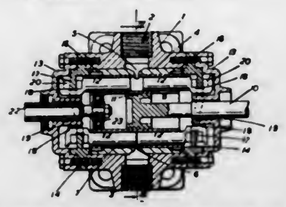
John F. Marquis, Haddonfield, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application January 31, 1944, Serial No. 520,497
2 Claims. (Cl. 181—31)



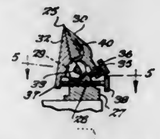
1. In an acoustic mass controlled device of the direct acting type, a conical type diaphragm having a base and small end, a support housing having a rigid annular flange adjacent said diaphragm base and external to the space enclosed by said diaphragm, highly compliant low frequency suspension system for said base and small end, respectively, comprising an annular flexible rim member attached to said base and extending radially, a second annular flexible rim member attached to said housing flange and extending radially in overlapping relation with respect to said first named member, a relatively short frusto conical non-compliant coupling member of fibrous sheet material peripherally attached to the outer periphery of one of said members and to the inner periphery of the other of said rim members for spacing said members closely in parallel planes and cross connecting them in series compliant relation between said diaphragm base and said housing flange to substantially decrease resistance to axial driving forces, a concentrically corrugated suspension member for said small end and acoustic driving means attached to said diaphragm small end and supported entirely by said suspension system.

2,439,667
METHOD OF MAKING LAMINATED ELECTRICAL INSULATING MATERIAL
Kenneth N. Mathes, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application September 29, 1943, Serial No. 504,284
3 Claims. (Cl. 154—2.6)

1. The method of making a laminated electrical insulation panel having a dielectric strength of at least 60 volts per mil and a 2,000 lb. high-shock test of at least 5 lbs., which method comprises (1) forming a core of laminations of sheets of cloth impregnated and coated with a thermosetting phenolic resin, (2) applying to both sides of said core face sheets of asbestos sheet material coated and impregnated with an ortho-phosphoric acid compound decomposable under heat in the presence of asbestos to ortho-phosphoric acid, and (3) molding the assembly obtained in (2) under pressure and at a temperature of from about 125° to 165° C. to unite the laminations of said core to each other and to the face sheets.

2,439,668
PUMP OR COMPRESSOR
Arthur Alexander Mercer, Colchester, England, assignor of ten per cent to Bernard Mason, Colchester, England
Application April 3, 1944, Serial No. 529,293
In Great Britain April 21, 1943
6 Claims. (Cl. 103—162)

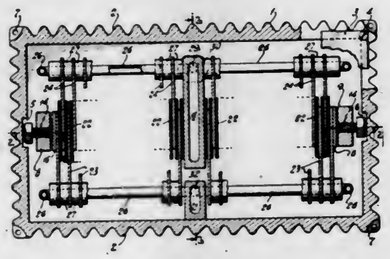
1. In a pump of the kind comprising a closed cylindrical casing having diametrically opposed inlet and delivery ports at its medial plane, a rotor in the casing having a plurality of cylinders extending therethrough parallel to its axis of rotation, and a port extending radially outwards from each cylinder to register periodically with the said inlet and delivery ports, a shaft for driving the rotor, and a pair of opposed plungers reciprocable in each of the said cylinders as the rotor rotates; the combination of means for positively and mechanically displacing the opposed plungers on both their outward and inward strokes, said means comprising two normally stationary end rings each presenting a circular cam track, and portions at the outer ends of the opposed plungers shaped to embrace the said tracks; and means for varying the delivery by partially masking the rotor ports comprising a shaft screw-threaded in the pump casing, and a head on the shaft engaging a counterbore in the rotor whereby the rotor is axially displaced by turning the said shaft.



2,439,669
CHLORINATED METHYLPOLYSILOXANE RESINS
Birger W. Nordlander, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application May 5, 1945, Serial No. 592,292
6 Claims. (Cl. 260—46.5)

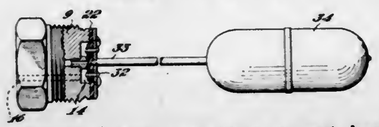
1. The process of improving the craze-resistance of a methylpolysiloxane resin which comprises passing chlorine into a solution of a methylpolysiloxane resin having a methyl-to-silicon ratio greater than 1 and less than 2 in an inert solvent and at reflux temperatures until the chlorine-to-methyl ratio of the chlorinated resin is between 0.2 and 0.4 the said passage of chlorine taking place under the effect of ultraviolet radiations.

2,439,670
PROCESS FOR REMOVING ACID COMPONENTS FROM ORGANIC LIQUIDS
Johan C. D. Oosterhout, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Application August 23, 1945, Serial No. 612,292
13 Claims. (Cl. 196—30)



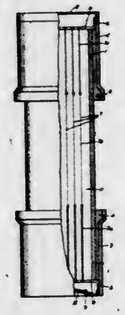
1. The process of separating weakly acid-reacting compounds from a non-acid water-insoluble organic liquid in which they are dissolved and which is substantially inert toward caustic alkali under the conditions of the process, comprising extracting said water-insoluble organic liquid with an aqueous alkaline solution of a salt of an alkyl substituted mono-nuclear aromatic mono-carboxylic acid of the benzene series, under conditions to absorb at least a portion of said weakly acid-reacting compounds in the aqueous solution.

2,439,671
KNIFE HOLDER FOR MICROTOMES
Harvey N. Ott, Buffalo, N. Y.
Original application February 16, 1944, Serial No. 522,608. Divided and this application November 1, 1944, Serial No. 561,412
5 Claims. (Cl. 88—40)



2. A knife holder for a microtome including a base having a pair of knife supporting levers mounted thereon to swing about a common pivot, each of said levers having an arm formed to engage one face of the knife and another arm, a pair of screws cooperating with said other arms of said levers and said base, whereby the levers may be swung about their pivots into engagement with opposite faces of the knife and also swung about said pivots to support said knife in different angular relations to said base.

2,439,672
ELECTRICAL CONDENSER
Wesley M. Roberds, Collingswood, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application March 31, 1944, Serial No. 528,981
9 Claims. (Cl. 175—41)

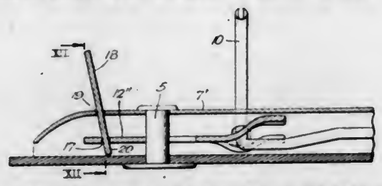


1. An electric condenser comprising a casing containing oil, a plurality of solid dielectric sheets, a plurality of electrodes of greater area than said dielectric sheets positioned each side thereof, said electrodes being interleaved alternately and extending beyond an edge of each one of said dielectric sheets to form a condenser stack within said casing, a hollow metallic cooling body having two hollow portions, said hollow metallic cooling body being located in the central portion of said condenser stack, a liquid cooling means including a fluid conduit in fluid communication with each hollow portion of said hollow metallic body and in thermal contact with each one of said electrodes to cool said condenser by the circulation of a liquid.

2,439,673
AIR VOLUME CONTROLLER
Charles G. Roper, Fairfield, Conn., assignor to Manning, Maxwell & Moore, Incorporated, New York, N. Y., a corporation of New Jersey
Application June 12, 1944, Serial No. 539,836
10 Claims. (Cl. 137—68)

1. A valve device comprising a part having therein a fluid flow passage terminating in an annular valve seat, a flexible, elastic diaphragm normally disposed in a plane substantially perpendicular to the axis of the valve seat, a portion of the diaphragm protruding from its general plane to constitute a valve head, said valve head being normally held in fluid-tight engagement with the seat by the elastic tension of the diaphragm, and means operative to flex the diaphragm transversely about a line approximating a chord of the diaphragm spaced from its axis thereby to rock the valve head away from the seat.

2,439,674
CURRENT LIMITING FUSE
Carl L. Schuck, Drexel Hill, Pa., assignor to General Electric Company, a corporation of New York
Application October 17, 1944, Serial No. 559,062
2 Claims. (Cl. 200—120)



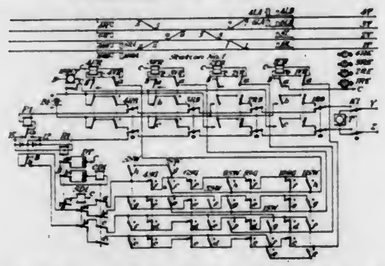
1. A current limiting fuse comprising, in combination, a casing, a fusible element mounted in said casing having a diameter between about 10 and 30 mils and an inert granular arc quenching siliceous material within said casing embedding said fusible element, substantially all of said material including a mixture of all the grain sizes that will pass through a 115 mesh screen and be held on a 170 mesh screen.

2,439,675
LOOSE-LEAF BINDER
Samuel Segal, New York, N. Y., assignor to Wilson-Jones Company, Chicago, Ill., a corporation of Massachusetts
Application August 21, 1944, Serial No. 550,335
2 Claims. (Cl. 129—24)

2. In a loose leaf binder, a pair of rockable frame members having a toggle connection at each end, said frame members terminating in ring sections, and a slidable member having one finger engaging both said frame members on one surface of one of said toggle connections and a

pair of fingers, each engaging the opposite surface of one of said ring sections adjacent said toggle connection, said first mentioned finger being shaped to move said ring sections to closed position when said slidable member is slid to-

wards said frame members and to hold said ring sections interlocked when said slidable member is in its innermost position, and said second mentioned fingers being shaped to open said ring sections when said slidable member is moved longitudinally away from said frame members.



2,439,676

INTERLOCKING LINE-CIRCUIT RAILWAY TRAFFIC CONTROLLING APPARATUS

Warren W. Seitz, Wilkinsburg, Pa., assignor to The Union Switch and Signal Company, Swissvale, Pa., a corporation of Pennsylvania

Application September 6, 1945, Serial No. 614,674

9 Claims. (Cl. 246—134)

1. Traffic direction locking apparatus for a stretch of railway track having a signal at each end for governing traffic movements into said stretch, a two position traffic lever and a traffic relay of the stick polar type at each end of the stretch, a circuit controlled by each traffic lever for operating the associated relay between its normal and reverse positions, the circuit for one traffic relay being also controlled by a contact of the other traffic relay closed in its reverse position and the circuit for said other traffic relay being controlled by a contact of said one traffic relay closed in its normal position, a circuit for clearing one signal controlled by a contact of said one traffic relay closed only in its reverse position, and a circuit for clearing the other signal controlled by a contact of the other traffic relay closed only in its normal position.

2,439,677

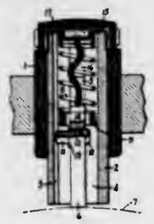
COATING COMPOSITION COMPRISING A VINYL HALIDE RESIN AND A HYDROXY POLYCARBOXYLIC ACID

Carl L. Shapiro, Crafton, Pa., assignor, by mesne assignments, to Lynnwood Laboratories, Inc., Newark, N. J., a corporation of New Jersey

No Drawing. Application July 31, 1942, Serial No. 453,056

13 Claims. (Cl. 260—41)

1. A coating composition which comprises a vinyl halide resin and a solvent and having incorporated therewith a hydroxy polycarboxylic acid in quantity sufficient to resist substantially blackening of the coating when the composition is baked on a surface selected from the class consisting of iron, zinc, and tin surfaces.



2,439,678

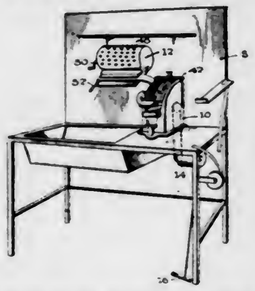
CURRENT COLLECTOR CONTACT MEMBER

Charles A. Thomas, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York

Application December 11, 1945, Serial No. 634,305

4 Claims. (Cl. 171—323)

1. A current collector contact member adapted for longitudinal movement in a brush holder having a contact member slot therein with a longitudinally extending groove in a transverse side of said slot, said contact member having resilient means affixed thereto and arranged in engagement with the side of said groove for biasing said contact member against a side of said slot whereby chatter of said contact member is reduced.



2,439,679

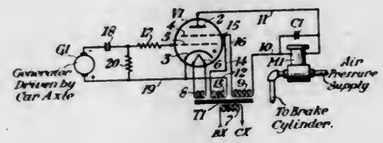
MEANS FOR PREVENTING DUPLICATION OF MARKS ON LAUNDRY

Willie Silverman, Jacksonville, Fla.

Application September 28, 1944, Serial No. 556,197

3 Claims. (Cl. 101—95)

3. The combination with a laundry list printing machine having a totalizing arm, a laundry marking machine having a plurality of individual settable key levers movable in parallel paths, and an electric motor for operating the marking machine, said motor being in circuit with a source of electric power, of switch means connected in the motor circuit and arranged to be opened by actuation of the totalizing arm of the list printing machine, a handle pivoted to the marking machine and having a portion constructed and arranged to move said key levers simultaneously to neutral position, and an additional switch connected in circuit with the motor and with the switch means associated with the totalizing arm, said additional switch being constructed and arranged to be closed by movement of the pivoted handle to the key lever neutralizing position, and thereby closing the portion of the motor circuit comprising said additional switch.



2,439,680

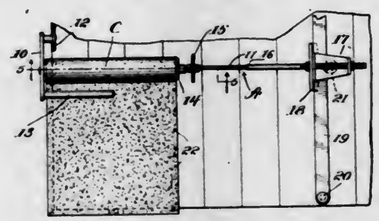
CONTROL CIRCUITS FOR VACUUM TUBES

Carl Volz, Penn Township, Allegheny County, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania

Application April 4, 1944, Serial No. 529,458

7 Claims. (Cl. 250—27)

1. In combination; a vacuum tube having an anode, a cathode and a first and a second grid; a load element, a power source of energy, a bias source of energy, said power energy source connected between a terminal of said anode and a terminal of said second grid and said bias energy source connected between a terminal of said second grid and a terminal of said cathode to form a series circuit between said anode and cathode, said power energy source and said bias energy source disposed and proportioned to provide a preselected conductive condition of the tube and which condition is checked by said series circuit, said load element interposed in said series circuit to be energized according to the current flowing in said series circuit as determined by the conductive condition of said tube, and a control source of energy connected between a terminal of said first grid and said cathode terminal to at times modify the preselected conductive condition of said tube.



2,439,681

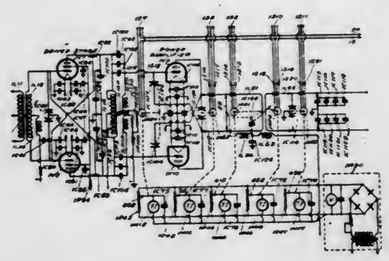
APPARATUS FOR LAYING ROLL ROOFING

Ezra W. Ankney, Acme, Pa.

Application February 16, 1945, Serial No. 578,327

4 Claims. (Cl. 242—90)

1. An apparatus of the kind described, comprising a carriage for a roll of roofing material, an axle section journalled medially of said carriage at right angles thereto for supporting the roll while said material is fed outwardly of said carriage on movement of the carriage, a guide track for the carriage remote from said carriage, and in parallel relation therewith, an extension on said axle section, and means mounted on the extension of said axle section for guiding the carriage on the track.



2,439,682

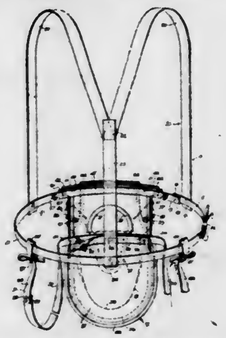
HIGH-FREQUENCY APPARATUS

Thomas James Boerner, Collingswood, and John W. Sanborn, Merchantville, N. J., assignors to Radio Corporation of America, a corporation of Delaware

Original application June 17, 1943, Serial No. 491,164. Divided and this application November 17, 1944, Serial No. 563,878

3 Claims. (Cl. 315—38)

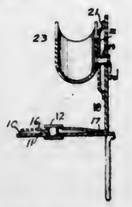
1. In high frequency apparatus, a pair of vacuum tubes each having an anode and supported so as to have their longitudinal axes substantially parallel, a pair of condenser plates hingedly mounted upon the anode structures of said tubes, a slotted bracket and a screw threaded nut for fixing the position of said hinged plates in desired position with reference to said anode structures, a third condenser plate electrically cooperating with said pair of hinged condenser plates, and motor driven cam mechanism for controlling the positioning of said third plate with respect to said pair of condenser plates hingedly mounted upon said anode structures.



2,439,683

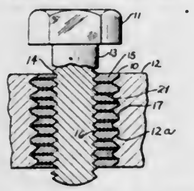
SANITARY RECEPTACLE AND SUPPORTER

Ernest N. Broderick, Detroit, Mich.



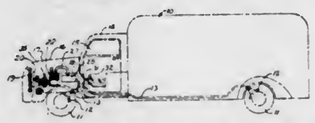
Application September 14, 1946, Serial No. 697,041

11 Claims. (Cl. 128—295)



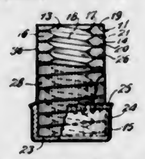
1. A sanitary receptacle comprising a body-encircling belt, an outer flexible waterproof bag connected to and depending from said belt, and an inner flexible bag within said waterproof bag arranged to receive liquid-absorbing material, said inner bag having an organ-receiving aperture in the inner wall thereof, one of said bags having its opposite side edges open, and separable fasteners disposed between said open edges for releasably closing said open edges.

2,439,684
SPRINKLING HOSE SUPPORT
Charles B. Day, Colorado Springs, Colo.
Application November 18, 1946, Serial No. 710,530
2 Claims. (Cl. 248—85)



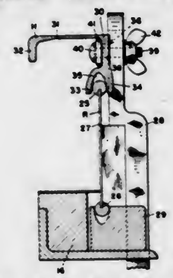
1. A sprinkler hose support comprising, in combination, a horizontal plate having a plurality of legs projecting from its under surface for insertion into the ground, the plate having a central opening for the reception of a pivot, a supporting bracket formed from a metal plate having two right angularly related sections, each section having an opening for a pivot, one of said sections being concave on its under surface and rests on the plate, means comprising a pivot pin for rotatably interconnecting the bracket with the plate, a spherically concave disk pivotally connected with the vertical side of the bracket, and a hose supporting trough secured to said disk.

2,439,685
THREAD INSERT
Howard J. Findley, Shaker Heights, Ohio, assignor to Eaton Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application September 30, 1943, Serial No. 504,393
6 Claims. (Cl. 85—32)



1. An insert of the character described, comprising a bushing formed merely of helically wound flat wire and having adjacent convolutions brazed together and also having a helical thread cut in at least one surface thereof, the pitch of the thread being different than the pitch of the helically wound wire.

2,439,686
DRIVE FOR AIR COMPRESSORS
Howard J. Findley, Chardon, Ohio, assignor to Eaton Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application August 24, 1944, Serial No. 550,961
2 Claims. (Cl. 230—15)



1. A compressor system for a motor vehicle having a variable speed internal combustion driving engine provided with an ignition circuit and a power take-off, comprising a compressor adapted to deliver gaseous medium under pressure, an electromagnetic coupling connecting said compressor with said power take-off and being operable with continuous slippage while energized, a circuit for energizing said coupling, a switch device controlling said circuit and adapted to be actuated automatically in response to variations in the pressure of said medium on the delivery side of the compressor, and a second switch device controlling said circuit and serving also as the ignition switch for said engine.

2,439,687
MOLD-IN THREAD INSERT
Howard J. Findley, Chardon, Ohio, assignor to Eaton Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application August 26, 1944, Serial No. 551,335
3 Claims. (Cl. 85—32)

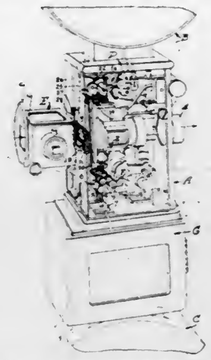
2. As an article of manufacture a thread insert in the form of a preformed unitary member consisting of a bushing formed of wire having opposed substantially square and beveled edges, said wire being helically coiled with its beveled edge providing a preformed thread in the bushing and its square edge providing a substantially cylindrical exterior on the bushing, the adjacent convolutions of the bushing being connected together by brazing or the like and said square edge of the wire having serrations thereon providing said exterior of the bushing with a roughened surface characteristic.

2,439,688
HANDRAIL AND REED HOLDER
Albert A. Gordon, 3rd, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application October 17, 1946, Serial No. 703,811
5 Claims. (Cl. 139—188)

1. A combined hand rail and reed holder for a loom lay having lay swords, said rail and holder being an elongated member having a vertical web the lower end of which is divided to form front and back walls defining a reed receiving groove, the rear wall extending behind said web and the ends of the member being provided with flat rear surfaces for attachment to the lay swords, said rear wall having a shoulder adjament to the associated flat surface to engage the corresponding lay sword.

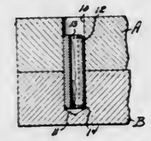
2,439,689
METHOD OF RENDERING GLASS WATER REPELLENT
James Franklin Hyde, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
No Drawing. Application June 11, 1943, Serial No. 490,517
2 Claims. (Cl. 117—124)

2. The method of treating glass which comprises dissolving an alkyl silicon trichloride, in which the alkyl radical is one which contains 7 or more carbon atoms in a volatile solvent to form a dilute solution thereof, applying the solution to the surface of the glass, removing the glass from contact with the body of the solution, and thereafter heating the glass at a temperature of at least 110° C. but below the decomposition point of the alkyl silicon trichloride, whereby to render the glass water repellent.



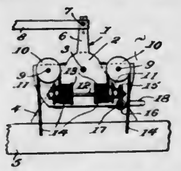
2,439,690
FURNITURE
Raymond E. Lippenberger, Alexandria, Va.
Application March 22, 1943, Serial No. 480,071
10 Claims. (Cl. 155—194)

1. The herein described method of forming an article of furniture in one piece, which consists in taking a rectangular sheet of metal, cutting the sheet lengthwise from each of two opposite edges along lines adjacent to and paralleling the other opposite edges, to points approaching the transverse center of the sheet to form four leg strips, then bending the leg strips to arrange the two strips adjacent to each of the said other sides of the sheet in divergent relation to form a pair of legs, the portion of the sheet lying between the pairs of legs forming a body support, and then bending back and under a part of the said body support forming portion to a position between the adjacent pair of legs to form an apron, and securing edges of the apron to the adjacent legs.



2,439,691
FILM CONTROL FOR AUTOMATIC SHUTTER ON MOVING PICTURE PROJECTOR
Lloyd Mannon, San Francisco, Calif.
Application February 25, 1946, Serial No. 650,009
6 Claims. (Cl. 88—17)

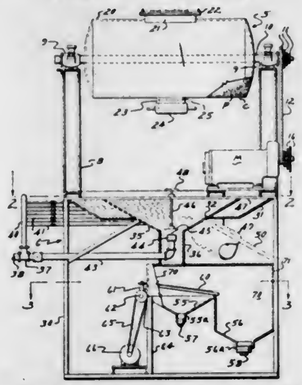
1. The combination with a moving picture projector including an opening past which a film is intermittently moved, a source of light rays directed through the opening for projecting pictures from the film onto a screen, a fire shutter for closing the opening for protecting the film from the light rays, and governor controlled means actuated by the moving picture projector mechanism for opening the fire shutter when the mechanism attains a predetermined speed and for automatically closing the shutter when the mechanism drops below this speed or stops; of auxiliary means actuated by the speed of the film moving through the projector for keeping the shutter closed until the film has reached the required speed for safety, whereupon the means permits the shutter to be opened by the



governor means, and for closing the shutter automatically should the film slow down below a predetermined speed or should the film break.

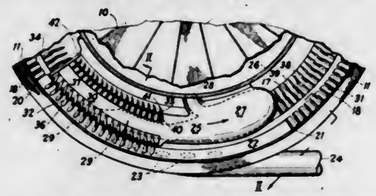
2,439,692
DOWEL PIN
Frank W. McKay, Charlestown, Ind.
Application December 7, 1945, Serial No. 633,434
1 Claim. (Cl. 20—92)

A dowel joint comprising parts adapted to be secured together by a dowel, one of said parts having a blind hole therein and a sump in its bottom end, and the other of said parts having a hole therein for receiving a dowel, a dowel pin tightly fitted within the parts with one end free of the hole sump of the one part, said dowel pin having a center bore in fluid communication with the sump of the one part whereby for the removal of the dowel pin from the one part, fluid under pressure may be extended through the dowel pin and into the sump to create a back pressure from the dowel pin and effect its removal.



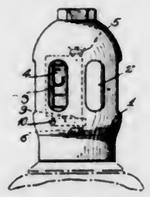
2,439,693
DRIVE FOR PUMPS
Herbert L. Poston, Kalispell, Mont.
Application April 22, 1944, Serial No. 532,308
2 Claims. (Cl. 74—108)

1. A drive mechanism comprising a base, supports extending upwardly from said base in transverse spaced relation to each other, a shaft extending between and carried by said supports, a walking beam between said supports consisting of side plates pivotally mounted by said shaft and



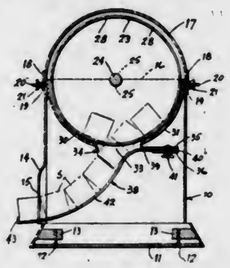
spaced transversely from each other, bearings between said side plates, a shaft rotatably mounted through said bearings and extending longitudinally of the walking beam, drums carried by said rotatable shaft, pulleys rotatably mounted between said side plates near opposite ends of the walking beam and disposed above said drums, and cables wound upon said drums and extending upwardly therefrom and trained about said pulleys and then extending downwardly for connection with two pivotally connected reciprocating mechanisms.

2,439,694
SEPARATION OF MERCURY BY HYDRAULIC CONCENTRATION AND SCREENING
Harry M. Robertson, Los Angeles, Calif., assignor to Turco Products, Inc., Los Angeles, Calif., a corporation of California
Application October 6, 1944, Serial No. 557,401
1 Claim. (Cl. 241—20)



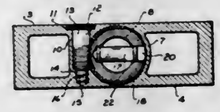
The method of separating heavy metallic particles from a concentrate containing oil, rock and metal which comprises grinding the concentrate in the presence of a soap to cleanse and remove the oil from the concentrate particles, subjecting the cleaned particles to a swirling body of water in a container until the lighter particles are washed over the edge of the container and then removing the metallic particles from the bottom of the container by screening them under water.

2,439,695
COMBUSTION GAS TURBINE
Charles F. Rocheville, West Los Angeles, Calif.
Application March 21, 1944, Serial No. 527,393
5 Claims. (Cl. 60—41)



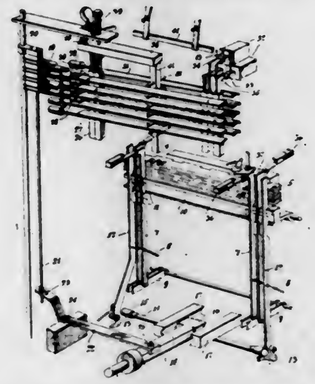
1. In a gas combustion turbine which includes a housing forming a toroidal passage and a combustion chamber rotatable throughout said passage and provided with a gas outlet port on its periphery, the combination of a trailing member for said combustion chamber, a plurality of rows of vanes extending around said member, said toroidal passage having a plurality of rows of vanes coacting with said vanes on said trailing member to form a tortuous passage for combustion gases from said outlet port into said toroidal passage to produce rotation of said combustion chamber.

2,439,696
CYLINDER CAP
Alvin H. Schaal, Butte, Mont.
Application August 26, 1946, Serial No. 693,080
2 Claims. (Cl. 116—130)



1. In an indicating device for cylindrical gas containers having threaded bosses at the ends with valves positioned in said bosses, a cap having a pair of windows in one side thereof adapted to be positioned over the valve and threaded on the boss of a cylinder, a flag pivotally mounted in the casing between the windows, and means holding the flag in either of two positions with the flag behind one window in one position, and behind the other window in the other position.

2,439,697
DEVICE FOR DISPENSING LUMP SUGAR
Laurie John Scott, Chilliwack, British Columbia, Canada
Application October 23, 1946, Serial No. 705,085
7 Claims. (Cl. 312—94)

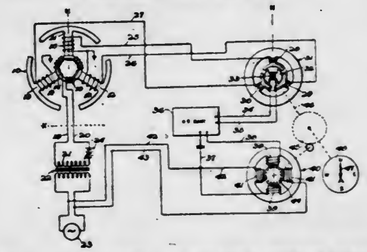


1. A device for dispensing lump sugar, comprising a casing for resting on a table or other object and having an open top and a lump sugar dispensing opening at the bottom of one of its side walls, a cover removably engaged on the top of said casing for closing said open top, a drum for holding lump sugar and having an axial shaft rotatively mounted across the open top of said casing and being provided with a large opening in one side wall by which it may be filled with lump sugar and being also provided with a plurality of peripheral openings of sizes which will permit one lump of sugar to freely pass through each opening at one time, a knob on said shaft for turning said drum, baffles mounted in the top portion of said casing and extending along the sides of said drum for covering certain of said peripheral openings and forming a throat passage at the bottom of said drum for lump sugar to pass through, and a lump sugar holding chute extending from said throat passage to said sugar dispensing opening.

2,439,698
LEVEL
Saul Shaler, Jackson Heights, Long Island, N. Y.
Application April 11, 1946, Serial No. 661,425
2 Claims. (Cl. 33—214)

1. A level comprising a frame having therein a circular chamber provided with a frusto conical seat, a spirit level carrier positioned within said chamber and having a frusto conical hub coaxial with and rotatably bearing against said seat, a graduated dial annulus overlying the face of the carrier distant from said seat and secured to the frame to hold the frusto conical hub of the carrier in engagement with said seat, the periphery of the carrier being toothed, an adjusting worm screw mounted to turn in the frame and meshing with the teeth of the carrier to rotate the latter, and an indicating pointer on the carrier cooperating with the graduations on the dial annulus.

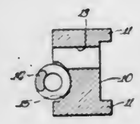
2,439,699
CONTROLLER
John H. Smoot, Darien, Conn., assignor to Trans-Lux Corporation, New York, N. Y., a corporation of Delaware
Application May 3, 1945, Serial No. 591,645
4 Claims. (Cl. 177—353)



2. A controller including in combination a group of movably mounted, notched permutation bars, a group of drop-in bars movably mounted to be extendable into the notches of said permutation bars, means for shifting those drop-in bars which are so extended, a group of switches to be actuated by the shifting of said drop-in bars, code bars movably mounted and connected with said switches to operate the latter and power multiplying means connecting said code bars with said drop-in bars whereby the movement of said code bars will produce sufficient power to operate the switches connected therewith.

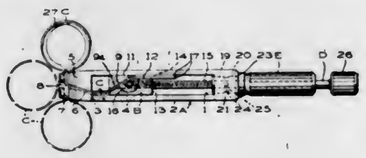
2,439,700
HAT
Gerald H. Simon, San Francisco, Calif.
Application October 15, 1945, Serial No. 622,257
1 Claim. (Cl. 2—175)

A crown for a hat made up of a plurality of substantially triangular-shaped sections whose adjacent edges abut each other, the inner and outer surfaces of each section being arranged flush with the inner and outer surfaces, respectively, of the adjacent sections to preserve continuity of the inner and outer surfaces of the crown, flexible strips underlying the crown and covering each line of abutment defined by the sections, and rows of stitching paralleling the lines of abutment and placed close to the lines for securing the sections together in abutting relation, said flexible strips being grosgrain ribbon, whereby the sections may be folded with respect to each other along the lines of abutment and the transverse ribs of the grosgrain ribbon permits slight bending or folding of the sections along lines paralleling the transverse ribs to give the crown greater flexibility.



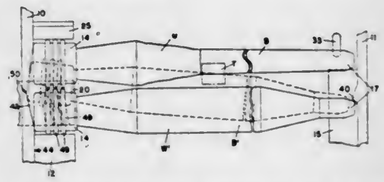
2,439,701
INDUCTION SYSTEM
Alfred A. Stuart, Jr., Hasbrouck Heights, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application September 2, 1944, Serial No. 552,475
8 Claims. (Cl. 33—204)

1. In combination, controlling means comprising an inductive device having a stator winding and a rotor winding, one of said windings being polyphase and the other being single phase, a two phase alternating current motor connected to angularly displace the rotor winding of said inductive device and having a winding in each phase, a source of alternating current connected to energize the winding of one phase of said motor, a magnetic induction device comprising a relatively stationary core of permeable magnetic material adapted to be traversed by a magnetic flux from an external magnetic field and having a polyphase winding and an energizing winding thereon, means connected to said energizing winding and interposed between said alternating current source and said induction device to supply said energizing winding with an undulating unidirectional current to vary the reluctance of said core whereby an alternating current having the same frequency as the frequency of the alternating current from said source is generated in the polyphase winding of said core member by the mag-



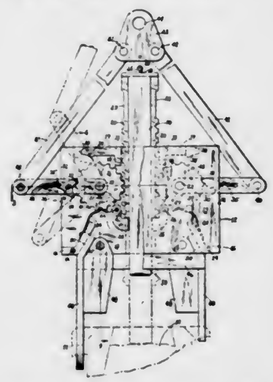
netic flux traversing said core member, means connecting the polyphase winding of said induction device to the polyphase winding of said inductive device, and means connecting the single phase winding of said inductive device to energize the winding of the other phase of said motor whereby the latter operates to angularly displace the rotor winding of said inductive device upon relative angular movement between the core of said induction device and said external magnetic field.

2,439,702
PISTON RING
Ralph R. Teetor, Hagerstown, Ind., assignor to The Perfect Circle Company, Hagerstown, Ind., a corporation of Indiana
Application February 9, 1945, Serial No. 576,988
1 Claim. (Cl. 309—45)



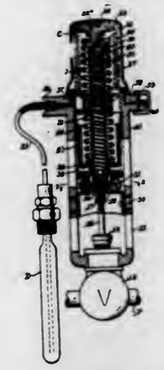
A one-piece ring for a reciprocatory piston, having an oil-collecting groove in its outer periphery providing a pair of axially spaced flanges for reciprocating engagement with the cylinder wall, a spring-receiving groove in its inner periphery offset toward one side of the ring but located within the axial space between said flanges, a coiled spring seated in said inner groove, and a plurality of radial oil-conducting slots for connecting said oil-collecting groove with the ring-receiving groove in the piston, said slots being located within the axial space between said flanges but offset toward the other side of the ring to avoid centering of said slots in said inner groove whereby oil may pass freely through said slots without inteference by said spring and the spring-seating portion of the inner groove is uninterrupted.

2,439,703
MATRIX RETAINER
Benjamin F. Toffiemire, La Fayette, Calif.
Application June 18, 1946, Serial No. 677,577
10 Claims. (Cl. 32—63)



1. A matrix band retainer comprising a frame, a matrix band end gripping block slidable along the frame, said frame having a slotted head for permitting the ends of a band forming a conical tooth-receiving matrix to be threaded therethrough to permit the matrix to extend from the end of the head or from either side thereof, means for securing the band ends to the block, and means for moving the block along the frame for contracting the matrix about the tooth.

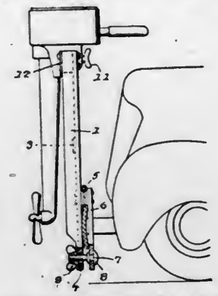
2,439,704
BOBBIN CONTROL FOR WEFT REPLENISHING MECHANISM
Richard G. Turner, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application February 25, 1947, Serial No. 730,788
10 Claims. (Cl. 139—251)



6. In a reserve bobbin magazine for a loom in which bobbins move downwardly along butt and tip guideway toward a transfer position, a stop in the tip guideway, a recess in the butt guideway extending in a direction away from the stop, and bobbin butt guide means causing a bobbin butt moving therealong to enter said recess and cause longitudinal movement of the bobbin to effect removal of the tip thereof from the stop.

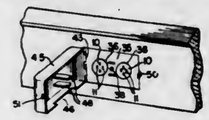
2,439,705
HOT TOP STRIPPER
Walter W. Urmetz, Parma, Ohio, assignor to The Ferro Engineering Company, Cleveland, Ohio, a corporation of Ohio
Application August 24, 1944, Serial No. 551,008
3 Claims. (Cl. 22—95)

1. In a hot top stripper, a housing, a plunger vertically slidable therein adapted to bear at its lower end against a sinkhead, a rack on said plunger, a gear journaled in said housing meshing with said rack, a lever arm pivotally mounted to turn about the axis of said gear, a pawl on said arm adapted to engage the teeth of said gear for operatively connecting the lever arm to the gear during the upward motion of the arm, while permitting the arm to move downwardly, independently of the gear, means carried by the housing for engagement with the hot top to exert a lifting force thereupon in opposition to the said plunger depressing force, and a knockout for said pawl at the upper limit of motion of said lever arm, leaving said gear free to turn in response to movement of said plunger.



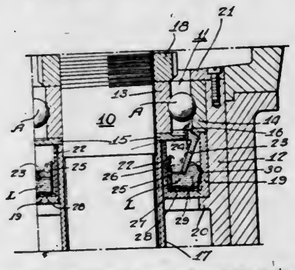
2,439,706
TEMPERATURE CONTROLLED ACTUATING MECHANISM
Charles A. West, Southbridge, Mass.
Application February 23, 1946, Serial No. 649,643
3 Claims. (Cl. 236—99)

1. Mechanism for moving a valve under control of a fluid-filled device which is responsive to temperature changes, said valve-moving mechanism comprising a frame, a casing, a bellows member fixed at its lower end to said casing and fixed at its upper end to a cap movable longitudinally of said casing on compression or expansion of said bellows member, said casing, bellows member and cap defining an enclosed space exterior to said bellows member and in communication with said fluid-filled device, a thrust member engaging and depressible by said cap, a tube depending from said thrust member and operatively connected to the valve to be moved, a guiding support adjustably secured in said frame and in which the lower end of said tube is freely slidable, a spring-centering guide member freely slidable on the middle portion of said tube, a coil spring loosely encircling said tube and interposed between said thrust member and said guide member, and a second coil spring also looscly encircling said tube and interposed between said guide member and said tube-guiding support, and said two springs being centered and held clear of said tube by portions of said thrust member, said guide member and said tube-guiding support which project within the end portions of said springs.



2,439,707
AUTOMOBILE BUMPER SUPPORT FOR OUTBOARD MOTORS
Roger E. Wright, San Antonio, Tex.
Application July 18, 1946, Serial No. 684,526
1 Claim. (Cl. 224—29)

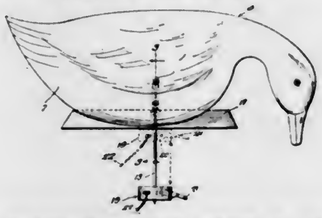
A rack adapted to be attached to an automobile bumper for carrying an outboard motor comprising a pair of parallel L-shaped members, an upper cross bar adapted to receive and support an outboard motor secured to corresponding portions of one end of each L-shaped member, the opposite end of each L-shaped member being provided with an aperture, a lower cross bar secured to corresponding portions of said L-shaped members intermediate the ends thereof and substantially parallel to said upper cross bar, movable arms overlying said L-shaped members, a hinge means anchored to each L-shaped member intermediate the apertured end of the same and said lower cross bar and attached to one end of each said arm, bolts attached to the opposite ends of said arms and



adapted to extend through the apertures of said members.

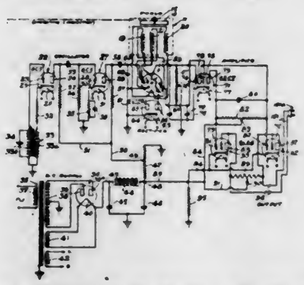
2,439,708
ELECTRIC OUTLET
Hans A. Abraham, Philadelphia, Pa.
Application March 10, 1947, Serial No. 733,677
6 Claims. (Cl. 200—50)

1. In an electric outlet, a receptacle having a body portion with openings for the reception of a pronged plug, a cover for said receptacle, said body portion having a conductor strip extending to one of said openings, a conductor member, a resilient member normally out of contact with said conductor member, one of said members being electrically connected to said conductor strip and the other being insulated therefrom and having a lead wire connection, and an actuating member carried by said cover for positioning said resilient member in engagement with said conductor member in the closed position of said cover.



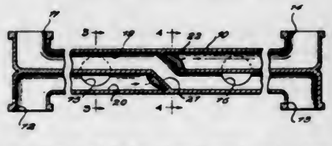
2,439,709
BEARING LUBRICATOR
Charles T. Asbury, Abington, Pa.
Application August 9, 1945, Serial No. 609,775
6 Claims. (Cl. 308—187)

1. Means for lubricating planetary type antifriction bearings for high speed shafts comprising a member secured to the shaft immediately below the bearing and having on its upper face a rib projecting into the space between the races of the bearing, a stationary annular reservoir for liquid lubricant surrounding the shaft below said



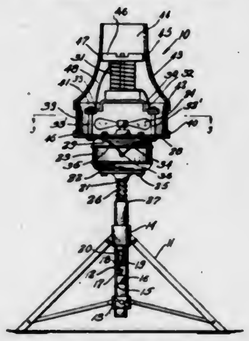
member and an annular downwardly and inwardly extending flange on said member the lower end of which extends into the lubricant in said reservoir, said member having ports to deliver lubricant moving upwardly along said flange to the inner face of said rib, said reservoir having an inner wall formed in two radially spaced sections the space between which is open at its upper and lower ends and has its upper end disposed below the upper end of the radially inner face of said sections.

2,439,710
COLLAPSIBLE WILD FOWL DECOY
William A. Banigan, Redding, Calif.
Application February 9, 1945, Serial No. 577,061
4 Claims. (Cl. 43—3)



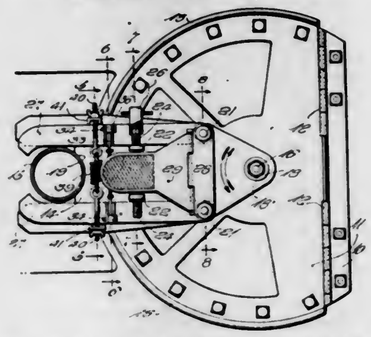
1. A collapsible wild fowl decoy of the class described comprising a foldable body composed of duplicate half-sections movable toward and from each other and hingedly connected together, and a frame pivotally attached to the inner surface of one of said half-sections, the other half-section being provided with keeper clips, said frame being releasably engaged with said keeper clips, and said frame being provided with a depending rod, said rod serving as an anchoring stake.

2,439,711
ELECTRICAL MEASUREMENT OF DISPLACEMENT
Donald E. Bovey, Rockford, Ill., assignor to Woodward Governor Company, Rockford, Ill., a corporation of Illinois
Application June 14, 1943, Serial No. 490,781
8 Claims. (Cl. 177—351)



1. In a system for producing an output signal which varies substantially proportionately with changes in a condition, the combination of an electromagnetic pickup device comprising an exciting winding and two secondary windings together with a movable armature for varying the inductive couplings between said exciting winding and respective ones of said secondary windings simultaneously and in opposite senses as said armature is moved in opposite directions from a neutral position, means for moving said armature in response to changes in said condition, means for energizing said exciting winding with alternating current to induce alternating current potentials in said secondary windings, an output circuit, means for separately rectifying prior to amplification the alternating current potentials induced in said secondary windings and means for separately amplifying the direct voltage outputs of the last-mentioned means while maintaining the direct voltage nature thereof and for thereafter applying the resulting amplified direct current potentials to said output circuit in voltage opposition to each other, whereby the net potential in said output circuit is varied in polarity in accordance with the direction of movement of said armature from its neutral position and in magnitude substantially proportionately with extent of such movement of the armature.

2,439,712
PLUMBING FITTING
Clyde H. Brady, Danville, Va.
Application June 11, 1946, Serial No. 675,983
2 Claims. (Cl. 285—210)

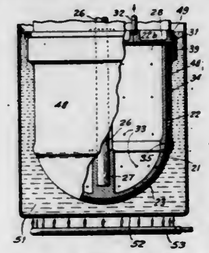


1. A plumbing fitting comprising an elongated body having oppositely disposed discharge openings at each end, said body also having spaced parallel inlet openings intermediate its ends and said body having longitudinal passages establishing communication between oppositely disposed discharge openings at opposite ends of the body and with an inlet opening intermediate the ends of the body whereby fluid entering an inlet opening will be discharged in opposite directions at opposite ends of the body.

2,439,713
AUTOMATIC WARMER FOR MUSICAL INSTRUMENTS
Pasquale Michael Bredice, Middletown, R. I., assignor of fifty per cent to Gordon Lawrence Hubert, Middletown, R. I.
Application November 19, 1945, Serial No. 629,562
7 Claims. (Cl. 219—39)

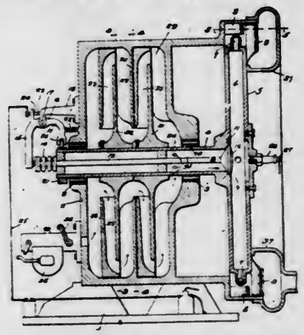
1. The described device comprising a heater element and a bell mounted thereover to receive the bell of a musical instrument, a blower beneath the heater, a motor for driving the blower, a switch operating connection between the motor and heater actuated by the weight of the instrument being placed on the first bell, a rod supporting the motor and a tube in which the rod slidably seats forming said connection, a spring normally holding the rod from the switch, and said switch mounted within said tube.

2,439,714
ATTACHMENT FOR WELL DRILLING DERRICKS
Henry J. Broers, Powell, Wyo.
Application July 12, 1946, Serial No. 683,017
6 Claims. (Cl. 214—1)



1. An attachment for drilling derricks comprising a suitably mounted base, a stub shaft anchored to the base and projecting thereabove, a carrier plate turnably mounted on the stub shaft, spaced studs having their ends secured in the carrier plate, arms pivotally mounted on the said studs and projecting beyond the edge of the base, clamping jaws pivoted on said studs above the arms, means for adjusting the arms with relation to each other for varying the space between them, means for drawing the jaws into clamping contact with a pipe, and means for forcing the jaws apart.

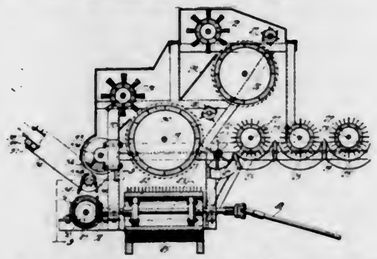
2,439,715
FLEXIBLE POCKET RECEPTACLE
Douglas J. Broughton, Springfield, Mass., assignor to Buxton, Incorporated, Springfield, Mass., a corporation of Massachusetts
Application February 14, 1945, Serial No. 577,788
3 Claims. (Cl. 150—35)



2. A combination billfold and auxiliary receptacle, the latter being detachably secured to the billfold, which comprises, a pocket wall on the face of an end section of the billfold forming a pocket therewith, said pocket being open along two adjacent edges and closed along the other two edges, complementary elements of a snap fastener carried respectively on the inner and outer faces of the outer wall of said pocket, an auxiliary receptacle having a wall member and a closure flap, said member and flap being provided with complementary snap fastener elements engageable with each other to releasably hold the auxiliary receptacle closed when separated from the billfold, the element on said wall member being engageable with the said element on one side of the pocket wall to releasably secure the auxiliary receptacle to the billfold and the element on the closure flap being engageable with the said element on the opposite side of the pocket wall to releasably hold the auxiliary receptacle closed when attached to the billfold.

2,439,716
PROCESS OF FORMING HOLLOW ARTICLES FROM ORIENTED POLYMER
Robert W. Canfield and Fred E. Wiley, West Hartford, and Antone M. Guerreiro, Hartford, Conn., assignors to Plax Corporation, Hartford, Conn., a corporation of Delaware
Application January 27, 1944, Serial No. 519,890
2 Claims. (Cl. 18—59)

1. The process of forming an integral hollow article of oriented polymer having a wall portion and a curved end portion which comprises assembling on a form layers of oriented polymer for the wall portion of the article, then assembling on the form curved layers of oriented polymer for the end portion of the article in overlapping relation to the first-named layers, heating the entire assembly until the layers are coalesced into an integral mass, and restraining the recovery of the layers during such heating to prevent separation of the wall forming layers and the end forming layers.

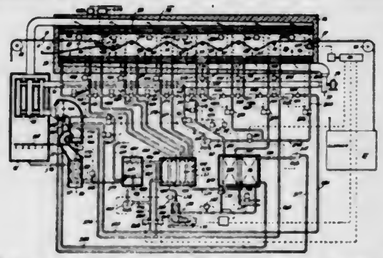


2,439,717
ROTARY GAS ENGINE OF THE REACTION TYPE
Grady Carlyle Cooke, Winston-Salem, N. C.
Application May 31, 1946, Serial No. 673,660
4 Claims. (Cl. 60—41)

1. A rotary engine including a stator, a shaft journaled therein having a compression chamber.

a rotor carried by the shaft and having a combustion chamber, means for supplying an explosive mixture to the stator, cooperating fixed and rotatable means carried by the stator and the shaft respectively for directing said explosive mixture under increasing pressure from the stator to the compression chamber, a valve normally closing communication between the compression chamber and the explosion chamber, and separate means controlled by the rotation of the shaft for intermittently actuating the valve and intermittently exploding the charge in the combustion chamber in properly timed relation.

2,439,718
COTTON CLEANING ATTACHMENT FOR HARVESTERS
Joshua C. Conrad, Oklahoma City, Okla.
Application December 30, 1943, Serial No. 516,201
6 Claims. (Cl. 19—37)

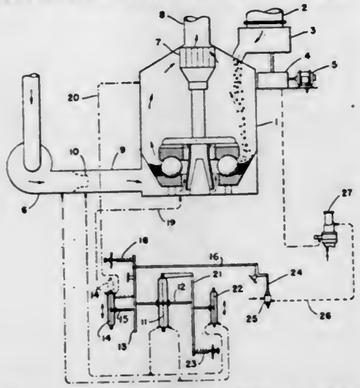


4. A machine for separating field cotton from its trash contents, comprising two groups of cooperative beater cylinders initially receiving and transporting material into said machine, an impaling drum operated above the rearmost of the beater cylinders of each group against which cotton is propelled thereby for removing from the transported material the bulk of cotton for cleaning, a second impaling drum, means for depositing cotton from said first drum onto the top of said second drum for reprocessing, means for receiving material escaping impalement by said first drum and adapted to propel the same along the upgoing side of said second drum to remove cotton from its trash contents, a final cleaning assembly comprising a plurality of parallel beater cylinders operating in foraminous concaves under said second drum, transverse to its axis, and adapted to propel the material in a direction counter to its movement by said latter means, baffles extending upwardly between each of said parallel cylinders and a common means for receiving the separated cotton from the cleaning and separating means.

2,439,719
INCUBATOR
Robert B. P. Crawford, Kansas City, Mo.
Application September 20, 1943, Serial No. 503,067
16 Claims. (Cl. 119—41)

1. An egg incubator comprising a conditioned space, means for transferring eggs through the conditioned space, said means comprising an undulating belt having a plurality of transverse rows of individual egg compartments, each of said rows of compartments being articulated to the adjacent rows, means for circulating fresh air through the conditioned space, and means for preventing any portion of the air being circulated through the conditioned space from contacting more than one egg.

10. In an incubator, an incubating chamber, an endless belt having a portion thereof passing through the chamber for transporting eggs therethrough, means for maintaining proper conditions of temperature and humidity throughout the various portions of the incubator, means for causing a continuous circulation of fresh conditioned air upwardly through the belt and past the eggs for maintaining the air surrounding the eggs in a pure condition, means for automatically causing the removal of nonfertile eggs from the belt and incubator after a predetermined length of time, and means for sterilizing the belt after leaving the incubating chamber and prior to reentering said chamber.



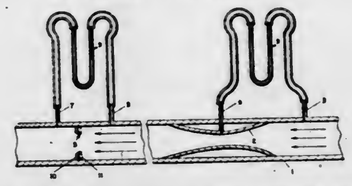
13. In an egg incubator, means for transporting eggs therethrough, a light source adjacent to the path of the eggs through the incubator, a photo-electric cell receiving light from the light source, the photo-electric cell being so arranged with respect to the light source that the eggs move across the path of light to the photo-electric cell, and means operated by the photo-electric cell when it receives sufficient light from the light source for causing removal of the egg permitting the transmission of light from the transporting means.

2,439,720
PROCESS OF PRODUCING SODIUM TETRATHIONATE
Raymond W. Crosley, Hazel Crest, and Albert L. Raymond, Northfield, Ill., assignors to G. D. Searle & Co., Skokie, Ill., a corporation of Illinois
No Drawing. Application August 7, 1942, Serial No. 454,074
3 Claims. (Cl. 23—115)

1. The process of preparing stable sodium tetrathionate powder characterized by a high degree of purity and by substantially less water of crystallization than the commonly known sodium tetrathionate dihydrate crystals, which comprises treating sodium tetrathionate dihydrate crystals with a liquid consisting of an anhydrous organic solvent in which water is readily soluble.

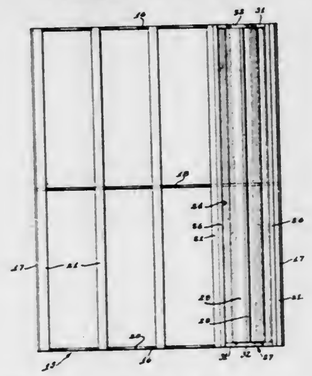
2,439,721
CONTROL SYSTEM FOR FEEDING FUEL TO FURNACES
Paul S. Dickey, Shaker Heights, Ohio, assignor to Bailey Meter Company, a corporation of Delaware
Application April 22, 1941, Serial No. 389,777
3 Claims. (Cl. 110—106)

2. A system for controlling means feeding fuel to a pulverizer through which air is discharged for carrying the fuel to a furnace comprising, in combination, a pivoted lever, means for producing a force in response to the rate of air flow to the pulverizer, means for subjecting said lever to said force, means for producing a second force in response to the rate of flow of air and pulverized fuel leaving the pulverizer, means for imparting said second force to said lever in opposition to said first force, a second pivoted lever, means for producing a third force in response to the rate of steam flow from the furnace, means



for subjecting said second lever to said third force, means for imparting forces from said second lever to said first lever in opposition to said second force, and means responsive to movement of said first lever for controlling said fuel feeding means.

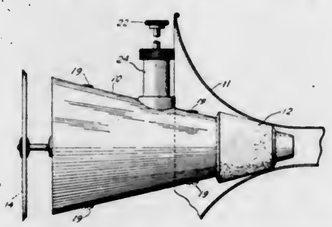
2,439,722
DRYING APPARATUS
William Dreisel, Lawrence, Mass., assignor to Andrews & Goodrich, Inc., Dorchester, Mass., a corporation of Massachusetts
Application February 24, 1947, Serial No. 730,423
2 Claims. (Cl. 34—159)



1. An apparatus for drying web material while in a slack, non-tensioned condition, comprising means defining an elongated drying space divided into communicating sections having a zigzag arrangement and located one above another, a plurality of web-supporting rolls in each drying space section on which the web material to be dried is loosely supported, a direction roll at the junction of each two connecting drying space sections around which the web material passes and which feeds the web material from one section to the next, means to rotate positively the supporting rolls in each drying space section, thereby to feed the web material forward, a non-positive driving means for rotating each direction roll whereby the speed thereof automatically adjusts itself to the speed of the web material being delivered thereto, a plurality of downwardly directed nozzles in each drying space section situated above the web material to direct air jets against the upper face thereof, and a plurality of upwardly directed nozzles in each drying space section situated beneath the web material to deliver air jets against the under face thereof, each downwardly directed nozzle being located directly above the supporting roll and each upwardly directed nozzle being situated between two adjacent supporting rolls.

2,439,723
FLOWMETER
Richard B. Engdahl, Columbus, Ohio, assignor, by mesne assignments, to Bituminous Coal Research, Inc., Pittsburgh, Pa., a corporation of Delaware
Application January 12, 1946, Serial No. 640,904
2 Claims. (Cl. 73—196)

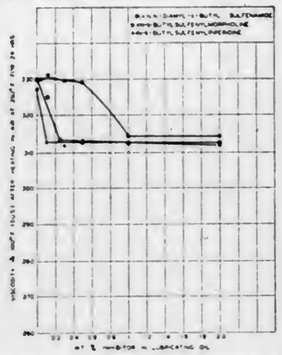
1. A meter for measuring the weight rate of flow of solid in a solid-fluid mixture, comprising a conduit, an elongated restriction and an orifice plate arranged in said conduit in spaced relation and both so positioned in said conduit that the solid-fluid mixture passes serially therethrough, and means for measuring the pressure drop across said restriction and said orifice, respectively.



2,439,724
APPARATUS FOR MOLDING PIPE COVERINGS
Hugh P. Finley, Berlin, N. J., assignor to Owens-Illinois Glass Company, a corporation of Ohio
Application July 19, 1945, Serial No. 606,006
7 Claims. (Cl. 25—118)

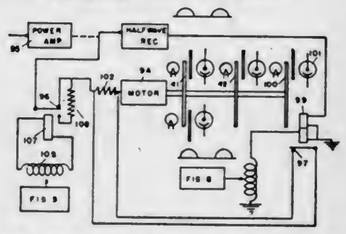
1. Apparatus for molding pipe covering sections of hemicylindrical form, comprising a hemicylindrical shell, a frame in which the shell is supported with the axis of the shell extending horizontally and the body of the shell below said axis, a cylindrical core of smaller diameter than said shell, semi-annular spacing members having a fixed connection with the core adjacent the ends thereof, said spacing members being seated in said shell and shaped to hold the core in a position concentric with the shell, said shell, core, and spacing members together forming a hemicylindrical mold cavity of which the shell and core form respectively the outer and inner semicylindrical wall surfaces and the spacing members form the end surfaces, the said mold cavity being open between the core and the rim of the shell to receive the molding material, the core and spacing members being free to be lifted as a unit from the shell and the molded article therein.

nism and connected to said switch contacts whereby they close and open the time switch contacts at instants determined by the adjustment of the cam, a master selector switch knob having at least two selector positions, a master switch contact in the control circuit and connected to said knob, a switch element connected in the control circuit in series with said time switch contacts, and a second switch element connected in the control circuit in shunt relation to said time switch contacts, the said switch elements being positioned with respect to the master switch contact so that with said knob in one of said selected positions the master switch contact engages said second switch element to complete the control circuit, and with said knob in another selected position the master switch contact engages said first switch element and does not engage said second switch element, whereby the control circuit is then completed only when the clock mechanism operates to close said pair of time switch contacts, and a disengageable driving element connected to said master switch contact and engaging said clock mechanism to be driven thereby when said master switch contact engages said second switch element, whereby the master switch contact is driven until it disengages said second switch element to open the control circuit and stop the radio receiver.



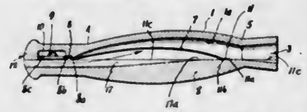
2,439,733
MUTE FOR MUSICAL INSTRUMENTS
Theodore J. Hermes, Stonington, Conn.
Application November 21, 1945, Serial No. 629,988
2 Claims. (Cl. 84—400)

1. A mute for musical instruments comprising a generally conical member adapted to fit within the bell of a musical instrument, a disk-like valve member fitting within the outer end of said conical member, resilient means normally holding said valve in a position to close the outer end of said conical member, means within said conical member for supporting said valve for movement into and out of closed position and manual means to open and close said valve comprising a finger key movable in a direction normal to the direction of movement of the valve, supporting means for said finger key extending laterally from the side of said conical member, and means connecting said finger key and valve supporting means, whereby depressing said key will open said valve.



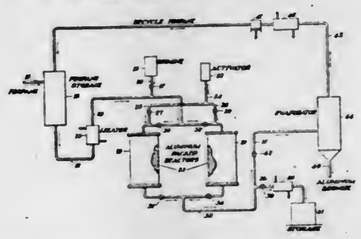
2,439,734
LUBRICATING OIL ADDITIVES
Chester M. Himel and Grant C. Balley, Bartlesville, Okla., assignors to Phillips Petroleum Company, a corporation of Delaware
Application February 11, 1946, Serial No. 646,734
12 Claims. (Cl. 252—47)

1. An improved lubricant comprising a major proportion of a lubricating oil and as an oxidation inhibitor therefor an unsubstituted alkyl sulfenamide, said sulfenamide being present in an



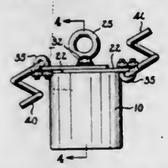
amount ranging from 0.01 to 5 per cent by weight of said oil.

2,439,735
ELECTRICAL CONTROL SYSTEM
John H. Homrighous, Oak Park, Ill.
Original application September 17, 1942, Serial No. 458,612. Divided and this application October 16, 1944, Serial No. 558,932
9 Claims. (Cl. 250—41.5)



1. In a motor control system, a source of alternating current supply, a motor driven by alternating current from said source, automatic means under the control of the positive polarity pulses of alternating current from said source to change the speed of said motor for adjusting a point on the rotor relative to the positive polarity pulses of the alternating current supply.

2,439,736
ACOUSTIC DEVICE
Hal Horne, New York, N. Y.
Application February 10, 1944, Serial No. 521,816
10 Claims. (Cl. 46—178)

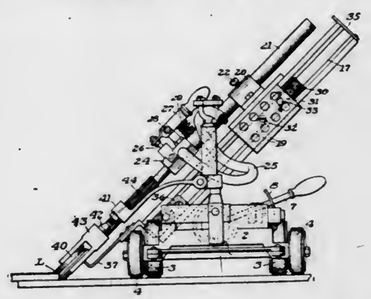


1. An acoustic device comprising a hollow body which has an inlet opening, said body having an internal partition, said body having a pair of internal diaphragms each said diaphragm being connected to said body and being movable relative to said body, each said diaphragm being biased to a normal position in which an edgeportion of each said diaphragm abuts said partition, said partition being located intermediate said diaphragms, said diaphragms and said partition defining an inlet chamber of the hollow space of said body with which said inlet opening communicates, said inlet chamber being wholly enclosed save for said inlet opening when said diaphragms are in their respective normal positions, each said diaphragm being spaced from the inner wall of said hollow body to provide a respective outlet air chamber, said body having outlet means for said outlet air chambers, all said chambers being separated from each other when said diaphragms are in their respective normal positions.

2,439,737
MANUFACTURE OF ALUMINUM BROMIDE
Victor E. Houston and Alex G. Oblad, Dallas, Tex., assignors, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application March 5, 1945, Serial No. 581,164
11 Claims. (Cl. 23—93)

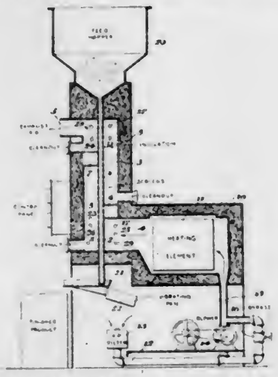
1. The process of producing aluminum bromide comprising contacting metallic aluminum with a material selected from the group consisting of bromine and hydrogen bromide dissolved in a substantially anhydrous saturated organic solvent in which aluminum bromide is soluble, said material being dissolved in said organic solvent in an amount such that the bromine content of the solution is at least five percent by weight.

2,439,738
ADJUSTABLE CABLE GUIDED MEMBER FOR LIMIT STOP WEIGHTS
Richard B. Hunter, Shorewood, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application November 13, 1943, Serial No. 510,142
17 Claims. (Cl. 16—1)



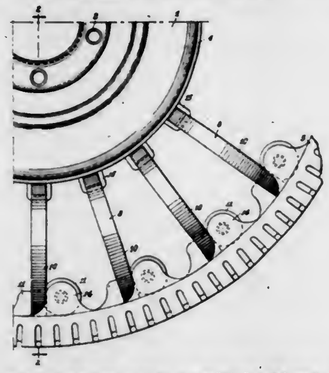
16. An adjustable cable guided device for use with a reset weight of a crane limit stop, said device comprising an adjustable metal support attached to said weight, a pair of metal cable guided members carried by said support, said guided members being bendable through a relatively great distance without damage thereto, each of said guided members comprising a straight rod-like portion and an end loop portion adapted to surround a cable to be associated therewith, the straight portions of said guided members being adjustable with respect to said support in the direction of their respective lengths, and said metal support being adjustable with respect to said weight to provide for extension of said straight portions from said support at any one of a number of different angles with respect to the vertical axis of the associated weight, whereby said loop portions may be jointly positioned at any two points within an area of predetermined width completely surrounding said vertical axis of said weight.

2,439,739
VIBRATION ABSORBING MOUNTING
Carl Hussman, Chicago, Ill.
Application May 17, 1946, Serial No. 670,653
8 Claims. (Cl. 248—21)



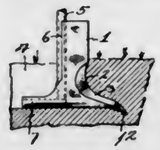
4. A vibration absorbing mounting comprising a machine supporting base, a plurality of vibration absorbing units each comprising a plate provided with a floor-contacting member, suspending means supported by the respective plates for suspending the base above a floor and comprising vibration absorbing elements for absorbing vibrations that tend to travel from the base downwardly through the units, and a vibration absorbing element in each unit arranged to stabilize the respective base-suspending means against the induction of lateral oscillatory movements in the suspending means by horizontally traveling vibratory impulses transmitted to the suspending means from said base.

2,439,740
ARC WELDING APPARATUS
Wallace C. Johnson, Sewickley, Pa., assignor to Dravo Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Application December 29, 1943, Serial No. 516,026
14 Claims. (Cl. 219—8)



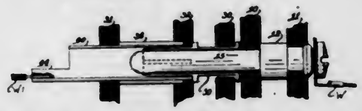
1. Welding apparatus of the type wherein an electrode is traversed along the work with the electrode having a refractory coating which maintains the metal core of the electrode spaced from the work comprising a movable carriage, a guide on the carriage, an electrode holder movable by gravity along the guide, and adjustable friction brake means for retarding the movement of the holder.

2,439,741
PROCESS FOR CONTROLLING DRIER DISCHARGE
Frederick Lucas Litty, Jr., Baltimore, Md., assignor to The Davison Chemical Corporation, Baltimore, Md.
Application April 28, 1943, Serial No. 484,930
2 Claims. (Cl. 34—25)



1. A method of activating an oxide gel comprising passing the gel in the form of granules downwardly in a thin, substantially vertical stream and passing a drying gas at an elevated temperature transversely through a lower portion of said stream, passing the gas transversely through a higher portion of said stream, and controlling the flow of gel downwardly through the channel in relation to the temperature of the drying gas after passing through the higher portion of the stream.

2,439,742
DISTORTABLE CIRCLE TIRE
James V. Martin, Paramus, N. J.
Application January 24, 1944, Serial No. 519,442
14 Claims. (Cl. 152—260)



5. In combination with a vehicle wheel rim, a tire including sets of large and small diameter hoops, the said larger hoops arranged to surround the said smaller hoops and positioned in planes substantially transverse thereto and the said larger hoops provided with a road tread for the said tire, the said road tread extending laterally beyond the outermost portions of the said smaller hoops to protect same from curb contacts; the inner portion of each said smaller hoop attached to the said wheel rim.

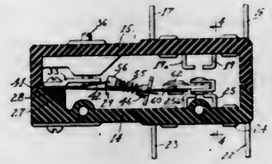
2,439,743
SUBSOILER AND AERATOR
Samuel M. McEwen, Baltimore, Md.
Application October 30, 1945, Serial No. 625,569
1 Claim. (Cl. 97—78)

An agricultural implement for aerating the earth and forming a slot through the earth, said implement comprising a plow body of uniform thickness, the forward end of said plow body terminating in a downwardly, rearwardly and forwardly extending cutting edge, rearwardly extending bevelled sides in the body member and forming said cutting edge, a tubular member through which air is forced, said tubular member being secured to the rear side of the body member in a vertical channel in the rear of the body member, a heel carried by the body member at the rear lower end thereof and having a rearwardly extending discharge port therethrough, the lower end of the tubular member being disposed in an aperture in the body member where the heel merges into the body member and communicating with the rearwardly extending discharge port.

2,439,744
PLUG AND JACK ASSEMBLY
Eugene L. Mentor, Westminster, Mass., assignor to Simplex Time Recorder Co., Gardner, Mass., a corporation of Massachusetts
Application December 15, 1945, Serial No. 635,295
3 Claims. (Cl. 173—363)

2. A plug and jack assembly comprising a fixed guide sleeve having a rearwardly contracted bore, a jack sleeve slidable in said guide sleeve and having a slotted and inwardly displaced rear end portion, and a plug insertable in said jack sleeve, the rearwardly contracted bore of said guide sleeve forcing the slotted portion of said jack sleeve inwardly and the free end of said plug being rounded and forcing the extreme rear end elements of said jack sleeve outwardly as said plug is fully seated, thereby effecting firm contact of said plug, jack sleeve and guide sleeve, all of which are of conducting materials.

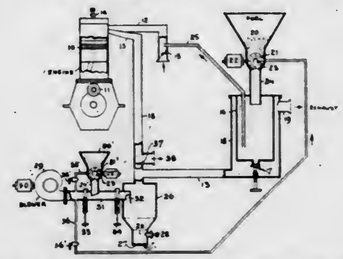
2,439,745
COMPOSITION COMPRISING CAPROLACTAM FOR PRINTING NYLON FIBER
Charles Franklin Miller, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 23, 1946, Serial No. 649,743
8 Claims. (Cl. 8—62)



1. In the process of printing nylon fabric with a color from the group consisting of acid and direct dyestuffs, the improvement which consists of applying the color by the aid of a printing paste containing as special assistants caprolactam

and an ammonium salt selected from the group consisting of the neutral and acid ammonium salts of sulfuric, phosphoric and pyrophosphoric acids.

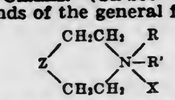
2,439,746
METHOD OF PREPARING MEPACRINE DIHYDROCHLORIDE DIHYDRATE
Arthur George Murray, Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application June 16, 1944, Serial No. 540,753. In Great Britain June 16, 1943
8 Claims. (Cl. 260—279)



6. A process for producing the dihydrate of 2-methoxy - 6 - chloro-9 - (4' - diethylamino - 1' - methyl - butylamino) - acridine dihydrochloride, which comprises reacting 2-methoxy-6:9-dichloro-acridine with 2-amino-5-diethylamino-pentane in a medium of phenol, adding the reaction mass to a mixture of aqueous caustic soda and an organic solvent selected from the group consisting of ether and benzene, separating the oily phase and treating the same with an aqueous solution of an aliphatic carboxylic acid selected from the group consisting of acetic and formic acids, then treating said aqueous mass with aqueous hydrochloric acid to precipitate the dihydrochloride dihydrate above named, and separating the precipitate from the aqueous mass.

2,439,747
ELECTRIC SWITCH
Royal G. Nelson, Freeport, Ill., assignor, by mesne assignments, to First Industrial Corporation, Wilmington, Del., a corporation of Delaware
Application January 28, 1944, Serial No. 519,983
6 Claims. (Cl. 200—67)

1. The combination in a precision switch of a switch spring having a free end movable in an arc between opposed positions, a contact carrier of insulating material mounted on said free end, a plurality of spaced mobile bridging contacts on said carrier, a plurality of spaced pairs of spaced fixed contacts, each pair being positioned for engagement by one of said mobile contacts to limit the movement of said free end in one direction and thereby define one of said opposed positions, means for mounting each of said mobile contacts on said carrier comprising a U-shaped strap having ends spaced a substantially greater distance than the thickness of said carrier and an intermediate portion extending around the edge of said carrier and a connecting member passing loosely through said carrier to permit tilting of said contact and strap with respect to said carrier under the force of said switch spring, and means for mounting said carrier on said free end comprising a pin passing through said free end and said carrier shaped for movement of said carrier circumferentially of the pin and about an axis transverse with respect to said pin, and means for limiting the circumferential and transverse movement of said carrier.

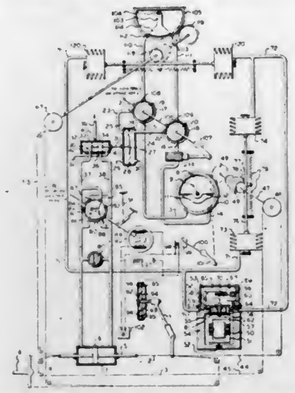


2,439,748
HEAT ENGINE
Frederick Nettel, Manhasset, N. Y.
Application August 5, 1944, Serial No. 548,290
18 Claims. (Cl. 123—179)

1. In a reciprocating internal combustion engine comprising at least one cylinder, a piston reciprocable in said cylinder, ignition means in said cylinder, and a gas heated vaporizer for fueling said engine with particulate solid hydrocarbons having melting points substantially above ambient air temperatures and evaporating substantially without residue, and conduit means connecting said vaporizer to said cylinder, the combination of means for supplying an air stream, conduit means for said air stream connected to a combustion chamber external to the engine cylinder, means for feeding solid particulated hydrocarbons to said combustion chamber, means for initially heating and igniting a portion of said hydrocarbons in said chamber for creating a self-supporting combustion therein, and conduit means for bringing the hot products of said combustion in contact with said vaporizer for preheating it prior to starting the engine.

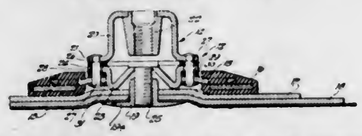
2,439,749
N-ALKYL THIAMORPHOLINES AND DERIVATIVES
Joseph B. Niederl, Brooklyn, N. Y., and William F. Hart, Easton, Pa.
No Drawing. Application May 3, 1945, Serial No. 591,850
4 Claims. (Cl. 260—243)

1. Compounds of the general formula:



in which Z represents an atomic grouping selected from the class consisting of S, SO, and SO_2, R an alkyl radical containing from 12 to 18 carbon atoms, R' a short chain alkyl radical, X an anion.

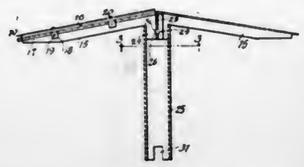
2,439,750
AUTOMATIC CONTROL SYSTEM FOR AIRCRAFT
Robert Hayes Nisbet, Stroud, and Arthur Philip Glenny, Amberley, England, assignors to The Sperry Gyroscope Company, Limited, Brentford, England, a British company
Application September 17, 1942, Serial No. 458,654
In Great Britain November 22, 1940
Section 1, Public Law 690, August 8, 1946
Patent expires November 22, 1960
20 Claims. (Cl. 244—77)



2. A system of control for aircraft comprising an automatic pilot having rugged, coarse controlling means therefor and delicate, sensitive primary controlling means normally movable

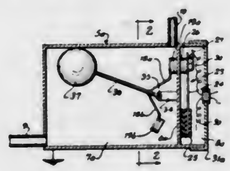
relative to said pilot, protective means operative when said aircraft departs from a selected flight path by more than a predetermined angular deviation for locking said delicate, sensitive primary

controlling means, and means for transferring control of said aircraft from said delicate controlling means to said rugged controlling means upon operation of said locking means.



2,439,751
ABRASIVE DISC HOLDER
Gustav A. Oisen, Sioux City, Iowa, assignor to Albertson & Company, Inc., Sioux City, Iowa, a corporation of Iowa
Application July 13, 1946, Serial No. 683,523
6 Claims. (Cl. 51—197)

1. In an abrasive disc holder, a hub comprising a first hub member having an outwardly projecting flange, a second hub member co-axial with said first hub member and having an outwardly projecting flange in face-to-face relation to the first-mentioned flange, a plurality of spaced pins rigidly attached to one of said flanges and each passing loosely through an opening in the other of said flanges, a cushion of resilient material clamped between and separating said flanges and operating as the torque transmitting medium between said hub members, and means for attaching an abrasive disc to said second hub member.

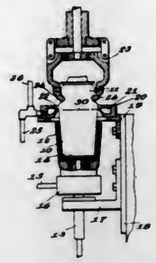


2,439,752
UMBRELLA
Arthur P. Pfeil, Williamsville, N. Y.
Application June 10, 1946, Serial No. 675,700
6 Claims. (Cl. 135—20)

6. An umbrella comprising a foldable canopy, a plurality of ribs supporting said canopy and movable therewith into a position in which they are spaced circumferentially or arranged parallel with one another and each of said ribs being provided with a downwardly projecting shank which together form a hub, a tubular handle adapted to receive said hub and a fastening pin adapted to pass through parts of said hub and tubular handle for holding the same together, said pin, canopy, and ribs being detachable from said tubular handle and stowable in the latter, and said pin

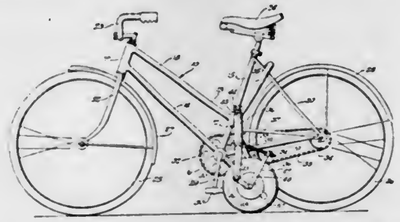
being loosely connected with said tubular handle to prevent loss or displacement of the same.

2,439,753
FLOAT-OPERATED SWITCH
Charles N. Reavis, Raleigh, N. C., assignor of two-thirds to Silas B. Coley, Raleigh, N. C.; Charlotte L. Reavis administratrix of Charles N. Reavis, deceased
Application February 3, 1945, Serial No. 575,950
1 Claim. (Cl. 200—84)



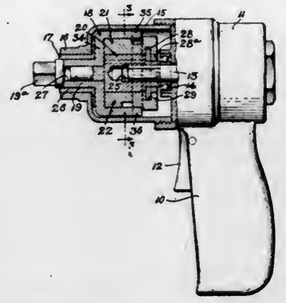
A float-operated switch comprising a casing provided with non-communicating float and contact chambers, said float chamber having a bottom water inlet and a top vent, a normally closed circuit maker and breaker in said contact chamber having a fixed contact and a flexible contact carrying an armature and normally tensioned to engage the fixed contact, a second circuit maker and breaker in said contact chamber including a fixed contact and a flexible contact normally tensioned to disengage from the associated fixed contact and carrying an armature, and actuating means for said flexible contacts mounted in the float chamber and including a rock shaft, arms projecting upwardly from and downwardly from said rock shaft respectively, permanent magnets carried by the free ends of said arms, a float arm rigid with said shaft and carrying a float, the upwardly extending arm being arranged so that its magnet is moved to bring its field within range of the armature of the first circuit maker and breaker when the float is raised, said downwardly extending arm being arranged so that the field of its magnet is brought within range of the armature of the second-named circuit maker and breaker when the float is lowered.

2,439,754
BURN-OFF METHOD
Harold R. Schutz, Toledo, Ohio, assignor, by mesne assignments, to Owens-Illinois Glass Company, Toledo, Ohio, a corporation of Ohio
Application May 1, 1943, Serial No. 485,331
6 Claims. (Cl. 49—77)



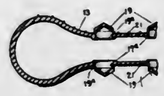
2. In the method of burning off glassware wherein a moil and tumbler, while still united, are supported in superposed relationship and an oxygen-gas flame is applied to the glass at the

juncture of the moil and tumbler, the steps consisting of slowly stretching the glass as it softens under influence of the flame, suddenly applying



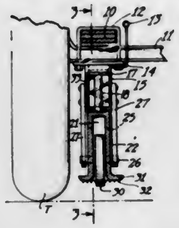
an increased stretching force and accelerating the speed of stretching the glass and thereby severing the moil and tumbler, and shaping the severed edge of the tumbler with a gas flame only.

2,439,755
QUADRICYCLE
Frank W. Schwinn, Chicago, Ill.
Application September 28, 1945, Serial No. 619,076
3 Claims. (Cl. 280—282)



3. In a quadricycle of the class described and having a main passenger carrying structure of bicycle-type construction including a frame carried by front and rear wheels, a seat, and foot driven means drivingly connected to the rear wheel for propulsion, the combination comprising an upper frame tube secured to said rear frame near the seat and extending outwardly and downwardly, rear braces secured to said frame near the axis of the rear wheel and extending outwardly and forwardly, vertically disposed end tubes secured to the ends of said upper frame tube and braces at positions spaced substantially equidistantly from opposite sides of the frame and in approximate lateral alignment with the seat, side wheel support forks mounted in said end tubes for free rotation relative thereto and each having separated side legs, an auxiliary fork for each of said side wheel support forks and each having curved legs and a connecting portion, the ends of the curved legs of each of said auxiliary forks being rotatably connected to the side legs of one of the side wheel support forks, the curved legs of said auxiliary forks extending rearwardly and upwardly from the side wheel support forks, means including a resilient element movably connecting and resiliently separating each auxiliary fork from its side wheel support fork at a distance from the connected ends, and a wheel rotatably secured to each of the auxiliary forks at a position spaced rearwardly from the connected ends of the forks so that the axes of the wheels are to the rear of the rotational axes of the side wheel support forks.

2,439,756
IMPACT CLUTCH
Ernest H. Shaff, Grand Haven, Mich., assignor to Keller Tool Company, Grand Haven, Mich., a corporation of Michigan
Application July 9, 1943, Serial No. 493,961
15 Claims. (Cl. 192—30.5)



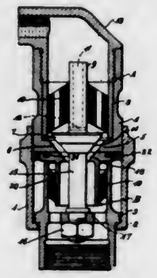
1. An impact clutch comprising, in combination, revoluble driving and driven members, said driven member presenting a pair of impact surfaces thereon at symmetrically located, generally diametrically opposite points in an orbit of revolution for the same, striker means for delivering substantially simultaneous sharp impact blows to said symmetrically located impact surfaces to thereby set up a strong couple tending to turn the driven member, said striker means embodying a pair of striker weights revoluble by said driving member coaxially with said driven member and presenting respective striker surfaces thereon also symmetrically located at generally diametrically opposite points relative to the axis of rotation of such weights, and means limiting the outward movement of said striker weights from their axis of rotation under the compulsion of centrifugal force to retain the striker surfaces thereon within an orbit circumscribed by that of the impact surfaces and thus out of contact with the latter except once during each full revolution of relative movement between the striker weights and driven member.

2,439,757
PERFORATED RUBBER LAUNDRY BAG
Albert E. Sidnell, Akron, Ohio, assignor to Seiberling Latex Products Company, Barberton, Ohio, a corporation of Ohio
Application January 21, 1941, Serial No. 375,145, which is a division of application Serial No. 272,586, May 9, 1939. Divided and this application June 23, 1943, Serial No. 491,868
1 Claim. (Cl. 150—1)

A molded laundry or like bag of vulcanized elastic or resilient material which unfilled has spaced, flat, flexible walls with perforations throughout a large portion of the body thereof, each perforation being reinforced around the outside edge thereof by a molded rib of the said material which is integral with the wall, the edge portions of the bag between the perforated walls being rounded on a radius greater than the distance between the walls when the bag is not filled.

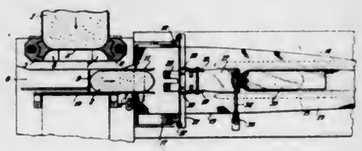
2,439,758
ANTISKID JACKING DEVICE FOR VEHICLES
Antonio Monte Sorrentino, Brooklyn, N. Y.
Application January 21, 1947, Serial No. 723,399
6 Claims. (Cl. 280—150)

2. In a vehicle, a ground engaging support member mounted on the vehicle adjacent the inner side of each wheel and comprising a vertically disposed cylinder, a piston in the cylinder, a piston rod depending from the piston and extending out of said cylinder, a foot on the lower end of said rod arranged to be lowered to ground engaging position when fluid pressure is applied to said piston, means for yieldably maintaining the piston in raised position whereby the foot is spaced from the ground when the fluid pressure on the piston is relieved, a wheel suspended from said cylinder in spaced relation with the ground and extending below the bottom of said foot, when the latter is in raised position, for engagement with the ground when the tire of the adjacent wheel is deflated, and said foot being operable to engage the ground to lift said suspended wheel and the vehicle wheel off the ground.



2,439,759
PICK
Eugene St. Pierre, Pawtucket, R. I., assignor to Hemphill Company, Central Falls, R. I., a corporation of Massachusetts
Application June 10, 1947, Serial No. 753,649
5 Claims. (Cl. 66—48)

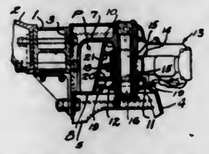
1. For a circular, independent needle knitting machine, a pick for widening and narrowing, said pick having a recess therein for receiving needle butts, an abutment in said recess for excluding long butts, an adjustable abutment in said recess for limiting the number of short butts which may be received in said recess at one time.



2,439,760
SELF-SEALING PIPE COUPLING
Percival Edward Thomas, Worcester Park, England, assignor to Sterling Industries Limited, London, England, a British company
Application May 31, 1945, Serial No. 596,857
In Great Britain June 12, 1944
1 Claim. (Cl. 284—19)

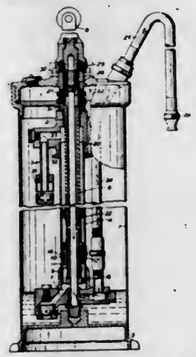
In a self-sealing pipe coupling of the type which includes a nonmobile valve centrally supported in fixed position in a first conduit and cooperating with a mobile valve seating located between the first conduit and the valve, a resiliently loaded mobile valve cooperating with a nonmobile valve seating located in a second conduit, and means for connecting said conduits together; the improvement that comprises an annulus of resilient rubber located between said mobile valve seating and said first conduit, said annulus being bonded about its entire periphery to said first conduit for at least a portion of its axial length and being bonded about its entire inner periphery and for at least a portion of its

axial length to said mobile valve seating, said annulus acting in shear to bias said mobile valve seating to conduit closing position in contact with said nonmobile valve and functioning to prevent fluid passage between said first conduit and said mobile valve seating, and wherein the resilient loading of the mobile valve is effected by an axially perforate annulus of resilient rubber material situate between said mobile valve and said second conduit and bonded to both.



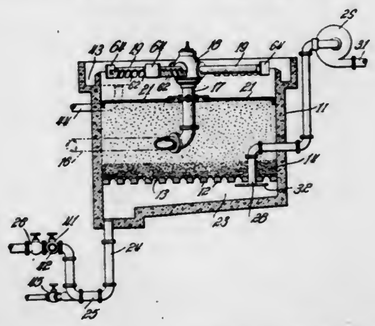
2,439,761
APPARATUS AND METHOD FOR SOFTENING SANITARY NAPKIN PADS
Oscar T. Thompson, Neenah, Wis., and Don D. Feagles, Niagara Falls, N. Y., assignors to International Cellucotton Products Company, Chicago, Ill., a corporation of Delaware
Application October 26, 1944, Serial No. 560,514
9 Claims. (Cl. 154—29)

1. The method of preparing absorbent pads for sanitary napkins which consists in shearing a pad of the desired size from a blanket composed of a plurality of relatively superposed plies of crepe tissue paper and then subjecting certain of the sheared edges of the pad to a combing action to break down or fluff said sheared edges.



9. Apparatus for softening the edges of an elongated, multi-ply, crepe tissue paper pad which is hard as an incident to compression of the pad edges and mechanical joining of the edges of the corresponding edges of the plies, comprising means for propelling the pad endwise, and a pair of scraper members yieldingly urged against the opposite pad edges during the travel of the pad to thereby effect separation and fluffing of the edges of the sheet material plies of the pad.

2,439,762
RETRACTABLE COUPLER FOR LOCOMOTIVE STRUCTURES
James C. Travilla, Jr., Swarthmore, Pa., and William C. Krautheim, Normandy, Mo., assignors to General Steel Castings Corporation, Granite City, Ill., a corporation of Delaware
Application December 22, 1944, Serial No. 569,374
14 Claims. (Cl. 213—4)

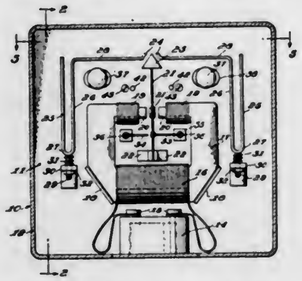


6. In a locomotive pilot structure, a pilot having a coupler pocket, a coupler pivot pin mounted on said pilot, a laterally swinging coupler pivoted on said pin and movable into and out of said pocket to non-functioning and functioning positions and comprising a coupler head and a coupler shank, and a pocket closure plate movable with said coupler to close said pocket, said coupler and said closure plate having a common axis, said closure plate pivoting with and on said coupler independently of said pivot pin.

2,439,763
FIRE-EXTINGUISHING PUMP
Richard Zieschang, Brentford, England, assignor to The Pyrene Company Limited, Brentford, England, a British company
Application June 21, 1944, Serial No. 541,416
In Great Britain July 1, 1943
4 Claims. (Cl. 103—192)

1. In a fire extinguishing hand-operated double-acting pump, a vertically arranged pump cylinder provided at its bottom end with a fitting having therein an intake passage communicating with the bottom end of said cylinder and provided with a check-valve permitting liquid to enter but not escape from said cylinder through said passage; a hollow piston rod having openings therein near the lower end thereof; a piston assembly carried by said piston rod and reciprocatable in said cylinder and exerting pressure on the liquid therein during movement of said piston assembly in both directions; said assembly including a piston having a liquid passage therethrough and slidingly supported for limited movement on said piston rod and cooperating with the openings therein, said assembly also including a clack-valve cooperating with the upper side of said piston and having a liquid passage therethrough which is out of alignment with the passage through the piston, said clack-valve being movable by liquid pressure during upward movement of the piston assembly into engagement with the top of the piston, thereby during said movement preventing flow of any liquid through the piston assembly, and said clack-valve being movable by liquid pressure during downward movement of the piston assembly out of engagement with the top of the piston, thereby during said last mentioned movement permitting a limited flow of liquid through the piston assembly; the aforesaid fitting being also provided with an outlet passage communicating with the upper end of said hollow piston rod; whereby during upward movement of said piston assembly liquid is drawn into the cylinder through said check-valve and at the same time liquid in said cylinder above said piston assembly is expelled through said outlet passage, and whereby during downward movement of said piston assembly some of the liquid in the bottom of said cylinder is permitted to flow through said piston assembly into the space in said cylinder above the piston assembly and some of said liquid is expelled through said outlet passage.

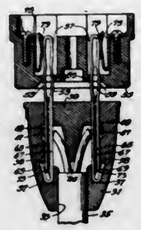
2,439,764
WATER TREATING APPARATUS
James D. Walker, Aurora, Ill., assignor to The American Well Works, a corporation of Illinois
Application May 8, 1943, Serial No. 486,172
4 Claims. (Cl. 210—16)



1. Water treating apparatus including a tank, a false bottom in the tank comprising spaced parallel beams, grating members resting on the beams having projections extending between the beams and adjacent thereto to position the grating members in bridging position and having projections extending upwardly to prevent clogging of the grating by overlying material, coarse material resting on the grating, a bed of anthracite coal of a particle size mainly of the order of at least 1½ millimeters supported thereby, a rotary distributor for sprinkling water in a thin layer on the surface of the bed, said distributor being spaced approximately between two and three feet above the bed, means for supplying raw water to the rotary distributor, means for draining the water from the tank below the false bottom, means alternatively effective for supplying backwash water to the tank below the false bottom and causing it to flow upwardly through the bed, and an overflow trough adapted to receive water overflowing from the tank and to discharge it to waste.

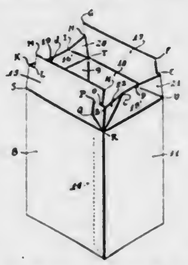
2,439,765
SUPPORTED METAL ACETYLIDE CATALYST
Joseph Frederic Walker, Westfield, N. J., and Thomas Edward Londergan, Niagara Falls, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Original application October 30, 1944, Serial No. 561,150. Divided and this application October 31, 1946, Serial No. 707,046
3 Claims. (Cl. 252—227.5)

3. A metal acetylide catalyst material consisting essentially of a mass of finely divided particles of a catalyst support having a size not to exceed 300 mesh and, uniformly distributed therein, a heavy metal acetylide selected from the group consisting of the acetylides of copper, silver, gold, and mercurous mercury, said catalyst material containing not to exceed 10% by weight of said acetylide when said acetylide is silver acetylide, and not to exceed 20% by weight of said acetylide when said acetylide is the acetylide of copper, gold or mercury.



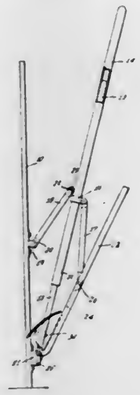
2,439,766
AUDIBLE AND VISUAL ELECTRICAL SIGNALING DEVICE
Eugene Weissman, Baltimore, Md.
Application May 29, 1945, Serial No. 596,471
10 Claims. (Cl. 177—324)

1. An electrical signaling device comprising a vibratory resonance member including a pair of vertically disposed tines, one of which merges into a horizontal plate, a vibratory member having a head for engaging the plate and imparting vibration to the resonance member, and switch controlled electrical means and connections for effecting vibration of the vibratory member.



2,439,767
ELECTRICAL CONNECTOR
Hugo H. Wermine, Wheaton, Ill., assignor to Belden Manufacturing Company, a corporation of Illinois
Application March 20, 1943, Serial No. 479,846
10 Claims. (Cl. 173—361)

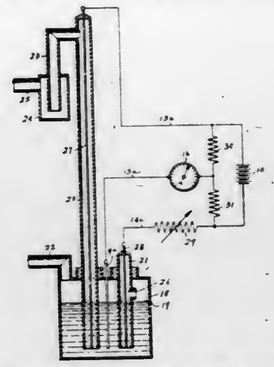
1. A two ply, spring blade for electrical plug connectors and the like, comprising a flat, metal strip of standard blade width which is folded upon itself at the outer end of said blade and shaped to provide a flattened, transversely resilient, contact portion, a bowed, transversely resilient, contact portion, and a shank portion; said flattened contact portion being located at the outer end of said blade, comprising, coextensive, substantially parallel sections of said strip, which are spaced a short distance from each other, and having a length at least approximately equal to the width of said strip; said bowed contact portion being located longitudinally adjacent said flattened contact portion, having a length approximately one and one-half times the width of said strip, and comprising symmetrically opposed, outwardly bowed sections of said strip; said shank portion comprising co-



extensive, parallel sections of said strip which contact each other, and at least one of the parallel portions of said strip which constitute said shank portion being provided with an embossed stiffening rib which extends longitudinally therealong for a substantial distance.

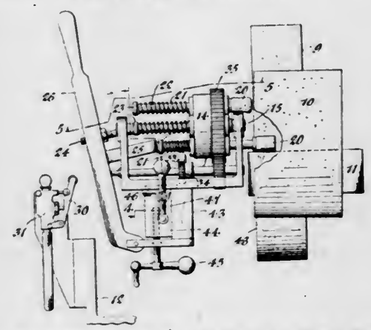
2,439,768
RECEPTACLE
Charles O. Ball, Maumee, Ohio, assignor to Owens-Illinois Glass Company, a corporation of Ohio
Application May 19, 1945, Serial No. 594,695
3 Claims. (Cl. 229—38)

1. A blank of sheet material for forming an article having a rectangular body and a closed bottom end, said blank having parallel score lines defining panels which form the said body, said panels comprising narrow panels alternating with comparatively wide panels, said blank being formed with a base score line perpendicular to and intersecting the said parallel lines to form the bottom edge of the receptacle, the said panels being extended downward below said base line to provide a foldable bottom-forming portion, the wide panels being extended beyond the narrow panels to provide extensions of greater width than those of the narrow panels, the said extensions of the narrow panels each being formed with downwardly convergent diagonal score lines extending from the base line and thereby dividing each of said extensions of the narrow panels into a central section in the form of a truncated triangle and outer triangular sections, the latter being adapted to fold back against the truncated triangles, the said extensions of the wide panels being shortened in a direction transverse to the panels, with the distance between said extended portions being substantially equal to their length, thereby permitting nesting of the blanks with their bottom ends adjoining.



2,439,769
IRONING BOARD LEG AND BRACE STRUCTURE
Earl C. Booth, Columbus, Ind., assignor to Noblitt-Sparks Industries, Inc., Columbus, Ind., a corporation of Indiana
Application April 9, 1945, Serial No. 587,366
5 Claims. (Cl. 38—117)

1. In an ironing board, a top, front and rear legs pivotally mounted on said top for swinging movement about adjacent transverse axes, said front leg comprising a pair of tubular telescoping parts, the inner one of said telescoping parts being pivotally mounted on said top on a transverse axis, links connecting the outer of said telescoping parts with said rear legs and with said top, said links extending oppositely from said front leg and being so constructed and arranged that the legs may swing from substantially coplanar positions adjacent the lower surface of the top to extended positions in which they are adapted to support the top in operative position while the outer of said telescoping parts, during such swinging, slides inwardly on the inner telescoping part, and a latch pivoted within the inner telescoping part and projecting through an opening in the wall thereof and engageable with the outer telescoping part to hold the legs in extended position.



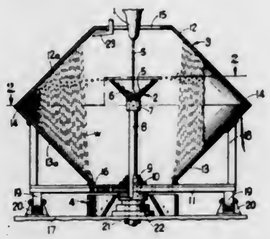
2,439,770
ELECTRICALLY INDICATING LIQUID FILLED MANOMETER
Harold A. Brown, State College, N. Mex., and Harry Gollob, El Paso, Tex.
Application January 29, 1945, Serial No. 575,164
2 Claims. (Cl. 73—398)

1. An instrument of the character described comprising, a container, a manometer tube extending through the top of the container, a compensating tube extending through the top of the container, said tubes being sealed with the top of the container, an electrically conductive fluid in the container in which the lower ends of said tubes are submerged, said compensating tube having a vent within the container above the level of said fluid, electrodes in, and sealed with the upper ends of said tubes and whose lower ends extend into the fluid in the vessel, electrical means, including a galvanometer, connected to the electrodes and also including resistors and effective to indicate the resistance of the electrodes and means for applying pressure to the surface of the fluid in the container whereby said

fluid is moved along the electrodes to vary their resistance.

2,439,771
APPARATUS FOR FACING AND TRUING ABRASIVE ARTICLES
Eric P. Dahlstrom, Niagara Falls, N. Y., assignor to The Carborundum Company, Niagara Falls, N. Y., a corporation of Delaware
Application August 1, 1946, Serial No. 687,737
9 Claims. (Cl. 51—103)

1. An apparatus adapted for use with a centerless grinding mechanism for facing, edging and truing rotatable abrading bodies, said apparatus comprising, in combination, a supporting framework, a rotatable mounting plate carrying a plurality of rotatable holding means for holding the abrading bodies to be acted upon, each of said holding means being independently capable of axial movement, spring means for independently retaining each of said holding means normally out of engagement with the centerless grinding mechanism, means for independently moving one of said holding means axially toward the flat side of the grinding wheel of said grinding mechanism to dress the flat end face of an abrading body held by said holding means, means for simultaneously moving another of said holding means and the abrading body being held thereby axially into engagement by said grinding mechanism so that said abrading body is acted upon by said grinding wheel to edge and true the curved surface of said body while it is rotatably held and centered radially against the peripheral grinding surface of said grinding wheel until truing of said abrading body is assured where-



upon said abrading body is released from its holding means to pass between the grinding wheel and feed wheel of the grinding mechanism, rest means for further supporting said abrading body in the latter part of its path of travel between the grinding wheel and the feed wheel of the centerless grinding mechanism, means for adjusting the vertical position of the aforesaid mounting plate, means for adjusting the lateral position of said mounting plate, mechanism for rotating said mounting plate through a partial revolution to move the holding means carrying the faced abrading body into position for the aforesaid edging and truing operation and to move another of the holding means carrying a newly inserted abrading body into position for the aforesaid facing operation, and means for actuating said rotating mechanism.

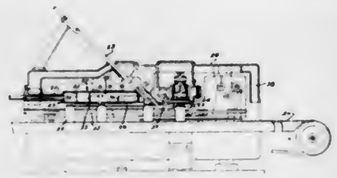
2,439,772

METHOD AND APPARATUS FOR FORMING SOLIDIFIED PARTICLES FROM MOLTEN MATERIAL

James T. Gow, Columbus, Ohio, assignor, by mesne assignments, to Steel Shot Producers, Inc., Butler, Pa., a corporation of Delaware

Application April 9, 1946, Serial No. 660,623
13 Claims. (Cl. 18—2.6)

7. Apparatus for forming solidified particles from molten material comprising a member rotatable about a vertical axis upon which a stream of the molten material is discharged and which is adapted to disintegrate the stream into globules, said member being dish-shaped, a liquid container of annular cross-section surrounding said member and adapted to contain quenching liquid for said globules, said container being rotatable about the vertical axis of said dish-shaped member, means for rotating said dish-shaped member and said container, said dish-shaped member being spaced from the side wall of said container, said side wall of said container being formed by an upper guide section of frustoconical form and an inverted frusto-conical section joining the upper section to form a particle collecting pocket, said pocket being located below the level of said dish-shaped member, said lower section extending to the bottom of the container, said bottom of the container being provided with discharge apertures.



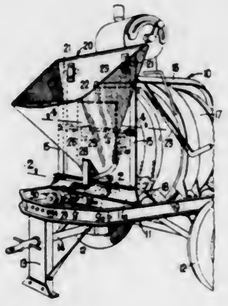
2,439,773

STEAM DISTRIBUTOR FOR VACUUMIZING CONTAINERS IN SEALING MACHINES

John Hohl and Olav Bjering, Toledo, Ohio, assignors to Owens-Illinois Glass Company, a corporation of Ohio

Application March 2, 1945, Serial No. 580,556
10 Claims. (Cl. 226—82)

1. The combination of a horizontally-traveling conveyor, a steam distributor comprising a steam chest extending lengthwise of the conveyor and spaced thereabove to provide a passage for open top containers supported on and traveling with the conveyor, the floor of said chest being substantially flat and horizontal and having a multiplicity of perforations therethrough distributed over areas extending lengthwise thereof, said floor



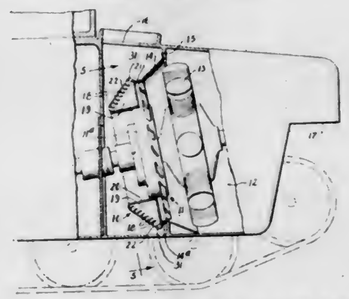
having a central imperforate section extending lengthwise thereof between said perforated areas in position to overlie the tops of the said containers, said perforated areas being symmetrically disposed on opposite sides of and defining the margins of said imperforate section.

2,439,774

CONCRETE MIXER

Gebhard Jaeger, Columbus, Ohio, assignor to The Jaeger Machine Company, Columbus, Ohio, a corporation of Ohio

Application May 1, 1946, Serial No. 666,395
3 Claims. (Cl. 259—172)



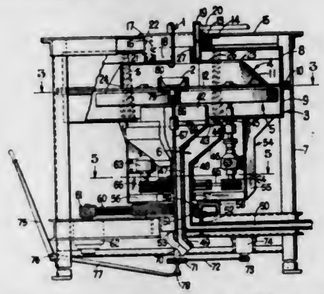
1. In a concrete mixing machine including a mixing drum and a power driven shaft for imparting rotary movement to the drum, said machine comprising a main frame and spaced upright frame members located adjacent an end of the mixing drum, a drum charging hopper swingably mounted upon the upright frame members to swing outwardly at its lower end away from the drum, said hopper having a discharge throat registering with a charge opening formed in the mixing drum, a slidable gate for controlling the passage of material through the discharge throat of said hopper, means on the gate and engageable with a part of the machine for moving the lower portion of the hopper outwardly away from the mixing drum at predetermined times while the gate is in closed position, and means operable when the gate is in open position to impart a jarring action to the hopper whereby to free the inner wall surfaces of the hopper of material accumulated thereupon.

2,439,775

HEAT EXCHANGER

Walter W. Kennedy, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a corporation of Illinois

Application June 17, 1944, Serial No. 540,843
1 Claim. (Cl. 257—259)



A combined air distributing and heat exchange unit comprising, in combination with an axial thrust fan, a plurality of hollow annular air distributing vanes of uniform cross sectional area disposed forwardly of the fan and spaced apart equidistantly along the axis of the fan as well as radially therefrom to form the frustum of a cone, said vanes being of airfoil section and bent transversely so as to act upon air entering between the vanes substantially radially of the coil to turn it axially while distributing it over and along each of the fan blades, and means interconnecting the vanes and providing an inlet and an outlet for a fluid medium.

APPARATUS FOR FORMING SOLIDIFIED PARTICLES FROM MOLTEN MATERIAL

Harold L. Klein and John L. Courtright, Columbus, Ohio, assignors, by mesne assignments, to Steel Shot Producers, Inc., Butler, Pa., a corporation of Delaware

Application April 20, 1946, Serial No. 663,652
16 Claims. (Cl. 18—2.6)

3. Apparatus for forming solidified particles from molten material comprising a member rotatable about a vertical axis upon which a stream of the molten material is discharged and which is adapted to disintegrate the stream into globules and throw them substantially horizontally therefrom, an annular liquid container surrounding said member and being rotatable about a vertical axis so that when rotated at a selected speed a revolving body of liquid will be formed which surrounds said member and which receives the globules thrown therefrom, means for rotating said member and said container, a guide wall at the interior of the container surrounding said member and being spaced outwardly therefrom, said guide wall having its lower edge disposed at a level substantially below the globue discharge level of said member so that globules thrown therefrom will strike said guide wall and be guided thereby, said guide wall being so formed as to provide a plurality of particle collecting pockets at points spaced circumferentially of said container, each of said pockets having a discharge outlet adjacent the outer side thereof, a conveyor unit disposed in said container and associated with each of said pockets for receiving the particles discharged from said pocket, said conveyer unit being rotatable about a vertical axis spaced outwardly from the axis of said container and being adapted to transfer the particles from the discharge point of the pocket through substantially 180° to a discharge point where the particles are discharged from the container, and means for rotating each of said conveyers upon rotation of said container.

2,439,777

SEPARATION OF THIOPHENES FROM HYDROCARBONS BY AZEOTROPIC DISTILLATION

George R. Lake and Josephine M. Stribley, Long Beach, Calif., assignors to Union Oil Company of California, Los Angeles, Calif., a corporation of California

No Drawing. Application September 18, 1944, Serial No. 554,722
5 Claims. (Cl. 202—42)

1. A process for the separation of a sulfur compound of the group consisting of thiophene and its homologs from a complex hydrocarbon fraction containing paraffins, naphthenes, olefins, and aromatics as well as said sulfur compound all of which hydrocarbons ordinarily distill from said fraction in the same temperature range as said sulfur compound distills therefrom which comprises azeotropically distilling said complex hydrocarbon fraction in the presence of a sufficient amount of an azeotrope former selected from the group consisting of the heterocyclic compounds containing at least one oxygen atom in the ring, the heterocyclic compounds containing at least one nitrogen atom in the ring, and the nitriles to vaporize said paraffins, naphthenes, olefins and aromatics, continuing the distillation at a temperature sufficiently high to vaporize the azeotropes of all of said hydrocarbons with said azeotrope former until said paraffins, naphthenes, olefins, and aromatics are completely vaporized together with said azeotrope former thereby leaving said sulfur compound in the residue, said azeotrope former boiling below but not more than 35° C. below said sulfur compound.

2,439,778

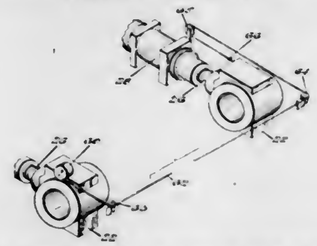
COTTER KEY

John A. MacLean, Jr., Winnetka, Ill., and Benjamin Franklin Money, Tulsa, Okla., assignors to MacLean-Fogg Lock Nut Company, Chicago, Ill., a corporation of Illinois

Application May 21, 1945, Serial No. 595,024
2 Claims. (Cl. 85—8.5)

1. A cotter key adapted to fit snugly into an appropriate cotter-receiving aperture and comprising a pair of legs of substantially semi-circular section extending in adjacent and closely spaced relationship from an integral head loop, said legs having plane surfaces facing one an-

other, the major portions of the length of each of said legs being substantially straight and aligned as viewed in a direction perpendicular to said plane surfaces, and adjacent intermediate portions of each of said legs being similarly bent



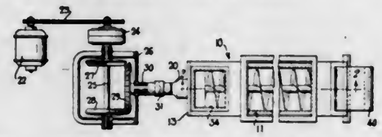
to one side in a direction crosswise of said plane surfaces to form smoothly curved offset portions adapted to serve as wedges in said cotter-receiving aperture to effect tight engagement of the key in the aperture in directions at right angles to each other.

2,439,779

APPARATUS FOR CONTROLLING PRESSURE BANDS

Grosvenor D. Marcy, Newton Highlands, Mass., assignor to Boston Woven Hose & Rubber Company, Cambridge, Mass., a corporation of Massachusetts

Application March 29, 1945, Serial No. 585,468
5 Claims. (Cl. 18—6)



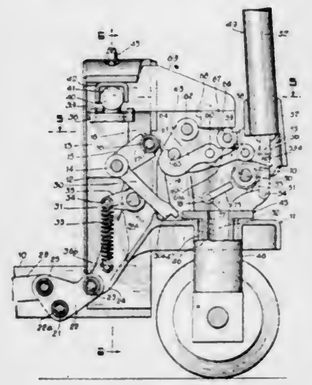
3. In a vulcanizing machine of the continuous type employing a cylindrical vulcanizing drum, an endless pressure band cooperating with an arcuate portion of the drum, a plurality of rolls cooperating with the drum to support the band and including a tensioning roll for placing the band under pressure on the drum, hydraulically operated pistons operative against the opposite ends of the tension roll in a direction tending to move them away from the drum, and means for independently controlling the operative pressure against the pistons; the combination of an indicator cooperating with one end of the tensioning roll, and a flexible cable attached to the indicator and cooperating with the other end of the tensioning roll for indicating on the indicator the relative lateral movement of said ends under the action of the pistons.

2,439,780

COOKING APPARATUS

Melvin J. Napier, Akron, Ohio, assignor to Miami Boiler & Machine Company, Inc., Akron, Ohio, a corporation of Ohio

Application February 28, 1945, Serial No. 580,234
5 Claims. (Cl. 99—443)



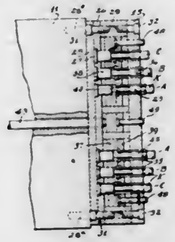
1. In cooking apparatus of the character described, the combination of a cooking chamber having a receiving opening at one end and a discharge opening at the other end, means for heating the chamber, means for intermittently forcing material through said chamber and out of said discharge opening while concurrently stirring and agitating the material by imparting limited reciprocatory movement thereto, and means for maintaining the material under pressure while in said chamber, said means for intermittently forcing material through said chamber comprising a rotating feed screw, a gear fixed to the feed screw, and a pair of constantly driven mutilated gears operatively engaging said screw gear in alternation at opposite sides of the axis thereof.

2,439,781

HAND LIFT TRUCK

George Quayle, Philadelphia, Pa., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn., a corporation of Connecticut

Application January 29, 1944, Serial No. 520,186
18 Claims. (Cl. 254—2)



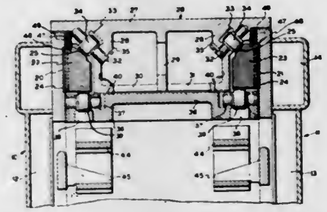
15. In a truck of the class described, a lifting head, an elevating platform, means mounting said elevating platform for lifting movement relatively to said lifting head, a steering head rotatable on said lifting head, a bell crank pivoted on said steering head and having a thrust imparting portion thereon, a boss secured as a part of said elevating platform and overlying said thrust imparting portion in all steering positions of said steering head and in all positions of said elevating platform, a steering and lifting handle pivoted on said steering head for downward swinging movement, a link pivoted on said steering handle, a hook pivoted to said link and adapted to engage a part of said bell crank to rotate said bell crank when the steering and lifting handle swings downwardly, whereby through said thrust imparting portion and boss to lift the elevating platform, said hook being biased normally out of engagement with said part but adapted to be held in engagement therewith by the stress therebetween incidental to the lifting operation, the relieving of said stress as after the elevation of said platform allowing separation of said hook from said bell crank part to contribute a free steering and lifting handle, and means whereby said link and hook are positioned automatically to effect engagement of said hook with said bell crank part when said elevating platform is in its lowered position and said steering and lifting handle is in an initial vertical position.

2,439,782

STRIPPING MEANS FOR MOLDS

William Schmid and William E. Fillmore, Toledo, Ohio, assignors to Owens-Illinois Glass Company, a corporation of Ohio

Application September 14, 1944, Serial No. 553,994
10 Claims. (Cl. 18—42)



1. A molding machine comprising a plurality of molding units each including a pair of cooperating molding elements, carriers on which the molding elements of said pairs are respectively mounted, means for withdrawing one said carrier from a molding position and thereby causing the molding elements thereon to withdraw molded articles from the other molding elements, an ejector device mounted on said last mentioned carrier, means for moving said ejector device relative to the carrier on which it is mounted, and stripper devices individual to the molding elements on said last mentioned carrier, said stripper devices being mounted separately from the ejector device for individual movement relative thereto and having contact surfaces positioned in the path of said ejector device, said surfaces being in stepped relation to the contacting surface portions of the ejector device and positioned to effect operating engagement of the ejector device with the stripper devices in succession and thereby strip the molded articles in succession from the molding elements.

2,439,783

FLASH WELDER CONSTRUCTION

Melvin M. Seeloff, Warren, Ohio, assignor to The Taylor-Winfield Corporation, Warren, Ohio, a corporation of Ohio

Application October 8, 1945, Serial No. 620,934
13 Claims. (Cl. 219—4)

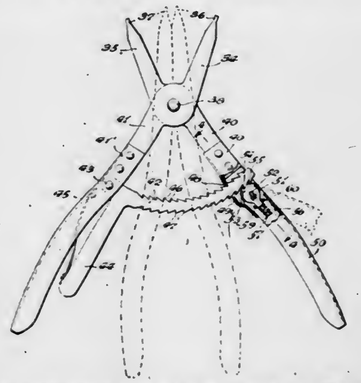
1. In an electric resistance flash-butt welder the combination of a rigid frame comprising a pair of spaced and generally parallel plate-like side members, a normally fixed platen assembly interposed between said side members adjacent one end thereof and rigidly interconnected therewith, a bracket interposed between said side members adjacent the opposite end thereof and rigidly interconnected therewith, a longitudinally extending gib rigidly mounted on the inner face of each said side members and extending horizontally between said fixed platen and said bracket but below the top edges of said side members, said gibs having horizontal bottom bearing surfaces and outwardly inclined upper bearing surfaces, said bearing surfaces extending uniformly in a longitudinal direction; and a movable platen adapted to be moved by means supported on said bracket and carrying rollers for engaging said bearing surfaces whereby said movable platen is anti-frictionally mounted and effectively guided for movement in a longitudinal direction.

2,439,784

PROCESS OF BOILING OUT STEAM BOILERS PRIOR TO PLACING THEM IN OPERATION AND COMPOSITION THEREFOR

Wendell W. Cerna, Mount Lebanon, Pa., assignor to Hall Laboratories, Inc., Pittsburgh, Pa., a corporation of Pennsylvania

No Drawing. Application December 30, 1944, Serial No. 570,797
7 Claims. (Cl. 252—135)



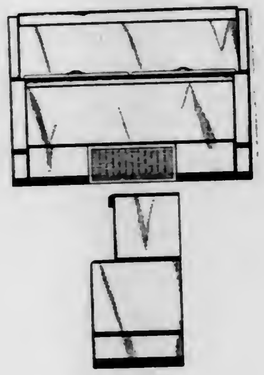
1. The process of boiling out steam boilers prior to placing them in operation for the generation of steam, which comprises circulating through the boiler a heated aqueous alkaline cleaning solution having a concentration of solids in solution of at least 3,000 parts per million by weight, said solution containing about 10% to 40% by weight of at least one alkali metal silicate selected from the group consisting of sodium silicate and potassium silicate based on the solids in solution, said solution having a caustic alkalinity of about 100 to about 2500 parts per million by weight, maintaining in said solution a ratio in equivalents of silica to total sodium oxide plus potassium oxide of not more than 1:1 and a ratio in equivalents of potassium to sodium of at least 0.5:1, said circulation being continued until the boiler is effectively cleaned, withdrawing the cleaning solution from the boiler and flushing it out with clean water.

2,439,785

TOOL FOR HANDLING OPEN-ENDED RETAINING RINGS

Rudolf Feitl, Brooklyn, and Hugo Wurzel, Bronx, N. Y., assignors to Waldes Koh-I-Noor, Inc., Long Island City, N. Y., a corporation of New York

Application February 19, 1945, Serial No. 578,633
4 Claims. (Cl. 29—229)



2. A plier-type tool of the character described comprising a pair of levers and means pivotally connecting said levers together intermediate their

ends, the ends of the levers to one side of the pivot means constituting plier tips terminating in working points and the other ends constituting handles which are adapted to be brought together upon coupling of the working points with a work piece, and means for locking said handles against self-spreading and for allowing controlled spreading of the handles including an elongated ratchet member pivotally connected to one handle and extending between said handles, the opposite longitudinal edges of said ratchet member each having a series of ratchet teeth, the teeth of one edge series being staggered relative to the teeth of the other edge series, oppositely disposed pawls and means mounting them on the other handle in fixed relation and spaced so that one or the other edge series of teeth are always engageable by one or the other pawl, spring means normally urging said ratchet member to a position wherein the teeth of one edge series thereof are engageable by one of said pawls, and an actuating arm carried by the ratchet member for actuating the same out of said position, thereby to effect release of an engaged tooth, and simultaneously to a position wherein the teeth of the other edge series are engageable by the other pawl.

DESIGNS

APRIL 13, 1948

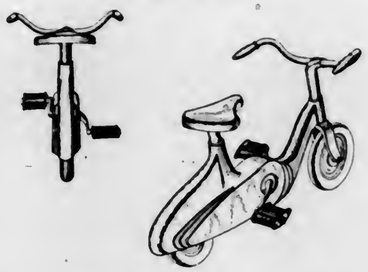
149,240
DESIGN FOR A REFRIGERATOR
Nicholas Achs, Detroit, Mich.
Application February 28, 1946, Serial No. 126,972
Term of patent 7 years
(Cl. D67—3)

The ornamental design for a refrigerator, as shown and described.

149,241
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Humbert Armao, Providence, R. I.
Application March 4, 1947, Serial No. 137,332
Term of patent 3½ years
(Cl. D45—19)

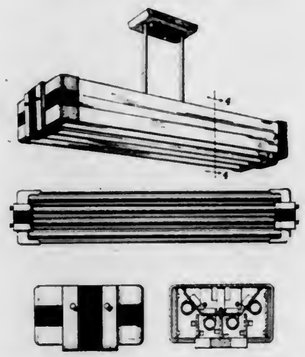
The ornamental design for a brooch or similar article as shown.

149,242
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Nicholas Barbieri, Providence, R. I., assignor to Uncas Manufacturing Company, a corporation of Rhode Island
Application June 6, 1946, Serial No. 130,456
Term of patent 14 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown and described.

149,243
DESIGN FOR A VELOCIPEDE
Willard M. Bashaw and Willis Olin Dixon, Wichita, Kans.
Application May 3, 1946, Serial No. 129,297
Term of patent 3½ years
(Cl. D34—15)

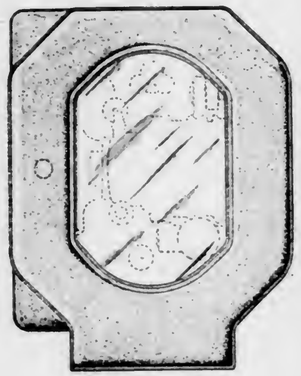


The ornamental design for a velocipede, substantially as shown.

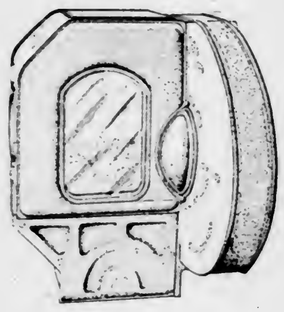
149,244
DESIGN FOR A VELOCIPEDE
Willard M. Bashaw and Willis Olin Dixon, Wichita, Kans.
Application May 3, 1946, Serial No. 129,298
Term of patent 3½ years
(Cl. D34—15)

The ornamental design for a velocipede, substantially as shown.

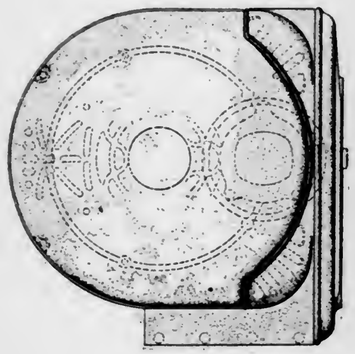
149,245
DESIGN FOR A FLUORESCENT LIGHTING FIXTURE OR SIMILAR ARTICLE
Thomas G. Beckett, Dallas, Tex.
Application September 14, 1946, Serial No. 133,325
Term of patent 7 years
(Cl. D48—23)



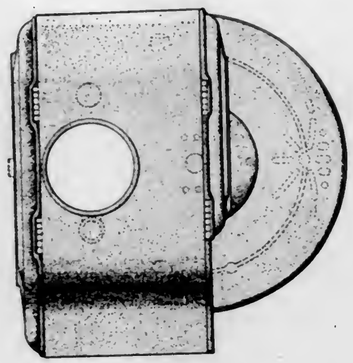
The ornamental design for a fluorescent lighting fixture or similar article, substantially as shown.



149,246
DESIGN FOR A BRAID
Leo Beer, Kew Gardens, and Herman Stern, New York, N. Y.
Application June 10, 1947, Serial No. 139,564
Term of patent 7 years
(Cl. D3—32)



The ornamental design for a braid, substantially as shown and described.

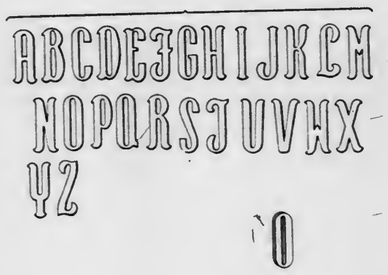


149,247
DESIGN FOR A HOUSING FOR A MOTION-PICTURE PROJECTOR OR SIMILAR ARTICLE
Ewald Boecking, Great Kills, Staten Island, N. Y., assignor to Manufacturers Machine & Tool Co., Inc., Mount Vernon, N. Y., a corporation of New York
Application July 30, 1947, Serial No. 140,607
Term of patent 14 years
(Cl. D61—1)

149,247—Continued

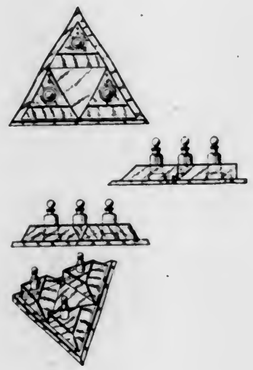
The ornamental design for a housing for a motion-picture projector or similar article, as shown and described.

149,248
DESIGN FOR A DESK ORNAMENT
Violet Brown, Wrentham, Mass., assignor to R. M. Jordan & Company, Inc., a corporation of Rhode Island
Application September 10, 1946, Serial No. 133,213
Term of patent 3½ years
(Cl. D29—23)



The ornamental design for a desk ornament, substantially as shown.

149,249
DESIGN FOR A DESK ORNAMENT
Violet Brown, Wrentham, Mass., assignor to R. M. Jordan & Company, Inc., a corporation of Rhode Island
Application September 10, 1946, Serial No. 133,217
Term of patent 3½ years
(Cl. D29—23)

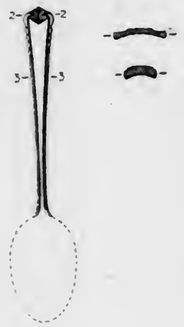


The ornamental design for a desk ornament, substantially as shown.

149,250
DESIGN FOR AN ALPHABET FOR FORMING MONOGRAMS OR THE LIKE
Michael Chernow, New York, N. Y.
Application November 26, 1946, Serial No. 135,093
Term of patent 14 years
(Cl. D64—12)

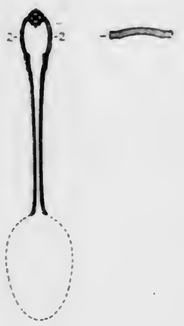
The ornamental design for an alphabet for forming monograms or the like, substantially as shown and described.

149,251
DESIGN FOR A COMBINED DISPLAY STAND AND PERFUME BOTTLES
Victor Civita, New York, N. Y., assignor to Consolidated Cosmetics, Chicago, Ill., a firm
Application July 15, 1946, Serial No. 131,598
Term of patent 3½ years
(Cl. D80—9)



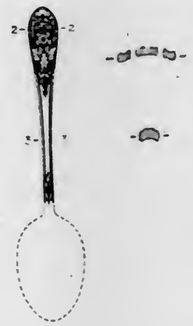
The ornamental design for a combined display stand and perfume bottles, substantially as shown.

149,252
DESIGN FOR A PERFUME DIFFUSER
Henry Cobbs, Little River, Fla.
Application February 11, 1947, Serial No. 136,852
Term of patent 14 years
(Cl. D16—2)



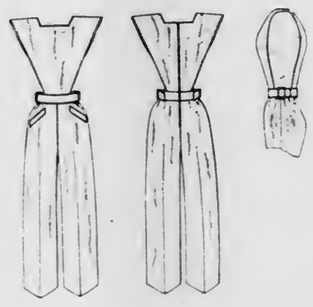
The ornamental design for a perfume diffuser, as shown.

149,253
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
Edward J. Conroy, Meriden, Conn., assignor to The International Silver Company, Meriden, Conn., a corporation of Connecticut
Application April 14, 1947, Serial No. 138,343
Term of patent 14 years
(Cl. D54—12)



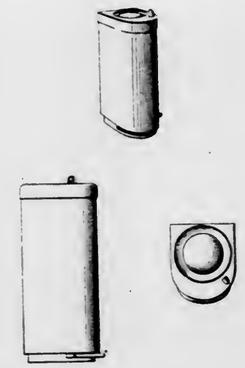
The ornamental design for a spoon or other article of flatware, substantially as shown and described.

149,254
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
Edward J. Conroy, Meriden, Conn., assignor to The International Silver Company, Meriden, Conn., a corporation of Connecticut
Application April 14, 1947, Serial No. 138,344
Term of patent 14 years
(Cl. D54—12)



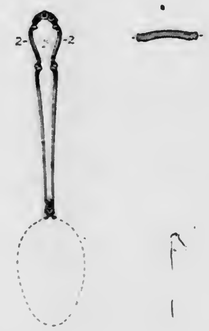
The ornamental design for a spoon or other article of flatware, substantially as shown and described.

149,255
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
Edward J. Conroy, Meriden, Conn., assignor to The International Silver Company, Meriden, Conn., a corporation of Connecticut
Application April 16, 1947, Serial No. 138,436
Term of patent 14 years
(Cl. D54—12)



The ornamental design for a spoon or other article of flatware, substantially as shown and described.

149,256
DESIGN FOR A LADY'S ONE-PIECE OVERALL
Helen C. Cookman, New York, N. Y., assignor to Mary Ellen Cookman, New York, N. Y.
Application March 26, 1946, Serial No. 127,957
Term of patent 7 years
(Cl. D3—17)

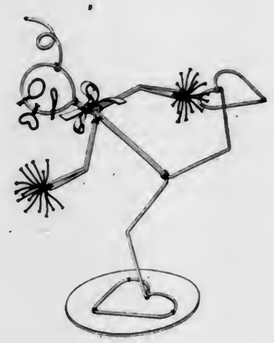


The ornamental design for a lady's one-piece overall, as shown.

149,257
DESIGN FOR A WATER COOLER OR SIMILAR ARTICLE
James J. Corey, Elmhurst, N. Y.
Application April 12, 1946, Serial No. 128,524
Term of patent 14 years
(Cl. D67—4)

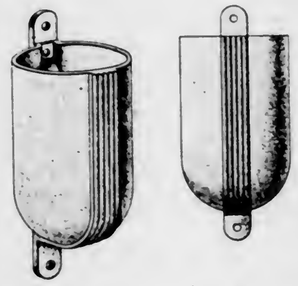
The ornamental design for a water cooler or similar article, substantially as shown.

149,258
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
Alexandra A. Dabrowski, Meriden, Conn., assignor to The International Silver Company, Meriden, Conn., a corporation of Connecticut
Application April 10, 1947, Serial No. 138,290
Term of patent 14 years
(Cl. D54—12)



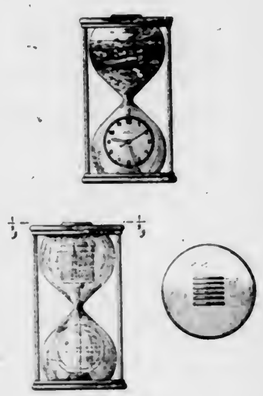
The ornamental design for a spoon or other article of flatware, substantially as shown and described.

149,259
DESIGN FOR A GRATER
Elmer H. Daniels, Pasadena, Calif., assignor to Na Mac Products Corp., Los Angeles, Calif., a corporation of California
Application August 13, 1946, Serial No. 132,482
Term of patent 14 years
(Cl. D89—1)



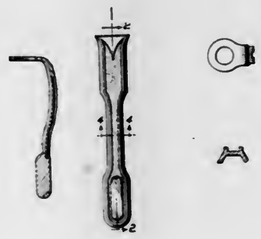
The ornamental design for a grater, as shown.

149,260
DESIGN FOR A FIGURINE
Louella C. Danz, Detroit, Mich.
Application February 28, 1947, Serial No. 137,226
Term of patent 14 years
(Cl. D29—23)



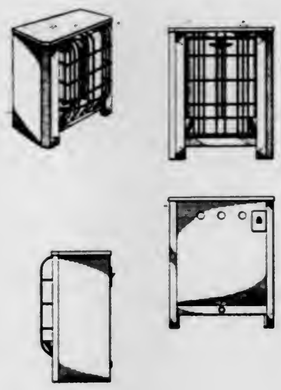
The ornamental design for a figurine, as shown.

149,261
DESIGN FOR A HOLDER FOR A CYLINDRICAL FIRE EXTINGUISHER OR SIMILAR ARTICLE
Armand De Mott, Fords, N. J., assignor to Amity Manufacturing Corp., Perth Amboy, N. J., a corporation of New Jersey
Application October 2, 1946, Serial No. 133,695
Term of patent 14 years
(Cl. D16—2)



The ornamental design for a holder for a cylindrical fire extinguisher or similar article, as shown.

149,262
DESIGN FOR AN ILLUMINABLE HOROLOGICAL INSTRUMENT OR SIMILAR ARTICLE
Royal Doolin, Newark, N. J.
Application April 23, 1947, Serial No. 138,554
Term of patent 14 years
(Cl. D42—7)



The ornamental design for an illuminable horological instrument or similar article, as shown.

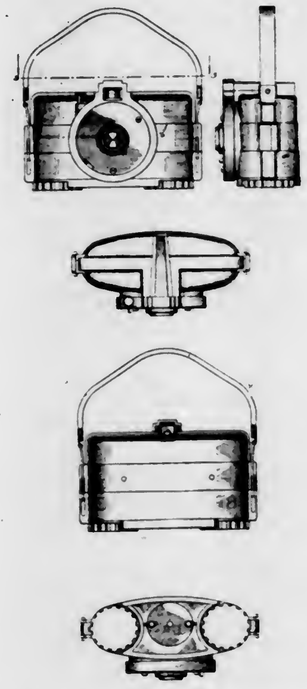
149,263
DESIGN FOR A FOUNTAIN PEN CLIP OR SIMILAR ARTICLE
Fred Ferber, Englewood, N. J., assignor to Rolla Ball Pen Corp., New York, N. Y., a corporation of New York
Application June 1, 1946, Serial No. 130,325
Term of patent 3½ years
(Cl. D74—1)

The ornamental design for a fountain pen clip or similar article, as shown.

149,264
DESIGN FOR AN ELECTRIC HEATER
Raymond L. Fitch, West Los Angeles, Calif., assignor to The Firan Co., Santa Monica, Calif., a corporation of California
Application July 8, 1946, Serial No. 131,361
Term of patent 14 years
(Cl. D81—10)

The ornamental design for an electric heater, substantially as shown.

149,265
DESIGN FOR AN ASH TRAY
Lanny Grey, New York, N. Y.
Application September 25, 1946, Serial No. 133,552
Term of patent 14 years
(Cl. D85—2)

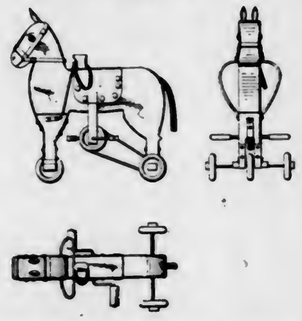


The ornamental design for an ash tray, as shown.

149,266
DESIGN FOR A PORTABLE ELECTRIC SPACE HEATER
Wayne A. Gustafson, Minneapolis, Minn., assignor to M. S. Aviation Co., Minneapolis, Minn., a partnership comprised of John E. Magner and Warren J. Schneider, both of Minneapolis, Minn.
Application July 5, 1946, Serial No. 131,330
Term of patent 7 years
(Cl. D81—10)

The ornamental design for a portable electric space heater, as shown.

149,267
DESIGN FOR A PHOTOGRAPHIC FILM CAMERA
Julius A. Henne, Rochester, N. Y., assignor to Webster Industries, Inc., Webster, N. Y., a corporation of New York
Application March 20, 1947, Serial No. 137,763
Term of patent 14 years
(Cl. D61—1)

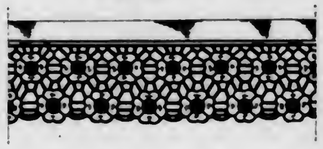


The ornamental design for photographic film camera, as shown.

149,268
DESIGN FOR A PERFUME BOTTLE STOPPER OR SIMILAR ARTICLE
John Herbst, New York, N. Y.
Application June 8, 1946, Serial No. 130,526
Term of patent 3½ years
(Cl. D58—10)

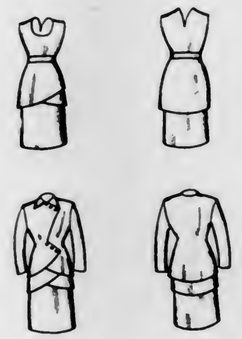
The ornamental design for a perfume bottle stopper or similar article, substantially as shown and described.

149,269
DESIGN FOR A HOBBYHORSE
Harold J. Hiller, Lancaster, Ohio
Application November 14, 1946, Serial No. 134,770
Term of patent 14 years
(Cl. D34—15)



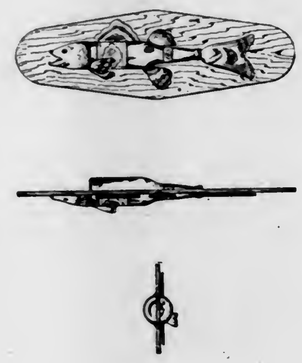
The ornamental design for a hobbyhorse, substantially as shown.

149,270
DESIGN FOR A CHATELAINE BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 18, 1947, Serial No. 136,988
Term of patent 7 years
(Cl. D45—19)



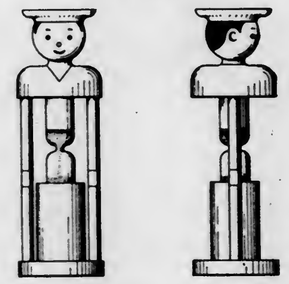
The ornamental design for a chatelaine brooch or similar article, substantially as shown.

149,271
DESIGN FOR AN EMBROIDERED TRIMMING
Herman Kaufman, New York, N. Y.
Application April 21, 1947, Serial No. 138,510
Term of patent 7 years
(Cl. D92—1)



The ornamental design for an embroidered trimming, substantially as shown.

149,272
DESIGN FOR A DRESS ENSEMBLE
Joe Kipness, New York, N. Y., assignor to Joe Kipness, Inc., a corporation of New York
Application June 26, 1947, Serial No. 139,935
Term of patent 3½ years
(Cl. D3—26)



The ornamental design for a dress ensemble, substantially as shown.

149,273
DESIGN FOR AN ADVERTISING PLAQUE
Charles Kompas, Milwaukee, Wis.
Application June 3, 1946, Serial No. 130,362
Term of patent 7 years
(Cl. D1—12)

The ornamental design for an advertising plaque, substantially as shown.

149,274
DESIGN FOR A SANDGLASS
Marianne L. Lavine, Bala-Cynwyd, Pa.
Application December 4, 1946, Serial No. 135,246
Term of patent 3½ years
(Cl. D42—7)

The ornamental design for a sandglass, substantially as shown.

149,275
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
George J. Lederer, Providence, R. I.
Application March 18, 1947, Serial No. 137,709
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, as shown.

149,276
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
George J. Lederer, Providence, R. I.
Application March 18, 1947, Serial No. 137,711
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, as shown.

149,277
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
George J. Lederer, Providence, R. I.
Application March 18, 1947, Serial No. 137,714
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, as shown.

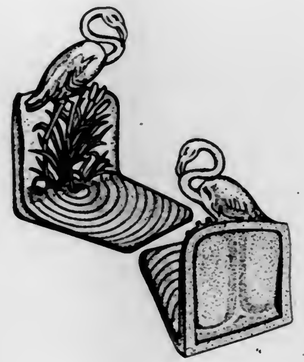
149,278
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
George J. Lederer, Providence, R. I.
Application March 18, 1947, Serial No. 137,715
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, as shown.

149,279
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
George J. Lederer, Providence, R. I.
Application March 18, 1947, Serial No. 137,718
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, as shown.

149,280
DESIGN FOR A BOOK END
Alexander Leva, New York, N. Y.
Application November 20, 1946, Serial No. 134,947
Term of patent 3½ years
(Cl. D33—1)

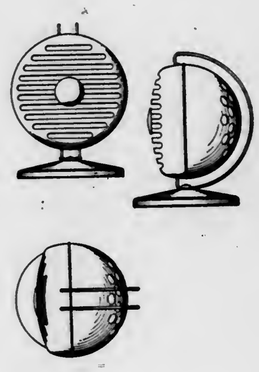


The ornamental design for a book end, substantially as shown.

149,281
DESIGN FOR A BOOK END
Alexander Leva, New York, N. Y.
Application November 20, 1946, Serial No. 134,948
Term of patent 3½ years
(Cl. D33—1)

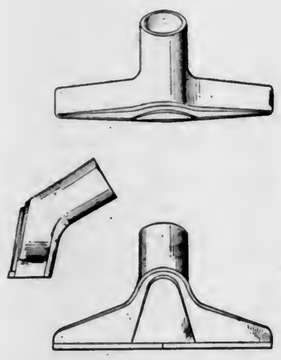
The ornamental design for a book end, substantially as shown.

149,282
DESIGN FOR A BOOK END
Alexander Leva, New York, N. Y.
Application November 20, 1946, Serial No. 134,950
Term of patent 3½ years
(Cl. D33—1)



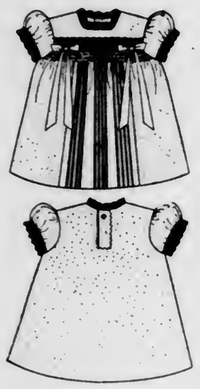
The ornamental design for a book end, substantially as shown.

149,283
DESIGN FOR A BOOK END
Alexander Leva, New York, N. Y.
Application November 20, 1946, Serial No. 134,951
Term of patent 3½ years
(Cl. D33—1)



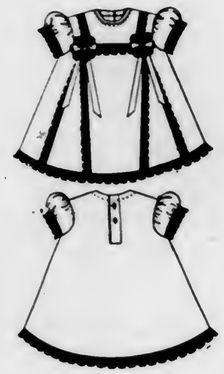
The ornamental design for a book end, substantially as shown.

149,284
DESIGN FOR AN ELECTRIC HEATER
Joshua Gordon Lippincott, New York, N. Y., assignor to Victor Electric Products, Inc., Cincinnati, Ohio, a corporation of Ohio
Application April 16, 1946, Serial No. 128,641
Term of patent 14 years
(Cl. D81—10)



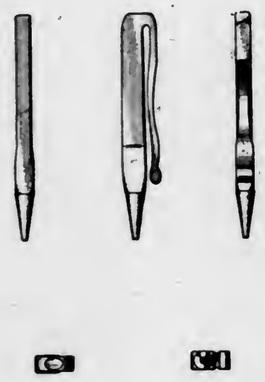
The ornamental design for an electric heater, as shown.

149,285
DESIGN FOR A VACUUM CLEANER NOZZLE
Joshua G. Lippincott, Scarsdale, N. Y., assignor to Lewyt Corporation, Brooklyn, N. Y., a corporation of New York
Application December 28, 1946, Serial No. 135,816
Term of patent 14 years
(Cl. D9—2)



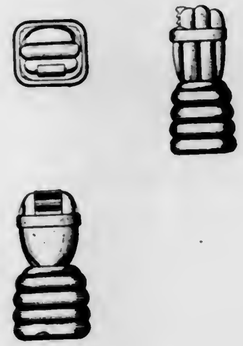
The ornamental design for a vacuum cleaner nozzle, as shown and described.

149,286
DESIGN FOR A DRESS
Rose Maliuk, Cliffside Park, N. J.
Application July 16, 1947, Serial No. 140,316
Term of patent 3½ years
(Cl. D3—26)



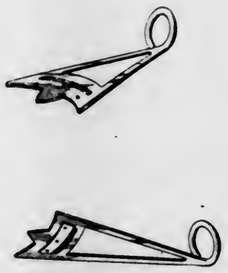
The ornamental design for a dress, substantially as shown.

149,287
DESIGN FOR A DRESS
Rose Maliuk, Cliffside Park, N. J.
Application July 16, 1947, Serial No. 140,317
Term of patent 3½ years
(Cl. D3—26)



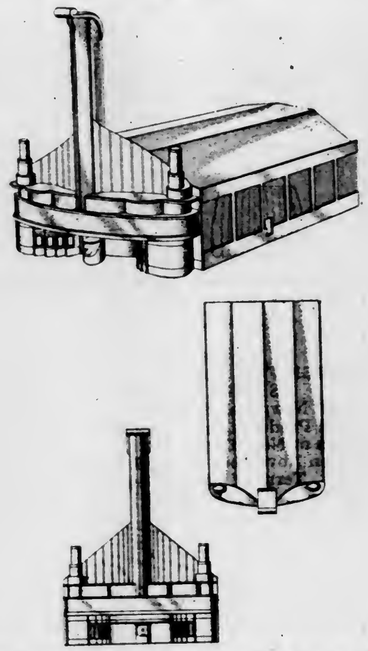
The ornamental design for a dress, substantially as shown.

149,288
DESIGN FOR A COMBINED TIE CLIP AND PENCIL
Richard B. Maxwell, Brooklyn, N. Y.
Application September 9, 1946, Serial No. 133,200
Term of patent 7 years
(Cl. D74—24)



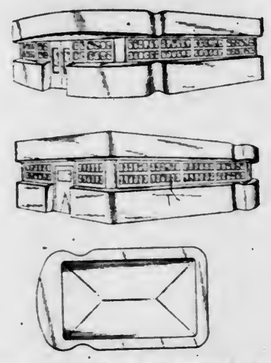
The ornamental design for a combined tie clip and pencil, substantially as shown.

149,289
DESIGN FOR AN ATOMIZER OR THE LIKE
Clara E. McNutt, Toledo, Ohio
Application April 23, 1947, Serial No. 138,560
Term of patent 14 years
(Cl. D83—1)



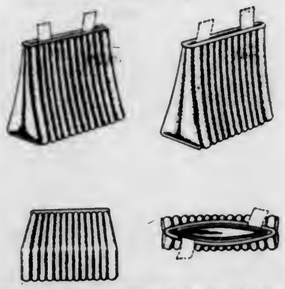
The ornamental design for an atomizer or the like, as shown and described.

149,290
DESIGN FOR A VEGETABLE AND FRUIT PEELER
Laura R. Meyran, Fresno, Calif., assignor of one-half to Sterling N. Schein and Forrest Lark, both of Fresno, Calif.
Application September 16, 1946, Serial No. 133,354
Term of patent 3½ years
(Cl. D22—3)



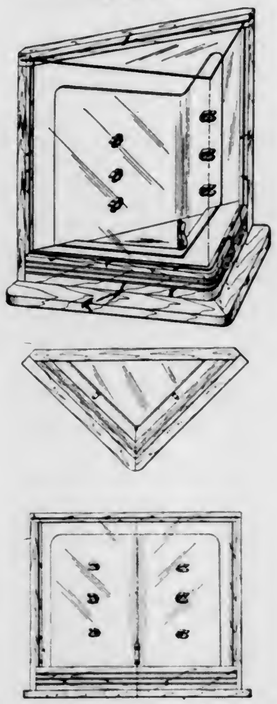
The ornamental design for a vegetable and fruit peeler, as shown.

149,291
DESIGN FOR A THEATRE
Carl G. Moeller, Los Angeles, Calif., assignor to Fox West Coast Theatres Corporation, Los Angeles, Calif., a corporation of Delaware
Application August 13, 1946, Serial No. 132,471
Term of patent 14 years
(Cl. D13—1)



The ornamental design for a theatre, as shown and described.

149,292
DESIGN FOR A BUILDING
Arthur T. Moore, Fayetteville, N. C.
Application November 4, 1946, Serial No. 134,512
Term of patent 14 years
(Cl. D13—1)



The ornamental design for a building, substantially as shown.

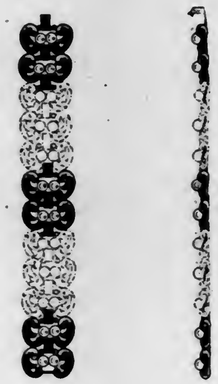
149,293
DESIGN FOR A HANDBAG OR SIMILAR ARTICLE
Harry Morris, Chicago, Ill.
Application April 15, 1947, Serial No. 138,399
Term of patent 14 years
(Cl. D87—3)

The ornamental design for a handbag or similar article, substantially as shown and described.

149,294
DESIGN FOR A DISPLAY STAND OR SIMILAR ARTICLE
Monroe H. Newman, Brooklyn, N. Y., assignor to Duranol Products, Inc., Brooklyn, N. Y., a corporation of New York
Application November 19, 1946, Serial No. 134,899
Term of patent 3½ years
(Cl. D80—9)

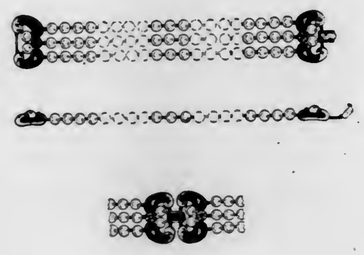
The ornamental design for a display stand or similar article, as shown.

149,295
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 26, 1947, Serial No. 140,529
Term of patent 7 years
(Cl. D45—19)



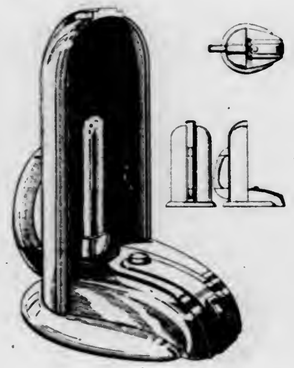
The ornamental design for a brooch or similar article, substantially as shown.

149,296
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 29, 1947, Serial No. 140,593
Term of patent 7 years
(Cl. D45—16)



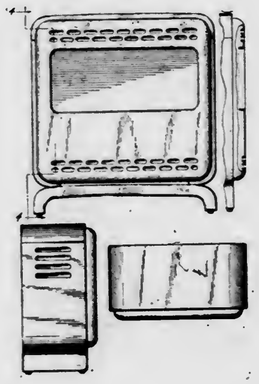
The ornamental design for a necklace or similar article, substantially as shown.

149,297
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman and Fishel, Inc., New York, N. Y.
Application August 6, 1947, Serial No. 140,719
Term of patent 7 years
(Cl. D45—4)



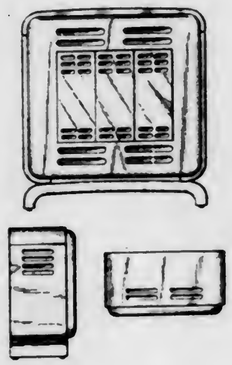
The ornamental design for a bracelet or similar article, substantially as shown and described.

149,298
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman and Fishel, Inc., New York, N. Y.
Application August 6, 1947, Serial No. 140,720
Term of patent 7 years
(Cl. D45—4)



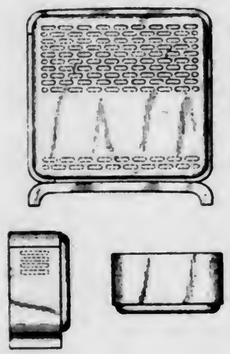
The ornamental design for a bracelet or similar article, substantially as shown and described.

149,299
DESIGN FOR AN ELECTRIC IRRADIATION DEVICE OR THE LIKE
Jules Radinsky, Seattle, Wash.
Application May 6, 1946, Serial No. 129,360
Term of patent 3½ years
Cl. D48—20)



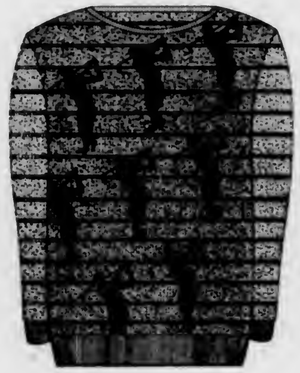
The ornamental design for an electric irradiation device, or the like, as shown.

149,300
DESIGN FOR A SPACE HEATER CASING
Jean O. Reinecke, Oak Park, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a corporation of New York
Application May 24, 1946, Serial No. 130,036
Term of patent 3½ years
(Cl. D81—19)



The ornamental design for a space heater casing, substantially as shown and described.

149,301
DESIGN FOR A SPACE HEATER CASING
Jean O. Reinecke, Oak Park, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a corporation of New York
Application May 24, 1946, Serial No. 130,038
Term of patent 3½ years
(Cl. D81—19)



The ornamental design for a space heater casing, substantially as shown and described.

149,302
DESIGN FOR A SPACE HEATER CASING
Jean O. Reinecke, Oak Park, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a corporation of New York
Application June 10, 1946, Serial No. 130,567
Term of patent 3½ years
(Cl. D81—19)

The ornamental design for a space heater casing, substantially as shown and described.

149,303
DESIGN FOR A SWEATER
John Rosenfeld, Philadelphia, Pa.
Application September 4, 1946, Serial No. 133,041
Term of patent 3½ years
(Cl. D3—4)

The ornamental design for a sweater, substantially as shown and described.

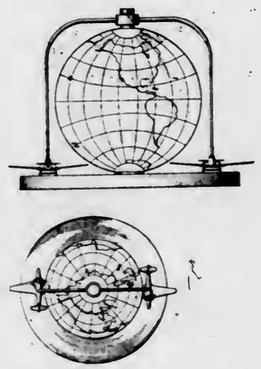
149,304
DESIGN FOR A SWEATER
John Rosenfeld, Philadelphia, Pa.
Application September 4, 1946, Serial No. 133,042
Term of patent 3½ years
(Cl. D3—4)

The ornamental design for a sweater, substantially as shown and described.

149,305
DESIGN FOR A SWEATER
John Rosenfeld, Philadelphia, Pa.
Application September 4, 1946, Serial No. 133,043
Term of patent 3½ years
(Cl. D3—4)

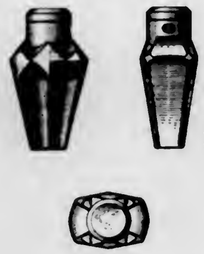
The ornamental design for a sweater, substantially as shown and described.

149,306
DESIGN FOR A SWEATER
John Rosenfeld, Philadelphia, Pa.
Application September 4, 1946, Serial No. 133,044
Term of patent 3½ years
(Cl. D3—4)



The ornamental design for a sweater, substantially as shown and described.

149,307
DESIGN FOR A SWEATER
John Rosenfeld, Philadelphia, Pa.
Application September 4, 1946, Serial No. 133,045
Term of patent 3½ years
(Cl. D3—4)



The ornamental design for a sweater, substantially as shown and described.

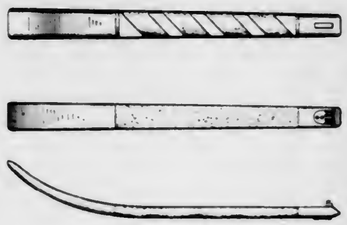
149,308
DESIGN FOR AN AIRPLANE TOY
Theodore A. Schaad, Detroit, Mich.
Application April 10, 1946, Serial No. 128,464
Term of patent 14 years
(Cl. D34—15)

The ornamental design for an airplane toy, substantially as shown.

149,309
DESIGN FOR AN ATOMIZER
Victor R. Schlesinger, Los Angeles, Calif.
Application November 19, 1946, Serial No. 134,903
Term of patent 3½ years
(Cl. D83—1)

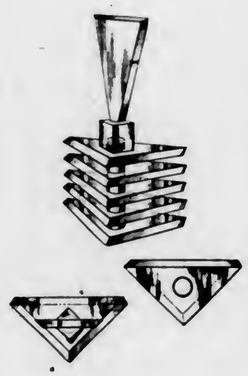
The ornamental design for an atomizer, as shown.

149,310
DESIGN FOR A WATER KETTLE
Peter Schlumbohm, New York, N. Y.
Application October 7, 1946, Serial No. 133,814
Term of patent 14 years
(Cl. D44—25)



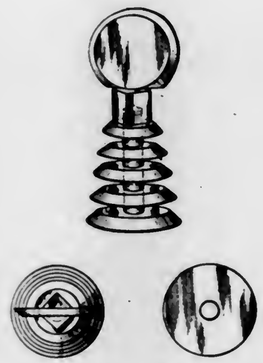
The ornamental design for a water kettle, as shown.

149,311
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Walter G. Schreiber, New York, N. Y.
Application March 15, 1947, Serial No. 137,618
Term of patent 3½ years
(Cl. D45—19)



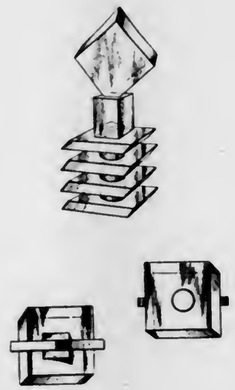
The ornamental design for a brooch or similar article, substantially as shown.

149,312
DESIGN FOR A TEMPLE MEMBER FOR SPECTACLES OR SIMILAR ARTICLES
Morris Schwartz, Sunnyside, N. Y.
Application February 27, 1947, Serial No. 137,196
Term of patent 3½ years
(Cl. D57—1)



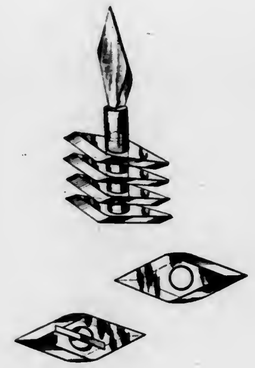
The ornamental design for a temple member for spectacles or similar articles, as shown.

149,313
DESIGN FOR A PERFUME BOTTLE
Beatrice A. Shapiro, Chicago, Ill.
Application April 27, 1946, Serial No. 129,052
Term of patent 3½ years
(Cl. D58—6)



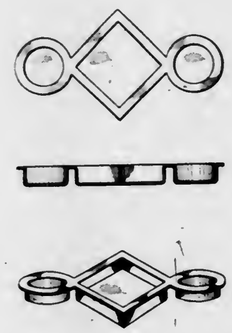
The ornamental design for a perfume bottle, as shown.

149,314
DESIGN FOR A PERFUME BOTTLE
Beatrice A. Shapiro, Chicago, Ill.
Application April 27, 1946, Serial No. 129,053
Term of patent 3½ years
(Cl. D58—8)



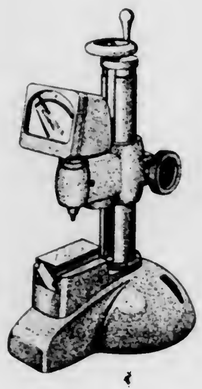
The ornamental design for a perfume bottle, as shown.

149,315
DESIGN FOR A PERFUME BOTTLE
Beatrice A. Shapiro, Chicago, Ill.
Application April 27, 1946, Serial No. 129,054
Term of patent 3½ years
(Cl. D58—6)



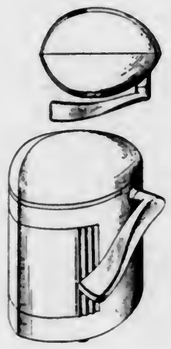
The ornamental design for a perfume bottle, as shown.

149,316
DESIGN FOR A PERFUME BOTTLE
Beatrice A. Shapiro, Chicago, Ill.
Application April 27, 1946, Serial No. 129,055
Term of patent 3½ years
(Cl. D58—6)



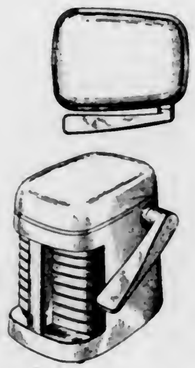
The ornamental design for a perfume bottle, as shown.

149,317
DESIGN FOR A SANDWICH TRAY OR SIMILAR ARTICLE
Lenore Sonn, New Haven, Conn.
Application May 23, 1946, Serial No. 130,025
Term of patent 7 years
(Cl. D44—10)



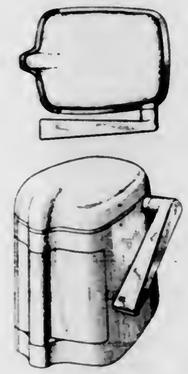
The ornamental design for a sandwich tray or similar article as shown.

149,318
DESIGN FOR A HEIGHT MEASURING GAUGE
John E. Sonnhalter, South Euclid, Ohio, assignor, by mesne assignments, to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio, a corporation of Delaware
Application March 2, 1946, Serial No. 127,036
Term of patent 3½ years
(Cl. D52—1)



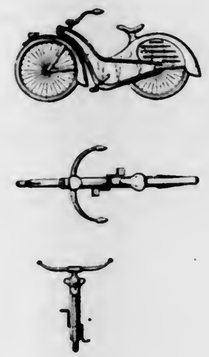
The ornamental design for a height measuring gauge, substantially as shown.

149,319
DESIGN FOR A JUICE EXTRACTOR
Albert M. Travis, Kansas City, Kans.
Application November 4, 1946, Serial No. 134,505
Term of patent 14 years
(Cl. D89—1)



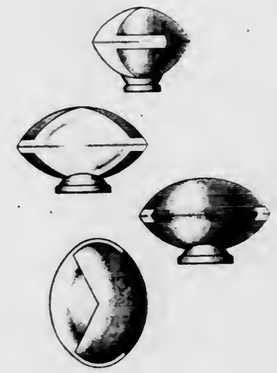
The ornamental design for a juice extractor, substantially as shown.

149,320
DESIGN FOR A JUICE EXTRACTOR
Albert M. Travis, Kansas City, Kans.
Application November 4, 1946, Serial No. 134,506
Term of patent 14 years
(Cl. D89—1)



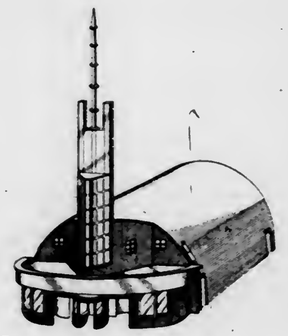
The ornamental design for a juice extractor, substantially as shown.

149,321
DESIGN FOR A JUICE EXTRACTOR
Albert M. Travis, Kansas City, Kans.
Application November 4, 1946, Serial No. 134,507
Term of patent 14 years
(Cl. D89—1)



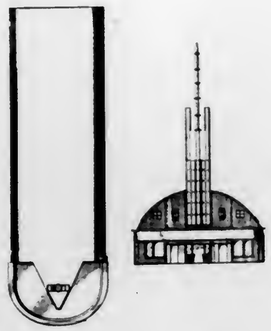
The ornamental design for a juice extractor, substantially as shown.

149,322
DESIGN FOR A BICYCLE
Otto A. Trnka, Saugerties, N. Y.
Application June 10, 1946, Serial No. 130,575
Term of patent 14 years
(Cl. D90—8)



The ornamental design for a bicycle, as shown.

149,323
DESIGN FOR A LIGHT FIXTURE
Charles A. Trowbridge, Roxborough, Pa., assignor to Taber Associates, Philadelphia, Pa., a firm composed of Philip Taber and Richard C. Paige
Application February 6, 1947, Serial No. 136,721
Term of patent 3½ years
(Cl. D72—1)



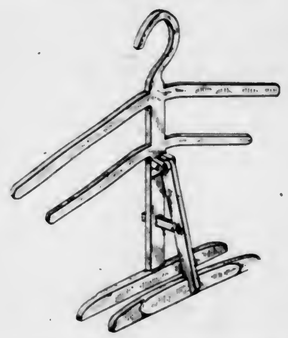
The ornamental design for a light fixture, substantially as shown.

149,324
DESIGN FOR A THEATRE
Albert R. Walker, Los Angeles, Calif., assignor to Fox West Coast Theatres Corporation, Los Angeles, Calif., a corporation of Delaware
Application September 9, 1946, Serial No. 133,191
Term of patent 14 years
(Cl. D13—1)

149,324—Continued

The ornamental design for a theatre, as shown and described.

149,325
DESIGN FOR A DINNER PLATE OR SIMILAR ARTICLE
John T. Wigley, Syracuse, N. Y., assignor to Onondaga Pottery Company, Syracuse, N. Y., a corporation of New York
Application February 26, 1946, Serial No. 126,920
Term of patent 14 years
(Cl. D44—15)



The ornamental design for a dinner plate or similar article, as shown and described.

149,326
DESIGN FOR A TRAY
Grant Wortman, Chicago, Ill.
Application April 16, 1946, Serial No. 128,647
Term of patent 3½ years
(Cl. D44—10)

The ornamental design for a tray, as shown and described.

149,327
DESIGN FOR A GARMENT HANGER
Hugh B. Young, Denver, Colo., assignor to Triplex, Inc., a corporation of Colorado
Application June 21, 1947, Serial No. 139,853
Term of patent 7 years
(Cl. D80—8)

The ornamental design for a garment hanger, as shown.

Bilfred Enterprises, Los Angeles, Calif. Periodical published at intervals. Serial No. 508,965, Apr. 20. Class 38.

Bird & Sons, Inc., East Walpole, Mass. Asphalt shingles. Serial No. 532,905, Apr. 20. Class 12.

Bishop, Stephen, Waban, Mass. Educational and amusement device. Serial No. 514,883, Apr. 20. Class 22.

Berlage, J., Co., Inc., New York, N. Y. Methyl bromide. Serial No. 510,006, Apr. 20. Class 6.

Bettner, Louis C., Seattle, Wash. Chopping boards. Serial No. 515,652, Apr. 20. Class 23.

Blancard & Co., Inc., New York, N. Y. Finger rings. Serial No. 534,081, Apr. 20. Class 28.

Brac, S. A., Soleure, Switzerland. Watches and parts thereof. Serial No. 516,950, Apr. 20. Class 27.

Bryte Spot Products: *See*—
Lewis, Rae W.

C. B. G. Development Co.: *See*—
Goodstein, Charles B.

Cal-Pro Laboratories Inc., Los Angeles, Calif. Scientifically compounded preparation for relief of hyperacidity, ulcerations, etc. Serial No. 534,509, Apr. 20. Class 6.

Central Soya Company, Inc., Fort Wayne, Ind. Livestock and poultry feeds and feed concentrates. Serial No. 505,557, Apr. 20. Class 46.

Central Soya Company, Inc., Fort Wayne, Ind. Soy bean flour, lecithin for food purposes, toasted expanded soy bean material, etc. Serial No. 505,558, Apr. 20. Class 46.

Charbach, R. F., Co., Chicago, Ill. Refrigerator deodorant. Serial No. 515,656, Apr. 20. Class 6.

Chicago Belting Company, Chicago, Ill. Leather belting. Serial No. 532,389, Apr. 20. Class 35.

Church & Dwight Co., Inc., New York, N. Y. Baking powder. Serial No. 526,749, Apr. 20. Class 46.

Ciba Pharmaceutical Products, Inc., Summit, N. J. Preparation for use in sex hormone therapy. Serial No. 516,396, Apr. 20. Class 6.

Clark, J. R., Company, The, Minneapolis, Minn. Clothes drying racks. Serial No. 530,378, Apr. 20. Class 24.

Clock-Wise Fashions: *See*—
Miller, Gerald F.

Coastal Oil Company, Newark, N. J. Fuel oil and bunker oil, for heating, burning and internal combustion, and for both domestic and industrial use. Serial No. 520,016, Apr. 20. Class 15.

Cohen, Bertha H., Stelton, N. J. Cold cream, hand cream, face cream, etc. Serial No. 515,698, Apr. 20. Class 6.

Colibri Lighters Limited, London, England. Ash trays, cigar and cigarette cases and boxes, combination cigarette cases and lighters, etc. Serial No. 496,370, Apr. 20. Class 8.

Columbia Ribbon & Carbon Manufacturing Company, Inc., Glen Cove, N. Y. Ink eradicator. Serial No. 516,956, Apr. 20. Class 6.

Compass Manufacturing Co.: *See*—
Porte Manufacturing Co. Inc.

Conn, C. G. Ltd., Elkhart, Ind. Stroboscopic apparatus for measuring the frequencies of sounds. Serial No. 496,767, Apr. 20. Class 26.

Consolidated Millinery Company, Chicago, Ill. Ladies' and children's hats. Serial No. 505,467, Apr. 20. Class 39.

Coralite Dental Products Company, Chicago, Ill. Dental impression materials of alginate composition. Serial No. 512,579, Apr. 20. Class 44.

Cribben and Sexton Company, Chicago, Ill. Stoves, ranges, and hot-air furnaces. Serial No. 531,776, Apr. 20. Class 34.

Custer, Benjamin L., Marietta, Ga. Hosiery for infants and children. Serial No. 522,989, Apr. 20. Class 39.

Davio, Joseph C., Agawam, Mass. Personal leather goods. Serial No. 521,116, Apr. 20. Class 3.

Davis-Cleaver Produce Company, Quincy, Ill. Dressed eviscerated poultry. Serial No. 508,273, Apr. 20. Class 46.

Dow Chemical Company, The, Midland, Mich. Aromatic chemical. Serial Nos. 540,051–2, Apr. 20. Class 6.

Dry Air Products Corp., Orlando, Fla. Silica gel. Serial No. 526,514, Apr. 20. Class 6.

Duke Manufacturing Co., St. Louis, Mo. Pastry counters, bakers' tables, setup tables, etc. Serial No. 527,170, Apr. 20. Class 32.

Durham Hosiery Mills, Durham, N. C. Hosiery. Serial Nos. 526,946–7, Apr. 20. Class 39.

E & J Manufacturing Co., Glendale, Calif. Resuscitators, oxygenators, and cases. Serial No. 523,249, Apr. 20. Class 44.

Easterling Company, The, Chicago, Ill. Sterling silver flatware and hollow ware. Serial No. 534,253, Apr. 20. Class 28.

Endo Products Inc., Richmond Hill, N. Y. Medicine. Serial No. 542,751, Apr. 20. Class 6.

Ero Manufacturing Company, Chicago, Ill. Hassocks. Serial No. 531,582, Apr. 20. Class 32.

Eronel Industries, Los Angeles, Calif. Resinous textile sizing composition. Serial No. 496,771, Apr. 20. Class 6.

Famous Model Co.: *See*—
Menten, Theodore J.

Feldstein, Zadek, Co., Inc., New York, N. Y. Toy rattles, teething toys, dolls, etc. Serial No. 487,775, Apr. 20. Class 22.

Filice & Perrelli Canning Company, Inc., Richmond, Calif. Canned fruits and canned vegetables. Serial No. 542,020, Apr. 20. Class 46.

First Texas Chemical Mfg. Co., Dallas, Tex. Emulsion of sulfadiazine. Serial No. 523,955, Apr. 20. Class 6.

Food Machinery Corporation, San Jose, Calif. Insecticides. Serial No. 542,303, Apr. 20. Class 6.

Forster Manufacturing Co., Inc., Strong, Maine. Clothespins. Serial No. 505,192, Apr. 20. Class 24.

Frederick, John, Company, Chicago, Ill. Calendars. Serial No. 502,743, Apr. 20. Class 38.

Gantner & Mattern Company, San Francisco, Calif. Fluorescent fabrics. Serial No. 519,808, Apr. 20. Class 42.

Garay & Co., Inc., New York, N. Y. Apparel belts. Serial No. 517,986, Apr. 20. Class 39.

Garrett Corporation (Airsearch Manufacturing Company Division), The, Los Angeles, Calif. Automatic controlling valve units for regulating air pressure in compartments of aircraft, etc. Serial No. 506,925, Apr. 20. Class 26.

Wrigley, Wm., Jr., Company, Chicago, Ill. Chewing-gum. 117,966, Aug. 7, 1917. Republished Apr. 20. Class 46.

Wrigley, Wm., Jr., Company, Chicago, Ill. Chewing-gum. 371,120, Sept. 19, 1939. Republished Apr. 20. Class 46.

Yankee Shoemakers, Inc., Newmarket, N. H. Shoes. 438,409. Apr. 20; Serial No. 509,550, published Jan. 20, 1948. Class 39.

Zellerbach Paper Company, San Francisco, Calif. Wax treated wrapping paper. 393,460, Feb. 17, 1942. Republished Apr. 20. Class 37.

Zeropack Company, The, Cincinnati, Ohio. Fresh frozen fruit. 320,772, Jan. 8, 1935. Republished Apr. 20. Class 46.

CLASSIFIED LIST OF TRADE-MARKS REGISTERED

CLASS 2

Bags, Open-mesh. Bemis Bro. Bag Company. 429,911, May 20, 1947. Republished Apr. 20.

Boxes, Corrugated pasteboard. Strohmeyer & Arpe Company. 218,867, Oct. 5, 1926. Republished Apr. 20.

Sacks, Paper. Chatfield & Woods Sack Company. 330,130, Nov. 19, 1935. Republished Apr. 20.

CLASS 3

Suitcases, trunks, luggage carriers, etc. Hartmann Trunk Company. 385,499, Mar. 4, 1941. Republished Apr. 20.

CLASS 4

Cleaning and polishing compound. Acme Chemical Company. 406,278, Mar. 21, 1944. Republished Apr. 20.

Cleaning composition. Miami Products & Chemical Company. 500,117, Apr. 20; Serial No. 493,205.

Cleaning fluid, Lens. Wollensak Optical Company. 432,251, Aug. 27, 1946. Republished Apr. 20.

Cleaning or washing compound, General. U. S. Sanitary Specialties Corporation. 237,099, Jan. 3, 1928. Republished Apr. 20.

Cleanser or detergent. Diversey Manufacturing Company. 225,092, Mar. 8, 1927. Republished Apr. 20.

Cleanser, Powdered. Purex Corporation, Ltd. 430,422, Jan. 10, 1947. Republished Apr. 20.

Cleanser, soaps and general household cleansing and polishing preparation, etc., Wall paper. Bennett Glass & Paint Company. 308,468, Dec. 5, 1933. Republished Apr. 20.

Compound for cleaning, sterilising, etc. Acme Chemical Company. 406,277, Mar. 21, 1944. Republished Apr. 20.

Sand, Sand-blast. United States Silica Co. 117,383, July 3, 1917. Republished Apr. 20.

Scythe-stones, whetstones, and abrasive sharpening stones. Pike Manufacturing Company. 203,766, Sept. 22, 1925. Corrected. O. G. Apr. 20.

Soap. J. P. Davies Company. 78,069, May 31, 1910. Republished Apr. 20.

Soap. Perkins Soap Company. 239,440, Mar. 6, 1928 Republished Apr. 20.

Soap, Toilet. Acme Chemical Company. 412,305, Feb. 27, 1945. Republished Apr. 20.

Soap, Toilet. Hewitt Soap Company, Inc. 390,320, Sept. 16, 1941. Republished Apr. 20.

Valve-grinding compound. S. C. Johnson & Son. 181,114, Mar. 11, 1924. Republished Apr. 20.

Washing powder. Procter & Gamble Company. 234,222, Oct. 18, 1927. Republished Apr. 20.

CLASS 6

Aldehydes suitable for perfuming purposes, alcohols suitable for perfuming purposes, etc. Felton Chemical Company, Inc. 242,637–8, renewed May 29, 1948. O. G. Apr. 20.

Bleaching, cleansing, antiseptic and germicidal compounds. Clorox Chemical Corporation. 251,292, Jan. 1, 1929. Republished Apr. 20.

Calogreen a mercurial salt known as mercurous chloride. Mallinckrodt Chemical Works. 230,506, July 26, 1927. Republished Apr. 20.

Chemical rust preventing compound. Parker Rust Proof Company. 327,233, Aug. 20, 1935. Republished Apr. 20.

Chemical rust-preventing compounds. Parker Rust Proof Company. 350,662, Oct. 5, 1937. Republished Apr. 20.
Chemicals and mixtures of chemicals for use in photographic developing processes. Edwal Laboratories, Inc. 369,746, Aug. 1, 1939. Republished Apr. 20.
Chemicals for treating steel surfaces. Parker Rust Proof Company. 370,624, Aug. 29, 1939. Republished Apr. 20.
Chemicals for use in obtaining on metallic surfaces corrosion-resistant paint-holding coatings. Parker Rust Proof Company. 365,390, Mar. 7, 1939. Republished Apr. 20.
Cologne. Robbins, Anatole, Inc. 500,120, Apr. 20; Serial No. 524,720.
Coloring for easter eggs. Fred Fear & Co. 380,283, Aug. 20, 1940. Republished Apr. 20.
Composition containing chemical ingredients for strengthening, sterilizing, feeding, etc. Flower Foods, Inc. 401,470, May 18, 1943. Republished Apr. 20.
Cough remedies. F. T. Hopkins. 241,494, renewed May 1, 1948. O. G. Apr. 20.
Deodorant. Phillips & Benjamin Company. 384,789, Feb. 4, 1941. Canceled Mar. 26, 1948. O. G. Apr. 20.
Deodorant and disinfectant, Spray. Acme Chemical Company. 406,279, Mar. 21, 1944. Republished Apr. 20.
Dyes. Fred Fear & Co. 336,375, July 7, 1936. Republished Apr. 20.
Expectorant and sedative preparations for coughs due to common colds. M. McGillicuddy. 404,725, Dec. 21, 1943. Republished Apr. 20.
Face powder. Madam C. J. Walker Manufacturing Company, Inc. 255,739, Apr. 30, 1929. Republished Apr. 20.
Germicidal and fungicidal preparations. Medical Chemicals, Inc. 401,781, June 8, 1943. Republished Apr. 20.
Germicide, deodorant, and disinfectant. Acme Chemical Company. 316,763, Sept. 4, 1934. Republished Apr. 20.
Hair dressing. J. B. Knight, Sr. 427,046, Jan. 21, 1947. Canceled Mar. 26, 1948. O. G. Apr. 20.
Insecticides. U. S. Sanitary Specialties Corporation. 240,415, Mar. 27, 1928. Republished Apr. 20.
Lotion, Hand. M. W. Sargeant. 200,442, June 30, 1925. Republished Apr. 20.
Materials for preventing freezing of the water in automobile radiators. H. C. Thompson. 227,919, renewed May 17, 1947. O. G. Apr. 20.
Medicinal preparation. S. Pfeiffer Mfg. Co. 126,952, Oct. 14, 1919. Republished Apr. 20.
Medicinal preparation. S. Pfeiffer Mfg. Co. 139,868, Feb. 22, 1921. Republished Apr. 20.
Medicinal preparation, particularly for remineralization of tooth and bone structure. C. A. Meyer. 232,096, renewed Aug. 30, 1947. O. G. Apr. 20.
Perfume. S. C. Ghose. 375,454, Feb. 20, 1940. Republished Apr. 20.
Perfumes. Chas. A. Stevens & Bros. 235,008, renewed Nov. 8, 1947. O. G. Apr. 20.
Perfumes and essential oils. Artificial and synthetic. M. Nael & Co. 236,145-6, renewed Dec. 6, 1947. O. G. Apr. 20.
Perfumes and essential oils. Artificial and synthetical. M. Nael & Co. 236,240, renewed Dec. 6, 1947. O. G. Apr. 20.
Perfumes, lotions. E. Daltroff & Cie. 311,439, Mar. 20, 1934. Republished Apr. 20.
Photographic fixing agents. Edwal Laboratories, Inc. 410,695, Dec. 12, 1944. Republished Apr. 20.
Pomade. Madam C. J. Walker Manufacturing Company, Inc. 255,740, Apr. 30, 1929. Republished Apr. 20.
Powders, bath crystals, talcum powders, etc., Bath. Campana Sales Company. 390,154, Sept. 9, 1941. Republished Apr. 20.
Preparation for acute, relaxed and disturbed conditions of the stomach and bowels. Dr. Peter Fahrney & Sons Co. 377,477, May 7, 1940. Republished Apr. 20.
Preparation for the treatment of diseases of the skin. L. F. Birdsong, Sr. 500,119, Apr. 20; Serial No. 517,695.
Salves, skin ointments, skin lotions, etc., Skin. Sargeant Acnoid Pharmaceutical Co., Inc. 314,984, July 17, 1934. Republished Apr. 20.
Shampoo. Procter & Gamble Company. 389,815, Aug. 19, 1941. Republished Apr. 20.
Solution for removing sludge deposits from heating and cooling systems, pipes, etc. Rid-Sludge, Incorporated. 404,401, Nov. 23, 1943. Republished Apr. 20.
Soot destroyer and fuel saver. Acme Chemical Company. 353,439, Jan. 11, 1938. Republished Apr. 20.
Teething-powders. M. Gardner. 68,118, re-renewed Mar. 10, 1948. O. G. Apr. 20.
Tooth powder. A. E. Drucker. 84,730, Jan. 2, 1912. Republished Apr. 20.
Vaginal douche powder. Norwich Pharmacal Company. 236,398, renewed Dec. 13, 1947. O. G. Apr. 20.
Veterinary preparations. D. A. Long. 417,211, Oct. 16, 1945. Republished Apr. 20.
Water-softening materials. International Filter Co. 215,869, July 27, 1926. Republished Apr. 20.

CLASS 8

Ash trays. Fitzpatrick Industries, Inc. 438,446, Apr. 20; Serial No. 518,594, published Jan. 27, 1948.
Smokers' articles. Fran-Stef Mfg. Co. 438,386, Apr. 20; Serial No. 494,268, published Jan. 27, 1948.

CLASS 9

Nitroglycerin dynamite. Potts Powder Company. 68,557, Apr. 14, 1908. Republished Apr. 20.

CLASS 11

Carbon paper, Pack of. Standard Manifold Company. 394,561, Apr. 14, 1942. Republished Apr. 20.
Carbon papers and typewriter ribbons. Kee Lox Manufacturing Company. 387,507, May 20, 1941. Republished Apr. 20.
Carbon papers and typewriter ribbons. Kee Lox Manufacturing Company. 392,901, Jan. 20, 1942. Republished Apr. 20.
Carbon papers and typewriter ribbons. Kee Lox Manufacturing Company. 397,995, Oct. 6, 1942. Republished Apr. 20.
Carbon papers and typewriter ribbons. Kee Lox Manufacturing Company. 398,475, Nov. 3, 1942. Republished Apr. 20.

CLASS 12

Cement for patching concrete, Pre-mixed. Walter Maguire Company, Inc. 412,093, Feb. 20, 1945. Republished Apr. 20.
Fire brick, fire brick in plastic form for patching and repair purposes. A. P. Green Fire Brick Company. 500,121, Apr. 20; Serial No. 530,194.
Houses, Ready-cut. Lewis Manufacturing Co. 500,122, Apr. 20; Serial No. 530,648.
Kapok batting for sound-deadening and thermal insulation. Seaman Paper Company. 388,071, June 10, 1941. Republished Apr. 20.
Lime. Woodville Lime Products Company. 233,050, Sept. 20, 1927. Republished Apr. 20.
Lumber, Structural. W. E. Morgan. 500,118, Apr. 20; Serial No. 507,922.
Plaster board. Schumacher Wall Board Corporation. 236,475, renewed Dec. 13, 1947. O. G. Apr. 20.
Powdered material to be mixed into a plaster-like consistency for sealing masonry. Rock-Tred Corporation. 438,491, Apr. 20; Serial No. 507,939.
Wall boards and similar building materials. Celotex Company. 187,332, renewed Jan. 5, 1948. O. G. Apr. 20.
Window sash, Supplemental. American Weather Windows, Inc. 438,487, Apr. 20; Serial No. 494,251.

CLASS 13

Brackets, Curtain rod. H. E. Huggins. 438,461, Apr. 20; Serial No. 522,240, published Jan. 27, 1948.
Casters. M. B. Schenck Company. 90,585, Mar. 4, 1913. Republished Apr. 20.
Casters, metal drawer pulls and knobs, keyhole escutcheons, etc. Bassick Company. 154,226, Apr. 11, 1922. Republished Apr. 20.
Chains for use on motor front ends, motor drives, and power transmissions of all descriptions. Perfection Gear Company. 231,624, renewed Aug. 23, 1947. O. G. Apr. 20.
Clamps for wires. W. N. Matthews Corporation. 429,701, May 13, 1947. Republished Apr. 20.
Cookers, Portable hot-water food warmers, etc., Cereal. Duke Manufacturing Co. 274,575, Sept. 2, 1930. Republished Apr. 20.
Curtains, Shower. House Beautiful Curtains, Inc. 438,399, Apr. 20; Serial No. 505,830, published Jan. 27, 1948.
Fastener stringers and separable fasteners, Separable. Hookless Fastener Company. 232,898, Sept. 20, 1927. Republished Apr. 20.
Fasteners, faucets, valves, and drain valves, Metal. A. R. Adams. 429,695, May 13, 1947. Republished Apr. 20.
Fasteners, Separable. Hookless Fastener Company. 234,746, Nov. 1, 1927. Republished Apr. 20.
Fasteners, Slide. Talon, Inc. 381,511, Sept. 24, 1940. Republished Apr. 20.
Hollow ware, Base metal cooking. Wagner Manufacturing Company. 341,566, Dec. 15, 1936. Republished Apr. 20.
Hollow ware, Base metal cooking. West Bend Aluminum Co. 305,163, Aug. 8, 1933. Republished Apr. 20.
Key Holders, Pocket-base-metal. C. A. Lewis. 279,629, Jan. 20, 1931. Republished Apr. 20.
Kitchen and cooking utensils, comprising coffee-pots, teapots, etc., Metallic. Manufacture Metallurgique De Tournus. 146,291, renewed Sept. 6, 1941. O. G. Apr. 20.
Molded articles of plastic composition. General Industries Company. 243,359, June 19, 1928. Republished Apr. 20.
Pans, Fry. C. Rendler. 438,410, Apr. 20; Serial No. 509,601, published Jan. 27, 1948.
Percolators, Coffee-making. West Bend Aluminum Co. 305,164, Aug. 8, 1933. Republished Apr. 20.
Pipe, Metallic or non-metallic. United Association of Journeymen Plumbers and Steamfitters of the United States and Canada. 438,396, Apr. 20; Serial No. 503,486, published Jan. 20, 1948.
Platter, Base metal steak. Wagner Manufacturing Company. 295,483, July 5, 1932. Republished Apr. 20.
Slides and wheels. Bassick Company. 240,590, Apr. 3, 1928. Republished Apr. 20.
Strainers. Automatic Products Company. 402,467, July 27, 1943. Republished Apr. 20.
Valves and combination stop and drain valves, Stop. Hays Manufacturing Company. 438,407, Apr. 20; Serial No. 509,274, published Jan. 27, 1948.

CLASS 14

Alloy steel and corrosion-resisting alloy steel. Rustless Iron & Steel Corporation. 424,315, Oct. 1, 1946. Republished Apr. 20.
Alloys, compound metals, and tungsten, Metal. Elkon Works, Inc. 234,831, renewed Nov. 8, 1947. O. G. Apr. 20.
Anvils. Illinois Iron & Bolt Co. 75,084, Aug. 31, 1909. Republished Apr. 20.
Anvils. Illinois Iron & Bolt Co. 310,330, Feb. 20, 1934. Republished Apr. 20.
Castings, Pressure die. Milwaukee Die Casting Co. 405,481, Feb. 1, 1944. Republished Apr. 20.
Electrodes, Metallic welding. Harnischfeger Corporation. 411,286, Jan. 9, 1945. Republished Apr. 20.
Forgings, Steel. Heppenstall Company. 417,623, Nov. 6, 1945. Republished Apr. 20.
Rods and hard castings, Hard-facing welding. Coast Metals, Inc. 414,788, June 26, 1915. Republished Apr. 20.
Stampings, Metal. National Metal Specialties Co. 411,385, Jan. 16, 1945. Republished Apr. 20.
Steel sheets. Parker Rust Proof Company. 363,830, Jan. 10, 1939. Republished Apr. 20.
Steel, Tool. Kloster Steel Corporation. 235,975, Nov. 29, 1927. Republished Apr. 20.

CLASS 15

Gasoline and lubricating oils. Independent Oil and Gas Company. 265,820, Jan. 7, 1930. Canceled Mar. 26, 1948. O. G. Apr. 20.
Kerosene, gasoline, furnace oil, etc. Independent Oil and Gas Company. 261,791, Sept. 24, 1929. Canceled Mar. 26, 1948. O. G. Apr. 20.
Wax, Mineral. Strohmeyer & Arpe Company. 90,390, Feb. 18, 1913. Republished Apr. 20.
Wax, Mineral. Strohmeyer & Arpe Company. 91,430, Apr. 29, 1913. Republished Apr. 20.

CLASS 16

Cleaner, Paint brush. Schalk Chemical Company. 500,110, Apr. 20; Serial No. 528,587, published Jan. 13, 1948.
Finishes. Rohm & Haas Company. 438,471, Apr. 20; Serial No. 523,618, published Nov. 25, 1947.
Floor dressing. Acme Chemical Company. 301,015, Feb. 14, 1933. Republished Apr. 20.
Lacquer, Rubberized liquid. Worth Lacquer and Chemical Company. 438,405, Apr. 20; Serial No. 508,350, published Jan. 13, 1948.
Lacquers. S. C. Johnson & Son. 247,965, Oct. 9, 1928. Republished Apr. 20.
Naphthas for use as solvents or thinners in paints, varnishes, etc. Phillips Petroleum Company. 438,427, Apr. 20; Serial No. 513,203, published Sept. 16, 1947.
Paints. Paint Merchandising Council. 438,371, Apr. 20; Serial No. 462,649, published Apr. 4, 1944.
Paints. H. H. Robertson Company. 438,376, Apr. 20; Serial No. 483,152, published Jan. 13, 1948.
Paints. Sherwin-Williams Company. 438,455, Apr. 20; Serial No. 521,616, published Jan. 27, 1948.
Paints and varnishes. Minnesota Linseed Oil Paint Company. 374,700, Jan. 23, 1940. Republished Apr. 20.
Paints and varnishes, Ready-mixed. Commonwealth Varnish Co. 438,377, Apr. 20; Serial No. 483,259, published Jan. 13, 1948.
Paints, enamels, and varnishes. Boatwright Paint & Varnish Works, Inc. 500,114, Apr. 20; Serial No. 530,713, published Jan. 13, 1948.
Paints, lacquer paints, and primer paints, Enamel. Arco Company. 438,392, Apr. 20; Serial No. 501,623, published May 13, 1947.
Paints, paint enamels, varnishes, etc., Ready-mixed. J. E. Harris Company. 438,483, Apr. 20; Serial No. 525,592, published Jan. 13, 1948.
Paints, Under coat, fumeproof, eggshell, flat white, and gloss interior wall finish. Minnesota Linseed Oil Paint Co. 500,107, Apr. 20; Serial No. 527,958, published Jan. 13, 1948.
Paints, varnishes, and enamels, Dry, paste, and ready-mixed. Bennett Glass & Paint Company. 206,205, Nov. 24, 1925. Republished Apr. 20.
Paints, varnishes, and enamels, Dry, paste, and ready-mixed. Bennet Glass & Paint Company. 206,312, Nov. 24, 1925. Republished Apr. 20.
Polish. W. L. Clemens. 236,725, renewed Dec. 20, 1947. O. G. Apr. 20.
Polish, Liquid. Sno-Flake Products Co. 438,472, Apr. 20; Serial No. 523,713, published Nov. 25, 1947.
Polishes, Automobile. H. C. Thompson. 228,311, renewed May 31, 1947. O. G. Apr. 20.
Scratch and mar remover for furniture. Tidy House Products Company. 438,411, Apr. 20; Serial No. 509,798, published Jan. 13, 1948.
Seal for concrete and terrazzo floors, Quick-drying, penetrating, transparent, hardening. Acme Chemical Company. 405,181, Jan. 11, 1944. Republished Apr. 20.
Sealer and primer white paint, Pigmented. Minnesota Linseed Oil Paint Co. 500,106, Apr. 20; Serial No. 527,957, published Jan. 13, 1948.
Stains and oil and wax dressings, Chemical. H. H. Rohloff. 425,715, Dec. 3, 1946. Republished Apr. 20.
Varnish. S. C. Johnson & Son. 224,358, Feb. 22, 1927. Republished Apr. 20.
Varnish, Penetrating floor. Acme Chemical Company. 406,918, May 9, 1944. Republished Apr. 20.
Wax and paste floor wax, Self-polishing floor. Bennett Glass & Paint Company. 306,793, Sept. 26, 1933. Republished Apr. 20.
Wax, and powdered floor wax, Liquid floor. Acme Chemical Company. 411,032, Jan. 2, 1945. Republished Apr. 20.

CLASS 17

Cigarettes. Philip Morris & Co. Ltd. 68,502, Re-renewed Apr. 14, 1948. O. G. Apr. 20.

CLASS 19

Airplanes and structural parts therefor. Lockheed Aircraft Corporation. 373,314, Dec. 5, 1939. Republished Apr. 20.
Automobiles and constructive parts thereof and aeroplanes and constructive parts thereof. Societe Anonyme des Usines Renault. 240,774, renewed Apr. 10, 1948. O. G. Apr. 20.
Bicycles. Mead Cycle Company. 127,289-90, Nov. 4, 1919. Republished Apr. 20.
Cars, spreader cars, flat cars, etc., Dump. Western Wheeled Scraper Company. 135,162, Sept. 21, 1920. Republished Apr. 20.
Carts, Hand. Shopper-ette & Specialties, Inc. 438,429, Apr. 20; Serial No. 513,691, published Jan. 6, 1948.
Motorcycles. J. N. Gladden. 438,384, Apr. 20; Serial No. 490,303, published Jan. 21, 1947.
Vehicles. Buda Company. 404,084, Nov. 2, 1943. Republished Apr. 20.

CLASS 20

Linoleum and similar hard surface floor coverings, Prefabricated, decorative elements of. Armstrong Cork Company. 392,035, Dec. 2, 1941. Republished Apr. 20.

CLASS 21

Amplifiers, microphones, loud speakers, and selector switches, Audio and electric. Bell Sound Systems, Inc. 343,020, Feb. 9, 1937. Republished Apr. 20.
Apparatus, Bus bar electrical distribution system. Trumbull Electric Manufacturing Co. 438,417, Apr. 20; Serial No. 511,706, published Jan. 20, 1948.
Batteries, primary and secondary and parts for same, Electric. National Carbon Company, Inc. 140,539, renewed Jan. 5, 1948. O. G. Apr. 20.
Condensers, High dielectric ceramic. Erie Resistor Corporation. 405,685, Feb. 15, 1944. Republished Apr. 20.
Electric-lighting attachments and parts thereof. Singer Manufacturing Company. 237,589, renewed Jan. 10, 1948. O. G. Apr. 20.
Electrical flashers and flasher controls. Reynolds Electric Co. 302,936, May 2, 1933. Republished Apr. 20.
Electrical lighters and dispensers, Automatic. American Metal Products Corporation. 241,892, May 8, 1928. Republished Apr. 20.
Electrically operated hair brushes. Hershey Mfg. Co. 430,384, June 10, 1947. Republished Apr. 20.
Engraving and cutting implement, Portable electric. Burgess Battery Company. 405,700, Feb. 15, 1944. Republished Apr. 20.
Fans, Electric. Reynolds Electric Company. 373,180, Nov. 28, 1939. Republished Apr. 20.
Fences, Electric. R. H. Turk. 424,467, Oct. 8, 1946. Republished Apr. 20.
Floor polisher, Electric. Burkaw Electric Co. 438,415, Apr. 20; Serial No. 510,421, published Jan. 27, 1948.
Floor-polishing machines, Electric. S. C. Johnson & Son. 227,213, May 3, 1927. Republished Apr. 20.
Heating apparatus, Inductive and dielectric. Ohio Crankshaft Company. 417,711, Nov. 13, 1945. Republished Apr. 20.
Instrument for electroplating. H. Lewis. 438,433, Apr. 20; Serial No. 514,963, published Jan. 20, 1948.
Insulating compound, Ceramic electric. Henry L. Crowley & Company, Inc. 252,646, Feb. 12, 1929. Republished Apr. 20.
Insulators, Wet process porcelain high tension electric. Victor Insulators, Inc. 396,924, Aug. 11, 1942. Republished Apr. 20.
Magnetos. Wico Electric Company. 409,384, Oct. 3, 1944. Republished Apr. 20.
Motors for sewing machines and controllers therefor, Electric. Singer Manufacturing Company. 161,905, renewed Jan. 5, 1948. O. G. Apr. 20.
Ovens, Heating and drying. W. J. Miskella. 438,443, Apr. 20; Serial No. 517,581, published Jan. 20, 1948.
Percolators, Electric. Aluminum Goods Manufacturing Co. 242,891, renewed June 5, 1948. O. G. Apr. 20.
Plugs, electric sadiron elements, radiant heating coils, etc., Attachment. Presto Products Co. 236,795, renewed Dec. 20, 1947. O. G. Apr. 20.
Signs, Electric advertising. Reynolds Electric Co. 314,225, June 19, 1934. Republished Apr. 20.
Switches, Electric. Hart & Hegeman Mfg. Co. 241,792, renewed May 8, 1948. O. G. Apr. 20.
Tea kettles, Electric. West Bend Aluminum Co. 329,344, Oct. 29, 1935. Republished Apr. 20.

CLASS 22

Bowling pins. Brunswick-Balke-Collender Company. 300,432, Jan. 17, 1933. Republished Apr. 20.
Bowling pins. Brunswick-Balke-Collender Company. 314,586, July 3, 1934. Republished Apr. 20.
Fishing lines. Horton Manufacturing Company. 298,096, Oct. 11, 1932. Republished Apr. 20.
Fishing-rods. Horton Manufacturing Company. 73,218, Mar. 30, 1909. Republished Apr. 20.
Fishing rods. W. F. Warren. 438,490, Apr. 20; Serial No. 500,849.
Game-table cushions. Brunswick-Balke-Collender Company. 269,965, Apr. 22, 1930. Republished Apr. 20.
Golf game, Indoor. J. Hayem. 438,397, Apr. 20; Serial No. 505,751, published Jan. 6, 1948.
Playing cards. Brown & Bigelow. 239,599, Mar. 6, 1928. Republished Apr. 20.
Toy kites. S. Lang. 438,422, Apr. 20; Serial No. 512,268, published Dec. 2, 1947.
Toys, Wooden. Scandia Toys. 422,557, July 30, 1946. Republished Apr. 20.
Velocipede, Children's. E. J. Hughes. 360,011, Sept. 6, 1938. Canceled Mar. 26, 1948. O. G. Apr. 20.

CLASS 23

Actuators for brake mechanisms, etc., Power. Bendix Aviation Corporation. 382,225, Oct. 22, 1940. Republished Apr. 20.
Blocks, traveling blocks, swivels, etc., Crown. Emsco Derrick & Equipment Company. 370,912, Sept. 12, 1939. Republished Apr. 20.
Clutches. Master Electric Company. 438,375, Apr. 20; Serial No. 482,003, published Jan. 20, 1948.
Compressors, Air. Service Station Equipment Company. 242,759, renewed June 5, 1948. O. G. Apr. 20.
Compressors and parts thereof, Air. Bendix-Westinghouse Automotive Air Brake Company. 371,393, Sept. 26, 1939. Republished Apr. 20.
Cutters, glass cutter wheels, putty knives, etc., Glass. Glaziers' Tool Mfg. Corp. 438,430, Apr. 20; Serial No. 513,821, published Jan. 20, 1948.
Cutters or power operated cutting machines, Hand operated. Alfa Machine Company. 369,574, Aug. 1, 1939. Republished Apr. 20.
Cutting machines. Thermo Cuber Company, Inc. 375,745, Feb. 27, 1940. Republished Apr. 20.
Derricks and all the other items named in the registration, Steel. Emsco Derrick & Equipment Company. 397,476, Sept. 8, 1942. Republished Apr. 20.
Doughnut and bakery goods manufacturing equipment. V. E. Ackles. 438,465, Apr. 20; Serial No. 522,893, published Jan. 27, 1948.
Driers, centrifugal filters, and centrifugal separators, etc., Centrifugal. S. S. Hepworth Company. 148,582, renewed Jan. 1948. O. G. Apr. 20.
Farm machinery. International Harvester Company. 421,730, June 18, 1946. Republished Apr. 20.
Fire extinguishers, Hand operated, liquid chemical. Boka Sales Corporation. 438,391, Apr. 20; Serial No. 499,940, published Jan. 27, 1948.
Icing machines. Basic Food Sales Corp. 438,478, Apr. 20; Serial No. 524,518, published Jan. 20, 1948.
Internal combustion engines and power transmissions. Marmon-Herrington Company, Inc. 438,468, Apr. 20; Serial No. 523,320, published Jan. 20, 1948.
Internal combustion or explosion motors and parts thereof, etc. Societe Anonyme Des Usines Renault. 235,066, renewed Nov. 8, 1947. O. G. Apr. 20.
Jacks, Lifting. Duff-Norton Manufacturing Company. 421,489, June 4, 1946. Republished Apr. 20.
Knives, Kitchen. A. Guerra. 438,477, Apr. 20; Serial No. 524,457, published Jan. 20, 1948.
Lathes, Metal. R. K. Le Blond Machine Tool Co. 438,462, Apr. 20; Serial No. 522,415, published Jan. 20, 1948.
Lathes, Metal. R. K. Le Blond Machine Tool Co. 438,463, Apr. 20; Serial No. 522,449, published Jan. 20, 1948.
Lawn mowers, Power driven. W. N. Millar. 438,454, Apr. 20; Serial No. 521,588, published Jan. 20, 1948.
Liquid treating apparatus and equipment in particular apparatus, etc. International Filter Co. 371,146, Sept. 19, 1939. Republished Apr. 20.
Lubricating apparatus, Portable. Lincoln Steel & Steel Forge Company. 231,354, Aug. 16, 1927. Republished Apr. 20.
Machines. Jabez Burns & Sons, Inc. 238,672, renewed Feb. 14, 1948. O. G. Apr. 20.
Mixers, meat grinders, vegetable peelers, and juice extractors, Food. Reynolds Electric Co. 308,478. Dec. 5, 1933. Republished Apr. 20.
Openers, Can. J. A. Cahill. 438,437, Apr. 20; Serial No. 516,665, published Jan. 20, 1948.
Peeling machines, Mechanical. Peelex, Inc. 438,480, Apr. 20; Serial No. 524,618, published Jan. 20, 1948.
Peg-board. Felt and Tarrant Manufacturing Company. 413,261, Apr. 17, 1945. Republished Apr. 20.
Pistons. Autoproducts Corporation. 438,444–5, Apr. 20; Serial Nos. 518,192–3, published Jan. 20, 1948.
Printers' machinery. Miller Printing Machinery Co. 289,548, Dec. 1, 1931. Republished Apr. 20.
Pump plungers, Porcelain. Aldrich Pump Company. 236,075, renewed Dec. 6, 1947. O. G. Apr. 20.
Pumps, Rotary. Foster Pump Works. 236,037, Nov. 29, 1927. Republished Apr. 20.
Railway-tracks and jacks for general lifting purposes. Verona Tool Works. 197,704, Apr. 21, 1925. Republished Apr. 20.
Reels for hose pipes. Service Station Equipment Company. 242,801, renewed June 5, 1948. O. G. Apr. 20.
Servicing apparatus, Unitary portable automotive. Lincoln Engineering Company. 423,437, Sept. 3, 1946. Republished Apr. 20.
Spark-plug cleaners, Mechanical. Champion Spark Plug Company. 123,559, Nov. 19, 1918. Republished Apr. 20.
Sprayer, Insecticide. Edco Corporation. 438,460, Apr. 20; Serial No. 522,154, published Jan. 27, 1948.
Tool sets, Fireplace. Chattanooga Implement & Manufacturing Company. 438,458, Apr. 20; Serial No. 522,063, published Jan. 20, 1948.
Tools, Dispensing. Kelly-Wheaton Company. 438,485–6, Apr. 20; Serial Nos. 526,246–7, published Jan. 20, 1948.
Tools, Metal-working and wood-working hand. W. H. Myers. 438,473, Apr. 20; Serial No. 523,920, published Jan. 20, 1948.
Vending machines, Electric cigarette. M. Caruso. 438,423, Apr. 20; Serial No. 512,320, published Jan. 20, 1948.
Winding machinery, Yarn. Foster Machine Company. 397,466, Sept. 8, 1942. Republished Apr. 20.

CLASS 24

Laundry machines. American Machine and Metals, Inc. 396,963, Aug. 11, 1942. Republished Apr. 20.
Wash boards. Binswanger-Henkin Industries. 438,466, Apr. 20; Serial No. 523,067, published Jan. 27, 1948.

CLASS 26

Calculating device. Eugene Dietzen Co. 438,379, Apr. 20; Serial No. 484,945, published Jan. 20, 1948.
Calculating devices. Eugene Dietzgen Co. 438,378, Apr. 20; Serial No. 483,810, published Jan. 20, 1948.
Cameras, motion picture cameras, sensitized photographic films, etc. National Vision Equipment Corporation. 422,617, Aug. 6, 1946. Republished Apr. 20.
Cameras, projectors, and viewers. Golde Manufacturing Company, Chicago, Ill. 438,414, Apr. 20; Serial No. 510,316, published Jan. 20, 1948.
Coffee measure. Hills Bros. 322,133, Feb. 26, 1935. Republished Apr. 20.
Counting apparatus, Electrically actuated. H. K. Leedy. 438,385, Apr. 20; Serial No. 493,786, published Jan. 20, 1948.
Covers, Dust. Felt and Tarrant Manufacturing Company. 413,582, May 1, 1945. Republished Apr. 20.
Cutting machines, Ice. Thermo Cuber Company, Inc. 374,818, Jan. 23, 1940. Republished Apr. 20.
Feeders, hydraulic control tables, liquid flow controllers, etc., Chemical. International Filter Company. 325,305, June 18, 1935. Republished Apr. 20.
Gauges, Pressure. Service Station Equipment Company. 242,758, renewed June 5, 1948. O. G. Apr. 20.
Indicators. Aseptic-Thermo Indicator Co. 438,373–4, Apr. 20; Serial Nos. 474,522–3, published Jan. 20, 1948.
Measuring and dispensing apparatus, Liquid. S. F. Bowser & Company, Incorporated. 374,107, Jan. 2, 1940. Republished Apr. 20.
Meter. Selas Corporation of America. 438,372, Apr. 20; Serial No. 473,261, published Apr. 8, 1947.
Photocopying papers, Sensitized. Haloid Company. 438,432 Apr. 20; Serial No. 514,034, published Jan. 20, 1948.
Photographic apparatus. A. G. Alos. 438,424, Apr. 20; Serial No. 512,360, published Jan. 20, 1948.
Photographic cameras. Federal Manufacturing and Engineering Corp. 438,442, Apr. 20; Serial No. 517,567, published Jan. 20, 1948.
Photographic film, Sensitized. Agfa Ansco Corporation. 322,477, Mar. 5, 1935. Republished Apr. 20.
Photographic material, Light-sensitive. General Aniline & Film Corporation. 385,671, Mar. 11, 1941. Republished Apr. 20.
Photographic printing masks. F. D. Fisher. 438,420, Apr. 20; Serial No. 512,248, published Jan. 20, 1948.
Positive paper and cloth, etc., Sensitized direct. Spaulding-Moss Company. 391,034, Oct. 21, 1941. Republished Apr. 20.
Pumps, Self-measuring gasoline. William M. Wilson's Sons, Inc. 438,395, Apr. 20; Serial No. 503,336, published Jan. 20, 1948.
Rules, Steel. Consolidated Razor Blade Co., Inc. 438,402–3, Apr. 20; Serial Nos. 507,672–3, published Jan. 20, 1948.
Sensitive paper, Light. Haloid Company. 372,236, Oct. 24, 1939. Republished Apr. 20.
Sensitive paper, Light. Haloid Company. 374,811, Jan. 23, 1940. Republished Apr. 20.
Shutters, Photographic. Wollensak Optical Company. 401,467, May 18, 1943. Republished Apr. 20.
Tanks and measuring dispensing pumps, Combined liquid. Bennett Pumps Corporation. 242,794, renewed June 5, 1948. O. G. Apr. 20.
Thermistor devices. Electra Voice Corporation. 438,412, Apr. 20; Serial No. 509,835, published Jan. 20, 1948.

CLASS 27

Watches and watch parts. Verifine Watch Supply Co. 438,489, Apr. 20; Serial No. 495,846.

Olive oil, cotton seed oil, etc. Strohmeyer & Arpe Company. 73,385, Apr. 13, 1909. Republished Apr. 20.
Pastry. Mother's Grandma Cookie Company. 276,541, Oct. 21, 1930. Republished Apr. 20.
Pretzels. H. Krasner. 428,423, Mar. 25, 1947. Canceled Mar. 26, 1948. O. G. Apr. 20.
Sardines, macaroni, etc., Spanish salted. Strohmeyer & Arpe Company. 73,116, Mar. 16, 1909. Republished Apr. 20.
Sardines, sprats, anchovies, etc. Strohmeyer & Arpe Company. 68,658, Apr. 21, 1908. Republished Apr. 20.
Teas. Great Atlantic and Pacific Tea Company. 69,037, re-renewed May 19, 1948. O. G. Apr. 20.

Tomatoes, Fresh. M. L. Greene. 438,381, Apr. 20; Serial No. 488,586, published Jan. 13, 1948.
Vanilla, artificial vanilla, and compounds, Natural. Felton Chemical Company, Inc. 239,928, renewed Mar. 13, 1948. O. G. Apr. 20.
Vegetables, Fresh. J. L. Budreau. 240,150, renewed Mar. 20, 1948. O. G. Apr. 20.
Wheat-flour. Freeburg Milling Co. 64,781, re-renewed Aug. 20, 1947. O. G. Apr. 20.

CLASS 47

Wines. Barton & Guestier. 31,498, re-renewed May 3, 1948. O. G. Apr. 20.
Wines. Urbana Wine Company. 427,562, Feb. 11, 1947. Republished Apr. 20.

CLASS 48

Beer. La Crosse Breweries, Inc. 389,557, Aug. 12, 1941. Republished Apr. 20.
Beer. Minneapolis Brewing Company. 381,507, Sept. 24, 1940. Republished Apr. 20.
Beer. Minneapolis Brewing Company. 389,979, Sept. 2, 1941. Republished Apr. 20.
Beer. Pilsen Brewing Company. 396,860, Aug. 4, 1942. Republished Apr. 20.
Malt preparation for making a beverage. Strohmeyer & Arpe Company. 68,447, Apr. 7, 1908. Republished Apr. 20.

CLASS 49

Whiskey. Bernheim Distilling Company. 406,220, Mar. 14, 1944. Corrected. O. G. Apr. 20.
Whiskey, brandy, gin, etc. Lord Fairfax Corporation of Maryland. 317,188, Sept. 18, 1934. Canceled Mar. 26, 1948. O. G. Apr. 20.

CLASS 50

Awnings, tents, and tarpaulins. S. A. Schmitt. 236,736, renewed Dec. 20, 1947. O. G. Apr. 20.
Ladders and scaffold equipment. Uecker Equipment Company. 346,868, June 8, 1937. Republished Apr. 20.
Mountings for mineral, biological, and pathological subjects, Transparent. W. A. Sampsel. 429,149, Apr. 22, 1947. Republished Apr. 20.
Screen material, Transparent. Arvey Corporation. 381,402, Sept. 24, 1940. Republished Apr. 20.

LIST OF REISSUE PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 20TH DAY OF APRIL, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Alford, Andrew, Cambridge, Mass., assignor to Mackay Radio and Telegraph Company, New York, N. Y. Matching network. 22,993, Apr. 20.
Bicknell, George M., assignor to Carter Carburetor Corporation, St. Louis, Mo. Antidetonating device. 22,994, Apr. 20.
Carter Carburetor Corporation, assignee: *See*— Bicknell, George M.
Mackay Radio and Telegraph Company, assignee: *See*— Alford, Andrew.

LIST OF PLANT PATENTEES

Bantel, Gustav E., assignor to Frank L. Sieloff, St. Louis, Mo. Sansevieria plant. 796, Apr. 20.
Sieloff, Frank L., assignee: *See*— Bantel, Gustav E.

LIST OF DESIGN PATENTEES

Abrams, William, Chicago, Ill. Cigarette dispenser. 149,328, Apr. 20.
Alexander, Carlyle N., New Rochelle, N. Y. Chair. 149,329, Apr. 20.
Alexander, Carlyle N., New Rochelle, N. Y. Chair. 149,330, Apr. 20.
Alexander, Carlyle N., New Rochelle, N. Y. Chair. 149,331, Apr. 20.
Allen, Grosvenor N., and W. Gerth, assignors to Oneida Ltd., Oneida, N. Y. Knife. 149,332, Apr. 20.
Anderson, Robert I., Grand Haven, and B. Hoeker, Muskegon, Mich., assignors to The Brunswick-Balke-Collender Company, Chicago, Ill. Settee. 149,333, Apr. 20.
Atomiko, Inc., assignee: *See*— Kern, John A.
Bali Washing Machine Corp., assignee: *See*— Stratmore, Irwin W.
Barbieri, Nicholas, Providence, R. I., assignor to Uncas Manufacturing Company. Brooch or similar article. 149,334, Apr. 20.
Beatty, Charles H., Philadelphia, Pa. Combination desk unit. 149,335, Apr. 20.
Binder, Sam, Los Angeles, assignor to World Games, Inc., Los Angeles County, Calif. Game board. 149,336, Apr. 20.
Brunswick-Balke-Collender Company, The, assignee: *See*— Anderson, Robert I., and Hoeker.
Caputo, Nicholas F., Kearny, N. J. Ash tray. 149,337, Apr. 20.
Carlson, Gustave W., Superior, Wis. Candy sucker. 149,338, Apr. 20.
Chirite, John D., Detroit, Mich. Combined telephone support, ash tray, and amplifying loud speaker. 149,339, Apr. 20.
Clemetsen, Erling A., Long Grove, Ill. Swimming pool. 149,340, Apr. 20.
Clemetsen, Erling A., Long Grove, Ill. Swimming pool. 149,341, Apr. 20.
Coro, Inc., assignee: *See*— Katz, Adolph.
Cozad, Robert F.: *See*— Wheeler, Richard, and Cozad.
Davis, John E., Sherman Oaks, assignor to Na Mac Products Corp., Los Angeles, Calif. Knife sharpener. 149,342, Apr. 20.
De Weese, Mary A., Glendale, Calif. Bathing suit. 149,343, Apr. 20.
Eugene Manufacturing Corp., assignee: *See*— Gilbert, Felix.
Fitter, Emil H., Woodside, assignor to Fitter Valve Division of the Tumpane Company, Long Island City, N. Y. Water faucet. 149,344, Apr. 20.
Fitter Valve Division of the Tumpane Company, assignee: *See*— Fitter, Emil H.
Fournier, George E., Pawtucket, R. I. Bracelet or similar article. 149,345, Apr. 20.
Geib, Charles A., Chicago, Ill. Toy construction piece. 149,346, Apr. 20.
Geib, Charles A., Chicago, Ill. Toy construction piece. 149,347, Apr. 20.
Gerth, William: *See*— Allen, Grosvenor N., and Gerth.
Gilbert, Felix, assignor to Eugene Manufacturing Corp., New York, N. Y. Film viewer. 149,348, Apr. 20.
Greyson, William L., Flushing, N. Y. Stool. 149,349, Apr. 20.
Guild, Lurelle, Noroton, Conn., assignor to Westinghouse Electric Corporation. Toaster. 149,350, Apr. 20.
Hamilton, Kenneth C., assignor to Milwaukee Lace Paper Company, Milwaukee, Wis. Place mat or similar article. 149,351, Apr. 20.
Hammer, John J., Detroit, Mich. Traffic signal. 149,352, Apr. 20.
Herbst, John, New York, N. Y. Perfume bottle stopper or similar article. 149,353, Apr. 20.
Hoeker, Bert: *See*— Anderson, Robert I., and Hoeker.
Hollstein, Fritz, West New York, N. J. Plastic fabric. 149,354, Apr. 20.
Hollstein, Fritz, West New York, N. J. Plastic fabric. 149,355, Apr. 20.
Jalof, William R., Los Angeles, Calif. Combined pencil sharpener and eraser. 149,356, Apr. 20.
Johnson & Johnson, assignee: *See*— Rosengren, Herbert.
Jones, W. Henderson, assignee: *See*— Schaefer, Herman W.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 149,357, Apr. 20.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 149,358, Apr. 20.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 149,359, Apr. 20.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 149,360, Apr. 20.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 149,361, Apr. 20.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 149,362, Apr. 20.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Separable brooch or similar article. 149,363, Apr. 20.
Kern, John A., assignor to Atomiko, Inc., Chicago, Ill. Welding transformer. 149,364, Apr. 20.
Larsen, Olai F., Jr., Demarest, N. J., assignor to Noma Electric Corporation, New York, N. Y. Toy automobile sedan. 149,365, Apr. 20.
Larsen, Olai F., Jr., Demarest, N. J., assignor to Noma Electric Corporation, New York, N. Y. Toy roadster. 149,366, Apr. 20.

Leary, Gordon, Trenton, N. J. Earring. 149,367, Apr. 20.
Lewyt Corporation, assignee: *See*—
Lippincott, Joshua G.
Lippincott, Joshua G., Scarsdale, assignor to Lewyt Corporation, Brooklyn, N. Y. Vacuum cleaner attachment. 149,368, Apr. 20.
Martin, Glenn L., Company, The, assignee: *See*—
Varrieur, Albert L.
Mayehoff Company, The, assignee: *See*—
McKelvey, Vanny.
McKelvey, Vanny, Greenwich, assignor to The Mayehoff Company, South Norwalk, Conn. Blouse. 149,369, Apr. 20.
Mickus, Joseph P., Newark, N. J. Toy bank or similar article. 149,370, Apr. 20.
Milwaukee Lace Paper Company, assignee: *See*—
Hamilton, Kenneth C.
Na Mac Products Corp., assignee: *See*—
Davis, John E.
Noma Electric Corporation, assignee: *See*—
Larsen, Olai F., Jr.
Nusbaum, David, Newark, N. J. Cigarette dispenser. 149,371, Apr. 20.
Odin Corporation, assignee: *See*—
Svenson, Ernest J.
O'Keefe, Daniel P., Los Angeles, Calif. Cooking stove. 149,372, Apr. 20.
Oneida Ltd., assignee: *See*—
Allen, Grosvenor N., and Gerth.
Paessler, Reinhard A., West New York, N. J. Lace medallion. 149,373, Apr. 20.
Palmer, Alvin M., Los Angeles, and F. W. Rodgers, Pacoima, Calif. Bag-grasping device. 149,375, Apr. 20.
Perlman, David, Detroit, Mich. Game board. 149,374, Apr. 20.
Plocky, Gustave F.: *See*—
Sherry, Victor, and H. A. and G. F. Plocky.
Plocky, Harry A.: *See*—
Sherry, Victor, and H. A. and G. F. Plocky.
Price, Edwin P., Jr., Wilmette, Ill. Merchandise display device or similar article. 149,376, Apr. 20.
Radio Corporation of America, assignee: *See*—
Stensgaard, William L.
Rodgers, Frederick W.: *See*—
Palmer, Alvin M., and Rodgers.
Rosengren, Herbert, Woodcliffe Lake, N. J., assignor to Johnson & Johnson. Table. 149,377, Apr. 20.
Rummelsburg, Alvin S., East Rockaway, N. Y. Drawer handle. 149,378, Apr. 20.
Sayre, Louis S., Los Angeles, Calif. Faucet. 149,379, Apr. 20.
Schaefer, Herman W., assignor to W. Henderson Jones, Culver City, Calif. Combination oil filter and cooler. 149,380, Apr. 20.
Schick, Howard M., Lee's Summit, Mo. Display fixture. 149,381, Apr. 20.
Schiess, Maurice J., New York, N. Y. Display frame and stand or similar article. 149,382, Apr. 20.
Sebel, Harry, London, England. Wheeled toy tortoise. 149,383, Apr. 20.
Sherry, Victor, and H. A. Plocky, Los Angeles, and G. F. Plocky, South Pasadena, Calif. Luminous plant container or the like. 149,384, Apr. 20.
Sherry, Victor, and H. A. Plocky, Los Angeles, and G. F. Plocky, South Pasadena, Calif. Plant container or the like. 149,385, Apr. 20.
Smolensky, Albert G., Cleveland, Ohio. Arch-stream offset combination faucet structure. 149,386, Apr. 20.
Stensgaard, William L., Park Ridge, Ill., assignor to Radio Corporation of America. Advertising device. 149,387, Apr. 20.
Stratmore, Irwin W., assignor to Ball Washing Machine Corp., Passaic, N. J. Faucet or similar article. 149,388, Apr. 20.
Svenson, Ernest J., Rockford, assignor to Odin Corporation, Chicago, Ill. Pump. 149,389, Apr. 20.
Swedlin, Jacob, New York, N. Y. Stuffed toy animal or similar article. 149,390, Apr. 20.
Uncas Manufacturing Company, assignee: *See*—
Barbieri, Nicholas.
Van Brunt, Geneva U., North Wilbraham, Mass. Lamp shade. 149,391, Apr. 20.
Varrieur, Albert L., assignor to The Glenn L. Martin Company, Baltimore, Md. Adjustable passenger loading ramp. 149,392, Apr. 20.
Westinghouse Electric Corporation, assignee: *See*—
Guild, Lurelle.
Wheeler, Richard, and R. F. Gozad, Des Moines, Iowa. Measuring comb. 149,393, Apr. 20.
World Games, Inc., assignee: *See*—
Binder, Sam.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 20TH DAY OF APRIL, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abbott Laboratories, assignee: *See*—
Knauf, Albert E., and Kirchmeyer.
Adams, Frederick W., New York, N. Y., assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa. Forming films upon the surfaces of glass plates. 2,439,999, Apr. 20.
Agriculture, United States of America as represented by the Secretary of, assignee: *See*—
O'Connell, Richard A., Jr.
Air Products Incorporated, assignee: *See*—
Anderson, Carl R.
Alexander, Paul, Berkhamsted, England. Method of and apparatus for depositing substances by thermal evaporation in vacuum chambers. 2,440,135, Apr. 20.
Alfthan, Johannes, New York, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of nonporous polytetrafluoroethylene articles. 2,440,190, Apr. 20.
Allen, Ivis J., Ypsilanti, Mich. Multicylinder fuel injection pump. 2,439,879, Apr. 20.
Allen, Lini, Berkeley, Calif. Pictorial display device. 2,440,062, Apr. 20.
Allen, Louis N., Jr., Short Hills, N. J., and W. K. Zahray, Bronx, assignors to Chemical Construction Corporation, New York, N. Y. Treatment of iron sulfate liquors. 2,440,215, Apr. 20.
American Box Board Company, assignee: *See*—
Anderson, Wilbur G., Jr.
American Loose Leaf Corporation, assignee: *See*—
Baker, Samuel S., and Batchelar.
American Metal Company, Limited, The, assignee: *See*—
Jones, Thomas R., and Bierly.
American Optical Company, assignee: *See*—
Silverberg, Carl G.
American Pattern and Manufacturing Co., assignee: *See*—
Miller, Raymond J.
American Viscose Corporation, assignee: *See*—
Kulp, Maurice P., and Sisson.
Nelson, Seddon C.
Sisson, Wayne A.
Stanley, Richard W.
Anderson, Carl R., assignor to Air Products Incorporated, Detroit, Mich. Pump for liquefied gases. 2,439,957, Apr. 20.
Anderson, Carl R., Chattanooga, Tenn., assignor to Air Products Incorporated, Detroit, Mich. Pump for liquefied gases. 2,439,958, Apr. 20.
Anderson, Carl R., assignor to Air Products, Incorporated, Chattanooga, Tenn. Reciprocating pump for liquefied gases. 2,440,216, Apr. 20.
Anderson, Ephraim H., Homewood, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Water seal for shaft-bearings. 2,439,917, Apr. 20.
Anderson, Fayette C., assignor to Thomas A. Edison, Incorporated, West Orange, N. J. Battery charging apparatus and method. 2,440,163, Apr. 20.
Anderson, Homer G., Waban, assignor to Raytheon Manufacturing Company, Newton, Mass. Electron discharge device. 2,439,786, Apr. 20.
Anderson, Lloyd L., Grand Rapids, assignor to Winters & Crampton Corporation, Grandville, Mich. Refrigeration latch mechanism. 2,440,162, Apr. 20.
Anderson, Wilbur G., Jr., assignor to American Box Board Company, Grand Rapids, Mich. Paper board chest. 2,439,959, Apr. 20.
Andrews, John L., Fairfield, Ill., assignor to Hotpoint Inc. Push-button switch. 2,440,063, Apr. 20.
Arnold, David C., O. T. Strand, Jr., and R. V. Lewis, Schenectady, N. Y., assignors to General Electric Company. Piezoelectric crystal apparatus. 2,440,064, Apr. 20.
Arnold, Herrick R., New Castle County, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Tungsten-molybdenum trioxide catalyst. 2,439,880, Apr. 20.
Aro Equipment Corporation, The, assignee: *See*—
Ginter, Charles W.
Snyder, Russell D.
Ash, Charles S., Milford, Mich. Wheel. 2,439,681, Apr. 20.
Ashton, Benjamin N., assignor to Electrol Incorporated, Kingston, N. Y. Piston type accumulator. 2,440,065, Apr. 20.
Atkins, Carl E., Elgin, assignor to Sun-Kraft, Inc., Chicago, Ill. Ultraviolet ray generator. 2,439,787, Apr. 20.
Atkinson, Allen S., Haddonfield, N. J. Method and apparatus for optimum economy operation of internal-combustion engines. 2,439,788, Apr. 20.
Attorney General of the United States: *See*—
Voit, Willy.
Auten, Claude I., assignor to Tennessee Coal, Iron and Railroad Company, Birmingham, Ala. Prefabricated metal house construction. 2,439,960, Apr. 20.
Auten, Jay C., Royal Oak, assignor to Chrysler Corporation, Highland Park, Mich. Transmission control mechanism. 2,440,217, Apr. 20.
Auxier, Robert W.: *See*—
Hill, Charles F., and Auxier.
Auxier, Robert W., Forest Hills, and P. Norelli, McKeesport, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Laminating. 2,439,918, Apr. 20.
Avco Manufacturing Corporation, assignee: *See*—
Davidson, Lloyd H.
Bailey Meter Company, assignee: *See*—
Hornfeck, Anthony J.
Baker, Samuel S., Eatontown, and R. F. Batchelar, Hillsdale, N. J., assignors to American Loose Leaf Corporation. Unidirectional locking apparatus. 2,440,038, Apr. 20.
Ballard, Seaver A.: *See*—
Winkler, De Loss E., and Ballard.
Bank, Albert M., Jersey City, N. J. Upholstery spring edge construction. 2,439,789, Apr. 20.
Barnes, Sydney H., Sydney, New South Wales, Australia. Table cutlery handle. 2,440,136, Apr. 20.
Bastian Blessing Co., The, assignee: *See*—
Buttner, William C.
Batchelar, Raymond F.: *See*—
Baker, Samuel S., and Batchelar.
Bauders, Ray, Kewanee, Ill. Wagon chute. 2,439,961, Apr. 20.
Beattie, James S., Los Angeles, Calif. Camera-pod. 2,440,137, Apr. 20.
Becker, Isidore, Bronx, N. Y. Mail sorting machine. 2,439,790, Apr. 20.
Beckwith, Edwin L., Brookline, Mass., assignor to Beckwith Manufacturing Company, Dover, N. H. Cigarette package holder. 2,440,164, Apr. 20.
Beckwith Manufacturing Company, assignee: *See*—
Beckwith, Edwin L.
Beddow, Raymond R., Toledo, Ohio. Knife, fork, and spoon set. 2,439,882, Apr. 20.
Beesch, Samuel C., assignor to Publicker Industries Inc., Philadelphia, Pa. Process for fermenting carbohydrates to butanol and acetone. 2,439,791, Apr. 20.
Behrend, William, Milwaukee, Wis. Debris collector for drains. 2,440,165, Apr. 20.
Bell Telephone Laboratories, Incorporated, assignee: *See*—
Willard, Gerald W.
Bell, Thomas A., Ridgefield Park, N. J. Trouser hanger. 2,440,066, Apr. 20.
Bendix Aviation Corporation, assignee: *See*—
Beringer, George E.
Boshka, Joseph M., Goepfrich, and Kuzmitz.
Davis, Robert J.
Frank, Frederick C.
Kasten, Walter.
Stuart, Alfred A., Jr.
Waterman, Herbert C.
Wisman, Franklin O.
Benenfeld, Peter, New York, N. Y. Reinforced corner seam for utility bags. 2,440,138, Apr. 20.
Bennett, Nicholas: *See*—
Hawkins, Peter A., and Bennett.
Bensen, Igor B., Schenectady, N. Y., assignor to General Electric Company. Manipulator. 2,440,067, Apr. 20.
Bergel, Franz, and A. Cohen, Welwyn Garden City, England, assignors, by mesne assignments, to Hoffmann-La Roche Inc., Nutley, N. J. Manufacture of ketotetrahydropyridine derivatives and hydroxypyridine derivatives. 2,440,218, Apr. 20.
Bergel, Franz, and A. Cohen, Welwyn Garden City, England, assignors, by mesne assignments, to Hoffmann-La Roche Inc., Roche Park, Nutley, N. J. Manufacture of ketotetrahydropyridine derivatives and hydroxypyridine derivatives. 2,440,219, Apr. 20.

Berger, Henry G., Glen Rock, G. S. Crandall and J. F. Socolofsky, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Treatment of drying oils. 2,440,000, Apr. 20.

Beringer, George E., assignor to Bendix Aviation Corporation, South Bend, Ind. Supporting beam for aircraft landing gears. 2,440,068, Apr. 20.

Bierly, Nevin R.: *See*—
Jones, Thomas R., and Bierly.

Birtman Electric Company, assignee: *See*—
Sparklin, Charles H.

Bjorksten, Johan: *See*—
Klaber, Joseph H., and Bjorksten.

Bliss, Harvey N., Windsor, assignor to Veeder-Root Incorporated, Hartford, Conn. Counter means for coin chutes. 2,440,191, Apr. 20.

Bloomberg, David J., Newton, Mass., assignor to General Electric Company. High-temperature elastic fluid turbine. 2,440,069, Apr. 20.

Blout, Elkan R., Cambridge, and R. M. Gofstein, Haverhill, assignors to Polaroid Corporation, Cambridge, Mass. Optical filter and manufacture. 2,440,070, Apr. 20.

Blumensaadt, Svend G., Beachwood Village, assignor to The Universal Wire Spring Company, Cleveland, Ohio. Attachment for wire elements to frame structures. 2,440,001, Apr. 20.

Boardman, Harry C., assignor to Chicago Bridge & Iron Company, Chicago, Ill. Floating roof storage tank. 2,439,792, Apr. 20.

Bonkowski, Teofil L., assignor to Merit Products, Inc., Los Angeles, Calif. Sanding drum. 2,439,962, Apr. 20.

Booth, Douglas G., assignor to The Plessey Company Limited, Ilford, England. Hydraulic pump. 2,440,072, Apr. 20.

Bornstein, Leopold: *See*—
Rostler, Fritz, and Bornstein.

Boshka, Joseph M., G. A. Goepfrich, and F. V. Kuzmitz, assignors to Bendix Aviation Corporation, South Bend, Ind. Semiautomatic hydraulic-electric gun charger. 2,440,071, Apr. 20.

Boucher, Charles P.: *See*—
Keiser, Russell W., and Boucher.

Boucher, Charles P., and R. W. Keiser, assignors to Boucher and Keiser Company, Atlanta, Ga. Fluorescent lighting system. 2,439,963, Apr. 20.

Boucher and Keiser Company, assignee: *See*—
Boucher, Charles P., and Keiser.
Keiser, Russell W., and Boucher.

Bourne, Roland B., West Hartford, and J. P. Tyskewicz, assignors to The Maxim Silencer Company, Hartford, Conn. Elevating mechanism for snowplows. 2,440,166, Apr. 20.

Bower, John L., New Haven, Conn., assignor to Control Instrument Company, Inc., Brooklyn, N. Y. Selective metering system with supervised control device. 2,440,002, Apr. 20.

Bower Roller Bearing Company, assignee: *See*—
Madison, Arthur F.

Bowlus, Glenn H., San Marino, Calif. Helicopter and airplane sustained aircraft. 2,440,003, Apr. 20.

Boyle-Midway Inc., assignee: *See*—
Thomas, Douglas W.

Braddon, Frederick D., Babylon, N. Y., assignor to The Sperry Corporation. Pressure regulator for instrument housings. 2,439,793, Apr. 20.

Bradley, William E., Swarthmore, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Synchronized oscillator circuit. 2,440,073, Apr. 20.

Brake Equipment & Supply Company, assignee: *See*—
Pratt, Best.

Brecht, Winston A., Forest Hills, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Flexible drive. 2,439,919, Apr. 20.

Brinen, Howard F.: *See*—
Skelly, Lawrence E., and Brinen.

Briskie, Jerry: *See*—
Nass, Lawrence.

British Insulated Callender's Cables Limited, assignee: *See*—
Carsten, Hans R. F., and Thorpe.

Brooks, Eugene H., Dallas, Tex., assignor to Continental Gin Company. Cotton cleaning apparatus. 2,440,139. Apr. 20.

Brown, Carl A., Chardon, and F. B. Van Sickle, deceased, by D. M. Van Sickle, administratrix, Cleveland Heights, Ohio, assignors to General Electric Company. Article traying machine. 2,439,883, Apr. 20.

Brown, George H., and W. C. Morrison, Princeton, N. J., assignors to Radio Corporation of America. Root mean square voltage measuring circuit. 2,440,004, Apr. 20.

Brown, Myron J., Forest Hills, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Automatic and manual control system for circuit breakers. 2,439,920, Apr. 20.

Brown, Nathan J., Barrington, Ill. Reticulately puckered laminated plastic sheet. 2,440,039, Apr. 20.

Brown, Theophilus, assignor to Deere & Company, Moline, Ill. Resiliently mounted cultivator tool. 2,439,921, Apr. 20.

Broxon, James W., and W. P. Jesse, Chicago, Ill., assignors, to the United States of America, as represented by the United States Atomic Energy Commission. Differential ion chamber. 2,440,167, Apr. 20.

Bruiport, George E., Rossmoyne, Ohio. Screw driver conditioner. 2,439,839, Apr. 20.

Brumby, Arnoldus S.: *See*—
Norman, Noah M., and Brumby.

Bruson, Herman A., Rydal, and W. D. Niederhauser, assignors to The Resinous Products & Chemical Company, Philadelphia, Pa. Addition products of acrylonitrile and drying oil acids and esters. 2,440,140, Apr. 20.

Bruson, Herman A., Rydal, and T. W. Riener, Philadelphia, Pa., assignors to The Resinous Products & Chemical Company. Cyclic ether. 2,440,220, Apr. 20.

Brusset, Jean A., Blairmore, Alberta, Canada, assignor to McNally Pittsburg Manufacturing Corporation, Pittsburg, Kans. Finely divided crystalline limestone in heavy fluid for float-and-sink concentration. 2,440,005, Apr. 20.

Budd Company, The, assignee: *See*—
Eksergian, Carolus L.
Weightman, William A.

Bugatti, Ettore, Paris, France. Machine for cutting and chamfering metal sheets. 2,439,794, Apr. 20.

Bugg, Kenly C., Fort Wayne, Ind. Fastener. 2,440,074. Apr. 20.

Buroff, Alvin F., Columbus, Wis. Machine for slicing cheese, or the like, in various shapes and sizes. 2,439,840, Apr. 20.

Burroughs Wellcome & Co. (U. S. A.) Inc., assignee: *See*—
Hitchings, George H.

Burton, Perry H., Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y. Apparatus for applying tags to articles. 2,440,040, Apr. 20.

Buttner, William C., Winnetka, assignor to The Bastian Blessing Co., Chicago, Ill. Fill indicator. 2,440,230. Apr. 20.

Byers, John R., Jr.: *See*—
Dickey, Joseph B., Byers, and McNally.

Byrne, Joseph F., Hove, and P. S. Powling, London, England. Extraction and preparation of agar. 2,439,964, Apr. 20.

Campbell-Edwards Pneumatic Artificial Foot Company, The, assignee: *See*—
Campbell, Harry C.

Campbell, Harry C., assignor to The Campbell-Edwards Pneumatic Artificial Foot Company, Youngstown, Ohio. Ankle joint and reinforcing member for pneumatic feet. 2,440,075, Apr. 20.

Campbell, John M., Fairmont, W. Va., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Method and machine for basing and seasoning fluorescent lamps. 2,439,884, Apr. 20.

Carbide and Carbon Chemicals Corporation, assignee: *See*—
Jackson, Donald R.

Carnegie-Illinois Steel Corporation, assignee: *See*—
Muddiman, Earll R. and Winterhalter.
Steudel, George E.

Carney, Thomas P.: *See*—
McElvain, Samuel M. and Carney.

Carsten, Hans R. F., Liverpool, and C. H. M. Thorpe, Huyton, assignors, by mesne assignments, to British Insulated Callender's Cables Limited, London, England. Coupling for coaxial cables. 2,439,841, Apr. 20.

Cassidy, George E., Aiplaus, N. Y., assignor to General Electric Company. Engine test system. 2,440,076, Apr. 20.

Celanese Corporation of America, assignee: *See*—
Roberts, Robert P.

Chain Belt Company, assignee: *See*—
Lind, Arthur C. and Klein.
Schmidt, Oliver G.

Chappell, Joseph J., Lockland, and M. R. Osborne, Cincinnati, Ohio. Nail brush. 2,439,922, Apr. 20.

Chemical Construction Corporation, assignee: *See*—
Allen, Louis N., Jr. and Zahray.

Chemical Foundation, Incorporated, The, assignee, trustee: *See*—
Hixson, Arthur W. and Miller.

Chicago Bridge & Iron Company, assignee: *See*—
Boardman, Harry C.

Chicago Electric Manufacturing Company, assignee: *See*—
Oetjen, Howard H.

Chrysler Corporation, assignee: *See*—
Auten, Jay C.
Matulaitis, Victor E.

Clark, Earl K., Mansfield, Ohio, assignor to Westinghouse Electric Corporation. Thermostat. 2,439,795, Apr. 20.

Clark, Earl K., Mansfield, Ohio, assignor to Westinghouse Electric Corporation, Pittsburgh, Pa. Control mechanism. 2,439,842, Apr. 20.

Clark, Earl K., Mansfield, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Gasket. 2,439,923, Apr. 20.

Clark, Earl K., Mansfield, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electric flatiron. 2,440,041, Apr. 20.

Clark, Louis H., New York, N. Y. Covering member for articles of luggage. 2,440,077, Apr. 20.

Clarke, William W.: *See*—
Zademach, Erich R. and Clarke.

Cleveland Welding Company, assignee: *See*—
Hoyt, Harold M.

Cobb, Albion B., assignee, et al.: *See*—
Sharp, Ralph P., Sr.

Cohen, Aaron: *See*—
Bergel, Franz and Cohen.

Colalaco, August P., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Sealed ignitron. 2,439,924, Apr. 20.

Collins Radio Company, assignee: *See*—
Hunter, Theodore A.

Columbian Carbon Company, assignee: *See*—
Heller, George L.

Composite Rubber Products Corporation, assignee: *See*—
Hosking, Oakley.

Continental Gin Company, assignee: *See*—
Brooks, Eugene H.

Control Instrument Company, Inc., assignee: *See*—
Bower, John L.

Corning Glass Works, assignee: *See*—
Hood, Harrison P.
McGregor, Rob R. and Warrick.

Cossor, A. C., Limited, assignee: *See*—
Jofeh, Lionel.

Cowan, Irma M., Chicago, Ill. Collapsible hanging garment container. 2,440,192, Apr. 20.

Crandall, George S.: *See*—
Berger, Henry G., Crandall and Socolofsky.

Crane, Co., assignee: *See*—
Stoyke, Ludwig T.

Cross, George L., Loudonville, assignor to Tobin Packing Co., Inc., Albany, N. Y. Meat product and making the same. 2,440,168, Apr. 20.

Cross, Lloyd E.: *See*—
Lingen, Ralph A. and Cross.

Cross, Marie E., assignee, et al.: *See*—
Lingen, Ralph A. and Cross.

Cullinan, James T., administrator: *See*—
Thomas, Charles L. and Lee.

Cupler, John A., Cumberland, Md. Drill press. 2,439,965. Apr. 20.

Curry, Herman H.: *See*—
Schaelchlin, Walter and Curry.

Curtiss-Wright Corporation, assignee: *See*—
Gley, Paul R.
Palmatier, Everett P.
Stulen, Foster B.

Dana Corporation, assignee: *See*—
Peterson, Carl D. and Deimel.

Darley, William G., Cleveland Heights, Ohio, assignor to General Electric Company. Luminaire. 2,439,885, Apr. 20.

Dath, George E., Mokena, assignor to W. H. Miner, Inc., Chicago, Ill. Friction shock absorbing mechanism for railway draft riggings. 2,439,843, Apr. 20.

Dath, George E., Mokena, assignor to W. H. Miner, Inc., Chicago, Ill. Snubbing means. 2,439,925, Apr. 20.

Davidson, Lloyd H., Connersville, Ind., assignor, by mesne assignments, to Avco Manufacturing Corporation. Sterilized toilet seat. 2,440,231, Apr. 20.

Davidson, Lloyd H., Connersville, Ind., assignor, by mesne assignments, to Avco Manufacturing Corporation. Sterilized toilet seat. 2,440,232, Apr. 20.

Davis, Lewis, and E. C. Tuukkanen, Worcester, assignors to McLaurin-Jones Co., Brookfield, Mass. Sealing and reinforcing cartons with tape and the tape as an article of manufacture. 2,440,193, Apr. 20.

Davis, Robert J., Lutherville, Md., assignor to Bendix Aviation Corporation, New York, N. Y. Amplifier and oscillator circuit. 2,439,844, Apr. 20.

Dearborn Chemical Company, assignee: *See*—
Denman, Wayne L.

Dearsley, Irwin E., assignor to Walker Manufacturing Company of Wisconsin, Racine, Wis. Pumping mechanism. 2,439,796, Apr. 20.

Deere & Company, assignee: *See*—
Brown, Theophilus.

Deimel, Albert H.: *See*—
Peterson, Carl D. and Deimel.

DeJuhasz, Kalman J., State College, Pa., and F. J. Villiforth, Jr., Beacon, assignors to The Texas Company, New York, N. Y. Fuel pump. 2,440,194, Apr. 20.

Denman, Wayne L., Frederick, Md., assignor to Dearborn Chemical Company, Chicago, Ill. Reduction of foaming in an aqueous bath containing foam-inducing constituents. 2,439,797, Apr. 20.

Denmark, Robert, New York, N. Y., and C. H. McWhirter, East Orange, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Lead-in construction. 2,439,886, Apr. 20.

Denton, William I.: *See*—
Krieble, Robert H. and Denton.

De Swart, Jan, Los Angeles, assignor of one half to C. B. Jamison, Beverly Hills, and one half to A. E. Wright, Los Angeles, Calif. Bottle cap. 2,439,845, Apr. 20.

Devine, George F., Easton, Conn., assignor to General Electric Company. Radio cabinet and speaker mounting. 2,440,078, Apr. 20.

D'Halloy, Audoin, Paris, France. Refrigerating machine. 2,440,079. Apr. 20.

Diamant, Malvina, New York, N. Y. Stocking dryer. 2,440,169, Apr. 20.

Dicke, Oscar H., assignor to General Railway Signal Company, Rochester, N. Y. Airplane course indicating system. 2,439,846, Apr. 20.

Dickey, Joseph B., and J. R. Byers, Jr., Rochester, N. Y., and J. G. McNally, Oak Ridge, Tenn., assignors to Eastman Kodak Company, Rochester, N. Y. Monoazo compounds containing a pyrazolone nucleus. 2,439,798, Apr. 20.

Dinzl, Richard W., Westfield, assignor to The Watson-Stillman Co., Roselle, N. J. Injection molding. 2,439,966, Apr. 20.

Disotell, Mose E., Berlin, Wis. Pole holder. 2,439,847, Apr. 20.

Dobbins, Horace M., Pasadena, Calif. Craft propulsion. 2,440,195, Apr. 20.

Dollase, Robert F., Fort Atkinson, Wis. Trailer hitch. 2,439,967, Apr. 20.

Donaldson, Frank Y., Burbank, Calif. Intermittent flow device. 2,440,006, Apr. 20.

Donovan, Arthur B., Newton Center, Mass. Catamenial tampon. 2,440,141, Apr. 20.

Duefrene, George, Monroe, Conn. Handle, knob, and mounting structure. 2,440,170. Apr. 20.

Duncan, Theodore R., North Hollywood, Calif. Salt shaker. 2,439,799, Apr. 20.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Alfthan, Johannes.
Arnold, Herrick R.
Howk, Benjamin W., and Jacobson.
Keats, John L., and Peterson.
Klabunde, Walter.
Millhiser, Frederick R.
Swank, Howard W.
Tippetts, Emerson A.

Eastman Kodak Company, assignee: *See*—
Dickey, Joseph B., Byers, and McNally.

Eck, Herbert P., M. M. Karlan, and C. Perrucci, New York, N. Y. Machine for trimming primer cups and the like. 2,440,080, Apr. 20.

Edison, Thomas A., Incorporated, assignee: *See*—
Anderson, Fayette C.
Fox, Robert A.

Eksergian, Carolus L., Detroit, Mich., assignor to The Budd Company, Philadelphia, Pa. Metal wheel. 2,439,848, Apr. 20.

Eldridge, James A., St. James, Manitoba, Canada. Quick release increasing the gap between disks upon entry of uncrushables. 2,440,171, Apr. 20.

Electric Service Manufacturing Company, assignee: *See*—
Hallman, Eric B.

Electrol Incorporated, assignee: *See*—
Ashton, Benjamin N.

Electronic Laboratories, Inc., assignee: *See*—
Peek, Walter E.

Elliott, Harold F., Belmont, Mass. Time control device. 2,440,142, Apr. 20.

Elliott, Peter M., assignor to Oil Distribution Appliances Limited, Toronto, Ontario, Canada. Filling apparatus for volatile liquids with vapor return conduit. 2,439,887, Apr. 20.

Eureka Williams Corporation, assignee: *See*—
Hammell, Kemper M.

Fairchild Engine and Airplane Corporation, assignee: *See*—
Mercier, Pierre E.

Faures, Morris H., assignee, et al.: *See*—
Sharp, Ralph P., Sr.

Fawick Airflex Company, Inc., The, assignee: *See*—
Fawick, Thomas L.

Fawick, Thomas L., Akron, Ohio, assignor to The Fawick Airflex Company, Inc. Assembly for clutches and brakes. 2,439,849, Apr. 20.

Fear, Ralph G., Reseda, Calif. Expansible reamer. 2,439,968. Apr. 20.

Fenney, William N., assignor to The Texas Company, New York, N. Y. Multiple fluid proportioning pump. 2,440,196, Apr. 20.

Fick, Clifford G., Schenectady, N. Y., assignor to General Electric Company. Tuning arrangement. 2,440,081, Apr. 20.

Fisher, Oscar, Locust Valley, N. Y. Sand toy. 2,439,800, Apr. 20.

Flanders, John S., West Kilbride, and E. Jones, Ardrossan, Scotland, assignors to Imperial Chemical Industries Limited. Thermically vaporisable fumigant comprising sensitized ammonium nitrate and a pesticide. 2,440,082. Apr. 20.

Flannery Bolt Company, assignee: *See*—
Greenslade, Grover R.

Floor-O-Matic, Inc., assignee: *See*—
Roger, Henry.

Flowers, Henry F., Findlay, Ohio. Rail vehicle having axleless trucks. 2,439,801, Apr. 20.

Fontaine, John P. K., assignee: *See*—
Norman, Noah M., and Brumby.

Foster, Newton C.: *See*—
Swiss, Jack, and Foster.

Foster, Robert E.: *See*—
Wallace, Frank C., and Foster.

Fountain, Lawrence L.: *See*—
Wagner, Charles F., and Fountain.

Fourneau, Ernest, assignor to Societe des Usines Chimiques Rhone-Poulenc, Paris, France. Amino-dioxacyclopentanes. 2,439,969, Apr. 20.

Fox, Robert A., Glenview, Ill., assignor to Thomas A. Edison, Incorporated, West Orange, N. J. Polarized armature electrical instrument. 2,439,970, Apr. 20.

Foy, William J.: *See*—
Wolff, Robert L., and Foy.
Francis, Carleton S., Jr., West Harwich, Mass. Apparatus for forming films and coatings. 2,439,802, Apr. 20.
Frank, Frederick C., assignor to Bendix Aviation Corporation, South Bend, Ind. Wheel. 2,439,926, Apr. 20.
Frank, Herman M., assignor to The North & Judd Manufacturing Company, New Britain, Conn. Slide fastener. 2,440,007, Apr. 20.
Freeman, Walter R., St. Louis County, Mo. Shaft bearing. 2,439,971, Apr. 20.
Frick Company, assignee: *See*—
Good, Daniel F.
Friedman, Ernest, New York, N. Y. Indicating system for baseball games. 2,440,042, Apr. 20.
Frohring, Paul R.: *See*—
Tabor, Joseph M., Seibert, and Frohring.
Gamblin, Fay B., Smithers, British Columbia, Canada. Hot-air heater with selective indirect draft. 2,439,972, Apr. 20.
Gardner, George D., San Jose, Calif. Spinach tumbler. 2,440,008, Apr. 20.
Gardner-Richardson Company, The, assignee: *See*—
Ringler, William A.
Gates, George W.: *See*—
Swisher, Robert E., and Gates.
General Aniline & Film Corporation, assignee: *See*—
Mueller, Fritz W. H.
Riester, Oskar, and Willmanns.
General Biochemicals, Inc., assignee: *See*—
Tabor, Joseph M., Seibert, and Frohring.

Dicke, Oscar H.
Preston, Neil D., and Hitchcock.
General Tire and Rubber Company, The, assignee: *See*—
Kraft, Herman T.
Gibbons, Thomas, Chicago, Ill. Hobbyhorse. 2,440,172, Apr. 20.
Giesen, Josef H., U. S. Navy. Surgical drill. 2,430,803, Apr. 20.
Ginter, Charles W., assignor to The Aro Equipment Corporation, Bryan, Ohio. Bearing packer. 2,439,888, Apr. 20.
Giey, Paul R., Haledon, N. J., assignor to Curtiss-Wright Corporation. Control mechanism. 2,440,083, Apr. 20.
Globe-Union Inc., assignee: *See*—
Wolff, Robert L., and Foy.
Glocker, Gustave, assignor to Super-Seal Container Corporation, Washington, D. C. Machine for applying closures and sealing jars. 2,440,085, Apr. 20.
Goda, Lawrence B., Sr., Chicago, Ill. Lithograph spray device. 2,440,084, Apr. 20.
Goepfrich, George A.: *See*—
Boshka, Joseph M., Goepfrich, and Kuzmitz.
Gofstein, Ralph M.: *See*—
Blout, Elkan R., and Gofstein.
Good, Daniel F., assignor to Frick Company, Waynesboro, Pa. Peanut picker with gaseous suspension and sifting. 2,440,197, Apr. 20.
Goodman Manufacturing Company, assignee: *See*—
Stoltz, Charles E.
Goodrich, B. F., Company, The, assignee: *See*—
Green, William C.
Jansen, Jacob E.
Swedish, Frank, Jr.
Gould, Henry C., Grantham, England. Sterilizing and disinfecting apparatus. 2,440,043, Apr. 20.
Grabau, Martin: *See*—
Land, Edwin H., and Grabau.
Graboi, Michael, New York, N. Y. Slide fastener. 2,440,086, Apr. 20.
Graham, Adelbert M., Beverly Hills, Calif., assignor, by mesne assignments, to Thermoid Company, Trenton, N. J. Drill pipe protector applying and installing apparatus. 2,440,009, Apr. 20.
Green, Edwin F., Ashland, Ky. Tire recapping machine. 2,440,087, Apr. 20.
Green, William C., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Pressure-detecting covering. 2,440,198, Apr. 20.
Greenslade, Grover R., Scott Township, Allegheny County, assignor to Flannery Bolt Company, Bridgeville, Pa. Device for making electrical-conductivity test on tubular articles. 2,440,044, Apr. 20.
Grey, David S., assignor to Polaroid Corporation, Cambridge, Mass. Optical lens system. 2,440,088, Apr. 20.
Guardite Corporation, assignee: *See*—
Heineman, Arnold H.
Gunderson, Gustav, Tremont, Pa. Cord holder for electric irons. 2,440,045, Apr. 20.
Gunn, Charles A., Alexander City, Ala. Dobby knife connector. 2,439,973, Apr. 20.
Haas, Walter O., Jr., Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Cooling tools. 2,439,927, Apr. 20.
Haddock, Norman H., Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited. Azo benzene benzthiazyls. 2,439,804, Apr. 20.
Haeff, Andrew V., Washington, D. C., assignor to Radio Corporation of America. Electron discharge device employing cavity resonators. 2,440,089, Apr. 20.
Hale, George E., assignee: *See*—
Ruskin, Henry.
Hall, Howard E., assignor to Olson Manufacturing Company, Boise, Idaho. Hoist attachment for tractors. 2,440,010, Apr. 20.
Hallman, Eric B., assignor to Electric Service Manufacturing Company, Philadelphia, Pa. Combined vehicle stop and directional signal. 2,440,011, Apr. 20.
Hammell, Kemper M., Detroit, Mich., assignor to Eureka Williams Corporation. Coupling for suction cleaner attachments. 2,440,143, Apr. 20.
Hanley, Herbert R., Rolla, Mo., and J. H. Jacobs, Boulder City, Nev. Electrowinning manganese. 2,439,805, Apr. 20.
Hart, Fred V., and F. L. Mooney, Lynn, Mass., assignors to United Shoe Machinery Corporation, Flemington, N. J. Leveling machine. 2,439,889, Apr. 20.
Hautier, Camille, Boulogne-sur-Seine, France. Reversible propeller with variable pitch. 2,440,046, Apr. 20.
Haver, Gabriel D., Los Angeles, Calif. Locking device. 2,440,012, Apr. 20.
Hawkins, Peter A., Widnes, and N. Bennett, Ditton, England, assignors to Imperial Chemical Industries Limited. Production of derivatives of dihydropyran. 2,439,928, Apr. 20.
Heineman, Arnold H., Chicago, Ill., assignor, by mesne assignments, to Guardite Corporation, Wilmington, Del. Testing chamber. 2,439,806, Apr. 20.
Heller, Edward A., Detroit, Mich. Caster. 2,440,047, Apr. 20.
Heller, George L., Monroe, La., assignor to Columbian Carbon Company, New York, N. Y. Manufacture of carbon black. 2,439,850, Apr. 20.
Henley's, W. T., Telegraph Works Company Limited, assignee: *See*—
Prosser, Alfred J., and Smith.
Henszey, Roy O., Oconomowoc, Wis. Multiple effect still with thermocompression of vapors. 2,440,173, Apr. 20.
Higgins, Frank, Princeton, Ill. Extensible hand truck. 2,439,851, Apr. 20.
Hill, Charles F., Edgewood, and R. W. Auxier, Forest Hills, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electrical insulation. 2,439,929, Apr. 20.
Hings, Donald L., Ottawa, Ontario, Canada. Oscillator control circuit. 2,439,890, Apr. 20.
Hitchcock, Forest B.: *See*—
Preston, Neil D., and Hitchcock.
Hitchings, George H., Tuckahoe, assignor to Burroughs Wellcome & Co. (U. S. A.) Inc., New York, N. Y. Preparation of xanthopterin. 2,440,221, Apr. 20.
Hixson, Arthur W., Leonia, N. J., and R. Miller, New York, N. Y., assignors to The Chemical Foundation, Incorporated, as trustee. Treatment of rosin. 2,439,807, Apr. 20.
Hoard, Bert V., Portland, Oreg., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Differential relay and restraint magnet therefor. 2,439,930, Apr. 20.
Hodnette, John K., Sharon, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Protective fuse for electrical apparatus immersed in a dielectric liquid. 2,439,931, Apr. 20.
Hodson, George F., Chicago, Ill., assignor to Wilson & Co. Inc. Coating eggs for breaking. 2,439,808, Apr. 20.
Hoffman, Alan C.: *See*—
Olcott, James, and Hoffman.
Hoffmann-La Roche Inc., assignee: See—
Bergel, Franz, and Cohen.
Zumbrunn, Robert.
Holman, Sam N., Tampa, Fla. Commutator. 2,439,974, Apr. 20.
Hood, Harrison P., assignor to Corning Glass Works, Corning, N. Y. Fluorescent silicate glasses and making same. 2,440,048, Apr. 20.
Hooper, Charles K.: *See*—
Lee, Reuben, and Hooper.
Hornfeck, Anthony J., Cleveland Heights, Ohio, assignor to Bailey Meter Company. Measuring and controlling system. 2,439,891, Apr. 20.
Hosking, Oakley W., Monroe, N. Y., assignor to Composite Rubber Products Corporation, Bridgeport, Conn. Core pin for molding valve stems. 2,440,144, Apr. 20.
Hotpoint Inc., assignee: *See*—
Andrews, John L.

Houghton, William D., Port Jefferson, N. Y., assignor to Radio Corporation of America. Electronic audio switch. 2,440,049, Apr. 20.
Howard, Michael, Davenport, Wash. Plowing mechanism. 2,440,174, Apr. 20.
Howk, Benjamin W., Wilmington, Del., and R. A. Jacobson, Landenburg, Pa., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Alpha-methylene carboxylic acid fluoride polymers and their preparation. 2,440,090, Apr. 20.
Hoyt, Harold M., assignor to The Cleveland Welding Company, Cleveland, Ohio. Bicycle. 2,440,091, Apr. 20.
Huck, Alfred J., assignor, by mesne assignments, to Knapp-Monarch Company, St. Louis, Mo. Heating blanket or the like and fabricating same. 2,439,892, Apr. 20.
Huetten, Clarence, assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Electric vibratory interrupter. 2,440,145, Apr. 20.
Hunter, Theodore A., Iowa City, Iowa, assignor to Collins Radio Company. Temperature compensation means for fixed reactances in tunable circuits. 2,430,809, Apr. 20.
Huston, William M., Lima, Ohio. Gantry structure. 2,440,199, Apr. 20.
Hutchinson, Job, Great Neck, N. Y. Changeable exhibitor having a series of rollers with webs. 2,439,932, Apr. 20.
Hyman, Mark, Jr.: *See*—
Land, Edwin H., Mahler, and Hyman.
Hyman, Mark, Jr., and P. H. Johnson, Jr., assignors to Polaroid Corporation, Cambridge, Mass. Polymers and copolymers of alkoxy acrylic esters. 2,440,092, Apr. 20.
Iden, Fred B., Cleveland Heights, Ohio, assignor to General Electric Company. Filament coiling apparatus. 2,439,893, Apr. 20.
Imperial Chemical Industries Limited, assignee: *See*—
Flanders, John S., and Jones.
Haddock, Norman H.
Hawkins, Peter A., and Bennett.
Independent Pneumatic Tool Company, assignee: *See*—
Mitchell, Walter G.
Industrial Rayon Corporation, assignee: *See*—
Israel, William O.
Ipatieff, Vladimir N.: *See*—

Macomber, Stanley, North Canton, Ohio. Floor tile and joist construction. 2,440,053, Apr. 20.

Maddox, Norval R., Owingsville, Ky. Safety inner tube for pneumatic tires. 2,440,107, Apr. 20.

Madison, Arthur F., assignor to Bower Roller Bearing Company, Detroit, Mich. Centerless grinding machine attachment. 2,440,148, Apr. 20.

Mahler, Joseph: *See*—
Land, Edwin H., Mahler, and Hyman.

Mallory, P. R., & Co., Inc., assignee: *See*—
Oles, Herbert E.
Huetten, Clarence.

Marshall, Laurence K., Cambridge, assignor to Raytheon Manufacturing Company, Newton, Mass. Operating electrical space discharge devices. 2,439,816, Apr. 20.

Marshall, William C., Oakland, Calif. Movable electrode tube. 2,439,942, Apr. 20.

Marsilius, Newman M., Trumbull, Conn. Utility press. 2,440,054, Apr. 20.

Martin, Alfred M., Park Ridge, Ill. Card-handling device. 2,439,943, Apr. 20.

Martin, Joseph, Dayton, Ohio. Storm sash and casement window connector. 2,440,223, Apr. 20.

Matulaitis, Victor E., assignor to Chrysler Corporation, Highland Park, Mich. Power transmission. 2,440,055, Apr. 20.

Maxim Silencer Company, The, assignee: *See*—
Bourne, Roland B., and Tyskewicz.

Maxwell, Donald E., Scotia, N. Y., assignor to General Electric Company. Overcurrent protective system for a direct-current load circuit. 2,440,108, Apr. 20.

Maxwell, William H., assignee: *See*—
Wainwright, George R.

McElvain, Samuel M., Madison, Wis., and T. P. Carney, Indianapolis, Ind. Substituted esters of benzoic acid. 2,439,818, Apr. 20.

McGinnis, Archibald B., assignor to Wheeling Stamping Company, Wheeling, W. Va. Closure cap. 2,440,149, Apr. 20.

McGregor, Rob R., Verona, and E. L. Warrick, Pittsburgh, Pa., assignor to Corning Glass Works, Corning, N. Y. Dimethyl silicone polymers and making them. 2,439,856, Apr. 20.

McIntyre, Brouwer D. and W. D., assignors to Monroe Auto Equipment Company, Monroe, Mich. Dumping box. 2,440,056, Apr. 20.

McIntyre, William D.: *See*—
McIntyre, Brouwer D. and W. D.

McLain, William R., assignor to Kusan Incorporated, Henderson, Ky. Toy block. 2,440,205, Apr. 20.

McLaurin-Jones Co., assignee: *See*—
Davis, Lewis, and Tuukkanen.

McNally, James G.: *See*—
Dickey, Joseph B., Byers, and McNally.

McNally Pittsburg Manufacturing Corporation, assignee: *See*—
Brusset, Jean A.

McWhirter, Carson H.: *See*—
Denmark, Robert, and McWhirter.

Meddick, Lorrain D., assignor to Lane-Wells Company, Los Angeles, Calif. Automatically releasing well head. 2,440,015, Apr. 20.

Mehring, Arthur C., East Orange, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Reactance type relay. 2,439,944, Apr. 20.

Mercier, Pierre E., Westport, Conn. Aircraft power plant of jet propulsion type. 2,439,817, Apr. 20.

Mercier, Pierre E., New York, assignor to Fairchild Engine and Airplane Corporation, Farmingdale, N. Y. Engine cooling system. 2,439,898, Apr. 20.

Merit Products, Inc., assignee: *See*—
Bonkowski, Teofil L.

Metalwash Machinery Company, assignee: *See*—
Zademach, Erich R., and Clarke.

Miller Company, The, assignee: *See*—
Runge, Richard M.

Miller, Ralph: *See*—
Hixson, Arthur W., and Miller.

Miller, Raymond J., assignor to American Pattern and Manufacturing Co., Detroit, Mich. Motion-picture projector. 2,439,981, Apr. 20.

Millhiser, Frederick R., Richmond, Va., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Production of viscose rayon. 2,440,057, Apr. 20.

Millikan, Glenn A., Nashville, Tenn., assignor to United States of America as represented by the Secretary of War. Single knob oximeter having selective control means for multiple channels. 2,439,857, Apr. 20.

Milster, Arthur N., Ferguson, assignor to Wagner Electric Corporation, St. Louis, Mo. Tractor steering control. 2,440,016, Apr. 20.

Miner, W. H., Inc., assignee: *See*—
Dath, George E.
Krob, Joseph J.
Lounsbury, Harvey J.

Minit-Man, Inc., assignee: *See*—
Rousseau, Leo J.

Mitchell, Walter B., Seattle, Wash. Wire twister. 2,440,058, Apr. 20.

Mitchell, Walter G., Aurora, assignor to Independent Pneumatic Tool Company, Chicago, Ill. Compression member. 2,440,150, Apr. 20.

Moffett, Frank W., Jr., Gates, N. Y. Demountable drier for hay and the like having a perforate floor and air circulating means. 2,439,853, Apr. 20.

Monaco, George C., Douglaston Hills, N. Y. Method and apparatus for coating comestibles. 2,439,899, Apr. 20.

Monogram Manufacturing Company, assignee: *See*—
Wallace, Frank C., and Foster.

Monroe Auto Equipment Company, assignee: *See*—
McIntyre, Brouwer D. and W. D.

Monroe, George S., and V. N. Ipatieff, Riverside, assignors to Universal Oil Products Company, Chicago, Ill. Production of dehydrated castor oil. 2,439,982, Apr. 20.

Mooney, Fred L.: *See*—
Hart, Fred V., and Mooney.

Moore, Frank J., Beacon, assignor, by mesne assignments, to The Texas Company, New York, N. Y. Effecting catalytic reactions. 2,440,109, Apr. 20.

Morgan, Willard L., Columbus, Ohio, and A. R. Weinrich, Brackenridge, Pa., assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Means for thermally evaporating various materials in vacuums for coating purposes. 2,439,983, Apr. 20.

Morrison, Wendell C.: *See*—
Brown, George H., and Morrison.

Mortensen, James C., Princeton, Ill. Respirator. 2,439,855, Apr. 20.

Morton, Henry J., Detroit, Mich. Electrically heated space radiator. 2,439,945, Apr. 20.

Muddiman, Earll R., Wilkinsburg, and W. E. Winterhalter, Mount Lebanon, Pa., assignors to Carnegie-Illinois Steel Corporation. Conductor roll. 2,439,858, Apr. 20.

Mueller, Fritz W. H., Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Stabilized silver halide emulsions. 2,440,110, Apr. 20.

Mueller, Fritz W. H., Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Stabilized silver halide emulsions. 2,440,206, Apr. 20.

Muller, George J., Philadelphia, assignor to Taylor Fibre Company, Norristown, Pa. Insulating cover for bus bars. 2,439,859, Apr. 20.

Muller, George J., Philadelphia, assignor to Taylor Fibre Company, Norristown, Pa. Picker stick. 2,440,181, Apr. 20.

Muller, George J., Philadelphia, assignor to Taylor Fibre Company, Norristown, Pa. Picker. 2,440,182, Apr. 20.

Murcko, Paul J., Bridgeport, Conn. Safety guard for presses. 2,440,111, Apr. 20.

Murphy, Everett E., Marblehead, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Making platform shoes. 2,439,900, Apr. 20.

Musselman, John M., South Euclid, assignor to The Standard Oil Company, Cleveland, Ohio. High efficiency lubricants. 2,439,819, Apr. 20.

Musselman, John M., South Euclid, assignor to The Standard Oil Company, Cleveland, Ohio. Compound lubricants. 2,439,820, Apr. 20.

Musselman, John M., South Euclid, assignor to The Standard Oil Company, Cleveland, Ohio. Lubricant preparation. 2,439,821, Apr. 20.

Nass, Lawrence, assignor to J. Briskie, New York, N. Y. Adjustable device. 2,440,017, Apr. 20.

National Lock Company, assignee: *See*—
North, Edwin W., and Stone.

Nellson, Stanley, New York, N. Y. Sanitary bottle spigot. 2,440,112, Apr. 20.

Nelson, Seddon C., Front Royal, Va., assignor to American Viscose Corporation, Wilmington, Del. Thread guide. 2,440,151, Apr. 20.

Neumann, Henry T., New York, N. Y. Producing colored photographs. 2,439,901, Apr. 20.

Niederhauser, Warren D.: *See*—
Bruson, Herman A., and Niederhauser.

Nisbet, Robert H., Stroud, assignor to The Sperry Gyroscope Company, Ltd., Brentford, England. Automatic regulating system having a movable control element and a follow-up element. 2,440,183, Apr. 20.

Noecker, Louis J., St. Clair, Mo. Machine for turning and binding the edges of leather. 2,440,113, Apr. 20.

Noel, Edward B., Cleveland Heights, Ohio, assignor to General Electric Company. Glass tube bending apparatus. 2,439,902, Apr. 20.

Nopco Chemical Company, assignee: *See*—
Pickel, Frank D., and Rosenberg.

Norelli, Patrick: *See*—
Auxier, Robert W., and Norelli.

Norman, Noah M., and A. S. Brumby, assignors to J. P. K. Fontaine, Birmingham, Ala. Trailer coupling mechanism. 2,440,152, Apr. 20.

North, Edwin W., and R. A. Stone, assignors to National Lock Company, Rockford, Ill. High chair tray slide. 2,440,224, Apr. 20.

North & Judd Manufacturing Company, The, assignee: *See*—
Frank, Herman M.

North American Aviation, Inc., assignee: *See*—
Villepigue, Julius G.

O'Connell, Richard A., Jr., Berkeley, Calif., assignor to United States of America as represented by the Secretary of Agriculture. Thread advancing, storage, and stretching reel. 2,439,903, Apr. 20.

Oetjen, Howard H., assignor to Chicago Electric Manufacturing Company, Chicago, Ill. Electric room heater. 2,440,018, Apr. 20.

Oil Distribution Appliances Limited, assignee: *See*—
Elliott, Peter M.

Olcott, James, and A. C. Hoffman, assignors to United Aircraft Products, Inc., Dayton, Ohio. Fluid flow regulator. 2,440,059, Apr. 20.

Oles, Herbert E., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Making spark gaps and products thereof. 2,440,153, Apr. 20.

Oles, Herbert E., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Spark gap. 2,440,154, Apr. 20.

Olson Manufacturing Company, assignee: *See*—
Hall, Howard E.

Osborne, Marianne R.: *See*—
Chappell, Joseph J., and Osborne.

Owens, Thomas B., Cleveland, Ohio. Holder for knives, forks, spoons, and the like. 2,440,207, Apr. 20.

Page, Herbert E., Alhambra, Calif. Pump for hydraulic jacks. 2,440,060, Apr. 20.

Page, Herbert E., Alhambra, Calif. Power driven dry shaver. 2,440,061, Apr. 20.

Page, Herbert E., Alhambra, Calif. Dry shaver. 2,440,114, Apr. 20.

Pakala, William E., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Vapor-electric device. 2,439,946, Apr. 20.

Palmatier, Everett P., Upper Montclair, N. J., assignor to Curtiss-Wright Corporation. Deicing system for aircraft surfaces. 2,440,115, Apr. 20.

Pangborn Corporation, assignee: *See*—
Keefer, Walter L.

Parcell, Charles L., Mariemont, Ohio. Hand tool for cutting out hinge recesses. 2,440,208, Apr. 20.

Parker, Robert R.: *See*—
Johnson, Paul H., and Parker.

Pearson, John L., Tacoma, Wash. Hat construction and sweatband therefor. 2,439,984, Apr. 20.

Peek, Walter E., assignor to Electronic Laboratories, Inc., Indianapolis, Ind. Direct current voltage doubler. 2,439,860, Apr. 20.

Pennsylvania Railroad Company, The, assignee: *See*—
Keller, William M.
Steins, Carleton K.

Perelson, Harold N., Huntington Park, Calif. Dispensing closure. 2,439,985, Apr. 20.

Perrucci, Cosimo: *See*—
Eck, Herbert P., Karlan, and Perrucci.

Petersen, Julius, Cleveland Heights, Ohio, assignor to General Electric Company. Filament coiling apparatus. 2,439,904, Apr. 20.

Peterson, Carl D., and A. H. Deimel; said Deimel and M. F. Peterson, executrix of said C. D. Peterson, deceased, assignors to Dana Corporation, Toledo, Ohio. Fluid seal. 2,440,155, Apr. 20.

Peterson, James H.: *See*—
Keats, John L.

Peterson, Marion F., executrix: *See*—
Peterson, Carl D., and Deimel.

Petkoff, Theodore W., Evansville, Ind. Driving attachment for motorcycles. 2,440,116, Apr. 20.

Phaneuf, Wilrose J., assignor to The Lapointe Machine Tool Company, Hudson, Mass. Saw-tooth surface broach. 2,439,822, Apr. 20.

Phileo Corporation, assignee: *See*—
Bradley, William E.

Phillips Petroleum Company, assignee: *See*—
Johnson, Paul H., and Parker.
Wagner, Cary R.

Phyfe, James D., Gloucester, N. J., assignor to Radio Corporation of America. Electric change-over system. 2,440,184, Apr. 20.

Pianowski, Leon J., and S. F. Sgriccia, assignors to The Udylite Corporation, Detroit, Mich. Work carrier for electroplating. 2,440,019, Apr. 20.

Pickel, Frank D., Bogota, and L. T. Rosenberg, Ridgefield Park, assignors to Nopco Chemical Company, Harrison, N. J. Purifying lactones. 2,439,905, Apr. 20.

Pipe Couplings, Inc., assignee: *See*—
Kroosa, John H.

Piron, Emil H., assignor to Transit Research Corporation. New York, N. Y. Wheel springing element. 2,439,906, Apr. 20.

Pittsburgh Plate Glass Company, assignee: *See*—
Adams, Frederick W.

Plessey Company Limited, assignee: *See*—
Booth, Douglas G.

Poglein, Louis, Jeannette, Pa. Grip for steel drums or the like. 2,439,907, Apr. 20.

Polaroid Corporation, assignee: *See*—
Blout, Elkan R., and Gofstein.
Grey, David S.
Hyman, Mark, Jr., and Johnson.
Land, Edwin H.
Land, Edwin H., and Graubau.
Land, Edwin H., Mahler, and Hyman.
Sterck, Thomas R.
Young, Clinton J. T.

Pontius, Peter A., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Solderless connector for attachment to electrical conductors. 2,439,947, Apr. 20.

Pootjes, Peter, Temple City, assignor to Western Precipitation Corporation, Los Angeles, Calif. Alternate tipping valve for handling fluent materials. 2,439,861, Apr. 20.

Popkin, Alexander H., Bronx, N. Y., assignor to Sun Chemical Corporation. Preparing sulfonamides. 2,440,117, Apr. 20.

Porter, Carl W., Alexandria, Va. Impact clutch. 2,439,823, Apr. 20.

Powling, Philip S.: *See*—
Byrne, Joseph F., and Powling.

Pratt, Best, assignor to Brake Equipment & Supply Company, Chicago, Ill. Disk brake. 2,440,020, Apr. 20.

Preston, Neil D., and F. B. Hitchcock, assignors to General Railway Signal Company, Rochester, N. Y. Airway traffic controlling system. 2,439,862, Apr. 20.

Preston, Neil D., and F. B. Hitchcock, assignors to General Railway Signal Company, Rochester, N. Y. Airway traffic control system. 2,439,948, Apr. 20.

Prindle, Charles: *See*—
Yardeny, Michel N., and Prindle.

Prosser, Alfred J., Rochester, and E. A. Smith, Gravesend, assignors to W. T. Henley's Telegraph Works Company Limited, London, England. Machine for stranding wires. 2,440,185, Apr. 20.

Publicker Industries Inc., assignee: *See*—
Beesch, Samuel C.

Pullin, Cyril G., Wimbledon, London, England. Helicopter rotor mounting and drive. 2,440,225, Apr. 20.

Quaker Chemical Products Corp., assignee: *See*—
Klaber, Joseph H., and Bjorksten.

Radio Corporation of America, assignee: *See*—
Brown, George H., and Morrison.
Haeff, Andrew V.
Houghton, William D.
Kellogg, Edward W.
Phyfe, James D.
Reinhold, Leonhard F., and Spencer.
Sanders, Royden C., Jr.
Zworykin, Vladimir K.

Rappl, Anton, assignor to Trico Products Corporation, Buffalo, N. Y. Vacuum operated three-way valve. 2,439,863, Apr. 20.

Raytheon Manufacturing Company, assignee: *See*—
Anderson, Homer G.
Marshall, Laurence K.

Redman, Frank R., Yardley, Pa. Method and apparatus for finishing and shrinking textile fabrics. 2,440,209, Apr. 20.

Reich, Joseph, assignee: *See*—
Laidig, Alfred H.

Reinhold, Leonhard F., Staten Island, N. Y., and J. A. Spencer, Teaneck, N. J., assignors to Radio Corporation of America. Indicator control mechanism. 2,440,118, Apr. 20.

Rennie, Robert J., Flushing, N. Y. Overhead railway. 2,439,986, Apr. 20.

Research Corporation, assignee: *See*—
Van Wagtendonk, Willem J.

Resinous Products & Chemical Company, The, assignee: *See*—
Bruson, Herman A., and Niederhauser.
Bruson, Herman A., and Riener.

Reso, Sam, assignor to Universal Tobacco Machine Co., Inc., Jacksonville, Fla. Cigar punching machine. 2,440,156, Apr. 20.

Riblet, Henry J., Belmont, Mass., assignor, by mesne assignments, to the United States of America, as represented by the Secretary of War. Antenna. 2,440,210, Apr. 20.

Richmont, Inc., assignee: *See*—
Livermont, Frank W.

Riener, Thomas W.: *See*—
Bruson, Herman A., and Riener.

Riester, Oskar, Dessau, and G. Wilmanns, Wolfen, Kreis Bitterfeld, Germany, assignors, by mesne assignments, to General Aniline & Film Corporation, New York, N. Y. Methine dyestuffs. 2,440,119, Apr. 20.

Rigrod, William W., Bloomfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Tuning means for electron discharge devices. 2,439,908, Apr. 20.

Ringler, William A., Wayne, Pa., assignor to The Gardner-Richardson Company, Middletown, Ohio. Folding box machine. 2,440,120, Apr. 20.

Ritchie, Thomas, Oskaloosa, assignor to C. B. Wade, Ottumwa, Iowa. Float valve. 2,439,864, Apr. 20.

Roberts, Robert P., Spondon, near Derby, England, assignor, by mesne assignments, to Celanese Corporation of America. Manufacture of water-soluble textile materials. 2,439,865, Apr. 20.

Roblee, John E., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control for barrel stencilling machines. 2,439,949, Apr. 20.

Roger, Henry, Sandy Hook, Conn., assignor to Floor-O-Matic, Inc., New York, N. Y. Picture projector and viewer. 2,430,987, Apr. 20.

Rogers, George T., Lake Forest, Ill. Bookholder. 2,439,950, Apr. 20.

Rosenberg, Louis T.: *See*—
Pickel, Frank D., and Rosenberg.

Rosenblatt, Pauline E., Cleveland, Ohio. Chafe pantie. 2,440,021, Apr. 20.

Ross, Donald A. G., West Vancouver, British Columbia, Canada. Bollard. 2,439,988, Apr. 20.

Rostler, Fritz, and L. Bornstein, assignors to Wilmington Chemical Corporation, Wilmington, Del. Resin from phenol, formaldehyde, saturated and unsaturated hydrocarbons, and rosin. 2,439,824, Apr. 20.

Rothweiler, Charles O., Milwaukee, Wis. Leveling device. 2,440,211, Apr. 20.

Rousseau, Leo J., Grosse Pointe Park, assignor, by mesne assignments, to Minit-Man, Inc., Detroit, Mich. Drier for motor vehicle washing and cleaning apparatus. 2,440,157, Apr. 20.

Runge, Richard M., assignor to The Miller Company, Meriden, Conn. Lighting fixture hinge. 2,440,186, Apr. 20.

Ruskin, Henry, assignor of one-half to G. E. Hale, Chicago, Ill. Safety razor blade. 2,439,909, Apr. 20.

Ruthven, Alfred L., Denver, Colo., assignor of three-fifths to himself as trustee for B. R., T. D., and S. A. Ruthven, one-fifth to H. D. Ruthven, and one-fifth to L. R. Ruthven. Toy parachute. 2,430,989, Apr. 20.

Ruthven, Betty R.: *See*—
Ruthven, Alfred L.

Ruthven, Helen D., assignee, et al.: *See*—
Ruthven, Alfred L.

Ruthven, Louis R., assignee, et al.: *See*—
Ruthven, Alfred L.

Ruthven, Sharon A.: *See*—
Ruthven, Alfred L.

Ruthven, Thomas D.: *See*—
Ruthven, Alfred L.

Ryan, Tom R., Trenton, Ga. Pattern control means for knitting machine. 2,439,990, Apr. 20.

Saffer, Martin: *See*—
Sterenbuch, Nathan, and Saffer.

Saladin, Otto, Schweizerhalle, near Basel, Switzerland. Open-air swimming pool. 2,439,866, Apr. 20.

Salfisberg, Leroy L., South Orange, assignor to The Ivers-Lee Company, Newark, N. J. Package. 2,440,022, Apr. 20.

Sanders, Royden C., Jr., Hightstown, N. J., assignor to Radio Corporation of America. Frequency responsive circuits. 2,439,872, Apr. 20.

Schacht, William F., Huntington, Ind. Cattle marker. 2,440,023, Apr. 20.

Schaeffer, Donald W., Dayton, Ohio. Internal-combustion engine. 2,439,867, Apr. 20.

Schaelchlin, Walter, Pittsburgh, Pa., and H. H. Curry, Morristown, N. J.; said Schaelchlin assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Alternating current generator fed motor control system. 2,439,951, Apr. 20.

Schmidt, Oliver G., West Allis, assignor to Chain Belt Company, Milwaukee, Wis. Flat top conveyer chain. 2,440,212, Apr. 20.

Schulman, Frank, Louisville, Ky. Shoulder pad. 2,439,991, Apr. 20.

Schwartz, Soll, Brooklyn, N. Y. Shoulder pad. 2,440,121. Apr. 20.

Schwiering, William, Bronx, N. Y. Necktie holder. 2,440,024, Apr. 20.

Segal, Samuel, New York, N. Y., assignor to Wilson-Jones Company, Chicago, Ill. Binder. 2,439,868, Apr. 20.

Selbert, Howard F.: *See*—
Tabor, Joseph M., Selbert, and Frohring.

Sgriccia, Sam F.: *See*—
Pianowski, Leon J., and Sgriccia.

Sharp, Ralph P., Sr., Carville, assignor of one-third to M. H. Faures and one-third to Albion B. Cobb, Baton Rouge, La. Bobby pin spreader and dispenser. 2,439,870, Apr. 20.

Sharp, Renwick J., Guatemala, Guatemala. Adjustable spring supported chair. 2,439,869, Apr. 20.

Sheahan, Robert E., Bridgeport, Conn., assignor to General Electric Company. Arc lamp. 2,440,122, Apr. 20.

Shell Development Company, assignee: *See*—
Winkler, De Loss E., and Ballard.

Shema, George W., assignee: *See*—
West, George A.

Silverberg, Carl G., Brookfield, assignor to American Optical Company, Southbridge, Mass. Refractory and making the same. 2,440,187, Apr. 20.

Simonian, Gerald, Fresno, Calif. Folding, wheeled, shopping bag. 2,439,992, Apr. 20.

Singer Manufacturing Company, The, assignee: *See*—
Wood, Alfred R.

Singleton, Sidney A., Effingham, assignor to Thermega Limited, London, England. Electric switch. 2,440,025, Apr. 20.

Sisson, Wayne A.: *See*—
Kulp, Maurice P., and Sisson.

Sisson, Wayne A., Silverside, assignor to American Viscose Corporation, Wilmington, Del. Artificial filament. 2,439,814, Apr. 20.

Sisson, Wayne A., Silverside, assignor to American Viscose Corporation, Wilmington, Del. Composite thermoplastic fibers. 2,439,815, Apr. 20.

Skelly, Lawrence E., New Haven, Conn., and H. F. Brinen, assignors to Young Radiator Company, Racine, Wis. Fluid temperature controlling device. 2,439,871, Apr. 20.

Sly, Le Roy W., Kyburz, Calif. Mounting and control means for adjustable saws. 2,440,158, Apr. 20.

Smith, Chester H., Pittsburg, Kans. Removable bone plate. 2,440,123, Apr. 20.

Smith, Ernest A.: *See*—
Prosser, Alfred J., and Smith.

Smith, Lawrence H., assignor to V. M. Langsett, Chicago, Ill. Sash latch. 2,440,026, Apr. 20.

Snyder, Ellis N., Melrose Park, Ill. Combined bird cage perch cleaner and holder for mite attracting material. 2,439,873, Apr. 20.

Snyder, Harry D., New York, assignor, by mesne assignments, to Speed Products Company Inc., Long Island City, N. Y. Loose-leaf binder. 2,439,826, Apr. 20.

Snyder, Russell D., assignor to The Aro Equipment Corporation, Bryan, Ohio. Air line oiler. 2,439,910, Apr. 20.

Societe des Usines Chimiques Rhone-Poulenc, assignee: *See*—
Fourneau, Ernest.

Socolofsky, John F.: *See*—
Berger, Henry G., Crandall, and Socolofsky.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Berger, Henry G., Crandall, and Socolofsky.
Krieble, Robert H., and Denton.

Sofnas, Samuel, Indianapolis, Ind. Spaceband cleaning machine. 2,439,911, Apr. 20.

Solomon, Morris, Kew Gardens, N. Y. Finger bandage. 2,440,235, Apr. 20.

Sorg, Lloyd F.: *See*—
Varian, Sigurd F., and Sorg.

Sparklin, Charles H., Chicago, Ill., assignor to Birtman Electric Company. Electric iron with synchronous heat indication. 2,439,825, Apr. 20.

Speed Products Company, Inc., assignee: *See*—
Snyder, Harry D.

Spencer, James A.: *See*—
Reinhold, Leonard F., and Spencer.

Sperry Corporation, The, assignee: *See*—
Braddon, Frederick D.
Varian, Sigurd F., and Sorg.

Sperry Gyroscope Company, Ltd., The, assignee: *See*—
Nisbet, Robert H.

Spring, George B., deceased, Essex, Conn.; M. B. Spring, executrix. Staking machine. 2,440,213, Apr. 20.

Spring, Mary B., executrix: *See*—
Spring, George B.

Standard Oil Company, The, assignee: *See*—
Musselman, John M.

Stanley, Richard W., Drexel Hill, Pa., assignor to American Viscose Corporation, Wilmington, Del. Apparatus for drying thread by conduction. 2,440,159, Apr. 20.

Steins, Carleton K., Merion, assignor to The Pennsylvania Railroad Company, Philadelphia, Pa. Wheel slip prevention mechanism for locomotives. 2,440,124, Apr. 20.

Sterck, Thomas R., Arlington, assignor to Polaroid Corporation, Cambridge, Mass. Image-carrying film having light-polarizing and nonpolarizing images. 2,440,125, Apr. 20.

Sterenbuch, Nathan, New York, and M. Saffer, Glendale, N. Y. Coil. 2,439,827, Apr. 20.

Stendel, George E., Chicago, Ill., assignor to Carnegie-Illinois Steel Corporation. Pig mold. 2,439,875, Apr. 20.

Stevens, Nichols, Chicago, Ill. Tire repair device. 2,439,876, Apr. 20.

Stoltz, Charles E., assignor to Goodman Manufacturing Company, Chicago, Ill. Mechanical shoveling machine. 2,439,912, Apr. 20.

Stone, Roy A.: *See*—
North, Edwin W., and Stone.

Stoyke, Ludwig T., assignor to Crane Co., Chicago, Ill. Lift check valve. 2,440,027, Apr. 20.

Strand, Oliver T., Jr.: *See*—
Arnold, David C., Strand, and Lewis.

Stroll, Alfred E., Brookline, Mass. Permanent waving apparatus. 2,440,188, Apr. 20.

Strom, Albert P., Forest Hills, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit interrupter. 2,439,952, Apr. 20.

Strott, Robert E., East Templeton, assignor to Thayer Company, Gardner, Mass. Carriage hood construction. 2,440,126, Apr. 20.

Stuart, Alfred A., Jr., Hasbrouck Heights, N. J., assignor to Bendix Aviation Corporation, South Bend, Ind. Cathode-ray phase indicator. 2,439,877, Apr. 20.

Stulen, Foster B., West Orange, N. J., assignor to Curtiss-Wright Corporation. Producing propeller blades. 2,440,127, Apr. 20.

Sullivan, Earle C., Bridgeport, Conn., assignor to General Electric Company. Pressure cooker. 2,440,128, Apr. 20.

Sun Chemical Corporation, assignee: *See*—
Popkin, Alexander H.

Sun-Kraft, Inc., assignee: *See*—
Atkins, Carl E.

Super-Seal Container Corporation, assignee: *See*—
Glocker, Gustave.

Suter, Menno R., Harrisonburg, Va. Carbon holder. 2,439,874, Apr. 20.

Svensson, Aron B., Filipstad, Sweden. Machine for making crisp bread. 2,439,993, Apr. 20.

Swank, Howard W., Richmond, Va., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Method and apparatus for producing and stretching artificial yarn. 2,440,226, Apr. 20.

Swedish, Frank, Jr., Rothschild, Wis., assignor to The B. F. Goodrich Company, New York, N. Y. Thiazine dimer. 2,439,828, Apr. 20.

Swisher, Robert E., and G. W. Gates, Kansas City, Mo. Automatic electric switch. 2,440,028, Apr. 20.

Swiss, Jack, and N. C. Foster, McKeesport, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Low-loss thermosetting resins. 2,439,953, Apr. 20.

Tabor, Joseph M., Cleveland, H. F. Seibert, and P. R. Frohring, assignors to General Biochemicals, Inc., Chagrin Falls, Ohio. Extracting pigments. 2,440,029, Apr. 20.

Taylor, Charles H., Springfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Coupling means. 2,440,160, Apr. 20.

Taylor Fibre Company, assignee: *See*—
Muller, George J.

Tennessee Coal, Iron and Railroad Company, assignee: *See*—
Auten, Claude I.

Tercho, John V., Turtle Creek, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Lubrication. 2,439,954, Apr. 20.

Tercho, John V., Turtle Creek, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Oil-ring and flood-lubricated bearing. 2,439,955, Apr. 20.

Texas Company, The, assignee: *See*—
DeJuhasz, Kalman J., and Villforth.
Fenney, William N.
Moore, Frank J.

Thayer Company, assignee: *See*—
Strott, Robert E.

Thermega Limited, assignee: *See*—
Singleton, Sidney A.

Thermoid Company, assignee: *See*—
Graham, Adelbert M.

Thomas, Charles L., Western Springs, and E. C. Lee, deceased, by J. T. Cullinan, administrator, assignors to Universal Oil Products Company, Chicago, Ill. Preparation of a silica-alumina-zirconia catalyst. 2,439,994, Apr. 20.

Thomas, Douglas W., Englewood, assignor to Boyle-Midway Inc., Jersey City, N. J. Magnetic cap guide. 2,440,030, Apr. 20.

Thompson, Douglas E., Chicago, Ill. Scoring device consisting of inclined ladder structure and folding standard therefor. 2,440,129, Apr. 20.

Thorpe, Christopher H. M.: *See*—
Carsten, Han R. F., and Thorpe.

Thrailkill, Orville W., Wellington, Kans. Securing device. 2,439,995, Apr. 20.

Tippetts, Emerson A., Richmond, Va., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Producing artificial yarn. 2,439,829, Apr. 20.

Tobin Packing Co., Inc., assignee: *See*—
Cross, George L.

Tondreau, Albert W., North Hollywood, Calif., assignor to Warner Bros. Pictures, Inc., New York, N. Y. Color motion-picture camera. 2,439,996, Apr. 20.

Transit Research Corporation, assignee: *See*—
Piron, Emil H.

Trico Products Corporation, assignee: *See*—
Rappl, Anton.

Tunke, Paul F.: *See*—
Williams, Edward H., and Tunke.

Tuukkanen, Edwin C.: *See*—
Davis, Lewis, and Tuukkanen.

Tyskewicz, John P.: *See*—
Bourne, Roland B., and Tyskewicz.

Udylite Corporation, The, assignee: *See*—
Pianowski, Leen J., and Sgriccia.

United Aircraft Products, Inc., assignee: *See*—
Olcott, James, and Hoffman.

United-Carr Fastener Corporation, assignee: *See*—
Jones, Walter I.

United Shoe Machinery Corporation, assignee: *See*—
Hart, Fred V., and Mooney.
Murphy, Everett E.

United States Atomic Energy Commission, United States of America, as represented by the, assignee: *See*—
Broxon, James W., and Jesse.

Universal Oil Products Company, assignee: *See*—
Monroe, George S., and Ipatieff.
Thomas, Charles L., and Lee.

Universal Tobacco Machine Co., Inc., assignee: *See*—
Reson, Sam.

Universal Wire Spring Company, The, assignee: *See*—
Blumensaadt, Svend G.

Van Liempt, Johannes A. M., Eindhoven, Netherlands, assignor to General Electric Company. Treating coiled tungsten filaments. 2,439,913, Apr. 20.

Van Sickle, Doris M., administratrix: *See*—
Brown, Carl A., and Van Sickle.

Van Sickle, Frank B.: *See*—
Brown, Carl A., and Van Sickle.

Van Wagtendonk, Willem J., Corvallis, Oreg., assignor to Research Corporation, New York, N. Y. Food accessory substance. 2,439,914, Apr. 20.

Varela, Alfonso P., New York, N. Y. Stud-welding gun. 2,439,830, Apr. 20.

Varian, Sigurd F., and L. F. Sorg, Garden City, N. Y., assignors to The Sperry Corporation. High-frequency apparatus. 2,439,831, Apr. 20.

Vaudreuil, John, Chicago, Ill. Dishwashing machine. 2,440,161, Apr. 20.

Veeder-Root Incorporated, assignee: *See*—
Bliss, Harvey N.

Villepigue, Julius G., assignor to North American Aviation, Inc., Inglewood, Calif. Gunner's turret for aircraft. 2,439,878, Apr. 20.

Villforth, Frederick J., Jr.: *See*—
DeJuhasz, Kalman J., and Villforth.

Volt, Willy, Stuttgart, Germany; vested in the Attorney General of the United States. Injection nozzle for internal-combustion engines. 2,439,832, Apr. 20.

Wade, Charles B.: *See*—
Ritchie, Thomas.

Wagner, Cary R., Utica, Ohio, assignor to Phillips Petroleum Company. Plugging wells. 2,439,833, Apr. 20.

Wagner, Charles F., Swissvale, and L. L. Fountain, Wilkinsburg, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Bus-bar structure. 2,439,956, Apr. 20.

Wagner Electric Corporation, assignee: *See*—
Milster, Arthur N.

Wainwright, George R., Glendale, assignor, by mesne assignments, to W. H. Maxwell, Los Angeles, Calif. Drop feed mechanism for sewing machines. 2,440,031, Apr. 20.

Walker Manufacturing Company of Wisconsin, assignee: *See*—
Dearsley, Irwin E.

Wallace, Frank C., North Hollywood, and R. E. Foster, Glendale, assignors to Monogram Manufacturing Company, Los Angeles, Calif. Jet shaft seal. 2,440,032, Apr. 20.

War, United States of America, as represented by the Secretary of, assignee: *See*—
Kusch, Polykarp.
Millikan, Glenn A.
Riblet, Henry J.
Warner Bros. Pictures, Inc., assignee: *See*—
Tondreau, Albert W.
Warrick, Earl L.: *See*—
McGregor, Rob R., and Warrick.
Waterman, Herbert C., assignor to Bendix Aviation Corporation, South Bend, Ind. Inverse feed-back motor control. 2,440,130, Apr. 20.
Watson-Stillman Co., The, assignee: *See*—
Dinzl, Richard W.
Wayne, Anthony, New York, N. Y. Convertible space saving table. 2,440,131, Apr. 20.
Weightman, William A., assignor to The Budd Company, Philadelphia, Pa. Portable roller welder. 2,439,834, Apr. 20.
Weightman, William A., assignor to The Budd Company, Philadelphia, Pa. Portable roller welder. 2,439,915, Apr. 20.
Weinrich, Arthur R.: *See*—
Morgan, Willard L., and Weinrich.
Welbilt Stove Company, Incorporated, The, assignee: *See*—
Williams, Edward H., and Tunke.
Wendt, Harry C., Lynnfield, Mass., assignor to General Electric Company. Volt-ampere meter. 2,439,835, Apr. 20.
Werner, Leo C., and W. S. Lund, Bloomfield, N. J., assignors to Westinghouse Electric Corporation, Pittsburgh, Pa. Sealing coaxial structures. 2,439,916, Apr. 20.
West, George A., Guffey, assignor of forty-nine per cent to G. W. Shema, Fairplay, Colo. Two-man portable power saw. 2,440,033, Apr. 20.
Western Electric Company Incorporated, assignee: *See*—
Burton, Perry H.
Haas, Walter O., Jr.
Lewis, Clay E.
Western Precipitation Corporation, assignee: *See*—
Pootjes, Peter.
Westinghouse Electric Corporation, assignee: *See*—
Anderson, Ephraim H.
Auxier, Robert W., and Norelli.
Brecht, Winston A.
Brown, Myron J.
Campbell, John M.
Clark, Earl K.
Colaiaco, August P.
Denmark, Robert, and McWhirter.
Hill, Charles F., and Auxier.
Hoard, Bert V.

Roblee, John E.
Schaelchlin, Walter, and Curry.
Strom, Albert P.
Swiss, Jack, and Foster.
Taylor, Charles H.
Tercho, John V.
Wagner, Charles F., and Fountain.
Werner, Leo C., and Lund.
Wheeling Stamping Company, assignee: *See*—
McGinnis, Archibald B.
Wiegers, Irvin E., Overland, Mo. Regulating device. 2,440,034, Apr. 20.
Wilcox, Bertram H., Redwood City, Calif. Brush receptacle and suspending bracket. 2,439,837, Apr. 20.
Willard, Gerald W., Fanwood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Method of and apparatus for locating the direction of natural axes of quartz crystal sections. 2,439,836, Apr. 20.
Williams, Earl, Los Angeles, Calif. Water key for brass musical instruments. 2,439,997, Apr. 20.
Williams, Edward H., Bayside, and P. F. Tunke, Ridgewood, assignors to The Welbilt Stove Company, Incorporated, Maspeth, N. Y. Grate for kitchen ranges. 2,440,035, Apr. 20.
Wilmanns, Gustav: *See*—
Riester, Oskar, and Wilmanns.
Wilmington Chemical Corporation, assignee: *See*—
Rostler, Fritz, and Bornstein.
Wilson & Co., Inc., assignee: *See*—
Hodson, George F.
Wilson, George A., Bogue Chitto, Miss. Vermin destroyer. 2,440,214, Apr. 20.
Wilson-Jones Company, assignee: *See*—
Segal, Samuel.
Wingate, Norman L., Albany, Ga. Foldable garment hanger. 2,439,838, Apr. 20.
Winkler, De Loss E., Berkeley, and S. A. Ballard, Oakland, assignors to Shell Development Company, San Francisco, Calif. Catalytic alkylation of phenols by amines. 2,440,036, Apr. 20.
Winterhalter, William E.: *See*—
Muddiman, Earll R., and Winterhalter.
Winters & Crampton Corporation, assignee: *See*—
Anderson, Lloyd L.
Wisman, Franklin O., assignor to Bendix Aviation Corporation, South Bend, Ind. Electronic motor control system. 2,440,132, Apr. 20.
Wolff, Robert L., Milwaukee, and W. J. Foy, Thiensville, assignors to Globe-Union Inc., Milwaukee, Wis. Frequency selecting switch. 2,440,037, Apr. 20.
Wood, Alfred R., Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Sewing machine safety device. 2,440,227, Apr. 20.
Wright, Arthur E., assignee, et al.: *See*—
De Swart, Jan.
Yardeny, Michel N., New York, and C. Prindle, Long Island City, N. Y.; said Prindle assignor to said Yardeny. Electrical pulsating drive. 2,440,228, Apr. 20.
Young, Clinton J. T., assignor to Polaroid Corporation, Cambridge, Mass. Windshield structure for use in automotive vehicles employing antiglare light-polarizing illuminating and viewing means. 2,440,133, Apr. 20.
Young Radiator Company, assignee: *See*—
Skelly, Lawrence E., and Brinen.
Zademach, Erich R., Hillside, and W. W. Clarke, Summit, assignors to Metalwash Machinery Company, Irvington, N. J. Apparatus for treating articles. 2,440,134, Apr. 20.
Zahray, Walter K.: *See*—
Allen, Louis N., Jr., and Zahray.
Zalkind, Philip, New York, N. Y. Fibre reinforced collapsible container. 2,439,998, Apr. 20.
Zumbrunn, Robert, Basel, Switzerland, assignors to Hoffmann-La Roche Inc., Nutley, N. J. Making alpha-aceto, alpha-chloro, gamma-butyrolactone. 2,440,229, Apr. 20.
Zworykin, Vladimir K., Princeton, N. J., assignor to Radio Corporation of America. Convection current responsive instrument. 2,440,189, Apr. 20.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 20TH DAY OF APRIL, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Antidetonating device. G. M. Bicknell. Re. 22,994, Apr. 20.

Network, Matching. A. Alford. Re. 22,993, Apr. 20.

LIST OF PLANT INVENTIONS

Sansevieria plant. G. E. Bantel. 796, Apr. 20.

LIST OF DESIGN INVENTIONS

Advertising device. W. L. Stensgaard. 149,387, Apr. 20.
Arch-stream offset combination faucet structure. A. G. Smolensky. 149,386, Apr. 20.
Bag-grasping device. A. M. Palmer and F. W. Rodgers. 149,375, Apr. 20.
Blouse. V. McKelvey. 149,369, Apr. 20.
Bottle stopper or similar article, Perfume. J. Herbst. 149,353, Apr. 20.
Bracelet or similar article. G. E. Fournier. 149,345, Apr. 20.
Brooch or similar article. N. Barbieri. 149,334, Apr. 20.
Brooch or similar article. A. Katz. 149,358–60, Apr. 20.
Brooch or similar article, Separable. A. Katz. 149,363, Apr. 20.
Chair. C. N. Alexander. 149,329–31, Apr. 20.
Comb, Measuring. R. Wheeler and R. F. Cozad. 149,393, Apr. 20.
Container or the like, Luminous plant. V. Sherry and H. A. and G. F. Plocky. 149,384–5, Apr. 20.
Desk unit, Combination. C. H. Beatty. 149,335, Apr. 20.
Dispenser, Cigarette. W. Abrams. 149,328, Apr. 20.
Dispenser, Cigarette. D. Nusbaum. 149,371, Apr. 20.
Display device or similar article, Merchandise. E. P. Price, Jr. 149,376, Apr. 20.
Earring. G. Leary. 149,367, Apr. 20.
Fabric, Plastic. F. Holistein. 149,354–5, Apr. 20.
Faucet. L. S. Sayre. 149,379, Apr. 20.
Faucet or similar article. I. W. Stratmore. 149,388, Apr. 20.
Faucet, Water. E. H. Fitter. 149,344, Apr. 20.
Film viewer. F. Gilbert. 149,348, Apr. 20.
Filter and cooler, Combination oil. H. W. Schaefer. 149,380, Apr. 20.
Fixture, Display. H. M. Schick. 149,381, Apr. 20.
Frame and stand or similar article, Display. M. J. Schless. 149,382, Apr. 20.
Game board. S. Binder. 149,336, Apr. 20.
Game board., D. Perlman. 149,374, Apr. 20.
Handle, Drawer. A. S. Rummelsburg. 149,378, Apr. 20.
Knife. G. N. Allen and W. Gerth. 149,332, Apr. 20.
Lace medallion. R. A. Paessler. 149,373, Apr. 20.
Loading ramp, Adjustable passenger. A. L. Varrieur. 149,392, Apr. 20.
Mat or similar article, Place. K. C. Hamilton. 149,351, Apr. 20.
Necklace or similar article. A. Katz. 149,357, Apr. 20.
Necklace or similar article. A. Katz. 149,361–2, Apr. 20.
Pool, Swimming. E. A. Clemetsen. 149,340–1, Apr. 20.
Pump. E. J. Svenson. 149,389, Apr. 20.
Settee. R. I. Anderson and B. Hoeker. 149,333, Apr. 20.
Shade, Lamp. G. U. Van Brunt. 149,391, Apr. 20.
Sharpener and eraser, Combined pencil. W. R. Jalof. 149,356, Apr. 20.
Sharpener, Knife. J. E. Davis. 149,342, Apr. 20.
Signal, Traffic. J. J. Hammer. 149,352, Apr. 20.
Stool. W. L. Greyson. 149,349, Apr. 20.
Stove, Cooking D. P. O'Keefe. 149,372, Apr. 20.
Sucker, Candy. G. W. Carlson. 149,338, Apr. 20.
Suit, Bathing. M. A. De Weese. 149,343, Apr. 20.
Table. H. Rosengren. 149,377, Apr. 20.
Telephone support, ash tray, and amplifying loud speaker, Combined. J. D. Chirite. 149,339, Apr. 20.
Toaster. L. Guild. 149,350, Apr. 20.
Toy animal or similar article, Stuffed. J. Swedlin. 149,390, Apr. 20.
Toy automobile sedan. O. F. Larsen, Jr. 149,365, Apr. 20.
Toy bank or similar article. J. P. Mickus. 149,370, Apr. 20.
Toy construction piece. C. A. Geib. 149,346–7, Apr. 20.
Toy roadster. O. F. Larsen, Jr. 149,366, Apr. 20.
Toy tortoise, Wheeled. H. Sebel. 149,383, Apr. 20.
Tray, Ash. N. F. Caputo. 149,337, Apr. 20.
Vacuum cleaner attachment. J. G. Lippincott. 149,368, Apr. 20.
Welding transformer. J. A. Kern. 149,364, Apr. 20.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 20TH DAY OF APRIL, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Accumulator, Piston type. B. N. Ashton. 2,440,065, Apr. 20.
Acrylonitrile and drying oil acids and esters, Addition products of. H. A. Bruson and W. D. Niederhauser. 2,440,140, Apr. 20.
Adjustable device. L. Nass. 2,440,017, Apr. 20.
Adjustable spring supported chair. R. J. Sharp. 2,439,869, Apr. 20.
Agar, Extraction and preparation of. J. F. Byrne and P. S. Powling. 2,439,964, Apr. 20.
Aircraft, Helicopter and airplane sustained. G. H. Bowlus. 2,440,003, Apr. 20.
Airplane course indicating system. O. H. Dicke. 2,439,846, Apr. 20.
Alpha-aceto, alpha-chloro, gamma-butyrolactone, Making. R. Zumbrunn. 2,440,229, Apr. 20.
Alpha-methylene carboxylic acid fluoride polymers and their preparation. B. W. Howk and R. A. Jacobson. 2,440,090, Apr. 20.
Amino-dioxacyclopentanes. E. Fourneau. 2,439,969, Apr. 20.
Amplifier and oscillator circuit. R. J. Davis. 2,439,844, Apr. 20.
Ankle joint and reinforcing member for pneumatic feet. H. C. Campbell. 2,440,075, Apr. 20.
Antenna. H. J. Riblet. 2,440,210, Apr. 20.
Apparatus for applying tags to articles. P. H. Burton. 2,440,040, Apr. 20.
Apparatus for drying thread by conduction. R. W. Stanley. 2,440,159, Apr. 20.
Apparatus for forming films and coatings. C. S. Francis, Jr. 2,439,802, Apr. 20.
Apparatus for treating articles. E. R. Zademach and W. W. Clarke. 2,440,134, Apr. 20.
Arc lamp. R. E. Sheahan. 2,440,122, Apr. 20.
Article traying machine. C. A. Brown and F. B. Van Sickle. 2,439,883, Apr. 20.
Artificial filament. M. P. Kulp and W. A. Sisson. 2,439,813, Apr. 20.
Artificial filament. W. A. Sisson. 2,439,814, Apr. 20.
Artificial yarn, Method and apparatus for producing and stretching. H. W. Swank. 2,440,226, Apr. 20.
Artificial yarn, Producing. E. A. Tippetts. 2,439,829, Apr. 20.
Attachment for wire elements to frame structures. S. G. Blumensaadt. 2,440,001, Apr. 20.
Automatic and manual control system for circuit breakers. M. J. Brown. 2,439,920, Apr. 20.
Automatic electric switch. R. E. Swisher and G. W. Gates. 2,440,028, Apr. 20.
Automatic regulating system having a movable control element and a follow-up element. R. H. Nisbet. 2,440,183, Apr. 20.
Automatically releasing well head. L. D. Meddick. 2,440,015, Apr. 20.
Azo benzene benzthiazyls. N. H. Haddock. 2,439,804, Apr. 20.
Bag: *See*—
Folding, wheeled, shopping bag.
Bandage, Finger. M. Solomon. 2,440,235, Apr. 20.
Battery charging apparatus and method. F. C. Anderson. 2,440,163, Apr. 20.
Beam for aircraft landing gears, Supporting. G. E. Beringer. 2,440,068, Apr. 20.
Bearing: *See*—
Oil-ring and flood-lubricated bearing. Shaft bearing.
Bending apparatus, Glass tube. E. B. Noel. 2,439,902, Apr. 20.
Bicycle. H. M. Hoyt. 2,440,091, Apr. 20.
Binder. S. Segal. 2,439,868, Apr. 20.
Binder, Loose-leaf. H. D. Snyder. 2,439,826, Apr. 20.
Blade, Safety razor. H. Ruskin. 2,439,909, Apr. 20.
Blanket or the like and fabricating same, Heating. A. J. Huck. 2,439,892, Apr. 20.
Blasting room. W. L. Keefer. 2,440,222, Apr. 20.
Block: *See*—
Toy block.
Blower, Centrifugal. C. F. Jenkins. 2,439,933, Apr. 20.
Bollard. D. A. G. Ross. 2,439,988, Apr. 20.
Bookholder. G. T. Rogers. 2,439,950, Apr. 20.
Bottle cap. J. de Swart. 2,439,845, Apr. 20.
Bottle seal cutter. A. J. and C. M. Jahn. 2,439,894, Apr. 20.
Box: *See*—
Dumping box.
Box machine, Folding. W. A. Ringler. 2,440,120, Apr. 20.

Brake: *See*—
Disk brake. Hand brake.
Broach, Saw tooth surface. W. J. Phaneuf. 2,439,822, Apr. 20.
Brush, Nail. J. J. Chappell and M. R. Osborne. 2,439,922, Apr. 20.
Brush receptacle and suspending bracket. B. H. Wilcox. 2,439,837, Apr. 20.
Bus-bar structure. C. E. Wagner and L. L. Fountain. 2,439,956, Apr. 20.
Camera, Color motion picture. A. W. Tondreau. 2,439,996, Apr. 20.
Camera-pod. J. S. Beattie. 2,440,137, Apr. 20.
Cap: *See*—
Bottle cap. Closure cap.
Carbon black, Manufacture of. G. L. Heller. 2,439,850, Apr. 20.
Carbon holder. M. R. Suter. 2,439,874, Apr. 20.
Card handling device. A. M. Martin. 2,439,943, Apr. 20.
Carriage hood construction. R. E. Strott. 2,440,126, Apr. 20.
Carrier for electroplating, Work. L. J. Pianowski and S. F. Sgriccia. 2,440,019, Apr. 20.
Caster. E. A. Heller. 2,440,047, Apr. 20.
Castor oil, Production of dehydrated. G. S. Monroe and V. N. Ipatieff. 2,439,982, Apr. 20.
Catalyst, Preparation of a silica-alumina-zirconia. C. L. Thomas and E. C. Lee. 2,439,904, Apr. 20.
Catalyst revivification. D. R. Jackson. 2,439,852, Apr. 20.
Catalyst, Tungsten-molybdenum trioxide. H. R. Arnold. 2,439,880, Apr. 20.
Catalytic alkylation of phenols by amines. De L. E. Winkler and S. A. Ballard. 2,440,036, Apr. 20.
Catalytic conversion of hydrocarbons. J. W. Jewell. 2,439,811, Apr. 20.
Catalytic reactions, Effecting. F. J. Moore. 2,440,109, Apr. 20.
Catamenial tampon. A. B. Donovan. 2,440,141, Apr. 20.
Cathode-ray phase indicator. A. A. Stuart, Jr. 2,439,877, Apr. 20.
Cathode structure. P. Kusch. 2,440,203, Apr. 20.
Cellulose compound, Solid fire-resistant. J. H. Klaber and J. Bjorksten. 2,440,202, Apr. 20.
Cellulose esters and ethers, Fire-resistant. J. H. Klaber and J. Bjorksten. 2,440,201, Apr. 20.
Chain: *See*—
Flat top conveyer chain.
Chair: *See*—
Adjustable spring supported chair.
Chest, Paper board. W. G. Anderson, Jr. 2,439,959, Apr. 20.
Chute, Wagon. R. Bauders. 2,439,961, Apr. 20.
Cigarette package holder. E. L. Beckwith. 2,440,164, Apr. 20.
Circuit: *See*—
Amplifier and oscillator circuit. Root mean square voltage measuring circuit.
Fluorescent lamp circuit. Synchronized oscillator circuit.
Oscillator control circuit.
Circuit interrupter. A. P. Strom. 2,439,952, Apr. 20.
Circuits, Frequency responsive. R. C. Sanders, Jr. 2,439,872, Apr. 20.
Cleaning machine, Spaceband. S. Sofnas. 2,439,911, Apr. 20.
Closure cap. A. B. McGinnis. 2,440,149, Apr. 20.
Closure, Dispensing. H. N. Perelson, 2,439,985, Apr. 20.
Clutch: *See*—
Impact clutch.
Clutches and brakes, Assembly for. T. L. Fawick. 2,439,849, Apr. 20.
Coating comestibles, Method and apparatus for. G. C. Monaco. 2,439,899, Apr. 20.
Coil. N. Sterenbuch and M. Saffer. 2,439,827, Apr. 20.
Coiled tungsten filaments, Treating. J. A. M. van Liempt. 2,439,913, Apr. 20.
Collapsible hanging garment container. I. M. Cowan. 2,440,192, Apr. 20.
Collector for drains, Debris. W. Behrend. 2,440,165, Apr. 20.
Commutator. S. N. Holman. 2,439,974, Apr. 20.
Composite thermoplastic fibers. W. A. Sisson. 2,439,815, Apr. 20.
Compression member. W. G. Mitchell. 2,440,150, Apr. 20.

Connecter: *See*—
Dobby knife connector.
Storm sash and casement window connector.
Connector: *See*—
Dobby knife connector.
Storm sash and casement window connector.
Connector for attachment to electrical conductors, Solderless. P. A. Pontius. 2,439,947, Apr. 20.
Container: *See*—
Collapsible hanging garment container. Fibre reinforced collapsible container.
Control for barrel stencilling machines. J. E. Roblee. 2,439,949, Apr. 20.
Control mechanism. E. K. Clark. 2,439,842, Apr. 20.
Control mechanism. P. R. Giey. 2,440,083, Apr. 20.
Controller, Averaging. R. A. Lingen and L. E. Cross. 2,440,052, Apr. 20.
Connection current responsive instrument. V. K. Zworykin. 2,440,189, Apr. 20.
Convertible space saving table. A. Wayne. 2,440,131, Apr. 20.
Cooker, Pressure. E. C. Sullivan. 2,440,128, Apr. 20.
Core pin for molding valve stems. O. W. Hosking. 2,440,144, Apr. 20.
Cotton cleaning apparatus. E. H. Brooks. 2,440,139, Apr. 20.
Counter coin chutes. H. N. Bliss. 2,440,191, Apr. 20.
Coupling: *See*—
Hose coupling. Pipe coupling.
Coupling for coaxial cables. H. R. F. Carsten and C. H. M. Thorpe. 2,439,841, Apr. 20.
Coupling for suction cleaner attachments. K. M. Hammell. 2,440,143, Apr. 20.
Coupling means. C. H. Taylor. 2,440,160, Apr. 20.
Coupling mechanism, Trailer. N. M. Norman and A. S. Brumby. 2,440,152, Apr. 20.
Cover: *See*—
Keyhole cover.
Cover for bus bars, Insulating. G. J. Muller. 2,439,859, Apr. 20.
Covering member for articles of luggage. L. H. Clark. 2,440,077, Apr. 20.
Craft propulsion. H. M. Dobbins. 2,440,195, Apr. 20.
Crystal apparatus, Piezoelectric. D. C. Arnold, O. T. Strand, Jr., and R. V. Lewis. 2,440,064, Apr. 20.
Crystalline limestone in heavy fluid for float-and-sink concentration, Finely divided. J. A. Brusset. 2,440,005, Apr. 20.
Cutter: *See*—
Bottle seal cutter.
Cutting and chamfering metal sheets, Machine for. E. Bugatti. 2,439,794, Apr. 20.
Cyclic ether. H. A. Bruson and T. W. Riener. 2,440,220, Apr. 20.
Defrosting mechanism in refrigerating apparatus. I. Kramer. 2,440,146, Apr. 20.
Degreasing iron and aluminum, Solvent for. W. Klabunde. 2,440,100, Apr. 20.
Deicing system for aircraft surfaces. E. P. Palmatier. 2,440,115, Apr. 20.
Depositing substances by thermal evaporation in vacuum chambers, Method of and apparatus for. P. Alexander. 2,440,135, Apr. 20.
Derivatives of dihydropyran, Production of. P. A. Hawkins and N. Bennett. 2,439,928, Apr. 20.
Device for making electrical-conductivity test on tubular articles. G. R. Greenslade. 2,440,044, Apr. 20.
Differential ion chamber. J. W. Broxon and W. P. Jesse. 2,440,167, Apr. 20.
Differential relay and restraint magnet therefor. B. V. Hoard. 2,439,930, Apr. 20.
Dimethyl silicone polymers and making them. R. R. McGregor and E. L. Warrick. 2,439,856, Apr. 20.
Dishwashing machine. J. Vaudreuil. 2,440,161, Apr. 20.
Disk brake. B. Pratt. 2,440,020, Apr. 20.
Display device, Pictorial. L. Allen. 2,440,062, Apr. 20.
Dobby knife connector. C. A. Gunn. 2,439,973, Apr. 20.
Drier: *See*—
Stocking dryer.
Drier for hay and the like having a perforate floor and air circulating means, Demountable. F. W. Moffett, Jr. 2,439,853, Apr. 20.
Drier for motor vehicle washing and cleaning apparatus. L. J. Rousseau. 2,440,157, Apr. 20.
Drill: *See*—
Surgical drill.
Drill press. J. A. Cupler. 2,439,965, Apr. 20.
Drive, Flexible. W. A. Brecht. 2,439,919, Apr. 20.
Driving attachment for motorcycles. T. W. Petkoff. 2,440,116, Apr. 20.
Drop feed mechanism for sewing machines. G. R. Wainwright. 2,440,031, Apr. 20.
Drum, Sanding. T. L. Bonkowski. 2,439,962, Apr. 20.
Dryer: *See*—
Stocking dryer.
Dumping box. B. D. and W. D. McIntyre. 2,440,056, Apr. 20.
Eggs for breaking, Coating. G. F. Hodson. 2,439,808, Apr. 20.
Electric change-over system. J. D. Phyfe. 2,440,184, Apr. 20.
Electric room heater. H. H. Oetjen. 2,440,018, Apr. 20.
Electric switch. S. A. Singleton. 2,440,025, Apr. 20.
Electric system for controlling motions. M. Lattmann. 2,440,147, Apr. 20.
Electric vibratory interrupter. C. Huetten. 2,440,145, Apr. 20.
Electrical instrument, Polarized armature. R. A. Fox. 2,439,970, Apr. 20.
Electrical insulation. C. F. Hill and R. W. Auxier. 2,439,929, Apr. 20.
Electrical insulation testing apparatus. C. E. Lewis. 2,439,940, Apr. 20.
Electrical pulsating drive. M. N. Yardeny and C. Prindle. 2,440,228, Apr. 20.
Electrical space discharge devices, Operating. L. K. Marshall. 2,439,816, Apr. 20.
Electron discharge device. H. G. Anderson. 2,439,786, Apr. 20.
Electron discharge device employing cavity resonators. A. V. Haeff. 2,440,089, Apr. 20.
Electronic audio switch. W. D. Houghton. 2,440,049, Apr. 20.
Electronic motor control system. F. O. Wisman. 2,440,132, Apr. 20.
Electrowinning manganese, Method of. H. R. Hanley and J. H. Jacobs. 2,439,805, Apr. 20.
Elevating mechanism for snowplows. R. B. Bourne and J. P. Tyskewicz. 2,440,166, Apr. 20.
Engine: *See*—
Internal-combustion engine.
Engine cooling system. P. E. Mercier. 2,439,898, Apr. 20.
Engine test system. G. E. Cassidy. 2,440,076, Apr. 20.
Esters of benzoic acid, Substituted. S. M. McElvain and T. P. Carney. 2,439,818, Apr. 20.
Evaporating various materials in vacuums for coating purposes, Thermally. W. L. Morgan and A. R. Weinrich. 2,439,983, Apr. 20.
Exhibitor having a series of rollers with webs, Changeable. J. Hutchinson. 2,439,932, Apr. 20.
Extensible support. W. W. Jury. 2,440,096, Apr. 20.
Fastener: *See*—
Rotary fastener. Slide fastener.
Fastener. K. C. Bugg. 2,440,074, Apr. 20.
Fermenting carbohydrates to butanol and acetone. S. C. Beesch. 2,439,791, Apr. 20.
Fibre reinforced collapsible container. P. Zalkind. 2,439,998, Apr. 20.
Filament coiling apparatus. F. B. Iden. 2,439,893, Apr. 20.
Filament coiling apparatus. J. Petersen. 2,439,904, Apr. 20.
Fill indicator. W. C. Buttner. 2,440,230, Apr. 20.
Filling apparatus for volatile liquids with vapor return conduit. P. M. Elliott. 2,439,887, Apr. 20.
Film having light-polarizing and nonpolarizing images, Image-carrying. E. H. Land and M. Grabau. 2,440,105, Apr. 20.
Film having light-polarizing and nonpolarizing images, Image-carrying. T. R. Sterck. 2,440,125, Apr. 20.
Films upon the surfaces of glass plates, Forming. F. W. Adams. 2,439,999, Apr. 20.
Filter and manufacture, Optical. E. R. Blout and R. M. Gofstein. 2,440,070, Apr. 20.
Finishing and shrinking textile fabrics, Method and apparatus for. F. R. Redman. 2,440,209, Apr. 20.
Flatiron, Electric. E. K. Clark. 2,440,041, Apr. 20.
Flat top conveyer chain. O. G. Schmidt. 2,440,212, Apr. 20.
Float valve. T. Ritchie. 2,439,864, Apr. 20.
Floating roof storage tank. H. C. Boardman. 2,439,792, Apr. 20.
Floor tile and joist construction. S. Macomber. 2,440,053, Apr. 20.
Flow device, Intermittent. F. Y. Donaldson. 2,440,006, Apr. 20.
Fluid flow regulator. J. Olcott and A. C. Hoffman. 2,440,059, Apr. 20.
Fluorescent lamp circuit. R. W. Keiser and C. P. Boucher. 2,439,976, Apr. 20.
Fluorescent lighting system. C. P. Boucher and R. W. Keiser. 2,439,963, Apr. 20.
Foaming in an aqueous bath containing foam-inducing constituents, Reduction of. W. L. Denman. 2,439,797, Apr. 20.
Foldable garment hanger. N. L. Wingate. 2,439,838, Apr. 20.
Folding, wheeled, shopping bag. G. Simonian. 2,439,992, Apr. 20.
Food accessory substance. W. J. van Wagtendonk. 2,439,914, Apr. 20.
Frequency selecting switch. R. L. Wolff and W. J. Foy. 2,440,037, Apr. 20.
Fuel pump. K. J. De Juhasz and F. J. Villforth, Jr. 2,440,194, Apr. 20.
Fuel pump. M. Katcher. 2,440,175, Apr. 20.
Fumigant comprising sensitized ammonium nitrate and a pesticide, Thermically vaporisable. J. S. Flanders and E. Jones. 2,440,082, Apr. 20.
Fuse for electrical apparatus immersed in a dielectric liquid, Protective. J. K. Hodnette. 2,439,931, Apr. 20.

Gantry structure. W. M. Huston. 2,440,199, Apr. 20.
Gasket. E. K. Clark. 2,439,923, Apr. 20.
Generator: *See*—
Ultraviolet ray generator.
Glasses and making same, Fluorescent silicate. H. P. Hood. 2,440,048, Apr. 20.
Grate for kitchen ranges. E. H. Williams and P. F. Tunke. 2,440,035, Apr. 20.
Grinding apparatus mounted on an overhanging shaft. A. C. Lind and R. E. Klein. 2,440,051, Apr. 20.
Grinding machine attachment, Centerless. A. F. Madison. 2,440,148, Apr. 20.
Grip for steel drums or the like. L. Poglein. 2,439,907, Apr. 20.
Gripping means for removing trees. J. W. MacClatchie. 2,440,180, Apr. 20.
Guard for presses, Safety. P. J. Murcko. 2,440,111, Apr. 20.
Guide, Magnetic cap. D. W. Thomas. 2,440,030, Apr. 20.
Guide, Thread. S. C. Nelson. 2,440,151, Apr. 20.
Gun charger, Semiautomatic hydraulic-electric. J. M. Boshka, G. A. Goepfrich, and F. V. Kuzmitz. 2,440,071, Apr. 20.
Gun, Stud-welding. A. P. Varela. 2,439,830, Apr. 20.
Hand brake. H. J. Lounsbury. 2,439,941, Apr. 20.
Hand tool for cutting out hinge recesses. C. L. Parcell. 2,440,208, Apr. 20.
Handle: *See*—
Table cutlery handle.
Handle, knob, and mounting structure. G. Duefrene. 2,440,170, Apr. 20.
Hanger: *See*—
Foldable garment hanger. Trouser hanger.
Hat construction and sweatband therefor. J. L. Pearson. 2,439,984, Apr. 20.
Heater: *See*—
Electric room heater.
Heater with selective indirect draft, Hot-air. F. B. Gamblin. 2,439,972, Apr. 20.
Helicopter rotor mounting and drive. C. G. Pullin. 2,440,225, Apr. 20.
High chair tray slide. E. W. North and R. A. Stone. 2,440,224, Apr. 20.
High-frequency apparatus. S. F. Varian and L. F. Sorg. 2,439,831, Apr. 20.
Hinge, Lighting fixture. R. M. Runge. 2,440,186, Apr. 20.
Hitch, Trailer. R. F. Dollase. 2,439,967, Apr. 20.
Hobby horse. T. Gibbons. 2,440,172, Apr. 20.
Hoist attachment for tractors. H. E. Hall. 2,440,010, Apr. 20.
Holder: *See*—
Carbon holder. Necktie holder.
Cigarette package holder. Pole holder.
Holder for electric irons, Cord. G. Gunderson. 2,440,045, Apr. 20.
Holder for knives, forks, spoons, and the like. T. B. Owens. 2,440,207, Apr. 20.
Hose coupling. A. P. Lofquist, Jr. 2,440,178, Apr. 20.
House construction, Prefabricated metal. C. I. Auten. 2,439,960, Apr. 20.
Hydraulic pump. D. G. Booth. 2,440,072, Apr. 20.
Hydrocarbons, Producing aromatic. P. H. Johnson and R. R. Parker. 2,439,934, Apr. 20.
Ignitron, Sealed. A. P. Colaiaco. 2,439,924, Apr. 20.
Impact clutch. C. W. Porter. 2,439,823, Apr. 20.
Indicating system for baseball games. E. Friedman. 2,440,042, Apr. 20.
Indicator: *See*—
Cathode-ray phase indicator. Fill indicator.
Indicator control mechanism. L. F. Reinhold and J. A. Spencer. 2,440,118, Apr. 20.
Indium electroplating. T. R. Jones and N. R. Bierly. 2,439,935, Apr. 20.
Inner tube for pneumatic tires, Safety. N. R. Maddox. 2,440,107, Apr. 20.
Internal-combustion engine. D. W. Schaeffer. 2,439,867, Apr. 20.
Iron sulfate liquors, Treatment of. L. N. Allen, Jr., and W. K. Zahray. 2,440,215, Apr. 20.
Iron with synchronous heat indication, Electric. C. H. Sparklin. 2,439,825, Apr. 20.
Ketotetrahydropyridine derivatives and hydroxypyridine derivatives, Manufacture of. F. Bergel and A. Cohen. 2,440,218–19, Apr. 20.
Key for brass musical instruments, Water. E. Williams. 2,439,997, Apr. 20.
Keyhole cover. A. W. Konchan. 2,439,978, Apr. 20.
Knife, fork, and spoon set. R. R. Beddow. 2,439,882, Apr. 20.
Lactones, Purifying. F. D. Pickel and L. T. Rosenberg. 2,439,905, Apr. 20.
Laminating. R. W. Auxier and P. Norelli. 2,439,918, Apr. 20.
Lamp: *See*—
Arc lamp.
Lamps, Method and machine for basing and seasoning fluorescent. J. M. Campbell. 2,439,884, Apr. 20.
Latch: *See*—
Sash latch.
Latch mechanism, Refrigeration. L. L. Anderson. 2,440,162, Apr. 20.
Lead-in construction. R. Denmark and C. H. McWhirter. 2,439,886, Apr. 20.
Lens system, Optical. D. S. Grey. 2,440,088, Apr. 20.
Leveling device. C. O. Rothweiler. 2,440,211, Apr. 20.
Leveling machine. F. V. Hart and F. L. Mooney. 2,439,889, Apr. 20.
Lift check valve. L. T. Stoyke. 2,440,027, Apr. 20.
Light-polarizing image and forming the same. E. H. Land, J. Mahler, and M. Hyman, Jr. 2,440,106, Apr. 20.
Light-polarizing lamination having a plurality of coplanar protective glass elements. E. H. Land. 2,440,103, Apr. 20.
Light-polarizing, two-tone image on a sheet, Manufacture of. E. H. Land. 2,440,102, Apr. 20.
Light-polarizing viewer for use in connection with stereoscopic pictures. E. H. Land. 2,440,104, Apr. 20.
Limited torque tool. F. W. Livermont. 2,439,980, Apr. 20.
Locking apparatus, Unidirectional. S. S. Baker and R. F. Batchelar. 2,440,038, Apr. 20.
Locking device. G. D. Haver. 2,440,012, Apr. 20.
Lubricant preparation. J. M. Musselman. 2,439,821, Apr. 20.
Lubricants, Compound. J. M. Musselman. 2,439,820, Apr. 20.
Lubricants, High-efficiency. J. M. Musselman. 2,439,819, Apr. 20.
Lubrication. J. V. Tercho. 2,439,954, Apr. 20.
Luminaire. W. G. Darley. 2,439,885, Apr. 20.
Machine for applying closures and sealing jars. G. Glocker. 2,440,085, Apr. 20.
Machine for making crisp bread. A. B. Svensson. 2,439,993, Apr. 20.
Machine for slicing cheese or the like in various shapes and sizes. A. F. Buroff. 2,439,840, Apr. 20.
Machine for stranding wires. A. J. Prosser and E. A. Smith. 2,440,185, Apr. 20.
Machine for trimming primer cups and the like. H. P. Eck, M. M. Karlan, and C. Perrucci. 2,440,080, Apr. 20.
Machine for turning and binding the edges of leather. L. J. Noecker. 2,440,113, Apr. 20.
Manipulator. I. B. Bensen. 2,440,067, Apr. 20.
Marker, Cattle. W. F. Schacht. 2,440,023, Apr. 20.
Measuring and controlling system. A. J. Hornfeck. 2,439,891, Apr. 20.
Meat product and making the same. G. L. Cross. 2,440,168, Apr. 20.
Metal wheel. C. L. Eksergian. 2,439,848, Apr. 20.
Metering system with supervised control device, Selective. J. L. Bower. 2,440,002, Apr. 20.
Meter: *See*—
Volt-ampere meter.
Methine dyestuffs. O. Riester and G. Wilmanns. 2,440,119, Apr. 20.
Moistening and dispensing device, Twine. V. F. Mabil. 2,440,179, Apr. 20.
Mold: *See*—
Pig mold.
Molding, Injection. R. W. Dinzl. 2,439,966, Apr. 20.
Monazo compounds containing a pyrazolone nucleus. J. B. Dickey, J. R. Byers, Jr., and J. G. McNally. 2,439,798, Apr. 20.
Motor and motor fuel treatment. J. A. E. Lachapelle. 2,439,897, Apr. 20.
Motor control, Inverse feed-back. H. C. Waterman. 2,440,130, Apr. 20.
Motor control system, Alternating current generator fed. W. Schaelchlin and H. H. Curry. 2,439,951, Apr. 20.
Motor drive system. E. W. Kellogg. 2,440,176, Apr. 20.
Mould: *See*—
Pig mold.
Mounting and control means for adjustable saws. Le R. W. Sly. 2,440,158, Apr. 20.
Movable electrode tube. W. C. Marshall. 2,439,942, Apr. 20.
Multicylinder fuel injection pump. I. J. Allen. 2,439,879, Apr. 20.
Multiple fluid proportioning pump. W. N. Fenney. 2,440,196, Apr. 20.
Natural axes of quartz crystal sections, Method of and apparatus for locating the direction of. G. W. Willard. 2,439,836, Apr. 20.
Necktie holder. W. Schwiering. 2,440,024, Apr. 20.
Nonporous polytetrafluoroethylene articles, Preparation of. J. Alfthan. 2,440,190, Apr. 20.
Nozzle for internal-combustion engines, Injection. W. Voit. 2,439,832, Apr. 20.
Oil-ring and flood-lubricated bearing. J. V. Tercho. 2,439,955, Apr. 20.
Oiler, Air-line. R. D. Snyder. 2,439,910, Apr. 20.
Oils, Treatment of drying. H. G. Berger, G. S. Crandall, and J. F. Socolofsky. 2,440,000, Apr. 20.
Optimum economy operation of internal-combustion engines, Method and apparatus for. A. S. Atkinson. 2,439,788, Apr. 20.
Oscillator control circuit. D. L. Hings. 2,439,890, Apr. 20.
Oxidation of benzene to phenol with an organic promoter. R. H. Krieble and W. I. Denton. 2,440,233, Apr. 20.
Oxidation of benzene to phenol promoted by added ethers. R. H. Krieble and W. I. Denton. 2,440,234, Apr. 20.
Oximeter having selective control means for multiple channels, Single knob. G. A. Millikan. 2,439,857, Apr. 20.
Package. L. L. Salfisberg. 2,440,022, Apr. 20.

Packaging machine, Tablet. F. J. Kendle. 2,439,977, Apr. 20.
Packer, Bearing. C. W. Ginter. 2,439,688, Apr. 20.
Pad: *See*—
Shoulder pad.
Pantie, Chafe. P. E. Rosenblatt. 2,440,021, Apr. 20.
Pattern control means for knitting machines. T. R. Ryan. 2,439,990, Apr. 20.
Perch cleaner and holder for mite attracting material, Combined bird cage. E. N. Snyder. 2,439,873, Apr. 20.
Permanent waving apparatus. A. E. Stroll. 2,440,188, Apr. 20.
Phenol, Making. R. H. Krieble and W. I. Denton. 2,439,812, Apr. 20.
Photographs, Producing colored. H. T. Neumann. 2,439,901, Apr. 20.
Picker. G. J. Muller. 2,440,182, Apr. 20.
Picker with gaseous suspension and sifting, Peanut. D. F. Good. 2,440,197, Apr. 20.
Pig mold. G. E. Steudel. 2,439,875, Apr. 20.
Pigments, Extracting. J. M. Tabor, H. F. Seibert, and P. R. Frohring. 2,440,029, Apr. 20.
Pipe coupling. J. H. Krooss. 2,439,979, Apr. 20.
Plastic sheet, Reticulately puckered laminated N. J. Brown. 2,440,039, Apr. 20.
Plate, Removable bone. C. H. Smith. 2,440,123, Apr. 20.
Player-operated means for positioning pins of bowling alleys. J. E. Laferriere. 2,440,013, Apr. 20.
Plowing mechanism. M. Howard. 2,440,174, Apr. 20.
Pole holder. M. E. Disotell. 2,439,847, Apr. 20.
Polishing implement with work face consisting of replaceable fabric sheets. J. H. Ludwick. 2,440,014, Apr. 20.
Polymers and copolymers of alkoxy acrylic esters. M. Hyman, Jr., and P. H. Johnson, Jr. 2,440,092, Apr. 20.
Pool, Open-air swimming. O. Saladin. 2,439,866, Apr. 20.
Power plant of jet propulsion type, Aircraft. P. E. Mercier. 2,439,817, Apr. 20.
Power transmission. V. E. Matulaitis. 2,440,055, Apr. 20.
Press: *See*—
Drill press. Utility press.
Pressure-detecting covering. W. C. Green. 2,440,198, Apr. 20.
Pressure regulator for instrument housings. F. D. Braddon. 2,439,793, Apr. 20.
Projector and viewer, Picture. H. Roger. 2,439,987, Apr. 20.
Projector, Motion-picture. R. J. Miller. 2,439,981, Apr. 20.
Propeller blades, Producing. F. B. Stulen. 2,440,127, Apr. 20.
Propeller with variable pitch, Reversible. C. Hautier. 2,440,046, Apr. 20.
Protective system for a direct-current load circuit, Overcurrent. D. E. Maxwell. 2,440,108, Apr. 20.
Protector applying and installing apparatus, Drill pipe. A. M. Graham. 2,440,009, Apr. 20.
Pump: *See*—
Fuel pump. Multiple fluid proportioning pump.
Hydraulic pump.
Multicylinder fuel injection pump.
Pump for hydraulic jacks. H. E. Page. 2,440,060, Apr. 20.
Pump for liquefied gases. C. R. Anderson. 2,439,957–8, Apr. 20.
Pump for liquefied gases, Reciprocating. C. R. Anderson. 2,440,216, Apr. 20.
Pumping mechanism. I. E. Dearsley. 2,439,796, Apr. 20.
Punching machine, Cigar. S. Reso. 2,440,156, Apr. 20.
Push-button switch. J. L. Andrews. 2,440,063, Apr. 20.
Quick release increasing the gap between disks upon entry of uncrushables. J. A. Eldridge. 2,440,171, Apr. 20.
Radiator, electrically heated space. H. J. Morton. 2,439,945, Apr. 20.
Radio cabinet and speaker mounting. G. F. Devine. 2,440,078, Apr. 20.
Railroad car refrigerated by dry ice and a secondary refrigerating system. W. M. Keller. 2,440,098, Apr. 20.
Railway, Overhead. R. J. Rennie, 2,439,986, Apr. 20.
Rayon, Production of viscose. F. R. Millhiser. 2,440,057, Apr. 20.
Reamer, Expansible. R. G. Fear. 2,439,968, Apr. 20.
Rectifier system. R. Lee and C. K. Hooper. 2,439,938, Apr. 20.
Rectifying network for measuring alternating currents. L. Jofeh. 2,440,200, Apr. 20.
Reel: *See*—
Thread advancing storage, and stretching reel.
Refractory and making same. C. C. Silverberg. 2,440,187, Apr. 20.
Refrigerating machine. A. d'Halloy. 2,440,079, Apr. 20.
Regulating device. I. E. Wiegers. 2,440,034, Apr. 20.
Relay, Reactance type. A. C. Mehring. 2,439,944, Apr. 20.
Resiliently mounted cultivator tool. T. Brown. 2,439,921, Apr. 20.
Resin from phenol, formaldehyde, saturated and unsaturated hydrocarbons, and rosin. F. Rostler and L. Bornstein. 2,439,824, Apr. 20.
Resins, Low-loss thermosetting. J. Swiss and N. C. Foster. 2,439,953, Apr. 20.
Respirator. J. C. Mortensen. 2,439,855, Apr. 20.
Riboflavin solution. A. E. Knauf and F. J. Kirchmeyer. 2,440,050, Apr. 20.
Roll, Conductor. E. R. Muddiman and W. E. Winterhalter. 2,439,858, Apr. 20.
Root mean square voltage measuring circuit. G. H. Brown and W. C. Morrison. 2,440,004, Apr. 20.
Rosin, Decolorizing gum. W. B. Logan. 2,440,204, Apr. 20.
Rosin, Treatment of. A. W. Hixson and R. Miller. 2,439,807, Apr. 20.
Rotary type shiftable fastener. W. I. Jones. 2,439,975, Apr. 20.
Safety device, Sewing machine. A. R. Wood. 2,440,227, Apr. 20.
Salt shaker. T. R. Duncan. 2,439,799, Apr. 20.
Sash latch. L. H. Smith. 2,440,026, Apr. 20.
Saw, Two-man portable power. G. A. West. 2,440,033, Apr. 20.
Scoring device consisting of incline ladder structure and folding standard therefor. D. E. Thompson. 2,440,129, Apr. 20.
Screw driver conditioner. G. E. Brulport. 2,439,839, Apr. 20.
Seal, Fluid. C. D. Peterson and A. H. Deimel. 2,440,155, Apr. 20.
Seal for shaft-bearings, Water. E. H. Anderson. 2,439,917, Apr. 20.
Seal, Jet shaft. F. C. Wallace and R. E. Foster. 2,440,032, Apr. 20.
Sealing and reinforcing cartons with tape and the tape as an article of manufacture. L. Davis and E. C. Tuukkanen. 2,440,193, Apr. 20.
Sealing coaxial structures. L. C. Werner and W. S. Lund. 2,439,916, Apr. 20.
Seam for utility bags, Reinforced corner. P. Benenfeld. 2,440,138, Apr. 20.
Seat: *See*—
Sterilized toilet seat.
Securing device. O. W. Thrailkill. 2,439,995, Apr. 20.
Separator with vertical classifying current, Trough. C. H Kear. 2,440,097, Apr. 20.
Shaft bearing. W. R. Freeman. 2,439,971, Apr. 20.
Shaver, Dry. H. E. Page. 2,440,114, Apr. 20.
Shaver, Power driven dry. H. E. Page. 2,440,061, Apr. 20.
Sheet material, System of forming. I. L. Lesavoy. 2,439,939, Apr. 20.
Shock absorbing mechanism for railway draft riggings, Friction. G. E. Dath. 2,439,843, Apr. 20.
Shock absorbing mechanism, Friction. J. J. Krob. 2,439,937, Apr. 20.
Shoes, Making platform. E. E. Murphy. 2,439,900, Apr. 20.
Shoulder pad. F. Schulman. 2,439,991, Apr. 20.
Shoulder pad. S. Schwartz. 2,440,121, Apr. 20.
Shoveling machine, Mechanical. C. E. Stoltz. 2,439,912, Apr. 20.
Silver halide emulsions, Stabilized. F. W. H. Mueller. 2,440,110, Apr. 20.
Silver halide emulsions, Stabilized. F. W. H. Mueller 2,440,206, Apr. 20.
Slide fastener. H. M. Frank. 2,440,007, Apr. 20.
Slide fastener. M. Grabol. 2,440,086, Apr. 20.
Snubbing means. G. E. Dath. 2,439,925, Apr. 20.
Sorting machine, Mail. I. Becker. 2,439,790, Apr. 20.
Spark gap. H. E. Oles. 2,440,154, Apr. 20.
Spark gaps and products thereof, Making. H. E. Oles. 2,440,153, Apr. 20.
Spigot, Sanitary bottle. S. Nellson. 2,440,112, Apr. 20.
Spinning solution and making it. W. O. Israel. 2,440,094, Apr. 20.
Spray device, Lithograph. L. B. Goda, Sr. 2,440,084, Apr. 20.
Spreader and dispenser, Bobby pin. R. P. Sharp, Sr. 2,439,870, Apr. 20.
Spring edge construction, Upholstery. A. M. Bank. 2,439,789, Apr. 20.
Squeegee with blade-holding grip responsive to handle setting. J. Kind. 2,440,099, Apr. 20.
Staking machine. G. B. Spring. 2,440,213, Apr. 20.
Sterilized toilet seat. L. H. Davidson. 2,440,231–2, Apr. 20.
Sterilizing and disinfecting apparatus. H. C. Gould. 2,440,043, Apr. 20.
Stick, Picker. G. J. Muller. 2,440,161, Apr. 20.
Still with thermocompression of vapors, Multiple effect. R. O. Henszey. 2,440,173, Apr. 20.
Stocking dryer. M. Diamant. 2,440,169, Apr. 20.
Storm sash and casement window connector. J. Martin. 2,440,223, Apr. 20.
Sulfonamides, Preparing. A. H. Popkin. 2,440,117, Apr. 20.
Sulfuric acid reaction product of 2-mercapto-4,6,6-trimethyl thiazine. J. E. Jansen. 2,439,810, Apr. 20.
Support: *See*—
Extensible support.
Surgical drill. J. H. Giesen. 2,439,803, Apr. 20.

Switch: *See*—
Automatic electric switch. Frequency selecting Electric switch. switch.
Electronic audio switch. Push-button switch.
Synchronized oscillator circuit. W. E. Bradley. 2,440,073, Apr. 20.

Welder, Portable roller. W. A. Weightman. 2,439,915, Apr. 20.
Wells, Plugging. C. R. Wagner. 2,439,833, Apr. 20.
Wheel: *See*—
Metal wheel.
Wheel. C. S. Ash. 2,439,881, Apr. 20.
Wheel. F. C. Frank. 2,439,926, Apr. 20.
Wheel slip prevention mechanism for locomotives. C. K. Steins. 2,440,124, Apr. 20.
Wheel springing element. E. H. Piron. 2,439,906, Apr. 20.
Windshield structure for use in automotive vehicles employing antiglare light-polarizing illuminating and viewing means. C. J. T. Young. 2,440,133, Apr. 20.
Xanthopterin, Preparation of. G. H. Hitchings. 2,440,221, Apr. 20.

CLASSIFICATION OF PATENTS

ISSUED APRIL 20, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number = class, second number = subclass, third number = patent number

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE CROSKEY ET AL.

No. 5348. Decided January 6, 1948. Petition for rehearing denied February 10, 1948

[— F.2d —; 76 USPQ 389]

REISSUE—DELAY IN FILING—ACT OF AUGUST 5, 1939, AMENDING R. S. 4886 CONSTRUED.

Where appellant filed a reissue application with broadened claims more than one year after the granting date, but the original application was filed prior to the effective date of the act of Aug. 5, 1939, amending R. S. 4886 to change the time bars from two years to one year, *Held* that, because of the proviso contained in Sec. 2 of that act, applications filed prior to the effective date of the act and patents issuing thereon, regardless of their date, are to be governed by the law in effect prior to the effective date of the amendments.

APPEAL from the Patent Office. Serial No. 509,910. REVERSED.

Ernest F. Mechlin (*Henry K. Muir* of counsel) for Croskey.

W. W. Cochran (*E. L. Reynolds* of counsel) for the Commissioner of Patents.

JACKSON, *J.:*

This appeal is from a decision of the Board of Appeals of the United States Patent Office affirming that of the Primary Examiner finally rejecting all of the claims 1 to 8 inclusive, 10 and 15 to 18 inclusive of an application, Serial No. 509,910, filed November 11, 1943, for the reissue of a patent, No. 2,287,976, dated June 30, 1942, on an application, Serial No. 342,798, filed June 27, 1940.

The sole question before us is one of law. Therefore, it is not necessary to consider the disclosure of the application or that of the cited reference, a patent to Stettinius et al. 2,327,972, dated August 24, 1943.

In its decision, the Board held, as did the Examiner, that there was "laches by delay in filing the reissue application," and because of such holding affirmed the decision of the Examiner in rejecting the claims on the reference. In other words, the decision of the Board, rejecting on the reference, was contingent upon its holding of so-called "laches" in filing the application. Therefore, our decision on the ground of undue delay is determinative of the case. It is admitted that if that doctrine applies, the rejection on the reference is proper.

The application for reissue of the patent in addition to claims 1 to 4 inclusive, being claims in appellants' original patent, contains several claims copied from the Stettinius et al. patent for the purpose of interference. The claims herein are concededly broader than the claims of the patent sought to be reissued.

On February 9, 1944, an interference, No. 81,347, was declared between the reissue application and the Stettinius et al. patent. A motion was made by counsel for Stettinius et al. to dissolve the interference on various grounds, one of which was that the count thereof was barred to appellants by reason of "unreasonable delay and laches in presenting the same."

By an Act of Congress approved August 5, 1939, 53 Stat. 1212, sections 4886, 4887, 4920 and 4929 of the Revised Statutes were amended, and section 2 was added to section 4886, reading as follows:

> Sec. 2. This act [amending sections 4886, 4887, 4920, and 4929 of the Revised Statutes (U. S. C., title 35, secs. 31, 62, 69, and 73) by changing "two years" to "one year"] shall take effect one year after its approval and shall apply to all applications for patent filed after it takes effect and to all patents granted on such applications: *Provided, however, That all applications for patents filed prior to the time this act takes effect and all patents granted on such applications are to be governed by the statutes in force at the time of approval of this act as if such statutes had not been amended.* [Italics ours except for the first two italicized words.]

It will be noted that the effective date of the act is by its terms August 5, 1940.

The Board in its decision stated as follows:

> The changes made in Revised Statutes 4886, 4887, 4920 and 4929 all refer to time bars arising before the date of filing of an application which may become a patent. No bars are here involved which did or could have arisen before the filing of the application which matured to [sic] applicants' patent. The only bar under consideration is the alleged laches by delay in filing the reissue application. The act relied on does not mention reissue applications, either explicitly or in our opinion, by inference. The rule against laches in reissuing was drawn by the courts by analogy to the time interval of the public use bar, and applies only to the interval between the grant of a patent and the filing of a reissue application. It follows that applicants should have shown "special circumstances" for delay beyond the one year limit and not having shown them, claims 5 to 8, 10 and 15 to 18 are properly rejected for laches.
>
> Applicants admit that if the rejection for laches be proper, all claims are met by the Stettinius patent. Having held as above, we affirm the rejection on Stettinius.

Appellants' contention below and here is, since their original application was filed June 27, 1940, which is a date prior to the effective date of the amendments, that under the provision of sec. 2 of section 4886, supra, the term of two years within which to file an application for the reissue of their patent is proper.

In the Solicitor's brief it is stated that "It does not appear to be urged by the appellants that their excuse for the delay is sufficient, if the critical period

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom al subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $19.50; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

is one year, and it has not been asserted by the Patent Office that the excuse is insufficient if the critical period is two years."

It is true, as stated by the Board of Appeals, that none of the statutes hereinabove referred to relates to reissued patents or the application for the issue thereof. The amendments, as the Board properly stated, had reference to the bar of time arising prior to the filing date of an application for a patent. The maximum time within which an invention could be in public use, on sale, or disclosed in a printed publication prior to the filing date of an application for a patent was shortened from "two years" to "one year." However, it is clearly provided in the act that * * * all applications for patents filed prior to the time this act takes effect [August 5, 1940] and all patents granted on such applications are to be governed by the statutes in force at the time of approval of this act [August 5, 1939] as if such statutes had not been amended."

It is clear to us that appellants' original application and his patent should be governed by the statutes in force prior to the effective date of the amendment.

There is no statutory requirement limiting the time within which a broadened reissue of a patent may be sought. There never has been any such statute. The Board correctly stated that the rule against laches in the filing of an application for reissue of a patent "* * * was drawn by the courts by analogy to the time interval of the public use bar, * * *."

That analogy was first made in the opinion of the Supreme Court in the case of *Miller* v. *Brass Company*, 104 U. S. 350, 21 O. G. 201. The principle was there laid down that the period fixed by statute within which an application for a patent could be filed, after two years public use of the invention, should likewise limit the delay, after a patent had issued, in filing an application for reissue with broader claims, in the absence of a compelling showing excusing such delay. The Court stated:

> If two years' public enjoyment of an invention with the consent and allowance of the inventor is evidence of abandonment, and a bar to an application for a patent, a public disclaimer in the patent itself should be construed equally favorable to the public. Nothing but a clear mistake, or inadvertence, and a speedy application for its correction, is admissible when it is sought merely to enlarge the claim.

That rule has been consistently followed. See *Mahn* v. *Harwood*, 112 U. S. 354, 30 O. G. 657; *Chapman et al.* v. *Wintroath*, 252 U. S. 126, 272 O. G. 913; *Sontag Chain Stores Co., Ltd.* v. *National Nut Company of California*, 310 U. S. 281, 523 O. G. 805; and the many cases cited in Walker on Patents, Deller's Edition, Volume Two, page 1369. From the opinion in the case of *Mahn* v. *Harwood*, supra, we quote from page 363 as follows:

> In *Miller* v. *The Brass Company*, by analogy to the law of public use before an application for a patent, we suggested that a delay of two years in applying for such correction should be construed equally favorable to the public. But this was a mere suggestion by the way, and was not intended to lay down any general rule. Nevertheless, the analogy is an apposite one, and we think that excuse for any longer delay than that should be made manifest by the special circumstances of the case.

Of course, in view of the amendments referred to herein and following the rule of law set forth in the above cited cases, it would seem with respect to such applications and to patents granted thereon that an application for reissue, unless made manifest by the special circumstances of the case, would have to be made within one year after the date of the patent.

It appears clear to us (and as far as our research and information goes it is a case of first impression) that because of the proviso contained in sec. 2, supra, applications filed prior to the effective date of the act and patents issuing thereon, regardless of their date, are to be governed by the law in effect prior to the effective date of the amendments.

While sec. 2, supra, is clear and in our opinion does not require extrinsic aid in its construction, it may be stated that an examination of the legislative history confirms our view in that respect. A report accompanying H. R. 6872 made by Mr. Kramer of the Committee on Patents of the House of Representatives, Report No. 961, 76th Congress, 1st Session, contains the following:

> TIME OF TAKING EFFECT
>
> • • • • • • •
>
> The proposal will apply only to applications for patent filed after the law takes effect, and to patents granted on such applications; it will not apply to patents granted before it comes into effect, nor to applications filed before that date and patents granted on such applications.

Senator Lucas of the Senate Committee on Patents made a report in identical words on the same act, Calendar No. 916, Report No. 876, 76th Congress, 1st Session.

While it is quite true that there is nothing in the amended statutes concerning applications for reissue, it should likewise be noted that in the same statutes prior to amendment there was nothing concerning reissue.

Section 4916 of the Revised Statutes (U. S. C., title 35, sec. 64) is the statutory authority under which reissue patents may be granted. That section is the same now as it was prior to the effective date of the act, August 5, 1940. If under the statutes prior to that time it was an established principle of law, as laid down by the Supreme Court, that the time of public use, or sale, or publication for a period of two years is applicable as a bar to the filing of a reissue application in the absence of special circumstances, surely, in view of the proviso of sec. 2, it is the law now with respect to all applications filed prior to the effective date of said amendments and to patents granted thereon. We can not see why an application for the reissue of a patent, such as is before us, should be excluded from the advantages flowing from the law governing applications filed before the effective date of the act of 1939, supra, by reason of the fact that reissue was not sought until subsequent to that date.

The Board in its decision made reference to the case of *Ryder et al.* v. *Coe*, 64 USPQ 365, decided by the U. S. District Court, District of Columbia, on February 15, 1945, and stated that although the facts herein are not identical with those in that case, it may be concluded as a matter of law that after the expiration of one year from the grant of a patent all the tests of "special circumstances" are to be made with respect to the reissue application with broadened claims as had been formerly applied after two years. The Solicitor in his brief contends that the Ryder case, supra, is directly in point here in that it involved an application for the reissue of a patent granted after the effective date of the act on an application filed prior thereto. There as here the time elapsing between the issue of the patent and the filing of the reissue application was about the same and the court found that the critical period to be applied there was one year rather than two. It is stated by the Solicitor that counsel for the plaintiff in his trial brief made the following statement:

> As stated in the amendment to section 4886 R. S. Congress specifically provided that applications for patents filed prior to the time this act takes effect (August 5, 1940) and all patents granted on such applications, are to be governed by the statutes in force at the time of the approval of this act as if such statutes had not been amended, and in the present case the Ryder application resulting in Patent No. 2,215,254 was filed May 2, 1936.

However, we find that the above quotation seemingly was not relied upon by the plaintiff and apparently there was no explanation of nor argument on the applicability of the proviso clause of sec. 2, supra. The issue there for determination was whether "special circumstances" had been shown excusing delay which the Patent Office regarded as being unreasonable. On that issue, and that issue alone, the court ruled against the plaintiff. We are of opinion, therefore, that the Ryder case, supra, is not applicable to the facts and circumstances here.

For the reasons herein stated, the decision of the Board of Appeals is reversed.

REVERSED.

BLAND, *J.*, sat during the argument of this case, but resigned before the opinion was prepared.

PATENT SUITS

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922]

1,427,771, G. M. Ball, Parachute vent; 1,427,772, same, Fabric structure for parachute and aerostats and method of constructing same; 1,511,154, same, Parachute; 1,554,192, same, Parachute pack; 1,560,366, same, Parachute harness, filed Sept. 25, 1945, D. C., W. D. N. Y., Doc. 2586, *G. M. Ball* v. *Irving Airchute Co., Inc.* Stipulation and order of discontinuance Jan. 8, 1948.

1,996,143, W. E. Callison, Amusement device, D. C., N. D. Ill., E. Div., Doc. 47c1229, *W. E. Callison* v. *D. Gottlieb & Co.* Complaint and counterclaim dismissed with prejudice Mar. 16, 1948.

1,996,634, V. G. Vaughan, Water heater control system, filed Mar. 11, 1948, D. C., N. D. Calif., S. Div., Doc. 27951-H, *Westinghouse Electric Corp.* v. *Addison Furniture Co.*

2,051,063. (See 1,892,426.) 2,151,692. (See 1,892,426.)

2,179,655, R. W. Cutler, Drive belt for textile spindles, filed Mar. 10, 1948, D. C. R. I., Doc. 863, *Cutler Textiles, Inc.*, v. *Hope Webbing Co.*

2,196,201. (See 1,892,426.)

2,197,615, D. J. Kellman, Ornamental articles and method of making same; 2,248,572, same, Apparatus for making ornamental articles; 2,414,378, same, Decorative ornament, filed Mar. 10, 1948, D. C. R. I., Doc. 862, *D. J. Kellman* v. *Miller Electric Co.*

2,200,349, B. Walker, Venetian blind, filed Mar. 12, 1948, D. C., N. D. Calif., S. Div., Doc. 27,956-R, *Sunset Venetian Co. et al.* v. *B. Walker.*

2,248,572. (See 2,197,615.)

2,256,803, E. Hauser, Antenna system for a radio receiving set, filed Mar. 1, 1948, D. C., S. D. N. Y., Doc. 45/102, *E. Hauser* v. *Freed Radio Corp.* Stipulation of discontinuance (notice Mar. 15, 1948).

2,278,074, G. F. Hauf, Flexible pipe joint, D. C., N. D. Ill., E. Div., Doc. 46c1486, *Chicago Metal Mfg. Co.* v. *National Metal Fabricators et al.* Cause dismissed with prejudice Mar. 12, 1948.

2,414,378. (See 2,197,615.)

Re. 19,694, W. Ernst, Hydraulic motor control means, D. C., W. D. N. Y., Doc. 676, *The Hydraulic Press Mfg. Co.* v. *E. W. Bliss Co. et al.* Order dismissing action with prejudice Jan. 19, 1948.

Re. 20,586, Ponting & Kilwer, Elevator bucket, D. C., N. D. Ill., E. Div., Doc. 47c1748, *B. I. Weller Co.* v. *Screw Conveyor Corp.* Cause dismissed on stipulation Mar. 8, 1948.

Des. 109,640, F. C. Kimmel, Electric broiler, D. C., W. D. N. Y., Doc. 2815, *Rochester Kimmel Co.* v. *Sibley, Lindsey & Curr Co.* Order dismissing case without prejudice for lack of prosecution Nov. 12, 1947.

Des. 147,040, A. E. Frontier, Table lamp; Des. 148,905, R. O. Bextel, Combination lamp and potted plant bowl, counterclaim filed Mar. 15, 1948, D. C., N. D. Ill., E. Div., Doc. 47c1610, *Advance Lamp Co.* v. *Lambex Specialties Lamp Mfg. Co. et al.*

Des. 147,368, M. B. Levoy, Spectacle frame, filed Mar. 10, 1948, D. C. N. J., Doc. 11137, *M. B. Levoy* v. *Sun Glass Industries, Inc.* Doc. 11138, *M. B. Levoy* v. *Fashion-Zyl Co., Inc.*

Des. 148,126, P. Bardach, Jewelry clasp, filed Mar. 12, 1948, D. C. R. I., Doc. 864, *Turiet & Bardach* v. *Jean-Art Co., Inc.*

Des. 148,905. (See Des. 147,040.)

T. M. 344,122, The Barbasol Co., Paste-like preparation for shaving, D. C., N. D. Ill., E. Div., Doc. 44c537, *The Barbasol Co.* v. *Eaton Laboratories.* Consent judgment enjoining defendant from infringing Mar. 12, 1948.

NOTICES

Disclaimers

1,938,548.—*Herbert E. Tautz*, Milwaukee, Wis. MACHINE TABLE EXTENSION. Patent dated Dec. 5, 1933. Disclaimer filed Mar. 18, 1948, by the assignee, *Rockwell Manufacturing Company.*

Hereby enters this disclaimer to claim 8 in said specification.

2,145,577.—*Jean A. H. Barkeij*, Altadena, Calif. COMBUSTION CHAMBER IN CYLINDER HEADS OF INTERNAL COMBUSTION ENGINES. Patent dated Jan. 31, 1939. Disclaimer filed Jan. 26, 1948, by the inventor.

Hereby enters disclaimer to the third object, mentioned in lines 7 to 10, page 1, column 2.

Further enters disclaimer to—9 that in the larger chamber—in lines 44–45, same column, and to—in chamber 6—in lines 14–15, page 2, column 1, and to—various objects are shown in various—in line 27, page 1, column 2, and to—but they all—in lines 28–29, same column.

Further limits the scope of claims 1, 2, 3 by disclaimer to non-simultaneous firing—in view of the disclaimed fifth object of the first disclaimer and the application thereof on drawings, description, and claims and in view of the lines 48 to 52, page 2, column 1, of description.

And he further limits the interval of non-simultaneous firing to the range of 2° to 12° crankshaft rotation.

And further limits the scope of the claims 1 and 2 for so far as concerns the location of the second sparkplug to a position closer to the edge of the inlet valve than to the edge of the exhaust valve on account of the diametrically opposite position of the second sparkplug with respect to the first sparkplug as defined in said claims, and further to a position in an auxiliary chamber as shown in Fig. 1a.

And further limits the scope of the claim 3 for so far as concerns the second sparkplug to a position closer to the edge of the inlet valve than to the edge of the exhaust valve, and limits the words—similarly situated—solely to a position in another auxiliary chamber as shown in Fig. 1a, and not to a position of the second sparkplug also closer to the exhaust valve than to the inlet valve as was claimed in the disclaimed claim 4, which referred to claim 3, and therefore limited to claim 3 to such a position.

And further limits the sequence of the non-simultaneous firing of the two sparkplugs to a sequence described in the description, in which the ignition is initiated in the hottest part of the chamber where the exhaust valve is located.

2,173,081.—*Jean A. H. Barkeij*, Altadena, Calif. INTERNAL COMBUSTION ENGINE. Patent dated Sept. 12, 1939. Disclaimer filed Jan. 26, 1948, by the inventor.

Hereby limits the firing interval of the spark ignition types in this patent to a firing interval between 2° and 12° or 15° crankshaft rotation, called—substantially simultaneous firing—in the description lines 68, column 2, page 6, to line 14, column 1, page 7 ending with the words, —may be fired substantially simultaneously—, that is an interval of 2° to 12° or 15° crankshaft rotation, in the claims of this patent. That means he does not limit the interval for other types described.

Hereby limits the scope of all the claims herein as far as the spark-ignition type is concerned, ---------- and the location of the second spark-ignition-means is concerned, firing substantially later on in general with an interval, to a position in an auxiliary chamber as clearly shown by numeral 6a in Fig. 1 and 41 in Fig. 3, and without limiting the location of the fuel-injection means for the combined spark-ignition-fuel-injection types, or the double-fuel-injection types.

The expression—substantially ahead—in the claims is limited to between 2° and 12° or 15° crankshaft rotation for spark ignition types and this interval may be also called—substantially simultaneously—if preferred, without referring this expression to page 1, column 1, hereof in relation to the engines of Saives and Werner, but referring to lines 9 to 15 on page 7, column 1 using the same expression, which refers to the present engines.

2,191,746.—*Jean A. H. Barkeij*, Altadena, Calif. COMBUSTION CHAMBER IN CYLINDER HEADS OF INTERNAL COMBUSTION ENGINES. Patent dated Feb. 27, 1940. Disclaimer filed Feb. 26, 1948, by the inventor.

Hereby enters disclaimer to page 2, column 1, —9 in the larger chamber—, lines 24–25, page 2, column 1, in lines 66–67, to —in chamber 6—, in line 4 same column to —various objects are shown in various—, and to —but they all— in lines 5–6 same column.

Hereby limits the scope of claims 1, 2, 3 to non-simultaneous firing in view of the prior disclaimers and in view of description in lines 28 to 33, page 2, column 2, and further limits the interval of non-simultaneous firing to the range of 2° to 12° crankshaft rotation, and preferably to the approximate center thereof which is about 6°.

And further limits the scope of claim 1 for so far as concerns the position of the second sparkplug, to a position closer to the edge of the inlet valve than to the edge of the exhaust valve on account of the diametrically opposite position of the second sparkplug with respect to the first sparkplug, which is closer to the edge of the exhaust valve.

And further limits the scope of claim 3 for so far as concerns the second sparkplug to a position closer to the edge of the inlet valve than to the edge of the exhaust valve, and limits the words—similarly situated—solely to a position in another auxiliary chamber communicating with the main chamber as shown in Fig. 1a, and not to a position also closer to the edge of the exhaust valve than to the edge of the inlet valve, as was claimed and subsequently disclaimed in claim 4, which limited claim 3 to such a position only and originally.

And further limits the sequence of the non-simultaneous firing to the sequence described in the description, in which the ignition is initiated in the hottest part of the chamber, where the exhaust valve is located.

2,300,416.—*Bror J. Grondal*, Watertown, and *Harry Morley Wylde*, Swampscott, Mass. SOAP AND PROCESS FOR MAKING SAME. Patent dated Nov. 3, 1942. Disclaimer filed Mar. 9, 1948, by the assignee, *Lever Brothers Company.*

Hereby enters this disclaimer of claims 2, 3, 4, 5, and 6 of said specification and that part of claim 1 thereof directed to cocoanut oil and palm kernel oil.

2,332,523.—*Elwood Norden*, Pelham, and *Arthur R. Weckel*, Freeport, N. Y. GROUND TRACK TRACER AND LANDING RECORDER. Patent dated Oct. 26, 1943. Disclaimer filed Mar. 18, 1948, by the assignee, *The Sperry Corporation.*

Hereby enters this disclaimer to claims 8, 9, 10, 11, 12, 13, and 14 of said patent.

2,413,185.—*William A. La Lande, Jr.*, Upper Darby, Pa. REMOVAL OF VOLATILE METAL HALIDES FROM FLUIDS. Patent dated Dec. 24, 1946. Disclaimer filed Mar. 24, 1948, by the assignee, *Porocel Corporation.*

Hereby enters this disclaimer to claims 3, 4, 7, 8, 11, and 12 of said patent.

Important Information

In ordering manuscript copies much time will be saved if the order states specifically what is desired, viz:

Application as originally filed. (Petition, specification, oath, and drawings, as received.) Application as amended. (Petition, specification, oath, and drawings with amendments entered.)

Application as allowed. (Petition, specification, oath, and drawings as passed by the Examiner for issue.)

Original application. (Facsimile petition, specification, oath, and drawings at present time.)

Specification as originally filed. (As received in Office.)

Specification as amended. (With amendments entered.)

Specification as allowed. (As passed by the Examiner for issue.)

Original specification. (Facsimile at present time.)

File-wrapper. (File-wrapper only.)

File-wrapper and contents. (File-wrapper, contents of record, including photoprints of any tracings or of prints within file-wrapper. In patented cases, printed copy of the specification and drawings of the patent is furnished.)

File-wrapper contents, and drawings. (File-wrapper and all of the contents of record, including photoprints of any tracings, exhibits, or prints within the file-wrapper. In pending cases, photoprints of the pending drawings only, omitting any canceled. If patented, copy of the specification and drawings of the patent being furnished, photoprints are not made of the original drawings unless specially ordered. If canceled drawings are wanted, they must also be specially ordered.)

Assignment. (Give the liber and page of the record as well as the name of the inventor.)

Printed publications in possession of the Office. (Give title and date of publication, also page and exact portion to be copied.)

Orders for copies of any other records not mentioned above must state specifically the exact paper to be copied.

Rule 72

RULE 72. After the completion of the application the Office will not return the specification for any purpose whatever. If applicants have not preserved copies of the paper which they wish to amend, the Office will furnish them on the usual terms.

The drawing may be withdrawn only for such corrections as cannot be made by the Office; but a drawing cannot be withdrawn unless a photographic copy has been filed and accepted by the Examiner as a part of the application. Permissible changes in the construction shown in any drawing may be made only by the Office and after an approved photographic copy has been filed. Sketches filed to show proposed changes in construction must be in permanent ink. (See Rule 30.) Substitute drawings will not be admitted in any case unless required by the Office.

Notice Regarding Payment of Fees

All fees must be paid in advance. Payment of money required for Office fees *must* be made in specie, Treasury notes, national-bank notes, post-office money orders, or certified checks. Money orders and checks must be made payable to the "Commissioner of Patents." Money sent by mail to the Patent Office will be at the risk of the sender. (See Rule 194.)

Certified checks, bank drafts, express and foreign money orders must be immediately negotiable in this country and for the full amount of the fee required by the Patent Office. No allowance can be made by this Office for any charge for their collection or exchange. Postage stamps will not be accepted. Failure to comply with the above instructions will cause delay.

Use of Patented Drawing in a Reissue

Upon receipt of an application for reissue and a request for the transfer of the drawings, from the original patent to the reissue application, applicant should be informed that a copy of the original patent or photoprints will be ordered and used as a drawing for purposes of examination and that if the reissue application is later allowed, a formal transfer of the drawings from the original patent to the reissue application will be made at the time of allowance.

Printed Copies of Trade-Marks

A printed copy of the drawing and statement of any registered trade-mark can be obtained for ten cents.

Drawings

RULE 38

38. When there are drawings, the description will refer to the different views by figures and to the different parts by letters or numerals (preferably the latter).

RULE 52—EXTRACT

(f) The different views should be consecutively numbered. Letters and figures of reference must be carefully formed. They should, if possible, measure at least one-eighth of an inch in height, so that they may bear reduction to one twenty-fourth of an inch; and they may be much larger when there is sufficient room. They must be so placed in the closed and complex parts of drawings as not to interfere with a thorough comprehension of the same, and therefore should rarely cross or mingle with the lines. When necessarily grouped around a certain part, they should be placed at a little distance, where there is available space, and connected by short lines with the parts to which they refer and by short broken lines when the number or letters refer to parts shown in dotted lines. They should not be placed upon shaded surfaces, and when it is difficult to avoid this, a blank space must be left in the shading where the letter occurs, so that it shall appear perfectly distinct and separate from the work. If the same part of an invention appears in more than one view of the drawing it must always be represented by the same character, and the same character must never be used to designate different parts.

It is suggested that numerals or letters be used without exponents.

Applicant's Address

The requirement of Rule 33, that the post-office address of the applicant must be stated in the petition, means that the applicant must give the post-office address at which he customarily receives his mail.

The rule was made in order that the Office in necessary cases might correspond directly with the applicant and not through his attorney. The address of the attorney with instructions to send communications to the applicant in his care will not be accepted as a compliance with this rule.

Photostat Copies

In ordering photostat copies of United States and foreign patents, when only the number of the patent is given, the whole patent, comprising specification and drawing, will be furnished, unless the order specifically states that the "specification only" or "drawing only" is required. Care should be taken in making out orders for foreign patents to give the year of the patent, as in old French and British patents the same number may appear in different years.

Cross-References in Cases Relating to Same Subject

RULE 43. When an applicant files two or more applications relating to the same subject matter of invention, all showing but only one claiming the same thing, the applications not claiming it must contain references to the application claiming it.

Amendment Filed by an Attorney Not of Record

When an amendment is filed, signed by an attorney whose power is not of record, he, as well as the applicant, should be notified that the amendment cannot be entered.

When the Examiner's letter is of such a character that the six months for amendment runs from the date of a previous action, a statement to that effect should be made at the end of the letter and the date from which the six months runs given.

Amendments to Amendments

RULE 74. When an amendatory clause is amended, it must be wholly rewritten, so that no interlineation or erasure shall appear in the clause, as finally amended, when the application is passed to issue. If the number or nature of the amendments shall render it otherwise difficult to consider the case or to arrange the papers for printing or copying, the Examiner or Commissioner may require the entire specification to be rewritten.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,434,855. PROCESS OF COATING METAL ARTICLES. Patented Jan. 20, 1948. A plating composition in dry powder form for metal objects which produces a coating having the appearance and wearing qualities of good nickel plating applied by ordinary methods. Metal objects to be plated are rubbed with a wet rag sprinkled with the powder. Several layers may be built up and a high brilliancy obtained by further polishing with a wheel or rouge. Various compositions are given in which ferrous chloride, stannous chloride, powdered metallic zinc, potassium bitartrate, ammonium chloride, sodium chloride, nickel sulphate, copper sulphate, and nickel ammonium sulphate are the ingredients. The composition will keep for several months and may be packed in jars or airtight bags. (Owner) Jose L. Teran Kosterlitzky, Apartado 674, Guadalajara, Mexico. Group 34—72. Reg. No. 9,497.

Pat. 2,002,291. CONNECTER ELEMENT. Patented May 21, 1935. This patent shows a connector element which may be constructed as a plug or plug receptacle. As a plug, the device has a hollow head and a clamping portion, both of insulating material, which are threadedly fitted together. L-shaped blades are held between the two parts, the blades having an opening and slot at the inner end which receive the lead wires. The use of binding screws is eliminated and the plug may be assembled without the use of tools. The construction of the plug receptacle is somewhat similar. (Owner) C. D. Wood Electric Co., Inc., 70—17 83rd St., Glendale, Long Island, N. Y. Group 36—11. Reg. No. 9,498.

Pat. 2,433,664. FUEL PUMP. Patented Dec. 30, 1947. Fuel pump has a sectional cylindrical fuel reservoir with a plurality of parallel pumping cylinders formed on the lowermost portion of the reservoir at right angles thereto. The pistons are connected to plungers which are actuated by cam taps on a cam shaft. A hollow cylindrical rotary valve fitting snugly inside reservoir is provided with a plurality of ports, each adapted to register with a group of spaced ports in each cylinder. The valve may be manually adjusted to regulate the amount of fuel delivered into the cylinders to control engine speed. Hand-controlled pawls are provided for selectively holding the pistons in forward inoperative position to render any one or more pumping cylinders inactive. Each pawl is adapted to engage and disengage a collar below a spring surrounding each plunger. (Owner) George Hantjopoulos. Address correspondence to Victor J. Evans & Co., Merlin Bldg., 1503 21st St., N. W., Washington 6, D. C. Group 35—19. Reg. No. 9,499.

Pat. 2,429,879. WOOD-TURNING LATHE CLAMP. Patented Oct. 28, 1947. Clamp consists of a pair of adjacent plates connected for independent coaxial rotation. Radiating arms on one plate are pivotally connected at their outer ends to a like number of radiating arms pivoted to the other plate. Hook-shaped rim-engaging clamps are carried by the united ends of the arms. Provision is made for maintaining the plates in any one of a desired plurality of rotary relationships. With this clamp, partly finished bowls or the like may be reversed and a bead formed on the underside. (Owner) Valentine Gwatkin, 123 Humboldt Ave., St. Vital, Manitoba, Canada. Group 35—69. Reg. No. 9,500.

Pat. 2,433,159. COPYHOLDER FOR HOLDING BOOKS OR SHEETS. Patented Dec. 23, 1947. Copyholder may be used to support single sheets, books, manuscripts, or the like in proper position in back of a typewriter for copying. Line guides are provided to facilitate copying. Adjustment for proper line spacing may be made when holder is initially set. During copying, a key located adjacent typewriter keyboard is depressed to effect upward line by line movement of the sheet. A book is set for copying by placing it on a supporting platform in open position with the pages held flat by a yieldable clamping bar. A book line guide is then adjusted to underlie first line to be copied. By shifting a clutch the same key is used during copying to effect downward line by line movement of the book line guide. Shifting a lever adjacent the key reverses the actuating mechanism so that reverse movement to either the rollers or book line guide is effected when the same key is depressed. (Owner) Luis Alberto Villafuerte Rozas. Address correspondence to Victor J. Evans & Co., Merlin Bldg., 1503 21st St., N. W., Washington 6, D. C. Group 35—72. Reg. No. 9,501.

The following eight patents are owned by Thomas J. Hoy, 839 South 13th St., Newark 8, N. J.

Pat. 2,243,863. POPPET VALVE. Patented June 3, 1941. Groups 33—66; 35—11; 37—11—12. Reg. No. 9,502.

Pat. 2,243,864. CYLINDER CASTING OR CYLINDER BLOCK FOR STEAM ENGINES AND THE LIKE. Patented June 3, 1941. Groups 33—66; 35—11; 37—11—12. Reg. No. 9,503.

These two patents show double seating poppet valve construction having inlet and exhaust poppet valve cages with double seats. Cylinder construction for locomotive steam engines or the like is also shown. Positive steam-tight seatings are assured regardless of distortions caused by temperature changes, etc. The cages and poppet valve are each constructed with inner resilient valve seats. Individual restraining rings limit upward movement of these seats. The poppet valve (as shown in Patent 2,243,863) has its inner seat resiliently connected (in a steam-tight manner by resilient bellows) to a ring-like projection of an adapter, permitting removal of valve and adapter as a unit from steam chest. The cages are likewise connected to the surrounding cylinder by resilient metallic bellows and detachable retaining rings, permitting removal of cages and bellows as a unit. The valves and cages may be adapted for use with conventional structures.

Pat. 2,243,865. POWER REVERSE GEAR FOR STEAM LOCOMOTIVES AND THE LIKE. Patented June 3, 1941. In this patent two or more sets of valve gear reversing mechanisms are coordinated by means of a variable ratio transmission actuated through a single manual control in locomotive cab. The transmission includes a threaded shaft connected by a propeller shaft to a reversible motor

in cab, an elongated sliding cam-nut threaded on the shaft, a cam roller engaging cam, and a fulcrumed lever having three arms. One arm carries the cam roller and another arm is connected to a steam or air actuated piston. The third arm is connected by linkage comprising an arm and rod to one reversing shaft, and the cam-nut is likewise connected to another reversing shaft. The lever maintains the cam roller in contact with the profile of the cam-nut at all times regardless of wear, thus eliminating lost motion. Groups 35—11; 37—11—12. Reg. No. 9,504.

Pat. 2,303,642. PRESSURE SEALED COUPLING. Patented Dec. 1, 1942. Light, leak-proof, flexible coupling (or joint) for lines conveying gases or fluids under high pressure is sealed against leakage by line pressure. A ball member extending inside a socket is engaged on opposite sides of its center by a pair of spaced gaskets. The outer gasket is held in place, retaining the ball in the socket, by an adjustable ferrule cap threaded on the outer end of the socket. A resilient metallic bellows is pre-loaded to exert force on the inner gasket to seal the joint. Line pressure tends to expand the bellows, causing it to exert increased pressure upon the inner gasket. Thus the greater the pressure, the more effective the seal. The space between the gaskets may be filled with a lubricant. Modifications shown. Groups 35—66—69; 37—22. Reg. No. 9,505.

Pat. 2,375,992. TIRE CONSTRUCTION. Patented May 15, 1945. Vehicle tire may be formed with resilient metallic side walls connected to spaced inner and outer annular metallic members. An annular sheet of rubber is provided with a tread surface and secured around the outer member. The inner member is designed to fit the rim of a wheel. Each side wall comprises a series of leaves in superimposed spaced relation with contacting edges connected in a fluid-tight manner to form a plurality of integral flexible hinges. The ends of the innermost and outermost leaves of each side wall are welded to the inner and outer annular members to form a fluid-tight chamber. Modifications shown. Groups 30—11; 38—31. Reg. No. 9,506.

Pat. 2,381,541. RESILIENT VALVE HEAD. Patented Aug. 7, 1945. Resilient valve head construction for internal combustion engines, steam engines, and the like, designed to obviate the necessity of providing tappet clearance and to automatically compensate for wear on the valve-actuating cam. The valve head is resilient and comparatively thick. It comprises a disc formed of flexible corrugated material with a rigid valve seating ring welded to the periphery of the disc. The valve may be used with structures having either a rigid or resilient seat. The resilient seat may comprise a rigid ring on a bellows-like mounting. A modification shows a double seating valve having a flexible head and a smaller rigid head adapted to cooperate with structures having a flexible valve seat and a rigid valve seat. Other modifications shown. Group 35—11—19—66—69. Reg. No. 9,507.

Pat. 2,427,456. JOINT. Patented Sept. 16, 1947. Leak-proof, flexible joint (or coupling) for use in lines conveying hot gases or fluids under high pressure is sealed by line pressure. A semi-spherical ball portion and a socket portion of the joint cooperate to form relatively movable nested bearing surfaces to lend flexibility to the joint. A continuous fluid-tight passage is formed through the center of the joint so that hot gases or fluids cannot contact the nested bearing surfaces. A tubular resilient metallic bellows (which forms a major portion of the fluid-tight passage) is pre-loaded to exert pressure against a gasket-retaining ring designed to force a gasket into sealing engagement with the outer surface of the ring and the inner surface of the ball member. Line pressure tends to expand the bellows, causing it to exert increased force against the ring and gasket. A chamber surrounding the bellows may be filled with a lubricant. A modification is shown. Groups 35—11—66—69; 37—22. Reg. No. 9,508.

Pat. 2,433,319. JOURNAL LUBRICATING DEVICE. Patented Dec. 23, 1947. Designed to maintain constant and even lubrication of locomotive journals at all times. The apparatus, which includes a cellar box adapted to contain a lubricant, may be provided with a pair of lubricating rollers. A concaved plate above the rollers for engaging a journal is recessed at the center to permit a peripheral portion of journal to project through recess for frictional engagement with the rollers. The curved sides of the concave plate engage opposite sides of the journal. The rollers and concaved plate are urged into contact with the journal at all times by resilient side and end members. Lubricant from a pump may be supplied to one side of journal through one side of the concaved plate with excess falling into reservoir surrounding rollers. The rollers pick up lubricant from reservoir and transmit it to the journal. Excess lubricant is then wiped from journal by the other side of the concaved plate. In place of the rollers absorbent waste material may be employed. Modifications shown. Group 37—11—12. Reg. No. 9,509.

Pat. 2,213,841. HACKSAW BLADE MOUNTING. Patented Sept. 3, 1940. Attachment for conventional hacksaw frames provides for adjustment and replacement of a blade without removing the attachment from frame. The attachment includes a threaded sleeve keyed to one end of the frame against rotation while permitting longitudinal movement of the sleeve in the frame. A rod to which end of hacksaw blade is attached is rotatably and longitudinally mounted within the sleeve. Ratchet teeth on a nut on the outer end of the rod and the end of the sleeve (held in engagement by a spring) permit angular adjustment of the blade when the sleeve is loose, but prevent rotation when blade is taut. Modifications shown. (Owner) Charles Hubeck, Swiss Farm, Hackettstown, N. J. Group 33—54. Reg. No. 9,510.

Pat. 2,433,336. MANUALLY OPERATED OVERRUNNING CLUTCH. Patented Dec. 30, 1947. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) One-way clutch is particularly useful for installation on a drive shaft for association with a pulley to drive additional machinery by means of an endless belt. The clutch consists of a collar, a sleeve concentrically surrounding the collar, and a pawl carried by the sleeve in an annular space between collar and sleeve. A rocking finger integral with pawl is provided for manually snapping the pawl into and out of engagement with a notch in the collar for effecting driving engagement and disengagement between collar and sleeve. The pawl is releasably held in either engaged or disengaged position by a single flexible blade which has one end connected to the sleeve and the other end connected to the free end of the pawl. (Owner) Madel A. Bordelon, 508 Frank Alley, Abbeville, La. Group 35—66. Reg. No. 9,511.

Pat. 2,434,161. ELECTRICAL CONTROL FOR MULTIPLE HEATING UNITS IN TUBES. Patented Jan. 6, 1948. The life of this electronic tube is prolonged by the provision of several heating units or filaments and a switching mechanism which automatically changes a heating unit when one is broken or burned out. The switching mechanism is held under tension or released by the action of a bimetallic spring, automatically or manually controlled. A circuit arrangement which may be employed with the tube includes a small lamp bulb that glows when operation of the filament has been disrupted. (Owner) John H. Homrighous, 1029 Wenonah Ave., Oak Park, Ill. Group 36—61. Reg. No. 9,512.

Pat. 2,434,698. TIME DIVISION MULTIPLEX TELEPHONE SYSTEM. Patented Jan. 20, 1948. Several telephone messages may be transmitted simultaneously over a pair of conductors by providing a different carrier wave for each

message, or two different messages may be transmitted over a trunk line by reducing the period of time for equal portions of different messages and transmitting the portions by 24 volt power and 48 volt power in rotation. The sound signals for the two messages are separated into equal portions and the duration for each portion reduced by about one-half. The transmission and reception of different messages in all telephone offices is synchronized by control signals developed by a master generator in one office and transmitted over trunk lines to all other offices in the system. (Owner) John H. Homrighous, 1029 Wenonah Ave., Oak Park, Ill. Group 36—62. Reg. No. 9,513.

Pat. 2,434,697. TIME DIVISION MULTIPLEX TELEPHONE SYSTEM. Patented Jan. 20, 1948. This patent provides a two-way trunk line telephone system for party lines in which two messages are transmitted simultaneously without overlapping. Each message is allotted an alternate period of time, the second conversation being transmitted during the period intervening between the first and second messages. The line from subscriber station to central office has a source of high and low potential direct current varied by a relay. The relay has a movable armature under control of an electromagnet which acts to select different portions of the signals that represent messages. The magnet, when energized, starts the relay, the circuit being closed by a pair of contact springs, one of which is actuated to engage the other by slight movement of the armature. The springs are released by a ratchet upon full movement of the armature to open the circuit. (Owner) Charles H. Homrighous, 1029 Wenonah Ave., Oak Park, Ill. Group 36—62. Reg. No. 9,514.

Pat. 2,435,337. LAMINATED INSOLE FOR SHOES. Patented Feb. 3, 1948. Cushion inner sole includes a flexible upper section which may be reversed at the discretion of the wearer to provide warmth in winter and cooling effect in summer. This upper section, formed of three bonded fabric plies of different materials, is detachably tied by cords to a comparatively thick base ply of soft rubber. (Owner) Alva Billingsley, P. O. Box 442, Lamesa, Tex. Groups 30—41; 32—41. Reg. No. 9,515.

Pat. 2,291,837. ELECTRIC CONNECTOR PLUG. Patented Aug. 4, 1942. Sectionally constructed plug has a lower rectangular block in which a pocket is formed to receive a thin upper section. The upper section has a heart-shaped portion on the sides of which a pair of arcuate springs with a central protuberance are seated. Two L-shaped prongs fit the corners of the pocket and extend through slots in the block. The prongs are held in place by a serrated portion which meshes with corrugations of a pair of right-angled detents fixed to the bottom of the block. The protuberance of the springs fits a recess in each of the prongs to make contact. (Owner) Timothy J. Sheehan, 45 Meisel Ave., Springfield, N. J. Group 36—11. Reg. No. 9,516.

Pat. 1,963,438. METHOD AND APPARATUS FOR PRODUCING FILM FOR PROJECTING STEREOSCOPIC MOTION PICTURES. Patented June 19, 1934. A stereoscopic effect is produced in motion pictures by recording alternate and adjacent slices or sections of right and left eye views. The arrangement further provides a series of vertical and translucent or opaque gratings or bars disposed in front of the screen on which the picture is projected. Those seated before the screen see the projected picture in stereoscopic relief in that each eye sees only the view intended for it. Standard size film is used, and special viewing glasses and other devices are unnecessary. (Owner) Elmer Greensfelder. Address correspondence to R. E. Meech, 626 Arch St., Meadville, Pa. Group 39—12. Reg. No. 9,517.

Pat. 2,039,406. METHOD OF AND APPARATUS FOR OPERATING INTELLIGENCE SYSTEMS. Patented May 5, 1936. This electrically or manually operated apparatus enables the blind to read ordinary newspapers, books, or handwritten material. Enlarged letters and words in actual outline are reproduced on a second page in raised dots that may be read with the fingertips. The page to be read is scanned by a narrow beam of light received by an opposed light-sensitive cell associated with an amplifier or relay. A magnetic switch, controlled by the amplifier, operates a punching mechanism that moves in direct relationship with the scanning unit. The punching mechanism includes a small hammer which strikes a thin metal or cardboard sheet to record a raised dot or perforation. The switch is closed when "black" type is scanned, remaining open for "white" portions of the page. Mechanism similar to a typewriter carriage is adapted to move the scanning and punching units back and forth across the page. (Owner) Elmer Greensfelder. Address correspondence to R. E. Meech, 626 Arch St., Meadville, Pa. Group 36—92. Reg. No. 9,518.

Pat. 2,430,514. ELECTRIC PLUG GUIDE PLATE. Patented Nov. 11, 1947. A guide is formed between the double female sockets of an electric plug cover plate by a pair of ribs. The first rib is vertical and generally triangular in shape with its lower end merged with a smoothly rounded horizontal projecting second rib. The ribs define guide recesses adjacent the socket, to aid in locating socket openings in dark or not easily accessible places. (Owner) Edward H. Knausz, 72 Locust Ave., White Horse, Trenton 10, N. J. Group 36—11. Reg. No. 9,519.

TRADE-MARKS

OFFICIAL GAZETTE, APRIL 20, 1948

[VOL. 609. No. 3]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 515,812. ACRYVIN CORPORATION OF AMERICA, Long Island, N. Y. Filed Jan. 16, 1947.

ACRYVIN

FOR SYRUPS OR SOLUTIONS OF POLYMERIZABLE SYNTHETIC RESINS SOLD AS SUCH FOR THE PURPOSE OF FABRICATING VARIOUS ARTICLES, INCLUDING CASTINGS, COATINGS, ADHESIVES AND THE LIKE.

Claims use since Nov. 18, 1946.

Ser. No. 522,175. THE RELDA TRADING COMPANY, INC., New York, N. Y. Filed May 9, 1947.

FOR FINISHED LEATHERS IN THE PIECE—NAMELY, UPPER LEATHER, CALF SKINS, SIDE LEATHER, SUEDE LEATHER, PATENT LEATHER, GLACED KID, SUEDE KID AND SOLE LEATHER.

Claims use since 1912.

CLASS 2

RECEPTACLES

Ser. No. 519,028. POLORON PRODUCTS, INC., New Rochelle, N. Y. Filed Mar. 14, 1947.

POLROCK

FOR METAL LINERS FOR INSULATED PICNIC JUGS.

Claims use since Jan. 2, 1947.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 500,108. F. O. MERZ & CO., Philadelphia, Pa. Filed Apr. 12, 1946.

Merzfold

FOR POCKETBOOKS, PORTFOLIOS, BILLFOLDS, WALLETS, PURSES, COIN PURSES, PASS CASES, AND LEATHER CARD CASES.

Claims use since October 1943.

Ser. No. 521,116. JOSEPH C. DAVIO, Agawam, Mass. Filed Apr. 22, 1947.

PHANTOM-FOLD

The word "Fold" is disclaimed apart from the mark.

FOR PERSONAL LEATHER GOODS — NAMELY, BILLFOLDS, WALLETS, KEY CASES, AND POCKET SECRETARY'S.

Claims use since Mar. 20, 1947.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 484,274. NORMAN J. PHELPS, Palatine, Ill. Filed June 7, 1945.

TROUSSEAU

FOR TOILET SOAP AND LAUNDRY SOAP.

Claims use since May 10, 1942.

Ser. No. 486,628. PHILLIPS CHEMICAL COMPANY, Chicago, Ill. Filed Aug. 2, 1945.

SWIRT

FOR CLEANING COMPOUND FOR CLEANING METALS.
Claims use since Oct. 14, 1944.

Ser. No. 512,183. RAE W. LEWIS, doing business as Bryte Spot Products, Bloomingdale, Mich. Filed Nov. 7, 1946.

BRYTE SPOT

FOR WASHING COMPOUND.
Claims use since Oct. 19, 1946.

Ser. No. 517,679. WETALENE LABORATORIES, INC., Columbus, Ohio. Filed Feb. 17, 1947.

The terms "It Is Tested," "Laboratories, Inc.," and "Columbus, Ohio" are disclaimed. The lining in the drawing represents the color red and two shades of blue.
FOR POWDERED CLEANSER—NAMELY, A SOAPLESS CLEANING AGENT IN A GRANULATED POWDER FORM.
Claims use since Feb. 19, 1935.

Ser. No. 518,241. JOHN N. MCMATH COMPANY, doing business as Lloyd-Sargent Co., New Rochelle, N. Y. Filed Feb. 27, 1947.

PUNCH & JUDY

FOR SOAP AND SOAP POWDERS FOR HANDS AND FACE.
Claims use since July 13, 1945.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 491,664. WILLIAM C. MCCUSKER, Los Angeles, Calif., assignor to Kip Corporation, Ltd., Los Angeles, Calif., a corporation of Nevada. Filed Nov. 15, 1945.

SUN SKIP

Applicant disclaims the word "Sun."
FOR LIQUID FOR PROTECTING THE SKIN FROM SUNBURN.
Claims use since Sept. 25, 1945.

Ser. No. 496,771: ERONEL INDUSTRIES, Los Angeles, Calif. Filed Feb. 18, 1946.

CHEMOSIZE

FOR RESINOUS TEXTILE SIZING COMPOSITION.
Claims use since Nov. 19, 1945.

Ser. No. 503,299. MICHAEL KROPP, doing business as "Tanners Corner Barber Shop," South River, N. J. Filed June 5, 1946.

It's R-OUN!

FOR DANDRUFF, HAIR, AND SCALP LOTIONS.
Claims use since Aug. 24, 1943.

Ser. No. 510,006. J. BERLAGE CO., INC., New York, N. Y. Filed Oct. 1, 1946.

FOR METHYL BROMIDE FOR USE AS A FUMIGANT AND INSECTICIDE.
Claims use since December 1945.

Ser. No. 513,520. T. J. MILLISACK, doing business as The Milli-Seal Company, Denver, Colo. Filed Nov. 30, 1946.

The words "Antiseptic," "Bandage," "Seal," and "Calmative" are disclaimed apart from the mark. The drawing is lined for the colors red and green.
FOR ANTISEPTIC MEDICINAL BANDAGES.
Claims use since Sept. 5, 1946.

Ser. No. 515,656. R. F. CHARBACH CO., Chicago, Ill. Filed Jan. 13, 1947.

SWEET-N-ICE

The word "Sweet" is disclaimed.
FOR REFRIGERATOR DEODORANTS.
Claims use since Nov. 20, 1946.

Ser. No. 515,698. BERTHA H. COHEN, Stelton, N. J. Filed Jan. 14, 1947.

la-DOR-u

FOR COLD CREAM, HAND CREAM, FACE CREAM, VANISHING CREAM, EMOLLIENT CREAM, AND SUNPROOF BALM.
Claims use since May 27, 1946.

Ser. No. 516,396. CIBA PHARMACEUTICAL PRODUCTS, INC., Summit, N. J. Filed Jan. 27, 1947.

PROGESTRADIOL

FOR PREPARATION FOR USE IN SEX HORMONE THERAPY.
Claims use since Oct. 2, 1946.

Ser. No. 516,956. COLUMBIA RIBBON & CARBON MANUFACTURING COMPANY, INC., Glen Cove, N. Y. Filed Feb. 5, 1947.

ERA-FIX

The mark consists of the word "Era-Fix."
FOR INK ERADICATOR.
Claims use since July 26, 1946.

Ser. No. 518,547. IRENE MCKNIGHT, New York, N. Y. Filed Mar. 5, 1947.

Clo-Scent

"Scent" is disclaimed apart from the mark.
FOR PERFUME AND SACHET POWDER.
Claims use since May 1946.

Ser. No. 518,700. SHAWNEE PRODUCTS COMPANY, Fort Lauderdale, Fla. Filed Mar. 7, 1947.

Shawnee

FOR SUNTAN OIL.
Claims use since June 6, 1946.

Ser. No. 518,701. SHAWNEE PRODUCTS COMPANY, Fort Lauderdale, Fla. Filed Mar. 7, 1947.

The drawing is lined for the colors red, yellow, and brown and the portrait appearing in the drawing is fanciful. The outline of the label is disclaimed and the words "Tanoil" and "For the tawny glow of a Shawnee Indian" are disclaimed apart from the mark.
FOR SUNTAN OIL.
Claims use since June 6, 1946.

Ser. No. 520,056. RIANT PRODUCTS CO., Long Island City, N. Y. Filed Apr. 2, 1947.

Riant

FOR NAIL LACQUERS, LIP STICKS, AND FACE POWDER.
Claims use since Mar. 15, 1947.

Ser. No. 521,947. PORTE MANUFACTURING CO. INC., doing business as Compass Manufacturing Co., Brooklyn, N. Y. Filed May 6, 1947.

Compass

FOR BRAKE FLUIDS USED IN THE SERVICING OF AUTOMOBILES.
Claims use since Jan. 1, 1945.

Ser. No. 523,437. WEST DISINFECTING COMPANY, Long Island City, N. Y. Filed June 2, 1947.

GRAINOSECT

FOR INSECTICIDE.
Claims use since December 1930.

Ser. No. 523,955. FIRST TEXAS CHEMICAL MFG. CO., Dallas, Tex. Filed June 11, 1947.

DI-AZO-MUL

Applicant disclaims use of "Di-Azo" apart from the trade-mark as shown.
FOR EMULSION OF SULFADIAZINE, INTENDED FOR ORAL ADMINISTRATION, AND WHICH CAN BE USED IN ALMOST ANY CASE WHERE SULFADIAZINE IS INDICATED.
Claims use since November 1945.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Ser. No. 496,370. COLIBRI LIGHTERS LIMITED, London, England. Filed Feb. 11, 1946.

COLIBRI

FOR ASH TRAYS, CIGAR AND CIGARETTE CASES AND BOXES, COMBINATION CIGARETTE CASES AND LIGHTERS, ALL OF BASE METAL, SMOKER'S PIPES, TOBACCO POUCHES, SMOKER'S PIPE CLEANERS, CIGAR CUTTERS, AND CIGARETTE HOLDERS.
Claims use since July 1933.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 477,123. PLYWOODS-PLASTICS CORPORATION, Hampton, S. C. Filed Dec. 1, 1944.

RESOPLY

FOR COMPOSITION CONSTRUCTION BOARD CONSISTING OF LAMINATIONS OF PHENOLIC RESIN BONDED VENEER OR WOOD PANELS.
Claims use since October 1941.

Ser. No. 503,511. CARROLL B. GRANT, Dallas, Tex. Filed June 8, 1946.

Breezeway

FOR WOOD AWNINGS.
Claims use since May 20, 1946.

Ser. No. 503,512. CARROLL B. GRANT, Dallas, Tex. Filed June 8, 1946.

The drawing is lined for shading only.
FOR WOOD AWNINGS.
Claims use since May 20, 1946.

Ser. No. 503,513. CARROLL B. GRANT, Dallas, Tex. Filed June 8, 1946.

The drawing is lined for shading and not color.
FOR WOOD AWNINGS.
Claims use since May 20, 1946.

Ser. No. 504,799. STANDARD FUEL ENGINEERING COMPANY, Detroit, Mich. Filed June 28, 1946.

ZERO
ACE

FOR FIRE BRICK.
Claims use since Jan. 1, 1945.

Ser. No. 525,057. THE ASSOCIATED PORTLAND CEMENT MANUFACTURERS, LIMITED, London, England. Filed June 28, 1947.

SNOWCEM

FOR PREPARATIONS IN POWDER FORM CONSISTING PRINCIPALLY OF CEMENT FOR USE IN BUILDING OR DECORATION.
Claims use since August 1939.

CLASS 15

OILS AND GREASES

Ser. No. 508,996. THE HANCOCK OIL COMPANY OF CALIFORNIA, Long Beach, Calif. Filed Sept. 13, 1946.

FIVE POINT

Applicant is the owner of Reg. Nos. 303,970 and 303,973.
FOR LUBRICATING OILS AND GREASES.
Claims use since Aug. 18, 1937.

Ser. No. 508,997. THE HANCOCK OIL COMPANY OF CALIFORNIA, Long Beach, Calif. Filed Sept. 13, 1946.

Hi-BALL

FOR HEAVY DUTY AND DIESEL ENGINE OILS AND LUBRICATING GREASES.
Claims use since July 15, 1939.

Ser. No. 520,016. COASTAL OIL COMPANY, Newark, N. J. Filed Apr. 2, 1947.

The lining on the drawing represents the color red. The words "Oil Company" are disclaimed.
FOR FUEL OIL AND BUNKER OIL, FOR HEATING, BURNING AND INTERNAL COMBUSTION, AND FOR BOTH DOMESTIC AND INDUSTRIAL USE.
Claims use since Oct. 3, 1938.

Ser. No. 525,082. CHRIS P. HOEFER, doing business as J-D-D Lubricants Co., Sioux City, Iowa. Filed June 28, 1947.

J-D-D

ZYL

Applicant claims ownership of registration No. 193,636.
FOR LUBRICATING OINTMENT FOR TREATMENT OF THE NASAL PASSAGES.
Claims use since July 31, 1924.

Ser. No. 531,791. GRIFFIN CHEMICAL COMPANY, San Francisco, Calif. Filed Aug. 19, 1947.

TIREX

FOR MIXTURES OF PETROLEUM ALKYL SULPHONATES AND POLYHYDRIC ALCOHOLS USEFUL AS EMULSIFIERS AND WETTING AGENTS.
Claims use since Apr. 11, 1947.

Ser. No. 531,793. GRIFFIN CHEMICAL COMPANY, San Francisco, Calif. Filed Aug. 19, 1947.

TIREM

FOR POLYHYDRIC ALCOHOL-FATTY ACID ESTERS IN LIQUID FORM USEFUL AS EMULSIFIERS AND WETTING AGENTS.
Claims use since July 11, 1946.

Ser. No. 531,975. ALLAN ALEXANDER, doing business as Allan Alexander Co., New York, N. Y. Filed Aug. 21, 1947.

YARABA

FOR HAIR PASTE FOR DRESSING HUMAN HAIR.
Claims use since July 7, 1947.

Ser. No. 532,037. M. J. LEWENSTEIN, doing business as Ac-Re Chemical Co., New York, N. Y. Filed Aug. 21, 1947.

AC-RE

FOR REAGENT FOR ACETONE IN URINE AND OTHER AQUEOUS LIQUIDS.
Claims use since June 15, 1947.

Ser. No. 532,377. STAUFFER CHEMICAL COMPANY, San Francisco, Calif. Filed Aug. 25, 1947.

ALFA

Applicant claims ownership of registration No. 165,497.
FOR SULPHUR.
Claims use since Dec. 31, 1921.

Ser. No. 532,406. F. W. HAMPSHIRE AND COMPANY, LTD., Sunnydale, Derby, England. Filed Aug. 16, 1947.

ZUBES

Applicant claims ownership of registration No. 487,265.
FOR COUGH DROPS AND COUGH MIXTURE.
Claims use since Jan. 24, 1928.

Ser. No. 532,901. ARMOUR AND COMPANY, Chicago, Ill. Filed Aug. 30, 1947.

STORK

Applicant claims ownership of registrations Nos. 40,024, 88,531, and 50,800.
FOR TOILET POWDERS AND BABY OIL.
Claims use since July 15, 1902.

Ser. No. 533,205. DR. SALSBURY LABORATORIES, Charles City, Iowa. Filed Sept. 3, 1947. Under section 2f of the act of 1946.

Dr. SALSBURY'S

Applicant claims ownership of registrations Nos. 420,354, 351,900, etc.
FOR ANTHELMINTICS, ANTIGENS, BACTERINS, CONDITIONERS, DISINFECTANTS, FUMIGANTS, HERBICIDES, INHALANTS, INSECTICIDES, OINTMENTS, RODENTICIDES, TONICS, VACCINES, AND PREPARATIONS FOR IRRIGATING AND WASHING EARS AND EXTERNAL MEMBRANES, FOR PREVENTING CANNIBALISM, FOR PREVENTING COCCIDIOSIS, AND FOR STIMULATING GROWTH, FOR TREATING POULTRY AND DOMESTIC ANIMALS AND FARM LIVESTOCK.
Claims use since 1924.

Ser. No. 534,311. DAVID ANTHONY MOLINARI, San Francisco, Calif. Filed Sept. 12, 1947.

SWEET DREAMS

FOR PERFUME, TOILET WATER, COLOGNE, COLD CREAM, AND LIPSTICK.
Claims use since May 1941.

Ser. No. 534,509. CAL-PRO LABORATORIES INC., Los Angeles, Calif. Filed Sept. 15, 1947.

Cal-Pro

FOR SCIENTIFICALLY COMPOUNDED PREPARATION FOR RELIEF OF HYPERACIDITY, ULCERATIONS, ABRASIONS, INDIGESTION, GASTRITIS, AND UP-SET STOMACH.
Claims use since February 1944.

Ser. No. 534,579. F. HOWARD WESTCOTT, doing business as The Nullo Company, New York, N. Y. Filed Sept. 15, 1947.

-NULLO-

FOR INGESTIBLE TABLETS HAVING THE PROPERTY, WHEN TAKEN INTERNALLY, OF ELIMINATING PERSONAL BODY ODORS.
Claims use since July 7, 1947.

Ser. No. 534,639. KRESS & OWEN COMPANY, New York, N. Y. Filed Sept. 16, 1947.

GLYCO-THYMOLINE

Applicant claims ownership of registrations Nos. 20,665, 38,081, 45,169, 241,934, and 369,803.
FOR ALKALINE, DEODORIZING AND NON-IRRITATING SOLUTION FOR APPLICATION TO SKIN AND MUCOUS MEMBRANES.
Claims use since Dec. 1, 1891.

Ser. No. 535,310. LADY ESTHER, LTD., Chicago, Ill. Filed Sept. 23, 1947.

ADULTS ONLY

FOR LIPSTICK AND LIP COLORING MATERIAL.
Claims use since Sept. 15, 1947.

Ser. No. 535,345. OD PEACOCK SULTAN COMPANY, St. Louis, Mo. Filed Sept. 23, 1947.

Thi-amino

No claims is made to the word "Amino" apart from the mark. Applicant claims ownership of registration No. 377,557.
FOR LIQUID VITAMIN PREPARATION FOR LOSS OF APPETITE AND FATIGABILITY.
Claims use since Aug. 24, 1939.

Ser. No. 540,051. THE DOW CHEMICAL COMPANY, Midland, Mich. Filed Nov. 4, 1947.

C·66

FOR AROMATIC CHEMICAL USEFUL AS A PERFUME BASE.
Claims use since Mar. 17, 1947.

Ser. No. 540,052. THE DOW CHEMICAL COMPANY, Midland, Mich. Filed Nov. 4, 1947.

C·64

FOR AROMATIC CHEMICAL USEFUL AS A PERFUME.
Claims use since May 10, 1946.

Ser. No. 540,813. HOOD CHEMICAL CO., INC., Pittsburgh, Pa. Filed Nov. 12, 1947.

Hoodchlor

FOR CALCIUM HYPOCHLORITE IN DRY POWDER FORM.
Claims use since June 1, 1941.

Ser. No. 540,865. PARFUMS SCHIAPARELLI, INC., New York, N. Y. Filed Nov. 12, 1947.

Sotto Voce

FOR PERFUMES.
Claims use since Oct. 31, 1947.

Ser. No. 542,303. FOOD MACHINERY CORPORATION, San Jose, Calif. Filed Nov. 25, 1947.

LIQUI-MIST

FOR INSECTICIDES.
Claims use since Sept. 24, 1947.

Ser. No. 542,371. THOMPSON-HAYWARD CHEMICAL COMPANY, Kansas City, Mo. Filed Nov. 25, 1947.

TOXICHLOR

FOR INSECTICIDES.
Claims use since July 15, 1947.

Ser. No. 542,603. LES PARFUMS DE DANA, INC., New York, N. Y. Filed Nov. 28, 1947.

BIS

FOR TOILET PREPARATIONS, PERFUMERY, AND COSMETICS—NAMELY, PERFUME, TOILET WATERS, LIPSTICKS, FACE POWDERS, TOILET CREAMS, AND ROUGE.
Claims use since Nov. 21, 1947.

Ser. No. 542,751. ENDO PRODUCTS INC., Richmond Hill, N. Y. Filed Nov. 29, 1947.

CELOTOL

FOR MEDICINE FOR HYPOCHROMIC ANEMIA.
Claims use since Nov. 1, 1947.

Ser. No. 543,035. PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa. Filed Sept. 23, 1947.

GC

Applicant claims ownership of registration No. 307,397.
FOR SILICATE OF SODA, EITHER ANHYDROUS, HYDRATED, OR IN SOLUTION.
Claims use since Apr. 12, 1933.

Ser. No. 543,037. PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa. Filed Sept. 23, 1947.

SS-C

Applicant claims ownership of registration No. 307,399.
FOR SILICATE OF SODA, EITHER ANHYDROUS, HYDRATED, OR IN SOLUTION.
Claims use since Jan. 1, 1932.

CLASS 7
CORDAGE

Ser. No. 534,771. JOHN H. GRAHAM & CO., INC., New York, N. Y. Filed Sept. 17, 1947.

BISON

FOR CLOTHES LINE.
Claims use since Mar. 26, 1940.

CLASS 11
INKS AND INKING MATERIALS

Ser. No. 535,976. MARKEM MACHINE COMPANY, Keene, N. H. Filed Sept. 27, 1947.

MARKEM

FOR PRINTERS' INK.
Claims use since June 15, 1921.

CLASS 12
CONSTRUCTION MATERIALS

Ser. No. 500,726. AMERICAN CRUCIBLE COMPANY, Shelton, Conn. Filed Sept. 25, 1947.

STARRLUM

FOR REFRACTORIES WHICH IN USE ARE SUBJECTED TO HIGH TEMPERATURES AND WHICH MAY FORM OR BE INCORPORATED IN OR USED IN CONNECTION WITH HEATING CHAMBERS AND FURNACES, AND CONTAINING ALUMINUM OXIDE AS AN ESSENTIAL INGREDIENT.
Claims use since Jan. 15, 1946.

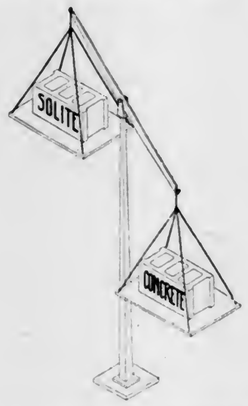
Ser. No. 500,727. AMERICAN CRUCIBLE COMPANY, Shelton, Conn. Filed Sept. 25, 1947.

STARRMAG

FOR REFRACTORIES WHICH IN USE ARE SUBJECTED TO HIGH TEMPERATURES AND WHICH MAY FORM OR BE INCORPORATED IN OR USED IN CONNECTION WITH HEATING CHAMBERS AND FURNACES, AND CONTAINING MAGNESIUM OXIDE AS AN ESSENTIAL INGREDIENT.
Claims use since Sept. 14, 1945.

Ser. No. 531,222. LEWIS ASPHALT ENGINEERING CORPORATION, New York, N. Y., and Clark, N. J. Filed Aug. 13, 1947.

KARNAK



FOR EMULSIFIED ASPHALT WITH FIBRE FOR ROOF COATING.
Claims use since May 26, 1920.

Ser. No. 532,905. BIRD & SON, INC., East Walpole, Mass. Filed Aug. 30, 1947. Under section 2f of the act of 1946.

LOCK-BUTT

FOR ASPHALT SHINGLES.
Claims use since June 1, 1924.

Ser. No. 533,066. SOUTHERN LIGHTWEIGHT AGGREGATE CORP., Norfolk, Va. Filed Sept. 2, 1947.

No claim is made to the word "Concrete" and the representation of the concrete block.
FOR LIGHTWEIGHT CONCRETE AGGREGATE.
Claims use since Aug. 28, 1947.

Ser. No. 535,909. UNITED CO-OPERATIVES, INC., Alliance, Ohio. Filed Sept. 26, 1947.

UNICO
ALLIANCE

FOR ASPHALT-IMPREGNATED SHEET ROOFING SOLD IN ROLL FORM.
Claims use since May 1, 1947.

CLASS 14
METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 527,739. THE AMERICAN ROLLING MILL COMPANY, Middletown, Ohio. Filed July 5, 1947.

GT 45

FOR ALLOY STEEL AND CORROSION-RESISTING ALLOY STEEL IN THE FORM OF INGOTS, CASTINGS AND FORGINGS AND IN WROUGHT FORMS SUCH AS BILLETS, BARS, RODS, WIRE, AND THE LIKE.
Claims use since June 1, 1945.

CLASS 17
TOBACCO PRODUCTS

Ser. No. 536,917. P. LORILLARD COMPANY, New York, N. Y. Filed Oct. 6, 1947.

MECHANIC'S DELIGHT

FOR SMOKING AND CHEWING TOBACCO.
Claims use since 1899.

Ser. No. 536,918. P. LORILLARD COMPANY, New York, N. Y. Filed Oct. 6, 1947.

OMEGA

FOR CHEWING AND SMOKING TOBACCO.
Claims use since 1883.

Ser. No. 536,920. P. LORILLARD COMPANY, New York, N. Y. Filed Oct. 6, 1947.

RIPPLE

FOR SMOKING TOBACCO.
Claims use since 1899.

Ser. No. 536,922. P. LORILLARD COMPANY, New York, N. Y. Filed Oct. 6, 1947.

UNION LEADER

FOR CHEWING AND SMOKING TOBACCO.
Claims use since 1897.

CLASS 21
ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 505,723. AMERICAN THERMO APPLIANCE COMPANY, Milwaukee, Wis. Filed Aug. 19, 1947.

The vertical lining of the drawing indicates the color red.
FOR ELECTRIC SADIRONS.
Claims use since June 14, 1946.

Ser. No. 514,288. PHOTOSWITCH INCORPORATED, Cambridge, Mass. Filed Aug. 11, 1947.

Applicant claims ownership of registration No. 393,141.
FOR ELECTRICAL SIGNAL AMPLIFYING AND/OR RELAYING APPARATUS OPERATED BY PHENOMENA DETECTED PHOTOELECTRICALLY OR BY MEANS OF OTHER VARIABLE IMPEDANCE DEVICES SUCH AS ELECTRICAL PROBE ELEMENTS IN CONTACT WITH OR DISPOSED TO COME INTO CONTACT WITH AN AGENCY TO BE CONTROLLED, ELECTRICAL PROBE ELEMENTS AND SIMILAR APPARATUS FOR USE WITH SUCH RELAYING AND/OR SIGNAL AMPLIFYING APPARATUS, AND ELECTRICALLY OPERATED ILLUMINATION SOURCES FOR USE WITH SAID SIGNAL AMPLIFYING AND/OR RELAYING APPARATUS WHEN PHOTOELECTRICALLY OPERATED, THE FOREGOING APPARATUS BEING USED FOR CONTROLLING THE CONDITION OF A CONTROLLED CIRCUIT IN ACCORDANCE WITH THE CONDITION OF A DETECTED PHENOMENON AFFECTING THE DETECTING MEANS; ELECTRICAL TIME METERING DEVICES FOR PROVIDING AN ELECTRICAL SIGNAL OR SIGNALS OF A PREDETERMINED TIME DURATION OR DURATIONS SINGLY OR IN A PREDETERMINED SEQUENCE IN RESPONSE TO A CHANGE IN THE CONDITION OF THE INPUT CIRCUIT THEREOF, SAID TIME METERING DEVICES BEING INTENDED FOR USE ALONE OR IN COOPERATION WITH SAID FOREGOING RELAYING AND/OR AMPLIFYING APPARATUS; AND ELECTRICAL EQUIPMENT HOUSINGS AND PARTS AND ACCESSORIES FOR THE FOREGOING APPARATUS AND DEVICES.
Claims use since Sept. 18, 1946.

Ser. No. 517,807. WEBSTER-CHICAGO CORPORATION, Chicago, Ill. Filed Aug. 13, 1947.

Applicant claims ownership of registration No. 422,175.
FOR ELECTRICALLY OPERATED PHONOGRAPHS.
Claims use since Dec. 3, 1946.

Ser. No. 526,647. APPLETON ELECTRIC COMPANY, Chicago, Ill. Filed July 5, 1947.

UNILETS

Applicant claims ownership of registration No. 69,532.
FOR ELECTRICAL APPARATUS—NAMELY, JUNCTION AND SPLICING BOXES, FUSE AND SWITCH BOXES, PLUG RECEPTACLES, CIRCUIT BREAKERS AND MOTOR STARTERS, PANEL BOARDS, SEALING FITTINGS WHICH ARE CONNECTIONS BETWEEN CONDUITS TO EFFECT LOCAL SEALS ABOUT CABLES RUNNING THROUGH THE CONDUITS, FIXTURE HANGERS, AND LIGHTING FIXTURES.
Claims use since January 1908.

Ser. No. 527,518. JENSEN MANUFACTURING COMPANY, Chicago, Ill. Filed July 5, 1947. Under section 2f of the act of 1946.

Jensen

Applicant claims ownership of registrations Nos. 333,281, 333,887, and 426,072.
FOR ELECTRICAL APPARATUS—NAMELY, LOUD SPEAKERS OF BOTH DIRECT RADIATOR AND HORN TYPES, SOUND REPRODUCERS COMPRISING DIRECT RADIATOR LOUD SPEAKERS AND ENCLOSURES THEREFOR, LOUD SPEAKER SYSTEMS HAVING A PLURALITY OF LOUD SPEAKER UNITS WITH OR WITHOUT APPARATUS CONTAINING FREQUENCY DIVIDING NETWORKS; TRANSFORMERS; ELECTRONIC POWER SUPPLY UNITS; VOLUME AND LEVEL CONTROL APPARATUS; ACCESSORIES FOR LOUD SPEAKERS INCLUDING SUPPORTING AND TILTING MECHANISMS; AND PARTS FOR SUCH ELECTRICAL APPARATUS.
Claims use since 1928.

Ser. No. 530,615. BELDEN MANUFACTURING COMPANY, Chicago, Ill. Filed Aug. 6, 1947. Under section 2f of the act of 1946.

Belden

Applicant claims ownership of registration No. 420,949.
FOR ELECTRICAL WIRES, CABLES, AND CORDAGE, ELECTRICAL TERMINALS AND CONNECTORS, STRAIN RELIEFS, I. E., ANCHORING ELEMENTS FOR RELIEVING THE CONDUCTORS OR TERMINALS OF ELECTRICAL CORDS FROM TENSILE STRESSES TO WHICH THE CORDS MAY BE SUBJECTED; SWITCH PLATES, DISTRIBUTOR AND SPARK PLUG GUARDS, ELECTRIC CURRENT SUPPLY CORD SETS WITH OR WITHOUT CONNECTORS FOR CARRYING CURRENT FROM A DISTRIBUTION SOURCE TO AN APPLIANCE OR MACHINE, ASSEMBLIES WITH OR WITHOUT CONNECTORS USED FOR DISTRIBUTING ELECTRIC CURRENT WITHIN AN APPLIANCE OR MACHINE.
Claims use since November 1902.

Ser. No. 530,647. KISCO COMPANY, INC., St. Louis, Mo. Filed Aug. 6, 1947.

KISCO

FOR DEFLECTOR TYPE AIR CIRCULATORS EMPLOYING ELECTRICALLY DRIVEN FANS, INCLUDING FLOOR MODELS, DESK MODELS AND VERTICAL OR COLUMN TYPE CIRCULATORS, AND CEILING CIRCULATORS.
Claims use since Jan. 16, 1937.

Ser. No. 532,737. THE MAGNAVOX COMPANY, Fort Wayne, Ind. Filed Aug. 28, 1947.

Contemporary

FOR RADIO RECEIVING SETS AND RADIO PHONOGRAPH COMBINATION SETS, INCLUDING CABINETS THEREFOR.
Claims use since July 1940.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 526,687. ILLINOIS IRON & BOLT CO., Carpentersville, Ill. Filed July 5, 1947.

BADGER

Applicant claims ownership of registration No. 96,888.
FOR JACK-SCREWS.
Claims use since July 15, 1937.

Ser. No. 526,689. ILLINOIS IRON & BOLT CO., Carpentersville, Ill. Filed July 5, 1947.

VULCAN

Applicant claims ownership of registration No. 85,252.
FOR JACK-SCREWS.
Claims use since July 15, 1937.

Ser. No. 526,813. THE TANGLEFOOT COMPANY, Grand Rapids, Mich. Filed July 5, 1947.

INDUSPRAYOR

FOR ELECTRIC AIR COMPRESSOR SPRAYER.
Claims use since May 5, 1947.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Ser. No. 505,192. FORSTER MANUFACTURING CO., INC., Strong, Maine. Filed July 5, 1947.

IDEAL

Applicant claims ownership of registration No. 35,326.
FOR CLOTHES-PINS.
Claims use since Oct. 1, 1936.

Ser. No. 530,378. THE J. R. CLARK COMPANY, Minneapolis, Minn. Filed Aug. 4, 1947.

LOW BOY

The word "Low" is disclaimed apart from the mark shown.
FOR CLOTHES DRYING RACKS.
Claims use since January 1925.

CLASS 25

LOCKS AND SAFES

Ser. No. 537,042. INDEPENDENT LOCK COMPANY, Fitchburg, Mass. Filed Oct. 7, 1947.

ILCO

Applicant claims ownership of registration No. 159,382.
FOR LOCKS AND KEYS.
Claims use since Jan. 1, 1921.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 496,767. C. G. CONN LTD., Elkhart, Ind. Filed July 11, 1947.

Stroboconn

FOR STROBOSCOPIC APPARATUS FOR MEASURING THE FREQUENCIES OF SOUNDS.
Claims use since Feb. 1, 1946.

Ser. No. 506,925. THE GARRETT CORPORATION (AIRSEARCH MANUFACTURING COMPANY DIVISION), Los Angeles, Calif. Filed July 5, 1947.

AIRESEARCH

FOR AUTOMATIC CONTROLLING VALVE UNITS FOR REGULATING AIR PRESSURE IN COMPARTMENTS OF AIRCRAFT, SAID VALVE BEING CONTROLLED IN ACCORDANCE WITH THE DIFFERENTIAL BETWEEN COMPARTMENT PRESSURE AND PRESSURE IN A CONTROL CHAMBER.
Claims use since July 11, 1941.

Ser. No. 526,690. THE TECHNICON CO., New York, N. Y. Filed July 5, 1947.

AUTOTECHNICON

Applicant claims ownership of registration No. 407,208.
FOR AUTOMATIC IMMERSION APPARATUS USED IN THE PREPARATION OF HISTOLOGICAL SPECIMENS.
Claims use since July 1939.

Ser. No. 527,321. JOSEPH A. LOEWINSOHN, Atlanta, Ga. Filed July 5, 1947.

SHIRT-O-GRAF

The word "Shirt" is disclaimed when used apart from the rest of the mark.
FOR MEASURING TAPE FOR DETERMINING SLEEVE LENGTHS AND COLLAR SIZES OF SHIRTS.
Claims use since June 24, 1947.

CLASS 27

HOROLOGICAL INSTRUMENTS

Ser. No. 534,905. L. & C. MAYERS CO., INC., New York, N. Y. Filed Sept. 18, 1947.

LYCEUM

Applicant claims ownership of registrations Nos. 252,672 and 252,527.
FOR WATCHES AND PARTS THEREOF.
Claims use since Feb. 1, 1928.

Ser. No. 535,949. THE WILLIAM L. GILBERT CLOCK CORPORATION, Winsted, Conn. Filed Sept. 27, 1947. Under section 2f of the act of 1946.

Gilbert
1807

Applicant claims ownership of registration No. 231,561.
FOR CLOCKS.
Claims use since Aug. 11, 1926.

Ser. No. 535,951. THE WILLIAM L. GILBERT CLOCK CORPORATION, Winsted, Conn. Filed Sept. 27, 1947. Under section 2f of the act of 1946.

Gilbert

Applicant claims ownership of registration No. 221,976.
FOR CLOCKS.
Claims use since Jan. 1, 1896.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Ser. No. 533,353. NATIONAL SILVER COMPANY, New York, N. Y. Filed Sept. 4, 1947.

BROADMOOR

FOR STERLING SILVER AND SILVER PLATED FLATWARE, HOLLOW WARE, AND TABLEWARE.
Claims use since July 28, 1947.

Ser. No. 534,046. NATIONAL SILVER COMPANY, New York, N. Y. Filed Sept. 10, 1947.

Southern Belle

FOR STERLING SILVER AND SILVER-PLATED FLATWARE—NAMELY, KNIVES, FORKS, SPOONS, SUGAR SHELLS, AND GRAVY LADLES.
Claims use since January 1933.

Ser. No. 534,081. BLANCARD & CO., INC., New York, N. Y. Filed Sept. 11, 1947.

LOHENGRIN

Applicant claims ownership of registration No. 214,411.
FOR FINGER RINGS.
Claims use since Sept. 1, 1925.

Ser. No. 534,253. THE EASTERLING COMPANY, Chicago, Ill. Filed Sept. 12, 1947.

Rosemary

FOR STERLING SILVER FLATWARE AND HOLLOW WARE.
Claims use since March 1945.

CLASS 32

FURNITURE AND UPHOLSTERY

Ser. No. 527,170. DUKE MANUFACTURING CO., St. Louis, Mo. Filed July 5, 1947.

Duke

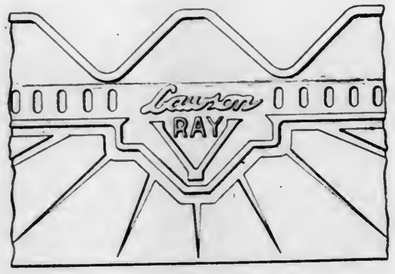
Applicant claims ownership of registrations Nos. 274,575, 275,715, and 369,025.
FOR PASTRY COUNTERS, BAKERS' TABLES, SETUP TABLES WITH TRAY RACKS, PLATE-STORAGE CABINETS, KITCHEN CABINETS, BACK BARS, PASTRY CASES, CAFETERIA COUNTERS, FOUNTAIN COUNTERS, GALVANIZED TOP TABLES, STEEL-TOP TABLES, WOOD-TOP TABLES, TABLES WITH DRAWERS, TABLES WITH SHELVING, TABLES WITH CLOSED CABINET BASE, METAL SHELVING, WALL CABINETS, STORAGE CABINETS, CENTER BARS, STOOLS FOR RESTAURANT OR BAR USE, LUNCH COUNTERS, DELICATESSEN COUNTERS, AND SERVICE COUNTERS.
Claims use since Sept. 9, 1925.

Ser. No. 530,269. THE VINCENT-MCCALL COMPANY, Kenosha, Wis. Filed Aug. 1, 1947.

Silhouette

FOR MATTRESSES AND BOXSPRINGS.
Claims use since June 9, 1947.

Ser. No. 531,582. ERO MANUFACTURING COMPANY, Chicago, Ill. Filed Aug. 16, 1947.



Relaxon

Applicant claims ownership of registration No. 429,184.
FOR HASSOCKS.
Claims use since August 1938.

CLASS 34

HEATING, LIGHTING, AND VENTILATING APPARATUS

Ser. No. 520,130. UNITED STATES STOVE COMPANY, South Pittsburg, Tenn. Filed Aug. 11, 1947. Under section 2f of the act of 1946.

Applicant claims ownership of registration No. 389,575.
FOR GAS TYPE RADIANT HEATERS.
Claims use since June 1935.

Ser. No. 531,776. CRIBBEN AND SEXTON COMPANY, Chicago, Ill. Filed Aug. 19, 1947.

Universal

Applicant claims ownership of registration No. 363,261.
FOR STOVES, RANGES, AND HOT-AIR FURNACES OF THE TYPES HEATED BY COAL, WOOD, AND GAS, AND PARTS OF SUCH STOVES, RANGES, AND HOT-AIR FURNACES.
Claims use since July 15, 1947.

Ser. No. 532,216. GENERAL WATER HEATER CORPORATION, Los Angeles, Calif. Filed Aug. 23, 1947.

Captain

FOR GAS HEATED HOT-WATER STORAGE SYSTEMS AND APPLIANCES.
Claims use since June 6, 1928.

CLASS 35

BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES

Ser. No. 532,389. CHICAGO BELTING COMPANY, Chicago, Ill. Filed Aug. 1, 1947. Under section 2f of the act of 1946.

YARNMAKER

Applicant claims ownership of registration No. 218,343.
FOR LEATHER BELTING.
Claims use since July 27, 1925.

CLASS 36

MUSICAL INSTRUMENTS AND SUPPLIES

Ser. No. 513,940. ROYAL PLASTICS CORPORATION, assignee of King Record Co., Cincinnati, Ohio. Filed July 29, 1947.

QUEEN

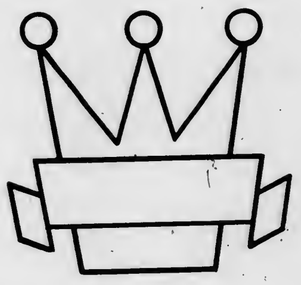
FOR GROOVED PHONOGRAPH RECORDS.
Claims use since Nov. 1, 1946.

CLASS 37

PAPER AND STATIONERY

Ser. No. 439,297. W. A. SHEAFFER PEN COMPANY, Fort Madison, Iowa. Filed July 5, 1947. Under section 2f of the act of 1946.

Fineline



FOR MECHANICAL PENCILS, PARTS THEREOF AND LEADS THEREFOR.
Claims use since Aug. 19, 1938.

Ser. No. 531,275. WESTERN TABLET & STATIONERY CORPORATION, Dayton, Ohio. Filed Aug. 13, 1947.

Applicant claims ownership of registration No. 71,057.
FOR PAPER TABLETS.
Claims use since Mar. 24, 1897.

Ser. No. 531,697. THE MONARCH MARKING SYSTEM COMPANY, Dayton, Ohio. Filed Aug. 18, 1947.

FOR PRICE TAGS AND TICKETS.
Claims use since Oct. 20, 1941.

Ser. No. 531,807. KIMBERLY-CLARK CORPORATION, Neenah, Wis. Filed Aug. 19, 1947.

Hifect

Applicant claims ownership of registration No. 309,338.
FOR BOOK PAPER.
Claims use since Aug. 4, 1947.

CLASS 38

PRINTS AND PUBLICATIONS

Ser. No. 532,964. LAWRENCE J. STEINBUGLER, Brooklyn, N. Y. Filed Aug. 30, 1947.

SYLLABLEGRAM

FOR WORD-FORMING PUZZLE PUBLICATIONS FOR USE IN NEWSPAPERS, BOOKS, AND PERIODICALS; AND IN THE FORM OF INDIVIDUAL PUZZLE SHEETS.
Claims use since July 14, 1947.

Ser. No. 537,887. GARTNER AND BENDER, INC., Chicago, Ill. Filed Oct. 15, 1947.

MIRROTONE

FOR GREETING CARDS.
Claims use since July 7, 1947.

Ser. No. 539,039. GENERAL FEATURES CORPORATION, New York, N. Y. Filed Oct. 25, 1947.

Just Between Us

FOR NEWSPAPER COLUMN.
Claims use since January 1947.

CLASS 39

CLOTHING

Ser. No. 518,403. ALBERT HOCHBERG CO., INC., New York, N. Y. Filed Oct. 18, 1947.

The Austinaire

FOR LADIES', MISSES', AND GIRLS' DRESSES, BLOUSES, AND JACKETS.
Claims use since Feb. 1, 1946.

Ser. No. 526,542. SAN LOO, INC., St. Louis, Mo. Filed July 5, 1947.

San Loo

FOR WOMEN'S AND MISSES' SHOES OF LEATHER, FABRIC, AND COMBINATIONS THEREOF; BELTS OF THE APPAREL TYPE AND HATS.
Claims use since Apr. 21, 1947.

Ser. No. 526,768. SCHULTZ-ROSKY-BLOCK CO., Chicago, Ill. Filed July 5, 1947. Under section 2f of the act of 1946.

Sarby

FOR MEN'S AND BOYS' JACKETS, SWEATERS, BEACH AND LOUNGING ROBES, UNDERWEAR, HOSIERY, PAJAMAS, NIGHTSHIRTS, MUFFLERS, AND SWIM TRUNKS.

GWENOID

FOR SKIN SALVES, SKIN OINTMENTS, SKIN LOTIONS, SKIN CREAMS, AND POWDERS FOR THE SKIN.
Claims use since Jan. 14, 1934.

Reg. No. 316,763. Registered Sept. 4, 1934. ACME CHEMICAL COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

FORMKOLENE

FOR GERMICIDE, DEODORANT, AND DISINFECTANT.
Claims use since Jan. 14, 1925.

Reg. No. 327,233. Registered Aug. 20, 1935. PARKER RUST PROOF COMPANY, Detroit, Mich., a corporation of Michigan. Republished by registrant.

SPRA Bonderite

The word "Spra" is disclaimed.
FOR CHEMICAL RUST PREVENTING COMPOUND.
Claims use since Mar. 22, 1935.

Reg. No. 336,375. Registered July 7, 1936. FRED FEAR & CO., Brooklyn, N. Y., a corporation of New York. Republished by registrant.

EASTER BUNNY

FOR DYES—NAMELY, EASTER-EGG DYES.
Claims use since Dec. 23, 1935.

Reg. No. 350,662. Registered Oct. 5, 1937. PARKER RUST PROOF COMPANY, Detroit, Mich., a corporation of Michigan. Republished by registrant.

BONDERITE Z

FOR CHEMICAL RUST-PREVENTING COMPOUNDS.
Claims use since Sept. 15, 1936.

Reg. No. 353,439. Registered Jan. 11, 1938. ACME CHEMICAL COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

THERMOX

FOR SOOT DESTROYER AND FUEL SAVER.
Claims use since Jan. 2, 1936.

Reg. No. 365,390. Registered Mar. [illegible]9. PARKER RUST PROOF COMPANY, Detroit, Mich., a corporation of Michigan. Republished by registrant.

PARCOLITE

FOR CHEMICALS FOR USE IN OBTAINING ON METALLIC SURFACES CORROSION-RESISTANT PAINT-HOLDING COATINGS.
Claims use since Sept. 21, 1938.

Reg. No. 369,746. Registered Aug. 1, 1939. THE EDWAL LABORATORIES, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

ORTHAZITE

FOR CHEMICALS AND MIXTURES OF CHEMICALS FOR USE IN PHOTOGRAPHIC DEVELOPING PROCESSES, PARTICULARLY MIXTURES OF CHEMICALS FOR IMPARTING MODIFIED TONES TO PHOTOGRAPHIC PRINTS.
Claims use since Mar. 6, 1939.

Reg. No. 370,624. Registered Aug. 29, 1939. PARKER RUST PROOF COMPANY, Detroit, Mich., a corporation of Michigan. Republished by registrant.

STEELBOND

FOR CHEMICALS FOR TREATING STEEL SURFACES TO OBTAIN THEREON CORROSION RESISTANT PAINT HOLDING COATINGS.
Claims use since Apr. 20, 1939.

Reg. No. 375,454. Registered Feb. 20, 1940. SATISH C. GHOSE, Chicago, Ill. Republished by registrant.

BIRTHDAY PERFUME

The word "Perfume" is disclaimed.
FOR PERFUME.
Claims use since May 15, 1939.

Reg. No. 377,477. Registered May 7, 1940. DR. PETER FAHRNEY & SONS CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

All the wording is disclaimed except "Dra. Petra," "Dr. Peter's," "Dra. Piotra," "Magolo," "1780," "P. Fahrney, M. D." and "Dr. Peter Fahrney & Sons Co."

FOR A PREPARATION FOR ACUTE, RELAXED AND DISTURBED CONDITIONS OF THE STOMACH AND BOWELS.

Claims use since July 27, 1939.

Reg. No. 380,283. Registered Aug. 20, 1940. FRED FEAR & Co., Brooklyn, N. Y., a corporation of New York. Republished by registrant.

PRESTO

FOR COLORING FOR EASTER EGGS.

Claims use since September 1933.

Reg. No. 389,815. Registered Aug. 19, 1941. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

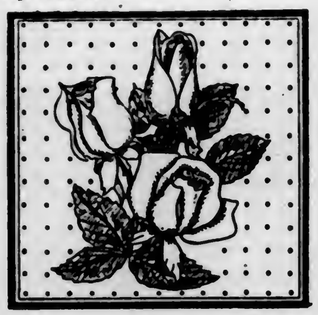
drene

Supreme

FOR SHAMPOO.

Claims use since Feb. 21, 1941.

Reg. No. 390,154. Registered Sept. 9, 1941. CAMPANA SALES COMPANY, Batavia, Ill., a corporation of Delaware. Republished by registrant.



Old South Perfumers

The word "Perfumers" is disclaimed.

FOR BATH POWDERS, BATH CRYSTALS, TALCUM POWDERS, SACHETS, LOTIONS FOR THE SKIN, AND PERFUMERY.

Claims use since July 9, 1940.

Reg. No. 401,470. Registered May 18, 1943. FLOWER FOODS, INC., Maywood, Ill., a corporation of Illinois. Republished by registrant.

FOR A COMPOSITION CONTAINING CHEMICAL INGREDIENTS FOR STRENGTHENING, STERILIZING, FEEDING, AND PROMOTING THE DEVELOPMENT OF CUT PLANTS AND ADAPTED TO BE ADDED TO WATER IN WHICH THE PLANTS ARE IMMERSED.

Claims use since Feb. 1, 1939.

Reg. No. 401,781. Registered June 8, 1943. MEDICAL CHEMICALS, INC., Baltimore, Md., a corporation of Maryland. Republished by registrant.

ISO-PARINOL

FOR GERMICIDAL AND FUNGICIDAL PREPARATIONS.

Claims use since Mar. 15, 1942.

Reg. No. 404,401. Registered Nov. 23, 1943. RID-SLUDGE, INCORPORATED, Minneapolis, Minn., a corporation of Minnesota. Republished by registrant.

RID-SLUDGE

The word "Sludge" is disclaimed.

FOR SOLUTION FOR REMOVING SLUDGE DEPOSITS FROM HEATING AND COOLING SYSTEMS, PIPES, CONDUITS, AND THE LIKE.

Claims use since in November 1941.

Reg. No. 404,725. Registered Dec. 21, 1943. MATHILDE MCGILLICUDDY, Minneapolis, Minn. Republished by registrant.

SISABO

FOR EXPECTORANT AND SEDATIVE PREPARATION FOR COUGHS DUE TO COMMON COLD.

Claims use since May 2, 1925.

Reg. No. 406,279. Registered Mar. 21, 1944. ACME CHEMICAL COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

PERFUMO

FOR SPRAY DEODORANT AND DISINFECTANT.

Claims use since Feb. 1, 1927.

Reg. No. 410,695. Registered Dec. 12, 1944. THE EDWAL LABORATORIES, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

THIAMATE

FOR PHOTOGRAPHIC FIXING AGENTS.

Claims use since on or about May 15, 1943.

Reg. No. 417,211. Registered Oct. 16, 1945. DOROTHY A. LONG, Amenia, N. Y. Republished by registrant.

DAWNWOOD FARM
F. NO. 3

The word "Farm" is disclaimed.

FOR VETERINARY PREPARATIONS—NAMELY, A PREPARATION FOR TREATMENT OF SKIN TROUBLES, ERUPTIONS AND SORES ON COWS, DOGS AND OTHER ANIMALS.

Claims use since Mar. 7, 1945.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Reg. No. 68,557. Registered Apr. 14, 1908. THE POTTS POWDER COMPANY, Reynolds, Pa., and New York, N. Y. Republished by Atlas Powder Company, Wilmington, Del., a corporation of Delaware.

COALITE

FOR NITROGLYCERIN DYNAMITE.

Claims use since July 1, 1907.

CLASS 11

INKS AND INKING MATERIALS

Reg. No. 387,507. Registered May 20, 1941. KEE LOX MANUFACTURING COMPANY, Rochester, N. Y., a corporation of New York. Republished by registrant.

BULLET

FOR CARBON PAPERS AND TYPEWRITER RIBBONS.

Claims use since Apr. 11, 1928.

Reg. No. 392,901. Registered Jan. 20, 1942. KEE LOX MANUFACTURING COMPANY, Rochester, N. Y., a corporation of New York. Republished by registrant.

NUMERICAL

FOR CARBON PAPERS AND TYPEWRITER RIBBONS.

Claims use since Apr. 29, 1936.

Reg. No. 394,561. Registered Apr. 14, 1942. STANDARD MANIFOLD COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

REPEAT-O-PAK

The word "Pak" is disclaimed.

FOR PACKS OF CARBON PAPER.

Claims use since Nov. 8, 1940.

Reg. No. 397,995. Registered Oct. 6, 1942. KEE LOX MANUFACTURING COMPANY, Rochester, N. Y., a corporation of New York. Republished by registrant.

WAY BILL

FOR CARBON PAPERS AND TYPEWRITER RIBBONS.

Claims use since Jan. 1, 1925.

Reg. No. 398,475. Registered Nov. 3, 1942. KEE LOX MANUFACTURING COMPANY, Rochester, N. Y., a corporation of New York. Republished by registrant.

TROPICAL BRAND

The word "Brand" is disclaimed.

FOR CARBON PAPERS AND TYPEWRITER RIBBONS.

Claims use since May 28, 1937.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 233,050. Registered Sept. 20, 1927. THE WOODVILLE LIME PRODUCTS COMPANY, Toledo, Ohio, a corporation of Ohio. Republished by registrant.

BLUE BOY

FOR LIME.

Claims use since Dec. 31, 1926.

Reg. No. 388,071. Registered June 10, 1941. SEAMAN PAPER COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

KWILKO

FOR KAPOK BATTING FOR SOUND-DEADENING AND THERMAL INSULATION.

Claims use since May 8, 1939.

Reg. No. 412,093. Registered Feb. 20, 1945. WALTER MAGUIRE COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

EMERI-CRETE

The word "Emeri" is disclaimed.

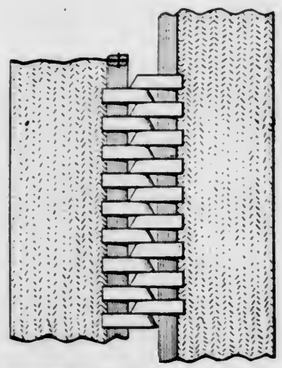
FOR PRE-MIXED CEMENT FOR PATCHING CONCRETE.

Claims use since Aug. 17, 1943.

CLASS 13
HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 90,585. Registered Mar. 4, 1913. THE M. B. SCHENCK COMPANY, Meriden, Conn. Republished by The Bassick Company, Bridgeport, Conn., a corporation of Connecticut.

STEEL GEM



The word "Steel" is disclaimed.
FOR CASTERS.
Claims use since Nov. 1, 1897.

Reg. No. 154,226. Registered Apr. 11, 1922. THE BASSICK COMPANY, Bridgeport, Conn., a corporation of Connecticut. Republished by registrant.

Bassick

FOR CASTERS, METAL DRAWER PULLS AND KNOBS, KEYHOLE ESCUTCHEONS, TOILET SCREWS, COAT AND HAT HOOKS, SOCKETS FOR END OF TABLE AND CHAIR LEGS, NAME PLATES FOR FILES, AND METAL FURNITURE TRIMMINGS.
Claims use since May 13, 1921.

Reg. No. 232,898. Registered Sept. 20, 1927. HOOKLESS FASTENER COMPANY, Meadville, Pa. Republished by Talon, Inc., Meadville, Pa., a corporation of Pennsylvania.

The representation of the goods is disclaimed.
FOR SEPARABLE FASTENER STRINGERS AND SEPARABLE FASTENERS.
Claims use since Feb. 26, 1927.

Reg. No. 234,746. Registered Nov. 1, 1927. HOOKLESS FASTENER COMPANY, Meadville, Pa. Republished by Talon, Inc., Meadville, Pa., a corporation of Pennsylvania.

FOR SEPARABLE FASTENERS ESPECIALLY OF THE SLIDER-CONTROLLED TYPE.
Claims use since Feb. 22, 1927.

Reg. No. 240,590. Registered Apr. 3, 1928. THE BASSICK COMPANY, Bridgeport, Conn., a corporation of Connecticut. Republished by registrant.

Atlasite

FOR SLIDES AND WHEELS FOR FURNITURE CASTERS.
Claims use since Sept. 1, 1927.

Reg. No. 243,359. Registered June 19, 1928. THE GENERAL INDUSTRIES COMPANY, Elyria, Ohio, a corporation of Ohio. Republished by registrant.

PERMO

FOR MOLDED ARTICLES OF PLASTIC COMPOSITION—NAMELY, CASTER WHEELS, HANDLES FOR VALVES, AND KNOBS.
Claims use since Sept. 30, 1926.

Reg. No. 274,575. Registered Sept. 2, 1930. DUKE MANUFACTURING CO., St. Louis, Mo., a corporation of Missouri. Republished by registrant.

Duke

FOR CEREAL COOKERS, PORTABLE HOT-WATER FOOD WARMERS, STEAM TABLES, PORTABLE HOT-WATER SERVICE-PLATE WARMERS, PORTABLE HOT-WATER ROLL WARMERS, URN STANDS, COFFEE URNS, COMPARTMENT STEAMERS, FLOOR PANS, BAINS-MARIE, SINKS, METALPROOF BOXES AND INSULATED PANS, WATER-COOLER FOUNTAINS AND WATER STATION FOUNTAINS.
Claims use since Sept. 9, 1925.

Reg. No. 279,629. Registered Jan. 20, 1931. CLAUDE A. LEWIS, Houston, Tex. Republished by Amity Leather Products Co., West Bend, Wis., a corporation of Wisconsin.

KEEKADDY

FOR POCKET-BASE-METAL KEY HOLDERS.
Claims use since Aug. 15, 1930.

Reg. No. 295,483. Registered July 5, 1932. THE WAGNER MANUFACTURING COMPANY, Sidney, Ohio., a corporation of Ohio. Republished by registrant.

SIZZLING

FOR BASE METAL STEAK PLATTER.
Claims use since Feb. 4, 1932.

Reg. No. 305,163. Registered Aug. 8, 1933. WEST BEND ALUMINUM CO., West Bend, Wis., a corporation of Wisconsin. Republished by registrant.

FUTURA

FOR BASE METAL COOKING HOLLOW WARE.
Claims use since Nov. 5, 1930.

Reg. No. 305,164. Registered Aug. 8, 1933. WEST BEND ALUMINUM CO., West Bend, Wis., a corporation of Wisconsin. Republished by registrant.

DRIPETTE

FOR COFFEE MAKING PERCOLATORS.
Claims use since Nov. 13, 1930.

Reg. No. 341,566. Registered Dec. 15, 1936. THE WAGNER MANUFACTURING COMPANY, Sidney, Ohio, a corporation of Ohio. Republished by registrant.

Magnalite

FOR BASE METAL COOKING HOLLOW WARE.
Claims use since Nov. 8, 1934.

Reg. No. 381,511. Registered Sept. 24, 1940. TALON, INC., Meadville, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR SLIDE FASTENERS.
Claims use since about April 1930.

Reg. No. 402,467. Registered July 27, 1943. AUTOMATIC PRODUCTS COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

TRAP-IT

FOR STRAINERS USED IN LIQUID SYSTEMS SUCH AS REFRIGERATION AND WATER SYSTEMS.
Claims use since Jan. 25, 1940.

Reg. No. 429,695. Registered May 13, 1947. ARTHUR R. ADAMS, Glendale, Calif. Republished by Adams Rite Manufacturing Company, Glendale, Calif., a corporation of California.

FOR METAL FASTENERS, FAUCETS, VALVES, AND DRAIN VALVES.
Claims use since Mar. 20, 1946.

Reg. No. 429,701. Registered May 13, 1947. W. N. MATTHEWS CORPORATION, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

UNIGUY

FOR CLAMPS FOR WIRES.
Claims use since February 1946.

CLASS 14
METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 75,084. Registered Aug. 31, 1909. ILLINOIS IRON & BOLT CO., Carpentersville, Ill., a corporation of Illinois. Republished by registrant.

FOR ANVILS.
Claims use since 1878.

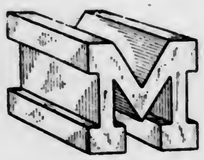
Reg. No. 235,975. Registered Nov. 29, 1927. KLOSTER STEEL CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

CHIZ-ALLOY

The word "Alloy" is disclaimed.
FOR TOOL STEEL.
Claims use since May 1, 1927.

Reg. No. 310,330. Registered Feb. 20, 1934. ILLINOIS IRON & BOLT CO., Carpentersville, Ill., a corporation of Illinois. Republished by registrant.

SOUTHERN CRESENT



FOR ANVILS.
Claims use since May 1908.

Reg. No. 363,830. Registered Jan. 10, 1939. PARKER RUST PROOF COMPANY, Detroit, Mich., a corporation of Michigan. Republished by registrant.

STEEL GRIP

FOR STEEL SHEETS WHICH HAVE BEEN CHEMICALLY TREATED TO OBTAIN UPON THE SURFACES THEREOF CORROSION RESISTANT PAINT HOLDING COATINGS.
Claims use since June 28, 1938.

Reg. No. 405,481. Registered Feb. 1, 1944. MILWAUKEE DIE CASTING CO., Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

FOR PRESSURE DYE CASTINGS OF ALUMINUM BASE ALLOYS, ZINC BASE ALLOYS, AND LEAD BASE ALLOYS IN THE FORM OF COMPLETED PARTS FOR ARTICLES OF MANUFACTURE BUT REQUIRING SUBSEQUENT TRIMMING AND/OR MACHINING.
Claims use since on or about June 4, 1943.

Reg. No. 411,286. Registered Jan. 9, 1945. HARNISCHFEGER CORPORATION, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

P & H

FOR METALLIC WELDING ELECTRODES.
Claims use since Aug. 26, 1939.

Reg. No. 411,385. Registered Jan. 16, 1945. NATIONAL METAL SPECIALTIES CO., Springfield, Mass., a corporation of Massachusetts. Republished by registrant.

NATIONAL -METAL-

The word "Metal" is disclaimed.
FOR METAL STAMPINGS OF SHEET SEMI-FABRICATED METAL IN THE FORM OF METAL PARTS FOR ARTICLES OF COMMERCE.
Claims use since May 6, 1944.

Reg. No. 414,788. Registered June 26, 1945. COAST METALS, INC., Canton, Ohio, a corporation of Delaware. Republished by registrant.

COAST METALS

The word "Metals" is disclaimed.
FOR HARD-FACING WELDING RODS AND HARD CASTINGS.
Claims use since 1936.

Reg. No. 417,623. Registered Nov. 6, 1945. HEPPENSTALL COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

SILVERTEM

FOR STEEL FORGINGS.
Claims use since Jan. 16, 1945.

Reg. No. 424,315. Registered Oct. 1, 1946. RUSTLESS IRON & STEEL CORPORATION, Baltimore, Md., assignor to The American Rolling Mill Company, Middletown, Ohio, a corporation of Ohio. Republished by The American Rolling Mill Company, Middletown, Ohio, a corporation of Ohio.

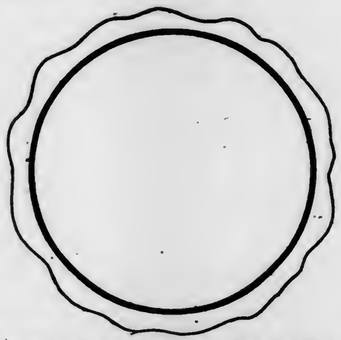
FOR ALLOY STEEL AND CORROSION RESISTING ALLOY STEEL IN THE FORM OF INGOTS, CASTINGS, AND FORGINGS, AND IN WROUGHT FORMS SUCH AS BILLETS, BARS, RODS, WIRE AND THE LIKE.
Claims use since November 1943.

CLASS 15
OILS AND GREASES

Reg. No. 90,390. Registered Feb. 18, 1913. STROHMEYER & ARPE COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

ROXITE

FOR MINERAL WAX.
Claims use since January 1905.



Reg. No. 91,430. Registered Apr. 29, 1913. STROHMEYER & ARPE COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

SPERMATINE

FOR MINERAL WAX.
Claims use since October 1903.

CLASS 16
PAINTS AND PAINTERS' MATERIALS

Reg. No. 206,205. Registered Nov. 24, 1925. BENNETT GLASS & PAINT COMPANY, Salt Lake City, Utah. Republished by Bennett's, Salt Lake City, Utah, a corporation of Utah.

FOR DRY, PASTE, AND READY-MIXED PAINTS, VARNISHES, AND ENAMELS INCLUDING PAINT, VARNISH, AND ENAMEL SPECIALTIES, PRODUCTS MANUFACTURED TO MEET PECULIAR CONDITIONS.
Claims use since June 1, 1923.

Reg. No. 206,312. Registered Nov. 24, 1925. BENNETT GLASS & PAINT COMPANY, Salt Lake City, Utah. Republished by Bennett's, Salt Lake City, Utah, a corporation of Utah.

Property Life Insurance

FOR DRY, PASTE, AND READY-MIXED PAINTS, VARNISHES, AND ENAMELS INCLUDING PAINT, VARNISH, AND ENAMEL SPECIALTIES, PRODUCTS MANUFACTURED TO MEET PECULIAR CONDITIONS.
Claims use since June 1, 1923.

Reg. No. 224,358. Registered Feb. 22, 1927. S. C. JOHNSON & SON, Racine, Wis. Republished by S. C. Johnson & Son, Inc., Racine Wis., a corporation of Wisconsin.

JOHNSON'S

FOR VARNISH.
Claims use since Jan. 1, 1895.

Reg. No. 247,965. Registered Oct. 9, 1928. S. C. JOHNSON & SON, Racine, Wis. Republished by S. C. Johnson & Son, Inc., Racine, Wis., a corporation of Wisconsin.

JOHNSON'S

FOR LACQUERS.
Claims use since about Mar. 6, 1924.

Reg. No. 301,015. Registered Feb. 14, 1933. ACME CHEMICAL COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

MISTO

FOR FLOOR DRESSING.
Claims use since Sept. 1, 1923.

Reg. No. 306,793. Registered Sept. 26, 1933. BENNETT GLASS & PAINT COMPANY, Salt Lake City, Utah. Republished by Bennett's, Salt Lake City, Utah, a corporation of Utah.

FOR SELF-POLISHING FLOOR WAX AND PASTE FLOOR WAX.
Claims use since Oct. 1, 1932.

Reg. No. 374,700. Registered Jan. 23, 1940. MINNESOTA LINSEED OIL PAINT COMPANY, Minneapolis, Minn., a corporation of Minnesota. Republished by registrant.

MASTER GUILD

FOR PAINTS OF ALL KINDS, IN LIQUID AND PASTE FORM, AND VARNISHES.
Claims use since March 1933.

Reg. No. 405,181. Registered Jan. 11, 1944. ACME CHEMICAL COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

CELLOPHOR

FOR QUICK-DRYING, PENETRATING, TRANSPARENT, HARDENING SEAL FOR CONCRETE AND TERRAZZO FLOORS.
Claims use since July 1, 1930.

Reg. No. 406,918. Registered May 9, 1944. ACME CHEMICAL COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

MISTOSEAL

FOR PENETRATING FLOOR VARNISH CONTAINING GUMS, RESINS, AND OILS.
Claims use since Aug. 1, 1934.

Reg. No. 411,032. Registered Jan. 2, 1945. ACME CHEMICAL COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

ACCO

FOR LIQUID FLOOR WAX SAPONIFIED WITH WATER AND POWDERED FLOOR WAX.
Claims use since December 1916.

Reg. No. 425,715. Registered Dec. 3, 1946. HARRY H. ROHLOFF, Los Angeles, Calif. Republished by registrant.

KEMIKO

FOR CHEMICAL STAINS FOR COLORING CONCRETE AND OIL AND WAX DRESSING FOR CONCRETE, BRICK, TILE AND LIKE SURFACES.
Claims use since Mar. 1, 1939.

CLASS 19

VEHICLES

Reg. No. 127,289. Registered Nov. 4, 1919. MEAD CYCLE COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

Ranger

FOR BICYCLES.
Claims use since early 1896.

Reg. No. 127,290. Registered Nov. 4, 1919. MEAD CYCLE COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

Pathfinder

FOR BICYCLES.
Claims use since spring of 1916.

Reg. No. 135,162. Registered Sept. 21, 1920. WESTERN WHEELED SCRAPER COMPANY, Aurora, Ill. Republished by Austin-Western Company, Aurora, Ill., a corporation of Illinois.

Western

FOR DUMP CARS, SPREADER CARS, FLAT CARS, AND DUMP WAGONS.
Claims use since Apr. 14, 1891.

Reg. No. 373,314. Registered Dec. 5, 1939. LOCKHEED AIRCRAFT CORPORATION, Burbank, Calif., a corporation of California. Republished by registrant.

LOCKHEED

FOR AIRPLANES AND STRUCTURAL PARTS THEREFOR, NOT IN OTHER CLASSES.
Claims use since July 1927.

Reg. No. 404,084. Registered Nov. 2, 1943. THE BUDA COMPANY, Harvey, Ill., a corporation of Illinois. Republished by registrant.

BUDA

FOR VEHICLES—NAMELY, RAILWAY MOTOR CARS FOR PASSENGERS, INSPECTION AND SECTION GANG PURPOSES, VELOCIPEDES, PUSH OR TRAILER CARS, HAND CARS, WHEELS, AXLES AND BEARINGS; INDUSTRIAL SHOP MOTOR TRUCKS; AND STRUCTURAL PARTS FOR SUCH VEHICLES.
Claims use since 1881.

CLASS 20

LINOLEUM AND OILED CLOTH

Reg. No. 392,035. Registered Dec. 2, 1941. ARMSTRONG CORK COMPANY, Lancaster, Pa., a corporation of Pennsylvania. Republished by registrant.

LINOSET

FOR PREFABRICATED, DECORATIVE ELEMENTS OF LINOLEUM AND SIMILAR HARD SURFACE FLOOR COVERINGS.
Claims use since on or about May 23, 1929.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 227,213. Registered May 3, 1927. S. C. JOHNSON & SON, Racine, Wis. Republished by S. C. Johnson & Son, Inc., Racine, Wis., a corporation of Wisconsin.

JOHNSON'S

FOR ELECTRIC FLOOR-POLISHING MACHINES.
Claims use since Dec. 17, 1924, or before.

Reg. No. 241,892. Registered May 8, 1928. AMERICAN METAL PRODUCTS CORPORATION, San Francisco, Calif. Republished by Universal Match Corporation, St. Louis, Mo., a corporation of Delaware.

presalite

FOR AUTOMATIC ELECTRICAL LIGHTERS AND DISPENSERS FOR CIGARS, CIGARETTES, AND THE LIKE, NOT INCLUDING ELECTRIC STORAGE BATTERIES.
Claims use since Jan. 1, 1927.

Reg. No. 252,646. Registered Feb. 12, 1929. HENRY L. CROWLEY & COMPANY, INC., East Orange, N. J., a corporation of New Jersey. Republished by registrant, present location West Orange, N. J.

CROLITE

FOR CERAMIC ELECTRIC INSULATING COMPOUND.
Claims use since Apr. 6, 1928.

Reg. No. 302,936. Registered May 2, 1933. REYNOLDS ELECTRIC CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

NEONIMATER

FOR ELECTRICAL FLASHERS AND FLASHER CONTROLS.
Claims use since May 10, 1932.

Reg. No. 314,225. Registered June 19, 1934. REYNOLDS ELECTRIC CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

Reco

FOR ELECTRIC ADVERTISING SIGNS OF THE GASEOUS GLOW TYPE, AND PARTS THEREOF CONSISTING IN FLASHER UNITS, TIMERS, BRUSHES, COLOR HOODS, AND HOOD SOCKETS; ELECTRICALLY-CONTROLLED INTERMITTENT SIGNAL LIGHT SYSTEMS AND EQUIPMENT FOR STREET AND RAILWAY TRAFFIC, CIRCUIT CONTROLS THEREFOR AND PARTS THEREOF; AND ELECTRIC LAMPS FOR ILLUMINATING PAINTED SIGNS, BULLETINS, POSTER BOARDS, AND THE LIKE.
Claims use since May 15, 1901.

Reg. No. 329,344. Registered Oct. 29, 1935. WEST BEND ALUMINUM CO., West Bend, Wis., a corporation of Wisconsin. Republished by registrant.

Speedmaster

FOR ELECTRIC TEA KETTLES.
Claims use since Jan. 15, 1935.

Reg. No. 343,020. Registered Feb. 9, 1937. THE BELL SOUND SYSTEMS, INC., Columbus, Ohio, a corporation of Ohio. Republished by registrant.

BELfone

FOR AUDIO AND ELECTRIC AMPLIFIERS, MICROPHONES, LOUD SPEAKERS, AND SELECTOR SWITCHES.
Claims use since May 20, 1936.

Reg. No. 373,180. Registered Nov. 28, 1939. REYNOLDS ELECTRIC COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

RADI-AIRE

FOR ELECTRIC FANS.
Claims use since June 7, 1939.

Reg. No. 396,924. Registered Aug. 11, 1942. VICTOR INSULATORS, INC., Victor, N. Y., a corporation of New York. Republished by registrant.

V

FOR WET PROCESS PORCELAIN HIGH TENSION ELECTRIC INSULATORS, HAVING RATINGS FROM A MINIMUM OF 4 KILOVOLTS TO MAXIMUM POSSIBLE VOLTAGES, WET FLASHOVER FROM A MINIMUM OF 12 KILOVOLTS TO THE MAXIMUM POSSIBLE WET FLASHOVER VOLTAGES, AND DRY FLASHOVER FROM A MINIMUM OF 23 KILOVOLTS TO THE MAXIMUM POSSIBLE DRY FLASHOVER VOLTAGES.
Claims use since Aug. 25, 1941.

Reg. No. 405,685. Registered Feb. 15, 1944. ERIE RESISTOR CORPORATION, Erie, Pa., a corporation of Pennsylvania. Republished by registrant.

HI-K CERAMICON

The word "Hi-K" is disclaimed.
FOR HIGH DIELECTRIC CERAMIC CONDENSERS.
Claims use since Apr. 21, 1943.

Reg. No. 405,700. Registered Feb. 15, 1944. BURGESS BATTERY COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant, present location Freeport, Ill.

vibro-tool

The word "Tool" is disclaimed.
FOR PORTABLE ELECTRIC ENGRAVING AND CUTTING IMPLEMENT.
Claims use since July 1941.

Reg. No. 409,384. Registered Oct. 3, 1944. WICO ELECTRIC COMPANY, West Springfield, Mass., a corporation of Massachusetts. Republished by registrant.

BANTAMAG

FOR MAGNETOS.
Claims use since May 12, 1944.

Reg. No. 417,711. Registered Nov. 13, 1945. THE OHIO CRANKSHAFT COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

TOCCOTRON

FOR INDUCTIVE AND DIELECTRIC HEATING APPARATUS IN WHICH CURRENT FOR HARDENING, ANNEALING, BRAZING, HEATING FOR FORGING, MELTING AND DRYING ARTICLES, AND PARTS OF ARTICLES IS DERIVED FROM ELECTRONIC TUBES, THE TUBES COMPRISING A PART OF THE APPARATUS.
Claims use since about Oct. 15, 1944.

Reg. No. 424,467. Registered Oct. 8, 1946. RICHARD H. TURK, doing business as International Electric Fence Co., Chicago, Ill. Republished by International Electric Co., Chicago, Ill., a corporation of Illinois.

International

FOR ELECTRIC FENCES.
Claims use since Jan. 1, 1938.

Reg. No. 430,384. Registered June 10, 1947. HERSHEY MFG. CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

Vitabrush

FOR ELECTRICALLY OPERATED HAIR BRUSHES.
Claims use since November 1940.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 73,218. Registered Mar. 30, 1909. THE HORTON MANUFACTURING COMPANY, Bristol, Conn., a corporation of Connecticut. Republished by registrant.

LUCKIE.

FOR FISHING-RODS.
Claims use since Sept. 1, 1908.

Reg. No. 239,599. Registered Mar. 6, 1928. BROWN & BIGELOW, St. Paul, Minn., a corporation of Minnesota. Republished by registrant.

Remembrance

FOR PLAYING CARDS.
Claims use since on or about Sept. 1, 1927.

Reg. No. 269,965. Registered Apr. 22, 1930. THE BRUNSWICK-BALKE-COLLENDER COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

SUPER SPEED

FOR GAME-TABLE CUSHIONS.
Claims use since Nov. 27, 1925.

Reg. No. 298,096. Registered Oct. 11, 1932. THE HORTON MANUFACTURING COMPANY, Bristol, Conn., a corporation of Connecticut. Republished by registrant.

BLACK WONDER

FOR FISHING LINES.
Claims use since 1906.

Reg. No. 300,432. Registered Jan. 17, 1933. THE BRUNSWICK-BALKE-COLLENDER COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

The representation of the pin and the groove around the centre of the pin, are disclaimed. The drawing is lined for the color red.
FOR BOWLING PINS PARTICULARLY THE TYPE KNOWN AS CANDLE PINS.
Claims use since Dec. 1, 1930.

Reg. No. 314,586. Registered July 3, 1934. THE BRUNSWICK-BALKE-COLLENDER COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

RED CROWN

FOR BOWLING PINS.
Claims use since June 1, 1933.

Reg. No. 422,557. Registered July 30, 1946. SCANDIA TOYS, Los Angeles, Calif., a co-partnership. Republished by registrant, present location, Glendale 1, Calif.

The word "Toys" is disclaimed.
FOR WOODEN TOYS—NAMELY, TOY BOXES ON WHEELS, TOY WAGONS, HOBBY HORSES, STICK HORSES, SWEDISH PEASANT TABLES, SWEDISH PEASANT CHAIRS, SWEDISH DOLL SULKIES, TELL TIME CLOCKS, SWEDISH STOOLS, WHEELBARROWS, ROCKING HORSES, PONY CARS, SAND WAGONS WITH TOOLS, CHILD'S ELECTRIC PHONOGRAPHS, DUMP CARS WITH TOOLS, SWEDISH ROCKING HORSES, NEST OF WAGONS, STICK HORSES WITH WAGONS, SAND PAILS WITH TOOLS, CRADLES, CALIFORNIA TABLES, CALIFORNIA CHAIRS, CHILDREN'S DESKS AND CHAIRS TO MATCH, CHILDREN'S BOOKCASES, BLACKBOARDS, RING TOSSING SETS, AND TOY BANJOS.
Claims use since Apr. 26, 1945.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 123,559. Registered Nov. 19, 1918. CHAMPION SPARK PLUG COMPANY, Toledo, Ohio, a corporation of Delaware. Republished by registrant.

CHAMPION

FOR MECHANICAL SPARK-PLUG CLEANERS.
Claims use since January 1916.

Reg. No. 197,704. Registered Apr. 21, 1925. VERONA TOOL WORKS, Pittsburgh, Pa. Republished by Woodings-Verona Tool Works, Verona, Pa., a corporation of Pennsylvania.

No. 1A

FOR RAILWAY-TRACK JACKS AND JACKS FOR GENERAL LIFTING PURPOSES.
Claims use since December 1921.

Reg. No. 231,354. Registered Aug. 16, 1927. LINCOLN STEEL & FORGE COMPANY, St. Louis, Mo. Republished by Lincoln Engineering Company, St. Louis, Mo., a corporation of Missouri, by change of name.

LUBRIGUN

FOR PORTABLE LUBRICATING APPARATUS.
Claims use since Nov. 9, 1925.

Reg. No. 236,037. Registered Nov. 29, 1927. FOSTER PUMP WORKS, Brooklyn, N. Y., a corporation of New Jersey. Republished by registrant.

EXCELSIOR

FOR ROTARY PUMPS.
Claims use since 1865.

Reg. No. 289,548. Registered Dec. 1, 1931. MILLER PRINTING MACHINERY CO., Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

The words "Pittsburgh, U. S. A. Pioneer Builders High-Speed Automatic Printing Machinery" are disclaimed.

FOR PRINTERS' MACHINERY—NAMELY, PRINTING PRESSES, FEEDING MECHANISM FOR PRINTING PRESSES, AND MACHINES FOR CUTTING, TRIMMING, AND OTHERWISE TREATING TYPE SLUGS.

Claims use since September 1928.

Reg. No. 308,478. Registered Dec. 5, 1933. REYNOLDS ELECTRIC CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

Reco

FOR FOOD MIXERS, MEAT GRINDERS, VEGETABLE PEELERS AND JUICE EXTRACTORS.

Claims use since Dec. 14, 1915.

Reg. No. 369,574. Registered Aug. 1, 1939. ALFA MACHINE COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

ALFA

FOR HAND OPERATED CUTTERS OR POWER OPERATED CUTTING MACHINES FOR CUTTING TEXTILES, UPHOLSTERING MATERIALS, INSULATING MATERIALS, PAPER, SHEET IRON, LEATHER, IMPREGNATED MATERIALS, RUBBER, COATED MATERIALS, FIBROUS MATERIALS, FELTS, CELLULOSE MATERIALS, PLASTIC MATERIALS, SYNTHETIC MATERIALS, AND SIMILAR MATERIALS AND COMBINATIONS THEREOF; SPECIAL MACHINES FOR CUTTING SHEETS, WEBS, TEXTILES, AND SIMILAR MATERIAL; POWER CLUTCHES AND SHEET FEEDING MECHANISM FOR USE WITH CUTTING MACHINES AND FOR GENERAL APPLICATION AND PARTS THEREOF.

Claims use since Dec. 11, 1923.

Reg. No. 370,912. Registered Sept. 12, 1939. EMSCO DERRICK & EQUIPMENT COMPANY, Los Angeles, Calif., a corporation of California. Republished by registrant.

EMSCO

FOR CROWN BLOCKS, TRAVELING BLOCKS, SWIVELS, ROTARY MACHINES, SLUSH PUMPS, ROTARY CHAINS, WELL PULLING MACHINES, PUMPING UNITS, DRILL STEMS, DRILL COLLARS, DRAWWORKS, REVERSE GEARS, ROTARY DRILLING RIGS, AND DERRICKS.

Claims use since Nov. 30, 1925.

Reg. No. 371,146. Registered Sept. 19, 1939. INTERNATIONAL FILTER CO., Chicago, Ill. Republished by Infilco Incorporated, Chicago, Ill., a corporation of Delaware.

ACCELATOR

FOR LIQUID TREATING APPARATUS AND EQUIPMENT IN PARTICULAR, APPARATUS AND EQUIPMENT FOR CLARIFYING TURBID LIQUIDS, FOR REMOVING HARDNESS FROM WATER, FOR REMOVING DISSOLVED AND COLLOIDAL SUBSTANCES FROM WATER, SEWAGE AND LIQUIDS IN GENERAL, FOR STABILIZING BRINES AND SOLUTIONS IN GENERAL WITH RESPECT TO SUBSTANCES DISSOLVED THEREIN, AND FOR CHEMICALLY TREATING WATER SUPPLIES AND WATER WASTES OF MUNICIPALITIES, INSTITUTIONS AND INDUSTRIAL PLANTS.

Claims use since January 1939.

Reg. No. 371,393. Registered Sept. 26, 1939. BENDIX-WESTINGHOUSE AUTOMOTIVE AIR BRAKE COMPANY, Pittsburgh, Pa., a corporation of Delaware. Republished by registrant.

BW

FOR AIR COMPRESSORS AND PARTS THEREOF.

Claims use since July 27, 1938.

Reg. No. 375,745. Registered Feb. 27, 1940. THERMO CUBER COMPANY, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

THERMO CUBER

The word "Cuber" is disclaimed.

FOR CUTTING MACHINES.

Claims use since Aug. 26, 1939.

Reg. No. 382,225. Registered Oct. 22, 1940. BENDIX AVIATION CORPORATION, South Bend, Ind., a corporation of Delaware. Republished by registrant.

BK

FOR POWER ACTUATORS FOR BRAKE MECHANISMS; GEARSHIFTING MECHANISM; POWER CLUTCH CONTROL MECHANISMS; POWER STEERING MECHANISM FOR LAND AND WATER VEHICLES; AND VACUUM SERVO MOTOR SYSTEMS FOR CONTROL AND ACTUATION MECHANISM.

Claims use since June 29, 1925.

Reg. No. 397,466. Registered Sept. 8, 1942. FOSTER MACHINE COMPANY, Westfield, Mass., a corporation of Massachusetts. Republished by registrant.

TENSIOMATIC

FOR YARN WINDING MACHINERY.

Claims use since Oct. 7, 1941.

Reg. No. 397,476. Registered Sept. 8, 1942. EMSCO DERRICK & EQUIPMENT COMPANY, Los Angeles, Calif., a corporation of California. Republished by registrant.

FOR STEEL DERRICKS AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.

Claims use since Apr. 1, 1928.

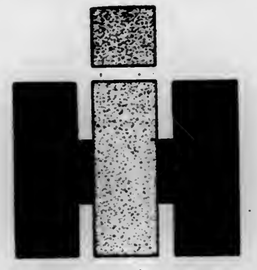
Reg. No. 413,261. Registered Apr. 17, 1945. FELT AND TARRANT MANUFACTURING COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

Comptometer

FOR PEG-BOARD, SAID PEG-BOARD BEING A BOARD WITH PROJECTING PEGS UPON WHICH VARIOUS PEG STRIP FORMS ARE MOUNTED FOR EASY ANALYSIS OF INDIVIDUAL ITEMS ON THE PLURALITY OF STRIPS.

Claims use since April 1930.

Reg. No. 421,489. Registered June 4, 1946. THE DUFF-NORTON MANUFACTURING COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant



DUFF-NORTON

The word "Duff" is disclaimed.

FOR LIFTING JACKS.

Claims use since July 1, 1930.

Reg. No. 421,730. Registered June 18, 1946. INTERNATIONAL HARVESTER COMPANY, Chicago, Ill., a corporation of New Jersey. Republished by registrant.

FOR FARM MACHINERY—NAMELY, MANURE LOADERS, CORN PICKERS, AND OTHER ITEMS LISTED IN THE REGISTRATION.

Claims use since on or about Aug. 9, 1944.

Reg. No. 423,437. Registered Sept. 3, 1946. LINCOLN ENGINEERING COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

LUBRO-VAN

The word "Van" is disclaimed.

FOR UNITARY PORTABLE AUTOMOTIVE SERVICING APPARATUS COMPRISING LUBRICANT AND AIR TANKS, PUMPS, ENGINES FOR THE PUMPS, COMPRESSORS, LUBRICANT AND AIR CONDUITS, REELS, METERS, LIGHTING PLANT AND AUXILIARIES THEREFOR SOLD AS A UNIT UNDER THE MARK.

Claims use since Aug. 17, 1944.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Reg. No. 396,963. Registered Aug. 11, 1942. AMERICAN MACHINE AND METALS, INC., New York, N. Y., a corporation of Delaware. Republished by registrant, present location East Moline, Ill.

Analytical

FOR LAUNDRY MACHINES FOR WASHING WITH WATER OR SOLVENTS TOGETHER WITH REGULATING AND AUTOMATIC CONTROL DEVICES FOR USE THEREWITH; ALSO CENTRIFUGAL EXTRACTORS FOR REMOVING THE SURPLUS LIQUID.
Claims use since Dec. 3, 1941.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Reg. No. 322,133. Registered Feb. 26, 1935. HILLS BROS., San Francisco, Calif. Republished by Hills Bros. Coffee, Inc., San Francisco, Calif., a corporation of California.

COFFEE  GUIDE

FOR COFFEE MEASURE.
Claims use since June 22, 1934.

Reg. No. 322,477. Registered Mar. 5, 1935. AGFA ANSCO CORPORATION, Binghamton, N. Y. Republished by General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware.

ISO PAN

FOR SENSITIZED PHOTOGRAPHIC FILM.
Claims use since Oct. 18, 1934.

Reg. No. 325,305. Registered June 18, 1935. INTERNATIONAL FILTER COMPANY, Chicago, Ill. Republished by Infilco Incorporated, Chicago, Ill., a corporation of Delaware.

INFILCO

FOR CHEMICAL FEEDERS, HYDRAULIC CONTROL TABLES, LIQUID FLOW CONTROLLERS, LIQUID FLOW INDICATORS, FLUID GAUGES, HYDRAULIC LEVEL CONTROLLERS, CHEMICAL PROPORTIONERS, LIQUID SAMPLING TABLES, SEWAGE METERS, VENTURI TYPE METERS AND VENTURI TUBES.
Claims use since March 1931.

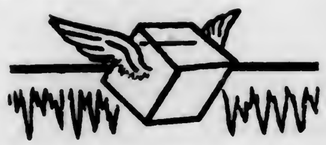
Reg. No. 372,236. Registered Oct. 24, 1939. THE HALOID COMPANY, Rochester, N. Y., a corporation of New York. Republished by registrant.

HALO

FOR LIGHT SENSITIVE PAPER.
Claims use since Mar. 8, 1939.

Reg. No. 374,107. Registered Jan. 2, 1940. S. F. BOWSER & COMPANY, INCORPORATED, Fort Wayne, Ind. Republished by Bowser, Inc., Fort Wayne, Ind., a corporation of Indiana.

REELWAY



FOR LIQUID MEASURING AND DISPENSING APPARATUS EQUIPPED WITH HOSE STORAGE DEVICES.
Claims use since Feb. 22, 1939.

Reg. No. 374,811. Registered Jan. 23, 1940. THE HALOID COMPANY, Rochester, N. Y., a corporation of New York. Republished by registrant.

TRANSALOID

FOR LIGHT SENSITIVE PAPER.
Claims use since Mar. 15, 1939.

Reg. No. 374,818. Registered Jan. 23, 1940. THERMO CUBER COMPANY, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR ICE CUTTING MACHINES.
Claims use since Aug. 26, 1939.

Reg. No. 385,671. Registered Mar. 11, 1941. GENERAL ANILINE & FILM CORPORATION, New York, N. Y., a corporation of Delaware. Republished by registrant.

BROVIRA

FOR LIGHT-SENSITIVE PHOTOGRAPHIC MATERIAL, PARTICULARLY PHOTOGRAPHIC PAPER.
Claims use since June 1, 1931.

Reg. No. 391,034. Registered Oct. 21, 1941. SPAULDING-MOSS COMPANY, Boston, Mass., a corporation of Massachusetts. Republished by registrant.

SEMCO

FOR SENSITIZED DIRECT POSITIVE PAPER AND CLOTH, SENSITIZED BLUE PRINT PAPER AND CLOTH, SENSITIZED VAN DYKE PAPER AND CLOTH; MECHANICAL DRAWING AND ARTISTS' MATERIALS—NAMELY, DRAWING INSTRUMENTS, DRAWING BOARDS, SLIDE RULES, MEASURING RULES, MEASURING TAPES, LETTERING INSTRUMENTS, TRIANGLES, T-SQUARES, MACHINES FOR BLUE PRINTING, MACHINES FOR DIRECT POSITIVE PRINTING, DRAWING TABLES, DRAFTING FURNITURE, SURVEYING INSTRUMENTS, PLUMB BOBS AND SURVEYING FIELD BOOKS.
Claims use since October 1928 for sensitized blue print paper and cloth and sensitized Van Dyke paper and cloth; and other dates for the other items.

Reg. No. 401,467. Registered May 18, 1943. WOLLENSAK OPTICAL COMPANY, Rochester, N. Y., a corporation of New York. Republished by registrant.

Rapax

FOR PHOTOGRAPHIC SHUTTERS.
Claims use since July 1, 1942.

Reg. No. 413,582. Registered May 1, 1945. FELT AND TARRANT MANUFACTURING COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

Comptometer

FOR DUST COVERS FOR USE ON CALCULATING MACHINES.
Claims use since March 1909.

Reg. No. 422,617. Registered Aug. 6, 1946. NATURAL VISION EQUIPMENT CORPORATION, New York, N. Y. Republished by Albert W. Mahone, Chicago, Ill.

NATURAL VISION

FOR CAMERAS, MOTION PICTURE CAMERAS, SENSITIZED PHOTOGRAPHIC FILMS, OPTICAL REDUCTION PRINTERS, AND MOTION PICTURE PROJECTING APPARATUS.
Claims use since Dec. 15, 1935.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Reg. No. 415,634. Registered Aug. 14, 1945. M. A. MEAD & COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

Boulevard

Reg. No. 73,225. Registered Mar. 30, 1909. STROHMEYER & ARPE COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

Le Dandy

FOR MACARONI, SPAGHETTI, VERMICELLI, AND IMPORTED SARDINES.
Claims use since 1906.

Reg. No. 73,285. Registered Apr. 6, 1909. STROHMEYER & ARPE COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

Marianne

FOR MACARONI, SPAGHETTI, VERMICELLI, OLIVE OIL, MARASCHINO CHERRIES, FRENCH CHICKEN LIVER, COTTON SEED OIL, AND BAR-LE-DUC JELLIES, IMPORTED CHEESE AND IMPORTED SARDINES.
Claims use since 1903.

Reg. No. 73,385. Registered Apr. 13, 1909. STROHMEYER & ARPE COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

SAPCO

FOR OLIVE OIL, COTTON SEED OIL, INTENDED FOR USE AS A FOOD, PRESERVED FIGS, CANNED ASPARAGUS, CANNED PEACHES, MACARONI, SPAGHETTI, VERMICELLI, SPICED FISH, SALTED FISH, PRESERVED BEANS IN CANS AND JARS, IMPORTED PEAS IN CANS AND JARS, ITALIAN PRESERVED VEGETABLES IN CANS AND JARS AND TOMATO SAUCE.
Claims use since 1893.

Reg. No. 94,956. Registered Jan. 13, 1914. STROHMEYER & ARPE COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

"KING GEORGE" BRAND

The word "Brand" is disclaimed.
FOR CANNED VEGETABLES, CANNED FRUITS AND CANNED FISH.
Claims use since February 1913.

Reg. No. 95,236. Registered Feb. 3, 1914. STROHMEYER & ARPE COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

"BOUQUET" BRAND

The word "Brand" is disclaimed.
FOR CANNED FISH.
Claims use since February 1913.

Reg. No. 96,207. Registered Apr. 7, 1914. STROHMEYER & ARPE COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

MANOLA

FOR PRESERVED FISH, CANNED FISH, CANNED FRUITS, CANNED VEGETABLES, OLIVE OIL, AND PEPPERS.
Claims use since 1910.

Reg. No. 102,001. Registered Jan. 19, 1915. WM. WRIGLEY JR. COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

DOUBLEMINT

The word "Mint" is disclaimed.
FOR CHEWING-GUM.
Claims use since July 28, 1914.

Reg. No. 105,032. Registered June 29, 1915. WM. WRIGLEY JR. COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

JUICY FRUIT

FOR CHEWING GUM.
Claims use since on or about Jan. 1, 1894.

Reg. No. 117,906. Registered Aug. 7, 1917. WM. WRIGLEY JR. COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

JUICY FRUIT

FOR CHEWING GUM.
Claims use since Sept. 10, 1914.

Reg. No. 127,623. Registered Nov. 18, 1919. JACOBS CANDY COMPANY, LTD., New Orleans, La. Republished by Jacobs Candy Corporation, New Orleans, La., a corporation of Louisiana.

REVELATION

FOR CANDY.
Claims use since Feb. 15, 1919.

Reg. No. 127,751. Registered Dec. 2, 1919. JACOBS CANDY COMPANY, LTD., New Orleans, La. Republished by Jacobs Candy Corporation, New Orleans, La., a corporation of Louisiana.

FLORABELLA

FOR CANDY.
Claims use since Feb. 1, 1919.

Reg. No. 139,556. Registered Feb. 8, 1921. JACOBS CANDY COMPANY, LTD., New Orleans, La. Republished by Jacobs Candy Corporation, New Orleans, La., a corporation of Louisiana.

Memory

FOR CANDY.
Claims use since July 1, 1919.

Reg. No. 146,597. Registered Sept. 13, 1921. THE RANNEY-DAVIS MERCANTILE COMPANY, Arkansas City, Kans., a corporation of Kansas. Republished by registrant.

The words "Santa Fe Brand" are disclaimed.
FOR CANNED FRUITS AND VEGETABLES, PORK AND BEANS, CORN, HOMINY; FRUIT JELLIES, PRESERVES AND BUTTERS; CANNED FISH, OYSTERS AND SOUPS; PACKAGED OATS, WHEAT AND RICE; SALTED PEANUTS, PEANUT-BUTTER, MACARONI, SPAGHETTI, VERMICELLI, NOODLES, CANNED MILK, MINCE MEAT, CANE SUGAR SYRUP, SORGHUM, CANDIES, VANILLA AND LEMON FLAVORING EXTRACTS, SPICES, VINEGAR, HORSERADISH, PEPPER, MUSTARD, PICKLES, TEA AND COFFEE.
Claims use since Apr. 1, 1916.

Reg. No. 196,893. Registered Mar. 31, 1925. STROHMEYER & ARPE COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

RC
GOBBO

FOR EDIBLE OILS—NAMELY, OLIVE OIL.
Claims use since Feb. 1, 1924.

Reg. No. 198,666. Registered May 26, 1925. STROHMEYER & ARPE COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

FOR CANNED FISH, SPECIFICALLY SARDINES IN OIL.
Claims use since December 1904.

Reg. No. 249,359. Registered Nov. 13, 1928. PRATT-LOW PRESERVING COMPANY, Santa Clara, Calif., a corporation of California. Republished by registrant.

PRATTLOW

FOR CANNED FRUITS AND CANNED VEGETABLES, AND APRICOT BUTTER.
Claims use since Jan. 1, 1923.

Reg. No. 267,677. Registered Feb. 25, 1930. P. F. PETERSEN BAKING COMPANY, Omaha, Nebr., a corporation of Nebraska. Republished by registrant.

PETER PAN

FOR CAKE AND SWEET ROLLS.
Claims use since April 1925.

Reg. No. 276,541. Registered Oct. 21, 1930. MOTHER'S GRANDMA COOKIE COMPANY, Seattle, Wash. Republished by Grandma Baking Company, Inc., Seattle, Wash., a corporation of Washington.

"For GOODNESS sake"

The word "Goodness" is disclaimed.
FOR PASTRY SPECIALTIES, CAKES AND COOKIES, AND ICE CREAM WAFERS, AND SUGAR COOKIES.
Claims use since Nov. 5, 1929.

Reg. No. 280,860. Registered Mar. 3, 1931. FRED FEAR & CO., Brooklyn, N. Y., a corporation of New York. Republished by registrant.

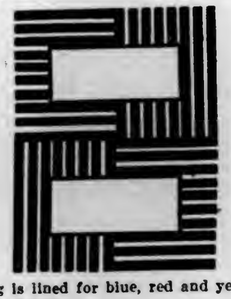
NEW ENGLAND

FOR FLAKED FISH AND TABLE SYRUPS.
Claims use since 1890.

Reg. No. 292,708. Registered Mar. 22, 1932. MAYFLOWER MILLS, Fort Wayne, Ind., a corporation of Indiana. Republished by registrant.

FOR WHEAT FLOUR, PHOSPHATED FLOUR, AND SELF-RISING FLOUR.
Claims use since February 1926.

Reg. No. 295,766. Registered July 12, 1932. MAYFLOWER MILLS, Fort Wayne, Ind., a corporation of Indiana. Republished by registrant.



FOR WHEAT FLOUR, SELF-RISING FLOUR, AND PHOSPHATED FLOUR.
Claims use since Mar. 15, 1925.

Reg. No. 320,772. Registered Jan. 8, 1935. THE ZERO-PACK COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

ZEROPAK

FOR FRESH FROZEN FRUIT—NAMELY, APPLES, PEACHES, CHERRIES, AND STRAWBERRIES.
Claims use since Oct. 16, 1933.

Reg. No. 361,585. Registered Oct. 25, 1938. CHARLESTON MILLING COMPANY, Charleston, W. Va., a corporation of West Virginia. Republished by registrant.

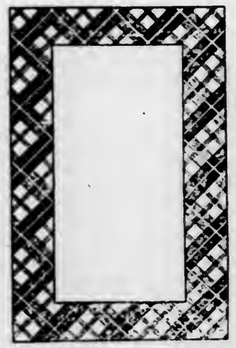
The drawing is lined for blue, red and yellow.
FOR DAIRY FEED.
Claims use since on or about November 1936.

Reg. No. 366,519. Registered Apr. 18, 1939. CHARLESTON MILLING COMPANY, Charleston, W. W. Va., a corporation of West Virginia. Republished by registrant.

The drawing is lined for red, green and blue.
FOR CORN MEAL.
Claims use since on or about November 1936.

Reg. No. 371,120. Registered Sept. 19, 1939. WM. WRIGLEY JR. COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

SPEAR



FOR CHEWING GUM.
Claims use since Jan. 8, 1938.

Reg. No. 384,562. Registered Jan. 21, 1941. CHARLESTON MILLING COMPANY, Charleston, W. Va., a corporation of West Virginia. Republished by registrant.

44

FOR WHEAT FLOUR.
Claims use since January 1938.

Reg. No. 389,268. Registered July 29, 1941. CHARLESTON MILLING COMPANY, Charleston, W. Va., a corporation of West Virginia. Republished by registrant.

FOR WHEAT FLOUR.
Claims use since December 1940.

Reg. No. 390,623. Registered Sept. 30, 1941. CHARLESTON MILLING COMPANY, Charleston, W. Va., a corporation of West Virginia. Republished by registrant.

In the drawing, the solid black areas represent blue and the broad white lines represent red, the remaining diagonal and criss-cross lining has a white background.
FOR WHEAT FLOUR CONTAINING VITAMIN AND IRON INGREDIENTS.
Claims use since on or about Mar. 7, 1941.

Reg. No. 390,867. Registered Oct. 7, 1941. HORLICK'S MALTED MILK CORPORATION, Racine, Wis. Republished by Horlick's Corporation, Racine, Wis., a corporation of Delaware.

FOR MALTED MILK.
Claims use since May 10, 1923.

Reg. No. 391,047. Registered Oct. 21, 1941. STANDARD MILLING COMPANY, New York, N. Y. Republished by Standard Milling Company, Chicago, Ill., a corporation of Illinois.

FINETEX

FOR WHEAT FLOUR.
Claims use since Dec. 29, 1933.

Reg. No. 392,181. Registered Dec. 16, 1941. UNITED PURE FOOD CO., New York, N. Y., a corporation of New York. Republished by registrant.

TOP FLIGHT

FOR CANNED VEGETABLES, DRIED VEGETABLES, PICKLED VEGETABLES, CANNED FISH, CANNED SHELL FISH, DRIED FISH, CHEESE, COCOA, TEA, VINEGAR, VEGETABLE SALAD OIL, OLIVE OIL, OLIVES, SPICE, ANCHOVY PASTE, SPAGHETTI SAUCE AND ANTIPASTO.
Claims use since Nov. 6, 1940.

Reg. No. 396,528. Registered July 21, 1942. CHOCOLATE PRODUCTS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

MILKPLUS

FOR VITAMIN FORTIFIED MILK.
Claims use since Mar. 15, 1941.

Reg. No. 401,127. Registered Apr. 27, 1943. NORTHERN COLD STORAGE & WAREHOUSE Co., Duluth, Minn., a corporation of Minnesota. Republished by registrant.

NORTHERN
BROWN BEAR
NORTHERN EGG PRODUCERS
DULUTH - MINN.

The words "Northern Egg Producers," "Northern," and "Duluth, Minn." are disclaimed.
FOR EGGS.
Claims use since July 1, 1938.

Reg. No. 401,128. Registered Apr. 27, 1943. NORTHERN COLD STORAGE & WAREHOUSE Co., Duluth, Minn., a corporation of Minnesota. Republished by registrant.

NORTHERN
WHITE BEAR
NORTHERN EGG PRODUCERS
DULUTH - MINN.

The words "Northern Egg Producers," "Northern," and "Duluth—Minn." are disclaimed. The drawing is lined for purple.
FOR EGGS.
Claims use since July 1, 1938.

Reg. No. 413,099. Registered Apr. 10, 1945. GOLDEN NUGGET SWEETS LTD., San Francisco, Calif., assignor to Golden Nugget Sweets Ltd., San Francisco, Calif., a limited partnership of California. Republished by Golden Nugget Sweets Ltd., San Francisco, Calif., a limited partnership.

GOLDEN NUGGET

FOR CANDY.
Claims use since September 1920 on fudge; since January 1929 on Nougat; since May 1930 on caramels; since February 1940 on chocolate coated bars.

Reg. No. 416,903. Registered Oct. 2, 1945. DOROTHY A. LONO, Amenia, N. Y. Republished by registrant.

DAWNWOOD FARMS

The word "Farms" is disclaimed.
FOR FLUID MILK.
Claims use since Mar. 7, 1943.

Reg. No. 417,437. Registered Oct. 30, 1945. CONTINENTAL COFFEE COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

CONTINENTAL
COFFEE
MALTED
MILK
CONTINENTAL COFFEE COMPANY

The words "Coffee Company" and the words, "Coffee Malted Milk" are disclaimed.
FOR COFFEE MALTED MILK IN POWDERED FORM.
Claims use since March 1915.

Reg. No. 425,786. Registered Dec. 3, 1946. STANDARD MILLING COMPANY, New York, N. Y., assignor to Standard Milling Company, Chicago, Ill. Republished by Standard Milling Company, Chicago, Ill., a corporation of Illinois.

NOVIA

FOR WHEAT FLOUR.
Claims use since Nov. 21, 1945.

Reg. No. 429,171. Registered Apr. 22, 1947. DAVID MICHAEL & Co., Philadelphia, Pa. Republished by David Michael and Company Incorporated, Philadelphia, Pa., a corporation of Pennsylvania.

AMERICA'S FLAVORITE

The word "America's" is disclaimed.
FOR FLAVORING FOR FOODS—NAMELY, POWDERED VANILLA PRODUCTS FOR INCORPORATION IN ICE CREAM OR THE LIKE.
Claims use since 1926.

CLASS 47

WINES

Reg. No. 427,562. Registered Feb. 11, 1947. URBANA WINE COMPANY, Hammondsport, N. Y., a corporation of New York. Republished by registrant.

The drawing is lined for gold color.
FOR WINES.
Claims use since Apr. 24, 1946.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 68,447. Registered Apr. 7, 1908. STROHMEYER & ARPE COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

SVENSK OL

33

FOR MALT PREPARATION FOR MAKING A BEVERAGE.
Claims use since 1894.

Reg. No. 381,507. Registered Sept. 24, 1940. MINNEAPOLIS BREWING COMPANY, Minneapolis, Minn., a corporation of Minnesota. Republished by registrant.

GRAIN BELT

The lining indicates the colors red and gold.
FOR BEER.
Claims use since Dec. 23, 1895.

Reg. No. 389,557. Registered Aug. 12, 1941. LA CROSSE BREWERIES, INC., La Crosse, Wis., a corporation of Wisconsin. Republished by registrant.

FOR BEER.
Claims use since Sept. 1, 1938.

Reg. No. 389,979. Registered Sept. 2, 1941. MINNEAPOLIS BREWING COMPANY, Minneapolis, Minn., a corporation of Minnesota. Republished by registrant.

GRAIN BELT

FOR BEER.
Claims use since Dec. 23, 1895.

Reg. No. 396,860. Registered Aug. 4, 1942. PILSEN BREWING COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

The drawing is lined for the colors blue and gold. The word "Pilsen" is disclaimed.
FOR BEER.
Claims use since Jan. 30, 1942.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 346,868. Registered June 8, 1937. UECKER EQUIPMENT COMPANY, Wauwatosa, Wis. Republished by Safway Steel Products, Inc., Milwaukee, Wis., a corporation of Wisconsin.

SAFWAY

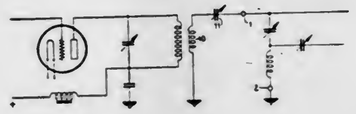
FOR LADDERS AND SCAFFOLD EQUIPMENT.
Claims use since June 1, 1935.

Reg. No. 381,402. Registered Sept. 24, 1940. ARVEY CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

R-V-LITE

FOR TRANSPARENT SCREEN MATERIAL FORMED OF LAMINATED MESH CLOTH AND CELLULOSE ACETATE FILM.
Claims use since Jan. 13, 1940.

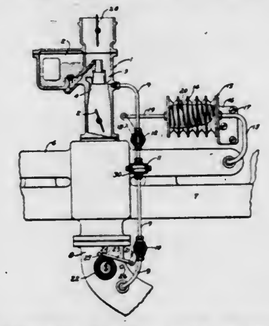
Reg. No. 429,149. Registered Apr. 22, 1947. WILLIAM A. SAMPSEL, Los Angeles, Calif. Republished by registrant.



VIS-A-MOUNT

The word "Mount" is disclaimed.
FOR TRANSPARENT MOUNTINGS FOR MINERAL, BIOLOGICAL, AND PATHOLOGICAL SUBJECTS.
Claims use since Dec. 19, 1945.

REISSUES



APRIL 20, 1948

22,993
MATCHING NETWORK
Andrew Alford, Cambridge, Mass., assignor to Mackay Radio and Telegraph Company, New York, N. Y., a corporation of Delaware
Original No. 2,165,086, dated July 4, 1939, Serial No. 111,643, November 19, 1936. Renewed December 21, 1938. Application for reissue March 19, 1945, Serial No. 583,401
13 Claims. (Cl. 178—44)

1. An electrical network adapted to insure that currents traversing the two conductors of a two wire transmission line are of substantially equal magnitude and opposite phase comprising three reactances, two of which are of the same sign and the third of which is of the opposite sign, one of said three reactances being connected in series in one of said two wires, another in shunt to said two wires, and the third between one of said two wires and ground.

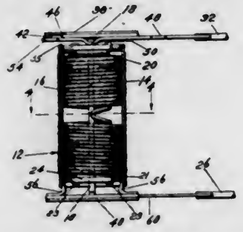
22,994
ANTIDETONATING DEVICE
George M. Bicknell, St. Louis, Mo., assignor to Carter Carburetor Corporation, St. Louis, Mo., a corporation of Delaware
Original No. 2,317,582, dated April 27, 1943, Serial No. 429,605, February 5, 1942. Application for reissue April 24, 1944, Serial No. 532,527
13 Claims. (Cl. 123—119)

1. The method of controlling combustion pressure in the combustion chamber of an internal combustion engine operating on a combustible mixture of liquid fuel and air which comprises diluting the mixture with exhaust gases of the engine, and varying the degree of such dilution in accordance with both the temperature of the engine and the suction in the intake manifold.

PLANT PATENTS

GRANTED APRIL 20, 1948

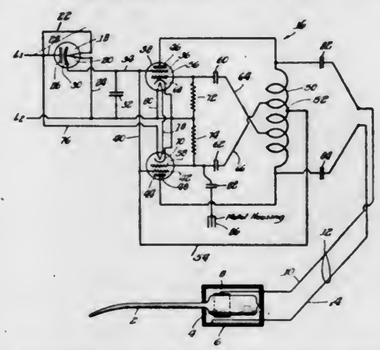
Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.



796
SANSEVIERIA PLANT
Gustav E. Bantel, St. Louis, Mo., assignor to Frank L. Sieloff, St. Louis, Mo.
Application July 24, 1946, Serial No. 685,978
1 Claim. (Cl. 47—59)

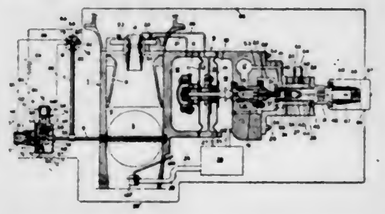
A new and distinct variety of sansevieria plant, substantially as shown and described, characterized particularly by its stiffly erect ensiform leaves, marked with alternating longitudinal stripes of white and green.

PATENTS



GRANTED APRIL 20, 1948

2,439,786
ELECTRON DISCHARGE DEVICE
Homer G. Anderson, Waban, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application November 7, 1944, Serial No. 562,334
2 Claims. (Cl. 250—27.5)

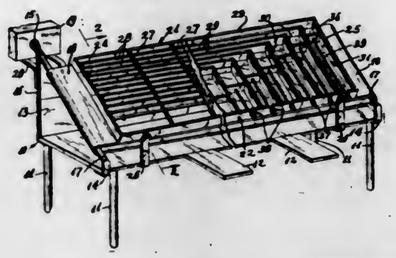


1. An electron discharge device comprising an envelope containing a cathode, an anode adjacent said cathode, a shield between each end of said cathode and said envelope, a heater wire within said cathode, a lead-in conductor, electrically conductive supporting means connected to said lead-in conductor and to a plurality of points of one on said shields to support the latter, and to one end of said heater wire, the other end of said heater wire being connected to said cathode, a second lead-in conductor, and electrically conductive supporting means for the other shield connected to said second lead-in conductor and to a plurality of points on said other shield, said other shield being electrically connected to said cathode.

2,439,787
ULTRAVIOLET RAY GENERATOR
Carl E. Atkins, Elgin, Ill., assignor to Sun-Kraft, Inc., Chicago, Ill., a corporation of Delaware
Application February 5, 1945, Serial No. 576,303
6 Claims. (Cl. 128—395)

1. An ultra-violet ray generator comprising an electrodeless vapor discharge tube, a metal band about a portion of said tube, an insulating member encircling said band but in spaced relation thereto, a wire connected to said band and extending from said member and a second wire entering said member and secured to the inner surface thereof, and means for supplying high frequency energy to said wires.

2,439,788
METHOD AND APPARATUS FOR OPTIMUM ECONOMY OPERATION OF INTERNAL-COMBUSTION ENGINES
Allen S. Atkinson, Haddonfield, N. J.
Application May 31, 1945, Serial No. 596,939
17 Claims. (Cl. 123—119)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

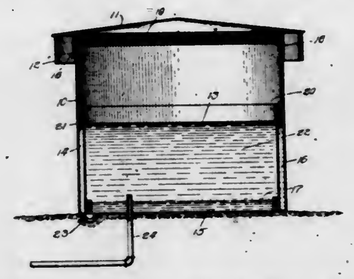


1. In the method of operating an internal combustion engine at optimum economy conditions for any given power condition, the steps which comprise establishing a condition of constant fuel flow to the engine, and then adjusting the ratio of the air-fuel mixture supplied to the engine to provide the maximum engine power output for the established constant rate of fuel flow thereto.

2,439,789
UPHOLSTERY SPRING EDGE CONSTRUCTION
Albert M. Bank, Jersey City, N. J.
Application April 12, 1944, Serial No. 530,609
10 Claims. (Cl. 155—179)

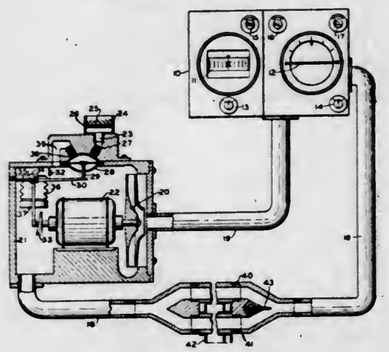
1. In a spring seat, a frame, a zig-zag spring mounted on said frame and a cantilever spring mounted on the zig-zag spring, said cantilever spring extending above the zig-zag spring and having a short arm and a long arm interconnected at one end, the short arm having a portion engaging beneath a pair of adjacent arms of said zig-zag spring and portions passing through a pair of adjacent loops on one side of said zig-zag spring, and the long arm having a portion engaging beneath one of the first pair of arms and the next adjacent arm of said zig-zag spring, and portions passing through a pair of loops on the opposite side of said zig-zag spring and staggered with respect to the first-mentioned pair of loops the ends of said arms being secured to the loops through which they pass.

2,439,790
MAIL SORTING MACHINE
Isidore Becker, Bronx, N. Y.
Application January 16, 1946, Serial No. 641,456
7 Claims. (Cl. 211—10)



1. An automatic mail sorting machine comprising a table supported on legs and having a horizontal wall and a vertical wall, inclined shafts journalled in bearings supported on said walls at opposite ends of said table, means for rotating one of said shafts, a continuous belt extending around said shafts driving the other of said shafts from said one shaft, and a rack supported on said table in an inclined position on top of said belt, said belt underlying the entire bottom of said rack, said rack being partitioned into a plurality of longitudinal passages each terminating at one end at a juncture with a transverse passage, said transverse passages being inclined with said junctures at their tops whereby letters placed in said longitudinal passages will be conveyed therealong by said belt to said transverse passages where they will stack by gravity, and means in each of said transverse passages for supporting said letters as they stack therein.

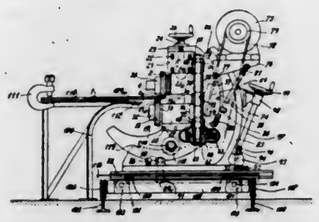
2,439,791
PROCESS FOR FERMENTING CARBOHYDRATES TO BUTANOL AND ACETONE
Samuel C. Beesch, Philadelphia, Pa., assignor to Publicker Industries Inc., a corporation of Pennsylvania
No Drawing. Application January 13, 1945, Serial No. 572,741
4 Claims. (Cl. 195—44)



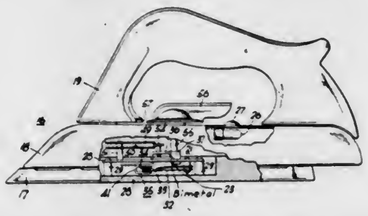
1. A process for producing organic solvents having relatively high proportions of butanol which comprises forming an aqueous mash containing a fermentable carbohydrate and containing suitable bacterial nutrients, adjusting the pH to approximately 6.0, inoculating the mash with a bacterial culture containing *Clostridium saccharo acetoperbutylicum* and incubating said inoculated mash at a temperature of about 28 to 35° C. for about 40 to 72 hours, while adding alkali from time to time to maintain the pH at approximately 5.5 to 6.5.

2,439,792
FLOATING ROOF STORAGE TANK
Harry C. Boardman, Chicago, Ill., assignor to Chicago Bridge & Iron Company, a corporation of Illinois
Application December 29, 1945, Serial No. 638,228
6 Claims. (Cl. 220—26)

1. A storage tank comprising an outer shell, a bottom therefor, a floating roof smaller than the shell and located within the shell, a flexible sealing member connecting the floating roof to said bottom to define a storage space under said floating roof, a portion of sealing liquid between the sealing member and the shell, a portion of sealing liquid in the bottom of the storage space, said portions of sealing liquid having specific gravities greater than that of the stored liquid, means connecting that portion of sealing liquid outside the sealing member with that portion at the bottom of the storage space, and filling and emptying means communicating with the storage space at a point above the greatest height of the sealing liquid in the bottom of the storage space.

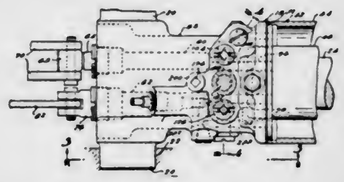


2,439,793
PRESSURE REGULATOR FOR INSTRUMENT HOUSINGS
Frederick D. Braddon, Babylon, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application February 22, 1944, Serial No. 523,493
3 Claims. (Cl. 98—1.5)



1. In a substantially closed air recirculating system, the combination of, an instrument housing in which air is utilized, a conduit through which air is supplied to the housing, a conduit through which air is exhausted from the housing, means interposed between the supply and exhaust conduits for continuously circulating the air in the system, a port to the atmosphere in one of the conduits, a valve normally closing said port, normally ineffective pumping means operable to open the valve and draw air into the system by way of the port to replenish the air lost in the system due to unintentional leakage, and pressure responsive means for rendering said pumping means effective when the pressure in one of the conduits drops below a predetermined value.

2,439,794
MACHINE FOR CUTTING AND CHAMFERING METAL SHEETS
Ettore Bugatti, Paris, France
Application October 29, 1945, Serial No. 625,338
In France November 20, 1944
8 Claims. (Cl. 164—63)



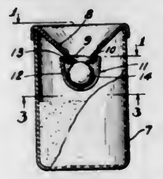
1. In a machine of the type described having a bed, the combination of a main carriage adapted to travel on said bed; means for guiding said carriage on the bed along a rectilinear path; a secondary carriage on the main carriage adapted to travel thereon; means for guiding the secondary carriage along a transverse path on said main carriage; a pair of cooperating cutting wheels; means for revolubly supporting said cutting wheels from the secondary carriage, including swiveling means whereby the cutting wheels can move bodily about an axis at right angles to the bed; and means supported from the secondary carriage to impart rotary motion to said wheels in opposite directions.

2,439,795
THERMOSTAT
Earl K. Clark, Mansfield, Ohio, assignor to Westinghouse Electric Corporation, a corporation of Pennsylvania
Application January 9, 1942, Serial No. 426,209
3 Claims. (Cl. 177—311)

1. An electrically-heated appliance comprising electrical heating means, a switch controlling energization of said heating means, means responsive to a temperature in said appliance and operating said switch to deenergize said heating means upon rise above a predetermined temperature and to energize said heating means upon fall below substantially the same predetermined temperature, adjusting means for varying the predetermined temperature or temperatures at which said temperature-responsive means operates said switch, a pilot light, a second switch comprising abutting contacts for controlling said pilot light, and a lost motion connection between said temperature-responsive means and said second switch, said lost motion connection comprising a first arm which carries one of the contacts of the first-mentioned switch and which is actuated by said temperature-responsive means and a second arm which carries one of the contacts of the second switch and which is biased in switch closing direction, said first arm being operable to move said second arm to open said second switch after a predetermined movement of said first arm in opening direction after opening said first switch, there being a lost motion between said first and second arms which is taken up during such predetermined movement, said lost motion connection being constructed and arranged so that movement of said temperature-responsive means occasioned by variation in said temperature when normally cycling at any adjustment is within the lost motion provided by such connection and said second switch is closed and so that when said temperature-responsive means moves beyond the extent of said lost motion, said second switch is opened.

2,439,796
PUMPING MECHANISM
Irwin E. Dearsley, Racine, Wis., assignor to Walker Manufacturing Company of Wisconsin, Racine, Wis., a corporation of Wisconsin
Application April 6, 1944, Serial No. 529,776
5 Claims. (Cl. 103—41)

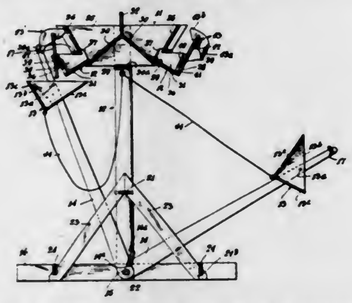
1. In a pumping system for transferring fluid from a first space to a second space, a plurality of pump units, operating means common to said units, passage means through which fluid is drawn from said first space by said units, said passage means including a portion common to said units and portions individual thereto, valve means in each said individual portion and normally operative to prevent a reverse flow therethrough, and control means common to said valve means for controlling the effectiveness thereof, said control means being movably positioned in said common passage portion.



2,439,797
REDUCTION OF FOAMING IN AN AQUEOUS BATH CONTAINING FOAM-INDUCING CONSTITUENTS
Wayne L. Denman, Frederick, Md., assignor to Dearborn Chemical Company, Chicago, Ill., a corporation of Illinois
No Drawing. Application June 28, 1944, Serial No. 542,610
17 Claims. (Cl. 252—321)

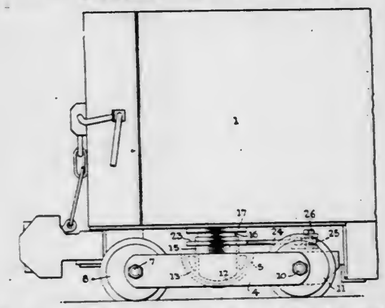
1. The method of treating an aqueous bath having present alkaline constituents inducing foaming therein comprising reducing the foaming of the bath by introducing into the same a mixture of a halogenated aliphatic amine and a hydroxy aliphatic amine, each of said amines having at least eleven carbon atoms in an alkyl radical thereof and being substantially insoluble in the aqueous bath, and showing little tendency to saponify with the ingredients of the bath.

2,439,798
MONOAZO COMPOUNDS CONTAINING A PYRAZOLONE NUCLEUS
Joseph B. Dickey and John R. Byers, Jr., Rochester, N. Y., and James G. McNally, Oak Ridge, Tenn., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application January 21, 1944, Serial No. 519,192
1 Claim. (Cl. 260—163)



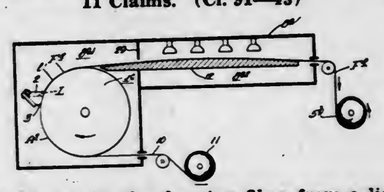
4-(4-n-butylsulfamyl-2-nitrophenylazo)-3-carbethoxy-5-pyrazolone.

2,439,799
SALT SHAKER
Theodore R. Duncan, North Hollywood, Calif.
Application April 21, 1945, Serial No. 589,494
3 Claims. (Cl. 65—57)



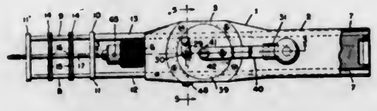
3. In a device of the kind described, a container having a hopper-shaped end portion to feed granular material into the container during the filling thereof, an approximately semicircular skeletal cage having at one side a mouth portion externally surrounding and detachably connected with the inner end of said hopper-shaped portion, and a globular retarder oscillatably contained within said cage and of a size sufficiently large in diameter to prevent it from escaping through the inner end of said hopper, said hopper portion having an external groove around its inner end and the mouth portion of said cage comprising an annular resilient portion springable into said groove to maintain the cage in its attached position.

2,439,800
SAND TOY
Oscar Fisher, Locust Valley, N. Y.
Application May 25, 1944, Serial No. 537,362
9 Claims. (Cl. 46—41)



1. In a toy of the class described, a supporting base having portions adapted to establish an extended area of support with a plane surface, a pair of laterally spaced uprights extending upward from said base and supporting a sand hopper adjacent their upper ends, bracing means extending between said uprights in spaced relation to said supporting base and holding said uprights against lateral displacement with relation to said supporting base, and a pair of angularly related levers each having a length approximating the height of the hopper above said base and mounted for oscillating movement between sand loading and dumping positions about a pivot point disposed in line with said uprights beneath said hopper and closely adjacent said base.

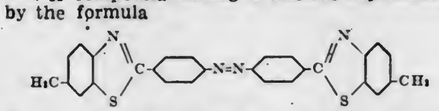
2,439,801
RAIL VEHICLE HAVING AXLELESS TRUCKS
Henry Fort Flowers, Findlay, Ohio
Application October 25, 1944, Serial No. 560,278
9 Claims. (Cl. 105—179)



3. A rail vehicle comprising a body, opposed truck engaging members at opposite sides of said body, a wheel truck associated with each of said members including a body support mounted on the truck engaging member for oscillations about a vertical axis, a rigid wheel frame mounted on said body support for oscillations in a vertical plane, flanged wheels mounted in tandem on said wheel supporting frame, each body support having an arm projecting therefrom, and a tie bar pivotally connected at its opposite ends to the arms of opposed trucks whereby horizontal turning movements of one truck are imparted to the opposed truck.

2,439,802
APPARATUS FOR FORMING FILMS AND COATINGS
Carleton Shurtleff Francis, Jr., West Harwich, Mass.
Application January 2, 1945, Serial No. 571,048
11 Claims. (Cl. 91—43)

11. Apparatus for forming films from a liquid film-forming material, comprising a reservoir for such liquid material, said reservoir including an upwardly extending wall laterally movable relative to the rest of said reservoir; and means for moving a film receiving surface upwardly in contact with and beyond the top edge of said wall with the level of said liquid material above said top edge, said top edge being disposed adjacent said surface, the pressure of the liquid material in said reservoir moving said wall laterally toward said surface and serving to maintain said top edge in firm engagement with said surface.

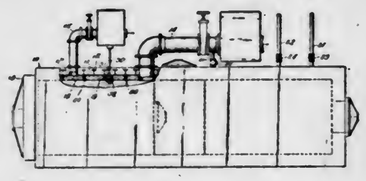


2,439,803
SURGICAL DRILL
Josef H. Giesen, United States Navy
Application January 19, 1945, Serial No. 573,616
7 Claims. (Cl. 128—310)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A surgical drill comprising a body having guide bores throughout the length thereof, a drill shaft, an operating handle, a two-speed gear train operated thereby, and means for changing the speed ratio so arranged within the body of the drill as to clear the guide bores, latch means for locking said gear train against displacement, a chuck mounted on said drill shaft having means for tightening and loosening it over a drill, screw, or pin inserted therein, said chuck being of a type which will not loosen upon reverse operation, and extensible guide means having shafts slidable in said guide bores and provided with guide plates adjustable along the shafts.

2,439,804
AZO BENZENE BENZTHIAZYLS
Norman Hulton Haddock, Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Original application May 19, 1942, Serial No. 443,670. Divided and this application December 14, 1944, Serial No. 568,200. In Great Britain May 23, 1941
8 Claims. (Cl. 260—158)

1. A compound having a nucleus represented by the formula

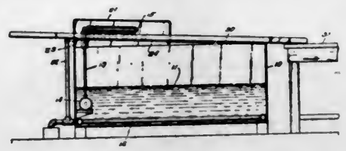


which is bis-substituted by one of the group consisting of thiocyano and alkyl xanthato groups.

2,439,805
METHOD OF ELECTROWINNING MANGANESE
Herbert R. Hanley, Rolla, Mo., and James H. Jacobs, Boulder City, Nev.
No Drawing. Application August 4, 1942, Serial No. 453,542
2 Claims. (Cl. 204—105)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In the method of electrowinning manganese wherein an electrolyte of manganese and ammonium sulphate is electrolyzed in a diaphragm cell wherein the current efficiency is greater than 50%, the improvement which is characterized by employing an anode of lead alloyed with one to three percent silver and of less surface area than the cathode; initially operating the cell at an anode current density above about 28 to about 58 amperes per square foot, and exceeding the cathode current density due to the difference in their areas while maintaining the current efficiency above 50%; initially depositing a protective film on the anode under said operating conditions for a period of about 24 hours and continuing said electrolysis under said operating conditions for a period of about two weeks to form a scale composed principally of oxides of manganese and lead at the anode and reduce the manganese deposited as oxide on the anode to less than 1% of the metal deposited on the cathode.

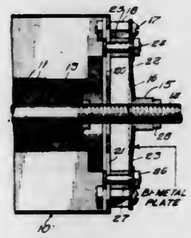
2,439,806
TESTING CHAMBER
Arnold H. Heineman, Chicago, Ill., assignor, by mesne assignments, to Guardite Corporation, Wilmington, Del., a corporation of Delaware
Application August 11, 1943, Serial No. 498,146
4 Claims. (Cl. 73—1)



1. In a pressure chamber, a pressure shell, a layer of insulating material inside the shell, an airtight membrane inside the insulation dividing the pressure chamber into an insulation chamber and a testing chamber, means for evacuating the testing chamber and the insulation chamber to an absolute pressure near zero and for maintaining pressure in the insulation chamber at subatmospheric pressure not substantially greater than the pressure in the testing chamber, the pressure shell being of metal which substantially loses strength at the temperatures normally encountered in the testing chamber, and the membrane being of metal which does not substantially lose its strength at said temperatures.

2,439,807
TREATMENT OF ROSIN
Arthur W. Hixson, Leonia, N. J., and Ralph Miller, New York, N. Y., assignors to The Chemical Foundation, Incorporated, a corporation of Delaware, as trustee
No Drawing. Application May 14, 1941, Serial No. 393,481
16 Claims. (Cl. 260—108)

1. The process of securing a plurality of rosin fractions from resins having fractions insoluble in liquefied hydrocarbons from a solution of rosins dissolved in liquefied, normally gaseous paraffin hydrocarbons comprising warming the solution until a rosin phase appears, separating the rosin phase from the hydrocarbon phase, raising the temperature of the hydrocarbon phase until a second rosin phase appears, separating the second rosin phase from the hydrocarbon phase and repeating the cycle until substantially all the rosin has been separated from the hydrocarbon phase.

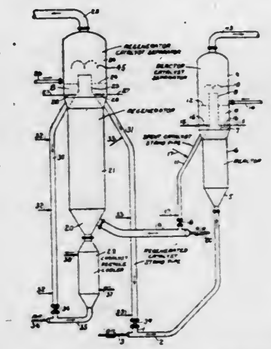


2,439,808
COATING EGGS FOR BREAKING
George F. Hodson, Chicago, Ill., assignor to Wilson & Co. Inc., a corporation of Delaware
Application March 30, 1945, Serial No. 585,706
3 Claims. (Cl. 146—221)

2. The method of treating a series of eggs which comprises applying a thin layer of a fluid thermoplastic material to the eggs, setting said material to a substantially solid state, and then substantially immediately breaking the eggs

within the areas of the coatings, said series of eggs including eggs in their natural dirty state and including eggs whose shells are broken.

2,439,809
TEMPERATURE COMPENSATION MEANS FOR FIXED REACTANCES IN TUNABLE CIRCUITS
Theodore A. Hunter, Iowa City, Iowa, assignor to Collins Radio Company, a corporation of Iowa
Application February 1, 1943, Serial No. 474,371
12 Claims. (Cl. 250—40)

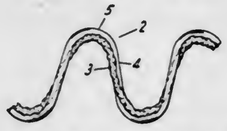


1. In radio communications equipment, apparatus of the character described, including: an impedance assembly having a movable portion; a member having at least a part movable as a function of temperature variations and connected to the movable portion of the impedance assembly for varying the impedance thereof; and means for adjusting the amount of movement of the movable part per unit of temperature variation.

2,439,810
SULFURIC ACID REACTION PRODUCT OF 2-MERCAPTO-4,6,6-TRIMETHYL THIAZINE
Jacob Eden Jansen, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
No Drawing. Application July 31, 1946, Serial No. 687,521
5 Claims. (Cl. 260—243)

1. A composition of matter selected from the class consisting of (1) the sulfuric acid reaction product of 2-mercapto-4,6,6-trimethylthiazine, said reaction product being formed by reacting 2-mercapto-4,6,6-trimethylthiazine with concentrated sulfuric acid of the concentration of 80% to oleum at a temperature of from about 20° C. to 75° C., the reaction being characterized by the evolution of a substantial amount of sulfur dioxide, heating the reaction mixture until evolution of sulfur dioxide has ceased, and separating the resulting reaction product, and (2) the metal salts of said reaction product.

2,439,811
CATALYTIC CONVERSION OF HYDROCARBONS
Joseph W. Jewell, Summit, N. J., assignor to The M. W. Kellogg Company, Jersey City, N. J., a corporation of Delaware
Application May 21, 1941, Serial No. 394,440
10 Claims. (Cl. 196—52)



2. A process for continously effecting chemical conversions involving contacting a gas with a solid material, which comprises continually effecting the following steps—introducing the solid material in powdered condition to a conversion zone, flowing the gas upwardly through said zone at a velocity sufficiently low to maintain the powdered material in said zone in a pseudo-liquid condition characterized by the relatively high concentration of the particles therein, continually adding additional quantities of the powdered material to said pseudo-liquid dense phase at a rate adapted to maintain it and its average activity at a suitable value, withdrawing a mixture of vaporous reaction products and treated solid particles from the upper part of the conversion zone and passing the mixture into a separating zone of large cross-sectional area approximating that of the conversion zone at right angles to the direction of vapor flow and deflecting the particles out of the direct path of vapor flow through said separating zone whereby said mixture is separated into two phases, a lower dense solid particles phase and an upper phase consisting of the vaporous reaction products mixed with a relatively small quantity of solid particles, introducing an inert gas throughout said lower dense phase in amount suitable to strip treated gas entrained therewith and to maintain said phase in a flowable condition, and continuously withdrawing both said phases from the separating zone.

2,439,812
METHOD FOR MAKING PHENOL
Robert H. Krieble, Schenectady, N. Y., and William I. Denton, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application November 30, 1944, Serial No. 565,927
11 Claims. (Cl. 260—621)

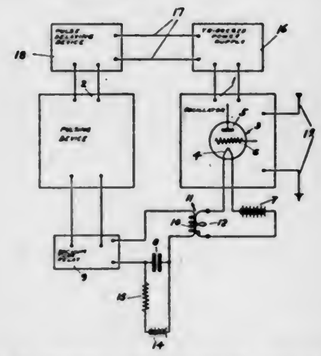
1. In the method of making phenol wherein a reaction mixture of benzene vapor and oxygen-containing gas is passed under a pressure in excess of about 500 pounds per square inch through a reaction zone at a temperature between about 600° F. and about 950° F., said reaction zone having a metallic surface and being void of solid

catalyst, the step of incorporating in the reaction mixture an olefin-containing hydrocarbon having a "potential hydrogen donor ability" value greater than about 2.5, in an amount such that the olefin concentration of the reaction mixture is within the range of from about 0.25 per cent to about 5 per cent by volume.

2,439,813
ARTIFICIAL FILAMENT
Maurice P. Kulp, Linwood, Pa., and Wayne A. Sisson, Silverside, Del., assignors to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application May 13, 1943, Serial No. 486,772
5 Claims. (Cl. 28—82)

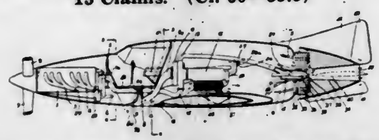
1. An artificial filament having a plurality of crimps lying at random in three dimensions comprising two components of regenerated celluloses differently oriented as a result of stretching the composite filaments during spinning while in a partially regenerated condition to an extent within 5 to 15% of, but short of, the rupturing stretch, the components being joined side by side the entire length thereof by intermingled portions of the materials making up the adjoining components, each of said components having a portion of its peripheral surface disposed outside the periphery of the other component throughout the entire length of the filament, the components being formed from differing materials and having different skin thickness at said peripheral portions, said filament having a crimp retentivity as determined in water ranging from cold to boiling temperatures of about 60 to 100%, a dry strength of at least 1.5 grams per denier and a wet strength of at least 0.6 gram per denier.

2,439,814
CRIMPED ARTIFICIAL FILAMENT
Wayne A. Sisson, Silverside, Del., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application May 13, 1943, Serial No. 486,773
6 Claims. (Cl. 28—82)



1. An artificial filaments comprising at least two components of materials joined side by side the entire length of the filament by intermingled portions of the materials making up the adjoining components, each of the components having a portion of its peripheral surface disposed outside the periphery of each other component throughout the entire length of the filament, said components being formed from differing materials and having different characteristics rendering the filament reversibly convertible by plasticization and setting thereof between an inherent crimped condition obtainable by setting in relaxed condition and a straight condition obtainable by setting under tension, said characteristics including different orientations with at least one component stretched beyond its elastic limit resulting from stretching the compostie filament after production beyond the elastic limit of at least one of its components.

2,439,815
COMPOSITE THERMOPLASTIC FIBERS
Wayne A. Sisson, Silverside, Del., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application April 3, 1945, Serial No. 586,451
11 Claims. (Cl. 28—82)

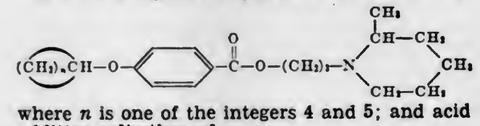


6. Artificial composite fibers which are unitary in cross-section but which comprise at least two eccentrically arranged thermoplastic components extending side-by-side the entire length of the fiber with each component having a portion of its peripheral surface outside the periphery of each other component, joined by intermingled portions of the materials making up the components, and having different temperature-responsive characteristics, the fibers being in a stretched condition in which the components are differentially strained internally sufficiently to render them reversibly convertible between a crimped condition and a potentially crimpable substantially straight condition under the influence of changes in temperature and extension, the fibers in the straight condition being crimpable in response to shrinkage of at least one of the components upon heating the fiber to a temperature above the shrinkage temperature of at least one of the components.

2,439,816
METHOD OF OPERATING ELECTRICAL SPACE DISCHARGE DEVICES
Laurence K. Marshall, Cambridge, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application September 10, 1942, Serial No. 457,803
2 Claims. (Cl. 250—27)

1. In a system for producing electrical impulses including an electrical space discharge device having a heated cathode and an anode, means for intermittently applying voltage pulses between the cathode and anode, and means for intermittently supplying pulses of heating current to said cathode to raise said cathode to a temperature of copious thermionic emission substantially in phase with said voltage pulses.

2,439,817
AIRCRAFT POWER PLANT OF JET PROPULSION TYPE
Pierre Ernest Mercier, Westport, Conn.
Application December 6, 1941, Serial No. 421,942
15 Claims. (Cl. 60—35.6)



4. In a power plant for aircraft, an internal combustion engine, a rear propulsive nozzle, a supercharger for supplying compressed air to said engine and to said rear propulsive nozzle, a second internal combustion engine for driving said supercharger, said second engine being operable independently of said first mentioned engine, and connections for leading the exhaust gases from both of said engines to said rear propulsive nozzle.

15. In an aircraft, an engine, a rear propulsive nozzle, a supercharger, a connection for leading compressed air from said supercharger to said engine, a second connection for leading compressed air from said supercharger to said rear propulsive nozzle, a second engine for driving said supercharger, said second engine being operable independently of said first mentioned engine, means located forwardly of said second engine for admitting external air for cooling said second engine, means located rearwardly of said second engine for admitting external air to said rear propulsive nozzle, and means for discharging exhaust gases from at least one of said engines into said nozzle adjacent the points of discharge thereinto of the compressed air and external air, and means for confining said exhaust gas and said air in heat exchanging relation during admission of said air to and while it and said exhaust gas are being ejected through said propulsive nozzle.

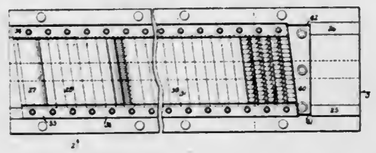
2,439,818
SUBSTITUTED ESTERS OF BENZOIC ACID
Samuel M. McElvain, Madison, Wis., and Thomas P. Carney, Indianapolis, Ind.
No Drawing. Application April 27, 1946, Serial No. 665,644
5 Claims. (Cl. 260—293)

1. Novel compounds represented by the formula

where n is one of the integers 4 and 5; and acid addition salts thereof.

2,439,819
HIGH EFFICIENCY LUBRICANTS
John M. Musselman, South Euclid, Ohio, assignor to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application October 13, 1941, Serial No. 414,783
17 Claims. (Cl. 252—32.7)

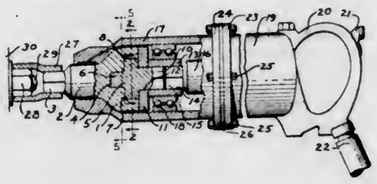
1. A compound of a heavy metal selected from the group consisting of chromium and metals below iron in the E. M. F. series and the reaction product of a sulphide of phosphorus and an oxygen-containing wax reacted at a temperature to separate a phosphorus and oxygen-containing residue.



2,439,820
COMPOUND LUBRICANTS
John M. Musselman, South Euclid, Ohio, assignor to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application October 14, 1941, Serial No. 414,977
17 Claims. (Cl. 252—32.7)

1. Compounds of a heavy metal selected from the group consisting of chromium and metals below iron in the E. M. F. series and of a metal selected from the group consisting of barium and metals having not more than four electron orbits selected from groups I, II and III of the periodic system, and the reaction product of a sulphide of phosphorus and an oxygen-containing wax reacted at a temperature to separate a phosphorus and oxygen-containing residue.

2,439,821
LUBRICANT PREPARATION
John M. Musselman, South Euclid, Ohio, assignor to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application August 19, 1942, Serial No. 455,344
24 Claims. (Cl. 252—32.7)

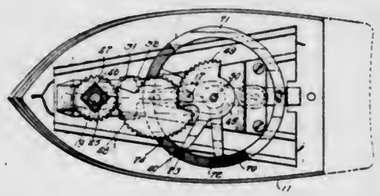


2. As a composition of matter suitable for use as a lubricant and as an addition agent to improve the characteristics of lubricating oils, a dual-reactive metal compound of the reaction product of a phosphorus sulfide and an ester wax reacted at a temperature at which most of the phosphorus of the phosphorus sulfide separates from said reaction product.

2,439,822
SAW-TOOTH SURFACE BROACH
Wilrose J. Phaneuf, Hudson, Mass., assignor to The Lapointe Machine Tool Company, Hudson, Mass., a corporation of Maine
Application November 2, 1943, Serial No. 508,758
2 Claims. (Cl. 90—33)

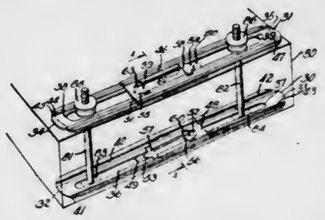
1. In a surface broach comprising a plate having side flanges and a continuous recessed flat cutter-supporting surface, a plurality of substantially rectangular elongated toothed cutting units each having its top face substantially at 90° to the parallel front and back faces of said unit and having its bottom face angularly disposed to form an included angle with the front face of said unit of slightly less than 90°, and means to align and position said units between said side flanges in said broach and with the bottom faces of said units seated against said continuous recessed surface of said broach and with said units thereby rearwardly inclined in accordance with said slight angle, whereby each cutting unit is relieved on its top surface.

2,439,823
IMPACT CLUTCH
Carl Wesley Porter, Alexandria, Va.
Application December 2, 1942, Serial No. 467,659
6 Claims. (Cl. 192—30.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



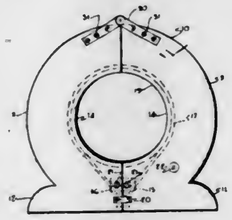
1. In a reversible variable speed power tool for turning, tightening and loosening parts; a coupling between the driving and driven members comprising a pair of aligned rotatable members attached respectively thereto and having closely adjacent opposed circumferential surfaces, there being a similar series of grooves equally spaced around the circumference of each of said surfaces, an anti-friction element for each of the grooves in one of said surfaces, the latter grooves being of a depth sufficient to contain the anti-friction elements, the other grooves being slightly less than half of such depth, said deeper grooves having sharp edges for simultaneously snapping all the elements out of their shallow grooves in cooperation with the opposed end edges thereof.

2,439,824
RESIN FROM PHENOL, FORMALDEHYDE, SATURATED AND UNSATURATED HYDROCARBONS, AND ROSIN
Fritz Rostler and Leopold Bornstein, Wilmington, Del., assignors to Wilmington Chemical Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 3, 1941, Serial No. 377,268. In Germany May 30, 1938
2 Claims. (Cl. 260—25)



1. Method for the production of heat-hardenable synthetic resin compositions of the phenol-aldehyde type containing saturated hydrocarbons in an amount sufficient to cause cloudiness when hardened, said resin having the characteristic of being substantially free from cloudiness when hardened, comprising effecting condensation of a mixture containing formaldehyde, a phenol condensible therewith to form a heat-hardenable resin, unsaturated hydrocarbons capable of condensing therewith, a proportion of more than 4% of saturated hydrocarbons boiling in the range of 160° to 360° C. at 12 mm. Hg, and sufficient to cause substantial cloudiness when said resin is hardened, and rosin, the amount of rosin being less than 10%, said unsaturated hydrocarbons being derived from by-products of mineral oil refining of the class consisting of those obtained by neutralizing petroleum acid sludge and fractionating the organic constituents thereof under vacuum to eliminate at least the portions boiling outside the range from 160° to 360° C. at 12 mm. Hg, and those obtained as solvent extract residues in the selective solvent refining of mineral oils, said unsaturated hydrocarbons having a composition of approximately 90% carbon and 10% hydrogen.

2,439,825
ELECTRIC IRON WITH SYNCHRONOUS HEAT INDICATION
Charles H. Sparklin, Chicago, Ill., assignor to Birtman Electric Company, a corporation of Illinois
Application May 13, 1944, Serial No. 535,429
3 Claims. (Cl. 38—74)



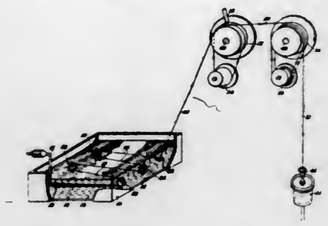
1. In an electric sadiron having a sole plate, means for heating the sole plate, a hood above the sole plate forming with the sole plate a body portion, a handle, an adjustable thermostat, an adjustable setting indicator synchronized therewith and indicating the setting of the thermostat in terms of operating conditions of the iron and a temperature indicator, the setting indicator and the temperature indicator being in substantially vertically superposed relationship whereby the setting indicator and the temperature indicator are in visual alignment.

2,439,826
LOOSE-LEAF BINDER
Harry D. Snyder, New York, N. Y., assignor, by mesne assignments, to Speed Products Company, Inc., Long Island City, N. Y., a corporation of New York
Application August 9, 1944, Serial No. 548,650
3 Claims. (Cl. 24—67)

1. In a fastener, upper and lower closely superimposed sections each having spaced rails defining a longitudinally arranged slot, means slidably guiding said sections longitudinally thereof, said rails of said upper section including alined notch means, a lug extending downwardly from said upper section and spaced from and in alinement with said notch means, said rails of said lower section including alined recess means, a lug projecting upwardly from said lower section and spaced from and in alinement with said recess means, said lug extending from said upper section adapted to be removably received in said recess means and slidably mounted on said rails of said lower section, and said lug extending from said lower section adapted to be removably received by said notch means and slidably mounted on said rails of said upper section.

2,439,827
COIL
Nathan Sterenbuch, New York, and Martin Saffer, Glendale, N. Y.
Application March 12, 1946, Serial No. 653,927
7 Claims. (Cl. 175—21)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

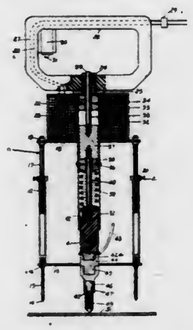
1. A coil comprising a first generally circular frame, a second generally circular frame, said frames having semicircular components, hinges connecting the said components of each circular frame, a generally tubular core between said frames, said core being divided into equal parts and extending between said frames, blocks between said frames below the parts of said tubular core, a helically wound coil on said core, plugs in one of said blocks, jacks on the other of said blocks, each of the convolutions of said coil being severed, the severed ends of each of said convolutions terminating in one of said jacks and plugs, and the ends of said coil protruding through said frames.



2,439,828
THIAZINE DIMER
Frank Swedish, Jr., Rothschild, Wis., assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
No Drawing. Application August 7, 1946, Serial No. 688,960
7 Claims. (Cl. 260—243)

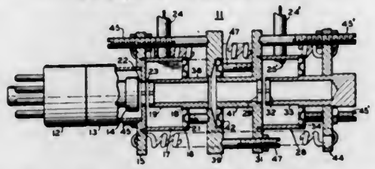
1. The method of preparing the dimer of 2-mercapto-4,6,6-trimethylthiazine which comprises heating a thiazine selected from the class consisting of 2-mercapto-4,6,6-trimethylthiazine and 2-mercapto-4-hydroxy-4,6,6-trimethyldihydrothiazine in the presence of an aqueous solution of a dehydrating mineral acid at a temperature not in excess of 90° C., the concentration of the mineral acid being that which is equivalent to aqueous sulfuric acid containing from about 50 to about 80% sulfuric acid by weight.

5. The dimer of 2-mercapto-4,6,6-trimethylthiazine.



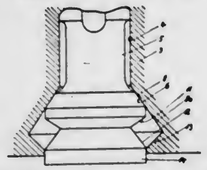
2,439,829
METHOD OF PRODUCING ARTIFICIAL YARN
Emerson A. Tippetts, Richmond, Va., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application August 19, 1943, Serial No. 499,162
7 Claims. (Cl. 18—8)

1. In the process of stretching viscose yarn between two spaced positively driven feed wheels, the step which comprises applying a jet of hot aqueous liquid to the yarn on the first feed wheel and while the yarn is within a zone of 90° from the point it leaves said feed wheel to pass to the second feed wheel, the temperature of said aqueous liquid being such as to heat said yarn to a temperature of at least 75° C., said jet being so directed as to have a component of its velocity



in the direction of rotation of said first feed wheel.

2,439,830
STUD-WELDING GUN
Alfonso P. Varela, New York, N. Y.
Application March 5, 1946, Serial No. 652,201
1 Claim. (Cl. 219—4)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

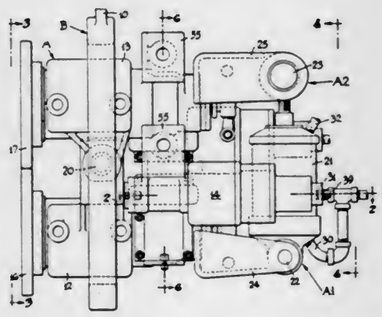


A stud-welding gun comprising a frame having a series of spaced vertical legs, a transverse member securing said legs together, each leg having an upward telescope extension, means for locking said extensions in selected position, a transverse member securing said extensions together, a solenoid coil mounted on said latter transverse member, a handle mounted on said coil, a guide tube mounted in said coil and depending toward the base of said legs, an upper stop in said tube having a central bore, a lower stop in said tube having a central bore, a solenoid armature in said tube between said stops and having its upward and downward movement limited by said stops, a signal pin on said armature extending upwardly through said upper stop and being exposed to view to indicate the position of said armature in said tube, a pin extending downwardly from said armature through said lower stop, an insulator on the lower end of said pin, a stud holder below said insulator and adjacent the base of said legs, an electrical contact between said insulator and said stud holder for conducting current through said stud holder, a compression spring between said lower stop and insulator for urging said insulator, stud holder and armature downwardly, said solenoid coil being arranged for electrical energization to reciprocate said insulator, stud holder and armature upwardly against the action of said spring.

2,439,831
HIGH-FREQUENCY APPARATUS
Sigurd F. Varian and Lloyd F. Sorg, Garden City, N. Y., assignors to The Sperry Corporation, a corporation of Delaware
Application June 28, 1944, Serial No. 542,550
14 Claims. (Cl. 315—5)

11. Electron discharge apparatus comprising a cathode, four grids successively spaced from said cathode, and adjustable means coupled to said grids for moving alternate ones of said grids with respect to the remaining ones of said grids for similarly and simultaneously varying the spacing between the grids of each pair of adjacent grids.

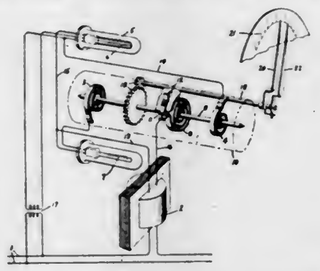
2,439,832
INJECTION NOZZLE FOR INTERNAL-COMBUSTION ENGINES
Willy Voit, Stuttgart, Germany; vested in the Attorney General of the United States
Application June 27, 1939, Serial No. 281,481
In Germany July 20, 1938
5 Claims. (Cl. 299—107.6)



1. An injection nozzle for internal combustion engines comprising a nozzle body having a bore therein of differential width longitudinally and a needle displaceable in said body toward the exit orifice thereof for opening purposes, said bore and needle being provided with cooperating conical valve seating surfaces, said bore having a cylindrical portion, beyond its seating surface, providing the exit orifice of said nozzle body, the said needle beyond its seating surface in the body bore and in the direction of fuel injection being provided with a substantially cylindrical portion which during the first portion of the opening lift of the needle from its seat on the nozzle body remains within the complementary cylindrical portion of the nozzle body so as to prevent escape of fuel from the nozzle but which finally emerges entirely from the cylindrical portion forming the exit orifice of said nozzle body to permit flow of fuel from said orifice; said cylindrical portion of said needle having a diameter at least as great as the largest diameter of said valve seating surface of said needle and arranged to form an annular shoulder whereby fuel under pressure delivered to said bore at the commencement of the needle opening movement exerts an additional force on said needle in the opening direction thereof as long as the cylindrical portion of said needle remains in said complementary cylindrical portion of said nozzle body, said bore adjacent its seating surface having a diameter larger than the largest diameter of the valve seating surface of said needle and having a wall surface at an angle to the conical valve seating surface of the bore to deflect fuel flowing past said seating surface, said needle having a constricted portion between its seating surface and its cylindrical portion to form with said deflecting wall surface an annular channel for fuel, said constricted portion being formed to provide a conical surface which in the open position of the needle at least partly emerges from the cylindrical portion forming the exit orifice of said nozzle body whereby the flow of fuel is directed outwardly away from the axis of the needle.

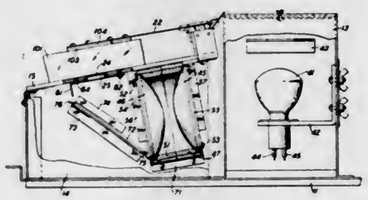
2,439,833
PROCESS FOR PLUGGING WELLS
Cary R. Wagner, Utica, Ohio, assignor to Phillips Petroleum Company, a corporation of Delaware
No Drawing. Application July 3, 1945, Serial No. 603,107
2 Claims. (Cl. 166—22)

1. The process of plugging a porous formation in a well comprising the steps of introducing into the formation a sufficient amount of an aqueous solution of sodium carboxymethylcellulose and a sufficient amount of an aqueous solution of a salt selected from the group consisting of ferrous sulphate, ferric chloride, barium nitrate, stannous chloride, basic lead acetate and aluminum sulphate, to react and form a water insoluble precipitate in an amount sufficient to effectively plug said porous formation.



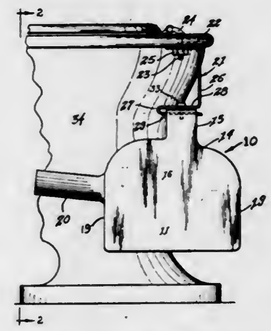
2,439,834
PORTABLE ROLLER WELDER
William A. Weightman, Philadelphia, Pa., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application March 29, 1944, Serial No. 528,577
14 Claims. (Cl. 219—4)

1. A roller welder comprising spaced arms, a welding roll mounted on each arm, and separate prime movers mounted on the arms for driving each of said rolls.



2,439,835
VOLT-AMPERE METER
Harry C. Wendt, Lynnfield, Mass., assignor to General Electric Company, a corporation of New York
Application August 21, 1946, Serial No. 692,081
4 Claims. (Cl. 171—95)

1. Apparatus for measuring the product of two quantities comprising a differential electrical measuring instrument having a pair of energizing circuits and responsive to the difference in the flow of current in said energizing circuits, means for energizing said circuits in parallel by currents the total of which is proportional to one of said quantities, a regulator in one of said energizing circuits comprising a temperature sensitive resistor heated in response to the other of said quantities for varying the relative flow of the



currents in the parallel energizing circuits, and a resistor contained in the other energizing circuit of the same order of resistance magnitude and temperature sensitivity as said regulator resistor for the purpose of compensating for the cold resistance of the regulator resistor and for changes in its resistance due to current flow therein and for ambient temperature changes.

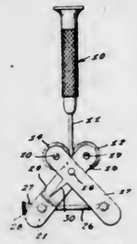
2,439,836
METHOD OF AND APPARATUS FOR LOCATING THE DIRECTION OF NATURAL AXES OF QUARTZ CRYSTAL SECTIONS
Gerald W. Willard, Fanwood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application September 9, 1943, Serial No. 501,619
3 Claims. (Cl. 88—14)

1. The method of locating the direction of one of the natural axes of a quartz crystal section that has been so cut from the mother crystal that at least one of the major surfaces of the section is perpendicular to a predetermined one of the natural axes of the crystal which comprises the steps of etching one of the major surfaces of the section, directing light successively through a light diffusing element, an aperture of pin hole magnitude and the other of the major surfaces of the section to produce a figure in the quartz section of definite configuration the orientation of which is difinitely related to the direction of said one of the natural axes of the crystal section in that it is rotated a definite amount away from the direction of said one axis, observing the figure through the etched surface of the section, moving a matching guide having a plurality of straight guide lines thereon to a predetermined position coaxial with the said light diffusing element and the aperture and in contact with a surface of the quartz section, orientating the crystal section in order to align characteristic directional points of the observed figure with the guide lines provided on said matching guide, said characteristic directional points being rotated away from the direction of said one axis, moving said matching guide to a position out of contact with the surface of the quartz section and removed from the first-mentioned position, and moving a marking guide to a predetermined position in contact with a surface of the orientated section and coaxial with the light diffusing element and the aperture, said marking guide having a straight guiding edge, and utilizing said guiding edge of said marking guide and cooperating marking means to mark a line indicating the direction of the desired natural axis on the etched surface of the section, said matching guide and said marking guide being so orientated with respect to each other when in said respective predetermined positions as to compensate for said rotation of said figure with respect to the direction of said one axis, the compensation resulting in coincidence between the direction of said guiding edge and the true direction of said one axis.

2,439,837
BRUSH RECEPTACLE AND SUSPENDING BRACKET
Bertram H. Wilcox, Redwood City, Calif.
Application July 13, 1945, Serial No. 604,793
1 Claim. (Cl. 206—15.1)

A device of the character described comprising a U-shaped hanger having attaching means on its upper end and spaced integral horizontally extending parallel supporting arms on its lower end, a brush holding container including a bail handle portion slidably and adjustably disposed between said spaced parallel supporting arms, means extending through said bail handle and parallel arms for securing the same in adjusted position, and an inclined arcuate brush handle supporting trough formed on said brush holding container extending laterally therefrom.

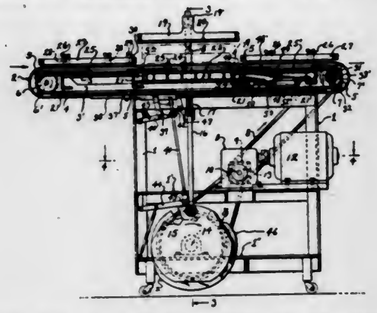
2,439,838
FOLDABLE GARMENT HANGER
Norman L. Wingate, Albany, Ga.
Application September 13, 1946, Serial No. 696,773
2 Claims. (Cl. 223—94)



1. A foldable garment hanger of the class described comprising, a pair of arm members, one of said arm members being provided with an upwardly-extending shank part on its inner end, a hooked part on the upper end of said shank part, said shank part being substantially rectan-

gular in cross-section and provided with a channeled recess in its inner side, the inner surface of that portion of said hooked part which is adjacent said shank part being arcuately-shaped so as to provide a rounded shoulder, a lug extending upwardly from the inner end of the other of said arm members and having its lower end portion pivotally mounted within said recess, and a U-shaped lock member having a pair of spaced substantially-parallel arm parts connected at their outer ends by an integral transverse back part, the inner end portions of said arm parts being pivotally secured to said shank part so that

said lock member may be rocked upwardly and downwardly between inoperative and operative positions respectively, all adapted and arranged whereby the said other arm member may be moved on its pivot between a collapsed position with respect to the one arm member wherein the upper portion of said lug projects outwardly from the recess in the shank part and the lock member is in its inoperative position out of engagement with the outer surface of said lug wherein said lug is wholly disposed within said recess and its outer surface is impinged by said back part of the locking member.



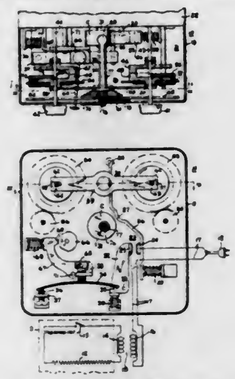
2,439,839
SCREW DRIVER CONDITIONER
George E. Brulport, Rossmoyne, Ohio
Application August 1, 1947, Serial No. 765,355
6 Claims. (Cl. 51—214)

1. A screw driver sharpener comprising a pair of transversely spaced apart cylindrical abrasive members, supporting means for said abrasive members, means carried by said supporting means for selectively adjusting the distance between said abrasive members, and means carried by said supporting means indicating the spaced apart relation of said abrasive members.

2,439,840
MACHINE FOR SLICING CHEESE OR THE LIKE IN VARIOUS SHAPES AND SIZES
Alvin F. Buroff, Columbus, Wis.
Application December 10, 1945, Serial No. 634,021
3 Claims. (Cl. 31—30)

1. A slicing machine for food products comprising a bed, a reciprocative slicing head above the bed, an endless conveyor having flights adapted to travel over the bed, a slip clutch driving means therefor, a movable stop finger projecting above the bed under control of the conveyor flights, a shiftable conveyor stop-lug, means for reversing the travel of the feed con-

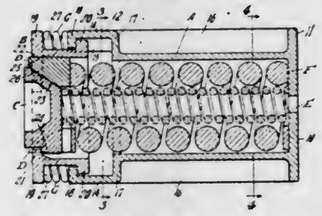
veyor, and a cam for actuating the conveyor stop-lug and reversing means.



2,439,841
COUPLING FOR COAXIAL CABLES
Hans Reinhold Ferdinand Carsten, Liverpool, and Christopher Henry Monson Thorpe, Huyton, England, assignors, by mesne assignments, to British Insulated Callender's Cables Limited, London, England, a company of Great Britain
Application August 18, 1944, Serial No. 550,028
In Great Britain September 28, 1943
2 Claims. (Cl. 174—21)

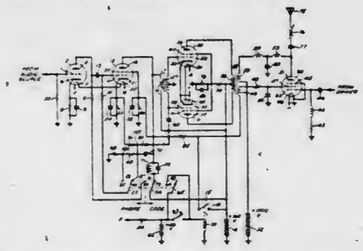
1. A coupling for a coaxial conductor cable comprising two coaxial pairs of interengaging contacts, an inner pair and an outer pair, said coupling being in two parts each of which comprises two relatively fixed contacts, one of each pair, each of said pair of contacts consisting of an internally screw-threaded socket member and an externally screw-threaded plug member for screwing into said socket member, the screw threads on the members forming the inner pair of contacts being of the same hand as, but of slightly different pitch from, the screw threads on the members forming the outer pair of contacts, whereby after the respective plugs and sockets have been brought into engagement by a few turns of the one coupling part relative to the other coupling part, the contact members of each of said pairs become locked together.

2,439,842
CONTROL MECHANISM
Earl K. Clark, Mansfield, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 6, 1944, Serial No. 562,070
5 Claims. (Cl. 200—139)



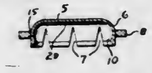
1. In control apparatus, the combination of a switch having relatively movable contacts, timing means for periodically actuating one of said contacts through a range of movement toward and away from the other contact, means responsive to the temperature of the ambient air for adjusting the other of said contacts relative said one contact into and out of said range of movement so that the ratio of the period of time the switch is closed to the period of time that it is

open is varied, inversely, with changes in the temperature of said air, means operated by said timing means for shifting said one contact relative said other contact from its active positions within said range of movement to an inactive position out of said range of movement, said con-



tact shifting means being effective to return said one contact from its inactive position to said active positions, and manually operable means associated with the contact shifting means for adjusting the times of the day that said contact is moved to its active and inactive positions.

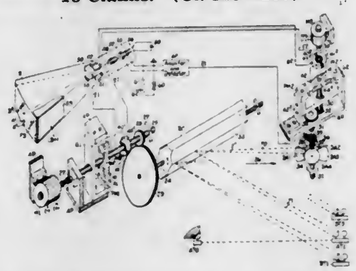
2,439,843
FRICTION SHOCK ABSORBING MECHANISM FOR RAILWAY DRAFT RIGGINGS
George E. Dath, Mokena, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application May 19, 1944, Serial No. 536,326
8 Claims. (Cl. 213—24)



5. In a friction shock absorbing mechanism, the combination with a tubular spring cage having laterally projecting, longitudinally extending, exterior wings at opposite sides thereof, and a laterally projecting follower member at the rear end; of a friction shell having a lost motion connection with the spring cage, comprising longitudinally spaced front and rear lugs at opposite sides of said cage, and a pair of lugs projecting from opposite sides of the shell and engaged between said front and rear lugs of the cage, said shell being rotatably displaceable with respect to the cage to engage the lugs of the former between the lugs of the latter, said shell having a laterally projecting follower flange at the front end; a friction clutch slidably telescoped within the friction shell; springs within the cage yieldingly opposing inward movement of said clutch and shell; longitudinally extending coil springs exteriorly of the cage disposed above and below said wings to hold said springs against rotation about the longitudinal central axis of the mechanism, said springs bearing at their front and rear ends on the follower flange of the shell and the follower member of the cage respectively; and centering bosses on said follower flange seated within the front ends of said coil springs to lock said shell against rotation with respect to said springs and hold said shell against rotation with repect to the spring cage.

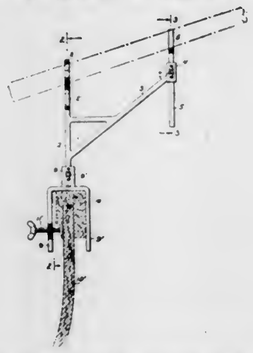
2,439,844
AMPLIFIER AND OSCILLATOR CIRCUIT
Robert J. Davis, Lutherville, Md., assignor to Bendix Aviation Corporation, New York, N. Y., a corporation of Delaware
Application October 29, 1943, Serial No. 508,177
13 Claims. (Cl. 250—17)

2. In signal responsive apparatus, an electric discharge device having input and output circuits, means for selectively feeding back energy from said output circuit to said input circuit in phase with and in phase opposition with the energy in said input circuit, said in phase feedback being of a magnitude sufficient to cause sustained oscillations in said input and output circuits, and means for peaking the response of said output circuit at a predetermined frequency when the output energy is fed back with an in phase relationship and eliminating said peaked response when the output energy is fed back in phase opposition.



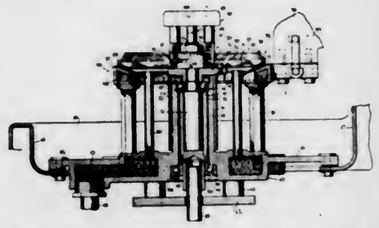
2,439,845
BOTTLE CAP
Jan de Swart, Los Angeles, Calif., assignor of one-half to C. Bland Jamison, Beverly Hills, and one-half to Arthur E. Wright, Los Angeles, Calif.
Application October 12, 1943, Serial No. 505,958
2 Claims. (Cl. 215—45)

2. A closure adapted to close a container having a mouth and an external locking bead below the mouth of the container, said closure comprising a cap having a top, a depending integral serrated skirt, a ring, and frangible connecting means between the skirt and ring to normally retain the ring integrally connected to the skirt intermediate the ends of the latter, said skirt gradually thickening in cross-section from said connecting means to its bottom end, said cap, skirt, ring and frangible connecting means being integral and formed of the same material, and said skirt, ring and frangible connecting means being constructed and arranged so that said ring may be slid downwardly on the skirt only when said frangible connecting means has been broken and so that said ring, by engaging that portion



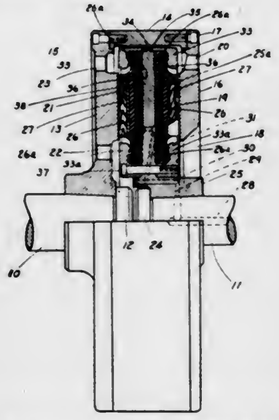
of the skirt having a gradually thickening cross-section may cause the inner surface of the bottom end portion of the skirt to engage under said locking bead of the container.

2,439,846
AIRPLANE COURSE INDICATING SYSTEM
Oscar H. Dicke, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.
Application April 21, 1944, Serial No. 532,181
18 Claims. (Cl. 343—107)



1. In an indicating system for airplanes, the combination with a plurality of fixed radio radiating apparatuses arranged along the ground to define a path over which an airplane is to fly, a display means supported within view of the pilot on such airplane, and radio responsive means including two mechanically moved scanning devices in series of which one comprises a radio reflector and the other comprises a radio detector for displaying visual images of said apparatuses on said display means by a plurality of lighted spots one for each apparatus, said spots being so juxtaposed as are the lines of sight connecting such airplane and apparatuses.

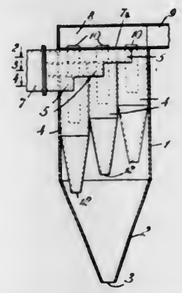
2,439,847
POLE HOLDER
Mose E. Disotell, Berlin, Wis.
Application July 25, 1945, Serial No. 607,007
1 Claim. (Cl. 248—42)



A rod or pole support comprising a vertically disposed stem terminating with a downwardly inclined loop, the same merging into an upwardly turned loop, forming an S in shape, the bottom upturned loop being adapted to receive the reel weighted butt of a casting pole, while the downturned loop is adapted to receive the light butt of a standard still fishing pole, a braced arm extending from the stem below the loops terminating with a vertically disposed sleeve, a shank adjustably fitted to the sleeve and an upwardly open crotch carried by the shank for supporting the intermediate portion of a reel weighted pole or a common still fishing pole.

2,439,848
METAL WHEEL
Carolus L. Eksergian, Detroit, Mich., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application June 21, 1943, Serial No. 491,699
3 Claims. (Cl. 74—230.8)

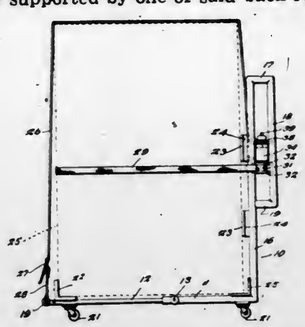
1. A wheel comprising a hub section, a sigmoid section outwardly joining said hub section, and an edge section outwardly joining said sigmoid section, said edge section including a rigid strip annulus adjoining said sigmoid section and a re-entrant annulus adjoining said rigid annulus, the re-entrant annulus and sigmoid section being flexible relative to said rigid annulus.



2,439,849
ASSEMBLY FOR CLUTCHES AND BRAKES
Thomas L. Fawick, Akron, Ohio, assignor to The Fawick Airflex Company, Inc., a corporation of Indiana
Application April 26, 1944, Serial No. 532,761
7 Claims. (Cl. 192—88)

1. An assembly comprising two relatively rotatable structures so journaled as to be subject to misalignment of their axes, said structures being adapted for frictional, torque-sustaining engagement with each other, one of said structures having an annular, frictional-engagement face disposed at least approximately at right angles to the axis of rotation and the other comprising a rigid member having an annular face confronting the

said frictional-engagement face, an annular diaphragm structure backed by the said annular face of the rigid member and having a portion for cushioning and sustaining the torque and for compensating for misalignment, the chief material of said portion having substantially the resilient deformability of vulcanized soft-rubber, said diaphragm structure being adapted to be distended into engagement with said frictional-engagement face, and means for conducting distending fluid to and from said diaphragm structure.

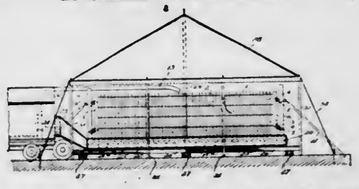


2,439,850
MANUFACTURE OF CARBON BLACK
George L. Heller, Monroe, La., assignor to Columbian Carbon Company, New York, N. Y., a corporation of Delaware
Application September 8, 1944, Serial No. 553,265
1 Claim. (Cl. 183—83)

In the centrifugal separation of flocculent agglomerates of furnace carbon black from suspension thereof in furnace gases, the improvement which comprises passing the suspension through a plurality of cyclone separators connected in parallel, the respective cyclone separators comprising a cylindrical body portion not exceeding about 3 feet in diameter and of a height equal to about 1½ to 2 times its diameter, an outlet tube co-axially positioned in said body portion and extending downwardly into the body portion for a distance of about 1 to 1½ times the diameter of said body portion, the diameter of said outlet being about ½ that of said body portion, and a cone-shaped hopper member extending downwardly from the cylindrical body portion for a distance approximating the height of said body portion, passing the suspension to the respective cyclone separators through a tangentially arranged inlet port, located at the upper end of said body portion, having an area of about ⅛ the square of the diameter of said body portion of the separator and at a velocity of about 10 to 12 feet per second.

2,439,851
EXTENSIBLE HAND TRUCK
Frank Higgins, Princeton, Ill.
Application August 28, 1945, Serial No. 613,109
3 Claims. (Cl. 280—34)

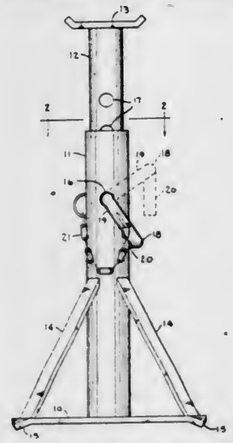
1. A hand truck including a longitudinally extensible, sectional base, casters supporting said base, a back integrally formed upon a first section of said base, said back including a pair of vertical, laterally spaced pillars, said pillars being inturned at their upper ends to constitute handles for said truck, a plurality of transversely disposed back rests secured to said pillars, a web article holding means having one end secured to one of said pillars and its other end wound upon a pulley supported by one of said back rests and



a ratchet and pawl for retaining said pulley and said web in tensioned adjustment.

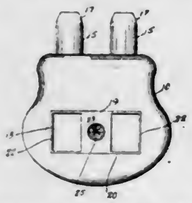
2,439,852
CATALYST REVIVIFICATION
Donald R. Jackson, South Charleston, W. Va., assignor to Carbide and Carbon Chemicals Corporation, a corporation of New York
No Drawing. Application June 30, 1944, Serial No. 543,051
11 Claims. (Cl. 252—241)

1. In the process for revivifying a spent catalyst comprising a silicious body promoted with at least one oxide of a metal selected from the group consisting of tantalum, zirconium and columbium, which catalyst is useful for condensing aliphatic aldehydes and alcohols to form diolefines, which process comprises eliminating at least the major portion of the carbonaceous impurities from the spent catalyst, thereby reactivating the catalyst, and thereafter impregnating the catalyst with an aqueous solution of a compound of a metal selected from the group consisting of tantalum, zirconium and columbium, which compound is decomposable to yield an oxide of such a metal, the steps which comprise reacting the reactivated catalyst with a dilute aqueous solution of hydrofluoric acid, and removing therefrom excess hydrofluoric acid and water-soluble reaction products prior to said impregnation step.



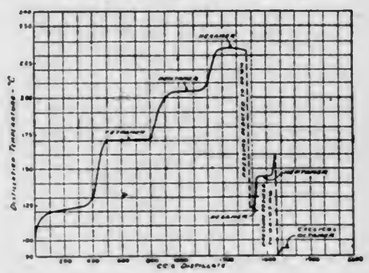
2,439,853
DEMOUNTABLE DRIER FOR HAY AND THE LIKE HAVING A PERFORATE FLOOR AND AIR CIRCULATING MEANS
Frank Wesley Moffett, Jr., Gates, N. Y.
Application October 19, 1945, Serial No. 623,298
15 Claims. (Cl. 34—233)

1. A portable knock-down rack for drying hay and the like comprising side walls, a bottom wall having openings therein, a canvas member folded to form a chamber beneath the bottom wall and having side walls with a portion of the side walls resting on the bottom wall, means resting on the



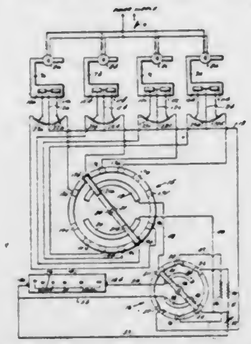
bottom of said canvas chamber and supporting said bottom wall, an air inlet communicating with said chamber, and means for forcing hot air into said air inlet.

2,439,854
JACK STAND
Daniel J. Lipski, Milwaukee, Wis.
Application April 25, 1946, Serial No. 664,825
3 Claims. (Cl. 248—352)



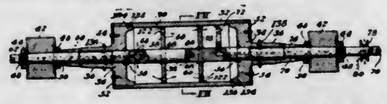
3. A locking pin for supports of a type having a vertically adjustable telescopic standard, said pin having a body portion projectable through the standard to secure the same in various positions of adjustment, and a pin retainer structure rigidly connected to one end of said pin and swingable by gravity into pin retaining position, said structure terminating in a finger disposed cross-wise of said pin spaced from but adjacent the opposite end of said pin.

2,439,855
RESPIRATOR
James C. Mortensen, Princeton, Ill.
Application July 16, 1946, Serial No. 683,900
5 Claims. (Cl. 128—146)



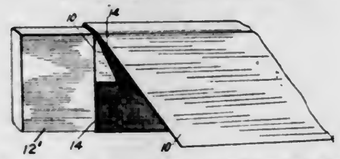
1. A respirator having a body including a mouth piece integrally formed with the body, and having a bore therein communicating with a cavity in the body, and a pair of nose pieces extending upwardly from the body and having bores therein communicating with said cavity, and a filter box adapted to be removably inserted in the cavity, and having two openings in its top communicating forwardly with the atmosphere, the body having two counterbored holes therein communicating with the holes in the filter box and the nose pieces being removably inserted in the counterbores.

2,439,856
DIMETHYL SILICONE POLYMERS AND METHODS OF MAKING THEM
Rob Roy McGregor, Verona, and Earl Leathen Warrick, Pittsburgh, Pa., assignors to Corning Glass Works, Corning, N. Y., a corporation of New York
Application June 10, 1943, Serial No. 490,348
6 Claims. (Cl. 260—448.2)



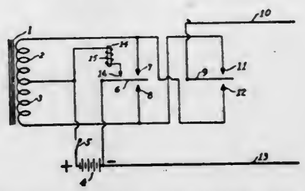
6. A liquid cyclic polymer of dimethyl silicone having the formula $[(CH_3)_2SiO]_n$, where n represents an integer from 5 to 7 inclusive.

2,439,857
SINGLE KNOB OXIMETER HAVING SELECTIVE CONTROL MEANS FOR MULTIPLE CHANNELS
Glenn A. Millikan, Nashville, Tenn., assignor to United States of America as represented by the Secretary of War
Application April 4, 1947, Serial No. 739,456
9 Claims. (Cl. 88—14)



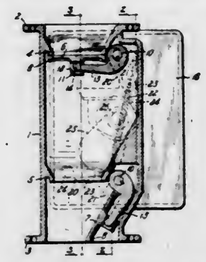
1. A single control multiple channel oximeter comprising, a plurality of photocell units each including a photocell means and a light source and being adapted to receive a living membrane between the photocell means and the light source, each photocell means including a separate control potentiometer, a galvanometer adapted to be connected to each photocell unit to indicate the per cent of oxyhemoglobin in the blood of said living membrane, a selector switch for connecting only a single photocell unit to said galvanometer at a time, adjusting means connected to said selector switch and adapted to engage only one of said potentiometers at a time according to the position of the selector switch, and the electrical connections between the selector switch and photocell units including the connection of the potentiometers and the photocell means being such that selection of a particular photocell unit by the selector switch thereby positions said adjusting means for engagement with the potentiometer connected to the photocell means included in said last mentioned photocell unit.

2,439,858
CONDUCTOR ROLL
Earll R. Muddiman, Wilkinsburg, and William E. Winterhalter, Mount Lebanon, Pa., assignors to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application August 28, 1943, Serial No. 500,418
10 Claims. (Cl. 204—209)



1. Apparatus for electroplating metal on a continuously rapidly moving strip of dissimilar metal, which comprises a combined conveyor and conductor roll for conveying the strip through an electroplating bath, the said roll also contacting and supplying electric current to the strip as it moves through the plating bath and making the said strip the cathode in the bath, the said combined conveyor and conductor roll comprising a hollow electrically conducting cylinder, a conductor shaft for mounting the cylinder, current conducting diaphragms between the cylinder and shaft in conducting relation therewith, the said diaphragms having a diameter equal to the inside diameter of the cylinder and being spaced equally along the shaft and cylinder and at equal distance within the ends of the cylinder, the said diaphragms uniformly distributing current over the entire cylinder, electrically conducting end closure members for the cylinder in tight engagement therewith and with the shaft, the said closure members being of less conductivity than the diaphragms, and forming auxiliary current conducting and distributing members cooperating with the diaphragms for uniformly distributing the current over the entire cylinder, the said closure members being extended into tapering hubs engaging the shaft, current collecting drums in tight engagement with the shaft, and means in the shaft for circulating cooling fluid through the cylinder.

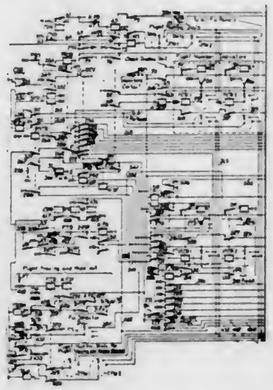
2,439,859
INSULATING COVER FOR BUS BARS
George J. Muller, Philadelphia, Pa., assignor to Taylor Fibre Company, Norristown, Pa., a corporation of Pennsylvania
Application October 2, 1945, Serial No. 619,782
3 Claims. (Cl. 174—140)



2. An insulating covering of tubular shape for a conductor bar having a layer of dielectric material on the inner surface, a layer of foraminous conducting metal on said inner layer of dielectric material, a plurality of layers of dielectric material wound on the layer of foraminous conducting metal bonded to each other by an insulating cement, portions of the foraminous conducting metal extending through the inner layer of dielectric and portions of the dielectric thereon.

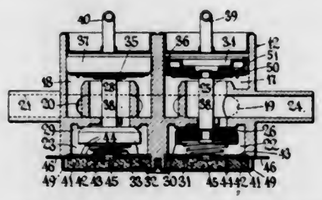
2,439,860
DIRECT CURRENT VOLTAGE DOUBLER
Walter E. Peek, Indianapolis, Ind., assignor to Electronic Laboratories, Inc., Indianapolis, Ind., a corporation of Indiana
Application April 28, 1944, Serial No. 533,125
6 Claims. (Cl. 171—97)

1. A vibrating interrupter system for modifying the voltage delivered from a direct current source, comprising an inductance winding having a center tap adapted for connection with one side of a direct current source, a first vibrating interrupter including a vibrating member adapted for connection to the opposite side of said direct current source and oppositely disposed contacts respectively connected to the opposite end terminal of said inductance winding, a second vibrating interrupter including a vibrating member adapted for connection with one side of the load and a pair of oppositely disposed contacts respectively connected to the opposite end terminals of said inductance windings.



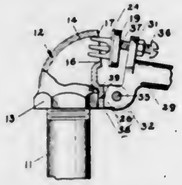
2,439,861
ALTERNATE TIPPING VALVE FOR HANDLING FLUENT MATERIALS
Peter Pooties, Temple City, Calif., assignor to Western Precipitation Corporation, Los Angeles, Calif., a corporation of California
Application January 2, 1945, Serial No. 571,086
2 Claims. (Cl. 222—445)

1. In an alternate tipping valve comprising a material conveying conduit; two valve seats in the conduit spaced axially thereof; two valve closure members each hinged to swing between open and closed positions with respect to one of said seats; an arm connected to each valve closure member; and a rotating cam engageable with said arms for alternately opening and closing said valves, the improvement which consists in that: the operating arms are substantially parallel to each other when the valve closure members are closed against the seats; a first and a second cam follower are located on each operating arm; and the rotating cam is located between the operating arms in a position to engage the first and then the second follower in sequence on each arm upon rotation in one direction and to engage the second and then the



first follower in sequence on each arm upon rotation in the opposite direction, to move the valve closure members alternately through similar cycles of opening and closing.

2,439,862
AIRWAY TRAFFIC CONTROLLING SYSTEM
Neil D. Preston and Forest B. Hitchcock, Rochester, N. Y., assignors to General Railway Signal Company, Rochester, N. Y.
Application March 31, 1944, Serial No. 528,926
53 Claims. (Cl. 177—353)



1. In a system of airways traffic control, the combination with two fix panels relating to adjacent fixes and each having a plurality of registration spaces for posting data for scheduled flights, each of said registration spaces including a plurality of changeable indicators for registering a scheduled time and altitude, means for registering the times and altitudes at said adjacent fixes for a proposed flight schedule, and conflict detection means operating automatically to determine if a given proposed flight is scheduled for times and altitudes conflicting with each of said prior flight schedules taken one at a time with respect to either of said fixes or any point in the fix interval between said fixes.

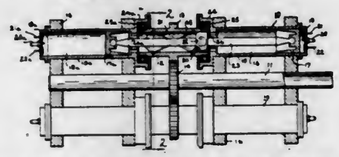
2,439,863
VACUUM OPERATED THREE-WAY VALVE
Anton Rappl, Buffalo, N. Y., assignor to Trico Products Corporation, Buffalo, N. Y.
Application May 4, 1942, Serial No. 441,612
3 Claims. (Cl. 121—44)

1. A fluid motor system having a fluid motor with a normally suction-balanced member therein, a motor control unit comprising a body having plural compartments each divided by a partition to provide a vacuum chamber and in an atmospheric chamber with the partition having a passage therethrough opening through valve seats in each chamber, a valve in the atmospheric chamber supported by a sustaining spacer from a valve in the vacuum chamber with the spacer acting to unseat one valve as the other seats, a pressure responsive wall in the vacuum chamber operative under a fluid pressure differential to seat the valve in the vacuum chamber, the vacuum chamber at the opposite side of the wall having a normally closed venting passage, pressure equalizing means normally providing restricted communication between the portions of the vacuum chamber at opposite sides of the wall, a suction supply line opening into each vacuum chamber, a chamber port from each partition passage leading to the fluid motor to so suction balance the member, a perforated closure wall for each atmospheric chamber, a perforated disk valve oscillatable upon the closure wall to register the perforations more or less in regulating the speed of operation of said fluid motor, means operable to selectively vent either venting passage, and spring means between each atmospheric valve and the respective perforated wall for normally seating such valve and unseating its associated vacuum valve.

2,439,864
FLOAT VALVE
Thomas Ritchie, Oskaloosa, Iowa, assignor to Charles B. Wade, Ottumwa, Iowa
Application January 14, 1944, Serial No. 518,484
1 Claim. (Cl. 137—104)

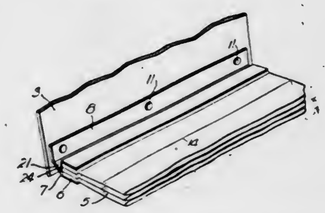
A float valve comprising a casing of elbow shape having an inlet adapted for connection with the top of an upright liquid supply pipe, and an outlet provided with a seat portion on the outside thereof, with said seat being in a plane inclined upwardly and inwardly of said casing, and with said outlet being of a reduced diameter relative to said inlet, a valve for said outlet comprised of a disc member having a plurality of circumferentially arranged legs projected laterally from one side thereof, and spaced apart from each other over substantially their full length, with said legs being loosely received within said outlet to provide for the movement of said disc member into and out of closing engagement with said seat portion, a float-supporting arm having a pair of oppositely extended lateral projections on one end, means pivoting one of said projections adjacent said inlet to provide for an up and down pivotal movement of said arm, with the second projection being pivotally movable toward and away from the outlet of said casing and engageable with said disc to control the operation of said valve member in response to the pivotal movement of said arm, and a stop on said casing engageable with said first projection to limit the downward pivotal movement of said arm at a position such that said disc member is retained by said second projection against falling out of said outlet.

2,439,865
MANUFACTURE OF WATER-SOLUBLE TEXTILE MATERIALS
Robert Pierce Roberts, Spondon, near Derby, England, assignor, by mesne assignments, to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application January 30, 1945, Serial No. 575,361. In Great Britain March 1, 1944
8 Claims. (Cl. 8—116.2)



1. Process for the manufacture of textile fabrics having a relatively high tenacity when dry but capable of being dissolved by water, which comprises impregnating a cellulose fabric with a caustic alkali solution of concentration at least 35%, removing excess alkali solution until the fabric retains 2 to 3 times its original weight of the alkali solution and, without allowing the alkalized cellulose material to age, subjecting it first to the action of acrylonitrile at about room temperature and then to the action of methyl chloride at a temperature above 50° C.

2,439,866
OPEN-AIR SWIMMING POOL
Otto Saladin, Schweizerhalle, near Basel, Switzerland
Application March 6, 1945, Serial No. 581,300
In Switzerland November 20, 1943
3 Claims. (Cl. 210—11)



1. An open-air swimming pool, the top of which is open to the atmosphere, said swimming pool comprising a wall extending completely around and laterally encompassing a body of water, a spray pipe connected to the water supply and extending over the entire width of the pool and secured to the said wall thereof approximately flush with the water surface, said pipe having perforations disposed in its upper half so that sprays issued therefrom define a small angle with the water surface, whereby the said sprays move close to the water, but in slight spacing therefrom, before hitting the water surface and thereby engender an air current immediately above the latter which drives flotsam toward the wall of the pool, supplementing the propagating action of the sprays hitting the water surface, a spillway incorporated in the pool wall opposite the said spray pipe, and means for discharging the spill and washed up flotsam into a sewer; the whole floatsam skimming device to operate as and for the purpose described.

2,439,867
INTERNAL-COMBUSTION ENGINE
Donald W. Schaeffer, Dayton, Ohio
Application October 8, 1942, Serial No. 461,281
9 Claims. (Cl. 74—57)

1. An internal combustion engine having a cylinder and a piston therein for reciprocation in said cylinder, said engine being characterized by a mechanism for transforming reciprocatory motion into rotary motion consisting of a rotatable cam cylinder, a piston cam follower reciprocable within said cam cylinder and driven by the piston of the motor, endless track means on said rotatable cam cylinder that spirals from one end to the other and returns to close upon itself, and drive means extending from said follower piston in said rotatable cam cylinder and engaging said track to produce rotation of said cam cylinder upon reciprocation of said follower piston therein, said drive means comprising a rotatable member carried by said follower piston, and interengaging relatively rotatable parts extending from said last mentioned rotatable member for engaging said track.

2,439,868
BINDER
Samuel Segal, New York, N. Y., assignor to Wilson-Jones Company, Chicago, Ill., a corporation of Massachusetts
Application September 13, 1944, Serial No. 553,865
3 Claims. (Cl. 129—1)

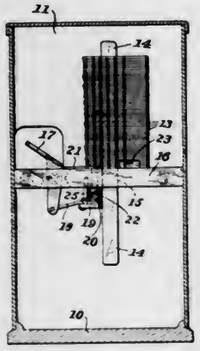
2. In a binder, a cover member, a stack of envelope means having reinforcing filler means at the lower ends thereof, a connector interposed between said cover member and envelope means and embodying a yoke having spaced parts straddling and secured to said envelope means and constituting a channel for receiving said lower ends, said connector comprising spaced margins defining an elongated gap, reinforcing means within said gap and secured to said margins and characterizing therewith a reinforced portion, said connector having juxtapositioned and secured portions integral with said yoke and between said channel and reinforced portion and defining a flexible web extending from one corner of said yoke and substantially coextensive the width of said channel and constituting hinge means to provide for bodily tiltable displacement of said envelope means and yoke relative to said web and the latter relative to said reinforced portion, and means securing said reinforced portion to said cover member.

2,439,869
ADJUSTABLE SPRING SUPPORTED CHAIR
Renwick J. Sharp, Guatemala, Guatemala
Application November 14, 1944, Serial No. 563,334
12 Claims. (Cl. 155—51)

1. In a revolving and swaying adjustable height seat or chair, a seat bottom for supporting a cushion, a tubular post member, an apertured cap member screwed onto the upper portion of said post member, a two armed cantilever spring having the free end portions of its arms mounted in said cap member and its body portion extended horizontally and connected by bowed downwardly directed runs with said arms, said body portion

underlying and being pivoted to the forward portion of said seat bottom, a pin having free end portions laterally mounted on said post member subjacent said cap member, a pair of bowed springs each having looped end portions at one end pivotally engaging the free end portions of

said pin, means carried at their concave sides by the central arched portions of said bowed springs pivotally related to the rear portion of said seat bottom, and a seat back fastened to and spanning the distance between the other ends of said bowed springs.



2,439,870

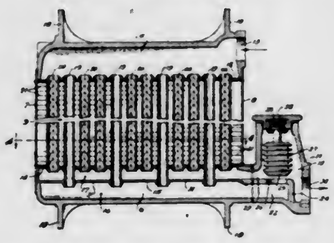
BOBBY PIN SPREADER AND DISPENSER

Ralph P. Sharp, Sr., Carville, La., assignor of one-third to Morris H. Faures and one-third to Albion B. Cobb, both of Baton Rouge, La.

Application July 24, 1946, Serial No. 685,880

8 Claims. (Cl. 132—1)

7. A bobby pin spreader and dispenser comprising a horizontal supporting shelf, a slot in said shelf, a thin vertical magazine blade inserted in said slot and adapted for free sliding movement therein, and adapted to have bobby pins strung in close superposed alignment thereon, the lowermost pin resting on the top surface of said shelf and supporting the magazine thereon, a finger mounted for pivotal movement upon the top surface of said shelf, means for turning said finger to bring it in contact with the lowermost bobby pin resting on said shelf whereby, upon continued movement of said finger, the lowermost bobby pin is rotated through approximately 90° upon the magazine blade and is simultaneously spread.



2,439,871

FLUID TEMPERATURE CONTROLLING DEVICE

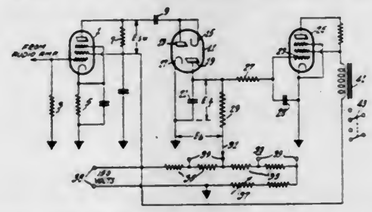
Lawrence E. Skelly, New Haven, Conn., and Howard F. Brinen, Racine, Wis., assignors to Young Radiator Company, Racine, Wis., a corporation of Wisconsin

Original application September 18, 1942, Serial No. 458,964. Divided and this application January 8, 1945, Serial No. 571,814

1 Claim. (Cl. 257—2)

An oil temperature control device of the class described comprising a pair of headers one of which has a single chamber with an oil inlet and the other of which is partitioned to provide double chambers with contiguous outlets and which headers are connected together in opposed relationship by a plurality of tubes, occasional of said tubes having unobstructed oil flow therethrough and providing communication between said single-chamber header and one of the chambers of said double chamber header, the remainder of said tubes having heat transfer means obstructing the oil flow therethrough and providing communication between said single-chamber header and the other chamber of said double-chamber header, a multiplicity of closely-spaced fins through which said tubes extend in heat transfer relationship, a valve housing with outlet connected to said double-chamber header outwardly of the outlets for said chambers, said valve housing being partitioned to provide valve chambers communicating respectively with said header chambers and having a port affording communication between said valve-housing chambers, and a thermostatically-operated valve exposed in said valve-housing to the flow of oil from both of said header chamber outlets to said valve-housing outlet, said valve being normally biased to open said partition port when the oil flow is free to flow through said occasional tubes at a time when the oil flow through said remainder of tubes is retarded by the viscosity of the oil, the partition separating the chambers of said double-chamber header having apertures providing communication between said chambers so as to permit a continuous small flow of oil from said other chamber to said one chamber of said double-chamber header.

2,439,872



FREQUENCY RESPONSIVE CIRCUITS

Royden C. Sanders, Jr., Hightstown, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Original application November 30, 1942, Serial No. 467,445. Divided and this application March 2, 1944, Serial No. 524,797

2 Claims. (Cl. 250—27)

1. A system for providing substantially uniform response to deviation in frequency of an input signal above and below a selected frequency, including a counter circuit including a capacitor and means for applying said input signal thereto, said means including two parallel paths each including a respective rectifier, said rectifiers being conductive in respectively opposite directions, one of said paths including a load resistor and a source of bias voltage predetermined in accordance with said selected frequency, connected in series with each other and said rectifier, and a storage capacitor connected across said load resistor and bias source, an amplifier tube including a control grid and a cathode, and means for applying the voltage across said storage capacitor to said control grid, said last mentioned means including a resistor connected between said load resistor and said grid and a capacitor connected between said grid and said cathode, the product of the values of said last mentioned resistor and said last mentioned capacitor being at least as much as the product of the values of said load resistor and said storage capacitor.

2,439,873

COMBINED BIRD CAGE PERCH CLEANER AND HOLDER FOR MITE ATTRACTING MATERIAL

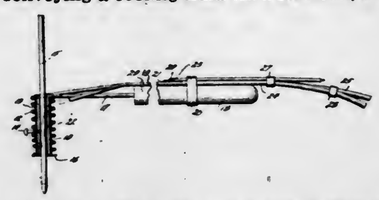
Ellis Norman Snyder, Melrose Park, Ill.

Application October 12, 1944, Serial No. 558,304

3 Claims. (Cl. 119—22)

2. A combined bird cage perch cleaner and holder for mite attracting material comprising a substantially rectangular piece of stiff metal, having an arched transversely extending perch cleaning portion between the ends having indentations therein and a hook on one end whereby to suspend the device on a bird cage with mite attracting material contained in the arched portion.

2,439,874



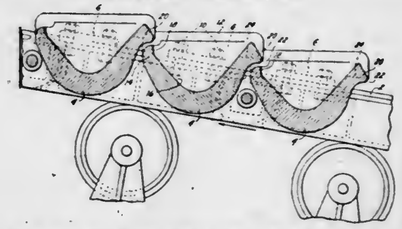
CARBON HOLDER

Menno R. Suter, Harrisonburg, Va.

Application March 12, 1946, Serial No. 653,827

4 Claims. (Cl. 219—8)

1. In a light weight carbon stick holder for manual use, an elongated wooden handle, a sleeve spaced from and supported by the handle, a metal coil helically wound about the sleeve and having its two ends secured to the wooden handle, means for conveying a cooling fluid thru said coil, a carbon stick extending thru the sleeve, a washer at the lower end of the sleeve of greater diameter than the sleeve, and a wire electrically connecting the coil with the stick thru said washer.



2,439,875

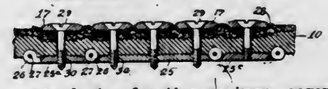
PIG MOLD

George E. Steudel, Chicago, Ill., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey

Application January 30, 1947, Serial No. 725,180

1 Claim. (Cl. 22—62)

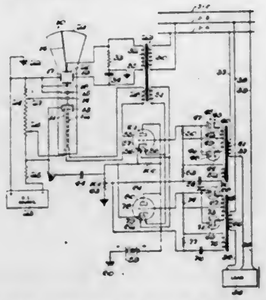
In a pig molding machine comprising an endless conveyor adapted to carry a plurality of pig molds in overlapping relationship, the combination with said conveyor of an open pig mold comprising a flat bottom, sloping end walls, sloping side walls, a retaining wall extending above the side wall on the underlapping side, said retaining wall being arranged with respect to the horizontal plane passing through the bottom of the retaining wall in such a manner that the retaining wall makes an angle of from 45° to 90° to the portion of said plane that passes over the mold cavity, an overlapping lip on the overlapping side, and an overflow notch extending through the overlapping lip, the bottom of said notch being at substantially the same elevation as the bottom of the retaining wall.



2,439,876

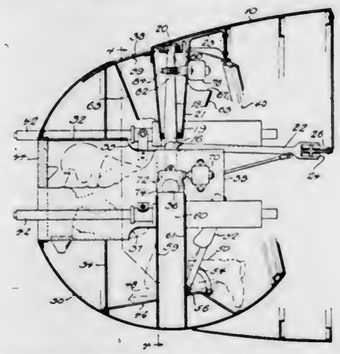
TIRE REPAIR DEVICE

Nichols Stevens, Chicago, Ill.



Application February 13, 1945, Serial No. 577,712

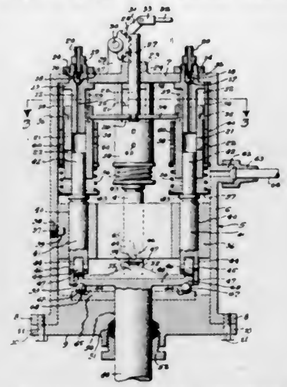
3 Claims. (Cl. 152—369)



1. A repair device for tire casings, comprising a plurality of outer clamp bars, some extending at right angles to others, and all being hingedly connected together, each having a threaded screw hole therein, inner washers, one for each clamp bar, and screws adapted to extend through said washers and through a tire casing disposed between said outer clamp bars and washers, and threaded in said clamp bars.

2,439,877
CATHODE-RAY PHASE INDICATOR
Alfred A. Stuart, Jr., Hasbrouck Heights, N. J., assignor to Bendix Aviation Corporation, New York, N. Y., a corporation of Delaware
Application October 6, 1943, Serial No. 505,242
4 Claims. (Cl. 172—245)

2. In phase responsive apparatus, a source of reference alternating current, means for deriving a harmonic of said reference source current, a rotating indicating element revolving in synchronism with and in predetermined relation to said harmonic, a second source of alternating current, means for deriving pulses from said second source, and means responsive to said pulses for controlling the radius of rotation of said element.

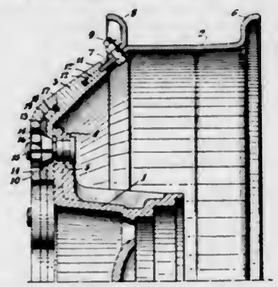


2,439,878
GUNNER'S TURRET FOR AIRCRAFT
Julius G. Villepigue, Inglewood, Calif., assignor to North American Aviation, Inc., Inglewood, Calif., a corporation of Delaware
Application February 21, 1944, Serial No. 523,230
8 Claims. (Cl. 89—37.5)

1. Aircraft turret construction comprising an outer wall of parti-spherical shape, a tubular inner wall disposed within said outer wall and adapted to receive the upper portion of a gunner's body, means for supporting said outer wall for oscillation in the azimuth and in elevation and a window in said outer wall in registering with one end of said tubular inner wall.

2,439,879
MULTICYLINDER FUEL INJECTION PUMP
Ivis James Allen, Ypsilanti, Mich.
Application December 2, 1944, Serial No. 566,267
14 Claims. (Cl. 103—37)

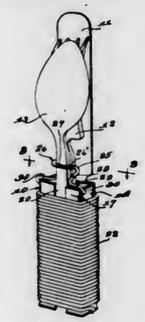
1. A pump structure, comprising a housing, a fixed plunger carried by said housing and having a discharge port, a cylinder reciprocably and guidably mounted on said fixed plunger and having an intake port, a reciprocating plunger mounted in said cylinder in opposed relation to said fixed plunger to form a pump chamber therein, and a



control member operatively connected to said cylinder to move said cylinder and intake port to various positions of adjustment whereby to vary the volumetric discharge through said discharge port.

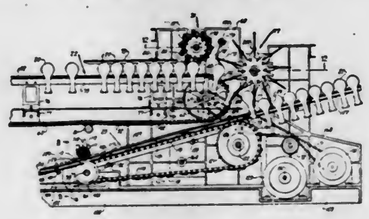
2,439,880
TUNGSTEN-MOLYBDENUM TRIOXIDE CATALYST
Herrick R. Arnold, New Castle County, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 13, 1942, Serial No. 461,896
2 Claims. (Cl. 252—232)

1. An oxidation catalyst composition consisting of an intimate mixture of the trioxides of tungsten and molybdenum in which the mole ratios of the trioxides varies from 10:1 to 1:10, said catalyst being porous and granular in nature and of bright orange-yellow color.



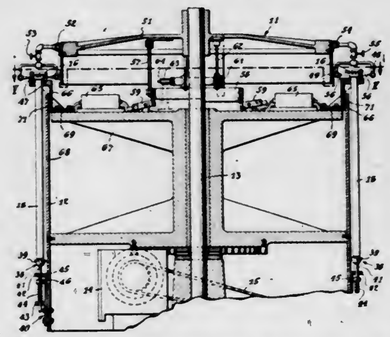
2,439,881
WHEEL
Charles S. Ash, Milford, Mich.
Application June 8, 1944, Serial No. 539,244
3 Claims. (Cl. 301—65)

1. A composite vehicle wheel structure including a dished, annular web element having a frusto-conical radially outer portion and a substantially plane radially inner portion normal to the axis of the wheel having apertures therein to receive hub mounting bolts, said radially outer



portion being formed of a casting of relatively soft, light weight material and said radially inner portion being formed of a relatively harder and heavier material, said inner portion having a radially outer extension curved into conformation with said radially outer frusto-conical portion and embedded therein.

2,439,882
KNIFE, FORK, AND SPOON SET
Raymond R. Beddow, Toledo, Ohio
Application April 1, 1946, Serial No. 658,832
6 Claims. (Cl. 30—147)

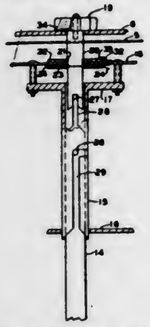


1. A holder for forks and spoons having tapered handles comprising an elongate tube having open ends and adapted to be attached to the handle of a table knife and receive a nested fork and spoon, and means on said tube adapted to fit the narrow portions of the fork and spoon handles and to wedge against the wider portions of such handles upon their relative shifting movement with the tube.

2,439,883
ARTICLE TRAYING MACHINE
Carl A. Brown, Chardon, Ohio, and Frank B. Van Sickle, deceased, late of Cleveland Heights, Ohio, by Doris M. Van Sickle, administratrix, Cleveland Heights, Ohio, assignors to General Electric Company, a corporation of New York
Application February 22, 1943, Serial No. 476,780
9 Claims. (Cl. 226—14)

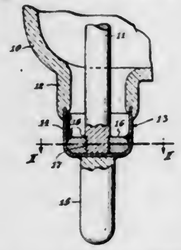
1. In apparatus of the class described for feeding articles such as lamp bulbs comprising means for guiding a row of the bulbs along a course of movement in a suspended neck-down position, placement means for directing movement of individual bulbs along the guiding means comprising a rotatable wheel having a plurality of radially extending fingers pivotally mounted thereon, means for turning said wheel to cause the fingers to be carried between succeeding bulbs in the guiding means and to control the movements and position of the bulbs, and means for changing the radial relationship of the fingers in the wheel upon delivery of the bulbs from the guiding means.

2,439,884
METHOD AND MACHINE FOR BASING AND SEASONING FLUORESCENT LAMPS
John M. Campbell, Fairmont, W. Va., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 7, 1946, Serial No. 646,146
14 Claims. (Cl. 316—13)



14. A machine for finishing fluorescent lamps comprising a series of chucks mounted for revolution about an axis, a series of resilient supports below said chucks and movable therewith for holding lamps with their based ends received within said chucks, means for causing said chucks to revolve about said axis, means for directing gas fires on some of said chucks to cause received bases to be cemented to associated lamps, means for cooling another group of said chucks and based lamp ends received therein, and means for simultaneously passing seasoning current through the lamps being cooled, said means comprising mercury switches, one in each chuck circuit, and means for operating said switches upon revolution of said chucks, whereby a seasoning current is directed through each lamp only when its chuck is being cooled.

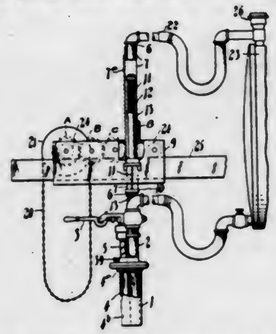
2,439,885
LUMINAIRE
William G. Darley, Cleveland Heights, Ohio, assignor to General Electric Company, a corporation of New York
Application April 27, 1945, Serial No. 590,617
4 Claims. (Cl. 248—319)



1. A luminaire comprising in combination, a mounting plate attachable to a ceiling member, a lamp accommodating fixture mounted beneath said plate, extensible counterbalancing means connecting said plate and said fixture for supporting the latter in a raised position suitable for illumination and in a lowered position suitable for servicing, and separable contacts for connecting said fixture to an electric power source in its raised position and for disconnecting said fixture from the power source when the fixture is moved from its raised position, and a catch releasable from below said fixture, mounted on said fixture and engageable with said mounting plate for locking said fixture in its raised position, said catch being rotatable and having surfaces partly helicoidal and partly planar in shape

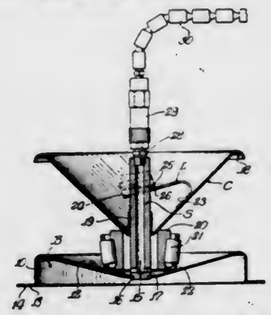
to draw up and retain the fixture in its raised position and having also a vertically disposed stem, and a tubular guide mounted in alignment with and below said stem to guide a key into engagement with the stem, said guide having an index-

ing slot extending first vertically and then horizontally for engaging said key as it is moved upward and then rotated to first engage and then move the catch from its locked to its unlocked position whereby the fixture may be lowered by moving the key downwardly.



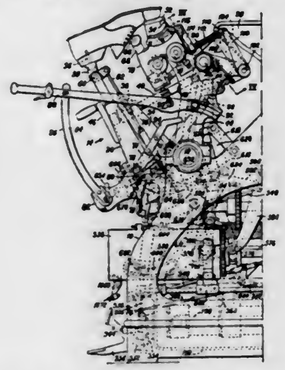
2,439,886
LEAD-IN CONSTRUCTION
Robert Denmark, New York, N. Y., and Carson H. McWhirter, East Orange, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 17, 1945, Serial No. 611,146
3 Claims. (Cl. 250—27.5)

1. A lead-in construction comprising a cup portion having an outer cylindrical wall with an open end and having a transverse flat wall remote from said open end, an attaching member secured in said cup portion and centered by said cylindrical wall and coaxially aligned by engagement against said flat wall, and a post carried by and projecting coaxially from said attaching member and projecting from the said open end of the cylindrical wall.



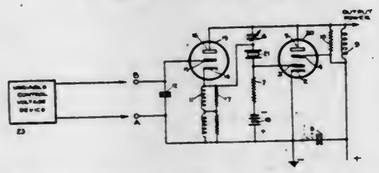
2,439,887
FILLING APPARATUS FOR VOLATILE LIQUIDS WITH VAPOR RETURN CONDUIT
Peter M. Elliott, Toronto, Ontario, Canada, assignor to Oil Distribution Appliances Limited, Toronto, Ontario, Canada
Application November 29, 1943, Serial No. 512,181
4 Claims. (Cl. 222—118)

1. Filling apparatus for filling tank waggons and the like from a tank comprising a liquid conduit for carrying liquid from the tank, a liquid discharge nozzle connected to the liquid conduit, a fume tube forming part of said nozzle for carrying off fumes, a vertical pipe communicating with the fume tube, said vertical pipe forming a tower or column where liquid tends to separate from the gases and run back to the nozzle; and



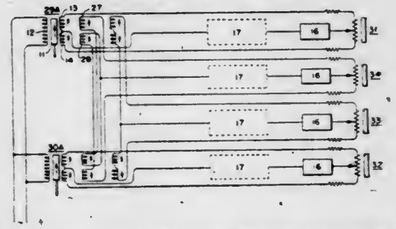
means for raising and lowering the nozzle including a support, gear means on said support, a sleeve slidable on said vertical pipe, a spring surrounding said pipe and engaging the lower end of the sleeve and the nozzle, and a rack on said sleeve engaging said gear means.

2,439,888
BEARING PACKER
Charles W. Ginter, Bryan, Ohio, assignor to The Aro Equipment Corporation, Bryan, Ohio, a corporation of Ohio
Application November 22, 1943, Serial No. 511,305
3 Claims. (Cl. 184—1)



1. A lubricating device for bearing assemblies comprising a bearing supporting member including a dished base member and a central and vertically disposed stem mounted rigidly with respect to said base member, a conical bearing closure member slidably mounted on said stem for engaging the upper end of the bearing assembly to grip it on said base member during the lubricating operation, said conical member being adapted to seal the central opening of the bearing assembly against discharge of lubricant therefrom, and clamp means engaging said stem and interposed between it and said closure member for retaining the closure member in position against the force of the lubricant entering the bearing, said clamp means comprising a member having a hole slightly larger than said stem and means constraining said last named member to tilt from a position at right angles to said support.

2,439,889
LEVELING MACHINE
Fred V. Hart and Fred L. Mooney, Lynn, Mass., assignors to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application December 5, 1945, Serial No. 632,932
46 Claims. (Cl. 12—34)



44. In a leveling machine, a leveling tool, a shoe support comprising heel and toe supports, said toe support being adjustable about an axis extending laterally of the shoe and located substantially at the toe-engaging surface of the support, means for swinging said shoe support into cooperative relation to the leveling tool, and means operative in response to said swinging movement for locking the toe support in the proper position of adjustment.

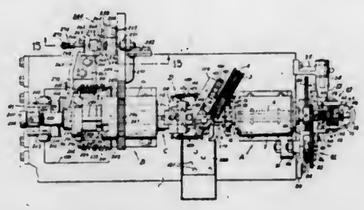
2,439,890
OSCILLATOR CONTROL CIRCUIT
Donald L. Hings, Ottawa, Ontario, Canada
Application May 3, 1944, Serial No. 533,861
In Canada April 24, 1944
9 Claims. (Cl. 250—36)

1. A radio frequency system comprising an oscillator circuit including at least an oscillator tube, said oscillator tube having at least a cathode, a plate and a control element, said cathode being connected to a point of reference potential, impedance means connected between said plate and said point of reference potential, a crystal and a capacitor connected in series between the plate and the control element for controlling the oscillations of the oscillator tube, said capacitor having a first terminal connected to said plate and a second terminal connected to said crystal, a control tube having at least a cathode, a plate and a control element, means including impedance means for connecting the cathode of the control tube to said point of reference potential, first circuit means for connecting the plate of the control tube to the first terminal of the capacitor, second circuit means for connecting the cathode of the control tube to the second terminal of the capacitor, and variable voltage means for varying the bias of the control element of the control tube and thereby governing the oscillations of the oscillator tube.

2,439,891
MEASURING AND CONTROLLING SYSTEM
Anthony J. Hornfeck, Cleveland Heights, Ohio, assignor to Bailey Meter Company, a corporation of Delaware
Original application October 18, 1943, Serial No. 506,633, now abandoned. Divided and this application December 23, 1944, Serial No. 569,479
10 Claims. (Cl. 177—351)

8. A telemetric measuring system including, in combination, a plurality of transmitters each having a primary winding and a plurality of secondary windings inductively energized from said primary winding, each having a magnetic core piece coupling its primary winding with its secondary windings variably in dependence upon a variable, a receiver for each of the transmitters electrically connected to at least one of its secondary windings and adapted to indicate the values of the variable, and a separate receiver electrically connected to a separate winding of each transmitter and adapted to indicate a mathematical relation of the individual values of the variables.

2,439,892
HEATING BLANKET OR THE LIKE AND METHOD OF FABRICATING SAME
Alfred J. Huck, St. Louis, Mo., assignor, by mesne assignments, to Knapp-Monarch Company, St. Louis, Mo., a corporation of Delaware
Application August 29, 1944, Serial No. 551,729
4 Claims. (Cl. 219—46)



1. A method of supporting a heating element on a backing sheet comprising the steps of folding the backing sheet in a corrugated manner, piercing the folded backing sheet at substantially equally spaced points substantially half way between the folded edges thereof, passing the heating element zig-zag through the piercings and in close coupled relation to the folded backing sheet, extending the bends of the heating element to a further coupled position relative to the folded backing sheet, and straightening the backing sheet to a substantial flat position.

2,439,893
FILAMENT COILING APPARATUS
Fred B. Iden, Cleveland Heights, Ohio, assignor to General Electric Company, a corporation of New York
Application August 1, 1945, Serial No. 608,115
25 Claims. (Cl. 153—67)

1. In filament coiling apparatus of the type comprising a mandrel on which the filament wire

is coiled, filament wire gripper means adapted to hold an end of the filament wire adjacent and across the mandrel and rotatable as a unit with the mandrel about the mandrel axis to coil the filament wire around the mandrel, and a carriage movable longitudinally of and pivotable about the mandrel axis and carrying means for guiding

the filament wire transversely to the mandrel, the combination of cutter means mounted directly on said carriage and operable upon completion of the longitudinal movement of said carriage to sever the portion of the filament wire extending between the mandrel and the guide means for said wire.

2,439,894

BOTTLE SEAL CUTTER

Albert J. Jahn and Carl M. Jahn, Denver, Colo.

Application September 9, 1946, Serial No. 695,704
5 Claims. (Cl. 30—2)

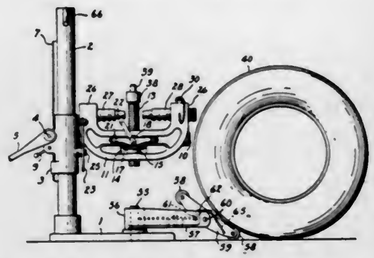
1. A seal cutter for bottles, comprising, in combination, a substantially horseshoe shaped member of spring steel, or the like, adapted to embrace a bottle neck, a cutter wheel secured to each end of said member for rotation about an axis perpendicular to the median plane of the member, the plane of rotation of said cutter wheels being parallel with the said median plane, and a roller secured to the horseshoe shaped member substantially midway between the axes of rotation of the cutter wheels, said roller being mounted for rotation about an axis parallel with the axes of the cutter wheels.

2,439,895

TITANIUM OXIDE PIGMENT PRODUCTION

John Lewis Keats and James Howard Peterson, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application January 9, 1942, Serial No. 426,250
8 Claims. (Cl. 23—202)



1. A process for producing an improved rutile titanium oxide pigment comprising subjecting, prior to heat treatment to develop its pigment properties anatase raw pigment titanium oxide to mechanical disintegration treatment to reduce the particle size thereof, and then calcining the disintegrated raw pigment in the presence of a titanium-oxygen compound rutile conversion promoter in order to develop essential pigmentary properties in said raw pigment and substantially convert the same to rutile.

2,439,896

TIRE REPAIR VULCANIZING APPARATUS

Herman T. Kraft, Akron, Ohio, assignor to The General Tire and Rubber Company, Akron, Ohio, a corporation of Ohio

Application September 5, 1946, Serial No. 694,850
13 Claims. (Cl. 18—18)

9. Repair vulcanizing apparatus comprising a support having a standard and a tire supporting arm projecting horizontally from the standard, a transfer table mounted adjacent the base of the standard and having a tire carrying platform comprising a pair of spaced rollers for rotatably supporting a tire in upright position, said table being movable from a tire receiving position to a transfer position in which said platform is beneath said arm and said arm projects into the center opening of the tire casing on the platform, and a jack carried by said arm for lifting a tire off said table.

2,439,897

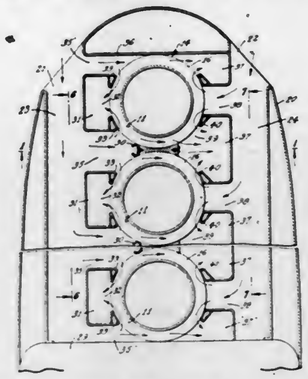
MOTOR AND MOTOR FUEL TREATMENT

Joseph A. Ephraim Lachapelle, Los Angeles, Calif.

Application March 2, 1944, Serial No. 524,770
4 Claims. (Cl. 123—1)

1. The method of improving fuel combustion by introducing an element that is beneficial in comminuted form into the fuel mixture of an internal combustion engine, whereby to feed the said element into the chamber of combustion together with said fuel mixture, said element consisting of metallic lead in the form of a solid piece deposited in the fuel tank of the engine, thereby to be frictionally comminuted by contact with the wall of the tank through the engine vibration.

2,439,898



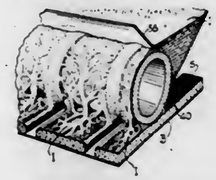
ENGINE COOLING SYSTEM

Pierre Ernest Mercier, New York, N. Y., assignor to Fairchild Engine and Airplane Corporation, Farmingdale, N. Y., a corporation of Maryland

Application January 17, 1945, Serial No. 573,273
12 Claims. (Cl. 123—171)

1. In an internal combustion engine having a row of cylinders, the combination of at least one air scoop enclosing a portion of the axial length of each cylinder and having an intake opening for receiving air under pressure, and a duct extending along each cylinder and having an opening adjacent said portion of each cylinder for receiving air under pressure from said scoop and

a discharge opening along another portion of the axial length of each cylinder for discharging air



from said duct over said other portion of each cylinder.

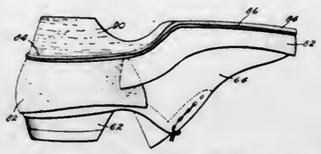
2,439,899

METHOD AND APPARATUS FOR COATING COMESTIBLES

George C. Monaco, Douglaston Hills, N. Y.

Application January 31, 1944, Serial No. 520,570
17 Claims. (Cl. 107—54)

1. A method of coating a comestible with an applicator having a viscous, fluid, edible coating material adhered to a surface thereof, comprising moving the comestible along a predetermined path of travel, moving said applicator so as to cause the surface carrying coating material to approach the comestible and deposit material on a surface thereof, then to depress the surface of the comestible with a layer of coating material between said applicator surface and said comestible surface and finally to leave the comestible in a direction having a component of travel moving in the same direction as the comestible and a component of travel moving perpendicular thereto, whereby the material is pulled out into interconnected relatively angularly disposed sheets which are attenuated until they snap and the portions thereof which fall back against the comestible form prominent interconnected relatively angularly disposed ridges on the surface of the comestible.



2,439,900

METHOD OF MAKING PLATFORM SHOES

Everett E. Murphy, Marblehead, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey

Application July 9, 1945, Serial No. 603,920
20 Claims. (Cl. 12—142)

1. That improvement in methods of making platform shoes which consists in providing a platform sole of relatively thick yielding material, assembling the sole on a last with a shoe upper, securing the upper in lasted relation to the platform sole, thereby conforming the upper to the shape of the last, attaching a platform wrapper of thin flexible material to the upper substantially opposite the edge face of the platform sole with the upper portion of the platform wrapper free from

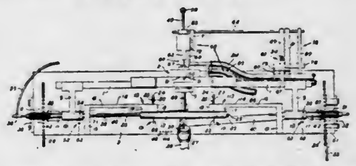
the upper, trimming the upper substantially flush with the outer surface of the platform sole, wrapping the free portion of the platform wrapper downwardly and inwardly over the outer surface of the platform sole and securing it to said surface, and attaching an outsole to the inturned portion of the platform wrapper.

2,439,901

METHOD FOR PRODUCING COLORED PHOTOGRAPHS

Henry T. Neumann, New York, N. Y.

No Drawing. Application December 27, 1941, Serial No. 424,574
1 Claim. (Cl. 95—2)



A method of producing a colored photograph of a multichromatic picture in a single-layered emulsion having photosensitive particles distributed throughout, comprising successively forming registered latent images of different monochromatic components of said picture in said emulsion by successively casting on one side thereof beams of light modulated by different color components of said picture and, prior to forming each latent image, subsequent to the first latent image, color developing the preceding latent image by dye-coupling, disturbing the capacity of the coupled dye to unite with chemicals subsequently used for forming other coupled dyes without affecting any previously actinically affected photosensitive particles, and offsetting the decreased photosensitivity of said photosensitive particles resulting from such disturbance, said disturbance and offsetting of the decreased photosensitivity being effected by treating the emulsion in a bath including hexamethylenetetramine, phthallic anhydride and a halide.

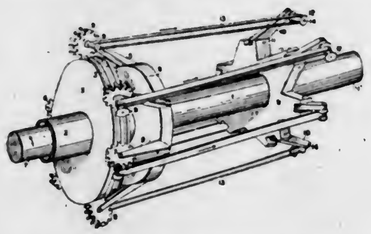
2,439,902

GLASS TUBE BENDING APPARATUS

Edward B. Noel, Cleveland Heights, Ohio, assignor to General Electric Company, a corporation of New York

Application March 30, 1946, Serial No. 658,398
12 Claims. (Cl. 49—7)

12. Glass tube bending apparatus comprising a support member, a pair of spaced aligned holders mounted on said support member and arranged to grip and hold a glass tube in axial alignment therewith, at least one of said holders



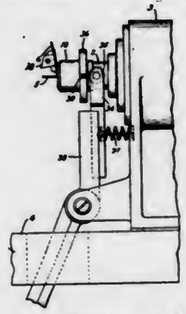
being pivotable on said support member about an axis extending transversely of and offset to one side of the glass tube in the holders and located between the said holders, heating means arranged to heat and soften a zone of the tube adjacent the pivot axis of the said one holder, a forming pin normally located in a position removed from the glass tube in said holders, and control means for simultaneously rendering the heating means inoperative and moving the said pin to a position contiguous to and extending across the tube on the same side thereof as the pivot axis of the said one holder, the said one holder being arranged to be swung about its pivot axis in a direction to bend the tube around the said pin.

2,439,903

THREAD ADVANCING, STORAGE, AND STRETCHING REEL

Richard A. O'Connell, Jr., Berkeley, Calif., assignor to United States of America as represented by the Secretary of Agriculture

Application December 6, 1946, Serial No. 714,597
5 Claims. (Cl. 28—71.6)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A thread-storage, thread-advancing device comprising a rotary shaft, a number of endless driven belts mounted longitudinally to the shaft, and rotating with said shaft, and providing a plurality of longitudinally extending circumferentially spaced strands moving longitudinally in unison and constituting the thread-supporting surface, a support mounted to rotate with the shaft, said support carrying a number of worm gears whose axes of rotation are transverse to that of the shaft, a worm wheel the axis of which is that of the shaft, said worm wheel meshing with said worm gears, whereby upon rotating said shaft, support, and worm gears about the axis of said shaft, the worm gears are caused to rotate about their individual axes, each of said worm gears having means for mounting and driving an end of one of said belts, a second support mounted to rotate with said shaft and carrying means for rotatably supporting the other ends of said belts and in which the second support is adjustable longitudinally of said shaft, and in which the said means carried by the second support comprises, for each belt, an arm pivoted at one end upon the second support, and having, adjacent the other end of the arm, means for supporting an end of a belt, whereby upon adjusting the second support longitudinally of the said shaft the arms pivot in unison to adjust the angle between the belts and the shaft, and having means for adjusting the second support longitudinally of said shaft, said means comprising a bracket rotatably supported on a screw mounted on one end of the shaft, one end of said bracket being operatively connected to the second support to adjust the latter longitudinally as aforesaid.

2,439,904

FILAMENT COILING APPARATUS

Julius Petersen, Cleveland Heights, Ohio, assignor to General Electric Company, a corporation of New York

Application August 1, 1945, Serial No. 608,257
11 Claims. (Cl. 153—67)

1. A filament wire gripper for filament coiling apparatus comprising inner and outer sleeve members slidable relative to one another, a mandrel guide pin fitting within the hollow interior of and rotatively interlocked with the inner sleeve member, said pin having an axially extending mandrel guide opening and having its outer end located outwardly beyond the outer end of the inner sleeve member and formed as an annular jaw face surrounding said opening, said outer sleeve member being provided at its outer end with an inturned annular flange having an annular jaw face overlying and opposed to the jaw face of said pin, and resilient means acting on one of said sleeve members to resiliently urge the opposed jaw faces together.

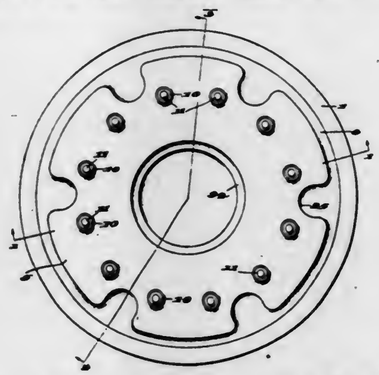
2,439,905

PROCESS OF PURIFYING LACTONES

Frank D. Pickel, Bogota, and Louis T. Rosenberg, Ridgefield Park, N. J., assignors to Nopco Chemical Company, Harrison, N. J., a corporation of New Jersey

No Drawing. Application May 5, 1943, Serial No. 485,758
6 Claims. (Cl. 260—344)

1. A process for separating dimethyl propylene glycol from racemic α-hydroxy-β,β-dimethyl-γ-butyrolactone, which comprises treating a mixture thereof with an aqueous alkali metal agent to convert the lactone to an alkali metal water-soluble salt of α-γ-dihydroxy-β,β-dimethyl butyric acid, adding a monohydric alcohol containing 3 to 4 carbon atoms to precipitate the butyric acid salt and removing said salt from the dimethyl propylene glycol.



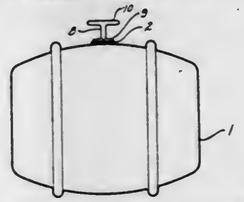
2,439,906

WHEEL SPRINGING ELEMENT

Emil H. Piron, New York, N. Y., assignor to Transit Research Corporation, New York, N. Y., a corporation of New York

Application March 29, 1943, Serial No. 480,998
6 Claims. (Cl. 295—11)

4. As an article of manufacture, a springing element for a resilient wheel composed of three side by side metallic discs each having a central opening therethrough, the outer discs having identical inside and outside diameters and the inner disc having a larger outside and a smaller inside diameter, and a mass of rubber-like material separating the inner plate from each of the two outer plates, the inside and outside diameter of both masses of rubber-like material being equal to the inside and outside diameters respectively of the outer metallic discs, one outside



disc and the inside disc each being scalloped at their outer peripheries, the remaining disc having a circular outside periphery and being pierced inwardly of its outer periphery at points opposite the scallops in the other two discs.

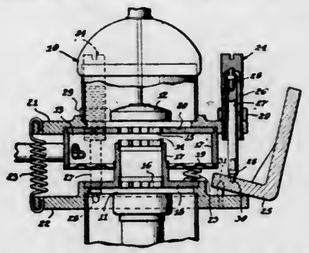
2,439,907

GRIP FOR STEEL DRUMS OR THE LIKE

Louis Poglein, Jeannette, Pa.

Application April 29, 1947, Serial No. 744,619
1 Claim. (Cl. 294—26)

A gripping member for handling empty steel drums and the like comprising a grip having a shank with spaced lugs for insertion through recesses in the stopper of the drum, which lugs when turned to be disposed beneath the flange of the stopper constitute abutments for said flange, and a pilot extending beyond the end of the shank cooperating with the inner walls of the drum stopper for maintaining proper spacing of the lugs and flange for interlocking the lifting member with the drum.



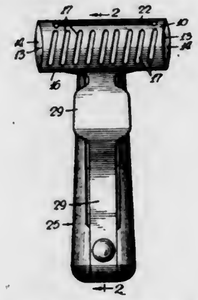
2,439,908

TUNING MEANS FOR ELECTRON DISCHARGE DEVICES

William W. Rigrod, Bloomfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application September 21, 1943, Serial No. 503,189
3 Claims. (Cl. 315—5)

1. An electron discharge device having a hollow body resonator with a fixed end wall, said resonator having a movable collar as a part thereof, said collar having an end thereof within the resonator spaced from and opposing a part of the fixed wall of said resonator and forming thereby a constriction, said collar having an end external of the resonator, plates respectively carrying said external end of the collar and said fixed part of the resonator, springs coupling and tending to draw said plates together and lessen the spacing between said fixed part of the resonator and the collar, and struts secured to one of said plates opposing the spring action and



keeping said fixed part and collar spaced, said struts having greater coefficient of expansion than said collar and automatically compensating for expansion of the collar due to heat in use and thereby maintaining the said spacing between said fixed part and the collar substantially constant under varying heat conditions encountered in use of the device.

2,439,909

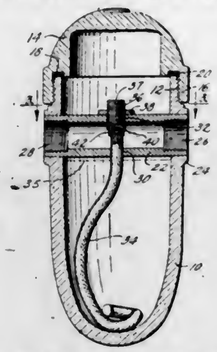
SAFETY RAZOR BLADE

Henry Ruskin, Chicago, Ill., assignor of one-half to George E. Hale, Chicago, Ill.

Application December 12, 1945, Serial No. 634,505
6 Claims. (Cl. 30—346)

1. A razor blade comprising an element of sheet material provided with a slot therein, at least one edge of the slot being attenuated to define a cutting edge, the opposite edge being suitably spaced therefrom to serve as a safety guard therefor, said element being curved to present a cylindrically convex outer surface, said slot being arranged with its axis lying in a plane obliquely intersecting the cylinder axis.

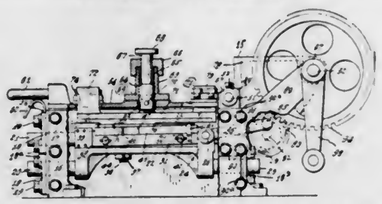
2,439,910



AIR-LINE OILER

Russell D. Snyder, Bryan, Ohio, assignor to The Aro Equipment Corporation, Bryan, Ohio, a corporation of Ohio

Application May 11, 1943, Serial No. 486,598
5 Claims. (Cl. 184—55)



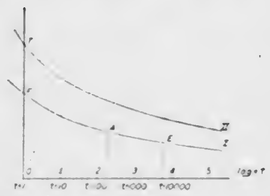
2. An air line oiler of the character described comprising a casing, a removable cover therefor, said casing being formed of transparent plastic material, a conduit through said casing and hav-

ing its ends molded in opposite walls thereof, said conduit having an opening in the lower side thereof and a threaded opening in the upper side thereof opposite said opening, an adjusting screw

threaded in said threaded opening, a wick immersed in the oil in the casing and extending upwardly through said opening, and means for attaching the upper end of said wick to the lower end of said adjusting screw.

2,439,911
SPACEBAND CLEANING MACHINE
Samuel Sofnas, Indianapolis, Ind.
Application April 2, 1945, Serial No. 586,246
11 Claims. (Cl. 51—157)

1. A machine for cleaning space bands comprising a carriage, two laterally-spaced posts upstanding from said carriage and engageable with the shoulders of a standard space band, a finger upstanding from said carriage near said posts and intermediate the positions of said posts, a second finger on said carriage aligned with said first-named finger and longitudinally spaced therefrom, and independent means for securing said fingers in position on said carriage, said fingers being adjustable toward and away from each other and being respectively engageable in notches at opposite ends of such space bands, a presser element formed to provide a plane surface adapted to assume a position in cooperative relation to said carriage and in contact with the exposed face of such space band, means resiliently urging such surface into such contact, and means for reciprocating said carriage to rub said exposed space band face against said surface.

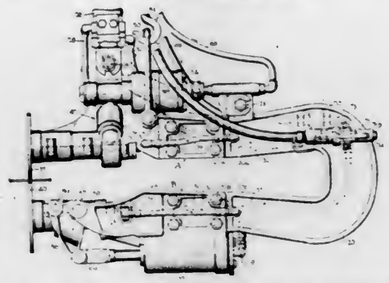


2,439,912
MECHANICAL SHOVELING MACHINE
Charles E. Stoltz, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application March 22, 1946, Serial No. 656,228
10 Claims. (Cl. 214—90)

1. A scoop adapted to be operated by power to pick up loose material from the ground and discharge it onto a conveyor of a loading machine by swinging movement about a transverse axis and having a pair of parallel spaced side walls, a bottom plate having a forward digging edge extending in advance of said side walls and adapted to engage and pick up loose material from the ground, and an endless conveyor independent of said loading machine conveyor and

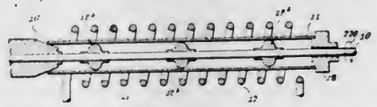
mounted between and within the limits of said side walls and forming a rear wall portion of said scoop, said conveyor being spaced from the axis of swinging movement of said scoop and extending at an obtuse angle with respect to said bottom plate and being operable upon upward movement of said scoop to a discharge position, to discharge material beyond the rear end thereof.

2,439,913
METHOD OF TREATING COILED TUNGSTEN FILAMENTS
Johannes Antonius Maria van Liempt, Eindhoven, Netherlands, assignor to General Electric Company, a corporation of New York
Application February 26, 1943, Serial No. 477,326
In the Netherlands October 28, 1941
4 Claims. (Cl. 148—11.5)



1. A method of treating a coiled tungsten filament wire which when recrystallized consists of crystals of an average size of at least one wire turn, and is thus resistant to sagging, to give the coil high vibration-endurance and high extensibility in the direction of its axis at ordinary room temperature, as contrasted with poor corresponding characteristics without this treatment; which method consists in maintaining the coiled wire at lattice-readjusting temperature until lattice-restoration has been effected before allowing the wire to reach a higher temperature that results in recrystallization.

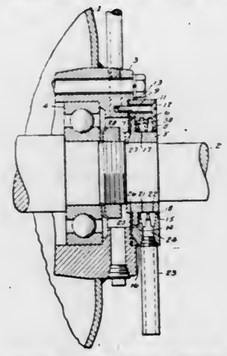
2,439,914
FOOD ACCESSORY SUBSTANCE
Willem J. van Wagtendonk, Corvallis, Oreg., assignor to Research Corporation, New York, N. Y., a corporation of New York
No Drawing. Application March 18, 1946, Serial No. 655,377
13 Claims. (Cl. 99—22)



1. A method of obtaining a physiologically active substance which comprises extracting a plant of the group consisting of sugar cane and sorghum with an organic liquid solvent.

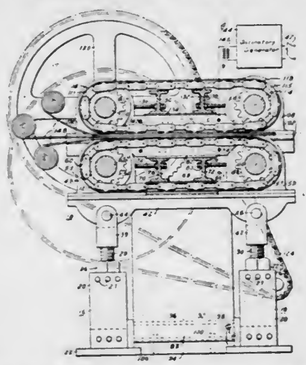
2,439,915
PORTABLE ROLLER WELDER
William A. Weightman, Philadelphia, Pa., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Continuation of application Serial No. 507,667, October 26, 1943. This application October 23, 1946, Serial No. 705,142
19 Claims. (Cl. 219—4)

1. A portable roller welding device comprising in combination, a rigid yoke with spaced arms, a driven welding roller mounted on a first arm of said yoke, a drive motor mounted on said first arm having a driving connection with said driven roller, a shiftable roller mounted on the second arm of said yoke, and a motor mounted on said second arm having a connection with said shiftable roller for moving it toward and from said driven roller.



2,439,916
METHOD OF SEALING COAXIAL STRUCTURES
Leo C. Werner and Willard S. Lund, Bloomfield, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 1, 1945, Serial No. 580,386
3 Claims. (Cl. 49—81)

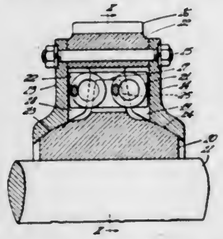
1. A method of sealing coaxial structures having inner and outer members comprising applying a plurality of meltable buttons on the inner member of said structure, inserting the inner member into the outer member, rotating said members while heating the meltable buttons to a viscous flowing temperature, and engaging the buttons in flowing condition centrifugally against the outer member of the coaxial structure.



2,439,917
WATER SEAL FOR SHAFT BEARINGS
Ephraim H. Anderson, Homewood, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 28, 1945, Serial No. 607,643
3 Claims. (Cl. 286—5)

1. An improved water-seal for a machine having a stationary bracket and a rotatable shaft extending through said bracket, said bracket having a bracket-hub, and a shaft-supporting bearing-housing carried by said bracket-hub, said improved water-seal comprising a flinger carried by the shaft just outside of said bearing-housing, said flinger comprising a sleeve having a radially outwardly extending flinger-flange adjacent to, but spaced from, its inner end, said sleeve and said flinger-flange having cylindrical outer peripheries, an annular cap removably carried by said bracket-hub, said cap having a cylindrical groove extending back from the inner periphery of the cap at the inner end of the cap, the cylindrical bore of said groove being spaced from the

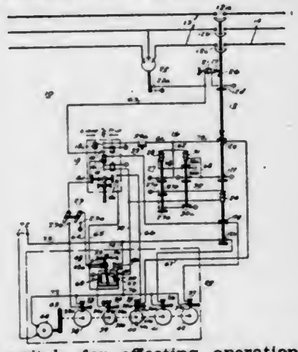
cylindrical periphery of the flinger-flange, and the radial wall of the groove being spaced from the outer side of the flinger flange, the inner periphery of said cap being a cylindrical bore having a close clearance from the outer periphery of the flinger-sleeve, said cap having one or more relatively wide grooves terminating in its inner periphery, and a drain-pipe secured to the lower side of said cap in draining communication to said relatively wide groove or grooves.



2,439,918
METHOD OF LAMINATING
Robert W. Auxier, Forest Hills, and Patrick Norelli, McKeesport, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 18, 1944, Serial No. 527,126
2 Claims. (Cl. 154—126)

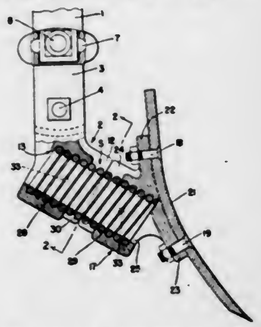
1. The method of continuously molding composite stock from laminated sheets of fibrous material having a resinous binder associated therewith comprising, in combination, feeding a plurality of the sheets in laminated relation into the space between and in engagement with a pair of spaced flexible endless belts, impressing a high frequency high voltage difference of electrical

potential between and substantially throughout the inner stretches of the belts to develop an electrical field therebetween, the electrical field having a sinusoidal variation in potential lengthwise of the inner stretches of the belts, drawing the laminated sheets through the electrical field to subject the sheets in their entirety to the same sinusoidal variation in potential as they pass between the belts to effect the uniform heating of the sheets, applying a progressively increasing pressure to the sheets simultaneous with the heating thereof as the sheets pass between and throughout the engaging lengths of the belts, the heat and pressure applied effecting the consolidation of the laminated sheets into an integral body, and developing heat adjacent the endless belts external of the electrical field therebetween to limit the escape of heat from the sheets as they pass through the electrical field.



2,439,919
FLEXIBLE DRIVE
Winston A. Brecht, Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 3, 1945, Serial No. 580,800
5 Claims. (Cl. 64—15)

1. A gear comprising, a gear center having a plurality of radially extending lugs, a gear rim having removable side plates for retaining the rim in position, said side plates and said gear center having spherical engaging surfaces, laterally extending ears on said side plates, and spring members cooperating with said lugs and said ears to permit limited universal movement between the gear rim and the gear center.



2,439,920
AUTOMATIC AND MANUAL CONTROL SYSTEM FOR CIRCUIT BREAKERS
Myron J. Brown, Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 15, 1943, Serial No. 514,373
13 Claims. (Cl. 175—294)

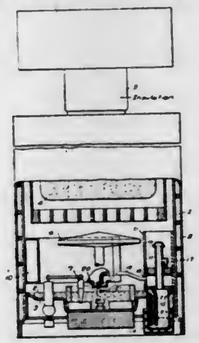
13. A control system for a circuit breaker connecting a pair of circuits comprising, reclosing means having timing means for effecting timed reclosures of the circuit breaker subsequent to opening in response to a fault condition, a manual control switch for opening and closing the circuit breaker, said control switch having auxiliary contact members closable when the switch is operated to close the circuit breaker to normally provide a reclosing circuit for the circuit breaker in conjunction with the timing means, synchronizing switch means connected in series relation with the manual control switch for preventing manual closure of the circuit breaker in response to operation of the manual control switch to close the circuit breaker unless the circuits to be connected are synchronized, a control relay operable to effect operation of the timing means, circuit means normally operating the timing means to a reset position ready for reclosing the circuit breaker when it becomes open and the auxiliary contact members of the manual control switch are operated to provide a reclosing circuit for the circuit breaker, and means responsive to operation of the manual

control switch for effecting operation of the control relay to effect operation of the timing means to a lockout position whenever the manual control switch is operated to trip the circuit breaker, whereby operation of the timing means to automatically reclose the breaker upon closure of the manual control switch while the synchronizing switch is open is prevented.

2,439,921
RESILIENTLY MOUNTED CULTIVATOR TOOL
Theophilus Brown, Moline, Ill., assignor to Deere & Company, Moline, Ill., a corporation of Illinois
Application April 7, 1944, Serial No. 530,017
3 Claims. (Cl. 97—184)

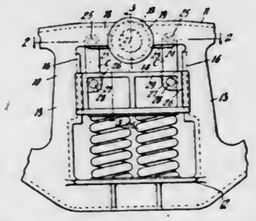
2. In an agricultural implement, a tool-supporting part having a downwardly and forwardly facing spring-receiving socket at the lower end of said part, a tool carrying part having an upwardly facing spring-receiving socket, a spring member disposed in a downwardly and forwardly extending line and fixed at its rear end in the spring receiving socket of said supporting part and fixed at its forward end in the spring receiving socket in said tool-carrying part, said spring being disposed in a downwardly and forwardly extending line and having considerable initial resistance against buckling, and a tool fixed to said tool-carrying part and having a point positioned substantially in line with said spring forwardly and downwardly thereof.

2,439,922
NAIL BRUSH
Joseph J. Chappell, Lockland, and Marianne R. Osborne, Cincinnati, Ohio
Application December 15, 1944, Serial No. 568,284
1 Claim. (Cl. 15—167)



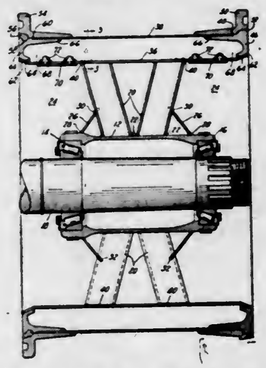
In a nail brush a base portion in which a narrow row of bristles is mounted lengthwise thereof, said base portion having a narrow groove formed therein at one side thereof, at least, alongside of the inner ends of the bristles and facing in the direction of the bristles, the outer edge of the groove being the edge of the base, for the purpose described, said groove having its inner wall beginning at the approximate level of the inner exposed ends of the bristles, and its outer wall terminating at a somewhat lower level.

2,439,923
GASKET
Earl K. Clark, Mansfield, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 21, 1943, Serial No. 507,124
4 Claims. (Cl. 288—23)



1. In a gasket adapted for association with a device having a pair of flat members slidably disposed in facing relation within a cylindrical member, a flexible ring-like body comprising inner and outer concentric U-shaped portions joined by an annular flattened portion, said inner U-shaped portion being of greater depth than that of said outer U-shaped portion, and adhesive means for securing said intermediate annular flattened portion of the gasket to one of said flat members whereby upon assembly of said elements said U-shaped portions of the gasket are free for expansion, said outer U-shaped portion being expandible into sealing relationship with all three of said members.

2,439,924
SEALED IGNITRON
August P. Colaiaco, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 8, 1947, Serial No. 733,395
3 Claims. (Cl. 250—27.5)



1. In a vapor-electric device having a substantially sealed container, a diffusion pump in said container, means exterior of said container for activating said pump, a normally sealed compartment in said container, an exhaust connection from said pump to said compartment and a reverse flow seal in said connection.

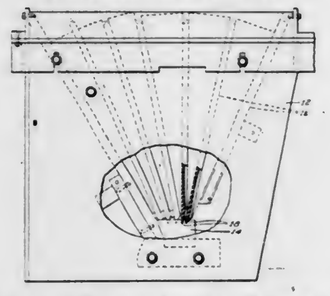
2,439,925
SNUBBING MEANS
George E. Dath, Mokena, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application July 20, 1944, Serial No. 545,772
3 Claims. (Cl. 105—197)

1. In a railway car truck, the combination with a side frame having a hollow boss thereon provided with an interior friction surface; of a vertically movable bolster; a cluster of truck springs supporting said bolster; a rotary friction disc rotatably mounted within said boss and engaging said friction surface; a spring pressing said disc against the friction surface of the side frame; and means actuated by relative vertical movement of the bolster and side frame for rotating said disc.

2,439,926
WHEEL
Frederick C. Frank, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application August 17, 1944, Serial No. 549,856
10 Claims. (Cl. 301—73)

7. A wheel comprising a hub, a plurality of pairs of spokes spaced circumferentially about said hub, each spoke being inclined with respect to the vertical in such a way that the outer ends of each pair of spokes are spaced farther apart than their inner ends, a plurality of horizontal beams, each supported on a pair of the spokes, the outer end of each spoke being secured to one of the beams and the inner end of each spoke being secured to the hub, a rim supported on and

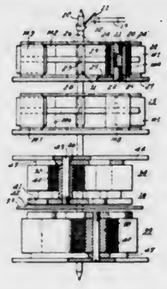
secured to said beams, and an annular reinforcing member at each side of the wheel secured at its outer edge to the respective side of the rim and at its inner edge to the horizontal beams.



2,439,927
METHOD OF COOLING TOOLS
Walter O. Haas, Jr., Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
No Drawing. Application June 22, 1945, Serial No. 601,081
2 Claims. (Cl. 252—71)

1. A method of cooling a tool used in cutting artificial water-soluble crystals of ammonium dihydrogen phosphate, comprising contacting the tool with a cooling fluid consisting of an aqueous solution of diammonium hydrogen phosphate and ammonium dihydrogen phosphate in approximately the following proportions: water, one gallon; diammonium hydrogen phosphate, approximately 3.2 pounds; and ammonium dihydrogen phosphate, approximately five to six pounds, sufficient to provide a solution which is saturated with ammonium dihydrogen phosphate at a temperature of approximately 5° F. below that at which the solution will be used.

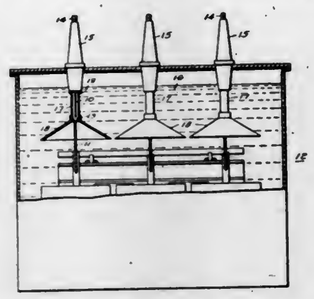
2,439,928
PRODUCTION OF DERIVATIVES OF DIHYDROPYRAN
Peter A. Hawkins, Widnes, and Nicholas Bennett, Ditton, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application November 7, 1944, Serial No. 562,404. In Great Britain November 19, 1943
4 Claims. (Cl. 260—333)



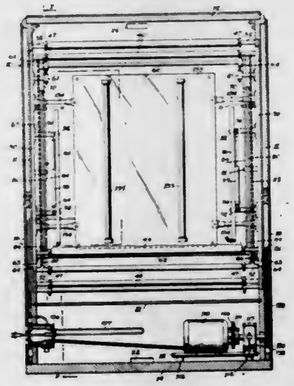
4. A process for the production of bis-(3-chlorotetrahydropyran) - 2 - ether which comprises mixing 2-hydroxy-3-chloroterahydropyran with approximately an equivalent amount of 3-chloro-5,6-dihydropyran, saturating the resulting mixture at atmospheric temperature with gaseous hydrogen chloride, and subsequently isolating the resulting bis-(3-chlorotetrahydropyran)-2-ether from the reaction product.

2,439,929
ELECTRICAL INSULATION
Charles F. Hill, Edgewood, and Robert W. Auxier, Forest Hills, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 17, 1942, Serial No. 447,464
9 Claims. (Cl. 200—149)

9. A circuit interrupter comprising a pair of contact members adapted to form an arc, a plurality of arc splitters of plate form disposed adjacent the contact members and means for driving an arc formed between the contact members against edges of the arc splitters for extinguishing the arc, the arc splitters composed of thermosetting melamine aldehyde resin and asbestos fibers distributed therein, the whole cured under heat and pressure into a unitary molded structure.



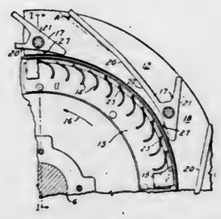
2,439,930
DIFFERENTIAL RELAY AND RESTRAINT MAGNET THEREFOR
Bert V. Hoard, Portland, Oreg., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 10, 1942, Serial No. 461,577
24 Claims. (Cl. 175—294)



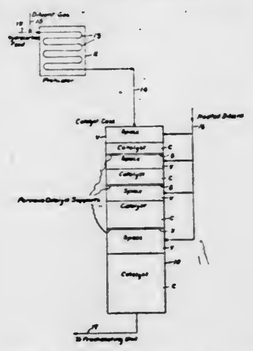
1. An electromagnet-structure comprising a magnetizable core-member, an energizing-coil means surrounding the core-member, a flat pole-piece at each end of the core-member, each flat pole-piece having a tapered end extending out away from one side of the core-member, a movable armature comprising a flat rectangular piece of magnetic material disposed between the two tapered ends of the two pole-pieces and separated therefrom by airgaps, said rectangular armature-piece being substantially parallel to the core and to the coil-means, and means for movably supporting said armature piece to move toward and away from said core and said coil-means between the tapered ends of the pole-pieces, whereby the tapering of said pole-piece ends causes the magnetic flux to draw the armature-piece toward said core and said coil-means.

2,439,931
PROTECTIVE FUSE FOR ELECTRICAL APPARATUS IMMERSED IN A DIELECTRIC LIQUID
John K. Hodnette, Sharon, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 29, 1944, Serial No. 520,222
3 Claims. (Cl. 175—294)

1. In a protective device for electrical apparatus provided for a conductor wound into a coil and a liquid dielectric in which the coil is immersed, in combination, a fusible conductor having predetermined fusing characteristics connected in circuit relation with the coil to be protected and immersed in the liquid dielectric, a tubular member disposed around the fusible conductor, the tubular member having an opening therein near the upper end to provide for the escape of gas at a predetermined rate and a hood depending from the bottom of the tubular member, the hood being disposed above the coil to collect gases evolved as a result of arcing conditions in the coil and to deliver them to the tubular member to displace the liquid dielectric and envelop the fusible conductor in a gaseous atmosphere when gases are evolved faster than they escape through the opening thereby to change the conditions under which the fusible conductor will fuse and interrupt the circuit through the electrical apparatus.



2,439,932
CHANGEABLE EXHIBITOR HAVING A SERIES OF ROLLERS WITH WEBS
Job Hutchinson, Great Neck, N. Y.
Application February 10, 1944, Serial No. 521,832
10 Claims. (Cl. 40—84)



1. In a sign display apparatus of the type having sign units which travel periodically along a continuous guideway, each unit having a sign member which may be unrolled while the unit is stationary and rerolled during travel and the sign member of each unit having one end attached to a second unit in advance of it, the combination of pick-up means to move the units successively one at a time, holding and releasing means to engage each unit as it is presented thereto to hold it while a second unit is being advanced by said pick-up means to unroll the sign member of the held unit and to enable the sign member of the advancing unit to be rerolled, and back-check means connected with the holding and releasing means actuated by the movement of the advancing unit causing the operation of the holding and releasing means to release the held unit so that it may be advanced in due order.

2,439,933
CENTRIFUGAL BLOWER
Charles F. Jenkins, Laughlintown, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 28, 1943, Serial No. 496,404
4 Claims. (Cl. 230—127)

1. An exhauster-type blower comprising the combination of a rotatable centrifugal fan and a scroll-housing surrounding the fan, characterized by said fan comprising a substantially radially disposed, rotatable annular plate and a plurality of circumferentially spaced, substantially rectangularly shaped, formerly curved blades secured thereto in a ring-formation, the inner discharge-surface of each fan-blade, immediately before the exit-point, being inclined forwardly, in the direction of rotation, at an inclination-angle with respect to the radial direction, the exit-area between adjacent blades, measured at right angles to said inner discharge-surface, immediately before the exit-point, being related to the tangential area between the blades, measured at right angles to the radius at the mid-point of said exit-area, in approximately the same ratio as the cosine of said inclination-angle within approximately plus or minus 20%, so as to produce a smooth air-flow which substantially fills the entire space between successive blades, at all times.

2,439,934
METHOD OF PRODUCING AROMATIC HYDROCARBONS
Paul H. Johnson, Bartlesville, Okla., and Robert R. Parker, Borger, Tex., assignors to Phillips Petroleum Company, a corporation of Delaware
Application October 30, 1944, Serial No. 561,118
3 Claims. (Cl. 260—673.5)

1. A process for converting a paraffin hydrocarbon material boiling in the gasoline range to aromatic hydrocarbons, which comprises heating such a material to a temperature in the range of

1000 to 1200° F. and maintaining same within this temperature range in an endothermic conversion zone and in the absence of any catalyst for a time of 0.05 to 1 second, passing the resulting material containing olefins so produced into contact with a mass of solid granular catalyst which promotes exothermic aromatization and polymerization reactions for a reaction time of 0.5 to 2 seconds to effect an exothermic hydrocarbon reaction, passing hydrocarbons effluent from said catalyst mass through a second endothermic conversion zone in the absence of a catalyst for a reaction time of 0.05 to 1 second, passing the resulting material containing olefins so produced into contact with a second mass of solid granular catalyst which promotes exothermic aromatization and polymerization reactions for a reaction time of 0.5 to 2 seconds to effect an exothermic hydrocarbon reaction, each of said endothermic reactions being carried out without addition of heat from an outside source, and recovering from effluents of the last said zone an aromatic hydrocarbon material boiling in the gasoline range so produced.

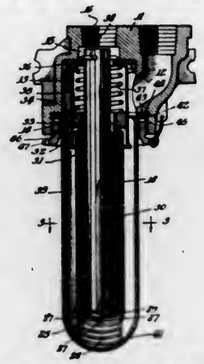
2,439,935

INDIUM ELECTROPLATING

Thomas R. Jones, Woodbridge, and Nevin R. Bierly, Avenel, N. J., assignors to The American Metal Company, Limited, New York, N. Y., a corporation of New York

No Drawing. Application March 15, 1944, Serial No. 526,652
6 Claims. (Cl. 204—45)

6. A process for electrodepositing indium which comprises, electrolyzing an aqueous solution of perchloric acid with electrodes including a substantially pure indium anode until an electrolyte consisting of indium perchlorate in water with some free acid is formed, adjusting the indium content thereof to about 20 to about 60 grams per liter and free perchloric acid content to about 1 to about 75 grams per liter, employing a substantially pure indium metal as anode and a bearing as cathode in said electrolyte, and electrodepositing indium on the bearing surface of said bearing, adjusting the current density to about 10 to about 55 amperes per square foot, voltage to about 0.6 to about 2.5, and the temperature of electrolyte to about 75° F. to about 130° F.



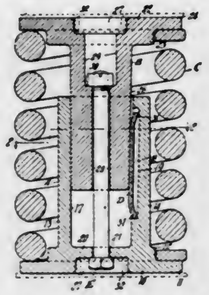
2,439,936

FILTER BY-PASS VALVE CONSTRUCTION

Walter Kasten, Franklin, Mich., assignor, by mesne assignments, to Bendix Aviation Corporation (Delaware), Detroit, Mich., a corporation of Delaware

Application August 23, 1944, Serial No. 550,842
1 Claim. (Cl. 210—183)

In a filter of known type having a housing with an inlet and outlet, a hollow filter-element in said housing operative between said inlet and outlet and with its interior connected to said outlet, and a hollow barrier enclosing at least a part of the length of said filter-element and spaced therefrom and having an apertured end-wall through which the filter-element discharges its filtered fluid into said outlet, the novel improvement of a normally-closed bypass for said filter-element including a spring-closed valve having a valve-seat member and a valve-member both of which are outside of, and apertured in register with, said filter-element, one of said members being mounted on the discharge end of said filter-element and communicating with its interior, the other cooperating member being inside of, slidable in, and guided by, said barrier and subjected to the pressure of the unfiltered fluid in said housing, the spring of said valve being located in said



barrier and acting on said cooperating member to maintain the valve normally closed.

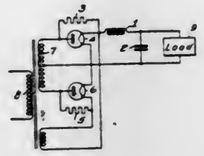
2,439,937

FRICTION SHOCK ABSORBING MECHANISM

Joseph J. Krob, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware

Application August 28, 1944, Serial No. 551,482
6 Claims. (Cl. 267—9)

1. In a friction shock absorbing mechanism, the combination with a friction casing having two longitudinally extending, laterally outwardly converging, interior friction surfaces, and a longitudinally extending wall opposed to said converging surfaces; of a friction post telescoped within the casing and having lengthwise extending, flat friction surfaces at one side thereof slidingly engaging said casing surfaces; a spring seat in said wall of the casing; a plate spring in said seat pressing against the post to force the same against the friction surfaces of the casing; and spring means yieldingly opposing lengthwise relative movement of the post and casing toward each other.



2,439,938

RECTIFIER SYSTEM

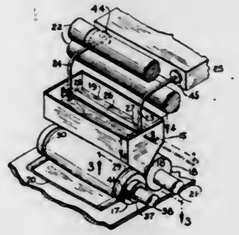
Reuben Lee, Catonsville, and Charles K. Hooper, Shipley Heights, Md., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application February 9, 1943, Serial No. 475,270
4 Claims. (Cl. 175—363)

1. In combination, a source of alternating voltage, a pair of half-wave rectifiers having similar terminals connected respectively to the end terminals of said source, the other terminals of said rectifiers being connected together to a direct-current load circuit through an inductor, a capac-

itor shunted across said load circuit on the load side of said inductor, and a pair of resistors respectively connected in shunt to the terminals of said rectifiers, each said resistor having a value approximately equal to

$$37.6fL-\frac{0.239}{fC}$$



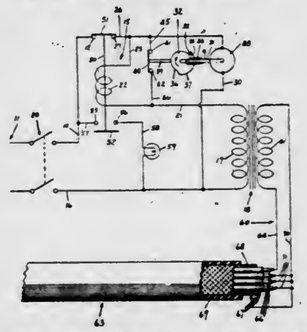
where f is the frequency of said source, L is the inductance in henrys of said inductor, C is the capacitance in farads of said capacitor.

2,439,939

SYSTEM OF FORMING SHEET MATERIAL

I. Lawrence Lesavoy, Allentown, Pa.

Application July 3, 1945, Serial No. 603,043
4 Claims. (Cl. 18—1)



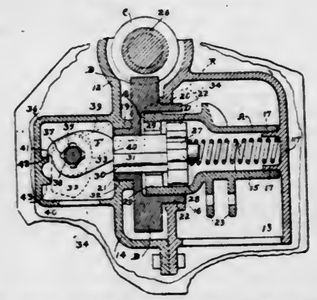
3. In an apparatus for rolling a continuous sheet of plastic material with an extruded bead of predetermined undercut cross-section superimposed thereon, a pair of coacting rollers, a hopper thereabove for containing the material to be rolled, said hopper having an outlet in feeding relation to said rollers, means to feed to the rollers an extruded rod shaped to conform to the undercut bead, said means including a guide bar disposed within and extending across the hopper and containing an aperture shaped to substantially conform with the cross-section of said extruded rod and proportioned to slidably receive the rod, the rollers being shaped to operatively accommodate therebetween the rod and said sheet in contiguous relation, one of the said rollers containing a circumferential groove adapted to receive the said extruded rod with the undercut portion radially outwardly disposed with respect to the grooved roller, whereby such portion will be brought into operative contact with the sheet adjacent the other roller, and heating means at least on one roller and positioned adjacent the regions of contact of said sheet and rod while passing through the rollers whereby the rod will be fused to the sheet.

2,439,940

ELECTRICAL INSULATION TESTING APPARATUS

Clay E. Lewis, Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York

Application June 2, 1944, Serial No. 538,401
3 Claims. (Cl. 175—183)

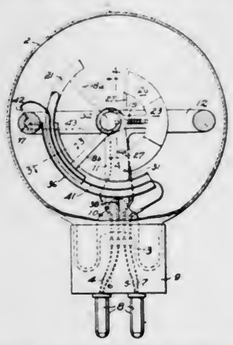


1. An apparatus for testing the insulation on an insulated conductor forming part of an electric cable, which comprises a transformer having an insulated conductor to be tested connected in the secondary circuit thereof, means for energizing the primary side of said transformer to impress a high potential across its secondary side and across the insulation of a conductor connected thereto to break down any faults in the insulation of said conductor, manually operable means for controlling the energization of the transformer, current responsive means connected in series with the primary side of the transformer to automatically deenergize said transformer when an increased current flows therein due to a breakdown in the insulation of the conductor connected thereto, and means including a timing device energized simultaneously with the transformer for shunting the current responsive means for a predetermined period of time thereby preventing the operation of the current responsive means by transient magnetizing inrush currents occurring upon the energization of the transformer.

2,439,941

HAND BRAKE

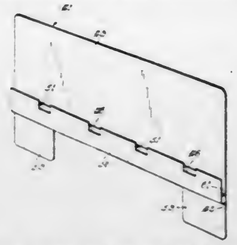
Harvey J. Lounsbury, Glen Ellyn, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware



Application May 11, 1946, Serial No. 669,070
1 Claim. (Cl. 74—505)

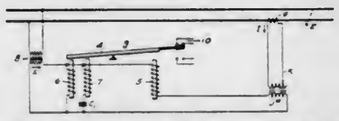
In a hand brake mechanism, the combination with a chain winding drum rotatable about a hori-

zontal axis; of a worm wheel rotatable about a horizontal axis and axially aligned with said drum; a horizontally disposed sliding clutch member coaxial with said worm wheel and rotatable in unison with the latter, said drum and clutch member having cooperating locking portions; spring means yieldingly holding said clutch member engaged; a worm member meshing with the worm wheel; a housing enclosing said drum, worm wheel and worm; a hand wheel operatively connected to the worm member for rotating the latter; a cam within the housing supported for rotation about a horizontal axis, said cam having a curved edge face engageable with said clutch member to slide the same out of operative engagement with the drum, and a flat locking edge face adjacent said curved edge face engageable with said clutch to lock the latter in disengaged position; a lever fixed to the cam for actuating the same, said lever being swingable from pendant to raised position to rotate the cam and disengage said clutch member, said flat face, when engaged with the clutch member, holding said lever in raised position; a projecting stop lip on said cam diametrically opposite to said flat locking face; and a fixed stop on the housing in the path of movement of said lip for limiting the throw of said cam and lever in clutch disengaging direction.



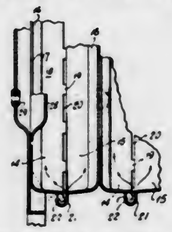
2,439,942
MOVABLE ELECTRODE TUBE
William C. Marshall, Oakland, Calif.
Application November 20, 1944, Serial No. 564,302
9 Claims. (Cl. 250—27.5)

1. An electron discharge device comprising a chassis, a grid frame pivoted in the chassis, a grid mounted on the grid frame in an arc centered at the axis of the grid frame pivot, and an anode and a cathode supported on the chassis and lying at the side of the grid in arcs centered at the axis of the grid frame pivot.



2,439,943
CARD HANDLING DEVICE
Alfred M. Martin, Park Ridge, Ill.
Application August 7, 1943, Serial No. 497,834
6 Claims. (Cl. 129—16.7)

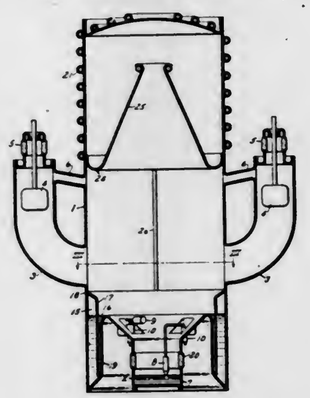
2. In a card handling device, the combination of a panel, a rib along the lower edge of the panel providing an upwardly facing ledge thereon, a series of leaf springs secured to the outer face of the rib and having their free ends projecting thereabove into proximity with the panel, the springs being spaced along the panel longitudinally and having their said free ends turned inwardly and then outwardly, a coaming secured to the outer face of said rib and over the lower ends of the springs, said coaming being slotted at intervals longitudinally opposite the upper end of each spring to permit the upper ends of the springs to play therein, said coaming providing a



guard for the free edges of said spring upper ends, wherein the springs have rivets passing therethrough and through the rib and panel and the coaming is recessed on its inner face to let the rivets thereinto.

2,439,944
REACTANCE TYPE RELAY
Arthur C. Mehring, East Orange, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 9, 1945, Serial No. 576,973
2 Claims. (Cl. 175—294)

2. A differential-type reactance-relay, having an operating-coil flux-producing means, a restraint-coil flux-producing means, a reactance-means, means for exciting said reactance-means in response to the line-current, means for producing a relaying-voltage in response to the line-voltage, exciting means for exciting said operating-coil flux-producing means with both said relaying-voltage and the voltage-drop across said reactance-means, and exciting means for exciting said restraint-coil flux-producing means with said relaying-voltage alone, the voltage-responses of the operating-coil and restraint-coil flux-producing means being substantially equal, when there is no current applied to said reactance-means.

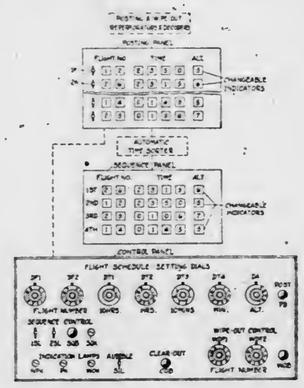


2,439,945
ELECTRICALLY HEATED SPACE RADIATOR
Henry J. Morton, Detroit, Mich.
Application January 17, 1946, Serial No. 641,688
9 Claims. (Cl. 219—38)

1. A sheet metal radiator comprising a plurality of hollow, relatively flat sections, means

for securing said sections in assembled relation; said sections each including two similarly shaped parts of opposite hand secured together along their edges and provided along their entire periphery with a series of air ports, a guard-shield on one of said parts co-extensive in outline therewith and extending over the edge of the other of said parts in spaced relation to the air ports between said parts for the full periphery of said one part, and heating means extending through said sections.

2,439,946
VAPOR-ELECTRIC DEVICE
William E. Pakala, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 8, 1947, Serial No. 733,394
11 Claims. (Cl. 250—27.5)

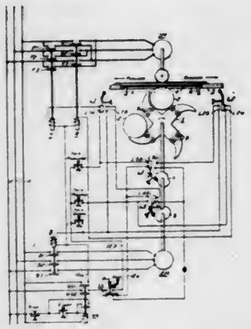


1. A vapor-electric device comprising a sealed substantially evacuated container, the bottom of said container being reentrant to provide a channel adjacent the walls of the chamber, a flange secured to the wall of the chamber in gastight relation and extending into said channel, a quantity of mercury in said channel providing a sealed compartment under said flange, a mercury pool cathode covering at least a portion of said bottom, means for collecting mercury above said compartment and a fall tube extending from said mercury collecting means into said compartment.

2,439,947
SOLDERLESS CONNECTOR FOR ATTACHMENT TO ELECTRICAL CONDUCTORS
Peter A. Pontius, East Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 27, 1943, Serial No. 488,635
5 Claims. (Cl. 173—269)

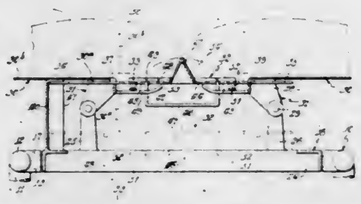
4. An electrical connector comprising, an eyelet portion, a contact tongue formed integrally with the eyelet portion, a sleeve disposed on the contact tongue, the longitudinal axis of said contact tongue being disposed at an angle to the longitudinal axis of the connector, a finger formed integrally with the eyelet portion, the longitudinal axis of said finger being disposed substantially at a right angle to said contact tongue, and an additional finger formed integrally with the eyelet portion, said additional finger having a portion disposed substantially parallel to the first-named finger and an extension disposed substantially at a right angle to the longitudinal axis of the connector.

2,439,948
AIRWAY TRAFFIC CONTROL SYSTEM
Neil D. Preston and Forest B. Hitchcock, Rochester, N. Y., assignors to General Railway Signal Company, Rochester, N. Y.
Application October 11, 1945, Serial No. 621,778
31 Claims. (Cl. 177—353)



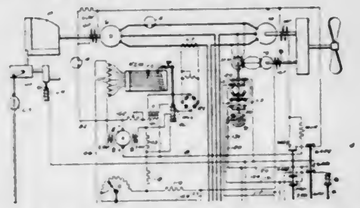
25. In a flight schedule organization, a posting panel having a plurality of groups of changeable indicators for displaying different scheduled times, means for causing the posting of a series of time schedules in successive groups of changeable indicators regardless of the times such schedules represent, sorting means manually initiated for comparing the time schedules already posted in said posting panel for identifying said schedules in a chronological order determined by the times they represent, and means governed by said sorting means for reposting said schedules in the identified order.

2,439,949
CONTROL FOR BARREL STENCILLING MACHINES
John E. Roblee, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 24, 1946, Serial No. 698,971
5 Claims. (Cl. 318—35)



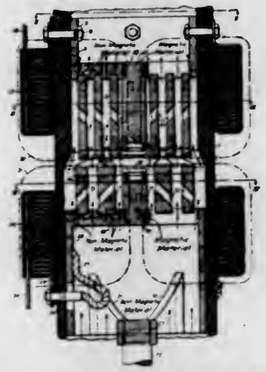
1. A control system for a pair of motors comprising, in combination, means for supplying electrical energy to said motors, a pair of relays for reversibly connecting one of said motors to said means for supplying electrical energy, a third relay for connecting the other of said motors to said means for supplying electrical energy, a reciprocating member driven by said one motor, and operable to each of two extremes of posi-

tion, a rotatable member, constructed and arranged for intermittent rotation through a predetermined angle and driven by said other motor, first and second switches having normal positions and actuated positions, each of said switches being disposed for actuation by said reciprocating member, one at each extreme of movement thereof, third and fourth switches each having two positions of operation, one a normal position and one an actuated position, means for operating said third and fourth switches so that one is in its normal position when the other is in its actuated position for each intermittent movement of said rotatable member through said predetermined angle, circuit means connecting one of said pair of relays in circuit relation with said



first and third limit switches to effect energization of said one relay when said first and third switches are in normal positions, circuit means connecting the other of said pair of relays in circuit relation with said second and fourth switches to effect energization of said other of said pair of relays when said second and fourth switches are in normal positions, circuit means connecting said third relay in circuit relation with said first and fourth switches to effect energization thereof when said first and fourth switches are in actuated positions, and circuit means connecting said second and third switches in circuit relation with said third relay to effect energization thereof when said second and third switches are in actuated positions.

2,439,950
BOOKHOLDER
George T. Rogers, Lake Forest, Ill.
Application October 27, 1944, Serial No. 560,538
12 Claims. (Cl. 45—85)

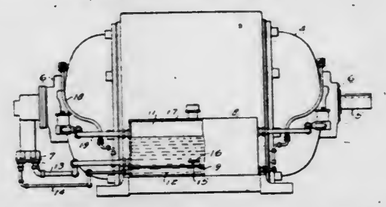


1. A book-holder comprising in combination a frame, pairs of fulcrum members supported by the frame in parallel relation, a pair of levers pivotally connected to each pair of fulcrum members respectively, each of said levers comprising a short arm and a long arm angular thereto, a stirrup supported by and between said levers, means connecting the stirrup with the levers whereby when the levers are in book opening position the stirrup will be raised and when the levers are in closed position the stirrup will be depressed and will receive the back of the book and support the entire weight of the book, and means associated with said levers and stirrup and having relative movement with respect to the stirrup for further elevating intermediate portions of the back of the book when the stirrup is raised, said means comprising a pair of hangers depending from said stirrup, a chine member carried by said hangers for up and down movement thereon, a lifter arm carried by each lever and engageable with said chine member to raise the chine member in the elevated position of the stirrup, said chine member also having lateral movement with respect to said stirrup to accommodate varying positions of the book back.

2,439,951
ALTERNATING CURRENT GENERATOR FED MOTOR CONTROL SYSTEM
Walter Schaelchlin, Pittsburgh, Pa., and Herman H. Curry, Morristown, N. J.; said Schaelchlin assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 21, 1945, Serial No. 589,632
4 Claims. (Cl. 318—148)

1. In a ship propulsion system having a turbine, an alternating current generator driven by the turbine having conventional armature and field windings, a synchronous motor having conventional damper windings, alternating current primary windings and field windings, the combination of, a speed control lever in the pilot house, a follow-up lever in the engine room, electric synchronizing means for causing the follow-up lever in the engine room to follow the movements of the pilot house control lever, a pilot motor controlled by the follow-up lever, a starting sequence control drum for the synchronous motor coupled to be driven by the pilot motor, means responsive to a predetermined operation of the drum to increase the speed of the generator and to connect the synchronous motor to the generator to effect automatic acceleration of the synchronous motor as an induction motor, means responsive to a selected slip speed of the synchronous motor for automatically decreasing the generator speed and means responsive to the motor load current for increasing the generator excitation, and means responsive to a selected position of the pole pieces of the synchronous motor to the rotating flux in the motor for automatically exciting the field windings of the synchronous motor so as to synchronize the synchronous motor with maximum pull-in torque, and means operable upon synchronization of the synchronous motor for effecting movement of the starting sequence control drum to the speed position selected by the pilot house lever.

2,439,952
CIRCUIT INTERRUPTER
Albert P. Strom, Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 31, 1944, Serial No. 552,064
8 Claims. (Cl. 200—147)



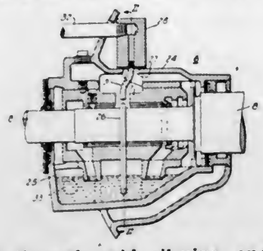
1. In a circuit interrupter of the fluid blast type, a fluid exhaust electrode including a plurality of spaced annular arc terminal members all at one potential and having a fluid exhaust passage therebetween, a fluid entrance electrode including a plurality of spaced annular arc terminal members all at one potential and having a fluid entrance passage therebetween, said annular arc terminal members of the two electrodes having their larger surfaces and the passages therebetween extending in substantially the same direction and having their edge portions facing each other at all times, and said edge portions providing an arc gap between the two electrodes during interruption of the circuit, means for establishing an arc which plays in the gap between the facing edges of the spaced annular arc terminal members, magnetic means for rotating the arc around the arc gap between the edges of the spaced annular arc terminal members of the two electrodes, and means for causing a flow of fluid which flows without major change of direction while flowing through the spaces between the annular members of the entrance electrode, longitudinally of the arc across the arc gap and through the spaces between the annular members of the exhaust electrode.

2,439,953
LOW-LOSS THERMOSETTING RESINS
Jack Swiss and Newton C. Foster, McKeesport, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application March 21, 1944, Serial No. 527,483
9 Claims. (Cl. 154—43)

5. A laminated member comprising, in combination, a plurality of sheets of fibrous material and a binder for the sheets of fibrous material consisting of the resinous reaction product of from 75 to 95 parts by weight of a vinyl aryl compound selected from the group consisting of styrene, alpha methyl styrene, and monohalide and monoalkyl nuclear substituted styrene and from 25 to 5 parts by weight of the soluble ester reaction product of an unsaturated alpha-beta ethylenic dicarboxylic acidic compound selected from the group consisting of maleic anhydride, maleic acid, fumaric acid, citraconic acid and citraconic anhydride, with castor oil, and not more than 50 parts by weight of a plasticizer in the resinous product to provide for predetermined toughness.

9. A composition of matter consisting of the resinous reaction product of from 75 to 95 parts by weight of a vinyl aryl compound from the group consisting of styrene, alpha methyl styrene and monohalide and monoalkyl nuclear substituted styrene, and from 5 to 25 parts by weight of the soluble ester reaction product of castor oil and an unsaturated alpha-beta dicarboxylic acidic compound selected from the group consisting of maleic anhydride, maleic acid, citraconic acid, citraconic anhydride and fumaric acid.

2,439,954
LUBRICATION
John V. Tercho, Turtle Creek, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 3, 1945, Serial No. 586,289
8 Claims. (Cl. 184—6)



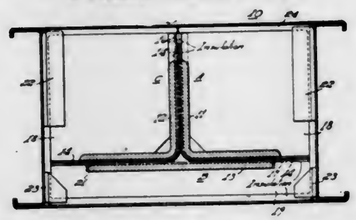
1. A flood-lubricating means for a lubricated device having an approximately horizontal rotating shaft, a bearing for supporting the shaft at each end of the lubricated device, and a shaft-driven oil-pump at one end of the device, said flood-lubricating means comprising an oil-tank centrally disposed alongside of said lubricated device, said oil-tank having a partition dividing the same into an oil-reservoir and a pressure-oil chamber, an oil-line to the pump from the oil-reservoir, an oil-line from the pump to the pressure-oil chamber, the device including means providing a pressure-relieving oil-passageway for discharging some of the oil pumped by said pump, two oil-lines of approximately identical oil-pressure characteristics from the pressure-oil chamber to the respective bearings for flood-lubricating the same, and an oil-line from each bearing to the oil-reservoir for draining oil from each bearing.

2,439,955
OIL-RING AND FLOOD-LUBRICATED BEARING
John V. Tercho, Turtle Creek, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 3, 1945, Serial No. 586,290
2 Claims. (Cl. 308—128)

1. A combination oil-ring bearing and flood-lubrication bearing, comprising a sleeve-bearing for journalling an approximately horizontal rotating shaft, said sleeve-bearing having a housing having an oil-chamber in its lower portion and having a slot in its upper portion, an oil-ring for lifting oil from the oil-chamber to the top of the journal, the slot being so shaped and dimensioned that the oil-ring may be inserted and removed therethrough, a removable slot-cover having a downwardly depending oil-

pipe extending into close juxtaposition to the top of the oil-ring, an oil-supply coupling-means for

feeding oil through said oil-pipe, and an oil-overflow drain-line from said oil-chamber.



2,439,956

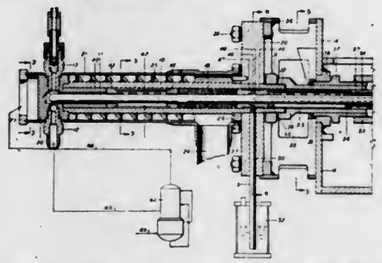
BUS-BAR STRUCTURE

Charles F. Wagner, Swissvale, and Lawrence L. Fountain, Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application July 7, 1944, Serial No. 543,936

5 Claims. (Cl. 174—99)

1. A multi-phase bus structure comprising, a pair of right angle bars and a flat bar disposed in a T formation, insulating means disposed between said bars, a substantially rectangular housing enclosing said bars, substantially rectangular insulating blocks slidably disposed in said housing and directly engaging said bars to support and retain them in position, said insulating blocks being detached from said bars, and means on the inside walls of the housing for retaining said blocks in position.



2,439,957

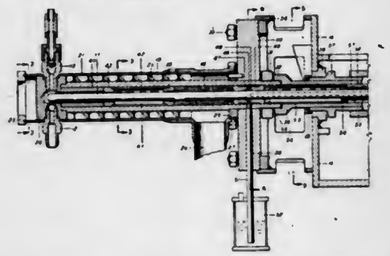
PUMP FOR LIQUEFIED GASES

Carl R. Anderson, Detroit, Mich., assignor to Air Products Incorporated, Detroit, Mich., a corporation of Michigan

Application October 21, 1943, Serial No. 507,091

50 Claims. (Cl. 103—1)

1. In a pump for highly volatile liquids comprising intake and discharge valves, a cylinder and a plunger reciprocating therein, the diameter of said plunger being materially less than the internal diameter of said cylinder, and packing surrounding said plunger within said cylinder; a working barrel fixed in said cylinder adjacent said valves; means for widely spacing said packing from said working barrel to provide a longitudinally extended annular open space between said plunger and said cylinder; means for restricting the flow of liquid between said working barrel and said annular space, and means for refrigerating at least the portion of said cylinder surrounding said annular space.



2,439,958

PUMP FOR LIQUEFIED GASES

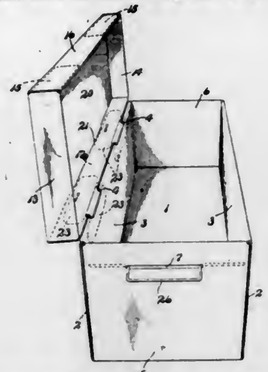
Carl R. Anderson, Chattanooga, Tenn., assignor to Air Products Incorporated, Chattanooga, Tenn., a corporation of Michigan

Original application October 21, 1943, Serial No. 507,091. Divided and this application August 10, 1944, Serial No. 548,846

11 Claims. (Cl. 103—1)

1. In combination with a pump having a cylinder, a plunger reciprocating therein and packing surrounding said plunger within said cylinder: means for supplying said cylinder with a liquefied gas having an atmospheric pressure boiling point materially below atmospheric temperature; a lantern ring within said cylinder on the low pressure side of said packing; means communicating with said packing for converting liquid leaking through said packing to the form of an invisible gas, and means communicating with last said means for rendering a flow of said invisible gas visually evident.

2,439,959



PAPER BOARD CHEST

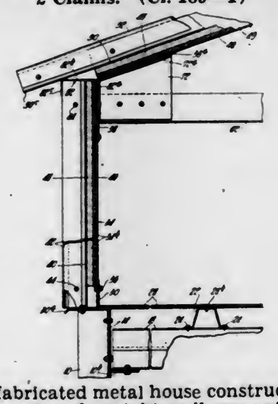
Wilbur G. Anderson, Jr., Grand Rapids, Mich., assignor to American Box Board Company Grand Rapids, Mich., a corporation of Michigan

Application April 21, 1947, Serial No. 742,842

5 Claims. (Cl. 229—44)

1. A receptacle having a vertical side of two thicknesses of material integrally connected at their upper edges in a smooth, continuous extension from one of said thicknesses of material to the other at said edge, said side at its upper edge having spaced slots through the material at said edge, a cover member having a side of two thicknesses of material integrally connected at the lower edge of a side of the cover, with like spaced slots therein, and flat hinges of flexible material each of substantially rectangular form slotted inwardly for a distance at each end, substantially midway between the side edges thereof to provide two leaves connected by a portion of reduced length, one of said hinges being connected at each of associated slots, one in the receptacle and the other in the cover, with one of the leaves of a hinge between the two thicknesses of material of said side of the receptacle and the other

between the two thicknesses of material of said side of the cover, with the shorter length connecting portion between the leaves between said slots in the side of the receptacle and cover.



2,439,960

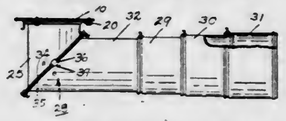
PREFABRICATED METAL HOUSE CONSTRUCTION

Claude I. Auten, Birmingham, Ala., assignor to Tennessee Coal, Iron and Railroad Company, Birmingham, Ala., a corporation of Alabama

Application May 3, 1943, Serial No. 485,486

2 Claims. (Cl. 189—1)

1. Prefabricated metal house construction comprising a series of upright wall supporting members consisting of sheet metal angles arranged back to back along each side and at each end of said house, a respective metal eaves member bent to an obtuse angle secured to each series of upright side members, a respective top horizontal gable end cross member consisting of a metal angle secured to each series of upright end members, the outer-most end and side upright members being secured to each other to form integrated reinforced corner posts, rafter members each consisting of sheet metal angles of the same cross-sectional size and shape as said upright wall supporting members and arranged back to back and having their lower ends resting on and secured to said eaves member, a pair of spaced parallel central longitudinally extending ridge members of sheet metal each bent to an acute angle and forming supports for the upper ends of said rafter members, the spacing between said central ridge members being adapted to accommodate a smoke pipe, cross members carrying gusset brackets at their ends having lateral flanges for attachment to said eaves members, upright struts whose tops and bottoms are respectively connected with said ridge members and said cross members, metal roof panels filling the spaces between the several rafter members and having flanges contacting the sides of said rafters, U-shaped sheet metal battens embracing and secured to said flanges of the panels and rafter members, and a central ridge plate spanning the space above said spaced ridge members.



2,439,961

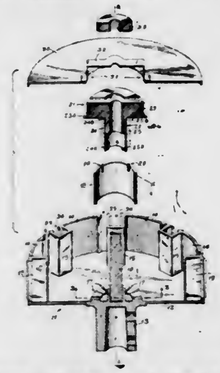
WAGON CHUTE

Ray Bauders, Kewanee, Ill.

Application March 29, 1946, Serial No. 658,267

4 Claims. (Cl. 193—5)

1. A chute for attachment to vehicles comprising a plurality of telescopic sections, an elbow section connected to one of said sections and to the rear of the vehicle, said elbow comprising two parts angularly adjustable with respect to each other, to thereby permit the telescopic sections to be swung to either the left or right of the vehicle, releasable securing elements coupling the two elbow parts together for changing the angular relation of the parts, a plate secured to the rear wall of the dump vehicle, a flange carried by one part of said elbow, studs extending from the plate, and rollers journalled on said studs, said flange riding on said rollers for turning thereon, whereby the entire chute may be turned on this connection when said elbow parts are locked together by said securing elements.

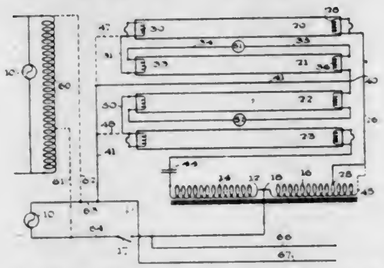


2,439,962

SANDING DRUM

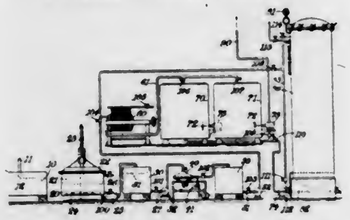
Teofil L. Bonkowski, Los Angeles, Calif., assignor, by direct and mesne assignments, to Merit Products, Inc., Los Angeles, Calif., a corporation of California

Application April 24, 1945, Serial No. 590,026



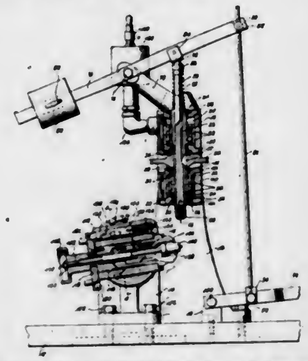
3 Claims. (Cl. 51—194)

3. In sanding apparatus of the type described, a drum member, a centrally located spindle af-



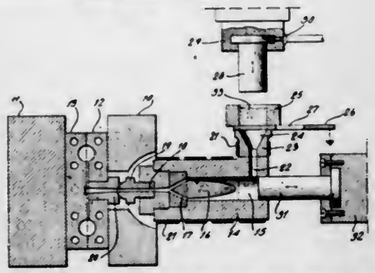
fixed to said drum member and extending therethrough, a two-part reel assembly comprising a spool member having a plurality of strips of abrasive material wound concentrically thereon and a male member journaled for rotation on said spindle, releasable locking means between said male and female member, releasable indexing means between said drum member and said male member, and said male member having a portion thereof extending outside the confines of said drum member for manual movement thereof.

2,439,963
FLUORESCENT LIGHTING SYSTEM
Charles P. Boucher and Russell W. Keiser, Atlanta, Ga., assignors to Boucher and Keiser Company, Atlanta, Ga., a partnership
Application April 25, 1944, Serial No. 532,682
10 Claims. (Cl. 315—96)



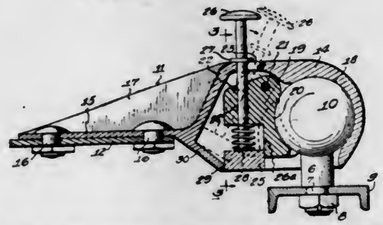
1. A fluorescent lamp system comprising in combination with a source of current having a voltage at least twice the operating potential of a lamp, of a pair of like fluorescent lamps, a reactor, and conductors associating the lamps and reactor in series with the said source, one of said lamps having its electrodes connected in said series for cold starting and the other having its electrodes connected in said series for heated cathode starting, a starting switch of the type having a closed circuit when cold connected to close the heater circuits of the second lamp whereby the first lamp starts instantly on closing the circuit, the second lamp starts when its switch opens and both lamps then operate in series.

2,439,964
EXTRACTION AND PREPARATION OF AGAR
Joseph Francis Byrne, Hove, and Philip Steward Powling, London, England
Application July 26, 1944, Serial No. 546,698
In Great Britain August 10, 1943
6 Claims. (Cl. 260—209.6)



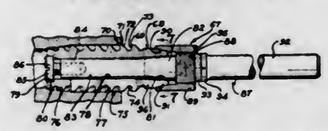
1. In the treatment of seaweed of the kind specified for the production of agar the steps of first obtaining an aqueous extract from the seaweed by boiling with a weak alkaline solution, separating the resultant liquor and thereafter treating the latter under heat and pressure in an autoclave-type apparatus in the presence of potassium hydroxide.

2,439,965
DRILL PRESS
John A. Cupler, Cumberland, Md.
Application January 9, 1943, Serial No. 471,869
2 Claims. (Cl. 77—19)



1. A drill press comprising a work support and a tool spindle, one end of said spindle carrying a chuck for reception of a tool and the other end of said spindle providing a bearing surface, a pivoted beam mounted adjacent said spindle and having an intermediate portion adapted for engagement with said bearing surface for feeding the tool towards said work support, an operating lever connected to said beam at one side of its pivot, said operating lever being pivoted so as to provide a large mechanical advantage for advancing said spindle, cam means for retracting said beam, and means for balancing said beam.

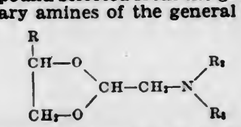
2,439,966
INJECTION MOLDING
Richard W. Dinzl, Westfield, N. J., assignor to The Watson-Stillman Co., Roselle, N. J., a corporation of New Jersey
Application June 25, 1943, Serial No. 492,212
8 Claims. (Cl. 18—30)



8. In apparatus for the injection molding of organic plastic material, the combination with a generator for high frequency current for heating a charge of organic plastic material and an injection cylinder electrically connected to said high frequency generator for receiving said heated charge, of a non-metallic charging cylinder for holding the charge of organic plastic material, a non-conducting plunger for pushing the charge of organic plastic material from said charging cylinder into said injection cylinder, and means on said plunger for applying high frequency electric current to the organic plastic material in said charging cylinder, said means being electrically connected to said high frequency generator.

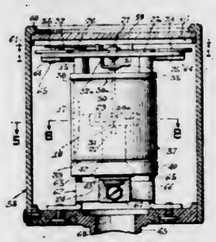
2,439,967
TRAILER HITCH
Robert F. Dollase, Fort Atkinson, Wis.
Application June 10, 1946, Serial No. 675,615
6 Claims. (Cl. 280—33.17)

4. A trailer hitch element for engagement with a stud or the like, said element comprising a housing open at its lower side, a head pivotally mounted in the housing and cooperating therewith to retain the stud in the housing, operating means slidably extending through said head for pivotally moving the head, a latch carried by the operating means, abutment surfaces on the housing and head with the latch normally disposed therebetween for holding the head against pivotal movement, means for limiting sliding movement of said operating means and means for biasing the latch to a position between the abutment surfaces, the abutment surface on the housing forming a part of a wall thereof and said operating means being movable with the pivoted head and disposable in contact with the inner surface of said wall, said housing having an enlarged opening in the upper wall thereof through which said operating means extends for sliding movement and pivotal movement with said head.



2,439,968
EXPANSIBLE REAMER
Ralph Gordon Fear, Reseda, Calif.
Application September 13, 1943, Serial No. 502,147
6 Claims. (Cl. 77—76)

1. In a cutting tool, the combination of: a tool body having a bore extending therethrough, said bore being flared at the rearward end of said tool body and said body having a slot in its rearward portion; a helical cutting edge projecting from said tool body, said cutting edge being formed at such an acute angle with the plane normal to the axis of said tool body as to cut a contacting surface with a shearing action; a mandrel disposed in said bore, said mandrel having a tapered portion extending into said flared bore; and means for securing said body in various positions upon said mandrel, whereby the diameter of said cutting edge on said rearward portion of said body is varied.

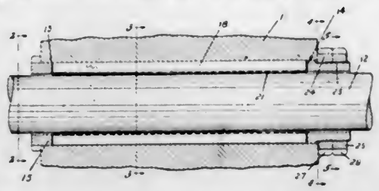


2,439,969
AMINO-DIOXACYCLOPENTANES
Ernest Fourneau, Paris, France, assignor to Societe des Usines Chimiques Rhone-Poulenc, Paris, France, a French company
No Drawing. Application May 8, 1946, Serial No. 668,314. In France April 17, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires April 17, 1964
10 Claims. (Cl. 260—338)

1. A compound selected from the group consisting of tertiary amines of the general formula:

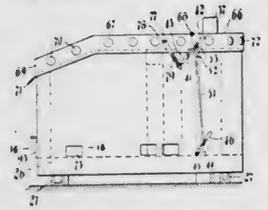
where R represents a member selected from the class consisting of the hydrogen atom and lower alkyl, hydroxyalkyl and dialkylaminoalkyl groups and R_2 and R_3 are each a lower alkyl group, and the quaternary salts of such amines.

2,439,970
POLARIZED ARMATURE ELECTRICAL INSTRUMENT
Robert A. Fox, Glenview, Ill., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a corporation of New Jersey
Application June 14, 1944, Serial No. 540,363
9 Claims. (Cl. 171—95)



1. In an electrical instrument including a pivoted permanent magnet and means for generating a magnetic field to produce a torque influence on said magnet: the combination of a frame to which said magnet is pivoted; a surrounding sleeve of magnetic material for shielding said instrument; and means for locating said sleeve in concentric relation to the pivot axis of said magnet, comprising a conical surface on said frame concentric to said pivot axis and forming a seat for one end of said sleeve, a clamping member on said frame having a conical surface forming a seat for the other end of said sleeve, and means localizing said clamping member in concentric relation to the pivot axis of said magnet.

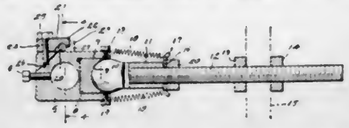
2,439,971
SHAFT BEARING
Walter R. Freeman, St. Louis County, Mo.
Application November 1, 1944, Serial No. 561,398
4 Claims. (Cl. 308—239)



1. In a bearing for use with two relatively rotatable members having different size internal and external cylindrical surfaces, a cylindrical cage having integral ends and circumferentially spaced longitudinally extending slots with outwardly diverging side walls, said cage having an external diameter adapted to fit within the ex-

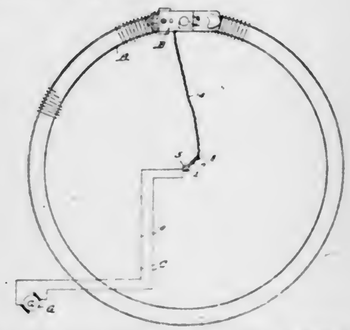
ternal cylindrical surface and an internal diameter greater than the external cylindrical surface, elongated members of rubber or like yieldable material having diverging side walls and fitting within the slots and of such a radial thick-

ness as to contact both cylindrical surfaces, and detachable means for preventing the cage from rotation with the member having the external cylindrical surface, and comprising clamping and locking nuts associated with one integral end of the cage.



2,439,972
HOT-AIR HEATER WITH SELECTIVE INDIRECT DRAFT
Fay B. Gamblin, Smithers, British Columbia, Canada
Application October 19, 1944, Serial No. 559,394
10 Claims. (Cl. 126—67)

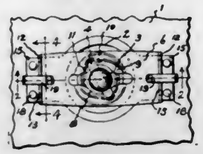
1. In a heating apparatus of the kind described, a firebox, a series of vertical tubes at a side thereof, said tubes closed at their ends and spaced to provide intervening passages for circulation of heated air, a smoke pipe communicating with the upper part of the end tube of the series, upper and lower horizontal ducts forming communications between the firebox and the tubes whereby products of combustion may either pass directly to the smoke pipe or downwardly through one tube and upwardly through the next, a horizontal damper in one of the upper ducts between adjacent tubes, a combined damper and deflector plate disposed in the bottom part of the end tube of the series for controlling a port provided in the bottom thereof, the combined damper and deflector plate being hingedly mounted at an edge of said port adjacent to the lower duct of the said end tube for directing the products of combustion upwardly of said port when opened, means for conducting foul air to said port, and a case encompassing said series of vertical tubes and forming a wall part of said passages for circulation of heated air, said case having inlet and outlet openings.



2,439,973
DOBBY KNIFE CONNECTOR
Charles A. Gunn, Alexander City, Ala.
Application November 15, 1946, Serial No. 709,921
1 Claim. (Cl. 139—66)

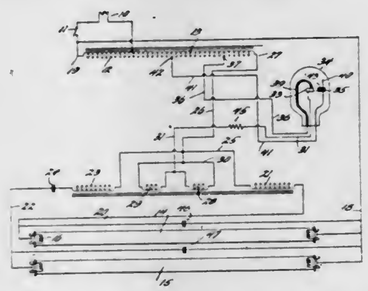
A dobby knife connector comprising a block having a shaft opening therethrough and formed with a socket at one end, a bearing block disposed in the socket, an elongated threaded rod, a ball head disposed into the socket and against the bearing block, said ball head being provided with a tubular internally threaded extension for receiving one end of the threaded rod, a jamb nut on the threaded rod, a washer on the rod

held against the outer end of the threaded extension by said jamb nut, said washer being provided with outstanding lugs and tension springs interposed between the block at the socket end thereof and connected to said lugs for holding the ball head disposed into the socket and snugly against said bearing block.



2,439,974
COMMUTATOR
Sam N. Holman, Tampa, Fla.
Application April 15, 1947, Serial No. 741,518
1 Claim. (Cl. 191—12)

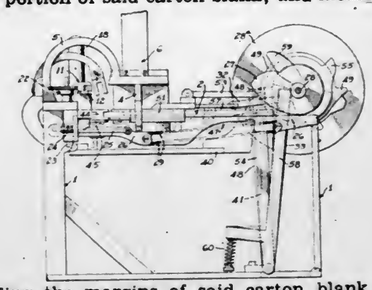
A circular amusement ride electrical drive commutator, comprising a vertical insulated support centrally located within the circular amusement ride, a pair of superimposed circular metal collars secured to the vertical support and insulated from each other, wires providing an electrical circuit between a source of electricity supply and the collars, enlarged flanges formed at the lower ends of the metal collars, laterally extended metal arms having metal ring members fitted over the metal collars, and resting on the enlarged flanges, terminal posts carried at the free ends of the arms, a two-wire circuit connected to the terminal posts, whereby rotation of the wires and metal arms with the amusement ride is permitted, in the manner and for the purpose described.



2,439,975
ROTARY TYPE SHIFTABLE FASTENER
Walter I. Jones, Belmont, Mass., assignor to United-Carr Fastener Corporation, Cambridge, Mass., a corporation of Massachusetts
Continuation of application Serial No. 458,195, September 14, 1942. This application March 17, 1944, Serial No. 526,932
31 Claims. (Cl. 24—221)

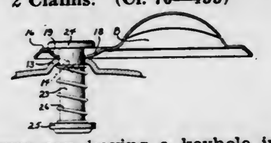
1. A fastener for use in securing together an apertured support and a part to be attached thereto which is provided with a rotatably mounted stud, said fastener comprising a stud-engaging fastener member for cooperative engagement with a rotatable stud, retainer means adapted to be mounted on the support and supporting said stud-engaging fastener member, means on said retainer overlying a portion of said fastener

member whereby lateral shifting of said stud-engaging fastener member in a plurality of directions relative to the aperture of said support may be effected, and support-engaging means on said retainer disposed intermediate the means which overlie portions of the fastener member.



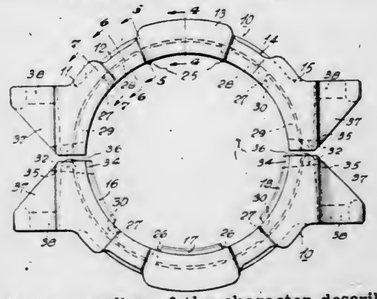
2,439,976
FLUORESCENT LAMP CIRCUIT
Russell W. Keiser and Charles Philippe Boucher, Fostoria, Ohio, assignors to Boucher and Keiser Company, Atlanta, Ga., a partnership
Application August 5, 1942, Serial No. 453,714
2 Claims. (Cl. 315—280)

1. A starting and operating circuit for a fluorescent lamp comprising a current source, a voltage step-up transformer at least a portion of the winding of which is connected in series with said lamp across the said source, a switch to temporarily connect the primary of said transformer across said source to impress a high voltage across said lamp during the starting period, at least a portion of the transformer winding serving as a ballast for the lamp during operation thereof, said switch comprising a pair of contacts supported in normal engagement, a bimetallic support for one of said contacts, and means to heat said support to cause it to separate said contacts, said heating means being energized continuously from said current source only during the operation of the lamp.



2,439,977
TABLET PACKAGING MACHINE
Fordyce J. Kendle, Monterey Park, Calif.
Application February 8, 1947, Serial No. 727,455
11 Claims. (Cl. 93—2)

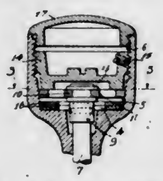
1. A tablet packaging apparatus comprising: a hopper for supplying predetermined loads of tablets juxtaposed in rows; means for feeding an initially flat carton blank in a receiving position in which an edge thereof underlies a load of tablets; means for advancing said load to the central portion of said carton blank; and means for



folding the margins of said carton blank over said load of tablets.

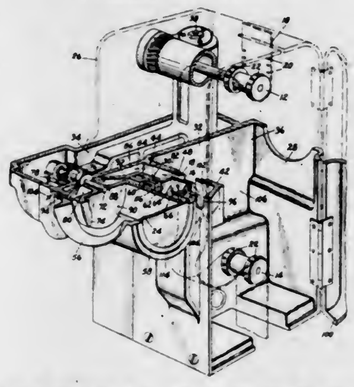
2,439,978
KEYHOLE COVER
Anton W. Konchan, Berwyn, Ill.
Application November 21, 1945, Serial No. 630,026
2 Claims. (Cl. 70—455)

1. A closure cap having a keyhole in it and having a pivot pinhole in it adjacent the keyhole, said cap having a ridge formed in it about said holes simulating a figure 8 in plan, said ridge having two aligned grooves in it separated in endwise relation by the pin hole, a cover for the keyhole pivoted to the cap and formed to simulate a figure 8 in plan to conform to the ridge contour of the cap, said cover having a tab portion, the tab portion having a pivot pin hole through it with the tab formed with two aligned tongues separated by the pin hole therein, a pivot pin through said holes, and a spring about said pin to draw the tongues of the cover into the grooves of the cap when the cover is in closed position over the keyhole to thereby restrain the cover from accidental displacement from closed position.



2,439,979
PIPE COUPLING
John H. Krooss, New York, N. Y., assignor to Pipe Couplings, Inc., New York, N. Y., a corporation of New York
Application July 27, 1945, Serial No. 607,387
10 Claims. (Cl. 285—194)

3. A pipe coupling of the character described, comprising a housing member of segmental shape

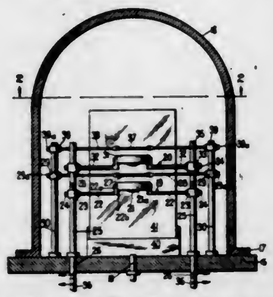


having an internal groove at one end thereof, extending circumferentially of the member, a jaw arranged in the groove, a plate engaging one end of the jaw for holding it in the groove, and means integral with the housing member for rigidly securing the plate to the member.

2,439,980
LIMITED TORQUE TOOL
Frank W. Livermont, Los Angeles, Calif., assignor to Richmont, Inc., Los Angeles, Calif., a corporation of California
Application September 4, 1944, Serial No. 552,611
7 Claims. (Cl. 64—30)

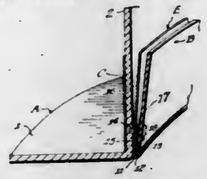
1. A limited torque tool comprising: a handle including a head having a tapered bore, and a sleeve extending from said head; a tool stem rotatably mounted in said sleeve, and protruding into said head; a planular spiral element attached at its radially inner end to said stem and having a radially outer peripheral portion adapted to engage frictionally said tapered portion to form a drive connection between said stem and said handle; and means for adjustably positioning said spiral element relative to said tapered portion to vary the frictional contact therewith.

2,439,981
MOTION-PICTURE PROJECTOR
Raymond J. Miller, Detroit, Mich., assignor to American Pattern and Manufacturing Co., Detroit, Mich., a copartnership
Application February 21, 1941, Serial No. 379,962
2 Claims. (Cl. 88—17)



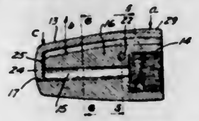
1. In a motion picture projector, a holding, a partition separating said housing into a film compartment and a mechanism compartment, an aperture plate extending from said partition into said film compartment, a blower having one side communicating with the atmosphere, said housing having an opening communicating with the other side of said blower in a path including said plate, a side door for said film compartment, a portion of said door being adapted to close against the adjacent vertical edge of said plate, whereby to obstruct communication between said opening and in front and laterally of said plate.

2,439,982
PRODUCTION OF DEHYDRATED CASTOR OIL
George S. Monroe and Vladimir N. Ipatieff, Riverside, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application July 30, 1943, Serial No. 496,778
8 Claims. (Cl. 260—405.5)



1. A process for dehydrating castor oil which comprises contacting castor oil at a dehydrating temperature and superatmospheric pressure with a liquid catalyst consisting of an aqueous solution containing at least 1 weight percent but less than 5 weight percent of an acidic substance selected from the group consisting of the mineral acids and hydrolyzable salts of mineral acids.

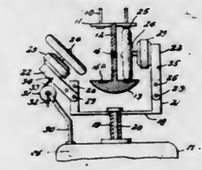
2,439,983
MEANS FOR THERMALLY EVAPORATING VARIOUS MATERIALS IN VACUUMS FOR COATING PURPOSES
Willard L. Morgan, Columbus, Ohio, and Arthur R. Weinrich, Brackenridge, Pa., assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
Application January 15, 1944, Serial No. 518,372
4 Claims. (Cl. 91—12.2)



1. An apparatus for thermal evaporation of materials in a vacuum and for restricting deposition of the evaporated material to predetermine defined areas at the side of such apparatus, comprising a vacuum chamber, thermal evaporating means located within the chamber, said evaporating means comprising a metallic cup-like material-receiving receptacle heated by passage of an electric current through its body and having an outwardly projecting peripheral flat flange of a length several times greater than the wall imposed cover matching in overall dimensions thickness of said cup-like receptacle, and a superimposed cover matching in overall dimensions said cup and flange, said cover being located at all times during thermal evaporation above and closely adjacent to said receptacle, said receptacle flange and superimposed cover outer portion being arranged substantially parallel and in horizontal position and together providing a horizontal peripheral throat as a vapor outlet for said evaporating means, the length of said throat and the separation of said flange and superimposed cover portion restricting the deposition within the predetermined defined areas.

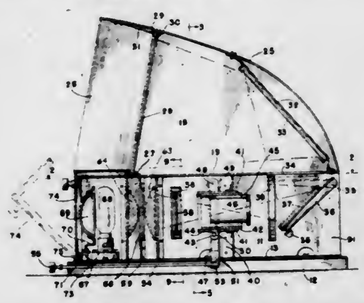
2,439,984
HAT CONSTRUCTION AND SWEATBAND THEREFOR
John L. Pearson, Tacoma, Wash.
Application January 10, 1947, Serial No. 721,357
8 Claims. (Cl. 2—181)

5. In a hat, a hat body comprising a crown and a brim; a sweat band; an attaching strip; stitching joining the lower edge portion of the sweat band to the lower portion of the attaching strip; stitching above said first named stitching and joining said attaching strip to said hat body adjacent the juncture of said brim and crown; and a moisture resistant strip floatingly interposed between said crown and said sweat band and having its lower edge portion folded to extend upwardly between said sweat band and the upper portion of said attaching strip, said lower edge portion of said moisture resistant strip being surface-adhered to said sweat band throughout a narrow zone above the stitching joining said sweat band lower edge portion to the lower portion of said attaching strip.



2,439,985
DISPENSING CLOSURE
Harold N. Perelson, Huntington Park, Calif.
Application March 30, 1945, Serial No. 585,739
3 Claims. (Cl. 222—545)

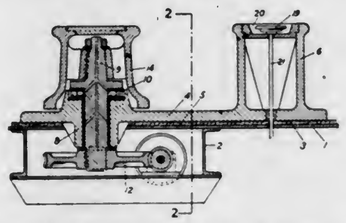
1. A device of the character described comprising a body member having a tubular threaded end portion adapted to receive the threaded end of a receptacle, a jaw-like extension of said body member having a discharge passageway extending longitudinally thereof and communicating with the tubular end portion, said jaw-like portion having a shoulder extending along the two sides and across the end thereof in a plane parallel to the axis of the discharge passageway and at one side of said passageway, a hinged shell-like closure fitting over the jaw-like extension of the body member and resting upon the face of said shoulder, the end portion of said shell-like closure extending across the outer end of the discharge passageway, and pivotal means articulately connecting the hinged closure with the body member upon an axis parallel to the plane of said shoulder and at right angles to the longitudinal axis of the passageway, said pivotal axis being contiguous to the passageway and disposed at the end of the jaw-like extension of said body adjacent to the tubular portion.



2,439,986
OVERHEAD RAILWAY
Robert John Rennie, Flushing, N. Y.
Application June 13, 1944, Serial No. 540,019
4 Claims. (Cl. 104—93)

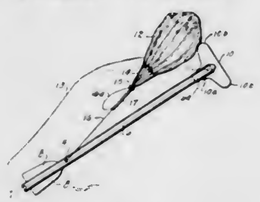
1. In an overhead railway embodying a suspended monorail having a vertical web and oppositely projecting bottom flanges, a car having an elongated body, vertical spindles fixed to the top of said body near the front and rear ends thereof, a truck swivelled on each spindle, each truck having spaced independent front and rear pairs of upright wheel mounts, the wheel mounts of each pair being arranged at opposite sides of the monorail, each wheel mount including an upper section hinged to swing laterally toward and

from the monorail, a wheel journaled on the upper section of each wheel mount and arranged to ride on the adjacent bottom flange of the monorail when said upper section is swung toward the monorail to a vertical position and to be disengaged from said monorail when said upper section is swung away from the monorail to an inclined position, and means to releasably secure the upper section of each wheel mount in a vertical position.



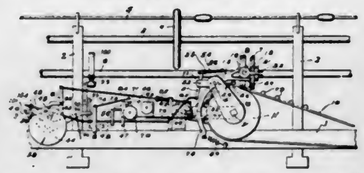
2,439,987
PICTURE PROJECTOR AND VIEWER
Henry Roger, Sandy Hook, Conn., assignor to Floor-O-Matic, Inc., New York, N. Y., a corporation
Application December 11, 1946, Serial No. 715,405
9 Claims. (Cl. 88—24)

1. A projector comprising a lower housing unit consisting of a light unit therein, condenser lens arranged before the said light unit, a slide holder movable through the side walls and arranged before the said condensers, a lens cylinder containing a focusing lens adjustably mounted in said lower housing unit and arranged before the said slide holder, an adjustable reflector element pivotally mounted in said lower housing unit and placed before the said lens cylinder and a hood slidably attached to the top of the said lower housing unit and consisting of base, side walls and top, the said base being formed with an opening arranged directly above the aforesaid pivotally mounted adjustable reflector element, a stationary reflector element in said hood and arranged at an angle directly above said opening in base of hood and a viewing screen mounted at the rear open end of said hood, the aforesaid pivotally mounted adjustable reflector element in said lower housing, and the stationary reflector element fixed in the said



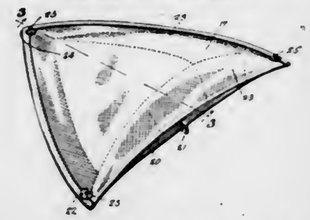
hood coacting to reflect the light rays from the said light unit upwardly and backwardly to the said viewing screen in said hood, spring means coacting with said pivotally mounted adjustable reflector element to hold same in raised inactive position to permit light rays from said light unit to be projected in a straight line to a distant screen, and means for supplying current to illuminate the said light bulb.

2,439,988
BOLLARD
Donald A. G. Ross, West Vancouver, British Columbia, Canada
Application July 3, 1944, Serial No. 543,250
1 Claim. (Cl. 254—176)



A bollard comprising a base, a pair of upstanding members spaced apart, one of said members being substantially cylindrical in form about a vertical axis and being non-rotatable, the second of said members being substantially in the form of a truncated cone and mounted on a vertical shaft parallel to the vertical axis of the first named member, means adapted for connection to a source of power for rotating the second named member, and means for controlling the rotation of said member, said means being located within the upper end of the non-rotatable member.

2,439,989
TOY PARACHUTE
Alfred L. Ruthven, Denver, Colo., assignor of three-fifths to himself as trustee for Betty R. Ruthven, Thomas D. Ruthven, and Sharon A. Ruthven, one-fifth to Helen D. Ruthven, and one-fifth to Louis R. Ruthven
Application September 19, 1946, Serial No. 697,949
6 Claims. (Cl. 46—86)

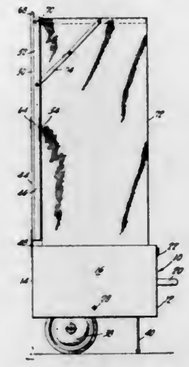


1. A toy parachute device comprising, in combination, a projectile comprising a shaft and a tip on the front end of the shaft which is substantially the same on both sides of the shaft and has a straight forward edge lying perpendicular to the longitudinal axis of the shaft, and a parachute having a shrouds cord secured to the shaft and adapted to be folded over said edge when the shrouds cord is thus secured and elastic means associated with the parachute and adapted to exert a pull on the parachute in the direction of the rear end of the projectile.

2,439,990
PATTERN CONTROL MEANS FOR KNITTING MACHINES
Tom Read Ryan, Trenton, Ga.
Application December 8, 1943, Serial No. 513,407
4 Claims. (Cl. 66—155)

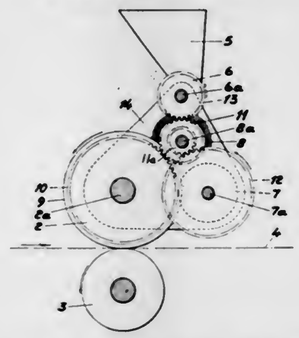
1. In a knitting machine, the combination with a main cam shaft endwise movable in opposite directions into knitting and narrowing positions, respectively, a pattern chain, a chain drive, means to move said shaft under control of said chain, and course control means normally ineffective, of means to render said course control means effective comprising an endwise movable rod, a reciprocating dog carrier, means operative by said chain to move said carrier in one direction, an abutment on said rod, and a dog on said carrier for engaging said abutment.

2,439,991
SHOULDER PAD
Frank Schulman, Louisville, Ky.
Application September 3, 1946, Serial No. 694,475
4 Claims. (Cl. 2—268)



1. A shoulder pad for outer garments including superposed connected thicknesses of stiffening fabric, one of said thicknesses having an elongated V-shaped slit the edge portions of which are drawn together and stitched to the other thicknesses of said material, there being V-shaped slits extending into the base portions of the stiffening materials, the edge portions of said slits being gathered together, the covering material fitted snugly upon the stiffening material and having inturned edges stitched to the stiffening material, the edges of the slits in the base portion of the stiffening material being stitched together thereby to impart to the pad an abrupt upwardly curved contour along the said base portion, and a lining secured to the side portions of the stiffening members, there being a dart in the lining for holding the lining taut and maintaining a transverse bow in the stiffening members whereby said members are held spaced from the lining between their edges.

2,439,992
FOLDING, WHEELED, SHOPPING BAG
Gerald Simonian, Fresno, Calif.
Application August 31, 1946, Serial No. 694,279
3 Claims. (Cl. 280—37)

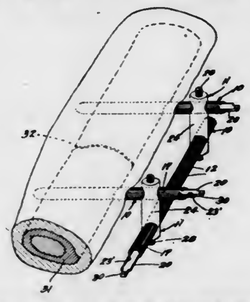


1. A vehicular shopping bag comprising a housing, a pair of wheels supporting said housing,

a leg adapted to coact with said wheels for the static support of said housing, a two section panel foldable upon itself pivotably secured to the housing, a stay pivotably secured to the upper edge of the upper panel section, a bag depend-

ing from said stay and extending within said housing, means to lock said panel sections in alignment normal to the upper edge of the housing, and means to lock said stay in position normal to said panel.

2,439,993
MACHINE FOR MAKING CRISP BREAD
Aron Birger Svensson, Filipstad, Sweden
Application January 30, 1945, Serial No. 575,304
In Sweden January 15, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires January 15, 1963
5 Claims. (Cl. 107—8)

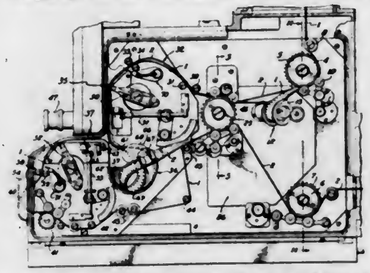


1. A device in machines for making crisp bread in which a dough string moves under a rotating pricking roll, the axis of which is at right angles to the longitudinal axis of the dough string, comprising two brushing rolls, which are parallel with the pricking roll and which rotate at different speeds, the said rolls being connected to the pricking roll and so arranged that they at least contact each other and rotate in opposite directions, one brush being positioned so that it cleans only the outer portions of the advancing pricking pins while the other brush is located above the first mentioned brush and in contact with the entire lengths of the pins and the outer surface of the pricking roll so as to insure effective cleaning thereof.

2,439,994
PREPARATION OF A SILICA-ALUMINA-ZIRCONIA CATALYST
Charles L. Thomas, Western Springs, Ill., and Edward C. Lee, deceased, late of Chicago, Ill., by James T. Cullinan, administrator, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Original application March 30, 1944, Serial No. 528,774. Divided and this application August 30, 1945, Serial No. 613,710
4 Claims. (Cl. 252—248)

1. A process for manufacturing a catalyst which comprises commingling silica with decomposable salts of aluminum and zirconium and heating the resultant mixture sufficiently to convert said salts to oxides.

2,439,995
SECURING DEVICE
Orville W. Thrailkill, Wellington, Kans.
Application April 11, 1944, Serial No. 530,488
15 Claims. (Cl. 128—84)

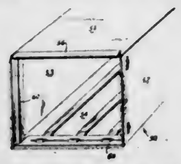


1. A device of the character stated comprising a tubular member longitudinally divided to form two portions, a loose coupling between said portions at one end permitting expansion and contraction of the tubular member from a minimum to a maximum diameter, an expander rod insertible into the tubular member and having a portion of maximum diameter greater than the minimum diameter of the tubular member, the rod having diametrically opposite camming surfaces spaced diagonally of the portion of maximum diameter for facilitating the turning of the rod from a position in which the plane of the maximum diameter is parallel with a plane passing between the opposing sides of the portions of the tubular member to a position in which the said plane of maximum diameter is transverse to the said plane passing between the opposing sides of the tube to effect the expansion of the tubular member, and means for preventing the turning of the rod upon its long axis in the tubular member.

2,439,996
COLOR MOTION-PICTURE CAMERA
Albert W. Tondreau, North Hollywood, Calif., assignor to Warner Bros. Pictures, Inc., New York, N. Y., a corporation of Delaware
Original application October 27, 1944, Serial No. 560,546. Divided and this application April 27, 1945, Serial No. 590,545
6 Claims. (Cl. 88—16.4)

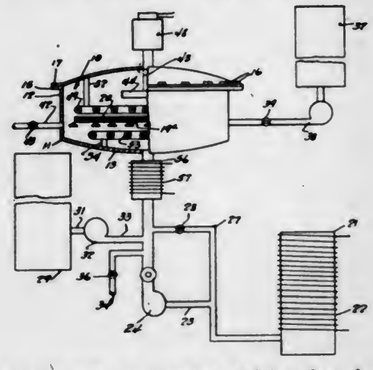
1. A camera having two film gates at right angles to each other, pull-down mechanism for each of said gates for advancing the film two frames at a time, a double sprocket having front and rear sprockets, said rear sprocket compris-

ing means for feeding two films in bi-pack relation to one of said gates, means at the exit side of said bi-pack gate for guiding the front film of said bi-pack to said front sprocket, means be-



tween said gates for guiding the rear film of said bi-pack through the other of said gates, and means at the exit side of said last mentioned gate for guiding the film therefrom to said rear sprocket.

2,439,997
WATER KEY FOR BRASS MUSICAL INSTRUMENTS
Earl Williams, Los Angeles, Calif.
Application September 10, 1945, Serial No. 615,393
6 Claims. (Cl. 84—397)



2. The combination with a musical instrument having a metal tube and a valve opening in the wall of said tube, of a water key for said opening, comprising: an arcuate sleeve positioned obliquely on said tube and curving in substantial conformity therewith; an arcuate stem slidable in said sleeve; a valve element on one end of said stem positioned to close the opening in said tube; and yieldable means urging said stem in a direction to close said valve element.

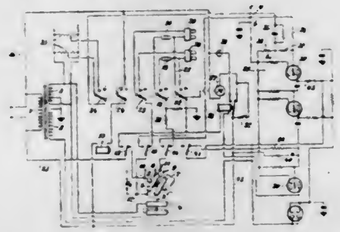
2,439,998
FIBRE REINFORCED COLLAPSIBLE CONTAINER
Philip Zalkind, New York, N. Y.
Application February 26, 1943, Serial No. 477,203
6 Claims. (Cl. 312—108)

1. A folding casing of the class described, having an open front and top, bottom and side walls; said walls being hingedly connected together along fold lines extending to said open front; extensions on said side walls hingedly connected thereto and extending in said container in surface to surface relation with the interior of their respective walls; vertical reinforcing members secured to said extensions; said reinforcing members, when said extensions are folded in, extending between the top and bottom walls; and means for locking reinforcing members in position in the erected casing, said means also assisting in maintaining rigid angular relation between the walls of the casing; and additional means for maintaining rigid angular relation between the walls of the casing, said last mentioned means being mounted on a horizontal wall of the casing and engaging a side wall thereof and being disengageable therefrom.

2,439,999
PROCESS OF FORMING FILMS UPON THE SURFACES OF GLASS PLATES
Frederick W. Adams, New York, N. Y., assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa., a corporation of Pennsylvania
Application December 9, 1944, Serial No. 567,439
10 Claims. (Cl. 154—2.73)

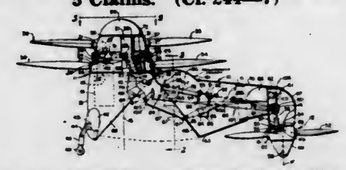
1. A process of forming safety glass having superficial films of high silica content upon the exposed surfaces thereof, which process comprises assembling a plurality of glass plates containing calcium oxide, silica and sodium oxide as components, with sheets of plastic as a binder between each two plates of glass, placing the resultant sandwich in an autoclave filled with an aqueous solution of a sodium salt at the laminating temperature for the plastic and at a corresponding pressure until the plates are adhered together and the exposed surfaces of the plates are etched preferentially to remove calcium to a depth of about 3 to 12 millionths of an inch, then removing and drying the assembly.

2,440,000
TREATMENT OF DRYING OILS
Henry G. Berger, Glen Rock, and George S. Crandall and John F. Socolofsky, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application February 2, 1945, Serial No. 575,938
8 Claims. (Cl. 106—222)



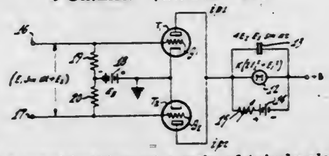
5. In a process of preparing a liquid coating composition, the steps which comprise polymerizing a drying oil containing a polymerization catalyst of the Friedel-Crafts type at a temperature not substantially above about 300° F. to a body not substantially lower than Z–6 (Gardner-Holdt scale), arresting polymerization of said oil before gelation thereof occurs by addition thereto of water in an amount sufficient to exert an arresting action but insufficient to form a separate phase and thereafter adding resin, thinner, and drier to form the said composition.

2,440,001
ATTACHMENT FOR WIRE ELEMENTS TO FRAME STRUCTURES
Svend G. Blumensaadt, Beachwood Village, Ohio, assignor to The Universal Wire Spring Company, Cleveland, Ohio, a corporation of Ohio
Application February 10, 1944, Serial No. 522,192
6 Claims. (Cl. 155—179)



1. A coupling connection for removably and axially non-rotatably coupling wire elements to frame-like structures embodying a wire member having left and right-handed loops connected by straight wire portions, a sharply outwardly curved portion at the end of said wire member extended from a straight wire portion in a plane angularly related to the longitudinal axis of said wire member, and a frame structure saving a rail with a pair of perforations extended at a right angle through the wall of said rail and arranged so that a line connecting said perforations is parallel to the axis of said rail, said perforations being dimensioned to fit the gauge of the wire of said wire member, said curved portion being threaded through said pair of perforations and said perforations being spaced from each other a distance approximately equal to the diameter of said curved portion so that the wire of the curved portion extends substantially at a right angle through the wall of said rail.

2,440,002
SELECTIVE METERING SYSTEM WITH SUPERVISED CONTROL DEVICE
John L. Bower, New Haven, Conn., assignor to Control Instrument Company, Inc., Brooklyn, N. Y., a corporation of New York
Application November 26, 1946, Serial No. 712,281
4 Claims. (Cl. 177—311)

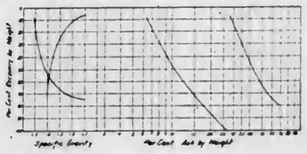


1. The combination with a plurality of metering circuits, and a meter including fixed and movable coils adapted for connection to said circuits and having mutual induction between the coils thereof during a metering operation; of a controlled device, a control circuit therefor, periodically operable means for switching said coils from the metering circuits to said control circuit to connect to the latter the voltage induced in said coil assembly, and means responsive to an increase in said voltage in excess of a predetermined value for energizing said control circuit to operate said device.

2,440,003
HELICOPTER AND AIRPLANE SUSTAINED AIRCRAFT
Glenn H. Bowlus, San Marino, Calif.
Application June 12, 1945, Serial No. 599,047
5 Claims. (Cl. 244—7)

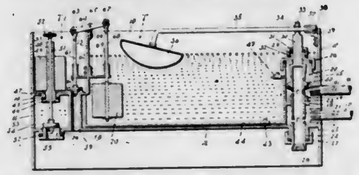
1. In an aircraft, a main body section, nose and tail sections hinged to the forward and rear ends thereof respectively on horizontal axes, the rear end of said main body section comprising a separate portion having a swiveling connection with said main body portion about the longitudinal axis thereof, a rotor rotatably mounted on said nose section and including blades adapted to be pitch adjusted from positions wherein they may function for helicopter type lifting to positions substantially at right angles to said first mentioned positions, wherein they may function, with the axis of said nose section substantially horizontal, as wing sustention and forward propulsion means, means for driving said rotors, and control means for orienting said nose and tail sections from positions with their longitudinal axes substantially vertical, wherein they are adapted to function for helicopter lifting, to positions wherein their axes are in substantial alignment with the axis of the main body section, in which positions the craft is adapted to fly horizontally.

2,440,004
ROOT MEAN SQUARE VOLTAGE MEASURING CIRCUIT
George H. Brown and Wendell C. Morrison, Princeton, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application April 4, 1946, Serial No. 659,480
8 Claims. (Cl. 171—95)



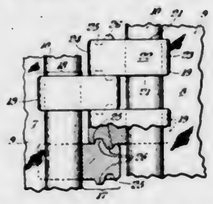
1. The combination of a pair of triode elements having their input circuits connected in push-pull and their output circuits connected in parallel through a common lead, means for applying to said input circuits a voltage having alternating and unidirectional components, and means for deriving from said common output lead a current which is proportional in value to the mean square value of said voltage.

2,440,005
FINELY DIVIDED CRYSTALLINE LIMESTONE IN HEAVY FLUID FOR FLOAT-AND-SINK CONCENTRATION
Jean Albert Brusset, Blairmore, Alberta, Canada, assignor to McNally Pittsburg Manufacturing Corporation, Pittsburg, Kans.
Application March 19, 1945, Serial No. 583,608
In Canada July 20, 1944
4 Claims. (Cl. 209—173)



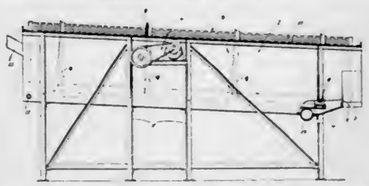
1. The method of separating particles of coal from a mixture thereof with particles of heavy

refuse, which comprises forming an aqueous suspension of finely divided crystalline limestone substantially free from quartz and from components which tend readily to disintegrate through use and handling into ultra-fine particles, said limestone having a hardness of about 3, practically all of which finely divided limestone is of a degree of fineness to pass a 48 mesh screen, a large fraction thereof being minus 100 mesh and



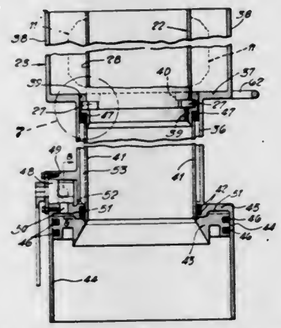
a minor but substantial part thereof, not exceeding about 25% by weight, being minus 200 mesh in particle size, introducing the mixture into a bath of said aqueous suspension of finely divided limestone, adjusting and maintaining the density of the aqueous suspension at such a value that the coal particles float on said bath but the particles of heavy refuse sink therein, and separately removing coal particles and particles of heavy refuse from said bath.

2,440,006
INTERMITTENT FLOW DEVICE
Frank Y. Donaldson, Burbank, Calif.
Application October 26, 1945, Serial No. 624,891
3 Claims. (Cl. 137—163)



1. In a device for controlling the flow of liquid under pressure from a supply line into a service line, a main control tank, a valve chamber associated with said tank and having an intake port for connection with said supply line, an outlet port for connection with said service line, and a valve seat between said ports; a main valve member constructed and arranged to permit flow through said chamber from the intake port to said outlet port when lifted off said seat and to shut off such flow when seated on said seat, means for continuously supplying liquid to said main control tank from said intake port, a float operated means arranged to unseat said main valve member when the level of liquid in said tank rises above a predetermined level and to seat said valve when the liquid level in said tank lowers to a predetermined point, said tank having a discharge opening, a main tank discharge valve for controlling said discharge opening, a timing tank associated with said main tank and having a discharge opening, a timing tank discharge valve for controlling the discharge opening of said timing tank, means operable only when said main valve is unseated for supplying liquid to said timing tank, a float operated means constructed and arranged for opening said main tank discharge valve when the level of the liquid in the timing tank reaches a predetermined high point and for closing said main tank discharge valve when a predetermined amount of liquid has been discharged through the discharge opening of said timing tank, and a float operated means in said main tank constructed and arranged to close the timing tank discharge valve before the liquid in the main tank reaches the level at which the main valve is unseated and to maintain said timing tank discharge valve closed after said main valve is unseated, and finally operating to open said timing tank discharge valve when the level of the liquid in said main tank is lowered to a predetermined point following the opening of said main tank discharge valve, whereby the time required to fill the timing tank to the level at which the main tank discharge valve is opened is the approximate time during which the main valve is unseated and the time required for filling the main tank to the level at which the main valve is unseated is the interval of time during which the main valve is seated.

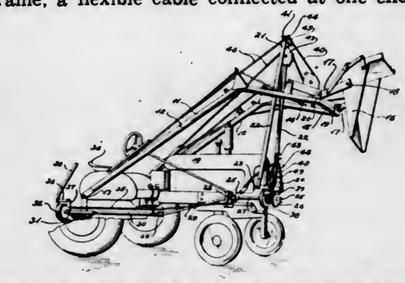
2,440,007
SLIDE FASTENER
Herman M. Frank, New Britain, Conn., assignor to The North & Judd Manufacturing Company, New Britain, Conn., a corporation of Connecticut
Application September 14, 1945, Serial No. 616,218
2 Claims. (Cl. 24—205)



1. In a slide fastener, a pair of complementary stringers, each comprising a relatively flexible carrier with a row of predeterminedly spaced fastener elements secured to one edge portion thereof, each of said fastener elements being symmetrical top and bottom having a leg portion at one end providing attachment to said carrier and an interlocking portion at the opposite end, said interlocking portion comprising oppositely disposed concentric pockets in the top and bottom surfaces of said interlocking member and oppositely disposed concentric projections substantially complementary with said pockets extending from said top and bottom surfaces and adjacent said pockets said projections and pockets each being substantially rectangular and the projections being disposed between said pockets and said tape engaging channel and in substantial contiguity with said pockets.

2,440,008
SPINACH TUMBLER
George D. Gardner, San Jose, Calif.
Application July 6, 1945, Serial No. 603,534
1 Claim. (Cl. 51—164)

A device for dry cleaning spinach comprising a revolvable foraminous trommel, such trommel being substantially hexagonal in cross section to present relatively wide flat surfaces upon which spinach leaves may lie in their normal unwetted state when moved through the trommel, relatively narrow flat webs connecting adjacent ones of said flat surfaces, and means associated with the trommel to divert and carry away foreign material which may be discharged through the openings in such foraminous trommel.



2,440,009
DRILL PIPE PROTECTOR APPLYING AND INSTALLING APPARATUS
Adelbert M. Graham, Beverly Hills, Calif., assignor, by mesne assignments, to Thermoid Company, Trenton, N. J., a corporation of Delaware
Application October 18, 1940, Serial No. 361,736
11 Claims. (Cl. 29—236)

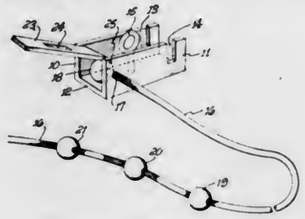
4. In a drill pipe protector applying device for separating an expanded protector from a cylindric holder, the combination of: inner and outer cylindric walls defining an annular cylinder space closed at one end and open at the other, said inner cylindric wall having an inwardly projecting shoulder defining an opening; an annular piston in said annular cylinder space; means extending from said piston through said open end of said cylinder space, said means comprising parts for engaging an end of a holder situated within said inner cylindric wall with said end thereof projecting through said opening defined by said shoulder; and means to apply fluid pressure to said annular cylinder space to move said piston so as to carry said parts away from said shoulder and pull said holder through said opening.

2,440,010
HOIST ATTACHMENT FOR TRACTORS
Howard E. Hall, Boise, Idaho, assignor to Olson Manufacturing Company, Boise, Idaho, a corporation of Idaho
Application October 4, 1946, Serial No. 701,342
5 Claims. (Cl. 214—140)

1. In a combination with a tractor, a hoist mechanism including a shaft extending along one side of the tractor, means operatively connecting said shaft to the power shaft of the tractor, a hoist drum fixed to the forward end of said shaft, a high supporting frame extending transversely of the tractor adjacent said drum, and having a pair of downwardly diverging arms, a low supporting frame extending transversely of the tractor adjacent said high supporting frame, said low supporting frame having a pair of front arms and a pair of rear arms, plates secured to opposite sides of the tractor, means connecting the lower ends of the arms of the high supporting frame and the low supporting frame to said plates, each of said supporting frames having a pulley pivotally connected thereto, the pulley on the low supporting frame being positioned below the pulley on the high supporting frame, a flexible cable connected at one end to

said hoist drum, means for detachably connecting the outer end of the cable to each of the supporting frames, an operable member associated with the high supporting frame, a second operable member associated with the low supporting frame, said cable arranged to be interchangeably connected through the pulleys to said operable members to connect the hoist drum to work requiring either a high or a low operating hoist.

2,440,011
COMBINED VEHICLE STOP AND DIRECTIONAL SIGNAL
Eric B. Hallman, Philadelphia, Pa., assignor to Electric Service Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application August 24, 1945, Serial No. 612,368
6 Claims. (Cl. 177—329)

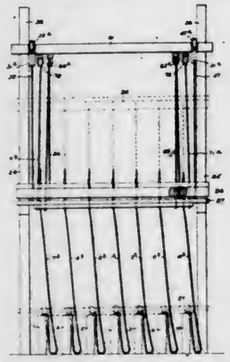


5. A signalling device for automotive vehicles comprising a main base member having a lamp-receiving well formed centrally therein, a transversely extending partition member for dividing said well into a pair of separate lamp-receiving compartments, said partition member being provided along its upper edge with a relatively wide rim, a pair of light transmitting panels respectively disposed in covering relation to said compartments with the adjoining edges thereof commonly resting upon said rim, and a retaining plate for said panels secured to said base member and adapted to clamp said adjoining edges of the panels against said rim, said retaining plate having openings through which portions of said panels are exposed, certain of said openings being of such shape and relative disposition as to provide the effect of a double-headed arrow upon the transmission of light through said panels.

2,440,012
LOCKING DEVICE
Gabriel D. Haver, Los Angeles, Calif.
Application May 29, 1944, Serial No. 537,811
3 Claims. (Cl. 24—30.5)

3. An adjustable locking device for sea bags, sleeping bags and other containers provided with

spaced grommets, comprising: a body portion, a flexible member attached by one end to said body portion, said flexible member being provided with a plurality of locking elements in spaced relation, said locking elements being of greater diameter than the member and adapted to pass through grommets on the container; a pair of spaced walls carried by the body portion, each of said walls including a slot through which a portion of the flexible member may be



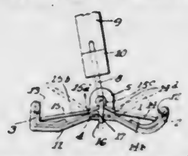
introduced, said walls being spaced sufficiently to receive and retain a locking element, whereby longitudinal motion of the flexible member through said slots is prevented; a fixed hasp carried by the body portion between the spaced walls; and a movable keeper pivotally carried by the body portion, said keeper being adapted to cooperate with said hasp and retain that portion of the flexible member extending through said slots.

2,440,013

PLAYER-OPERATED MEANS FOR POSITIONING PINS OF BOWLING ALLEYS

Joseph E. Laferriere, Boston, Mass.

Application May 12, 1945, Serial No. 593,376
12 Claims. (Cl. 273—44)



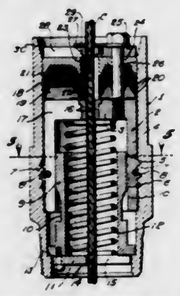
1. Player-operated bowling apparatus for use in usual bowling alleys and employing a ball or balls and a set of pins to be knocked over thereby, a series of non-elastic cords respectively attached at one end to the pins and thence extending to and supported in convenient position to be pulled by the player or players when standing at the player end of the bowling alley when the pins or any of them have been knocked down by a rolled ball, an upright at the player end of the bowling alley, and upon which the said cords are guidingly supported for player-manipulation when in the usual playing position, and a slidable member supported upon said upright for up-and-down manually-caused sliding movement, which slidable member is provided with formations for engagement with each of said cords, said formations consisting of notches in a transversely extending part of said slidable frame.

2,440,014

POLISHING IMPLEMENT WITH WORK FACE CONSISTING OF REPLACEABLE FABRIC SHEETS

Joseph H. Ludwick, Spokane, Wash.

Application April 27, 1945, Serial No. 590,552
4 Claims. (Cl. 15—231)



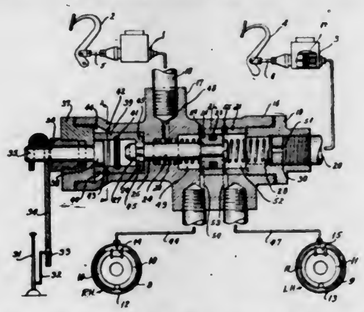
4. A floor waxer comprising a head formed of sheet material and having a lip along its front edge and a flange along its rear edge and having a portion bent upwardly and forming a longitudinally extending upstanding bridge spaced from its front and rear edges, a handle secured to said head, a bar extending longitudinally of said head under the bridge and having arms at its ends extending upwardly above the bridge and formed with pins extending inwardly over the bridge, said bar being free from the bridge and shiftable upwardly under the bridge for tightening a cloth against the under face of the head, and clamps for securing end portions of the said cloth folded about the lip and the flange, said clamps being pivoted to said pins and having rocking engagement with the bridge to shift the bar upwardly to its cloth tightening position when the clamps are swung downwardly to a clamping position.

2,440,015

AUTOMATICALLY RELEASING WELL HEAD

Lorrain D. Meddick, Los Angeles, Calif., assignor to Lane-Wells Company, Los Angeles, Calif., a corporation of Delaware

Application January 3, 1944, Serial No. 516,833
7 Claims. (Cl. 166—14)



1. A releasable packing head for wells, comprising: a tubular housing adapted to be secured in the upper end of a well casing, its inner surfaces having serrated latching channels formed therein and a smooth bore above said channels forming a packing face; a supporting structure including a cylindrical portion axially slidable in said tubular housing, and latching elements carried by said cylindrical portion having radially extending serrations engageable with said channels; a packing unit secured on the top portion of said supporting structure and sealingly but slidably engageable with said packing face, said packing unit having an axial opening therethrough adapted to admit slidably but seal around an instrumentality intended for movement in such casing; means normally engageable with said latching element for holding said latching element in engagement with said channels, thereby to secure said packing unit against axial movement in said housing, said means being engageable from within said casing by said instrumentality for movement clear of said latching element, thereby to release said packing unit for withwrawal axially from said housing.

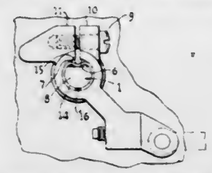
2,440,016

TRACTOR STEERING CONTROL

Arthur N. Milster, Ferguson, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a corporation of Delaware

Application January 23, 1946, Serial No. 642,837
9 Claims. (Cl. 180—17)

1. A tractor steering control comprising a valve having a movable piston therein; two manually-operated pressure fluid producers; brake mechanisms for the right and left-hand drive wheels of a tractor; a manually-operated speed controlling device; and means controlled by said manually-operated device when in certain positions of adjustment to lock said piston in position in said valve to enable said brake mechanisms when selectively actuated to assist in steering the tractor and said manually-operated speed control when in other positions of adjustment enabling either one of said pressure producers to actuate both of said brake mechanisms, said piston preventing transfer of pressure fluid from one pressure producer to the other when either one operates both brake mechanisms.



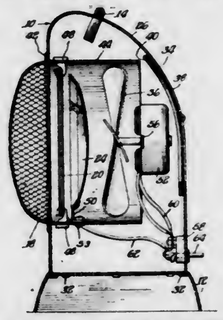
2,440,017

ADJUSTABLE DEVICE

Lawrence Nass, New York, N. Y., assignor to Jerry Briskie, New York, N. Y.

Application May 6, 1947, Serial No. 746,259
2 Claims. (Cl. 287—52.02)

1. A shaft formed of brass and formed at one end with a flat, a split sleeve formed of mild steel positioned on the end of the shaft formed with a flat, the split sleeve formed with a flat cooperating with the flat on the shaft to prevent turning of the sleeve relatively to the shaft, a body formed of a zinc alloy formed with a through bore in which the sleeve is positioned, said body formed with a slot extending from the exterior of the body to the bore and means for moving the material on each side of the slot together so as to decrease the size of the bore and thereby frictionally grasp the sleeve whereby



the shaft is prevented from turning relatively to the body and whereby the shaft may be adjusted and held in various rotated positions in regard to the body.

2,440,018

ELECTRIC ROOM HEATER

Howard H. Oetjen, Chicago, Ill., assignor to Chicago Electric Manufacturing Company, Chicago, Ill., a corporation of Illinois

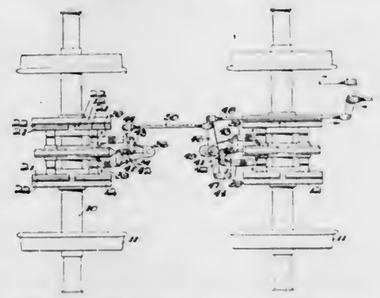
Application June 11, 1945, Serial No. 598,864
4 Claims. (Cl. 219—39)

1. An electric room heater including a generally cylindrical casing having open ends, a heating element supported within one end of said casing and having longitudinal sections positioned in a plane substantially normal to the longitudinal axis of said casing, an electric fan supported adjacent the other end of said casing, and a concave reflector of smaller diameter than said casing and having its periphery in spaced relation to said casing between said fan and said heater, said fan being adapted to direct air across the extremities of the longitudinal sections of said heating element in the vicinity of the periphery of said reflector.

2,440,019

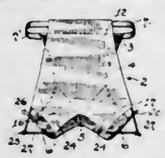
WORK CARRIER FOR ELECTROPLATING

Leon J. Pianowski and Sam F. Sgriccia, Detroit, Mich., assignors to The Udylite Corporation, Detroit, Mich., a corporation of Delaware



Application April 4, 1947, Serial No. 739,426
12 Claims. (Cl. 105—150)

1. A work carrier for electroplating comprising a pair of similar members adapted at one



end for suspension from a rail in juxtaposition and contiguous to each other and adapted for engagement with the rail to an appreciable extent both laterally and longitudinally of the rail, each of the contacting surfaces of said members at said end having a protuberance toward the other member, the two protuberances engaging each other to permit a rocking movement of said members, the lower ends of said members being shaped for the suspension of work therefrom.

2,440,020
DISK BRAKE
Best Pratt, Chicago, Ill., assignor to Brake Equipment & Supply Company, Chicago, Ill., a corporation of Illinois
Application June 26, 1945, Serial No. 601,609
15 Claims. (Cl. 188—153)

1. Braking mechanism for vehicles comprising a vehicle axle, brake disks mounted for rotation with said axle, a chambered supporting frame for brake elements mounted on said axle in operative relation to said disks and in rotatable relation to said axle, opposed diaphragms mounted in the chambers of said frame, means for applying fluid pressure to and exhausting it from the opposed faces of said diaphragms, and a plurality of brake blocks carried by such chambered frame and actuated by said diaphragms to engage said disks.

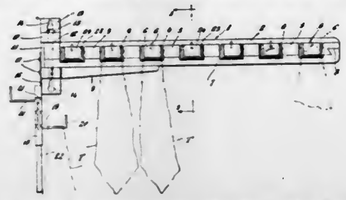
2,440,021
CHAFE PANTIE
Pauline E. Rosenblatt, Cleveland, Ohio
Application March 12, 1946, Serial No. 653,723
7 Claims. (Cl. 128—149)

1. In a chafe pantie a front member, a rear member including a top area and a sector-like bottom area having a radial slit therein, a crotch member extended into said slit and attached with one end to said rear member at the central portion of said slit, a pair of chafing shields attached to the crotch member and said front and rear members to form split leggings with said members, and resilient means for each of said leggings resiliently connecting the free ends of a legging to each other and to the bottom edge of the rear member at a point between the free ends of said legging to resiliently clutch the thighs of a person wearing the pantie and stretch the chafing shields and the bottom area of said rear member around the body of such person.

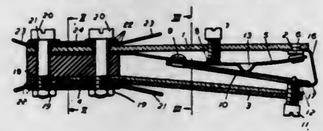
2,440,022
PACKAGE
Leroy L. Salfisberg, South Orange, N. J., assignor to The Ivers-Lee Company, Newark, N. J., a corporation of Delaware
Application June 29, 1944, Serial No. 542,671
5 Claims. (Cl. 229—48)

3. A container of three-dimensional articles comprising opposed layers of flexible material having inherent resiliency of low degree sealed together in zones that form relatively stiff flanges each of which forms a boundary of a compartment for said articles, the walls of said compartment comprising the portions of said layers disposed inwardly of said flanges, at least one of said layers having marginal portions folded inwardly between said layers in said zones, certain areas of said marginal portions being in abutting contact with and relatively immovably sealed to both said layers in the respective zones while the terminal edges of at least one of said marginal portions project permanently into said compartment beyond said zones and in spaced relation to said walls of the compartment to form barriers between said zones and said articles in said compartment.

2,440,023
CATTLE MARKER
William F. Schacht, Huntington, Ind.
Application October 24, 1945, Serial No. 624,267
7 Claims. (Cl. 40—3)



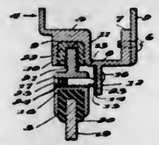
1. A marker for cattle comprising a flexible member adapted to encircle the neck or horns of the animal, a double hook having its eyes secured to the ends of the flexible member respectively; and a marker plate bearing indicia and secured to said hook; said marker plate having a perforation; and a second double hook having one eye engaged in the perforation of the plate and its other eye encircling the central portion of the first hook, thereby forming a clamp to prevent opening of the eyes of the first hook.



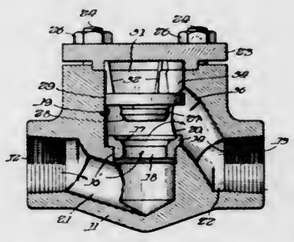
2,440,024
NECKTIE HOLDER
William Schwiering, Bronx, N. Y.
Application May 10, 1945, Serial No. 593,041
2 Claims. (Cl. 211—89)

1. A necktie holder comprising a securing bar from which a pair of lugs is extended, a tie holding bar and an arm being pivotally secured between said lugs, a plurality of cover pieces having means for vertical shifting on said arm and being adapted to exert a downward pressure on neckties hung in recesses at the upper side of said tie holding bar, and a spacing piece secured to said arm

between each two cover pieces, said arm and said tie holding bar being of the same length and having recesses at their outer extremities adapted to interlock with one another when said arm is directly above said tie holding bar.



2,440,025
ELECTRIC SWITCH
Sidney Arthur Singleton, Effingham, England, assignor to Thermega Limited, London, England, a British company
Application August 6, 1945, Serial No. 609,082
In Great Britain May 3, 1944
18 Claims. (Cl. 200—138)

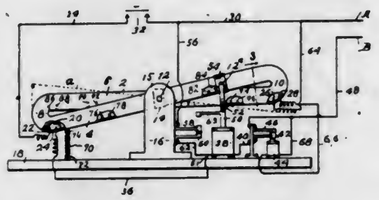


1. An electric switch including in combination a support, a blade spring fixed at one end to said support, an abutment bearing on said spring between the ends of the latter, to flex said spring, a movable contact carried at the free end of said blade spring, a fulcrum abutment carried by said blade spring between the first mentioned abutment and the movable contact, a second contact adapted to be contacted by said movable contact, a transversely curved spring strip bearing between its ends on said fulcrum abutment, means holding said transversely curved spring strip at one end, and actuating means to increase the pressure between said transversely curved strip and said fulcrum abutment whereby after a predetermined pressure said curved strip collapses about said fulcrum to relieve the pressure exerted on said blade spring and to allow said blade spring to straighten out and to carry said movable contact suddenly away from said second contact.

2,440,026
SASH LATCH
Lawrence H. Smith, Chicago, Ill., assignor to Victor M. Langsett, Chicago, Ill., as trustee
Application June 20, 1947, Serial No. 755,856
2 Claims. (Cl. 20—54)

1. In a sliding window structure adapted for use in a vehicle, the combination of a window frame having a channel shaped member with opposite sides, a slidable window sash having sliding engagement within the channel member in guiding relation thereto and with a clearance space between the channel member and the sash, said channel member having a flange carried thereby offset relative to one side thereof and extending in overlapping relation with the adjacent frame member of the sash and overlapping the clearance space between the sash and channel member, and an elongated strip carried by the flange and extending longitudinally thereof, said strip having longitudinally spaced indentations located in a side face thereof opposing an adjacent side face of the window sash arranged to form stops, and a spring-pressed plunger extending transversely through said adjacent frame member of the window sash in position for selective engagement with the indentations in the strip.

2,440,027
LIFT CHECK VALVE
Ludwig T. Stoyke, Chicago, Ill., assignor to Crane Co., Chicago, Ill., a corporation of Illinois
Application September 22, 1943, Serial No. 503,586
5 Claims. (Cl. 251—128)



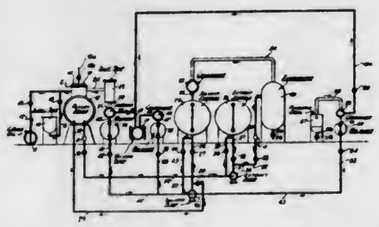
1. In a check valve of the relieved dashpot type, a body having an inlet end and an outlet end, a seat provided in said body and having a port opening therethrough, the said body having means defining a disc guide chamber, a disc mounted for reciprocating movement in said disc guide chamber, means within said body defining a dashpot chamber at the upper end of the disc guide chamber, the said body having an inlet passageway for directing a fluid medium through the port opening in the seat and against the disc to raise same to the upper end of the guide chamber, the said body having a relief port for exhausting fluid from the dashpot chamber in the direction of flow through the valve to thereby provide a differential in pressures adjacent opposite sides of the disc when same is disposed in its maximum open position and serving to maintain the disc in open position, the said disc closely fitting within the said guide chamber for its entire maximum periphery except for that peripheral portion which is interrupted to provide the relief port from the dashpot chamber, means to prevent the disc from completely closing the relief port, the said relief port also serving as the sole means of communication between the seat port opening and the outlet end of the said body.

2,440,028
AUTOMATIC ELECTRIC SWITCH
Robert E. Swisher and George W. Gates, Kansas City, Mo.
Application January 17, 1946, Serial No. 641,704
7 Claims. (Cl. 172—126)

1. In a mercury switch, two tubes communicating at their respective ends and having their longitudinal axes arranged at opposite inclinations

to each other, a suitably supported transverse axis on which the tubes are mounted for simultaneous oscillation, means for effecting oscillation of the tubes involving a normally open electrical circuit, a first pair of terminals sealed in one end of one tube and connected in series with said circuit, a second pair of terminals sealed in the opposite end of the companion tube, a circuit-completing globule of mercury adapted to

describe an orbit through the tubes during the oscillation thereof and contact each pair of terminals, electrical means energized by the normally open circuit, adapted to swing the tubes downward in one direction, means for deenergizing said electrical means and arranged in series with the second pair of terminals, and means for swinging the tubes downward in the opposite direction.



2,440,029

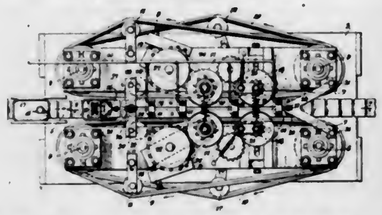
METHOD FOR EXTRACTING PIGMENTS

Joseph M. Tabor, Cleveland, and Howard F. Seibert and Paul R. Frohring, Chagrin Falls, Ohio, assignors to General Biochemicals, Inc., Chagrin Falls, Ohio, a corporation of Ohio

Application October 13, 1943, Serial No. 506,060

1 Claim. (Cl. 260—236.5)

In a process of extracting a heat-sensitive pigment from a pigment-containing saponifiable fatty material, the steps which comprise: reacting said fatty material with an aqueous saponifying agent, agitating the mixture, comminuting the resulting soap by exhausting gases and vapors from the reaction zone to reduce the pressure therein and utilize the heat of saponification to boil and thus evaporate water dispersed throughout the soap mass, the reduction in pressure being such as to ensure a boiling temperature not above the decomposition point of the pigment, said temperature being not above 80° C., thereby disrupting and disintegrating such soap lumps as may form, continuing the evaporation under a partial vacuum effective to maintain a temperature not above the decomposition point of the pigment long enough to convert the soap to a substantially dry, finely divided soap mass, and extracting pigment from said finely divided mass with an organic solvent for said pigment which is a non-solvent for said soap.



2,440,030

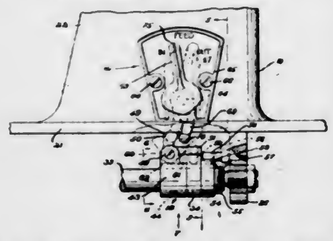
MAGNETIC CAP GUIDE

Douglas W. Thomas, Englewood, N. J., assignor to Boyle-Midway Inc., Jersey City, N. J., a corporation of Delaware

Application May 1, 1946, Serial No. 666,452

6 Claims. (Cl. 226—88)

1. In a container-capping machine, cap-tightening means, conveyor means for moving containers and caps into operative relation with the cap-tightening means, and a magnetic cap guide disposed in spaced parallel relation with the conveyor means ahead of the cap-tightening means.



2,440,031

DROP FEED MECHANISM FOR SEWING MACHINES

George B. Wainwright, Glendale, Calif., assignor, by mesne assignments, to William H. Maxwell, Los Angeles, Calif.

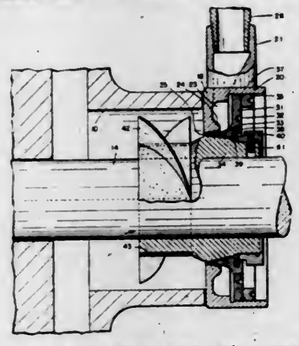
Application September 15, 1945, Serial No. 616,554

9 Claims. (Cl. 112—203)

1. A drop feed mechanism for sewing machines or the like including, a feed dog, means including a rock-shaft and a notched lever-arm thereon for normally imparting vertical reciprocatory movement to said feed dog, means for separably coupling said rock-shaft and said lever-arm including a latch pivotally carried by said rock-shaft and having latching engagement with the notch of said lever-arm, means for manually operating said latter means, and means operable upon uncoupling of said rock-shaft and lever-arm for holding said feed dog in non-feeding position.

2,440,032

JET SHAFT SEAL



Frank C. Wallace, North Hollywood, and Robert E. Foster, Glendale, Calif., assignors to Monogram Manufacturing Company, Los Angeles, Calif., a corporation of California

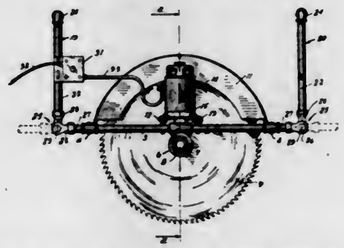
Application April 29, 1947, Serial No. 744,610

10 Claims. (Cl. 286—9)

3. A jet shaft seal comprising in combination with a rotary shaft, a low pressure liquid zone surrounding said shaft and a relatively high pressure zone, a seal housing surrounding said shaft and having an annular recess therein, said seal

housing also having a tapered central aperture therein, a jet adjusting plate adjustably mounted in said housing, a tapered annular flange on said jet adjusting plate, said flange being spaced inwardly from said housing to form a jet passage of conical section with the tapered central open-

ing in the seal housing, and being spaced outwardly from said shaft to form a narrow annular passage normally open at its outer end to the atmosphere, and terminating at its inner end jointly with, and at an acute angle to, the jet passage.



2,440,033

TWO-MAN PORTABLE POWER SAW

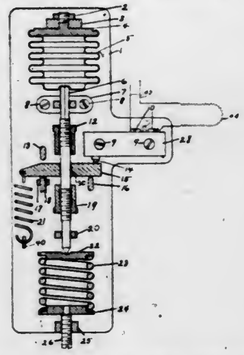
George A. West, Guffey, Colo., assignor of forty-nine per cent to George W. Shema, Fairplay, Colo.

Application February 19, 1945, Serial No. 578,585

5 Claims. (Cl. 143—43)

1. In a two man portable power saw, a frame, a shaft journaled on the frame intermediate its ends and transversely of the longitudinal axis of the frame, a saw driven by the shaft, a motor mounted on the frame and connected to drive the shaft, a handle at each end of the frame and comprising a U-shaped structure, adjustable connections between the outer ends of the leg portions of each U-shaped structure and a frame end, said connections permitting the handle to be positioned so that its legs are at an angle to the longitudinal axis of the frame or in a position extending longitudinally from the end of the frame, and means for locking each handle in an adjusted position.

2,440,034



REGULATING DEVICE

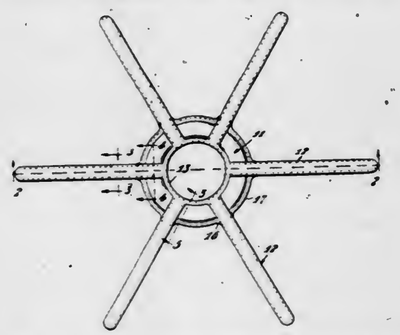
Irvin E. Wiegers, Overland, Mo.

Application March 3, 1945, Serial No. 580,905

7 Claims. (Cl. 200—140)

6. A regulating device of the character described, comprising, a member movable in correspondence to variations in the quantity to be regulated, control means for varying the quantity to be regulated, an actuator for said control means having a slip-clutch normally biased to

connect said actuator with said member, means for breaking the slip-clutch connection so made at a predetermined position and direction of movement of said member, and stop means adapted to arrest the movement of said member.



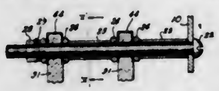
2,440,035

GRATE FOR KITCHEN RANGES

Edward H. Williams, Bayside, and Paul F. Tunke, Ridgewood, N. Y., assignors to The Welbilt Stove Company, Incorporated, Maspeth, N. Y., a corporation of New York

Application July 31, 1945, Serial No. 607,970

3 Claims. (Cl. 126—214)

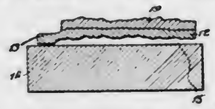


3. A grate of the type described formed from a single blank of sheet metal, said grate comprising a substantially toroidally shaped center section and a plurality of arms extending substantially radially outwardly therefrom, said center section including inner and outer downwardly extending flanges and a web portion therebetween, said arms being substantially U-shaped in cross section and extending to the inner flange of said center section with the top surfaces of said arms above the said web portion with said web portion in between the successive arms, said outer downwardly extending flange on said center section between said arms merging with the sides thereof extending outwardly therefrom, and said arms having downwardly projecting positioning lugs adjacent the free ends thereof.

2,440,036
PROCESS FOR THE CATALYTIC ALKYLATION OF PHENOLS BY AMINES
De Loss E. Winkler, Berkeley, and Seaver A. Ballard, Oakland, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application April 26, 1944, Serial No. 532,887
15 Claims. (Cl. 260—624)

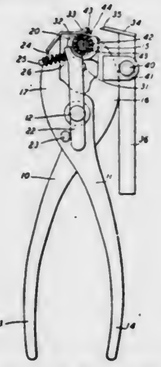
1. A process for the alkylation of xylenol which comprises reacting 3,5-xylenol with a saturated aliphatic primary amine at a temperature of about 350° C. to about 500° C. and a pressure of at least about 5 atmospheres in the presence of an activated bauxite.

2,440,037
FREQUENCY SELECTING SWITCH
Robert T. Wolff, Milwaukee, and William J. Foy, Thiensville, Wis., assignors to Globe-Union Inc., Milwaukee, Wis., a corporation of Delaware
Application July 24, 1944, Serial No. 546,398
4 Claims. (Cl. 174—138)



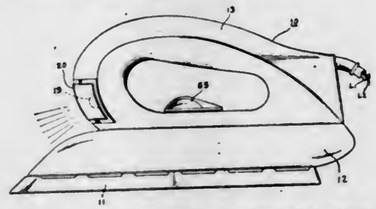
4. In a switch comprising a metallic plate and insulating material plates, all of the plates having holes therethrough adjacent the edges thereof, metallic screws extending through the holes, metallic spacers on the screws between the plates, the plates and the spacers being clamped in spaced relation, and metallic coatings bonded on and extending around the holes through the insulating plates and over the edges thereof between the holes to form an electrical bond between the metallic parts and maintain a uniform electrical potential thereon.

2,440,038
UNIDIRECTIONAL LOCKING APPARATUS
Samuel Stephen Baker, Eatontown, and Raymond F. Batchelar, Hillsdale, N. J., assignors to American Loose Leaf Corporation
Application August 25, 1945, Serial No. 612,694
4 Claims. (Cl. 85—5)



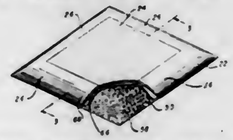
1. Uni-directional locking means for a penetrating member telescoped in a tubular female member, said locking means comprising a split ring on said penetrating member and an arcuate, raised cam member disposed on said penetrating member and adapted to act upon the open ends of said split ring, said arcuate cam member having a portion thereof disposed between said open ends and arcuately diverging beyond said ends, said ring having a normal outer diameter substantially equal to the inner diameter of said female member whereby force applied to said female member in a given direction is imparted to said split ring in the same direction so that attempted movement of said female member in the direction of said arcuate divergence causes said split ring to expand its effective diameter and grip said female member, and so that an opposite force applied to said female member actuates said split ring away from the direction of said arcuate divergence and collapses said ring so as to release said grip.

2,440,039
RETICULATELY PUCKERED LAMINATED PLASTIC SHEET
Nathan J. Brown, Barrington, Ill.
Application August 2, 1943, Serial No. 497,040
6 Claims. (Cl. 117—145)



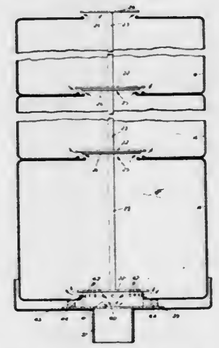
4. Process of producing a reticulately macroscopically puckered sheet comprising applying a solution of a vinyl resin to a preformed dry loosely supported sheet or film of a cellulose compound, employing as the solvent for the vinyl resin a solvent also capable of dissolving the cellulose compound, and drying the laminated structure thus obtained, whereby the partial solvation of the cellulose compound by said solvent produces a reticulate pucker in the sheet, the pucker being in bas-relief on the vinyl resin side and intaglio on the cellulose compound side.

2,440,040
APPARATUS FOR APPLYING TAGS TO ARTICLES
Perry H. Burton, Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application September 8, 1944, Serial No. 553,227
2 Claims. (Cl. 81—15)



1. A pair of pliers for applying bands to insulated conductors, which comprises a pair of arcuate clamps, a lever member having one of the clamps rigidly secured to an end thereof, a second lever member having the other clamp resiliently mounted on an end thereof, means for securing the lever members together for pivotal movement with respect to each other, a crimper pivotally mounted on the first-mentioned lever member for securing together the ends of a band clamped by the clamps around an insulated conductor, and a forming plate secured rigidly to the second lever member for moving one end of the band over the other prior to securing said ends together and for forming the ends of the band after they have been secured together by the crimper.

2,440,041
ELECTRIC FLATIRON
Earl K. Clark Mansfield, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 24, 1945, Serial No. 584,539
7 Claims. (Cl. 219—25)

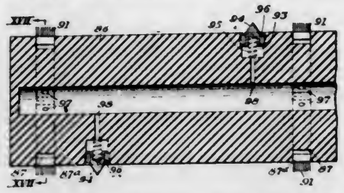


1. A flatiron including a soleplate, electrical heating means, a switch controlling energization of said heating means, means responsive to a temperature in said flatiron and operating said switch to deenergize said heating means upon rise above a predetermined temperature and to energize said heating means upon fall below substantially the same predetermined temperature, adjusting means for varying the predetermined temperature or temperatures at which said temperature-responsive means operates said switch, a lamp carried by the flatiron in such position as to illuminate the material to be ironed, a second switch comprising abutting contacts for controlling said lamp, and a lost motion connection between said temperature-responsive means and said second switch, said lost motion connection being constructed and arranged so that movement of said temperature-responsive means occasioned by variation in said temperature when normally cycling at any adjustment is within the lost motion provided by such connection and said second switch is closed and so that when said temperature-responsive means moves beyond the extent of said lost motion, said second switch is opened.

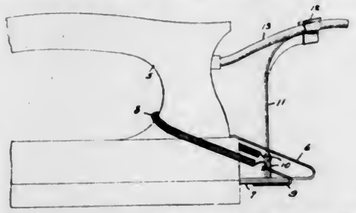
2,440,042
INDICATING SYSTEM FOR BASEBALL GAMES
Ernest Friedman, New York, N. Y.
Application March 4, 1947, Serial No. 732,249
8 Claims. (Cl. 177—384)

3. A baseball game device comprising a pair of lights the first of which is of one color and the second of which is of a different color, a base housing including an inner casing, a first plurality of positively polarized normally open magnetic switches in said casing and connected to the first of said lights and to a source of electric power, a second plurality of negatively polarized normally open magnetic switches in said casing and connected to the second of said lights and to a source of electric power, shoes wearable by the base man and having negatively polarized magnetic bodies on the soles and heels thereof for actuating at least one of said second plurality of switches to illuminate the second light upon contact of said shoe with the base housing.

2,440,043
STERILIZING AND DISINFECTING APPARATUS
Henry Charles Gould, Grantham, England
Application May 10, 1945, Serial No. 593,030
In Great Britain January 12, 1944
9 Claims. (Cl. 34—87)



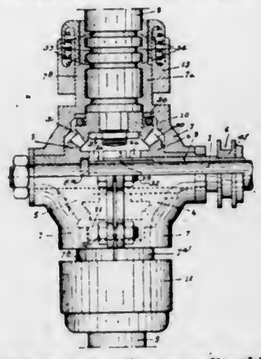
1. Sterilizing, disinfecting and drying apparatus of the kind embodying an enclosed chamber to receive at least one container for articles to be treated and having a base into which a fluid medium admission connection is led; characterized by a seating within said base of said chamber to receive said container and located around said fluid admission connection, a pedestal member projecting above said seating, said pedestal member communicating with said fluid medium admission connection, a valve in said container to admit fluid medium thereinto, and a valve in said container to release fluid medium therefrom, both said valves being operated by said pedestal member when said container is positioned upon said seating.



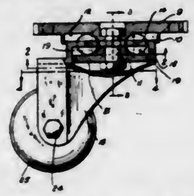
2,440,044
DEVICE FOR MAKING ELECTRICAL-CONDUCTIVITY TESTS ON TUBULAR ARTICLES
Grover R. Greenslade, Scott Township, Allegheny County, Pa., assignor to Flannery Bolt Company, Bridgeville, Pa., a corporation of Pennsylvania
Application March 24, 1943, Serial No. 480,285
4 Claims. (Cl. 175—183)

1. Apparatus for testing hollow articles of electrically conducting material comprising an elongated member insertible into said articles, contacts projecting laterally from said member and spaced longitudinally and circumferentially thereof, a current source connected to said contacts for circulating an electric current longitudinally

and circumferentially through an article when the member is inserted therein so that said contacts engage the interior of the article, and voltage contacts on said member adapted when the member is inserted in the article to engage the latter at points spaced along the path of said current.



2,440,045
CORD HOLDER FOR ELECTRIC IRONS
Gustav Gunderson, Tremont, Pa.
Application December 3, 1946, Serial No. 713,797
2 Claims. (Cl. 248—52)

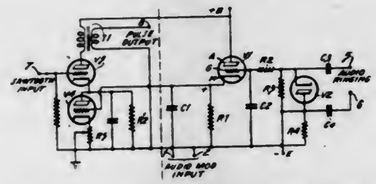


1. In a cord support for use with an electric iron, and having a flexible cord-engaging strip, a base plate extended transversely across the heel of the iron and having its ends projecting beyond the side edges thereof, a removable slide piece slidable on the base plate, strip-supporting brackets on the base plate, and a spring, having one end connected to the slide piece, the other end being connected to the brackets, said spring being extended intermediate its ends around the rear portion of the handle of the iron, and adapted to hold the base plate in position.

2,440,046
REVERSIBLE PROPELLER WITH VARIABLE PITCH
Camille Hautier, Boulogne-sur-Seine, France
Application November 24, 1937, Serial No. 176,367
In France November 26, 1936
Section 3, Public Law 690, August 8, 1946
Patent expires November 26, 1956
3 Claims. (Cl. 170—163)

1. In a variable pitch propeller, a shaft for driving the propeller, a hub-like casing mounted on the shaft, a propeller blade mounted with one end in the hub-like casing for rotation about the axis thereof, a beveled gear arranged in the casing adapted to rotate the blade about the axis thereof, a pair of beveled gears meshing with said first gear at diametrically opposite points, said last mentioned gears being mounted to turn about said shaft and each having teeth adjacent the hub portions thereof, means intermediate said last mentioned gears movable axially with respect to said shaft for selectively engaging the hub teeth of either of said pair of gears, means for transmitting rotary motion of said shaft to said axially movable means, means associated with said first mentioned means adapted to rotate one of the gears of said pair upon engagement thereof during the axial movement of said first mentioned means whereby the propeller blade is rotated about the axis thereof and means limiting the rotation of the first mentioned bevel gear.

2,440,047
CASTER
Edward A. Heller, Detroit, Mich.
Application February 5, 1945, Serial No. 576,292
3 Claims. (Cl. 16—23)



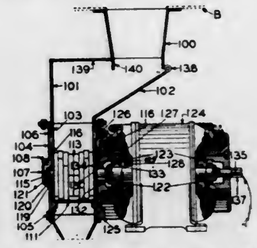
1. In a caster of the class described comprising: a top plate adapted for attachment to a supporting body; a boss projecting centrally downwardly from said top plate and having an opening formed therethrough; an annular flange extending downwardly from said top plate concentrically to and surrounding said boss; a caster head embodying a plate having a plurality of recesses formed therein; a roller rotatably mounted on a radially directed axis in each of said recesses; a circumferential flange projecting downwardly from said last mentioned plate; a bearing plate mounted within said last named flange and extended parallel to said recess-bearing plate; a bolt projecting through said boss and through said plates for securing the same together, said caster head having a central opening for reception of and being rotatable on said boss and said rollers bearing against the upper face of said bearing plate.

2,440,048
FLUORESCENT SILICATE GLASSES AND METHODS FOR MAKING SAME
Harrison P. Hood, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
No Drawing. Application June 17, 1944, Serial No. 540,793
5 Claims. (Cl. 252—301.4)

3. The method of making a colorless fluorescent silicate glass which comprises introducing into a batch containing a copper compound equivalent to about 0.11% to 0.66% CuO in the finished glass, about .8 to 2.4 parts of ammonium chloride per 100 parts of SiO_2, and melting the batch.

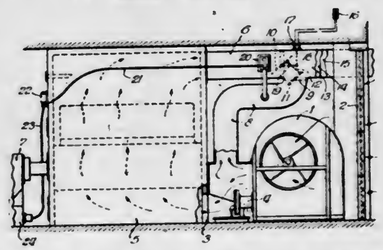
4. A batch for a colorless silicate glass which contains a compound of copper equivalent to 0.11% to 0.66% CuO in the finished glass and .8 to 2.4 parts of ammonium chloride per 100 parts of SiO_2.

2,440,049
ELECTRONIC AUDIO SWITCH
William D. Houghton, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application June 30, 1945, Serial No. 602,447
9 Claims. (Cl. 250—27)



5. An electronic switch comprising a vacuum tube normally biased for a predetermined limiting conduction condition, said tube including an anode, a cathode and a grid, means for supplying said anode with positive polarizing potential relative to the cathode, an output lead connected to said cathode, a pair of connections for supplying an alternating current voltage whose effective value in said output lead is to be controlled, a resistor of a relatively high value connected at one end to said cathode, the other end of said resistor being connected to one of said connections, the other of said connections including a serially arranged condenser also connected to said cathode, and means for supplying said grid with a potential of such polarity and magnitude as to overcome said bias and change the condition of said tube from said predetermined limiting conduction condition to another conduction condition.

2,440,050
RIBOFLAVIN SOLUTION
Albert Ensign Knauf and Frederick Joseph Kirchmeyer, Waukegan, Ill., assignors to Abbott Laboratories, a corporation of Illinois
No Drawing. Application May 13, 1944, Serial No. 535,552
3 Claims. (Cl. 167—81)

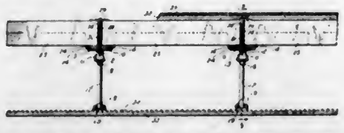


1. A therapeutic solution comprising riboflavin in a concentration greater than 0.011%, veratryl alcohol and water.

2,440,051
GRINDING APPARATUS MOUNTED ON AN OVERHANGING SHAFT
Arthur C. Lind and Robert E. Klein, Milwaukee, Wis., assignors to Chain Belt Company, Milwaukee, Wis., a corporation of Wisconsin
Application November 22, 1943, Serial No. 511,238
3 Claims. (Cl. 241—73)

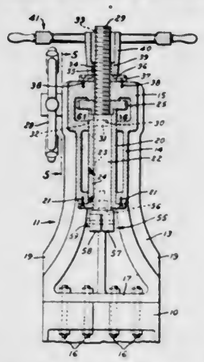
2. In a grinding machine, a rotor shaft, and a grinding element journalled on said shaft, said element composed of disc members assembled and locked as a unit, a housing enclosing said grinding element and having a grinding surface cooperating with said grinding element to produce grinding action, bearings supporting said shaft in an overhanging manner, friction means cooperating with said shaft and grinding element causing them to rotate together, and a cover plate secured to said housing enclosing the unsupported end of said shaft, said cover plate having an axially disposed surface sealing said grinding element and arranged to provide bearing support for the shaft through the friction means should the shaft deflect under grinding loads.

2,440,052
AVERAGING CONTROLLER
Ralph A. Lingen and Lloyd E. Cross, Milwaukee, Wis., assignors of one-fourth to Ruth Sharp Lingen and one-fourth to Marie Emmett Cross, Milwaukee, Wis.
Application September 24, 1945, Serial No. 618,310
12 Claims. (Cl. 236—13)



5. In an air treating system, in combination, connected warm and cool air supply ducts, means for regulating the air flow from each duct to supply a given area with air at a predetermined temperature, a unit to temper the air in one of said supply ducts, and control means to regulate the air temperature in said one supply duct comprising a manifold having communication with both ducts, and operable means directly responsive to the direction of flow of air through said manifold from one to the other of said ducts as determined by the pressure differentials established by said duct air flow regulating means, said operable means being connected with said air tempering unit to control the operation of the latter.

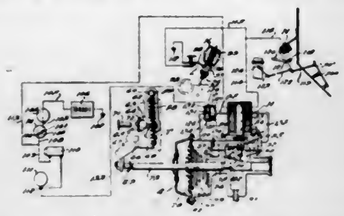
2,440,053
FLOOR TILE AND JOIST CONSTRUCTION
Stanley Macomber, North Canton, Ohio
Application May 29, 1945, Serial No. 596,436
7 Claims. (Cl. 72—67)



1. A floor construction comprising spaced steel floor joists, each joist having a top chord in the form of a trough with a longitudinal slot therein, a mortar bed in each trough, floor supporting tiles spanning the space between joists and having their end portions bedded upon said mortar beds, metal screws located between opposed ends

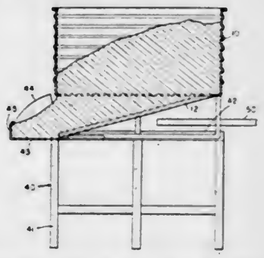
of adjacent tiles and driven into said slots, and clips at the upper ends of the screws engaging

the top surfaces of the tiles for firmly fastening the tiles to the joists.



2,440,054
UTILITY PRESS
Newman M. Marsilius, Trumbull, Conn.
Application November 27, 1945, Serial No. 631,081
4 Claims. (Cl. 164—101)

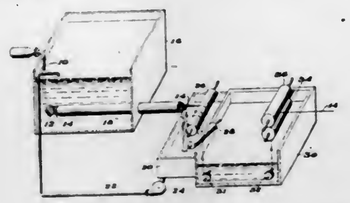
1. In a press, a bed, a yoke-like frame having its arms secured to opposite edge portions of said bed, said frame including an intermediate vertically extending hollow portion having a head at its upper end, a bar vertically movable in said vertically extending portion, a screw connected to said bar but rotatable relative thereto and extending to the upper side of said head, a hand wheel about the upper end portion of said screw above said head, and comprising a hub, a bushing within and keyed to said hub, means securing said bushing to said frame head but for turning movement relative thereto, a key and keyway connecting said bushing and said screw, a worm wheel threaded to said screw within said head, a worm meshing with said worm gear, a hand wheel for turning said worm, and means holding said worm wheel against any but turning movement in said head.



2,440,055
POWER TRANSMISSION
Victor E. Matulaitis, Highland Park, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application November 14, 1940, Serial No. 365,591
27 Claims. (Cl. 74—472)

1. In a drive for a motor vehicle having an engine; transmission mechanism operable to provide a drive between the engine and the vehicle, said mechanism including positively engageable drive-control elements one of which is movable into engaging relationship with the other to accommodate said drive and into disengaging relationship with respect to said other element to release said drive, said elements when relatively engaged being subject to thrust-application therebetween during said drive so as to resist relative disengagement thereof to release said drive until said thrust-application is relieved; an ignition system for said engine adapted to be interrupted to relieve said thrust-application; pressure fluid operating means adapted for pressure fluid op-

eration to control movement of said movable element into one of its said relationships and to be vented to control movement of said movable element into the other of its said relationships; and means responsive to pressure fluid variation at said pressure fluid operating means for effecting interruption of said ignition system.



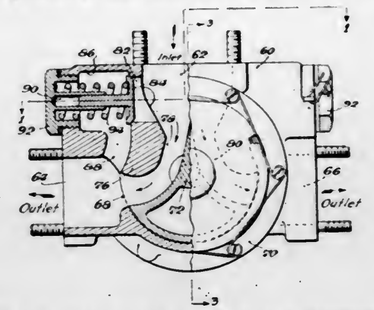
2,440,056
DUMPING BOX
Brouwer D. McIntyre and William D. McIntyre, Monroe, Mich., assignors to Monroe Auto Equipment Company, Monroe, Mich., a corporation of Michigan
Application August 5, 1946, Serial No. 688,462
21 Claims. (Cl. 222—185)

12. In combination, a supporting stand including a forwardly projecting ledge with front and side walls, a self-contained portable dumping box removably supported on said stand and including a bottom closure pivotally connected to said box for swinging movement toward and away therefrom, and supporting means for supporting said box on said stand far enough above the plane of said ledge to permit material within said box to slide along said bottom, when the latter is in a downwardly swung open position, and toward said stand and onto said stand ledge.

2,440,057
PRODUCTION OF VISCOSE RAYON
Frederick R. Millhiser, Richmond, Va., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application March 15, 1944, Serial No. 526,512
11 Claims. (Cl. 18—54)

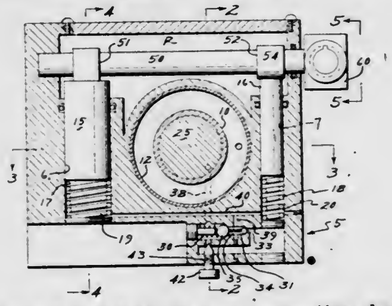
11. A process for spinning viscose rayon yarn which comprises extending viscose through a spinneret into a coagulating bath to produce a continuous filament yarn, stretching the resulting yarn at a tension not to exceed 0.06 gram per denier until said tension will no longer impart a substantial stretch to the yarn, causing coagulating bath to flow in the direction of movement of the yarn, maintaining said yarn in cocurrent

contact with said coagulating bath liquid at a tension not exceeding 0.06 gram per denier until it will withstand a tension of at least 0.5 gram per denier, with the yarn travelling at a speed slightly in excess of the speed of the cocurrent coagulating bath liquid, and then stretching said yarn.



2,440,058
WIRE TWISTER
Walter B. Mitchell, Seattle, Wash.
Application September 5, 1945, Serial No. 614,523
3 Claims. (Cl. 140—118)

1. A wire twister adapted to assist in forming a loop and twisting the free end of the loop on fishing line leaders comprisig a wire receptive and backing plate, said plate being flat on at least one side and having an outstanding hook at one end adapted to hook over the spindle-forming portion of the wire, said plate having a similar hook at its opposite end in alignment with the first-named hook and thus properly adapted for passage and retention of another portion of the wire, said plate, at its last-named end, being provided with an extension and said extension projecting beyond said hook and forming a finger, said finger being such and so situated in respect to the hook to coact with a free end portion of the wire, after the latter has been looped, this in a manner to twist said free end portion by coiling same around said spindle portion.

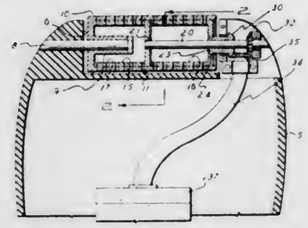


2,440,059
FLUID FLOW REGULATOR
James Olcott and Allan C. Hoffman, Dayton, Ohio, assignors to United Aircraft Products, Inc., Dayton, Ohio, a corporation of Ohio
Application September 16, 1943, Serial No. 502,682
5 Claims. (Cl. 137—166)

1. In a fluid flow divider, a casing having an inlet and a pair of outlets, separator means in said casing movable in opposite directions for selectively closing one or the other of the outlets, respectively, and having an intermediate position in which said outlets are open, pressure responsive means in said outlets connected to said separator means for moving the latter in response to an increase in the dynamic pressure of the fluid flowing through one outlet over that of the fluid flowing through the other outlet to a position closing the outlet from which flows the fluid of greater dynamic pressure, and means for bypassing fluid around said separator to the outlet

closed by said separator when the pressure at said inlet rises to a predetermined value.

2,440,060
PUMP FOR HYDRAULIC JACKS
Herbert E. Page, Alhambra, Calif.
Application October 27, 1944, Serial No. 560,572
6 Claims. (Cl. 103—37)

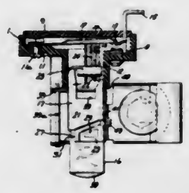


1. In a hydraulic pressure-generating device, a body providing a closed compartment and a pair of parallel cylinders opening into the compartment, a pumping piston reciprocally mounted in each cylinder and having its outer end exposed to the compartment, the inner end of each piston forming with the inner end of its cylinder a pressure-generating chamber one of the cylinders and its corresponding piston being of larger diameter than the other cylinder and its corresponding piston, a pair of cam members in the compartment journalled in the body for rotative camming engagement with the outer ends of the pistons to move the same in their pressure strokes, means for actuating the cam members, spring means cooperating with each of the pistons to move the same in its suction stroke, first valve controlled means for admitting fluid to the pressure-generating chamber upon each suction stroke of the respective pistons, and second valve-controlled means passing fluid under pressure from the pressure-generating chambers upon each pressure stroke of the respective pistons.

2,440,061
POWER-DRIVEN DRY SHAVER
Herbert E. Page, Alhambra, Calif.
Application April 30, 1945, Serial No. 590,998
3 Claims. (Cl. 30—43)

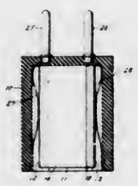
3. In a dry shaver having a body and power means, an outer cylindrical perforated cutter

head mounted on the body for free rolling movement over the skin of the user, a pair of inner cutter elements disposed end to end and nested in the outer head, and means operatively connecting the inner cutter elements to the power means, comprising a shaft journalled in the body and fixed to one of the inner cutter elements, a bevel gear fixed on said shaft, a sleeve rotat-



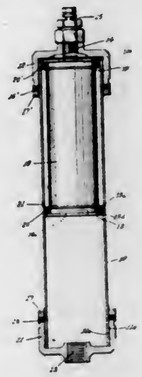
ably mounted on the shaft and fixed to the other inner cutter element, a bevel gear fixed on the sleeve and disposed opposite the other bevel gear, a third bevel gear meshing with both said bevel gears whereby rotation of the third bevel gear rotates the other gears in opposite directions relative to each other, and means drivingly connecting the power means to the third bevel gear.

2,440,062
PICTORIAL DISPLAY DEVICE
Lini Allen, Berkeley, Calif.
Application September 25, 1945, Serial No. 618,503
2 Claims. (Cl. 35—1)



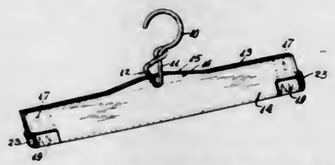
1. A pictorial display device, intended for the progressive revelation and display of graphic representations over a pre-selected period of time in a manner combining the elements of surprise and suspense, which comprises: a planar backing element containing upon a surface thereof a plurality of divisions of graphic material of varied substance and form; a cover sheet superimposed upon said backing element so as to conceal the graphic material contained upon the confronting surface of the backing element; a plurality of viewing apertures disposed in said cover sheet in number and orientation corresponding to the underlying divisions of graphic material contained upon the backing element; a closure for each of said apertures arranged to conceal the underlying graphic material, respectively, of each of the divisions when in closed position, and to reveal said material when in open position; suitable indicia associated with each aperture and closure by which it may be identified, and by which, in relation to each other, a progressive sequence for the consecutive revelation and display of the underlying graphic material might be established; and a pictorial design upon the outer face of said cover sheet in which the apertures and closures thereof are artistically accommodated as a representational part so as to become integrated thereby into a logical association.

2,440,063
PUSH-BUTTON SWITCH
John Lewis Andrews, Fairfield, Ill., assignor to Hotpoint Inc., a corporation of New York
Original application December 22, 1944, Serial No. 569,296. Divided and this application February 2, 1946, Serial No. 645,176
5 Claims. (Cl. 200—167)



1. A push button switch comprising a base, contact means supported on the base, means for actuating the contact means comprising a plurality of slides having cam surfaces and a plurality of push buttons cooperatively associated with the slides, each push button comprising a fabricated plunger made from a single piece of sheet metal by a punching and forming process, said plunger having side, front and rear walls the side walls forming at one end lugs with openings and the rear wall forming at an opposite end a cylindrical pin extending toward the front wall for engaging the slides, and a light-reflecting prism-shaped member made from transparent material and having side walls with projections fitting the openings of said lugs.

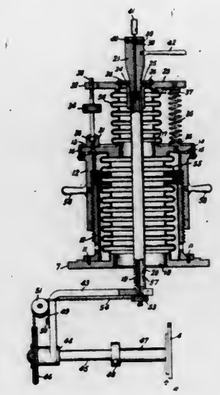
2,440,064
PIEZOELECTRIC CRYSTAL APPARATUS
David C. Arnold, Oliver T. Strand, Jr., and Roy V. Lewis, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
Application January 13, 1944, Serial No. 518,096
10 Claims. (Cl. 171—327)



1. Piezoelectric crystal apparatus comprising a slotted casing of insulating material, a laminar piezoelectric element loosely supported within said slotted casing for limited movement in all directions, said element having two metalized electrode surfaces each comprising the greater portion of one major face and at least a portion of one of a pair of opposite minor faces of said element, a pair of external electric connectors mounted upon said casing, and spring means electrically connected to said external connectors and positioned within said casing in engagement with said metalized minor faces, said spring means providing no appreciable mechanical support for said piezoelectric element.

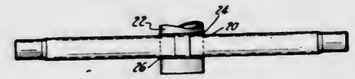
2,440,065
PISTON TYPE ACCUMULATOR
Benjamin N. Ashton, Kingston, N. Y., assignor to Electrol Incorporated, Kingston, N. Y., a corporation of Delaware
Application October 27, 1944, Serial No. 560,703
3 Claims. (Cl. 138—31)

1. An accumulator for hydraulic systems comprising a cylinder having closures at its opposite ends, means at one end of said cylinder for connecting said cylinder to a hydraulic system, a gas check valve at the opposite end of said cylinder, means forming a vent to atmosphere in the side of said cylinder substantially midway between its ends, an elongated piston slidable in said cylinder, and toroidal, rubbery sealing rings mounted on said piston adjacent its ends and engaging the cylinder walls on opposite sides of said vent in all positions of said piston.



2,440,066
TROUSER HANGER
Thomas A. Bell, Ridgefield Park, N. J.
Application March 18, 1947, Serial No. 735,340
4 Claims. (Cl. 223—96)

1. A device of the character described comprising a hook, an integrally formed transversely extending triangular member dependent therefrom and having a plurality of grooves formed in the lower end thereof, a pair of trouser gripping members adapted to be selectively placed in said grooves and means for urging the trouser gripping members together.

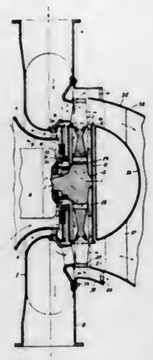


2,440,067
MANIPULATOR
Igor B. Bensen, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application November 10, 1945, Serial No. 627,952
10 Claims. (Cl. 250—49.5)

1. In a device for controlling the position of an article, the combination including a pair of coaxial shafts, means supporting said shafts, a frame member supported by one of said shafts for rotation thereby about a first axis, article supporting means including a shaft supported by said member and arranged to be rotated by the

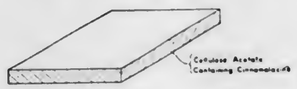
other of said shafts about an axis inclined at an angle to said first axis, and means for varying the position of the axis of said pair of shafts relative to said shaft supporting means.

2,440,068
SUPPORTING BEAM FOR AIRCRAFT LANDING GEARS
George E. Beringer, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application April 7, 1945, Serial No. 587,058
8 Claims. (Cl. 244—100)



8. For an aircraft landing gear, a trunnion comprising a formed tube supporting the landing gear at a point mid-length of the tube and pivotally supported at each end on end fittings mounted on the body of the aircraft, said tube having an appreciable diminution in outside diameter progressing from the mid-length point toward the ends, while having a relatively slight increase in wall thickness such that the cross-sectional area of the annular metal surface in the end portions is appreciably less than the cross-sectional area of the annular metal surface in the mid-length portion.

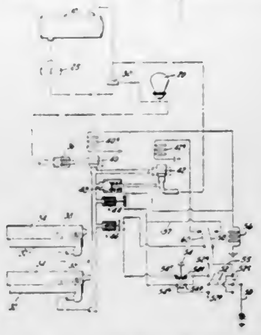
2,440,069
HIGH-TEMPERATURE ELASTIC FLUID TURBINE
David J. Bloomberg, Newton, Mass., assignor to General Electric Company, a corporation of New York
Application August 26, 1944, Serial No. 551,400
4 Claims. (Cl. 60—41)



2. Gas turbine comprising a bucket wheel having a disk and a plurality of circumferentially spaced buckets attached thereto, a shaft secured to the disk, a bearing for the shaft, a nozzle box concentrically surrounding the bearing and having a ring of nozzles for conducting operating

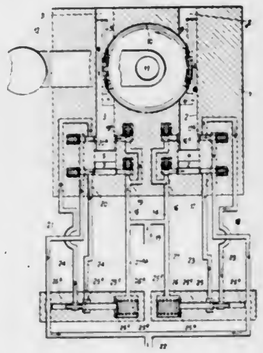
gases to the buckets, means for cooling the bearing and the disk including a cooling plate having inner and outer edges secured to the disk and forming a cooling space therewith, and means for circulating air through said space including chan-

nels formed in the buckets, each bucket having an outer portion with two radially spaced shrouds defining a passageway for gases leaking radially along the clearance space between the buckets and the nozzles.



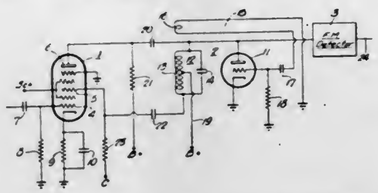
2,440,070
OPTICAL FILTER AND METHOD OF MANUFACTURE
Elkan R. Blout, Cambridge, and Ralph M. Gofstein, Haverhill, Mass., assignors to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application October 28, 1944, Serial No. 560,800
15 Claims. (Cl. 88—115)

14. As a new product, a light-filtering material adapted to absorb ultra violet radiation, said material comprising a sheet of light-transmitting plastic material comprising cellulose acetate and having incorporated therein a selectively light-absorbing agent comprising cinnamalazine.



2,440,071
SEMIAUTOMATIC HYDRAULIC-ELECTRIC GUN CHARGER
Joseph M. Boshka, George A. Goepfrich, and Frank V. Kuzmitz, South Bend, Ind., assignors to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application March 15, 1945, Serial No. 582,824
16 Claims. (Cl. 89—1)

1. The combination with a machine gun having a bolt stud reciprocable during normal gun operation, of a hydraulic system comprising a charging device for retracting the bolt stud and then releasing the same for countermovement, a source of fluid under pressure connected to the charging device, means operable for controlling the flow of said fluid under pressure to the charging device, means operable for exhausting said fluid in said charging device, and means for controlling a charging cycle including a pair of devices responsive to predetermined high and low pressures respectively acting in said charging device, said high pressure device constructed



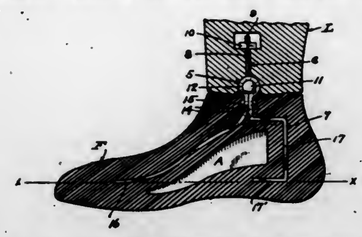
and arranged to control said first-named means, said low pressure device constructed and arranged to control said second-named means, whereby reciprocable movement of the bolt stud is obtained.

2,440,072
HYDRAULIC PUMP
Douglas Gerhard Booth, Ilford, England, assignor to The Plessey Company Limited, Ilford, England, a British company
Application February 24, 1945, Serial No. 579,658
In Great Britain March 3, 1944
5 Claims. (Cl. 103—11)

1. A pump comprising in combination a pump body containing at least two pump cylinders, conduits for communicating respective ends of the pump cylinders with the supply and discharge sides of the pump and a by-pass communicating with the ends of each individual pump cylinder and a passage leading to the discharge conduits, inlet and discharge valves closing the inlet and discharge passages leading to and from the respective ends of the pump cylinder, common actuating means operatively connected to said pistons, and a separate spring loaded valve provided with a stem closing the passage in the by-pass between the ends of each cylinder and the stem of each said spring loaded valve closing the passages between the discharge conduit and by-pass conduit in said valve body.

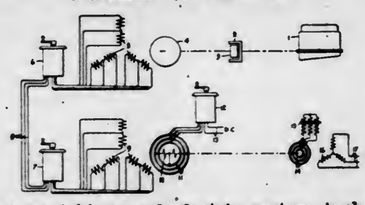
2,440,073
SYNCHRONIZED OSCILLATOR CIRCUIT
William E. Bradley, Swarthmore, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application October 9, 1945, Serial No. 621,343
11 Claims. (Cl. 250—36)

11. In a system wherein it is desired to synchronize an oscillator with a frequency-modulated carrier wave, an oscillator whose normal frequency corresponds to that of the unmodulated carrier wave, means for producing two current pulses during each cycle of the unmodulated carrier wave and the oscillator voltage, and for causing the relative amplitudes of said pulses to vary according to frequency variations of the modulated carrier wave, and means for utilizing said pulses to control the oscillator frequency according to the frequency variations of the modulated carrier wave.



2,440,074
FASTENER
Kenly C. Bugg, Fort Wayne, Ind.
Application April 14, 1943, Serial No. 483,050
16 Claims. (Cl. 85—38)

1. A fastener adapted to secure a pair of objects together, said objects having aligned apertures, said fastener comprising a stem having a head engageable with one of said objects and a body portion extending through said apertures, said head being of slightly less size than said apertures whereby it is insertable therethrough, and a shank having a head engageable with the other of said objects and having a shank body extending through said apertures, said shank body and stem filling said apertures a portion of the body portion of said stem being adapted to be positioned to engage said other of said objects.

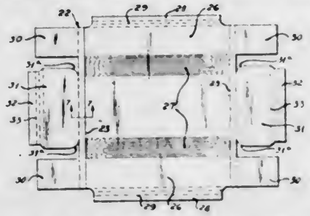


2,440,075
ANKLE JOINT AND REINFORCING MEMBER FOR PNEUMATIC FEET
Harry C. Campbell, Youngstown, Ohio, assignor to The Campbell-Edwards Pneumatic Artificial Foot Company, Youngstown, Ohio
Application April 24, 1946, Serial No. 664,526
3 Claims. (Cl. 3—8)

1. The combination with an artificial leg, a pneumatic foot, a lower ankle joint member molded in the foot and surrounding the upper portion of the air compartment therein, a substantially cylindrical head formed on the lower ankle joint member disposed outward of the upper surface of the foot with its bore extending laterally of the foot, an upper ankle joint member of substantially T-shape configuration removably secured to the lower portion of the

leg by its stem and having its arms removably and pivotally disposed in the head.

2,440,076
ENGINE TEST SYSTEM
George E. Cassidy, Alplaus, N. Y., assignor to General Electric Company, a corporation of New York
Application December 22, 1944, Serial No. 569,336
9 Claims. (Cl. 318—148)



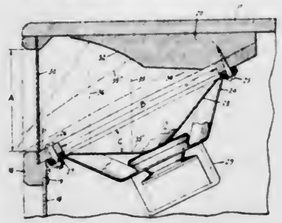
1. A variable speed electric system including an alternating current dynamoelectric machine having an alternating current winding, means for transmitting power between said alternating current dynamoelectric machine and a source of mechanical power, a second alternating current dynamoelectric machine having an alternating current winding, means for changing the number of poles of said second alternating current dynamoelectric machine for controlling the frequency and speed thereof, means for electrically connecting said first-mentioned alternating current dynamoelectric machine alternating current winding to said second alternating current dynamoelectric machine alternating current winding for transmitting electrical power therebetween, a third dynamoelectric machine, means for transmitting mechanical power between said dynamoelectric machine and said third dynamoelectric machine, means for transferring power between said variable speed electrical system and an independent source of electrical power including means connecting said third dynamoelectric machine to such independent source of electrical power other than said first two-mentioned dynamoelectric machines.

2,440,077
COVERING MEMBER FOR ARTICLES OF LUGGAGE
Louis H. Clark, New York, N. Y.
Application August 2, 1946, Serial No. 687,893
5 Claims. (Cl. 229—32)

1. A one-piece blank for forming a covering member of a section of an article of luggage, said blank having a quadrilateral central body portion whose adjacent edges are normal to each other, said central portion being adapted to form the covering bottom wall and having a top and a bot-

tom flap and a plurality of scorings defining the juncton of the central portion with each such flap, the top and bottom flaps being adapted to be folded upwardly along said scorings to form the covering front and rear walls with rounded bottom edges, two folds each extending along a side edge of the central portion and the top and bottom flaps at right angles to the above mentioned scorings, two oppositely disposed side flaps extending laterally from the folded side edges of the central portion and adapted to be folded upwardly to form the covering side walls with the folds forming outwardly extending flanges, portions of the side flap edges adjacent the folds

being arcuate and conforming to the rounded bottom edges of the covering, two oppositely disposed wings extending laterally from the folded side edges of the top and bottom flaps and adapted to be folded inwardly with respect to and to reinforce the covering side walls, and a tab extending along the outer edge of each of the four flaps and adapted to form resilient top portions of the front, back and side walls of the covering, each tab having three spaced scorings adjacent and parallel to its junction with a flap, that portion of each tab between the outer edge of said tab and the intermediate line of said three score lines having a length which is less than the length of its adjacent flap.



2,440,078

RADIO CABINET AND SPEAKER MOUNTING

George F. Devine, Easton, Conn., assignor to General Electric Company, a corporation of New York

Application March 17, 1943, Serial No. 479,523

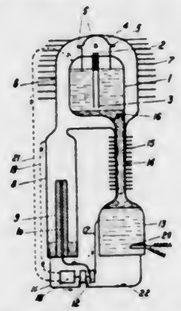
3 Claims. (Cl. 181—31)

3. The combination of a cabinet having a wall with an elongated opening therein, a cone-shaped sound emitting diaphragm having a periphery whose diameter is substantially larger than the small dimension of said opening being supported within said cabinet, the periphery of said diaphragm being located in a plane which intersects the plane of said opening substantially adjacent one side of said opening, a sound reflector having an edge positioned adjacent the side of said opening opposite to said one side across the small dimension of said opening and including a pair of angularly related surfaces, one of said surfaces lying in a plane which intersects the plane of said periphery at the side of said diaphragm opposite said opening and the junction of said surfaces being located substantially opposite the middle of said diaphragm, the angular relationship between said reflector surfaces and said diaphragm being such that lines perpendicular to the respective sides of said diaphragm and forming equal angles of incidence and reflection with a corresponding one of said surfaces are directed through said opening.

2,440,079

REFRIGERATING MACHINE

Audoin d'Halloy, Paris, France



Application August 29, 1939, Serial No. 292,497

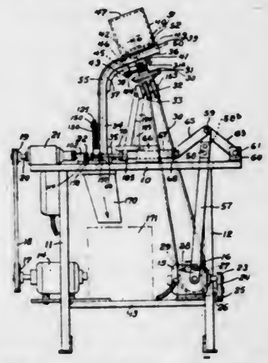
In Luxemburg September 13, 1938

Section 3, Public Law 690, August 8, 1946

Patent expires September 13, 1958

8 Claims. (Cl. 62—5)

1. In refrigerating apparatus, a vessel having a solution of a refrigerant therein, a receptacle having liquid refrigerant therein, a tube connecting said vessel with said receptacle, a supply of liquid filling said tube, said liquid being immiscible with said solution of the refrigerant and immiscible with the liquid refrigerant, and means for cooling said tube.



2,440,080

MACHINE FOR TRIMMING PRIMER CUPS AND THE LIKE

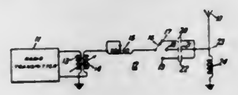
Herbert P. Eck, Martin M. Karlan, and Cosimo Perrucci, New York, N. Y.

Application June 3, 1943, Serial No. 489,518

6 Claims. (Cl. 90—21)

1. In a machine for finishing the ends of drawn cups or shells, a support, a finishing tool carried

on said support, and means for driving the same, a work holder reciprocatively movable on said support toward and away from said tool, mechanism for moving said work holder including serially arranged linkages one end of which is connected to a cross-head carrying said work holder and the other end of which is connected to said support, an intermediate pivotal connection between the linkages moved upwardly to move the work holder away from said tool and adapted to be moved to the infinite plane as work in said holder is engaged by said tool, and settable stops associated with said work holder for positively limiting the movement of said work holder in the direction of said tool.



2,440,081

TUNING ARRANGEMENT

Clifford G. Fick, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

Application August 24, 1942, Serial No. 455,827

2 Claims. (Cl. 250—33)

2. In combination, a source of high frequency energy, an antenna arranged to radiate such energy and exhibiting high inductive reactance at the frequency of energy from said source, an inductance connected between said antenna and ground having an inductive reactance at the frequency of energy from said source small relative to the reactance of said antenna, a capacitive reactance connected between said source and the point of connection of said antenna and said inductance, said capacitive reactance being of such value as to resonate the inductive reactance presented to said point by said antenna and said inductance at the frequency of said high frequency energy.

2,440,082

THERMALLY VAPORISABLE FUMIGANT COMPRISING SENSITIZED AMMONIUM NITRATE AND A PESTICIDE

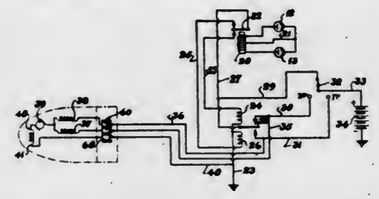
John Stocks Flanders, West Kilbride, and Elwyn Jones, Ardrossan, Scotland, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain

No Drawing. Application April 1, 1946, Serial No. 658,882. In Great Britain June 4, 1945

8 Claims. (Cl. 167—40)

1. A fumigating composition consisting of a mixture comprising a thermally vaporisable pesticidal compound, ammonium nitrate and an ammonium nitrate-sensitising salt of chromic acid in amount sufficient to render the composition capable of propagating throughout itself at ordinary atmospheric pressure an exothermal reaction when initiated by local heating.

2,440,083



CONTROL MECHANISM

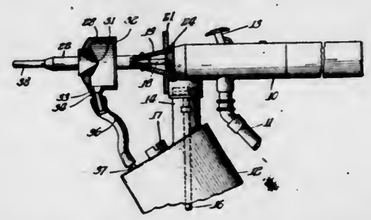
Paul R. Gley, Haledon, N. J., assignor to Curtiss-Wright Corporation, a corporation of Delaware

Application May 19, 1943, Serial No. 487,839

5 Claims. (Cl. 318—265)

3. In a control system, an electrical motor, a winding for rotating the armature of said motor in one direction, a winding for rotating the armature of said motor in reverse direction, means for energizing said windings individually, said last named means comprising a light-responsive cell system, said light-responsive cell system comprising a pair of members, a pair of

light-responsive devices and a cooperative light source carried by one of said members, the other member being adapted to control the passage of light from said light source to said light-responsive devices, and means for moving said one member to a desired position relative to said other member.



2,440,084

LITHOGRAPH SPRAY DEVICE

Lawrence B. Goda, Sr., Chicago, Ill.

Application February 4, 1944, Serial No. 521,027

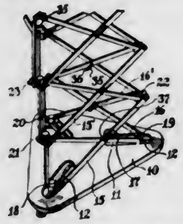
5 Claims. (Cl. 91—45)

1. A lithographic spray device, comprising a guide member, means to support said guide on an airbrush generally parallel to the axis of a spray produced thereby, means longitudinally adjustably carried by said guide member forming an aperture aligned with said spray, means for trapping liquid which does not pass said aperture, and a spring pressed extension on said guide member adapted to engage a lithograph surface to position said orifice with respect thereto.

2,440,085

MACHINE FOR APPLYING CLOSURES AND SEALING JARS

Gustave Glocker, Washington, D. C., assignor to Super-Seal Container Corporation, Washington, D. C.



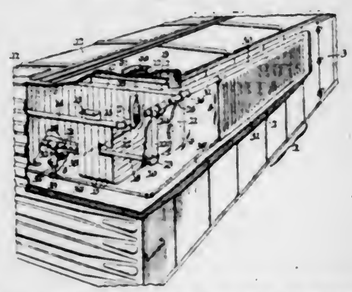
Application June 5, 1944, Serial No. 538,775

6 Claims. (Cl. 226—80)

1. In a closure-applying machine of the class wherein a jar is transported to a closure-applying station and moved axially into engagement with a closure, reciprocating transporting means for laterally sliding a closure from a position of storage to said closure-applying station, a head plate resiliently bearing upon said closure during said sliding movement, a pawl mounted in said head plate at said closure-applying station

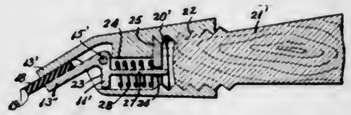
ing of hydrogen and hydrocarbon radicals, whereupon the dithiocarbamic acid adds to the alpha-beta unsaturation and ring closure occurs to form a 2-mercapto thiazine having a single bond between the ring carbon atoms in the 5 and 6 positions and then recovering the said 2-mercapto thiazine.

2,440,096
EXTENSIBLE SUPPORT
Webster W. Jury, Pines Lake, N. J.
Application June 7, 1945, Serial No. 598,127
2 Claims. (Cl. 248—157)



1. An extensible support comprising three pantagraphs arranged and connected to form a triangle, each pantagraph comprising sets of cross arms pivoted to each other, the outer ends of said arms of each set being pivoted to a common member to which are pivoted the adjacent outer ends of the arms of the next adjacent pantagraph, and a counterbalancing spring mounted on and encircling the pivot of each pair of cross arms and so connected to the pivot and cross arms as to extend said pantagraphs and to hold the cross arms in frictional engagement with each other and hold the pantagraph arms in all positions of adjustment.

2,440,097
TROUGH SEPARATOR WITH VERTICAL CLASSIFYING CURRENT
Collier H. Kear, Richmond Hill, Long Island, N. Y.; Dorothy E. Kear administratrix of said Collier H. Kear, deceased
Application May 9, 1945, Serial No. 592,792
6 Claims. (Cl. 209—155)



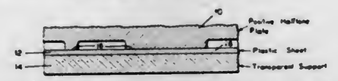
1. Apparatus for connection to the apertured lower part of a receptacle which is adapted to receive an aggregate of pieces having different specific gravities and for producing in such receptacle an ascending stream of water, comprising a closed chamber having an aperture in the upper part thereof adapted to register with the aperture in the lower part of the receptacle and having at least one exit orifice in the lower part thereof, water supply means extending into the closed chamber and having an aperture in the lower part thereof below the aperture in the upper part of the chamber, a plate positioned within the chamber below the aperture in the water supply means whereby a stream of water discharged downwardly from the aperture in the water supply means will impinge against the plate and rise about the water supply means and ascend through the aperture in the upper part of the chamber, and means for moving the plate toward and away from the water supply means to vary the force and volume of a stream of water discharged from the aperture therein.

2,440,098
RAILROAD CAR REFRIGERATED BY DRY ICE AND A SECONDARY REFRIGERATING SYSTEM
William M. Keller, Merion, Pa., assignor to The Pennsylvania Railroad Company, Philadelphia, Pa., a corporation of Pennsylvania
Application December 26, 1946, Serial No. 718,400
9 Claims. (Cl. 62—91.5)

2. In combination with a railway refrigeration car a refrigeration system comprising an insulated ice bunker having heat transfer pipes connected to top headers and a common bottom header, a cooling evaporator disposed within the lading space of the car, a thermostatic control valve connected to the common bottom header and responsive to temperature variations in the lading space of the car, a circulating pipe connecting the top headers to the top of the evaporator and a circulating pipe connecting the control valve to the bottom of the evaporator.

2,440,099
SQUEEGEE WITH BLADE-HOLDING GRIP RESPONSIVE TO HANDLE SETTING
Jacob Kind, Astoria, Long Island, N. Y.
Application September 23, 1944, Serial No. 555,435
2 Claims. (Cl. 15—245)

1. A squeegee comprising a member having an internally screw threaded socket opening at one end of the member and provided with a longitudinal passage disposed eccentrically of said socket and extending away from said screw threaded socket, said member being provided with a rigid jaw extending laterally of said member on both sides thereof and forwardly of said member, a movable lever pivotally supported in said member and provided with a movable jaw disposed in opposition to said rigid jaw and including a lever arm movable in said passage, a rigid stem on said lever arm projecting through the passage, a stop in said member disposed at the inner end of said passage through which the rigid stem projects, and a screw threaded handle engaging the screw threaded socket and adapted to bear against said stem to provide clamping pressure by said movable jaw to clamp a squeegee member against said rigid jaw.

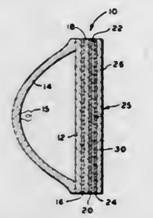


2,440,100
SOLVENT FOR DEGREASING IRON AND ALUMINUM
Walter Klabunde, Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 24, 1945, Serial No. 612,553
4 Claims. (Cl. 252—172)

1. A liquid solvent composition for degreasing iron and aluminum consisting essentially of trichlorethylene and 0.02 to 1% by weight of an inhibitor for condensation reactions of trichlorethylene catalyzed by the aforesaid metals, said inhibitor being a thiophene selected from the group consisting of thiophene, 2-methyl thiophene and 3-methyl thiophene.

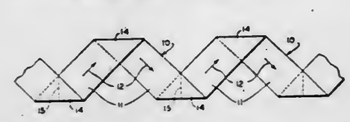
2,440,101
TRIS-(TRIMETHYLSILYL) BORATE AND METHOD OF PREPARING THE SAME
Robert Henry Krieble, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application May 7, 1947, Serial No. 746,629
3 Claims. (Cl. 260—448.2)

1. Tris-(trimethylsilyl) borate.



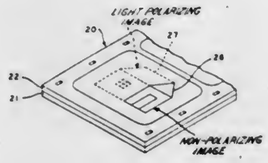
2,440,102
PROCESS OF MANUFACTURE OF LIGHT POLARIZING TWO TONE IMAGE ON A SHEET
Edwin H. Land, Cambridge, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application May 31, 1944, Serial No. 538,177
4 Claims. (Cl. 88—65)

1. The method of forming a desired halftone image having predetermined polarizing portions and non-polarizing portions in a sheet of transparent plastic having substantially oriented, long chain molecules, comprising printing a surface of the sheet with a halftone plate on which the image has been reproduced and which is inked with a resist material to cover the portions of the sheet which are to provide the non-polarizing portions of the image, and then dyeing the image forming portions of the sheet adjacent those portions covered by the resist with a dichroic dye to provide image forming portions of similar tone.



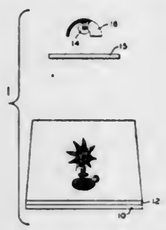
2,440,103
LIGHT-POLARIZING LAMINATION HAVING A PLURALITY OF COPLANAR PROTECTIVE GLASS ELEMENTS
Edwin H. Land, Cambridge, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application November 6, 1944, Serial No. 562,213
3 Claims. (Cl. 88—65)

1. A light-polarizing lamination for use in close proximity to a light source emitting substantial heat, said lamination comprising a sheet of light-polarizing material, a continuous layer of resilient adhesive material affixed to that face of the light-polarizing sheet farthest removed from the light source and means providing a protective layer affixed to said adhesive and positioned to overlie said sheet of polarizing material, said protective layer comprising a plurality of hard, transparent, abrasive-resistant glass elements which when subjected to temperatures of the order of those to



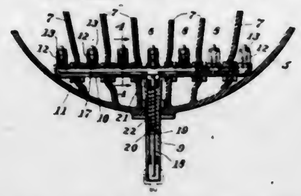
which the lamination is subjected show photoelastic strains, the resilience of said adhesive permitting relative movement of said glass elements with respect to one another, said glass elements being of substantially uniform thickness and being positioned in abutting spaced relationship to one another whereby photoelastic strains set up in any such glass element are confined to that element and the degree of such strain developed in the protective layer is of a low order.

2,440,104
LIGHT POLARIZING VIEWER FOR USE IN CONNECTION WITH STEREOSCOPIC PICTURES
Edwin H. Land, Cambridge, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Original application March 13, 1942, Serial No. 434,567. Divided and this application February 24, 1945, Serial No. 579,605
6 Claims. (Cl. 88—29)



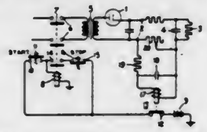
1. A viewing visor comprising a strip of light-polarizing material the longitudinal dimension of which is substantially in excess of the width dimension, said strip having a transmission axis bearing a predetermined relation to said longitudinal dimension and having therein a fold providing a plurality of diverging viewing portions adjacent said fold and also providing an interconnecting portion for said viewing portions, said interconnecting portion consisting of a section of superimposed layers of said strip, said fold causing said transmission axis in one viewing portion to be substantially perpendicular to said transmission axis in the other viewing portion whereby each said viewing portion is adapted to block substantially polarized light transmitted by the other viewing portion, said viewing portions being separated from each other by substantially the average interocular distance, said viewing visor being characterized by the fact that either face thereof may be used as the viewing face without alteration of the stereoscopic effect produced.

2,440,105
IMAGE-CARRYING FILM HAVING LIGHT-POLARIZING AND NONPOLARIZING IMAGES
Edwin H. Land, Cambridge, Mass., and Martin Grabau, Reading, Pa., assignors to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application April 9, 1945, Serial No. 587,278
2 Claims. (Cl. 88—65)



1. In a film comprising a support and a single image-carrying layer of a substantially transparent, hydrophilic, molecularly oriented linear polymeric plastic, in combination a dichroic material incorporated in at least one predetermined portion of said layer and rendering such portion light polarizing in character, and metallic silver contained in at least one other predetermined portion of said layer, each portion of said layer containing silver forming an individual main image which is visible in polarized light and in unpolarized light, and each portion of said layer containing said dichroic material forming an individual image which is auxiliary to a main image of silver and which in conjunction with said silver image is visible in unpolarized light but which in plane polarized light has an optical density that is a function of the direction of vibration of said polarized light.

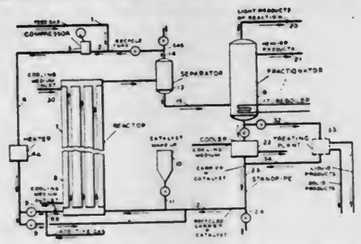
2,440,106
LIGHT-POLARIZING IMAGE AND METHODS FOR FORMING THE SAME
Edwin H. Land, Cambridge, Joseph Mahler, Brookline, and Mark Hyman, Jr., Cambridge, Mass., assignors to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application April 26, 1946, Serial No. 665,084
9 Claims. (Cl. 95—6)



1. The process which comprises treating a carrier sheet with a dichromate solution to render it light-sensitive, exposing said sensitized sheet to light through a differentially light-transmitting medium, removing the unexposed dichromate therefrom, and treating said sheet with an acid solution of an iodide which reacts with said dichromate to give a dichroic image as an oxidation product.

2,440,107
SAFETY INNER TUBE FOR PNEUMATIC TIRES
Norval Robert Maddox, Owingsville, Ky.
Application July 6, 1945, Serial No. 603,430
2 Claims. (Cl. 152—342)

1. An inner tube for pneumatic tires having a plurality of circumferentially extending, spaced apart partitions forming a plurality of circumferential air chambers in the tube, an air manifold discharge pipe extending transversely of the chambers through said partitions, an air discharge valve in each chamber for controlling the discharge of air from said pipe, a valve casing for inflating the tube and communicating with the pipe, a valve in the casing, a rod extending longitudinally in said pipe in operative engagement with each of the valves in said chambers, and a valve stem in said valve casing and connected to said rod and the second named valve for opening said first-named valves by an opening movement of the second valve.



2,440,108
OVERCURRENT PROTECTIVE SYSTEM FOR A DIRECT-CURRENT LOAD CIRCUIT
Donald E. Maxwell, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application May 5, 1943, Serial No. 485,745
3 Claims. (Cl. 175—294)

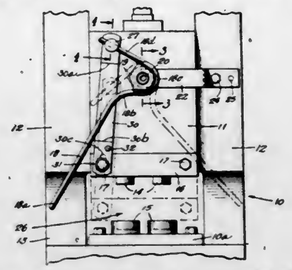
1. A rectifier control circuit, comprising a rectifier having input and output circuits, a circuit breaker in said input circuit, an operating coil for the circuit breaker in series with normally closed contacts of an overload relay, a start switch for selectively closing the operating coil circuit, a coil for the overload relay, a condenser in shunt with the relay coil and both the coil and condenser being in series with the rectifier output circuit through a resistance, said relay coil, condenser, and resistance being proportioned to comprise a non-oscillatory circuit and so as to obtain a time delay in energizing the relay coil by sudden fluctuations in the rectifier output.

2,440,109
METHOD OF EFFECTING CATALYTIC REACTIONS
Frank J. Moore, Beacon, N. Y., assignor, by mesne assignments, to The Texas Company, New York, N. Y., a corporation of Delaware
Application February 6, 1945, Serial No. 576,472
6 Claims. (Cl. 260—449.6)

6. In the catalytic hydrogenation of carbon monoxide under predetermined conditions of temperature and pressure by contact with a hydrogenating catalyst to produce compounds containing at least 2 carbon atoms per molecule, the method which comprises suspending the catalyst in finely-divided form in carrier liquid substantially non-vaporizable under the reaction conditions, introducing a stream of resulting suspension to the lower portion of an elongated vertical tubular reaction zone of restricted cross sectional area, dispersing carbon monoxide and hydrogen in effective proportions in gas phase in said stream in an amount sufficient to lift the slurry

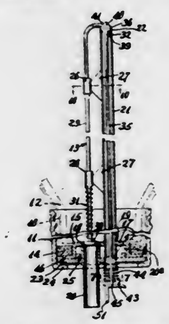
through the reaction zone by gravity displacement, surrounding the reaction zone with a cooling liquid to remove heat of reaction, thereby maintaining the reaction zone at substantially said predetermined temperature, discharging from the upper portion of the reaction zone a stream comprising unreacted gas, products of reaction and suspension, treating the discharged stream to remove unreacted gas and products of reaction from the catalyst and recycling to the reaction zone catalyst from which products of reaction have been removed, said recycled catalyst being suspended in carrier liquid.

2,440,110
STABILIZED SILVER HALIDE EMULSIONS
Fritz W. H. Mueller, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application October 6, 1944, Serial No. 557,545
5 Claims. (Cl. 95—7)



1. A photographic material comprising a silver halide gelatin emulsion in contact with a member of the group consisting of a sulfinic acid, a seleninic acid and their salts, and a polysulfide compound selected from the group consisting of aromatic and heterocyclic polysulfide compounds of the following structural formula:

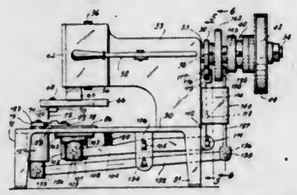
wherein Y represents the atoms necessary to complete an aromatic or heterocyclic ring system and n is a whole number greater than 1, in the proportion of from 0.00025 to 0.0050 mol of the member of the last named group to 1 mol of the member of the first named group.



2,440,111
SAFETY GUARD FOR PRESSES
Paul J. Murcko, Bridgeport, Conn.
Application March 20, 1945, Serial No. 583,759
2 Claims. (Cl. 74—615)

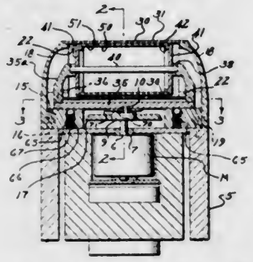
1. The combination with a press of a guard arm having a rigid pivot intermediate its ends, mounted in a fixed location with respect to the press frame, one part of said arm extending downward from the pivot whereby the lower end is movable across the front of the die-space of the press without transmitting flexure to the other part of the arm; a link rigidly secured to the ram of the press; and means slidable on the other part of the arm, and pivotally connected to the link for

causing the arm to sweep across said die-space when the ram is lowered and raised, both said arm parts normally extending to one side of a plane passing vertically through the axis of the pivot.



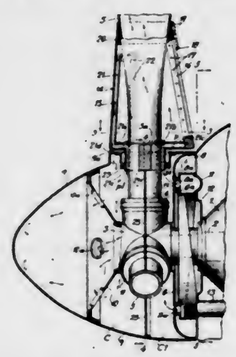
2,440,112
SANITARY BOTTLE SPIGOT
Stanley Neilson, New York, N. Y.
Continuation of application Serial No. 541,790, June 23, 1944. This application December 12, 1946, Serial No. 715,665
1 Claim. (Cl. 222—484)

A spigot for a container for liquids, comprising a gasket for engaging the top of a container, a plate disposed on top of said gasket and having a depressed cup extending into said gasket, said cup having a port and an orifice, a tube secured in said orifice and extending from opposite sides thereof and having a seat at its end disposed in said container, spaced guides secured to said tube in line with said port, each of said guides having a slot opening through its entire side, a push rod disposed in said tube having a head engaging said seat and a portion extending above said tube, a spout secured to said cup over said port on the side thereof remote from said container, a cover disposed on said plate having an orifice through which said spout extends and another orifice through which said tube extends, a thumb piece secured to said end of said rod above said tube, a spring compressed between said thumb piece and cover normally holding said head against said seat, a valve having a stem disposed in said guides, a head coacting with said port and an arm coacting with the bottom of said push rod, said stem having a diameter equal to said guide slots and a bushing secured to said push rod in each one of said guides holding said stem therein but permitting removal of said stem



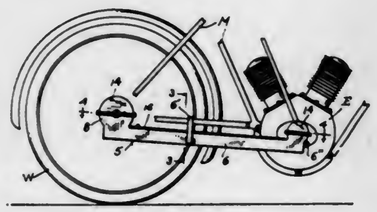
therefrom by lifting said stem to lift said bushings up from the correlated guide slot, a spring compressed between said head and the adjacent one of said guides for urging said valve head against said port, and a cap having a portion engaging said cover for holding said gasket, plate and cover on a container.

2,440,113
MACHINE FOR TURNING AND BINDING THE EDGES OF LEATHER
Louis J. Noecker, St. Clair, Mo.
Application August 12, 1946, Serial No. 689,897
10 Claims. (Cl. 69—1)



1. In a machine for turning and binding edge portions of pieces of leather, a forming block including a gauge portion and a projecting lip portion, means for adjustably mounting said block on a vertically reciprocable plunger, a resilient creasing blade, a supporting block therefor, means for adjustably mounting said block on a plate secured to a vertically reciprocable crosshead member, a combined anvil and pressure plate, means for adjustably mounting same on a vertically reciprocable plunger, means for reciprocating said first named plunger, said crosshead member, and said second named plunger during a single cycle of the machine, and clutch mechanism, operable at will, to govern the beginning and end of each such cycle.

2,440,114
DRY SHAVER
Herbert E. Page, Alhambra, Calif.
Application February 3, 1945, Serial No. 575,943
4 Claims. (Cl. 30—43)

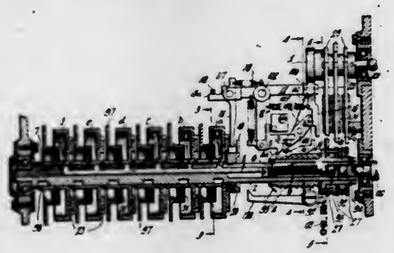


3. In a power-operated shaving device, a supporting body carrying power means, a perforated, cylindrical outer cutter head mounted on the body for free rolling movement relative thereto in response to movement of the body when said head is in contact with the skin, a yoke mounted on the body to oscillate relative thereto, means operatively connecting the yoke to the power means, said yoke having upright end portions each presenting a bearing, a spindle journalled at its ends in said respective bearings, a perforated cylindrical inner cutter head disposed axially in the outer head and rotatably carried by the spindle, said spindle being disposed parallel with the axis of the outer head and coaxial with said inner head, and resilient means urging the spindle into eccentric relationship with the axis of the outer head.

2,440,115
DEICING SYSTEM FOR AIRCRAFT SURFACES
Everett P. Palmatier, Upper Montclair, N. J., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application January 11, 1944, Serial No. 517,873
5 Claims. (Cl. 244—134)

4. In a propeller assembly comprising a hub, a hollow blade component mounted therein, a hollow cuff component on said blade and a hollow spinner component inclosing said hub, conduits interconnecting the spinner, cuff and blade hollows, a source of heated gas including means to conduct gas to one of said components for passage therefrom, serially, through the other components, and means to connect the last component of the series to the atmosphere for issue of spent gas thereto.

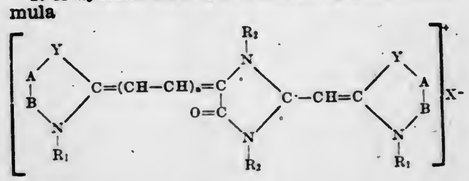
2,440,116
DRIVING ATTACHMENT FOR MOTORCYCLES
Theodore W. Petkoff, Evansville, Ind.
Application March 17, 1945, Serial No. 583,353
1 Claim. (Cl. 180—30)



In a power transmitting unit for motorcycles comprising an elongated casing having an elongated opening in its upper side and upstanding substantially semi-circular compartments formed on its opposite ends to receive gears on the engine drive shaft and driving wheel of the motorcycle, aligned bearing blocks removably secured to the bottom of the casing, a shaft seated on the bearing blocks, caps removably secured to the bearing blocks and retaining the shaft thereon, gears secured to the opposite ends of the shaft and meshing with the engine and drive wheel gears, substantially semi-circular caps removably secured to the semi-circular compartments of the casing and covering the aforesaid gears, an elongated cover plate secured over the opening in the casing and brackets detachably securing the casing to the frame of the motorcycle.

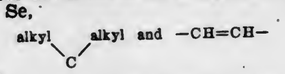
2,440,117
PROCESS FOR PREPARING SULFONAMIDES
Alexander H. Popkin, Bronx, N. Y., assignor to Sun Chemical Corporation, a corporation of Delaware
No Drawing. Application March 11, 1944, Serial No. 526,133
5 Claims. (Cl. 260—556)

1. A process for preparing a monosulfonamide of a primary organic aromatic amine, which consists in the steps of chlorsulfonation of a primary organic aromatic amine with chlorsulfonic acid by adding said primary organic aromatic amine to said chlorsulfonic acid in the ratio of approximately 1 mol of said primary organic aromatic amine to 8–10 mols of chlorsulfonic acid at a temperature within the range of approximately 25–70° C., and thereafter heating said admixture at 90° C., to secure a monosulfonyl chloride material, thereafter aminating said sulfonyl chloride material with ammonia to furnish an aminated product, and thereafter separating and recovering said aminated product.



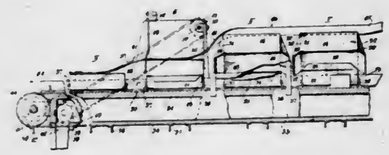
2,440,118
INDICATOR CONTROL MECHANISM
Leonhard Florens Reinhold, Staten Island, N. Y., and James Albert Spencer, Teaneck, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application January 12, 1946, Serial No. 640,839
9 Claims. (Cl. 177—353)

1. In a device for setting the drum dials of an indicator in response to the reception of code signals, an index shaft upon which said dials are mounted and a cam shaft, said shafts being subject to cyclic operation upon receiving each code signal, and the index shaft being arranged for arrest in different selected positions in which positions said cam shaft performs control operations upon said indicator, means extendable in varying degrees along the axis of said index shaft for mechanically coupling each drum dial individually and successively thereto, whereby the dials are set to display a visual translation of said code signals, and means operable by said cam shaft for causing said extendable means to be progressively advanced into coupling relation with each drum dial.



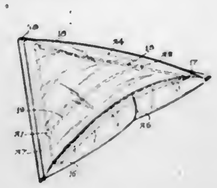
2,440,119
METHINE DYESTUFFS
Oskar Riester, Dessau, and Gustav Wilmanns, Wolfen, Kreis Bitterfeld, Germany, assignors, by mesne assignments, to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application November 13, 1939, Serial No. 304,173. In Germany November 9, 1938
7 Claims. (Cl. 260—240)

1. A dyestuff having the following general formula



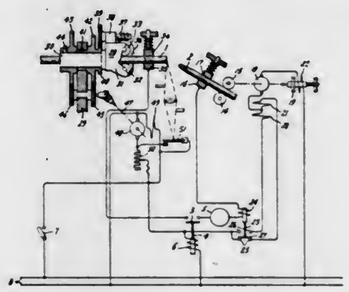
wherein

A and B stand for an atom grouping capable of completing an organic ring system,
Y stands for the member of the group consisting of O, S, Se,



R_1 is alkyl,
R_2 is a member selected from the class consisting of alkyl, aryl and
X is an anion, and
n is a whole number smaller than 3.

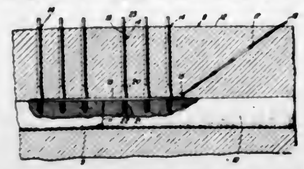
2,440,120
FOLDING BOX MACHINE
William A. Ringler, Wayne, Pa., assignor to The Gardner-Richardson Company, Middletown, Ohio, a corporation of Ohio
Application October 19, 1945, Serial No. 623,243
5 Claims. (Cl. 93—53)



1. A machine for the automatic closing of open cartons consisting of a carton body comprising a bottom panel, side walls, and a front and a back wall connected to the bottom panel; a carton cover hinged to said back wall, and front and side flange panels connected to the top panel, which carton in the collapsed condition has its cover side flange panels outfolded and its cover front flange panel infolded; and automatic locking means comprising a lock flap hinged to the front wall, and abutment means on the front flange panel, the machine comprising, in combination, an endless conveyor having lugs thereon adapted to engage said side walls; a sweep along the path of said conveyor for engaging and downfolding said cover into carton closed position; a first yieldable arm for engaging and bearing against the leading side flange panel, and a second arm moved in the direction of advance of said conveyor engaging and bearing against the trailing side flange panel during the engagement of the cover by said sweep.

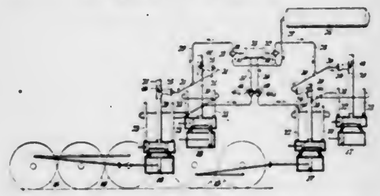
2,440,121
SHOULDER PAD
Soll Schwartz, Brooklyn, N. Y.
Application March 14, 1947, Serial No. 734,655
2 Claims. (Cl. 2—268)

1. A shoulder pad comprising a triangular shaped wire frame of three sides, one of said sides of the triangle being arched, padding material extending over the same, a covering over the padding material and said covering secured along its side to enclose the padding and the frame, a brace extending between two sides of the frame and spaced forwardly of the arched side of the frame, said brace being arched similarly to the curved side whereby the shoulder pad will better conform to the shoulder and a stronger frame will be provided.



2,440,122
ARC LAMP
Robert E. Sheahan, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York
Application September 25, 1946, Serial No. 699,287
2 Claims. (Cl. 314—40)

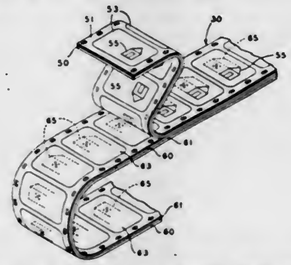
1. In an arc lamp including a pair of arcing electrodes, electrode feed control means for continuously rotating and advancing at least one of said electrodes comprising, a rotatable electrode holder, a concentric sun gear rotatable with respect to said holder, a planetary gear journaled in said holder in meshing engagement with said sun gear, and means for continuously and positively driving said holder and said sun gear at unequal speeds.



2,440,123
REMOVABLE BONE PLATE
Chester H. Smith, Pittsburg, Kans.
Application October 7, 1946, Serial No. 701,821
3 Claims. (Cl. 128—92)

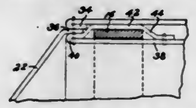
3. In a structural fracture treating and repair appliance of the class described, a bone plate longitudinally elongated, transversely bowed and having rectilinearly straight longitudinal edges, said bone plate being provided at one end with

a hook to accommodate the slotted end of a plate loosening and withdrawing lever.



2,440,124
WHEEL SLIP PREVENTION MECHANISM FOR LOCOMOTIVES
Carleton K. Steins, Merion, Pa., assignor to The Pennsylvania Railroad Company, Philadelphia, Pa., a corporation of Pennsylvania
Application April 30, 1945, Serial No. 591,134
4 Claims. (Cl. 105—48)

2. Slip prevention mechanism for a steam locomotive having groups of driving wheels powered by separate engines and separate conduits for delivering live steam to the several engines; said mechanism including individual flow control means in said live steam conduits, pressure fluid-actuated devices for operating the live steam control means, normally closed valves interposed between said devices and a supply source of pressure fluid at a pressure higher than that of the exhaust steam, and means responsive to the differential in the back pressures of the exhaust from the several engines upon slippage of any of the wheel groups and automatically operative to open the valve of the pressure fluid device for the steam control means of the engine of the slipping wheels, thereby to effect a reduction in the steam supply to such engine until normal conditions are restored.



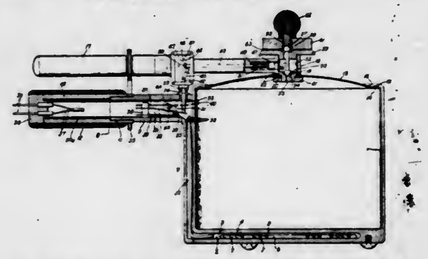
2,440,125
IMAGE-CARRYING FILM HAVING LIGHT-POLARIZING AND NONPOLARIZING IMAGES
Thomas R. Sterck, Arlington, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application December 15, 1944, Serial No. 568,238
5 Claims. (Cl. 88—65)

1. An image-carrying film which is designed for instructional and educational purposes and which carries at least one main image and an auxiliary image in association therewith, a main image and an auxiliary image associated therewith being viewable conjointly to form a composite image and said auxiliary image having the property of being rendered invisible as desired, said film comprising two substantially transparent and coextensive image-carrying layers superposed on one another, one of said image-carrying layers being formed of a molecularly oriented, hydrophilic, linear polymeric plastic material and the other of said image-carrying layers being formed of a transparent hydrophilic plastic material, at least one predetermined portion of the molecularly oriented material having carried thereby a light-polarizing image constituting said auxiliary image and at least one predetermined portion of the other hydrophilic material having carried thereby a nonpolarizing image constituting said main image with which said auxiliary image is associated, said light-polarizing auxiliary image having the property of absorbing light which is incident thereon and which is polarized in a predetermined

plane while transmitting incident light which is polarized in a plane at 90° to said first-named plane and also transmitting unpolarized light whereby said nonpolarizing main image and said light-polarizing auxiliary image associated therewith become simultaneously visible and form at least one composite image when viewed conjointly in unpolarized light as well as in light vibrating in said first-named plane but whereby said light-polarizing auxiliary image becomes substantially invisible when viewed in polarized light vibrating in said second-named plane while said nonpolarizing main image remains visible.

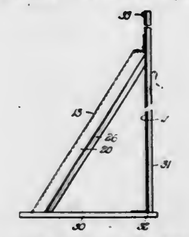
2,440,126
CARRIAGE HOOD CONSTRUCTION
Robert E. Strott, East Templeton, Mass., assignor to Thayer Company, Gardner, Mass., a corporation of Massachusetts
Application September 28, 1945, Serial No. 619,075
2 Claims. (Cl. 296—137)

1. A carriage hood, a bow therefor, a lining, the latter being generally co-extensive with the hood and folded over on itself to contain the bow, stitching securing the hood to the lining at the fold of the latter, said stitching being located wholly to one side of the bow, and means connecting the lining to itself adjacent the edge of the bow opposite the fold, said means being located wholly at the other side of the bow, the latter being wholly contained in a pocket formed by the lining and the hood being free of the bow.



2,440,127
ART OF PRODUCING PROPELLER BLADES
Foster B. Stulen, West Orange, N. J., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application July 31, 1944, Serial No. 547,463
1 Claim. (Cl. 29—156.8)

In the art of producing a propeller blade involving shaping, trimming and attachment together of separate plate members by a bonding operation contiguous to the blade leading and trailing edges to thereby produce and substantially complete insofar as blade airfoil section is concerned and except for final twist, a propeller blade having twist of one hand, the steps which consist in heating the propeller blade, and changing the twist of said propeller blade throughout



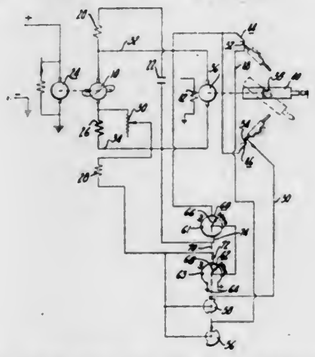
its length from that of said one hand to that of the opposite hand in response to a shaping operation performed on the propeller blade while maintaining the interior chamber thereof under gas pressure substantially higher than that of the atmosphere.

2,440,128
PRESSURE COOKER
Earle C. Sullivan, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York
Application October 31, 1945, Serial No. 625,899
6 Claims. (Cl. 219—44)

1. A pressure cooker comprising a closed container, electrical heating means for said container for generating relatively high and low heats, switching means controlling said heating means selectively to generate said heats, a relief valve for said container operable to release pressure when it attains a predetermined high value in the container, and pressure means operable responsively to the pressure released for operating said switching means to control said heating means to reduce the heat generated from said high to low heats.

2,440,129
SCORING DEVICE CONSISTING OF INCLINED LADDER STRUCTURE AND FOLDING STANDARD THEREFOR
Douglas E. Thompson, Chicago, Ill.
Application November 8, 1945, Serial No. 627,328
2 Claims. (Cl. 40—126)

1. In combination, a scoring device and a folding standard therefor, the scoring device com-



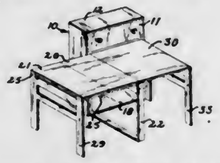
prising a vertical support member and an inclined member secured thereto, the standard comprising a vertical member and a horizontal member, said members being hinged together to limit their separation to ninety degrees, the vertical member having means for engaging the upper portion of the support member and the inclined member engaging the horizontal member to hold the parts in erected position.

2,440,130

INVERSE FEED-BACK MOTOR CONTROL

Herbert C. Waterman, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware

Application September 21, 1944, Serial No. 555,125
7 Claims. (Cl. 318—158)



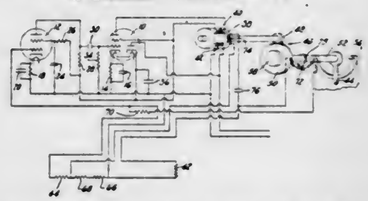
6. An apparatus for use as an electrical amplifier comprising, an electrical control system having a pair of potentiometers electrically connected in voltage opposition, and a shaft interconnecting the potentiometers so that movement of any one of the potentiometers will move the other a corresponding amount, one of the potentiometers being connected to a source of input voltage for supplying a variable input voltage to the system, the other potentiometer being connected to the output of the apparatus for supplying an inverse feedback voltage to the system, which voltage is a percentage of the output voltage of the apparatus, the percentage of the output voltage to be used for inverse feedback voltage varying in inverse proportion to the input voltage.

2,440,131

CONVERTIBLE SPACE SAVING TABLE

Anthony Wayne, New York, N. Y.

Application March 2, 1946, Serial No. 651,603
4 Claims. (Cl. 312—161)



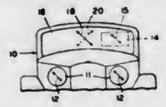
1. A convertible space saving table and chest combination comprising a receptacle having an open side, a frame hinged to the receptacle in the open side thereof and movable to a position exteriorly of said receptacle, a table structure mounted in said frame including a plurality of table top members pivoted in said frame and leg members pivoted to said top members, all of said members being folded to nesting position within the frame and unfoldable to provide a table exteriorly of said receptacle and said table structure forming a closure for said receptacle when the members are folded.

2,440,132

ELECTRONIC MOTOR CONTROL SYSTEM

Franklin O. Wisman, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware

Application April 12, 1944, Serial No. 530,714
2 Claims. (Cl. 318—29)



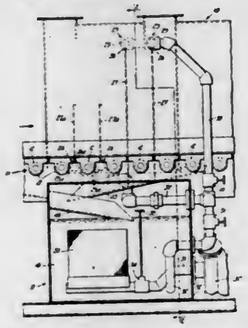
1. An electrical system comprising an alternating current source, an electrical motor having a winding connected to said source, a control arm having limited rotation and drivably connected to said motor, a slip clutch arrangement interposed between the motor and control arm to permit the continued rotation of said motor at times when said control arm has reached its rotational limits, an amplifier input circuit including a bridge having a plurality of legs, a second winding in the motor inductively related to said first mentioned winding and having connections to said bridge, a third winding in said motor arranged to be excited in response to a signal from said amplifier input circuit, a phase shifter in said connections to said bridge for causing the current flowing in the third winding in response to said signal to be out of phase with the current in the first mentioned winding, said phase shifter being disposed in the system to operate at an energy level lower than the energy level of the motor rating, an amplifier output circuit connected to said second winding for carrying current the flow of which is influenced by said signal, an element in one leg responsive to temperature changes for creating an unbalanced condition in said bridge whereby a signal is impressed in the amplifier input circuit, and means responsive to rotation of the arm for creating a balanced condition in said bridge.

2,440,133

WINDSHIELD STRUCTURE FOR USE IN AUTOMOTIVE VEHICLES EMPLOYING ANTI-GLARE LIGHT-POLARIZING ILLUMINATING AND VIEWING MEANS

Clinton J. T. Young, Cambridge, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware

Application August 9, 1944, Serial No. 548,657
1 Claim. (Cl. 88—65)



In an automotive vehicle of the class wherein a source of illumination for the pathway of the vehicle is provided to emit a beam of plane polarized light vibrating at an angle of 45° to the horizontal and wherein a light-polarizing viewing visor is provided having its transmission axis parallel to the vibration direction of said light, a windshield positioned on the vehicle in front of said viewing visor, said windshield comprising a plurality of glass sheets bonded together by a layer of plastic material possessing optical birefringence such that the principal vibration directions within said plastic layer lie in a plane substantially parallel to the surfaces of said windshield, and means positioning said windshield so that a principal vibration direction of the birefringent plastic layer thereof is at an angle of 45° to the horizontal and is parallel to the transmission axis of said visor.

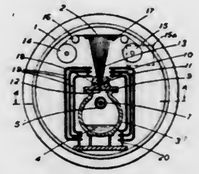
2,440,134

APPARATUS FOR TREATING ARTICLES

Erich R. Zademach, Hillside, and William W. Clarke, Summit, N. J., assignors to Metalwash Machinery Company, Irvington, N. J., a copartnership

Application July 20, 1943, Serial No. 495,430
6 Claims. (Cl. 91—44)

1. In an apparatus for applying a foamable liquid to an article disposed within the same, a sump tank, open at the top and with spaced sides for containing the foamable liquid at a predetermined level therein, a support for the article above the sump tank and the foamable liquid, a spray device for applying liquid to the article upon said support, pump means for drawing the liquid from the tank and delivering it to the spray device and baffle means over the top of the sump tank for preventing the direct return of the sprayed liquid to the liquid level of the tank and for conveying the same thereto with the minimum of impact, said baffle means including a downwardly inclined portion extending from one side of the tank to a point well beyond the middle of the tank and covering substantially all of the tank top and the liquid body therein, and a second downwardly inclined portion extending from the first mentioned portion to a point beneath the liquid level in the tank for carrying the collected liquid to the liquid body.



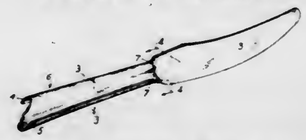
2,440,135

METHOD OF AND APPARATUS FOR DEPOSITING SUBSTANCES BY THERMAL EVAPORATION IN VACUUM CHAMBERS

Paul Alexander, Berkhamsted, England

Application September 15, 1944, Serial No. 554,312
In Great Britain August 4, 1944
12 Claims. (Cl. 117—106)

1. Apparatus for depositing on a support a coating of a substance of the type described by thermal evaporation in a vacuum chamber, comprising means for vapourising the substance including a container and heating means therefor, a nozzle structure mounted on the container for producing a beam of atoms of the substance directed with high velocity against the support, including at least one nozzle emanating from the container and directed towards the support, each said nozzle gradually increasing in cross-sectional area from the container to its mouth, whereby the potential energy of the stream of atoms entering the nozzle is substantially converted into kinetic energy of the beam issuing from the nozzle, and the container being closed except for the nozzle aperture, and means for progressively moving the support across the beam.



10. Method of progressively depositing a coating of a substance of the type described, on a moving support, by thermal evaporation in a vacuum chamber, consisting in producing a low vacuum in the chamber, vapourising the substance to be deposited in a container, confining the vapour so generated to obtain a pressure in the vapour which is high relative to that in the vacuum chamber, releasing the high pressure vapour from the container into the chamber as a beam whereby the potential energy in the vapour is substantially converted into kinetic energy in the form of directional velocity of the atoms in the beam, which velocity is high relatively to the mean random velocity of the atoms, whereby residual gas molecules in the chamber and adjacent to the beam are substantially prevented from entering the body of the beam, disposing the support in the path of the high velocity beam and moving the support across the beam.

2,440,136

TABLE CUTLERY HANDLE

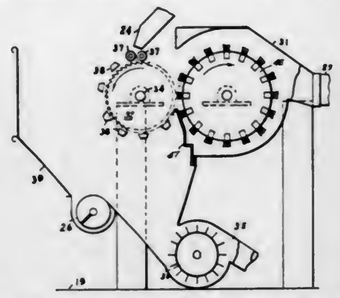
Sydney Harold Barnes, Sydney, New South Wales, Australia

Application January 25, 1945, Serial No. 574,487
In Australia May 26, 1944
4 Claims. (Cl. 30—340)

1. Table cutlery article made from a sheet metal blank including a front portion shaped for the intended use and an integral handle portion which is wider than said front portion, said handle portion being generally S-shaped in cross-section with its free edges disposed between the top and bottom planes of the S to provide a strong grip having smoothly rounded gripping surfaces and two opposed open channels permitting easy cleaning of all the surfaces of the handle.

2,440,137
CAMERA-POD
James S. Beattie, Los Angeles, Calif.
Application May 9, 1945, Serial No. 592,822
3 Claims. (Cl. 248—226)

1. A camera support comprising a camera mount, a cylindrical L-shaped member, a spring clamp adapted to attach the camera mount to the shorter arm of the L-shaped member, a handle mounted on said clamp and operable to hold the camera mount at positions of rotation about said shorter arm, a substantially flat plate having an axially aligned aperture and adapted to register with a stationary object, a spring clamp positioned to secure said plate to the longer arm of the L-shaped member and a C-clamp rotatably attached to said plate at said aperture and adapted to secure said plate to said stationary object.

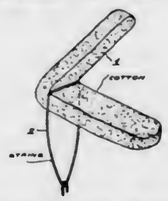


2,440,138
REINFORCED CORNER SEAM FOR UTILITY BAGS
Peter Benenfeld, New York, N. Y.
Application November 13, 1945, Serial No. 628,203
4 Claims. (Cl. 190—54)

1. In a stiffened bag having flexible side and end walls, an outstanding flange on the bag at the corner junctions of said walls, said flange comprising outstanding peripheral portions on the walls terminating in raw edges and arranged in face to face relation with the raw edges outside the planes of the walls, a binding strip for said portions, said strip being folded to provide an integral bend and a pair of flaps, each flap being in face to face contact with one of said portions, the free edge parts of the flaps being infolded against the adjacent walls, stitching passing through the flaps, through the infolded edge parts of the strip and through said portions and forming a smooth and substantially continuous corner on the inside of the bag at the inner interior edge of the flange, a bowed resilient stiffening and shaping wire within the flange and between said peripheral portions, and additional stitching adjacent the wire and passing through said portions and said flaps.

2,440,139
COTTON CLEANING APPARATUS
Eugene H. Brooks, Dallas, Tex., assignor to Continental Gin Company, a corporation of Delaware
Original application June 7, 1945, Serial No. 598,095, now Patent No. 2,418,694, dated April 8, 1947. Divided and this application December 19, 1945, Serial No. 635,947
5 Claims. (Cl. 19—67)

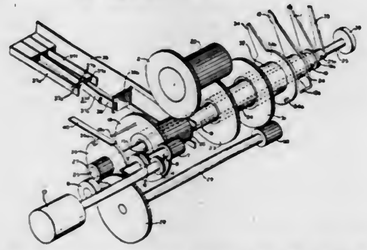
5. In a lint cotton cleaner embodying a casing, a rotating saw cylinder mounted in the upper part of the casing in spaced relation to one wall of the casing, feed rollers mounted closely adjacent the saw cylinder and disposed to feed lint cotton in a thin uniform bat to the saw cylinder to be carried around thereby, a cleaning bar extending parallel to the long axis of the saw cylinder and disposed to be struck by the lint carried around by the rotating saw cylinder thereby to remove trash from the lint, means cooperating



with the saw cylinder to doff lint therefrom after the lint has struck the cleaning bar, means disposed in the bottom of the casing for removing lint and trash thrown off by striking the bar, and a wall separating the doffing means from the lower part of the casing.

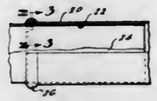
2,440,140
ADDITION PRODUCTS OF ACRYLONITRILE AND DRYING OIL ACIDS AND ESTERS
Herman A. Bruson, Rydal, and Warren D. Niederhauser, Philadelphia, Pa., assignors to The Resinous Products & Chemical Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application June 21, 1945, Serial No. 600,850
16 Claims. (Cl. 260—404)

1. Monomeric products formed by the addition at 80° C. to 300° C. of equimolecular proportions of (*a*) acrylonitrile and (*b*) a compound from the class consisting of drying oil fatty acids having conjugate olefinic bonds and esters of said acids and alcohols having the alcoholic hydroxyl group as the sole reactive functional group thereof.



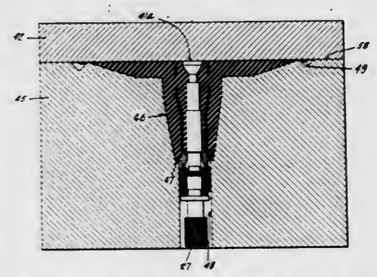
2,440,141
CATAMENIAL TAMPON
Arthur B. Donovan, Newton Center, Mass.
Original application December 7, 1940, Serial No. 368,989. Divided and this application January 5, 1944, Serial No. 517,023
2 Claims. (Cl. 128—285)

1. A method of making tampons which comprises folding an elongated piece of absorbent cotton on itself to form a loose quantity sufficient to absorb body fluids, then tightly compressing the same to substantially cylindrical form, then while still under compression heating the same to about 300° F. to form a compressed and substantially self-sustaining tampon of a diameter proper for body insertion, then rounding off one



end of the cylinder, and then coating the cylinder with a material which comprises a mixture of gum acacia, about 59% to 75%, sorbitol, about 24% to about 35%, glycol monostearate, about 0.5% to about 5%, and sodium lauryl sulfate, about 0.1% to about 5%.

2,440,142
TIME CONTROL DEVICE
Harold F. Elliott, Belmont, Mass.
Application November 2, 1945, Serial No. 626,371
6 Claims. (Cl. 161—1)

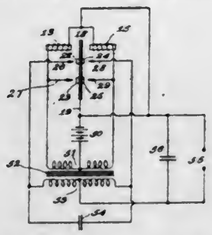


1. In a timing system including a timing motor means, a time-control device comprising, minute and hour time shafts adapted to be driven by said motor means, a settable minute shaft, a settable hour shaft, control means, and means operable only upon angular correspondence of said time shafts and the respective settable shafts for actuating said control means.

2,440,143
COUPLING FOR SUCTION CLEANER ATTACHMENTS
Kemper M. Hammell, Detroit, Mich., assignor to Eureka Williams Corporation, a corporation of Michigan
Application April 3, 1944, Serial No. 529,357
10 Claims. (Cl. 285—175)

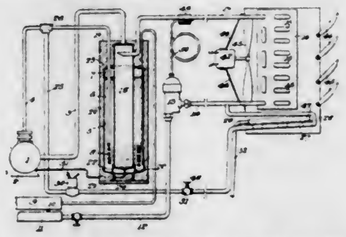
1. In a coupling for suction cleaner attachments, a thin walled tube forming an air conducting male coupling member, an air conducting socket coupling member adapted to telescopically and freely rotatably receive said male coupling member, the end of said socket coupling member being formed to provide an annularly extending internal groove having an entrance opening in the end wall thereof, the walls of said groove being formed to provide a notch at each side of said entrance opening and a detent between said entrance opening and each of said notches, said male coupling member being provided with a pin which is adapted to be arranged in said groove through the entrance opening therein when said male coupling member is inserted in said socket coupling member, said groove cooperating with said pin to limit the penetration of said male coupling member into said socket member, relative rotation of said coupling members when said pin is so arranged being adapted to move said pin past one of said detents into one of said notches, said thin walled tube being adapted to distort when said detent is pressed against said pin by a relative rotational force applied to said coupling members so as to permit said pin to move past said detent into or out of one of said notches, the resiliency of the material out of which said thin walled tube is formed permitting temporary displacement of said pin while moving past said detent.

2,440,144
CORE PIN FOR MOLDING VALVE STEMS
Oakley W. Hosking, Monroe, N. Y., assignor to Composite Rubber Products Corporation, Bridgeport, Conn., a corporation of Connecticut
Original application March 19, 1941, Serial No. 384,173. Divided and this application May 15, 1945, Serial No. 593,787
3 Claims. (Cl. 18—45)



3. A core pin for use in a mold for forming a bore in a molded rubber valve stem having a rigid insert extending into the tip of a rubber body and at least partly embedded therein, said insert and body having coaligned bores forming a passage through the stem and said mold having a base-forming surface, comprising a bore-forming member, one end of which is adapted to extend to the base-forming surface of the mold and having a bore-forming surface comprising cylindrical portions of various diameters, said surfaces terminating at an annular shoulder or bearing surface facing the opposite end of said bore-forming member and adapted to engage a corresponding bearing surface at the inner end of the bore-forming portion of said insert; a coaligned stem on said bore-forming member adapted to project into the bore of said insert having threads thereon, and a cylindrical portion adapted to fit the bore of said insert; and a clamping member having a flange for engaging the tip of said insert in abutting relation, and a threaded socket for engaging the threads on said stem, said clamping member being adapted, upon inserting the stem of the bore-forming member into the bore of the insert from the inner end of the latter, to be screwed over the threads of said stem until the said flange engages the tip of the insert to draw said bearing surfaces together in sealing relation and to align said bore-forming member with the insert while engagement of the fitted cylindrical portion of the stem in the bore of the insert centers said core pin in the insert.

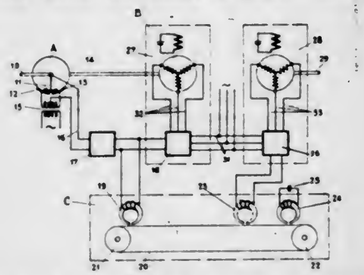
2,440,145
ELECTRIC VIBRATORY INTERRUPTER
Clarence Huetten, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application February 7, 1944, Serial No. 521,319
3 Claims. (Cl. 171—97)



2. A composite reed structure for an electromagnetic vibratory interrupter adapted to cooperate with an electromagnetic driving system and with non-compliant stationary contacts for

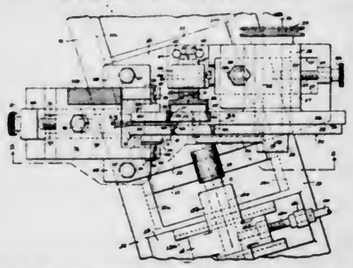
controlling a plurality of circuits including a driver circuit for said system, an interrupter circuit, and a rectifier circuit which comprises a hinge plate clamped at one end thereof, a pair of substantially non-compliant armature plates secured to the opposite faces of the upper portions of said hinge plate spacedly from its

clamped end, cut-out portions in the hinge section of said hinge plate to impart rotational compliance thereto, and vibratory interrupter and rectifier contacts on each armature plate capable of sequential cooperation with said stationary contacts during rotational displacement of said reed structure about its vertical axis.



2,440,146
DEFROSTING MECHANISM IN REFRIGERATING APPARATUS
Israel Kramer, Trenton, N. J., assignor to Kramer Trenton Company, Trenton, N. J., a corporation of New Jersey
Application November 7, 1944, Serial No. 562,299
23 Claims. (Cl. 62—115)

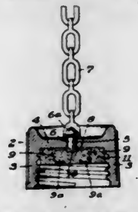
1. Apparatus of the character described comprising, a gas compressor, an evaporator, an element for storing heat, means for conducting gas from the compressor to said element to accomplish the storage of said heat, means for conducting gas from the compressor to the evaporator for defrosting the evaporator, means for conducting gas after it has been condensed in the evaporator during defrosting to said storing element to be vaporized by the stored heat of said element, and means for conducting said gas to the compressor.



2,440,147
ELECTRIC SYSTEM FOR CONTROLLING MOTIONS
Max Lattmann, Zurich, Switzerland
Application July 18, 1946, Serial No. 684,615
In Switzerland July 14, 1945
Section 1, Public Law 690, August 8, 1946
1 Claim. (Cl. 318—19)

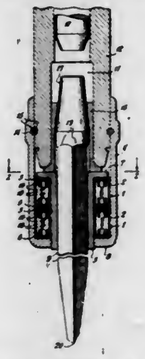
In a system for controlling follow-up movements in combination a device comprising two parts displaceable with respect to each other of which a first part is primarily moved while the second part moves in accordance with a first follow-up movement; a first driving means comprising a polyphase synchronous motor driving said second part and an electric modulating device, in which each phase of a polyphase current of constant frequency is modulated by a monophase current of variable frequency, the polyphase current generated in the modulating device being fed to said synchronous motor; an electric oscillatory circuit generating a monophase current whose frequency depends on the relative displacement of the two said parts; a second driving means, comprising a polyphase synchronous motor generating a second follow-up

movement and an electric modulating device in which each phase of a polyphase current of constant frequency is modulated by a monophase current of variable frequency; a magnetic recording and reproducing system, comprising a carrier moved with constant speed, a recording head to which is fed said monophase current of variable frequency feeding also the modulating device of said first driving means and a reproducing head, which is connected to the modulating device of said second driving means, the temporal course of said two follow-up movements being the same, the second movement being however delayed by a fixed time with respect to the first movement.



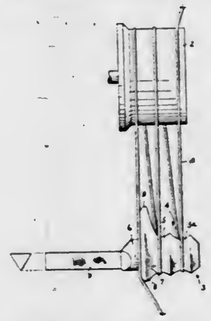
2,440,148
CENTERLESS GRINDING MACHINE ATTACHMENT
Arthur F. Madison, Detroit, Mich., assignor to Bower Roller Bearing Company, Detroit, Mich., a corporation of Michigan
Application May 9, 1946, Serial No. 668,557
20 Claims. (Cl. 51—236)

1. An attachment for internally grinding a pair of workpieces simultaneously on a centerless grinding machine having supporting structures for a regulating roll, a support roll, a pressure roll, and a backing member, and a driving structure for one of said rolls, said attachment comprising a rotary regulating device drivingly connected to said driving structure and having a



plurality of radially offset workpiece engaging paths thereon, a backing member mounted on one of said supporting structures and abutting one of said workpieces, a plurality of radially offset workpiece supports mounted on another of said supporting structures, and a plurality of radially offset pressure applicators mounted on another of said supporting structures, said workpieces being disposed in radially offset relationship between said regulating device, said workpiece supports and said pressure applicators and in peripheral engagement therewith.

2,440,149
CLOSURE CAP
Archibald B. McGinnis, Wheeling, W. Va., assignor to Wheeling Stamping Company, Wheeling, W. Va., a corporation of West Virginia
Application January 11, 1945, Serial No. 572,267
3 Claims. (Cl. 215—43)

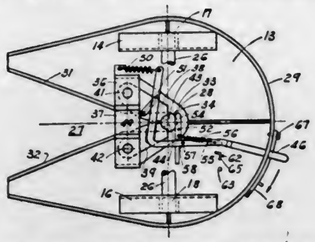


1. A cap having an integral end wall and a skirt and having a pin through the end wall thereof, a metal member inside the cap through which the pin passes, the cap having an opening therethrough of a size just sufficient to accommodate the pin, the pin having an abutment at each end thereof to restrain it against free endwise movement, a liner in the cap, and prongs on the metal member for holding the liner in place.

2,440,150
COMPRESSION MEMBER
Walter G. Mitchell, Aurora, Ill., assignor to Independent Pneumatic Tool Company, Chicago, Ill., a corporation of Delaware
Application January 31, 1945, Serial No. 575,426
6 Claims. (Cl. 279—19.6)

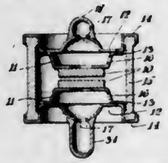
5. The combination with the barrel of a percussive tool having a power operated hammering piston reciprocable therein, of a chisel with shoulders insertible into the barrel to receive the blows of the piston, a retainer device for the chisel having an outer sleeve secured to the barrel and an inner or mounting sleeve for the chisel in the path of said shoulders, said outer sleeve having an inwardly extending flange at its outer end and said inner sleeve having an outwardly extending flange at its inner end, and resilient bumper means supported between said flanges about the mounting sleeve for absorbing the impacts of the shoulders on the mounting sleeve when struck thereby, said bumper means being comprised of a plurality of superimposed compression members, each having axially spaced upper and lower end wall sections at the opposite ends of the compression member and a complement of axially extending columns between and integrally connected with said end wall sections for holding the columns and the end wall sections in fixed relation, the columns of each compression member being spaced apart between the outer peripheries of the compression member for the flow of air therethrough to cool the same, the compression members at the ends of the bumper means having their outermost end wall sections in contact with the flanges of the respective sleeve members, and their other end wall sections in contact with each other.

2,440,151
THREAD GUIDE
Seddon C. Nelson, Front Royal, Va., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application October 31, 1944, Serial No. 561,301
14 Claims. (Cl. 28—71.5)



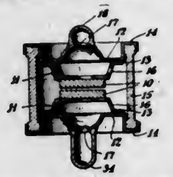
2. In combination, a wheel for handling filamentary material, and a stationary guide to cause lateral displacement of a thread wrapped one or more times around the wheel and prevent riding of the thread on itself, said guide comprising two thread-guiding portions laterally offset with respect to each other, the portion having the greatest diameter being provided with at least one annular groove, and said portions being separated by a dividing shoulder having the outline of an equilateral triangle, the apices of which define a plurality of operating positions for said guide.

2,440,152
TRAILER COUPLING MECHANISM
Noah M. Norman and Arnoldus S. Brumby, Birmingham, Ala., assignors to John P. K. Fontaine, Birmingham, Ala.
Application October 18, 1945, Serial No. 623,060
10 Claims. (Cl. 280—33.05)



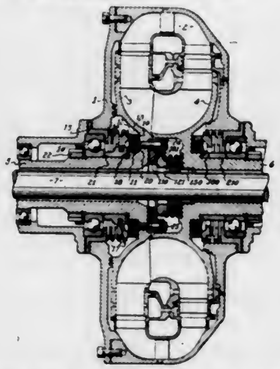
1. In a trailer coupling mechanism embodying a pair of pivoted locking jaws adapted to swing apart to receive a king pin when coupling, a manually operable lever operatively connected

to the jaws to open and close them, a latch member pivotally mounted to lie across the jaws in the path of the king pin when coupling, and a detent carried by the lever and disposed to



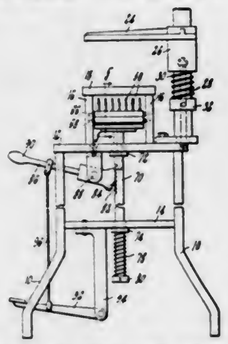
engage the latch and hold the jaws open when the lever is moved to open position and to be disengaged from the latch member by the king pin when coupling.

2,440,153
METHOD OF MAKING SPARK GAPS AND PRODUCTS THEREOF
Herbert E. Oles, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application July 4, 1945, Serial No. 603,203
5 Claims. (Cl. 315—85)



1. The method of making impulse gaps of stable characteristics which comprises providing a pair of spaced plane electrodes constituted of refractory metal within a gas-tight container, maintaining said container in communication with the external atmosphere, presparking said electrodes for a period of several hours, and then hermetically sealing said container.

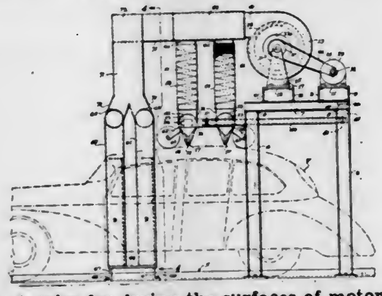
2,440,154
SPARK GAP
Herbert E. Oles, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application July 4, 1945, Serial No. 603,204
10 Claims. (Cl. 315—58)



1. The method of making spark gaps which comprises providing a pair of spaced electrodes in a container, producing periodic electrical sparks between said electrodes while continuously removing the gaseous products of such discharges, replacing the atmosphere within said container with a gaseous charge consisting of a mixture of nitrogen with a small percentage of oxygen and then hermetically sealing said container.

2,440,155
FLUID SEAL
Carl D. Peterson and Albert H. Deimel, Toledo, Ohio; said Deimel and Marion F. Peterson, executrix of said Carl D. Peterson, deceased, assignors to Dana Corporation, Toledo, Ohio, a corporation of Virginia
Application November 30, 1944, Serial No. 565,830
2 Claims. (Cl. 286—11)

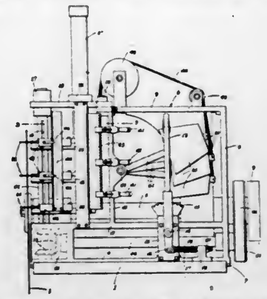
1. A fluid seal for hydraulic transmission units including relatively rotating coaxial parts, the seal including a ring of a material having a small coefficient of expansion relative to that of metal fixed on one of said parts, a second ring of metal fixed to the other of said parts, the rings having coacting radial, annular sealing faces, a bellows secured to the metal ring and arranged to prevent the flow of fluid from the outside of the rings and bellows to the inside, and vice-versa, around the sealing faces, and a spring washer carried by the part with which the first ring is associated and loaded to press against and frictionally engage the first ring to clamp the first ring to the part with which it is associated and thereby fix it thereto, the spring washer being located between said rings within the circles of their annular sealing faces.



2,440,156
CIGAR PUNCHING MACHINE
Sam Reso, Jacksonville, Fla., assignor to Universal Tobacco Machine Co., Inc., Jacksonville, Fla., a corporation of Florida
Application June 12, 1945, Serial No. 599,019
3 Claims. (Cl. 131—254)

1. A machine for punching cigars, comprising a cup plate having recesses therein to receive

ends of cigars in a bunch and a hole below each recess, means rigidly supporting said cup plate, a top plate spaced above and parallel to said cup plate, means supporting said top plate for vertical movement, spring means pressing said top plate upward, latch means for retaining said top plate in a depressed position, a needle plate vertically movable below said cup plate, needles projecting upward from said needle plate and movable therewith to project through respective holes in said cup plate, means for heating said needles, and means operable to elevate said needle plate and needles.



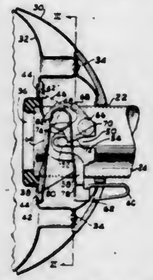
2,440,157
DRIER FOR MOTOR VEHICLE WASHING AND CLEANING APPARATUS
Leo J. Rousseau, Grosse Pointe Park, Mich., assignor, by mesne assignments, to Minit-Man, Inc., Detroit, Mich., a corporation of Michigan
Application August 19, 1944, Serial No. 550,241
7 Claims. (Cl. 34—229)

1. A drier for drying the surfaces of motor vehicles after they have been cleaned and washed, comprising a vehicle pathway, a frame structure disposed above said pathway and supported on each side thereof, a pair of pivoted bars carried by the frame structure, a spray nozzle extending between and supported by said pivoted bars to move vertically, means carried by said spray nozzle for engaging the top surface of a vehicle passing along said pathway to move said nozzle vertically and space said nozzle from the surface of said vehicle, said spray nozzle being provided with a discharge opening for directing air downwardly over a vehicle passing along said pathway, a motor blower for supplying said spray nozzle with air, spray nozzles disposed on opposite sides of said pathway for directing a jet of air over the sides of the vehicle body, a motor blower for said second-mentioned spray nozzles, and yielding duct means connecting said first-mentioned spray nozzle with the motor blower therefor.

2,440,158
MOUNTING AND CONTROL MEANS FOR ADJUSTABLE SAWS
Le Roy W. Sly, Kyburz, Calif.
Application May 2, 1945, Serial No. 591,441
8 Claims. (Cl. 143—37)

3. An edging saw assembly for sawmills, comprising a frame, a driven shaft upstanding from the frame, a guide rod upstanding from the frame in spaced but parallel relation to the shaft, a plurality of telescopically arranged tubular guides surrounding and guided by the rod, a shifting member fixed on and projecting from the lower end of each tubular guide, said shifting members being vertically spaced, a circular saw supported by each member and surrounding the shaft in vertically slidable, driven relation, and normally latched but releasable, manually

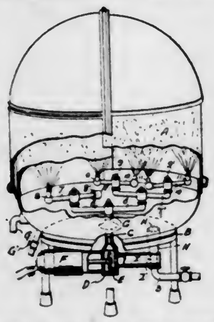
actuated means to vertically adjust said members separately and selectively.



2,440,159
APPARATUS FOR DRYING THREAD BY CONDUCTION
Richard W. Stanley, Drexel Hill, Pa., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application February 26, 1944, Serial No. 523,985
2 Claims. (Cl. 34—52)

1. In an apparatus for drying filamentary material of indefinite length, a smooth stationary heated surface, means for continuously advancing the material at a substantially uniform rate of speed over and in contact with the heated surface through a path having a substantially straight undeviating portion which comprises the heated surface and a loop portion at the discharge end of the straight portion, means adjacent the end of the path for collecting the material in the form of a wound package, means for varying the speed of the collecting means, and a tension responsive element in the loop for controlling the speed varying means and maintaining the length of the material moving freely in the straight and loop portions of the path substantially constant to permit free uniform lengthwise contraction of the material during drying.

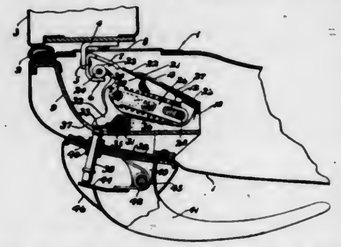
2,440,160
COUPLING MEANS
Charles H. Taylor, Springfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 16, 1945, Serial No. 599,939
6 Claims. (Cl. 285—173)



1. The combination with a first member having a first opening and a second member insertable into said opening, of means for detachably coupling said members, said means including a pin carried by said second member, a bracket carried by said first member adjacent said open-

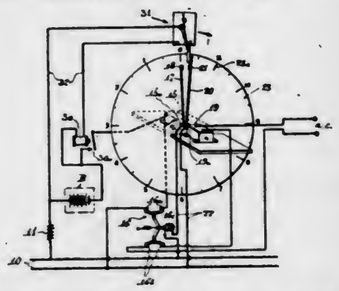
ing and having a slot therein adapted to receive said pin, a latch pivoted to said bracket and movable to a first position in which it permits insertion and withdrawal of said pin into and from said slot, and to a second position in which it prevents withdrawal of said pin from said

slot, a spring biasing said latch to said second position, there being a second opening formed in said first member, and means carried by said latch and projecting through said second opening for moving said latch to said first position against the action of said spring.



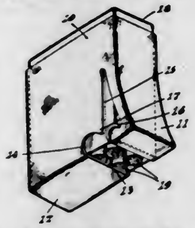
2,440,161
DISHWASHING MACHINE
John Vaudreuil, Chicago, Ill.
Application April 30, 1945, Serial No. 591,061
1 Claim. (Cl. 299—70)

A dish washer comprising a rotatory master fluid discharge pipe, a two armed distributing tube mounted upon one end of the master pipe, a pair of auxiliary nozzled tubes revolvably mounted upon the ends of the distributing tube whereby the master pipe is overbalanced and adapted to discharge a series of intersecting sprays from the auxiliary tubes, a second distributing tube mounted upon the opposite end of the master pipe having a nozzle at one end, and a weight upon the other end of the aforesaid distributing tube whereby the master pipe is momentarily delayed in rotation to cause the series of overbalanced spray jets to be delayed and concentrated upon dishes to be washed.



2,440,162
REFRIGERATION LATCH MECHANISM
Lloyd L. Anderson, Grand Rapids, Mich., assignor to Winters & Crampton Corporation, Grandville, Mich., a corporation of Michigan
Application July 31, 1944, Serial No. 547,374
10 Claims. (Cl. 292—332)

1. A latch structure comprising, a housing having spaced apart sides connected at one edge and adjacent one end by a cross member, the edges of said housing sides being continued therebeyond as straight inwardly extending flanges for a distance and then curved and extending at an angle for a short distance toward the opposite edges of said sides and then reversely curved and extended therebeyond in the arc of a circle toward said opposite edges, and from the ends of said arcs extended to the opposite edges of said sides, a rod located between the sides of the housings near the first mentioned end thereof, a latch bolt formed of sheet metal having spaced apart sides connected at one edge by transverse means, said latch bolt being pivotally mounted on said rod,

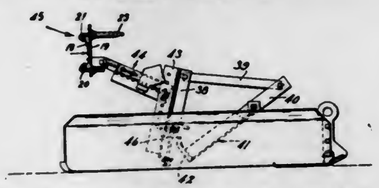


a roller carried at the free end of the latch bolt between the sides thereof, said latch bolt having slots in its sides toward the roller carrying end thereof, a bar having a longitudinal slot adjacent one end, said rod passing through said slot, whereby the bar is pivotally and slidably mounted on the housing, a cross pin passing through said bar at its opposite end and through the slots in the sides of the bolt, rollers mounted at the ends of said cross pin bearing against the flanges on said housing, and a coiled compression spring located around said bar bearing at one end against said rod, said bar adjacent its opposite end having shoulders against which the other end of the spring bears.

2,440,163
BATTERY-CHARGING APPARATUS AND METHOD
Fayette C. Anderson, West Orange, N. J., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a corporation of New Jersey
Application May 16, 1946, Serial No. 670,230
15 Claims. (Cl. 320—30)

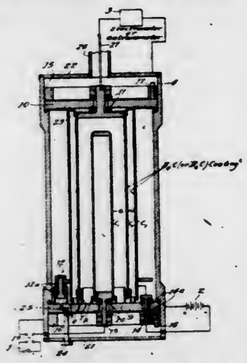
1. In charging a battery in accordance with the taper-current principle: the method comprising producing a varying quantity during charging according to the difference between the time-rate integrals of the actual charging rate and a selected average charging rate, and controlling the termination of the charge by said quantity.

2,440,164
CIGARETTE PACKAGE HOLDER
Edwin L. Beckwith, Brookline, Mass., assignor to Beckwith Manufacturing Company, Dover, N. H., a corporation of New Hampshire
Application July 23, 1946, Serial No. 685,688
4 Claims. (Cl. 206—41)



1. A cigarette case comprising an integral rectangular body of thin, resilient, transparent plastic material, open at one end to receive a cigarette package, and having at its other end a normally closed face intersected near one edge by a transverse slit which is connected by short curved slits in the wide side walls of the said body to longitudinal slits extending more than half way to the open end of the body, thereby forming a resilient hinge in the adjacent narrow wall of the body, and flanges projecting from the walls of the body adjacent to the said short curved slits.

2,440,165
DEBRIS COLLECTOR FOR DRAINS
William Behrend, Milwaukee, Wis.
Application July 20, 1945, Serial No. 606,104
3 Claims. (Cl. 4—190)

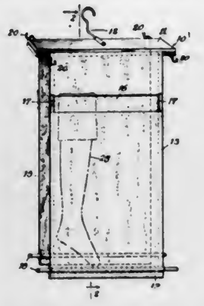


1. The combination with a drain outlet fitting provided with a stopper at its upper end and a fixed debris collecting spider downwardly spaced from the stopper, of a removable member interposed between the stopper and said fixed spider and having spider-like arms of arcuate cross section corresponding in number and substantially in horizontal diameter to those of the fixed spider, and adapted to register with those of the fixed spider and loosely rest thereon, whereby flow of water through the fitting will not be impeded by said removable member.

2,440,166
ELEVATING MECHANISM FOR SNOWPLOWS
Roland B. Bourne, West Hartford, and John P. Tyskewicz, Hartford, Conn., assignors to The Maxim Silencer Company, Hartford, Conn., a corporation of Connecticut
Application May 20, 1946, Serial No. 670,876
2 Claims. (Cl. 37—44)

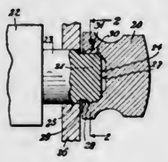
1. In a snowplow, a pair of moldboards in V-formation, a support pivoted between the moldboards adjacent the apex of the V, a shoe carried by the support at a distance from the pivot greater than the distance of the pivot from the lower surface of the moldboards, means connecting the plow with the bumper of an automobile and having a lost motion connection with the plow, and means connecting said means with the support to rock the same in a direction to remove the shoe from contact with the ground when the plow is being pushed forwardly and to tilt the support to elevate the front of the plow upon the shoe when the plow is pulled rearwardly.

2,440,167
DIFFERENTIAL ION CHAMBER
James W. Broxon and William P. Jesse, Chicago, Ill., assignors to the United States of America as represented by the United States Atomic Energy Commission
Application January 20, 1944, Serial No. 518,972
20 Claims. (Cl. 250—83.6)



1. Apparatus for measuring the radiation intensity of slow neutrons separately from that of other coexistent penetrating radiations such as gamma rays or fast neutrons comprising, in combination, a pair of sub-chambers having wall portions constituting electrodes, only one of said sub-chambers enclosing a material which emits alpha particles when bombarded by slow neutrons, the other of said sub-chambers being devoid of said material, means for applying electrical potentials to each of said electrodes, said electrodes including collecting electrode means for collecting ions formed in both sub-chambers, and means for measuring the flow of the collected ions.

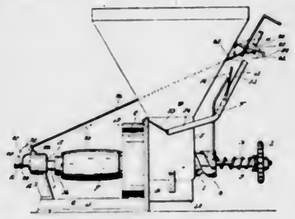
2,440,168
MEAT PRODUCT AND PROCESS OF MAKING THE SAME
George L. Cross, Loudonville, N. Y., assignor to Tobin Packing Co., Inc., Albany, N. Y.
No Drawing. Application December 8, 1944, Serial No. 567,311
4 Claims. (Cl. 99—108)



1. A process of preparing a meat product which comprises first dividing a quantity of lean muscle tissue into relatively small pieces, dividing a second quantity of muscle tissue into very small particles so as to form a colloid-like binder, thereafter mixing together the pieces of meat and the binder and blending therewith a small quantity of emulsified fat and pressing the mixture into a mold and freezing it solidly throughout, then removing the preparation from the mold and cutting the meat into slices.

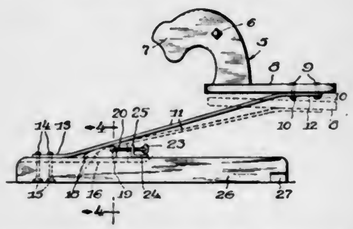
2,440,169
STOCKING DRYER
Malvina Diamant, New York, N. Y.
Application November 7, 1946, Serial No. 708,301
1 Claim. (Cl. 34—95)

A device of the character described, comprising a head piece, a pair of absorbent sheet members depending from said head piece, a strip of material sewn to each of said sheet members for holding stockings or the like, a rod in the lower portion of said sheet members and means on said head piece to engage said rod when said sheet members are rolled to hold them in a rolled position.



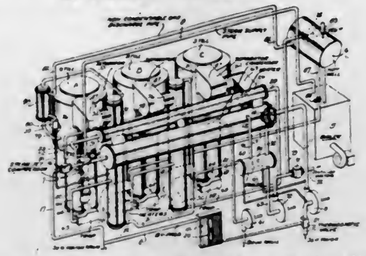
2,440,170
HANDLE, KNOB, AND MOUNTING STRUCTURE
George Duefrene, Monroe, Conn.
Application February 15, 1944, Serial No. 522,446
17 Claims. (Cl. 16—121)

8. A handle structure comprising a mounting member and a knob member, one of said members having a bulbous head and the other a socket to receive it, the socket being formed by a cavity having a constricted entrance opening to resist passage of the head into and out of the cavity and the center of curvature of the side wall of the head being inwardly displaced from and lower on the head than the center of curvature of the corresponding side wall of the socket, at least one of said members being made of cellulose acetate material which yields to permit the forced passage of the bulbous head into the cavity and resiliently holds the same therein against casual separation to thereby secure the mounting member and knob member together.



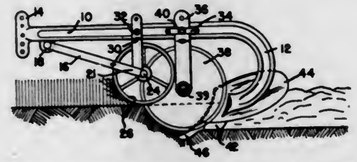
2,440,171
QUICK RELEASE MEANS FOR INCREASING THE GAP BETWEEN DISKS UPON ENTRY OF UNCRUSHABLES
James A. Eldridge, St. James, Manitoba, Canada
Application September 9, 1943, Serial No. 501,734
11 Claims. (Cl. 241—32)

1. A material crusher comprising in combination, a supporting structure, a hopper, a crushing chamber, crushing plates therewithin, a non-rotatable, end-shiftable shaft, a driving mechanism for actuating at least one of said crushing plates, the plate actuated thereby being held against independent linear movement on said shaft and acting to end-shift the same when separated from the other plate by a damaging obstruction, said driving mechanism also being mounted for rotation upon said shaft, crushing plate separating mechanism comprising in combination, a stationary cam thrust receiving element provided with a spiral face, a swivelling



thrust cam designed under normal conditions releasably to hold said shaft against end-shifting and the plate thereon against separation from the opposing plate, said cam and said element being mounted co-axially with respect to said shaft, releasable means for holding a predetermined area of said swivelling cam in bearing contact with said stationary element in the operable position of said crushing plates, the release of said means allowing said swivelling cam to move in a spiral direction against the face of said element to permit end-shifting of said shaft and separation of said plates.

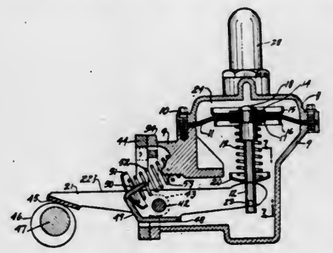
2,440,172
HOBBYHORSE
Thomas Gibbons, Chicago, Ill.
Application October 9, 1945, Serial No. 621,215
5 Claims. (Cl. 272—52)



1. A hobby horse comprising, a seat, a base, resilient means interconnecting the said seat to the said base, and resiliency adjusting means slidably secured to the said base adjacent the mooring point of the said resilient means to the said base for varying the flexure of the said resilient means, the said resiliency adjusting means including an angular support secured to the said base having a threaded portion in its upright portion, an adjusting screw threadably connected to the said threaded portion, the said screw being provided with a filleted portion at its end, a dovetailed slide element slidably secured to said base and provided with an inclined plane surface in intimate contact with the lower surface of the said resilient means, and a pin element secured to the said slide element and engaging the said filleted portion.

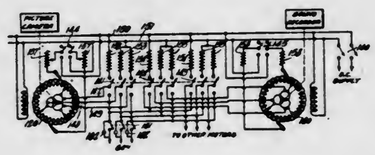
2,440,173
MULTIPLE EFFECT STILL WITH THERMO-COMPRESSION OF VAPORS
Roy O. Henszey, Oconomowoc, Wis.
Application June 15, 1942, Serial No. 447,170
20 Claims. (Cl. 202—174)

11. A still assembly comprising a plurality of stills and heat exchanger in series, each still comprising a heating fluid space, a heated fluid space, and a vapor space, and each heat exchanger comprising a heating fluid space and a heated fluid space, means connecting both the vapor space and the heating fluid space of a first still of said series to the heating fluid space of the heat exchanger, means for connecting the heating fluid space of the said heat exchanger to the heating fluid space of the next successive still of the series, whereby both the condensate and vapor and uncondensed heating fluid from the first still are led through the heat exchanger to the heating fluid space of the second still, and means for delivering fluid to be heated to the heated fluid space of the first still through the heated fluid space of said heat exchanger.



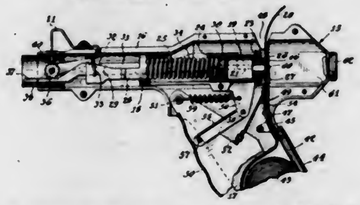
2,440,174
PLOWING MECHANISM
Michael Howard, Davenport, Wash.
Application December 18, 1944, Serial No. 568,617
2 Claims. (Cl. 97—3)

1. Plowing mechanism comprising a plow beam having an end-to-end pair of spaced apart pressure rollers journalled thereunder, said rollers comprising elongated cylinders with their adjacent ends in close proximity to each other, means connecting the rollers to the beam and positioning said rollers at a predetermined level below said beam, a rolling colter secured to said beam and having a portion positioned between said rollers, a plowshare and a moldboard secured on said beam with their forward vertical edges in juxtaposition to the colter whereby the colter serves as a land side therefor and the rollers provide a support to limit the depth to which the plow share can enter the ground.



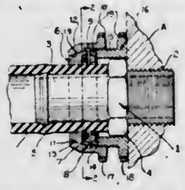
2,440,175
FUEL PUMP
Morris Katcher, New York, N. Y.
Application June 21, 1945, Serial No. 600,782
3 Claims. (Cl. 103—150)

1. A fuel pump for internal combustion engines having pump driving means comprising a pump housing adapted to be mounted on an engine, a pumping chamber in the housing, a pumping diaphragm within said housing adapted to cooperate with the pumping chamber for effecting the pumping, a stem attached to the diaphragm, a lever pivotally mounted at an intermediate portion on the housing, the outer end of the lever adapted to engage said driving means to be given a stroke in one direction and a spring reacting at one end against the lever and at the other against the housing for giving the lever a stroke



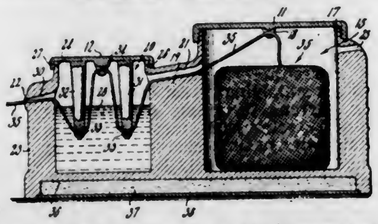
in the opposite direction, said lever being an integral piece of sheet metal formed into a pair of spaced substantially vertical side pieces, the outer end of said pieces being provided with a transverse bridge joining them and arranged to engage said driving means and a second bridge joining said pieces at a location inward of said former bridge, a tongue extending as an elongation of the second bridge for engaging the lever end of said spring, the inner end of the lever engaging the stem with a lost motion connection.

2,440,176
MOTOR DRIVE SYSTEM
Edward W. Kellogg, Indianapolis, Ind., assignor to Radio Corporation of America, a corporation of Delaware
Original application December 21, 1939, Serial No. 310,365, now Patent No. 2,295,664, dated September 15, 1942. Divided and this application April 30, 1942, Serial No. 441,149
8 Claims. (Cl. 318—41)



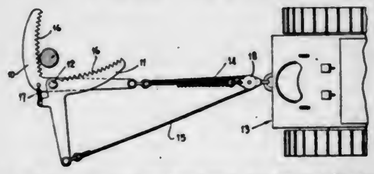
1. In a drive system for the synchronous operation from standstill to full speed of a plurality of electrodynamic machines each provided with polyphase alternating current terminals and with direct current terminals, the combination of means for supplying direct current to said alternating current terminals for interlocking said machines at standstill, means for interconnecting said alternating current terminals, means for supplying a relatively large direct current to the direct current terminals of one of said machines and a relatively small direct current to the direct current terminals of the other of said machines for starting said machines, and means for sychronizing said machines with an alternating current supply source.

2,440,177
TOY
Alfred H. Laidig, Bloomfield, N. J., assignor to Joseph Reich, Brooklyn, N. Y.
Application October 7, 1944, Serial No. 557,634
9 Claims. (Cl. 46—195)



1. A percussive toy comprising a fixed breech having a hole therein, means for feeding a burstable membrane across said breech over said hole, a reciprocator movable toward said breech and adapted to seal against the same around said hole with said membrane interposed, and means movable in said reciprocator for creating air pressure therein for bursting said membrane.

2,440,178
HOSE COUPLING
Albert P. Lofquist, Jr., Inglewood, Calif.
Application September 8, 1945, Serial No. 615,121
14 Claims. (Cl. 285—86)

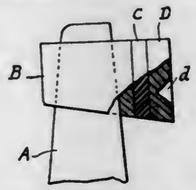


1. A hose coupling comprising: a thrust ring, and a cam ring, the latter having a tapered cam face; a plurality of clamping segments radially engaged by said cam ring and axially engaged by said thrust ring; said clamping segments defining compositely an annular axially directed channel; an annular retaining ring loosely fitting said channel; and radial pins for loosely retaining said segments on said ring in substantially equally spaced relation.

2,440,179
TWINE MOISTENING AND DISPENSING DEVICE
Victor F. Mabli, Tarrytown, N. Y.
Application February 6, 1945, Serial No. 576,432
3 Claims. (Cl. 91—46)

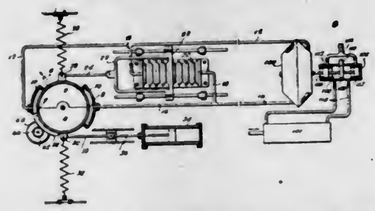
3. A sanitary twine dispenser comprising, in combination, a twine compartment; a water container; enclosure means for said compartment and container protecting twine and water therein from atmospheric contamination; guide means within said enclosure means effective to guide twine, from a supply thereof in said compartment, to said water container; finger means carried by said enclosure means effective to immerse the twine in water in said water container; and passage means for withdrawing twine from said dispenser.

2,440,180
GRIPPING MEANS FOR REMOVING TREES
John W. MacClatchie, Los Angeles, Calif.
Application February 7, 1945, Serial No. 576,527
2 Claims. (Cl. 37—2)



2. A device for attachment to a draft apparatus for gripping and pulling trees, stumps, and the like, comprising a primary jaw having a forwardly extending shank portion and a laterally extending gripping portion, a secondary jaw having a shank portion and a gripping portion, said secondary jaw being mounted on said primary jaw and pivotally movable from open position in which said gripping portion of said primary jaw is unobstructed for engagement with a tree, stump, or the like, to a closed position in which said gripping portion of said secondary jaw is in opposed cooperating relationship to the gripping portion of said primary jaw, resilient means for urging said secondary jaw to open position, an extensible spring member secured to said shank portion of said primary jaw and extending forwardly for connection to a draft apparatus, a flexible line extending forwardly from said shank portion of said primary jaw to a pulley secured to the draft apparatus, and thence extending rearwardly to said shank portion of said secondary jaw whereby said shank portion of said primary jaw may engage a tree, stump, or the like, during forward movement of the draft apparatus, and said flexible line will pull said secondary jaw from open position to closed position during elongation of said spring member, after which said flexible line will prevent further elongation of said spring member and will transmit pulling force from the draft apparatus to said device.

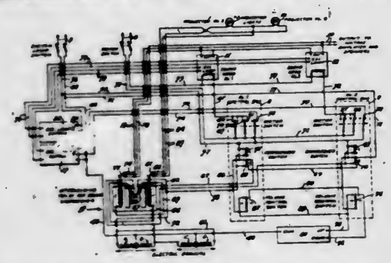
2,440,181
PICKER STICK
George J. Muller, Philadelphia, Pa., assignor to Taylor Fibre Company, Norristown, Pa., a corporation of Pennsylvania
Application December 11, 1945, Serial No. 634,160
2 Claims. (Cl. 139—157)



1. A picker stick having a body portion formed of strips of phenol fibre, a facing strip extending over at least a portion of the side thereof facing the striking portion of the picker, and a rubber strip interposed between the facing strip and the body portion for absorbing shock, both the facing strip and the rubber strip being relatively thin when compared to the thickness of the body.

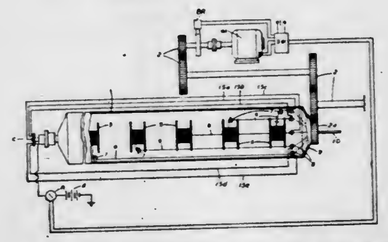
2,440,182
PICKER
George J. Muller, Philadelphia, Pa., assignor to Taylor Fibre Company, Norristown Pa., a corporation of Pennsylvania
Application December 11, 1945, Serial No. 634,161
5 Claims. (Cl. 139—159)

1. A picker for a loom picker stick, comprising a member provided with a socket member for mounting on a picker stick, a shuttle engaging member and a shock absorbing member between said members bonded to the side faces thereof, the shock absorbing member forming the sole support between the socket member and the shuttle engaging member, permitting free lateral expansion in all directions of the shock absorbing member between the bonded faces of the members.



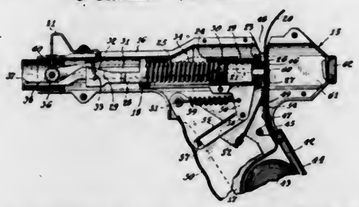
2,440,183
AUTOMATIC REGULATING SYSTEM HAVING A MOVABLE CONTROL ELEMENT AND A FOLLOW-UP ELEMENT
Robert Hayes Nisbet, Stroud, England, assignor to The Sperry Gyroscope Company, Ltd., Brentford, England
Application February 19, 1944, Serial No. 523,099
In Great Britain February 2, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires February 3, 1963
9 Claims. (Cl. 121—41)

1. An automatic regulating system having a movable control element and a following element, means for exerting a force on said following element dependent on the relative displacement of said elements and means connected to said following element for generating counter-forces to oppose the movement thereof, said last-named means including a control spring generating a force directly proportional to the amplitude of the displacement, and means for creating a force varying as the first time derivative of the displacement.



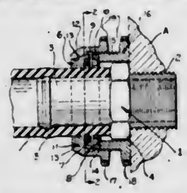
2,440,184
ELECTRIC CHANGE-OVER SYSTEM
James D. Phyfe, Gloucester, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application June 6, 1946, Serial No. 674,762
15 Claims. (Cl. 88—16.2)

1. A motion picture changeover system comprising a plurality of light sources for illuminating respective picture films, a plurality of light sources for scanning respective sound records on said films, one of each of said light picture illuminating and scanning light sources being operative at the same time, and a plurality of control boxes for changing from one illuminating light source to another and from one sound scanning light source to another, each of said control boxes



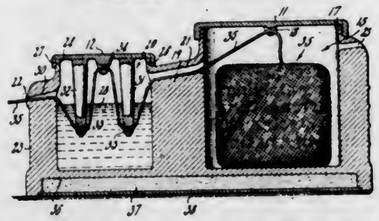
containing means for individually changing from one illuminating light source to another illuminating light source and subsequently from one scanning light source to another scanning light source, the actuation of one of said means providing simultaneous changeover from one of said picture illuminating sources to another and from one of said scanning light sources to another.

2,440,185
MACHINE FOR STRANDING WIRES
Alfred James Prosser, Rochester, and Ernest Alfred Smith, Gravesend, England, assignors to W. T. Henley's Telegraph Works Company Limited, London, England, a British company
Application August 1, 1946, Serial No. 687,774
In Great Britain August 31, 1945
7 Claims. (Cl. 57—81)



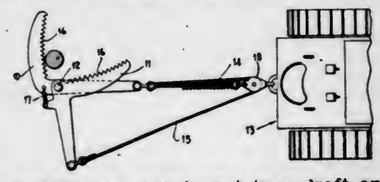
1. A stranding machine comprising a rotatably driven frame, a plurality of wire-supplying reels housed in said frame, a plurality of contacts, one for each reel, insulated from said frame and over which the wires pass on their way from the reels to the outlet from the frame, a plurality of internal circuits, each including one of the insulated contacts and the wire passing thereover, an external circuit including a source of current and a control device for stopping the machine which device is brought into action on the cessation of current flow therethrough, and means for connecting each internal circuit in turn and at short intervals of time to the external circuit before disconnecting the previously connected internal circuit therefrom, whereby to maintain for the control device a circuit which under normal running conditions is complete but which is interrupted on the occurrence of a break in any of the wires between the supply reel and the outlet from the frame.

2,440,177
TOY
Alfred H. Laidig, Bloomfield, N. J., assignor to Joseph Reich, Brooklyn, N. Y.
Application October 7, 1944, Serial No. 557,634
9 Claims. (Cl. 46—195)



1. A percussive toy comprising a fixed breech having a hole therein, means for feeding a burstable membrane across said breech over said hole, a reciprocator movable toward said breech and adapted to seal against the same around said hole with said membrane interposed, and means movable in said reciprocator for creating air pressure therein for bursting said membrane.

2,440,178
HOSE COUPLING
Albert P. Lofquist, Jr., Inglewood, Calif.
Application September 8, 1945, Serial No. 615,121
14 Claims. (Cl. 285—86)

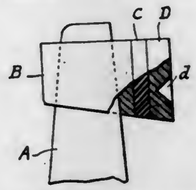


1. A hose coupling comprising: a thrust ring, and a cam ring, the latter having a tapered cam face; a plurality of clamping segments radially engaged by said cam ring and axially engaged by said thrust ring; said clamping segments defining compositely an annular axially directed channel; an annular retaining ring loosely fitting said channel; and radial pins for loosely retaining said segments on said ring in substantially equally spaced relation.

2,440,179
TWINE MOISTENING AND DISPENSING DEVICE
Victor F. Mabli, Tarrytown, N. Y.
Application February 6, 1945, Serial No. 576,432
3 Claims. (Cl. 91—46)

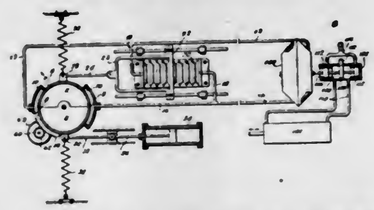
3. A sanitary twine dispenser comprising, in combination, a twine compartment; a water container; enclosure means for said compartment and container protecting twine and water therein from atmospheric contamination; guide means within said enclosure means effective to guide twine, from a supply thereof in said compartment, to said water container; finger means carried by said enclosure means effective to immerse the twine in water in said water container; and passage means for withdrawing twine from said dispenser.

2,440,180
GRIPPING MEANS FOR REMOVING TREES
John W. MacClatchie, Los Angeles, Calif.
Application February 7, 1945, Serial No. 576,527
2 Claims. (Cl. 37—2)



2. A device for attachment to a draft apparatus for gripping and pulling trees, stumps, and the like, comprising a primary jaw having a forwardly extending shank portion and a laterally extending gripping portion, a secondary jaw having a shank portion and a gripping portion, said secondary jaw being mounted on said primary jaw and pivotally movable from open position in which said gripping portion of said primary jaw is unobstructed for engagement with a tree, stump, or the like, to a closed position in which said gripping portion of said secondary jaw is in opposed cooperating relationship to the gripping portion of said primary jaw, resilient means for urging said secondary jaw to open position, an extensible spring member secured to said shank portion of said primary jaw and extending forwardly for connection to a draft apparatus, a flexible line extending forwardly from said shank portion of said primary jaw to a pulley secured to the draft apparatus, and thence extending rearwardly to said shank portion of said secondary jaw whereby said shank portion of said primary jaw may engage a tree, stump, or the like, during forward movement of the draft apparatus, and said flexible line will pull said secondary jaw from open position to closed position during elongation of said spring member, after which said flexible line will prevent further elongation of said spring member and will transmit pulling force from the draft apparatus to said device.

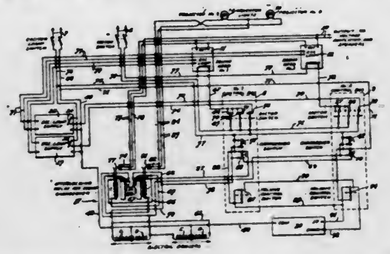
2,440,181
PICKER STICK
George J. Muller, Philadelphia, Pa., assignor to Taylor Fibre Company, Norristown, Pa., a corporation of Pennsylvania
Application December 11, 1945, Serial No. 634,160
2 Claims. (Cl. 139—157)



1. A picker stick having a body portion formed of strips of phenol fibre, a facing strip extending over at least a portion of the side thereof facing the striking portion of the picker, and a rubber strip interposed between the facing strip and the body portion for absorbing shock, both the facing strip and the rubber strip being relatively thin when compared to the thickness of the body.

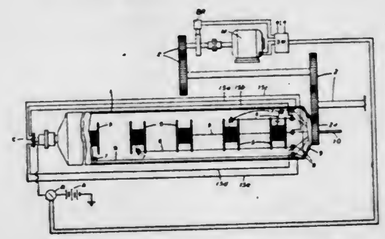
2,440,182
PICKER
George J. Muller, Philadelphia, Pa., assignor to Taylor Fibre Company, Norristown Pa., a corporation of Pennsylvania
Application December 11, 1945, Serial No. 634,161
5 Claims. (Cl. 139—159)

1. A picker for a loom picker stick, comprising a member provided with a socket member for mounting on a picker stick, a shuttle engaging member and a shock absorbing member between said members bonded to the side faces thereof, the shock absorbing member forming the sole support between the socket member and the shuttle engaging member, permitting free lateral expansion in all directions of the shock absorbing member between the bonded faces of the members.



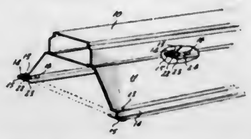
2,440,183
AUTOMATIC REGULATING SYSTEM HAVING A MOVABLE CONTROL ELEMENT AND A FOLLOW-UP ELEMENT
Robert Hayes Nisbet, Stroud, England, assignor to The Sperry Gyroscope Company, Ltd., Brentford, England
Application February 19, 1944, Serial No. 523,099
In Great Britain February 3, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires February 3, 1963
9 Claims. (Cl. 121—41)

1. An automatic regulating system having a movable control element and a following element, means for exerting a force on said following element dependent on the relative displacement of said elements and means connected to said following element for generating counter-forces to oppose the movement thereof, said last-named means including a control spring generating a force directly proportional to the amplitude of the displacement, and means for creating a force varying as the first time derivative of the displacement.



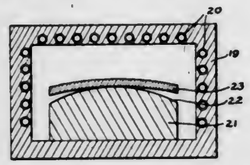
2,440,184
ELECTRIC CHANGE-OVER SYSTEM
James D. Phyfe, Gloucester, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application June 6, 1946, Serial No. 674,762
15 Claims. (Cl. 88—16.2)

1. A motion picture changeover system comprising a plurality of light sources for illuminating respective picture films, a plurality of light sources for scanning respective sound records on said films, one of each of said light picture illuminating and scanning light sources being operative at the same time, and a plurality of control boxes for changing from one illuminating light source to another and from one sound scanning light source to another, each of said control boxes



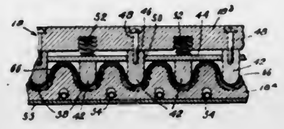
containing means for individually changing from one illuminating light source to another illuminating light source and subsequently from one scanning light source to another scanning light source, the actuation of one of said means providing simultaneous changeover from one of said picture illuminating sources to another and from one of said scanning light sources to another.

2,440,185
MACHINE FOR STRANDING WIRES
Alfred James Prosser, Rochester, and Ernest Alfred Smith, Gravesend, England, assignors to W. T. Henley's Telegraph Works Company Limited, London, England, a British company
Application August 1, 1946, Serial No. 687,774
In Great Britain August 31, 1945
7 Claims. (Cl. 57—81)



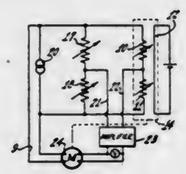
1. A stranding machine comprising a rotatably driven frame, a plurality of wire-supplying reels housed in said frame, a plurality of contacts, one for each reel, insulated from said frame and over which the wires pass on their way from the reels to the outlet from the frame, a plurality of internal circuits, each including one of the insulated contacts and the wire passing thereover, an external circuit including a source of current and a control device for stopping the machine which device is brought into action on the cessation of current flow therethrough, and means for connecting each internal circuit in turn and at short intervals of time to the external circuit before disconnecting the previously connected internal circuit therefrom, whereby to maintain for the control device a circuit which under normal running conditions is complete but which is interrupted on the occurrence of a break in any of the wires between the supply reel and the outlet from the frame.

2,440,186
LIGHTING FIXTURE HINGE
Richard M. Runge, Meriden, Conn., assignor to The Miller Company, Meriden, Conn., a corporation of Connecticut
Application April 23, 1946, Serial No. 664,317
8 Claims. (Cl. 240—103)



5. A reflector having an outwardly extending flange with a downwardly facing seat, an elongated angle member of right angle cross-section having an upper portion extending lengthwise of the seat and secured to it and a lower portion extending downwardly from the seat, the lower portion having a slot, the material forming the lower wall of the slot being out of the plane of the material forming the upper part of the slot, the slot being elongated and longer at the top than the bottom, and a reflector cover having a supporting member having a narrow lower portion and an upper long portion, the longer portion being movable transversely through the upper part of the slot and downwardly behind the end walls of the narrower portion of the slot.

2,440,187
REFRACTORY AND METHOD OF MAKING THE SAME
Carl G. Silverberg, Brookfield, Mass., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application January 16, 1943, Serial No. 472,604
13 Claims. (Cl. 106—66)

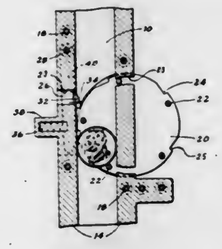


1. The method of forming a refractory suitable for heat dropping glass articles comprising forming a mixture of an ingredient having a high aluminous silicate content in substantially anhydrous state, ball clay, an infra-red absorbing ingredient and water with the ingredient of high aluminous silicate content being in excess of the ball clay and the infra-red absorbing ingredient being controlled according to the infrared absorbing characteristics desired, shaping said composition to produce a refractory having a supporting surface of substantially the shape desired to be formed on the glass article, subjecting said shaped refractory to heat of a relatively low temperature to remove the water and subsequently subjecting said refractory to heat of a relatively high temperature with the maximum temperature being substantially above the temperature at which the glass articles will initially soften and controlled to introduce the proper binding action of the ingredients of the composition with no vitrification and so that a non-vitrified body substantially non-adhesive to glass in the presence of heat sufficient to soften the glass remains.

2,440,188
PERMANENT WAVING APPARATUS
Alfred E. Stroll, Brookline, Mass.
Application December 31, 1946, Serial No. 719,362
9 Claims. (Cl. 132—31)

1. A permanent waving apparatus comprising a unit adapted to be supported out of contact with a head, said unit comprising coacting sections of which one section has spaced apart grooves in its upper surface across a plurality of which grooves each strand of hair to be waved is laid, and another section is adapted to be superimposed on the first section and has ridges on its under surface for fitting in said grooves of the first section, thereby to depress each strand of hair into each of the said plurality of grooves across which each strand extends, resilient means operative between the two said sections for clamping the hair at opposite sides of each said groove and for yieldably restraining the descent of the said ridges into the said grooves, and means for moving the two sections relatively toward each other after the said clamping of the hair, thereby to depress said ridges further into the grooves with stretching of the hair of each strand in each of the plurality of grooves across which the strand extends while the strand is clamped at opposite sides of each of said plurality of grooves.

2,440,189
CONVECTION CURRENT RESPONSIVE INSTRUMENT
Vladimir K. Zworykin, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application April 13, 1945, Serial No. 588,233
10 Claims. (Cl. 177—351)



1. An apparatus of the character stated, comprising a heating element, means to heat said element, two temperature responsive electrical conductors equally spaced from said element and initially balanced as to resistance by equal convection currents from said element and responsive to changes of the impinging angle of said convection currents relative to said conductors to cause a differential resistance between said conductors, means to mount said element and said conductors in a vertical position, means to tilt said mounting means to cause unequal currents to unbalance said conductors, and an electrical agency associated with said conductors and operable as a function of said differential resistance.

2,440,190
PREPARATION OF NONPOROUS POLYTETRAFLUOROETHYLENE ARTICLES
Johannes Alfthan, New York, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 1, 1944, Serial No. 524,655
3 Claims. (Cl. 18—47.5)

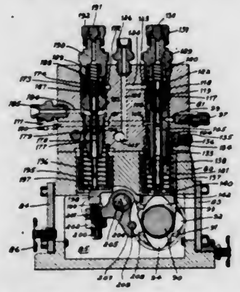
1. Process of fabricating non-porous, homogeneous articles which comprises forming a slurry of finely divided polytetrafluoroethylene in a liquid dispersant inert to and capable of wetting said polytetrafluoroethylene and vaporizable at temperatures below 427° C., sedimenting a layer of polytetrafluoroethylene from said slurry, removing the excess liquid dispersant from said sedimented polytetrafluoroethylene, pressing said layer of sedimented polytetrafluoroethylene under a pressure of at least 50 pounds per square inch, releasing the said pressure seasoning said sedimented polytetrafluoroethylene until substantially free from said liquid dispersant, and sintering said sedimented polytetrafluoroethylene at a temperature above 327° C.

2,440,191
COUNTER MEANS FOR COIN CHUTES
Harvey N. Bliss, Windsor, Conn., assignor to Veeder-Root Incorporated, Hartford, Conn., a corporation of Connecticut
Application August 16, 1944, Serial No. 549,673
2 Claims. (Cl. 133—8)

1. In a device of the character described, a coin chute having a downwardly extending passage corresponding in cross section generally to the cross sections of the coins, an element arranged to be driven by the weight of the coins passing through said passage, said element comprising a rotary disk partially located in the rear wall of the passage and a plurality of pins projecting from the front face of the disk and adapted to be engaged by the coins, said pins being angularly spaced-apart and each having within the passage a coin receiving position adjacent one side edge of the passage and a single temporary coin holding and exhibiting position therebeneath adjacent the opposite edge of the passage, said disk having stop shoulders, and a pivoted latch located adjacent the first-mentioned side edge of the passage and having a tooth adapted to engage said shoulders and a downwardly and inwardly inclined cam portion projecting into said passage above the coin receiving position of said pins and adapted to be engaged and cammed outwardly from said passage by a coin passing therethrough to disengage the tooth from said shoulders whereby the coin is permitted to move to held and exhibited position while the prior coin is released.

2,440,192
COLLAPSIBLE HANGING GARMENT CONTAINER
Irma M. Cowan, Chicago, Ill.
Application August 2, 1945, Serial No. 608,503
3 Claims. (Cl. 312—6)

1. In a garment receptacle comprising a flexible bag, a shelf structure and flexible tapes secured to said bag adjacent the top thereof and supporting said shelf structure therein, clasp members for adjustably attaching the shelves to the supporting tapes, each of said clasp members comprising a portion attached to the shelf, a portion at an angle thereto having turned-back ends which form a channel slidably receiving the tapes and tangs extending into the channel from the turned-back ends which engage the tapes and retain the shelves in adjusted position.

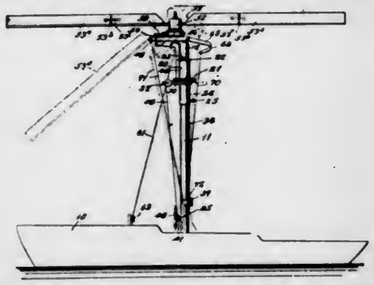


2,440,193
METHOD OF SEALING AND REINFORCING CARTONS WITH TAPE AND THE TAPE AS AN ARTICLE OF MANUFACTURE
Lewis Davis and Edwin C. Tuukkanen, Worcester, Mass., assignors to McLaurin-Jones Co., Brookfield, Mass., a corporation of Massachusetts
No Drawing. Application January 4, 1944, Serial No. 516,974
7 Claims. (Cl. 93—56)

1. That improvement in methods of sealing and reinforcing cartons and the like with a tape having a normally dry, non-tacky coating thereon composed chiefly of a protein-type water-soluble adhesive blended with an emulsified resinous waterproofing agent, comprising the steps of making said coating tacky by wetting it with an aqueous solution containing one or more chemicals adapted to convert the protein constituent of the coating into a water-insoluble form and also to de-emulsify said waterproofing agent, and applying the tape to the desired surface of the carton while said coating is in a tacky condition, whereby said chemical constituent of said wetting liquid will subsequently react with said protein adhesive and with said emulsified waterproofing agent to convert both into water-insoluble forms.

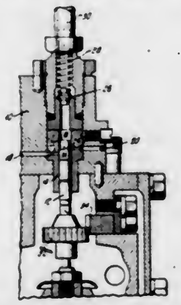
6. A readily water wettable sealing and reinforcing tape comprising a thin flexible backing sheet coated on one side thereof with a normally non-tacky mixture by dry weight of 50% to 80% water soluble protein glue and 20% to 50% colloidal particles of waterproof bituminous adhesive dispersed therein, said tape having been formed

by coating the sheet with a water solution of the glue containing the bituminous adhesive emulsified therein, and drying the coating to a minimum water content without breaking the emulsion.



2,440,194
FUEL PUMP
Kalman J. De Juhasz, State College, Pa., and Frederick J. Villforth, Jr., Beacon, N. Y., assignors to The Texas Company, New York, N. Y., a corporation of Delaware
Application January 29, 1946, Serial No. 644,032
20 Claims. (Cl. 103—41)

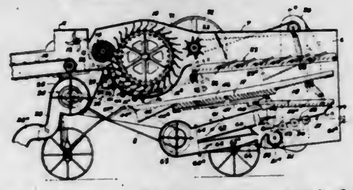
1. A fuel pump and timer assembly for an internal combustion engine operating with fuel injection and having a fuel injection line, comprising a pump block having a pump cylinder and a plunger operating therein, an inlet from a source of low pressure fuel supply communicating with said pump cylinder, a high pressure fuel storage chamber, an outlet from said pump cylinder communicating with said storage chamber, said pump block also having a timer cylinder and a plunger operating therein, an inlet to said timer cylinder communicating with said storage chamber, an outlet from said timer cylinder adapted to be connected to said fuel injection line of the engine, a spill port from said timer cylinder communicating with a return line to said low pressure fuel supply, a cam shaft mounted in said pump block, operative interconnections between said cam shaft and said pump and timer plungers, means for automatically controlling the operation of said pump plunger to regulate the supply of fuel from said low pressure source to said storage chamber to maintain a predetermined substantially constant high pressure of fuel within said storage chamber, and means associated with said timer plunger for controlling the beginning of injection on each cycle by connecting said timer cylinder inlet to said timer cylinder outlet while closing said spill port to thereby provide fuel flow from the storage chamber to the fuel injection line at the substantially constant high fuel pressure, and for regulating the end of injection on each cycle by connecting said spill port with said timer cylinder outlet while closing said timer cylinder inlet to thereby immediately reduce the fuel pressure in said fuel injection line to a substantially lower value.



2,440,195
CRAFT PROPULSION
Horace M. Dobbins, Pasadena, Calif.
Application August 20, 1946, Serial No. 691,758
8 Claims. (Cl. 114—39)

6. In an apparatus of the character described, a mast rising vertically from a craft, a sleeve slidable on the mast, a rotor mounting secured to the sleeve and including a vertical axle pivoted at one end on the sleeve and tiltable therefrom, a rotor on the axle and disposed normally in a horizontal plane above the mast, means controlling the tilting of said axle and for stabilizing the position of the axle and rotor, said mast having a groove in the top, said groove extending downwardly in the mast at diametrically opposite points, a second sleeve on the mast below the

first sleeve, means carried by the last named sleeve and projecting in the groove for preventing rotation of the sleeve, and a cable in the groove between the mast and the sleeves, one end of the cable having connection with the second sleeve, the other end of the cable having connections with the lower end of the mast so that when the last mentioned end is released the sleeve and rotor may be lowered.

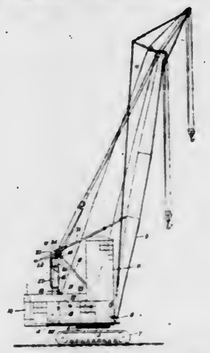


2,440,196
MULTIPLE FLUID PROPORTIONING PUMP
William N. Fenney, New York, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application June 29, 1944, Serial No. 542,777
16 Claims. (Cl. 103—7)

6. A pump of the character described comprising a cylinder provided with a valve-controlled outlet port, a plunger slidably and rotatably disposed in said cylinder, said plunger and said cylinder forming a fluid delivery chamber, means for causing said plunger to undergo reciprocating movement, means for varying the rotative position of said plunger in said cylinder, said cylinder also being provided with two inlet ports positioned in spaced relation in the direction of the axis of the cylinder and around the circumference of the cylinder to be uncovered at different points of plunger reciprocating movement, said plunger having a cylindrical section of substantially the diameter of said cylinder terminating in the direction of said delivery chamber in a helical line, said helical line having a varying

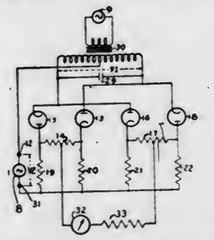
slope which is relatively large at the beginning and decreases toward the end, whereby upon rotation of said plunger the cylindrical section of said plunger covers a different portion of the wall of said cylinder and thereby is adapted to vary both the point in the cycle of plunger reciprocating movement at which each inlet port is opened to the delivery chamber and the period of the cycle during which each inlet port remains open to said delivery chamber, separate conduits for supplying a fluid to each of said inlet ports, and a valve in one of said conduits to prevent flow of fluid away from said cylinder.

2,440,197
PEANUT PICKER WITH GASEOUS SUSPENSION AND SIFTING
Daniel F. Good, Waynesboro, Pa., assignor to Frick Company, Waynesboro, Pa., a corporation of Pennsylvania
Original application September 21, 1942, Serial No. 466,470. Divided and this application July 6, 1944, Serial No. 543,678
6 Claims. (Cl. 209—33)



1. In a peanut picking machine, a wind blast unit, a housing for the latter, means separating the housing into upper and lower wind blast passages, a cleaning grid subject to the action of the wind blast, a conveyor for removing nuts from the machine, said conveyor being provided with a hopper opening, a valve board coacting with said opening, a deflector board in rear of said valve board, said valve board being adjustable to permit the nuts to pass directly from said cleaning grid into said opening or direct the nuts rearwardly to said deflector board and thence into said opening, the nuts when passing rearwardly to said deflector board being subjected to the blast of the lower wind blast passage to remove stones and like heavy particles therefrom.

2,440,198
PRESSURE-DETECTING COVERING
William C. Green, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application October 1, 1943, Serial No. 504,563
7 Claims. (Cl. 73—147)



7. A pressure-detecting covering strip for a surface in airflow comprising a relatively thin strip of flexible impervious material conformable to the surface with the outer face of the strip corresponding substantially to the conformation of said surface whereby local aerodynamic conditions remain substantially unaltered by the presence of the strip, said strip having spaced-apart apertures in said face and a plurality of passageways individually in communication with said apertures and extending internally of the strip to positions at the edge of the strip individually remote from said apertures.

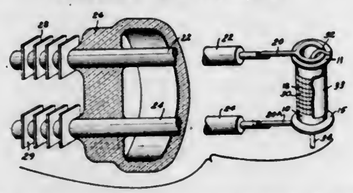
2,440,199
GANTRY STRUCTURE
William M. Huston, Lima, Ohio
Application July 5, 1945, Serial No. 603,380
8 Claims. (Cl. 212—59)

1. In a load handling machine having a rotating base carrying machinery frames and a boom, a gantry structure comprising a pair of front compression legs connected with the rotating base adjacent the mounting of the boom on the base and inclined upwardly and rearwardly therefrom, and rear tension legs extended generally vertically between the rotating base and the upper ends of the compression legs, a gantry head-shaft interconnecting the upper ends of the compression and tension legs, and braces connected with the tension legs intermediate the gantry shaft and the rotating base and inclined forwardly and downwardly therefrom toward and connected with the machinery frames.

2,440,200
RECTIFYING NETWORK FOR MEASURING ALTERNATING CURRENTS
Lionel Jofeh, London, England, assignor to A. C. Cossor Limited, London, England, a British company
Application March 14, 1945, Serial No. 582,640
In Great Britain April 6, 1944
6 Claims. (Cl. 171—95)

1. For the purpose described, the combination of a source of alternating reference voltage, a pair of rectifier load resistors each having rectifiers in series at both ends and being connected

to form parallel but oppositely-conducting paths across said source, four further resistors connected respectively from the four ends of said rectifier load resistors to a common point, a source of input alternating voltage having one terminal connected to a point having the mid-potential of said source of reference voltage and having its other terminal connected to said common point, and means responsive to the direct component of the voltage developed between the mid-points of said rectifier load resistors.



2,440,201
FIRE-RESISTANT CELLULOSE ESTERS AND ETHERS
Joseph H. Klaber, Conshohocken, and Johan Bjorksten, Philadelphia, Pa., assignors to Quaker Chemical Products Corp., Conshohocken, Pa.
No Drawing. Application December 23, 1944, Serial No. 569,642
12 Claims. (Cl. 106—194)

1. A plastic cellulosic composition in solid form comprising a solid cellulosic derivative selected from the group consisting of cellulose esters and cellulose ethers, and between about 1% and about 10% ammonium thiocyanate dissolved in solid solution in and distributed uniformly through said solid cellulosic derivative to impart fire-resistance thereto.

2,440,202
SOLID FIRE-RESISTANT CELLULOSE COMPOUND
Joseph H. Klaber, Conshohocken, Pa., and Johan Bjorksten, Chicago, Ill., assignors to Quaker Chemical Products Corp., Conshohocken, Pa.
No Drawing. Application March 7, 1945, Serial No. 581,562
9 Claims. (Cl. 106—186)

1. A plastic cellulosic composition in solid form comprising a solid cellulosic derivative selected from the group consisting of cellulose esters and cellulose ethers and between about 1% and about 12% of a substance selected from the group consisting of thiourea and alkyl substituted thioureas soluble in said cellulosic derivative and containing at least 20% nitrogen, dissolved in solid solution in and distributed uniformly through said solid cellulosic derivative to impart fire-resistance thereto.

2,440,203
CATHODE STRUCTURE
Polykarp Kusch, New York, N. Y., assignor to the United States of America as represented by the Secretary of War
Application July 9, 1945, Serial No. 604,072
5 Claims. (Cl. 250—27.5)

5. A cathode structure comprising a hollow, metallic cylinder, an integral flange at each end of said cylinder, dovetailed grooves around the outer surface of said cylinder and additional grooves crossing said dovetailed grooves, a metallic member brazed to each flange, said metallic member having a metallic arm radially extending away from said flange through a glass seal, and radiating surfaces at the outer end of each member for cooling said cylinder during the operation of said cathode.

2,440,204
PROCESS OF DECOLORIZING GUM ROSIN
William Burns Logan, Lake Charles, La.
No Drawing. Application June 24, 1943, Serial No. 492,131
1 Claim. (Cl. 260—108)

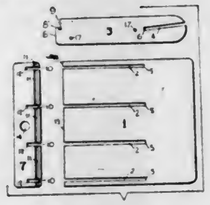
A process which comprises wetting the residual aluminum silicate still contained in a mineral hydrous magnesium silicate from which a substantial part of the originally contained aluminum silicate has been removed, by contacting same with a volatile alcohol containing a small percentage of water, while said mineral is in a granular to lumpy condition, separating the residual alcohol from said mineral and contacting said mineral with petroleum naphtha at a temperature above the normal boiling point of said alcohol but below 100° C., to leave all of the aluminum silicate content thereof wetted with water, in which condition it is substantially free from isomerizing action on the resin acids of gum rosin, contacting a solution of gum rosin containing color bodies, in an inert solvent, with a substantially stationary mass of said so treated mineral in a granular state, whereby the color bodies present in said solution are, to a large extent, adsorbed in said mineral, drawing off the gum rosin solution from said mineral containing adsorbed color bodies, and separating the solvent and the gum rosin from each other at a temperature too low to substantially injure the rosin, said granular adsorbent being of such particle size as to be retained on an 80 mesh screen.

2,440,205
TOY BLOCK
William R. McLain, Henderson, Ky., assignor to Kusan Incorporated, Henderson, Ky.
Application May 21, 1946, Serial No. 671,316
1 Claim. (Cl. 35—71)

An educational device comprising a hollow transparent block in the form of a cube having one end open, a plate for closing an dsealing the open end, a replica of an object secured to the inner face of the plate, and the name of the object being applied to an outer face of the block with the initial of the name being prominently displayed.

2,440,206
STABILIZED SILVER HALIDE EMULSIONS
Fritz W. H. Mueller, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application September 16, 1944, Serial No. 554,539
6 Claims. (Cl. 95—7)

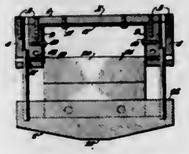
1. A photographic material comprising a silver halide gelatin emulsion, a member of the group consisting of a sulfinic acid, a seleninic acid and their salts and a member of the group consisting of polythionic acids and their salts of the formula



$$MOSO_2—S_n—SO_2OM$$

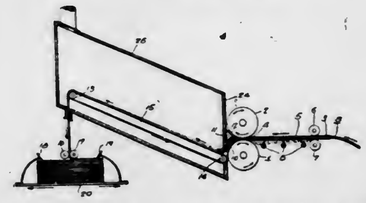
wherein M is a member of the group consisting of alkali metals and hydrogen and n is a positive integer, and thioanhydrides of the formula

$$RSO_2—S_n—SO_2R$$



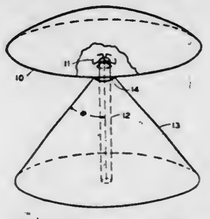
wherein R is an organic radical and n is a positive integer, in concentrations of from 0.025 to 0.500% by mol of the member of the last named group to the member of the first named group.

2,440,207
HOLDER FOR KNIVES, FORKS, SPOONS, AND THE LIKE
Thomas B. Owens, Cleveland, Ohio
Application November 1, 1945, Serial No. 626,083
6 Claims. (Cl. 206—72)



1. A holder for knives, forks, spoons, and the like comprising a built-up structure having a platform formed with spaced slots intersecting an end thereof, a transverse series of spaced longitudinal members forming partitions and side walls and each having a slot intersecting an end thereof and registering with a platform slot so that the platform and the members are interlocked to form a plurality of chambers with the ends of the members opposite their slotted ends extending outwardly of the slotted end of the platform, the extending member portions being notched, and a transverse end board having a transverse series of spaced slots accommodating the extended member ends and a series of transversely aligned grooves accommodating the slotted end of the platform, the wall portions of the end board slots being interlocked with the notches of the extended member portions.

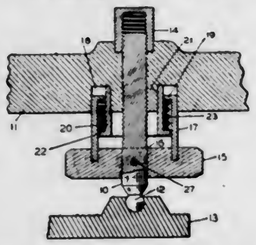
2,440,208
HAND TOOL FOR CUTTING OUT HINGE RECESSES
Charles L. Parcell, Mariemont, Ohio
Application January 17, 1945, Serial No. 573,191
2 Claims. (Cl. 144—27)



1. A hinge setting device comprising a head, a wood severing knife of U-shaped configuration extending beyond a surface of said head, that portion of the knife at the bight of the U being disposed to separate grain of the wood longitudinally and extending beyond said surface a distance greater than the portions of the knife at the adjacent sides of the U, a second head having guide means engaging the first head for relative movement of the two along a plane substantially parallel to the plane of the extremities of said U-shaped knife means, and a second knife carried by said second head for cutting to a predetermined depth the wood within the area incised by said first knife means.

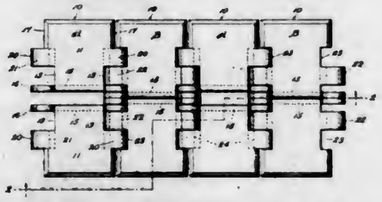
2,440,209
METHOD AND APPARATUS FOR FINISHING AND SHRINKING TEXTILE FABRICS
Frank R. Redman, Yardley, Pa.
Application January 8, 1945, Serial No. 571,841
6 Claims. (Cl. 26—18.5)

4. A method of finishing and shrinking textile fabric, which comprises moistening the fabric, passing the moist fabric between power-driven calendering rolls, depositing the fabric on a movable surface directly from said rolls substantially free from tensional stress, moving said surface at a speed less than the peripheral speed of said rolls, whereby the fabric is completely relaxed on said surface after its passage through said rolls, and applying heat to the fabric to dry it while it is in a relaxed condition on said surface.



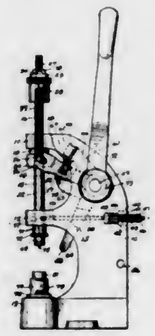
2,440,210
ANTENNA
Henry J. Riblet, Belmont, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application March 26, 1946, Serial No. 657,154
1 Claim. (Cl. 250—33.65)

An antenna for use in high frequency communication systems comprising a paraboloidal reflector, a radiating element located at the approximate focal point of said reflector and adapted to illuminate said reflector when properly energized, said radiating element comprising three coplanar, circumferentially arranged dipoles to provide a circularly polarized radiation pattern, an enclosed transmission line for feeding energy to said radiating element, said transmission line being disposed forwardly of said reflector with its axis perpendicular to the aper-



ture plane of said reflector, said radiating element being mounted at the end of said transmission line, a cone shaped member disposed about said transmission line with its axis collinear with the axis of said transmission line and its apex close to said radiating element and located at a greater distance from the vertex of said reflector than said radiating element, said cone shaped member flaring away from said reflector at an angle of 45° and having a base not greater than the diameter of said paraboloidal reflector, said cone shaped element being effective to modify the radiation pattern produced by said radiating element and said reflector so that a radiation pattern is produced that is omnidirectional in azimuth and narrow in elevation.

2,440,211
LEVELING DEVICE
Charles O. Rothweiler, Milwaukee, Wis.
Application April 19, 1946, Serial No. 663,416
2 Claims. (Cl. 248—180)

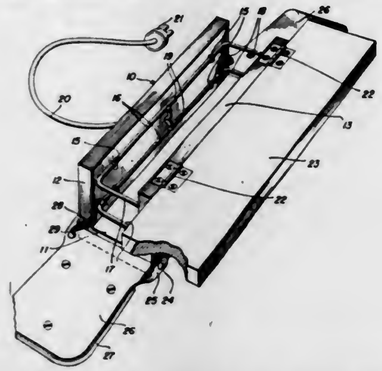


1. A leveling device of the character described in combination with a base and a device to be leveled, said device comprising an adjustment screw threadedly engaging the device to be leveled, a projecting member extending outward from said screw, said screw pivotally engaging said base, a downwardly disposed cylindrical sleeve having an inwardly projecting flange, said sleeve attached to the lower face of the device to be leveled, an upwardly extending cylindrical sleeve having an outwardly projecting flange, said sleeve attached to the outwardly extending element on said screw, said sleeves surrounding the exposed portion of said adjustment screw and telescopically engaging one another and a spring member disposed between said sleeves and contacting the flanges thereof.

2,440,212
FLAT TOP CONVEYER CHAIN
Oliver G. Schmidt, West Allis, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a corporation of Wisconsin
Application February 4, 1946, Serial No. 645,312
2 Claims. (Cl. 198—189)

1. A link for a flat-top conveyer chain, comprising a pair of like metallic plate elements reversely positioned side by side, each of said elements having a planar body portion providing a flat article supporting surface, the opposite transverse edges of said body portions being provided with integral tangential curled knuckles disposed to interfit with companion knuckles on adjacent links and constituting bearings for a chain pin, said body portions also having integral angularly disposed reach bars positioned along their inner longitudinal edges for interconnecting adjacent chain pins to relieve excessive strains on the knuckles.

2,440,213
STAKING MACHINE
George B. Spring, Essex, Conn.; Mary B. Spring executrix of said George B. Spring, deceased
Application March 2, 1946, Serial No. 651,517
14 Claims. (Cl. 218—1)

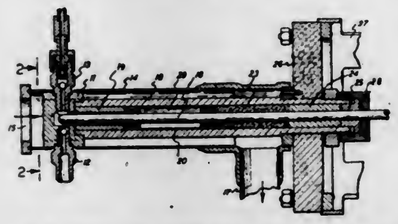


1. In a staking machine, a frame, a work-supporting anvil carried thereby, a work-holding member reciprocably mounted in said frame, a reciprocal work-staking member, retaining means engageable with said work-staking member to releaseably retain it in a relatively extended position with respect to said work-holding member, actuating means adapted to impart projecting movement to said work-holding member to engage it with a work piece on said anvil, and means associated with said actuating means adapted at a predetermined point in the movement of said actuating means to operate said retaining means to release said work staking member.

2,440,214
VERMIN DESTROYER
George A. Wilson, Bogue Chitto, Miss.
Application January 5, 1946, Serial No. 639,327
1 Claim. (Cl. 43—98)

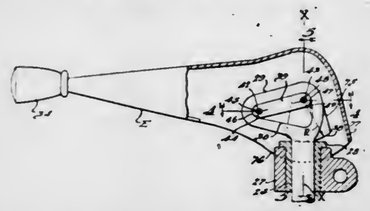
In a vermin destroyer, a trough-shaped bait container open at opposite ends, a pair of spaced, parallel electrodes extending between the side walls of the bait container near but spaced inwardly from opposite ends thereof, said electrodes being so spaced from one another as to inhibit access of vermin to bait contained in the bait container, a conducting platform pivoted to the bait container at each end thereof, means establishing electrical connection between each platform and an electrode, a cover hinged to the upper edge of one of the side walls of the bait container and adapted to close the open, upper side thereof, said cover having its opposite end

portions constituting guards overhanging the platforms when the cover is above the container,



and means to establish electrical communication between the electrodes and a power source.

2,440,215
TREATMENT OF IRON SULFATE LIQUORS
Louis N. Allen, Jr., Short Hills, N. J., and Walter K. Zahray, Bronx, N. Y., assignors to Chemical Construction Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application March 21, 1946, Serial No. 656,174
4 Claims. (Cl. 23—126)



1. A method of treating a ferrous sulfate liquor containing free sulfuric acid which comprises adjusting the acidity of said liquor to a pH within the range of from 2 to about 4.3 and reducing any ferric iron that may be present to the ferrous condition by adding to the liquor a metal above hydrogen in the electromotive force series of elements, heating the liquor to a temperature of at least 100° C., subjecting the liquor to a settling process at said elevated temperature and thereby separating therefrom a ferrous sulfate sludge.

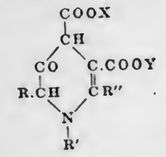
2,440,216
RECIPROCATING PUMP FOR LIQUEFIED GASES
Carl R. Anderson, Chattanooga, Tenn., assignor to Air Products, Incorporated, Chattanooga, Tenn., a corporation of Michigan
Application June 4, 1945, Serial No. 597,486
7 Claims. (Cl. 103—1)

1. In a pump for liquefied gases: a plunger of uniform diameter reciprocating in a working barrel; a cylinder surrounding and spaced from said plunger; packing between said plunger and said cylinder, and a spacing element separating said packing from the end of said working barrel, said element comprising a pair of guide bushings arranged to maintain said plunger concentric with said cylinder and means for maintaining said bushings in spaced relation, at least one of said bushings being perforated at a point spaced from said plunger to allow the pumped liquid to flow from said working barrel into the space between said bushings.

2,440,217
TRANSMISSION CONTROL MECHANISM
Jay C. Auten, Royal Oak, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Original application April 4, 1945, Serial No. 586,498. Divided and this application February 21, 1946, Serial No. 649,196
4 Claims. (Cl. 74—484)

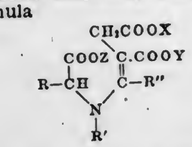
1. In a steering column mounted control mechanism for selectively operating speed ratio controls of a motor vehicle transmission, a main rotatable and reciprocatory control rod having its axis extending generally longitudinally of the steering column and adapted for operative connection with the transmission, said rod having its upper end provided with a lever portion rigidly connected to said rod and offset laterally therefrom, a shift lever having an outer end portion adapted to be grasped by the vehicle driver and a hollow inner end portion within which said offset lever portion is disposed thereby housing said lever portion within said hollow end portion and providing an operative connection between said shift lever and said offset lever portion such that rotary shifting movements of said shift lever about said rod axis cause said rod to rotate about said axis with said shift lever, said hollow end portion of the shift lever having an opening through which said rod extends, means for mounting said rod on said steering column comprising a member fixed relative to the steering column and having an annular fulcrum surface surrounding said rod adjacent said lever opening, means connecting the upper end of said rod with said shift lever for transmitting vertical swinging movements of said shift lever to said rod so as to move said rod in the direction of its axis and for guiding said shift lever for rotational shift about said rod axis during said rotary shifting movements of said shift lever, a pair of spacers respectively rigidly attached to the inner side walls of said shift lever for receiving the offset lever portion of said rod therebetween and each spacer being provided with a lever-fulcruming rocker engaging said annular surface, said rockers extending generally longitudinally of said shift lever along and adjacent opposite sides of said rod and each rocker having at least a portion thereof arced about an axis extending in a direction transverse to said rod axis, said mounting and connecting means cooperating with said rockers such that when said shift lever is rotatably shifted about said rod axis the said rockers rotatably wipe said annular friction surface and

such that when said shift lever is swung vertically upwardly said rockers slidably wipe said annular friction surface and fulcrum said shift lever for effecting lift of said rod.



2,440,218

MANUFACTURE OF KETOTETRAHYDROPYRIDINE DERIVATIVES AND HYDROXYPYRIDINE DERIVATIVES



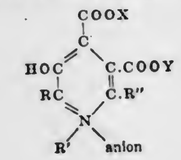
Franz Bergel and Aaron Cohen, Welwyn Garden City, England, assignors, by mesne assignments, to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey

No Drawing. Application April 8, 1943, Serial No. 482,324. In Great Britain March 9, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires March 9, 1962
16 Claims. (Cl. 260—295.5)

1. A process for the manufacture of ketotetrahydropyridine derivatives of the general formula

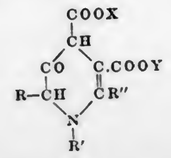
which comprises subjecting compounds of the general formula

to the action of a substance selected from the group consisting of alkali metals and alkali metal alcoholates, and treating the product thus formed with an acid to liberate a ketotetrahydropyridine derivative of the aforesaid general formula, in both formulae R being alkyl R' being a member selected from the group consisting of alkyl and aralkyl radicals, R'' being hydrogen and X, Y and Z being lower alkyl radicals, not necessarily identical.



2,440,219

MANUFACTURE OF KETOTETRAHYDROPYRIDINE DERIVATIVES AND HYDROXYPYRIDINE DERIVATIVES



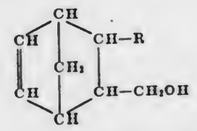
Franz Bergel and Aaron Cohen, Welwyn Garden City, England, assignors, by mesne assignments, to Hoffmann-La Roche Inc., Roche Park, Nutley, N. J., a corporation of New Jersey

No Drawing. Original application April 8, 1943, Serial No. 482,324. Divided and this application August 23, 1944, Serial No. 550,856. In Great Britain March 9, 1942
4 Claims. (Cl. 260—295.5)

1. A process for the manufacture of quaternary pyridinium salts of the general formula

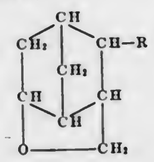
which comprises converting into a salt a compound of the general formula

in which R is alkyl, R' is a member selected from the group consisting of alkyl and aralkyl radicals, R'' is hydrogen, and X and Y are lower alkyl radicals, not necessarily identical, and dehydrogenating the salt by treatment with a member selected from the group consisting of oxygen and oxygen-containing gases.



2,440,220

CYCLIC ETHER



Herman A. Bruson, Rydal, and Thomas W. Riener, Philadelphia, Pa., assignors to The Resinous Products & Chemical Company, a corporation of Delaware

No Drawing. Application November 6, 1945, Serial No. 627,088
5 Claims. (Cl. 260—333)

1. As new compositions of matter, the internal ethers formed by the rearrangement resulting by heating alcohols of the formula:

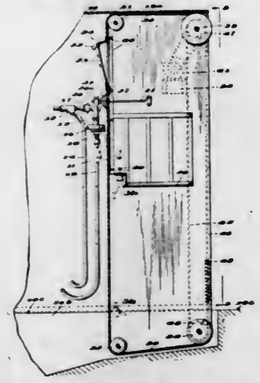
wherein R is selected from a member of the group consisting of hydrogen, methyl and phenyl groups, in the presence of an acidic condensing agent as catalyst, said internal ethers having the probable structure

2,440,221

PREPARATION OF XANTHOPTERIN

George H. Hitchings, Tuckahoe, N. Y., assignor to Burroughs Wellcome & Co. (U. S. A.) Inc., New York, N. Y., a corporation of New York

No Drawing. Application May 9, 1945, Serial No. 592,911
6 Claims. (Cl. 260—250)



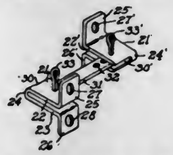
1. A process for preparing xanthopterin from 5-dichloroacetamino-2,4-diamino - 6-hydroxypyrimidine comprising the steps of dissolving 5-dichloroacetamino-2,4-diamino - 6-hydroxypyrimidine in an aqueous alkali, adding to the solution a large excess of a lower alcohol to effect the removal of 2 mols of hydrochloric acid from the pyrimidine derivative, and recovering xanthopterin from the reaction mixture.

2,440,222

BLASTING ROOM

Walter L. Keefer, Hagerstown, Md., assignor to Pangborn Corporation, Hagerstown, Md., a corporation of Maryland

Application March 2, 1946, Serial No. 651,641
19 Claims. (Cl. 51—8)



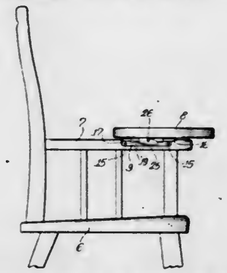
3. In a blast-room, an enclosure, said enclosure having a vertically slidable wall section, a bracket secured to the room side of said wall section, an operator's platform secured to the outer side of said wall section, a blast-gun carried by said bracket, and means controllable by an operator on said platform for raising and lowering said wall section, blast-gun, and platform as a unit.

2,440,223

STORM SASH AND CASEMENT WINDOW CONNECTOR

Joseph Martin, Dayton, Ohio

Application February 12, 1945, Serial No. 577,360
4 Claims. (Cl. 16—1)



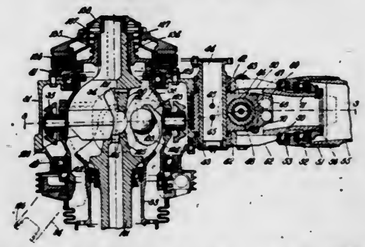
1. A connector for joining a storm sash to a casement sash, said connector comprising a pair of attaching members adapted for attachment to the inner side of a swinging storm sash and to the outer side of a swinging casement sash respectively, each of said members comprising a substantially U-shaped element providing spaced legs presenting substantially parallel plane surfaces facing one another and a base portion joining said legs, a link, each end of said link having substantially parallel plane surfaces on opposite sides of the link, and each end of said link extending between the legs of a respective attaching member with each of said end surfaces of said link in bearing relation with the plane surface of one of the legs of a respective attaching member, and detachable pivot means pivotally connecting respective ends of said link to the respective attaching members, each of said elements having the base portion thereof joining the legs slotted transversely to accommodate the link for pivotal movement thereof into said slotted portion between said legs, the slotted portions of said U-shaped elements being located at opposite sides of their respective attaching members, the attaching members being arranged with respect to the link so that when pivotally disposed with their base portions facing toward one another the unslotted base portion of one attaching member is disposed on one side of said link and the unslotted base portion of the other attaching member is disposed on the other side of said link.

2,440,224

HIGH CHAIR TRAY SLIDE

Edwin W. North and Roy A. Stone, Rockford, Ill., assignors to National Lock Company, Rockford, Ill., a corporation of Delaware

Application March 26, 1945, Serial No. 584,796
6 Claims. (Cl. 155—127)



1. Equipment for high chairs, including a pair of track members and a pair of slide members, each track member being shaped to provide an attaching flange and an outwardly projecting body beveled at one end, provided with an abutment at the other end and provided intermediate its ends with latch receiving openings, each slide member being of channel-shape with its upper wall adapted for attachment to the bottom of a tray, a latch member of angle shape pivoted on the vertical wall of each slide and provided with a portion underlying said body having an upwardly projecting detent adapted to extend through an opening in the slide and to engage in the track openings, and a spring interposed between such latch member and the lower wall of the slide whereby said latch is biased into track engaging position.

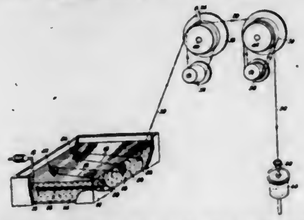
2,440,225

HELICOPTER ROTOR MOUNTING AND DRIVE

Cyril George Pullin, Wimbledon, London, England

Application May 20, 1944, Serial No. 536,547
In Great Britain May 18, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires May 18, 1963
20 Claims. (Cl. 244—17)

12. An aircraft sustaining rotor comprising blade means adapted to be rotated about an ap-



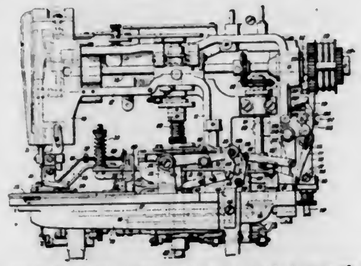
proximately upright axis, a rotatable member carrying said blade means, a mounting provided for tilting of said member and adapted to take rotor lift thrust, and power transmitting means adapted to drive said blade means including a homokinetic joint disposed concentrically within said mounting.

2,440,226

METHOD AND APPARATUS FOR PRODUCING AND STRETCHING ARTIFICIAL YARN

Howard W. Swank, Richmond, Va., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

Application May 31, 1946, Serial No. 673,446
21 Claims. (Cl. 18—8)



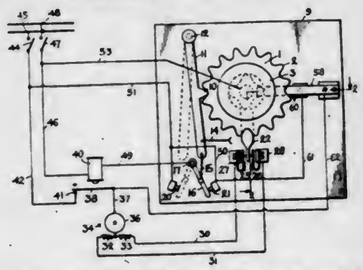
16. In combination a feed wheel over and about which yarn is passed and a freely rotatable snubber roller to displace the yarn passing about said feed wheel, said snubber roller having a plurality of inclined flanges and a body portion in advance of each flange, the front edge of the body portion last engaged by the yarn being free, said snubber roller being mounted askew to said feed wheel whereby in the successive passages of the yarn from said feed wheel to said snubber roller it will pass successively onto the respective flanges and roll therefrom to the body portion forwardly thereof to impart a twist in said yarn.

2,440,227

SEWING MACHINE SAFETY DEVICE

Alfred R. Wood, Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey

Application August 21, 1945, Serial No. 611,721
12 Claims. (Cl. 112—219)



1. In a sewing machine adapted to perform a sequence of operations and come to rest in a predetermined position, in combination, driving mechanism for said machine including a start- and stop-motion mechanism, manually controlled means for initiating operation of the machine, a work-clamp, means for raising and lowering said work-clamp, and means under control of said start- and stop-motion mechanism for preventing said work-clamp from being raised while the machine is in operation and for preventing the initiation of the beginning of the sequence of operations when the work-clamp is raised, said last named means including a pivot-lever of the first order with its ends cooperating with the start- and stop-motion mechanism and the clamp lifting means, and a pivoted latch under control of the start- and stop-motion mechanism and shiftable into and out of the path of movement of said clamp lifting means.

2,440,228

ELECTRICAL PULSATING DRIVE

Michel N. Yardeny, New York, and Charles Prindle, Long Island City, N. Y.; said Prindle assignor to said Yardeny

Application October 15, 1945, Serial No. 622,462
8 Claims. (Cl. 318—257)

1. An electric control apparatus comprising contact means; a contact arm movably supported and adapted to engage the contact means; means to periodically and alternately move the contact arm into and out of engagement with the contact means; means to render the position of the contact arm unstable between alternate positions; circuit means including the contact means for supplying electric current to an electrical device during the period of unstable arm positions and interrupting the current during the period of stable arm positions; and means included in the circuit means to vary the period of current supply relative to the period of current interruption in response to a variation of the speed of the contact arm moving means.

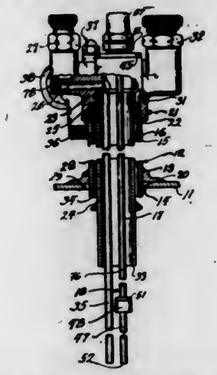
2,440,229

PROCESS OF MAKING ALPHA-ACETO, ALPHA-CHLORO, GAMMA-BUTYROLACTONE

Robert Zumbrunn, Basel, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey

No Drawing. Application August 31, 1946, Serial No. 694,415. In Switzerland November 1, 1945
3 Claims. (Cl. 260—344)

1. A process of producing α-aceto-α-chloro-γ-butyrolactone which comprises reacting α-aceto-γ-butyrolactone with chlorine gas in the presence of water and an alkaline earth metal carbonate to bind the acid formed by the chlorination.



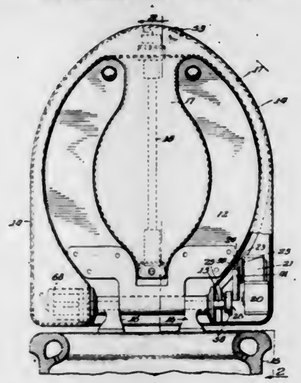
2,440,230

FILL INDICATOR

William C. Buttner, Winnetka, Ill., assignor to The Bastian Blessing Co., Chicago, Ill., a corporation of Illinois

Application July 22, 1941, Serial No. 403,512
18 Claims. (Cl. 62—1)

18. In a gage for liquefied petroleum gas tanks, a housing adapted to carry a slidable tube, a slidable tube disposed in said housing, packing removably received in said housing and forming a seal between the wall of said tube and said housing, a stop ring disposed about said tube at a point spaced from its lower end, a valve seat element and a valve disc element, one of said



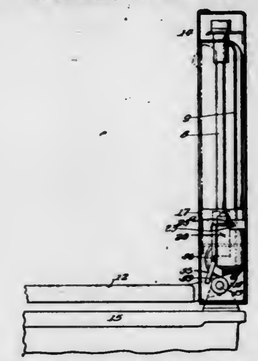
elements being disposed on the inner end of said housing and the other on the side of said stop ring facing said housing, said elements coacting to form a seal when said tube is moved upwardly the limit of travel, preventing leakage in the event said packing is removed.

2,440,231

STERILIZED TOILET SEAT

Lloyd H. Davidson, Connersville, Ind., assignor, by mesne assignments, to Avco Manufacturing Corporation, a corporation of Delaware

Application October 5, 1944, Serial No. 557,283
11 Claims. (Cl. 4—233)



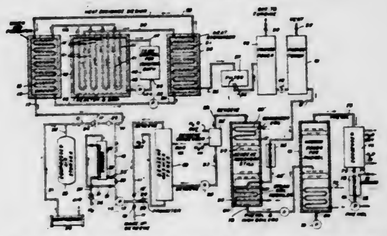
3. The combination with a toilet comprising a bowl, a seat-receiving sterilizing cabinet and a seat movable from a raised sterilizing position in the cabinet and to a lowered position over the bowl, of an electric motor, mechanism operable by the motor for successively lowering to a predetermined position above the bowl and raising the seat, means permitting the seat to be additionally lowered by occupancy, means for controlling the operation of the motor for lowering the seat, and automatic means, comprising a thermostatic switch for starting the motor to raise the seat after lapse of an interval after it has been lowered to said predetermined position, and mechanical means for controlling the switch while the seat is raised and in its unoccupied position.

2,440,232

STERILIZED TOILET SEAT

Lloyd H. Davidson, Connersville, Ind., assignor, by mesne assignments, to Avco Manufacturing Corporation, a corporation of Delaware

Application November 11, 1944, Serial No. 562,937
10 Claims. (Cl. 4—233)

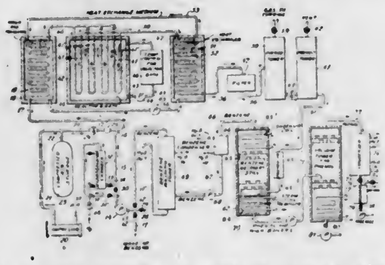


7. The combination with a toilet comprising: a bowl, a seat sterilizing cabinet and a seat manually movable from a sterilizing position in the cabinet to a lowered usable position over the bowl, of a hydraulic device for shifting the seat including, a cylinder and a piston slidable therein, a positive operating connection between the piston and the seat for shifting the piston in the cylinder by manual lowering of the seat and for raising the seat by hydraulic operation of the piston, a self-closing valve for discharging water from the cylinder when the piston is shifted by the seat, and valve-means controlled by the absence or removal of the weight of a user from the seat in its usable position for automatically and successively controlling the flow of water under pressure at different rates of flow to the cylinder for raising the seat successively at different rates of speed to its sterilizing position.

2,440,233

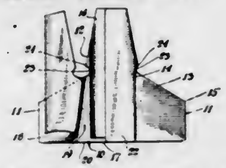
OXIDATION OF BENZENE TO PHENOL WITH AN ORGANIC PROMOTER

Robert H. Krieble, Schenectady, N. Y., and William I. Denton, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York



Application November 30, 1944, Serial No. 565,928
7 Claims. (Cl. 260—621)

4. In the method of making phenol wherein a reaction mixture of benzene vapor and oxygen-

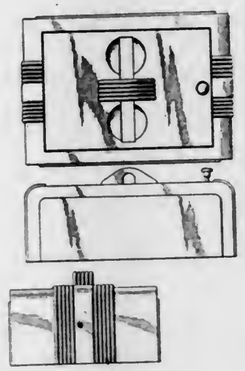


containing gas is passed under a pressure in excess of about 500 pounds per square inch through a reaction zone at a temperature between about 650° F. and about 1000° F., said reaction zone having a metallic surface and being void of solid catalyst, the step of incorporating in the reaction mixture a minor proportion, from about 0.2 per cent to about 3.0 per cent by volume based upon the quantity of benzene in the reaction mixture, of an organic compound selected from the group consisting of those consisting of carbon and hydrogen and those consisting of carbon, hydrogen, and oxygen, which compound is in the gaseous phase under the conditions of the reaction zone and which, under said conditions, is a better hydrogen donor than benzene and which has a "potential hydrogen donor ability" value greater than about 2.5.

2,440,234
PROCESS FOR OXIDATION OF BENZENE TO PHENOL PROMOTED BY ADDED ETHERS
Robert H. Krieble, Schenectady, N. Y., and William I. Denton, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application June 5, 1945, Serial No. 597,658
8 Claims. (Cl. 260—621)

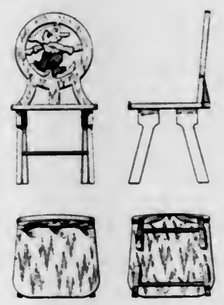
4. In the method of making phenol wherein a reaction mixture of benzene vapor and oxygen-containing gas is passed under pressure through a reaction zone void of solid catalyst and maintained at an elevated temperature; the step of incorporating in said reaction mixture an ether selected from the group consisting of diethyl ether, beta, beta'-dichloro diethyl ether, and dioxane, in an amount falling within the range of from about 0.2 per cent to about 3.0 per cent by volume based on the quantity of benzene in said reaction mixture.

2,440,235
FINGER BANDAGE
Morris Solomon, Kew Gardens, N. Y.
Application June 7, 1944, Serial No. 539,099
1 Claim. (Cl. 128—157)



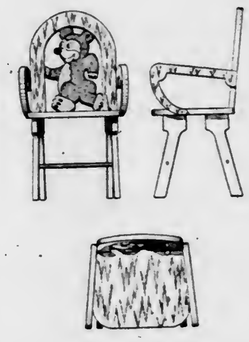
A bandage adapted to be utilized to protect the end of a digit, comprising, a body portion, a tapered central tab portion extending outwardly from the body portion, side portions extending outwardly from the body portion, the edges of said tab and side portions forming inwardly extending notches in the bandage at opposite sides of said tapered central tab portion adjacent the location where the edges of said tab and side portions normally merge with each other, an adhesive at one surface of said body and tab and side portions, a first gauze layer normally overlying a portion of said adhesive in the area of the body and tab portions and terminating at a location spaced from one edge of said body portion to thereby provide adjacent said edge a narrow adhesive area free of said first gauze layer, and additional gauze layers overlying said adhesive in the areas of said side portions and in said narrow area with inner adjacent edges thereof overlapping each other and overlying said first mentioned gauze layer.

DESIGNS



APRIL 20, 1948

149,328
DESIGN FOR A CIGARETTE DISPENSER
William Abrams, Chicago, Ill.
Application November 1, 1946, Serial No. 134,424
Term of patent 3½ years
(Cl. D85—2)

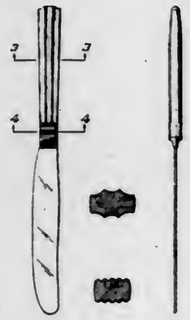


The ornamental design for a cigarette dispenser, as shown.

149,329
DESIGN FOR A CHAIR
Carlyle Norman Alexander, New Rochelle, N. Y.
Application January 21, 1947, Serial No. 136,280
Term of patent 14 years
(Cl. D15—1)

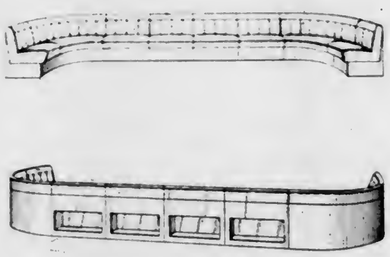
The ornamental design for a chair, as shown.

149,330
DESIGN FOR A CHAIR
Carlyle Norman Alexander, New Rochelle, N. Y.
Application January 21, 1947, Serial No. 136,281
Term of patent 14 years
(Cl. D15—1)



The ornamental design for a chair, as shown.

149,331
DESIGN FOR A CHAIR
Carlyle Norman Alexander, New Rochelle, N. Y.
Application January 21, 1947, Serial No. 136,282
Term of patent 14 years
(Cl. D15—1)

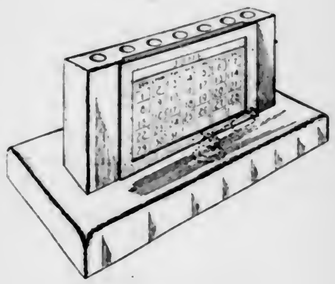


The ornamental design for a chair, as shown.

149,332
DESIGN FOR A KNIFE
Grosvenor N. Allen and William Gerth, Oneida, N. Y., assignors to Oneida Ltd., Oneida, N. Y., a corporation of New York
Application September 26, 1946, Serial No. 133,582
Term of patent 14 years
(Cl. D22—3)

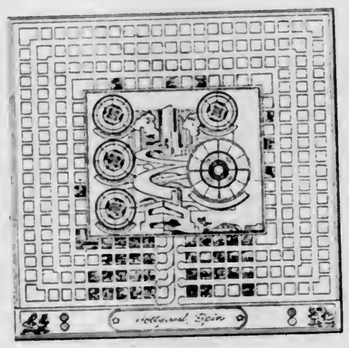
The ornamental design for a knife, substantially as shown and described.

149,333
DESIGN FOR A SETTEE
Robert I. Anderson, Grand Haven, and Bert Hoeker, Muskegon, Mich., assignors to The Brunswick-Balke-Collender Company, Chicago, Ill., a corporation of Delaware
Application March 13, 1946, Serial No. 127,454
Term of patent 14 years
(Cl. D15—11)



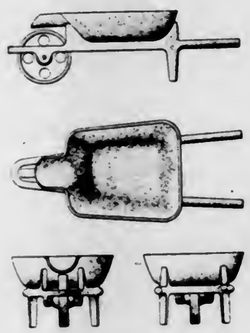
The ornamental design for a settee, as shown.

149,334
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Nicholas Barbieri, Providence, R. I., assignor to Uncas Manufacturing Company, a corporation of Rhode Island
Application August 27, 1946, Serial No. 132,886
Term of patent 14 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown and described.

149,335
DESIGN FOR A COMBINATION DESK UNIT
Charles H. Beatty, Philadelphia, Pa.
Application July 24, 1946, Serial No. 131,871
Term of patent 7 years
(Cl. D74—1)

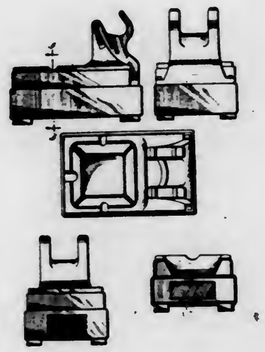


The ornamental design for a combination desk unit substantially as shown and described.

149,336
DESIGN FOR A GAME BOARD
Sam Binder, Los Angeles, Calif., assignor to World Games, Inc., Los Angeles County, Calif., a corporation of California
Application August 19, 1946, Serial No. 132,633
Term of patent 3½ years
(Cl. D34—5)

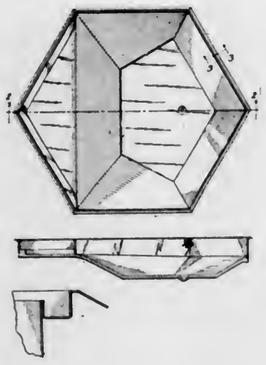
The ornamental design for a game board, as shown, and described.

149,337
DESIGN FOR AN ASH TRAY
Nicholas F. Caputo, Kearny, N. J.
Application January 15, 1946, Serial No. 125,557
Term of patent 3½ years
(Cl. D85—2)



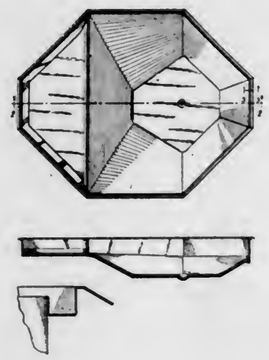
The ornamental design for an ash tray, as shown.

149,338
DESIGN FOR A CANDY SUCKER
Gustave W. Carlson, Superior, Wis.
Application August 5, 1946, Serial No. 132,290
Term of patent 14 years
(Cl. D82—2)



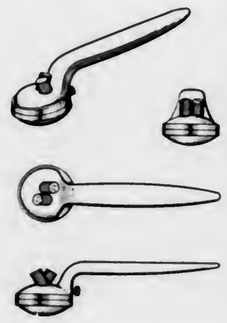
The ornamental design for a candy sucker, as shown and described.

149,339
DESIGN FOR A COMBINED TELEPHONE SUPPORT, ASH TRAY, AND AMPLIFYING LOUD SPEAKER
John Douglas Chirite, Detroit, Mich.
Application March 17, 1947, Serial No. 137,682
Term of patent 14 years
(Cl. D26—14)



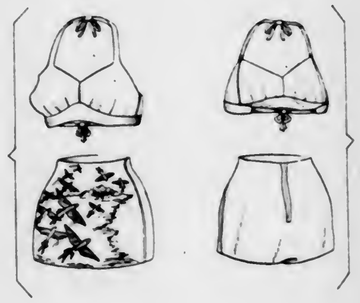
The ornamental design for a combined telephone support, ash tray and amplifying loud speaker, as shown.

149,340
DESIGN FOR A SWIMMING POOL
Erling A. Clemetsen, Long Grove, Ill.
Application March 11, 1946, Serial No. 127,348
Term of patent 14 years
(Cl. D4—4)



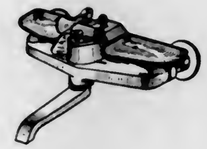
The ornamental design for a swimming pool, as shown.

149,341
DESIGN FOR A SWIMMING POOL
Erling A. Clemetsen, Long Grove, Ill.
Application March 11, 1946, Serial No. 127,350
Term of patent 14 years
(Cl. D4—4)



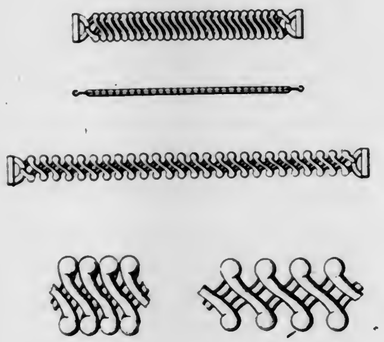
The ornamental design for a swimming pool, as shown.

149,342
DESIGN FOR A KNIFE SHARPENER
John E. Davis, Sherman Oaks, Calif., assignor to Na Mac Products Corp., Los Angeles, Calif., a corporation of California
Application August 13, 1946, Serial No. 132,480
Term of patent 7 years
(Cl. D37—1)



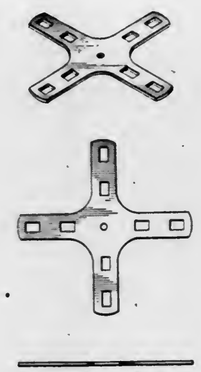
The ornamental design for a knife sharpener, as shown.

149,343
DESIGN FOR A BATHING SUIT
Mary Ann De Weese, Glendale, Calif.
Application September 13, 1946, Serial No. 133,293
Term of patent 14 years
(Cl. D3—17)



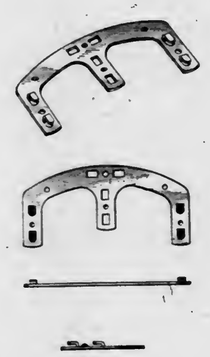
The ornamental design for a bathing suit, as shown.

148,344
DESIGN FOR A WATER FAUCET
Emil H. Fitter, Woodside, N. Y., assignor to Fitter Valve Division of the Tumpane Company, Long Island City, N. Y., a partnership composed of John J. Tumpane, Smithtown Branch, James P. Tumpane, Jr., East Elmhurst, Long Island, and Emil H. Fitter, Woodside, Long Island, N. Y.
Application May 3, 1946, Serial No. 129,252
Term of patent 14 years
(Cl. D91—3)



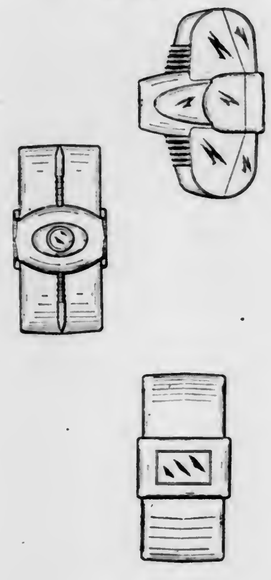
The ornamental design for a water faucet, as shown.

149,345
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
George E. Fournier, Pawtucket, R. I.
Application March 13, 1947, Serial No. 137,583
Term of patent 14 years
(Cl. D45—4)



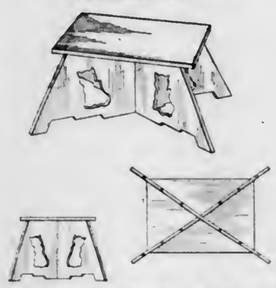
The ornamental design for a bracelet or similar article, as shown.

149,346
DESIGN FOR A TOY CONSTRUCTION PIECE
Charles A. Geib, Chicago, Ill.
Application December 18, 1946, Serial No. 135,582
Term of patent 14 years
(Cl. D34—15)



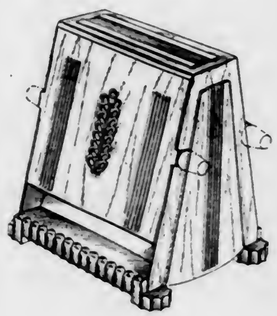
The ornamental design for a toy construction piece, substantially as shown.

149,347
DESIGN FOR A TOY CONSTRUCTION PIECE
Charles A. Geib, Chicago, Ill.
Application December 18, 1946, Serial No. 135,583
Term of patent 14 years
(Cl. D34—15)

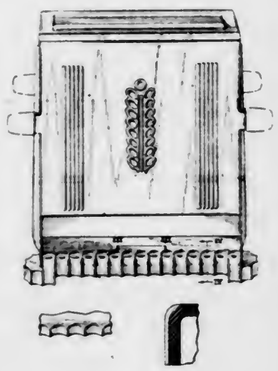


The ornamental design for a toy construction piece, substantially as shown.

149,348
DESIGN FOR A FILM VIEWER
Felix Gilbert, New York, N. Y., assignor to Eugene Manufacturing Corp., New York, N. Y., a corporation of New York
Application March 11, 1947, Serial No. 137,523
Term of patent 14 years
(Cl. D61—1)



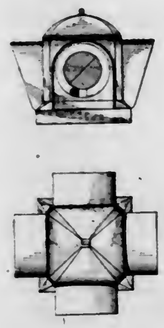
The ornamental design for a film viewer, substahtially as shown and described.



149,349
DESIGN FOR A STOOL
William L. Greyson, Flushing, N. Y.
Application September 7, 1946, Serial No. 133,178
Term of patent 14 years
(Cl. D15—8)

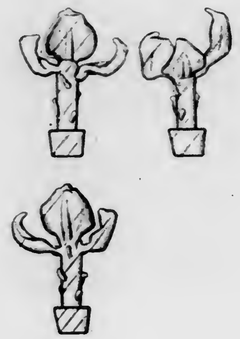
The ornamental design for a stool, substantially as shown.

149,350
DESIGN FOR A TOASTER
Lurelle Guild, Noroton, Conn., assignor to Westinghouse Electric Corporation, a corporation of Pennsylvania
Application January 23, 1947, Serial No. 136,315
Term of patent 14 years
(Cl. D81—10)



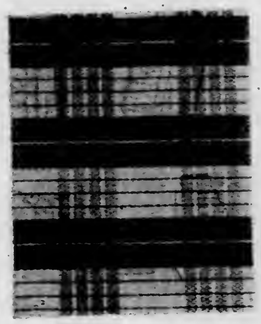
The ornamental design for a toaster, substantially as shown and described.

149,351
DESIGN FOR A PLACE MAT OR SIMILAR ARTICLE
Kenneth C. Hamilton, Milwaukee, Wis., assignor to Milwaukee Lace Paper Company, Milwaukee, Wis., a corporation of Wisconsin
Application March 20, 1947, Serial No. 137,772
Term of patent 14 years
(Cl. D59—2)



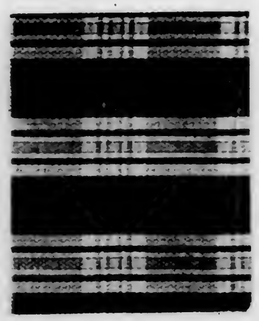
The ornamental design for a place mat or similar article, substantially as shown and described.

149,352
DESIGN FOR A TRAFFIC SIGNAL
John J. Hammer, Detroit, Mich.
Application April 12, 1946, Serial No. 128,552
Term of patent 3½ years
(Cl. D72—1)



The ornamental design for a traffic signal, substantially as shown and described.

149,353
DESIGN FOR A PERFUME BOTTLE STOPPER OR SIMILAR ARTICLE
John Herbst, New York, N. Y.
Application June 8, 1946, Serial No. 130,524
Term of patent 3½ years
(Cl. D58—10)



The ornamental design for a perfume bottle stopper or similar article, substantially as shown.

149,354
DESIGN FOR A PLASTIC FABRIC
Fritz Hollstein, West New York, N. J.
Application November 7, 1947, Serial No. 142,388
Term of patent 3½ years
(Cl. D92—1)

The ornamental design for a plastic fabric, substantially as shown.

149,355
DESIGN FOR A PLASTIC FABRIC
Fritz Hollstein, West New York, N. J.
Application November 7, 1947, Serial No. 142,389
Term of patent 3½ years
(Cl. D92—1)

The ornamental design for a plastic fabric, substantially as shown.

149,356
DESIGN FOR A COMBINED PENCIL SHARPENER AND ERASER
William R. Jalof, Los Angeles, Calif.
Application March 8, 1947, Serial No. 137,462
Term of patent 14 years
(Cl. D74—1)

The ornamental design for a combined pencil sharpener and eraser, substantially as shown.

149,357
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 11, 1947, Serial No. 136,836
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown.

149,358
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 12, 1947, Serial No. 137,537
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

149,359
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 12, 1947, Serial No. 137,538
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

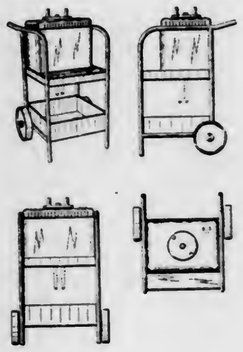
149,360
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 12, 1947, Serial No. 137,539
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

149,361
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 13, 1947, Serial No. 137,570
Term of patent 7 years
(Cl. D45—16)

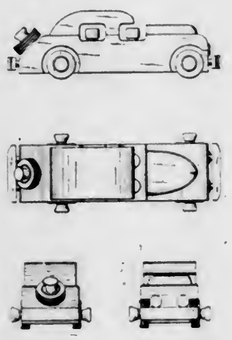
The ornamental design for a necklace or similar article, substantially as shown.

149,362
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 13, 1947, Serial No. 137,573
Term of patent 7 years
(Cl. D45—16)



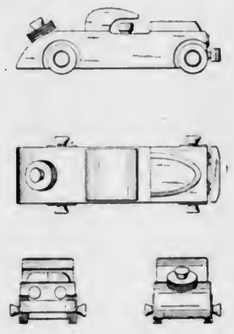
The ornamental design for a necklace or similar article, substantially as shown.

149,363
DESIGN FOR A SEPARABLE BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 13, 1947, Serial No. 137,577
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a separable brooch or similar article, substantially as shown.

149,364
DESIGN FOR A WELDING TRANSFORMER
John A. Kern, Chicago, Ill., assignor to Atomiko, Inc., Chicago, Ill., a corporation of Illinois
Application January 10, 1947, Serial No. 136,055
Term of patent 7 years
(Cl. D26—5)

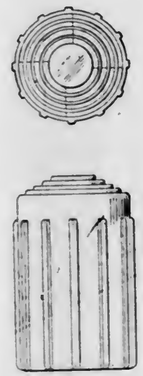


The ornamental design for a welding transformer, as shown and described.

149,365
DESIGN FOR A TOY AUTOMOBILE SEDAN
Olaf F. Larsen, Jr., Demarest, N. J., assignor to Noma Electric Corporation, New York, N. Y., a corporation of New York
Application March 14, 1946, Serial No. 127,517
Term of patent 3½ years
(Cl. D34—15)

The ornamental design for a toy automobile sedan, as shown.

149,366
DESIGN FOR A TOY ROADSTER
Olaf F. Larsen, Jr., Demarest, N. J., assignor to Noma Electric Corporation, New York, N. Y., a corporation of New York
Application April 3, 1946, Serial No. 128,229
Term of patent 3½ years
(Cl. D34—15)



The ornamental design for a toy roadster, as shown.

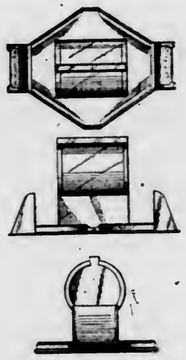
149,367
DESIGN FOR AN EARRING
Gordon Leary, Trenton, N. J.
Application May 31, 1946, Serial No. 130,245
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring, substantially as shown.

149,368
DESIGN FOR A VACUUM CLEANER ATTACHMENT
Joshua G. Lippincott, Scarsdale, N. Y., assignor to Lewyt Corporation, Brooklyn, N. Y., a corporation of New York
Application December 28, 1946, Serial No. 135,818
Term of patent 14 years
(Cl. D9—2)

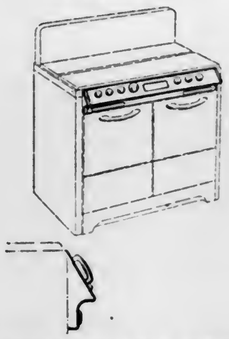
The ornamental design for a vacuum cleaner attachment, as shown.

149,369
DESIGN FOR A BLOUSE
Vanny McKelvey, Greenwich, Conn., assignor to The Mayehoff Company, South Norwalk, Conn., a corporation of Connecticut
Application June 10, 1947, Serial No. 139,561
Term of patent 14 years
(Cl. D3—25)



The ornamental design for a blouse, substantially as shown.

149,370
DESIGN FOR A TOY BANK OR SIMILAR ARTICLE
Joseph P. Mickus, Newark, N. J.
Application January 13, 1947, Serial No. 136,118
Term of patent 14 years
(Cl. D34—11)

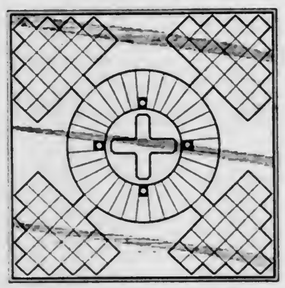


The ornamental design for a toy bank or similar article, as shown.

149,371
DESIGN FOR A CIGARETTE DISPENSER
David Nusbaum, Newark, N. J.
Application August 17, 1946, Serial No. 132,602
Term of patent 14 years
(Cl. D85—2)

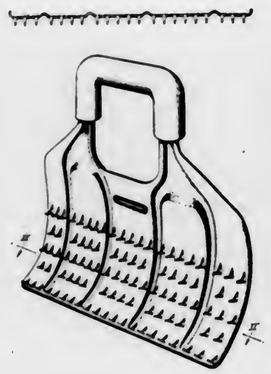
The ornamental design for a cigarette dispenser, as shown.

149,372
DESIGN FOR A COOKING STOVE
Daniel P. O'Keefe, Los Angeles, Calif.
Application April 19, 1946, Serial No. 128,769
Term of patent 14 years
(Cl. D81—25)



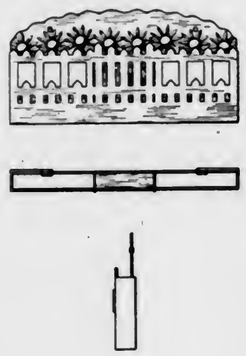
The ornamental design for a cooking stove, as shown and described.

149,373
DESIGN FOR A LACE MEDALLION
Reinhard A. Paessler, West New York, N. J.
Application July 18, 1947, Serial No. 140,362
Term of patent 7 years
(Cl. D3—9)



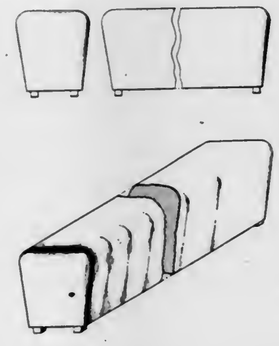
The ornamental design for a lace medallion, as shown and described.

149,374
DESIGN FOR A GAME BOARD
David Perlman, Detroit, Mich.
Application July 27, 1946, Serial No. 132,036
Term of patent 7 years
(Cl. D34—5)



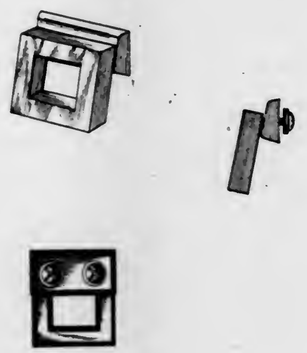
The ornamental design for a game board, substantially as shown.

149,375
DESIGN FOR A BAG-GRASPING DEVICE
Alvan M. Palmer, Los Angeles, and Frederick W. Rodgers, Pacoima, Calif.
Application April 26, 1946, Serial No. 128,965
Term of patent 14 years
(Cl. D54—13)



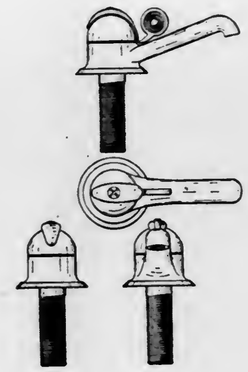
The ornamental design for a bag-grasping device, substantially as shown.

149,376
DESIGN FOR A MERCHANDISE DISPLAY DEVICE OR SIMILAR ARTICLE
Edwin P. Price, Jr., Wilmette, Ill.
Application April 26, 1946, Serial No. 128,982
Term of patent 7 years
(Cl. D80—9)



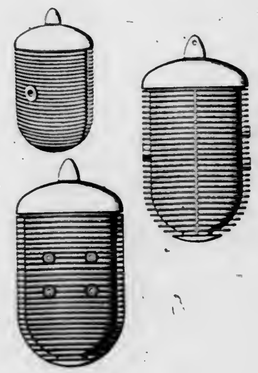
The ornamental design for a merchandise display device or similar article, substantially as shown.

149,377
DESIGN FOR A TABLE
Herbert Rosengren, Woodcliff Lake, N. J., assignor to Johnson & Johnson, a corporation of New Jersey
Application September 13, 1946, Serial No. 133,274
Term of patent 14 years
(Cl. D33—14)



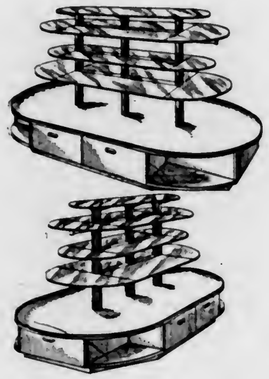
The ornamental design for a table as shown.

149,378
DESIGN FOR A DRAWER HANDLE
Alvin S. Rummelsburg, East Rockaway, N. Y.
Application September 29, 1947, Serial No. 141,651
Term of patent 7 years
(Cl. D10—8)



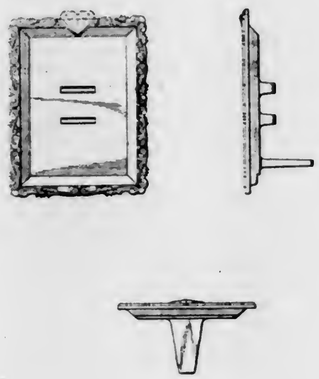
The ornamental design for a drawer handle, substantially as shown.

149,379
DESIGN FOR A FAUCET
Louis S. Sayre, Los Angeles, Calif.
Application February 10, 1947, Serial No. 136,817
Term of patent 14 years
(Cl. D91—3)



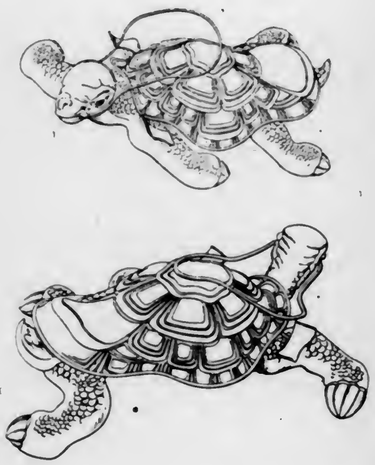
The ornamental design for a faucet, substantially as shown.

149,380
DESIGN FOR A COMBINATION OIL FILTER AND COOLER
Herman W. Schaefer, Culver City, Calif., assignor to W. Henderson Jones, Culver City, Calif.
Application June 29, 1946, Serial No. 131,178
Term of patent 7 years
(Cl. D46—1)



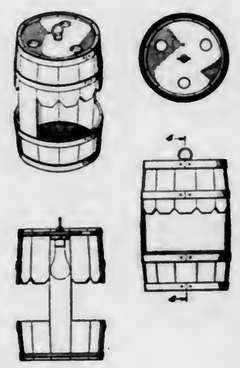
The ornamental design for a combination oil filter and cooler, substantially as shown.

149,381
DESIGN FOR A DISPLAY FIXTURE
Howard M. Schick, Lee's Summit, Mo.
Application April 7, 1947, Serial No. 138,200
Term of patent 14 years
(Cl. D80—9)



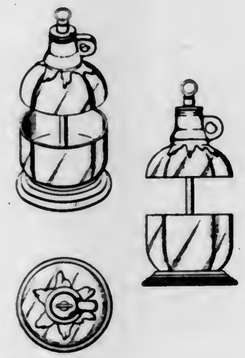
The ornamental design for a display fixture, substantially as shown.

149,382
DESIGN FOR A DISPLAY FRAME AND STAND OR SIMILAR ARTICLE
Maurice J. Schless, New York, N. Y.
Application June 6, 1947, Serial No. 139,498
Term of patent 14 years
(Cl. D80—9)



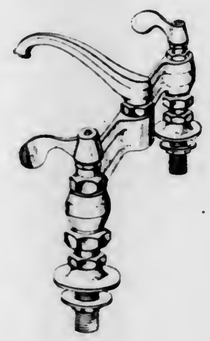
The ornamental design for a display frame and stand or similar article, as shown.

149,383
DESIGN FOR A WHEELED TOY TORTOISE
Harry Sebel, London, England
Application May 16, 1946, Serial No. 129,759
Term of patent 14 years
(Cl. D34—15)



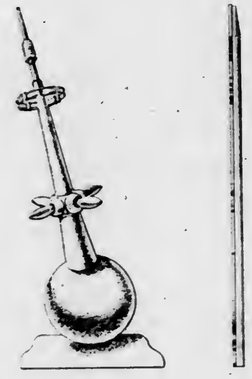
The ornamental design for a wheeled toy tortoise, as shown.

149,384
DESIGN FOR A LUMINOUS PLANT CONTAINER OR THE LIKE
Victor Sherry and Harry A. Plocky, Los Angeles, and Gustave F. Plocky, South Pasadena, Calif.
Application June 24, 1946, Serial No. 130,992
Term of patent 7 years
(Cl. D35—3)



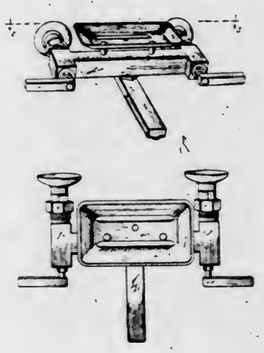
The ornamental design for a luminous plant container or the like, as shown.

149,385
DESIGN FOR A PLANT CONTAINER OR THE LIKE
Victor Sherry and Harry A. Plocky, Los Angeles, and Gustave F. Plocky, South Pasadena, Calif.
Application June 24, 1946, Serial No. 130,994
Term of patent 7 years
(Cl. D35—3)



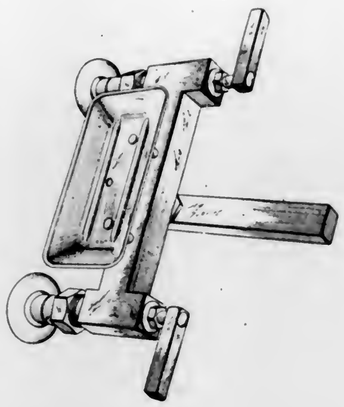
The ornamental design for a plant container or the like, as shown.

149,386
DESIGN FOR AN ARCH-STREAM OFFSET COMBINATION FAUCET STRUCTURE
Albert G. Smolensky, Cleveland, Ohio
Application October 5, 1946, Serial No. 133,788
Term of patent 14 years
(Cl. D91—3)



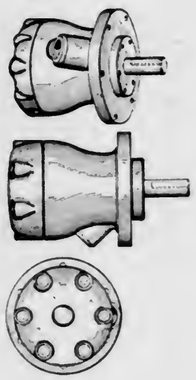
The ornamental design for an arch-stream offset combination faucet structure, as shown.

149,387
DESIGN FOR AN ADVERTISING DEVICE
William L. Stensgaard, Park Ridge, Ill., assignor to Radio Corporation of America, a corporation of Delaware
Application April 26, 1946, Serial No. 128,973
Term of patent 14 years
(Cl. D1—2)



The ornamental design for an advertising device, substantially as shown.

149,388
DESIGN FOR A FAUCET OR SIMILAR ARTICLE
Irwin W. Stratmore, Passaic, N. J., assignor to Ball Washing Machine Corp., Passaic, N. J., a corporation of New Jersey
Application November 14, 1946, Serial No. 134,769
Term of patent 3½ years
(Cl. D91—3)



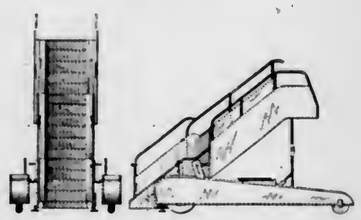
149,388—Continued

The ornamental design for a faucet or similar article, as shown.

149,389
DESIGN FOR A PUMP
Ernest J. Svenson, Rockford, Ill., assignor to Odin Corporation, Chicago, Ill., a corporation of Illinois
Application February 28, 1946, Serial No. 126,981
Term of patent 14 years
(Cl. D65—1)

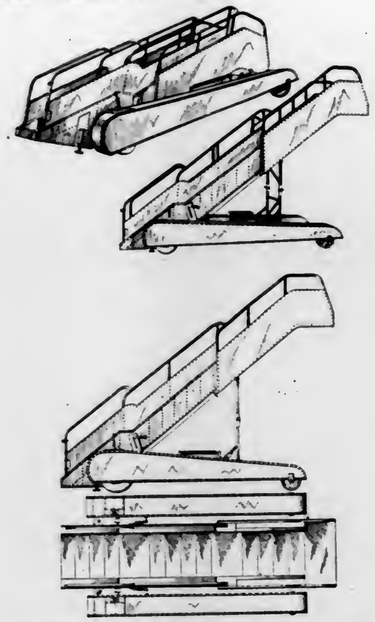
The ornamental design for a pump, substantially as shown.

149,390
DESIGN FOR A STUFFED TOY ANIMAL OR SIMILAR ARTICLE
Jacob Swedlin, New York, N. Y.
Application June 11, 1947, Serial No. 139,585
Term of patent 7 years
(Cl. D34—2)



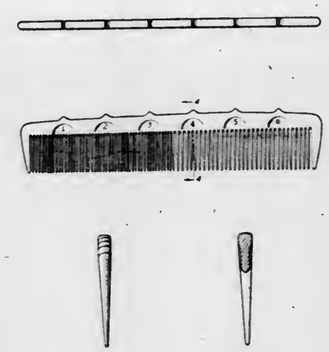
The ornamental design for a stuffed toy animal or similar article, substantially as shown.

149,391
DESIGN FOR A LAMP SHADE
Geneva U. Van Brunt, North Wilbraham, Mass.
Application February 5, 1947, Serial No. 136,692
Term of patent 7 years
(Cl. D48—16)



The ornamental design for a lamp shade, as shown.

149,392
DESIGN FOR AN ADJUSTABLE PASSENGER LOADING RAMP
Albert L. Varrieur, Baltimore, Md., assignor to The Glenn L. Martin Company, Baltimore, Md.
Application January 16, 1947, Serial No. 136,193
Term of patent 14 years
(Cl. D14—3)



149,392—Continued

The ornamental design for an adjustable passenger loading ramp, substantially as shown.

149,393
DESIGN FOR A MEASURING COMB
Richard Wheeler and Robert F. Cozad, Des Moines, Iowa
Application September 7, 1946, Serial No. 133,144
Term of patent 3½ years
(Cl. D86—8)

The ornamental design for a measuring comb, substantially as shown and described.

Patents expiring: Patent Numbers 1,802,333 to 1,803,309, inclusive, issued April 28, 1931, expire April 28, 1948

Condition of Applications Under Examination at Close of Business Apr. 9, 1948

(Total number of applications awaiting action, excluding Trade-Mark Division, 154,374; Trade-Mark Division, 35,601. Oldest new case, Apr. 19, 1946; oldest amended, Apr. 1, 1946.)

DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS

	Oldest new application awaiting Office action	Oldest amended application awaiting Office action	Applications awaiting action
	New	Amended	
1. GOLDBERG, A. J., Food Apparatus; Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons; Sewerage.	July 27	July 16	3,630
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying; Bee Culture; Dairy; Animal Husbandry; Presses; Tobacco; Textile Wringers; Butchering.	May 14	May 3	4,182
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	†July 2	†Feb. 7	1,545
4. BISHOP, WALTER C., Conveyors; Hoists; Handling Apparatus; Excavating; Elevators; Fire Escapes; Ladders; Scaffolds; Pneumatic Dispatch; Store Service; Mining, Quarrying, and Ice Harvesting.	Sept. 25	Aug. 6	3,684
5. ROBINSON, C. W., Harvesters; Acoustics; Sound Recording; Knotters	Apr. 29	May 1	1,776
6. SURLE, H., Carbon Chemistry (part)	†June 5	†May 7	1,800
7. HANLIN, GEORGE, Optics; Photographic Apparatus	†June 2	†Mar. 19	1,810
8. IMUS, A. E., Furniture; Racks and Cabinets	June 28	May 13	4,177
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	Oct. 24	Apr. 30	2,350
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Music; Modulators; Piezo-electric Crystals.	†May 7	†Mar. 20	1,456
11. BENHAM, E. V., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus.	†June 19	†Aug. 2	834
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	†May 15	July 11	2,049
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	June 20	May 21	2,494
14. FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	†Apr. 21	†Mar. 1	1,254
15. HENKIN, B., Plastics; Plastic Block and Earthenware Apparatus; Glass	Dec. 6	June 22	1,973
16. LOVEWELL, N. N., Television; Telephony	†July 1	Oct. 31	1,851
17. HABECKER, LEON B., Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding; Sheet or Web Feeding.	Oct. 23	July 24	1,931
18. KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal-Combustion Engines.	Oct. 18	June 3	1,779
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	Aug. 16	Aug. 27	1,846
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	Sept. 3	Aug. 12	2,060
21. MADER, R. C., Textiles	†Apr. 23	†Apr. 2	1,220
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance	Oct. 23	July 25	1,877
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	July 3	June 21	1,382
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Package and Article Carriers; Sewing Machines	†Mar. 20	†Feb. 5	2,377
25. BLAKELY, C. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	†Mar. 5	July 24	1,795
26. YOUNG, R. R., Electricity—Generation and Motive Power	†July 10	Aug. 16	1,428
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus); Liquid Treatment of Solids; General Cleaning; Ironing; Brush; Broom and Mop Making.	†Feb. 18	Sept. 18	3,109
28. SOLYOM, H. L., Heating; Metallurgical Apparatus; Internal-Combustion Engines (part); Cylinders; Pistons	†Mar. 17	Oct. 8	1,217
29. SHKLARIN, J. B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools	Nov. 13	July 8	3,017
30. BISHOFF, A., Automatic Temperature and Humidity Regulation; Illumination; Thermostats and Humidostats; Heating Systems; Ammunition and Explosive Devices.	†July 7	Aug. 26	2,408
31. DUNCOMBE, C. S., Mineral Oils; Carbocyclic or Acyclic Carbon Compounds (part)—e. g., Ketones, Aldehydes, Ethers, Hydroxy Compounds, Hydrocarbons, Halogenated Hydrocarbons.	†June 27	†July 1	2,149
32. LESH, KARL R., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation; Agitating; Wells; Earth Boring.	Nov. 1	May 16	2,952
33. KAUFFMAN, H. E., Bridges; Hydraulic and Earth Engineering; Building Structures; Roads and Pavements	June 21	June 14	3,501
34. SAPERSTEIN, S., Electricity—Transmission to Vehicles; Railways; Track Sanders; Signals and Indicators	Aug. 17	June 10	1,403
35. BROMLEY, E. D., Card and Sign Exhibiting; Dispensing; Filling and Closing Portable Receptacles; Ammunition and Explosive Charge Making.	Dec. 5	Sept. 4	2,973
36. McFADYEN, A. D., Automatic Weighers; Measuring and Testing; Force Measuring	May 14	Apr. 19	2,030
37. WEAVER, M. E., Electricity, Circuit Makers and Breakers	†Apr. 28	Nov. 23	1,544
38. ARNOLD, D., Coating Processes and Apparatus; Coating or Plastic Compositions (part); Rubber	Dec. 19	Dec. 10	1,761
39. WHITNEY, F. I., Fluid-Pressure Regulators; Valves; Water Distribution	May 11	May 10	2,845
40. DRUMMOND, E. J., Receptacles (part); Packages	†Apr. 11	Sept. 3	3,015
41. HERTZ, M., Recorders; Check-controlled Apparatus; Coin Handling; Article Dispensing Cabinets; Deposit Receptacles; Buckles, Buttons, Clasps.	May 28	June 3	2,770
42. MARANS, H., Telegraphy (part); Electric Signaling; Electricity, Voltage Magnitude and Phase Control Systems; Variable Transformer and Reactor Structure.	†July 29	†July 2	911
43. STONE, I. G., Medicines, Poisons and Cosmetics; Explosive Compositions; Sugar and Starch; Bleaching and Dyeing; Fluid Treatment of Textiles; Hides, Skins and Leathers.	†June 7	Dec. 5	1,426
44. HARVEY, L. P., Refrigeration; Preserving	Apr. 19	Apr. 23	1,304
45. MANTER, W. B., Shafting and Flexible Shaft Couplings; Wheels, Tires, Axles and Wheel Substitutes; Lubrication; Bearings and Guides; Belt and Sprocket Gearing; Spring Devices; Land Vehicles (part); Spring, Weight and Horsepower Motors.	June 6	June 10	2,853
46. MUSHAKE, W. I., Concentrating Evaporators; Fluid Sprinkling, Spraying and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers; Kitchen and Table Articles.	Sept. 10	June 4	1,970

NOTE.—The dates given are 1946 except where † indicates 1947.

(Total number of applications awaiting action, excluding Trade-Mark Division, 154,374; Trade-Mark Division, 35,601. Oldest new case, Apr. 19, 1946; oldest amended, Apr. 1, 1946.) DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
47. KANOF, WM. J., Motor Vehicles; Land Vehicles (part); Fluid Pressure Brakes	†May 23	Dec. 3	2,068
48. BERNSTEIN, S., Electricity, General Applications; Electric Igniters	Nov. 1	Oct. 5	1,575
49. SHEFFIELD, E. L., Drying and Gas or Vapor Contact with Solids; Ventilation; Liquid Separation or Purification.	May 27	Aug. 16	1,625
50. LEVIN, SAMUEL, Synthetic Resins	†July 8	Nov. 15	2,347
51. FRIEDMAN, M. H., Radiant Energy (part, e. g., Radio Transmission and Reception, Transmitters, Receivers, Antennae); Radiant Energy Communications.	†July 9	Oct. 4	1,837
52. KNOTTS, M. K., Supports; Chucks; Joint Packing; Pipe and Rod Joints or Couplings; Tool-Handle Fastenings; Pipes and Tubular Conduits.	†Apr. 10	Aug. 17	3,891
53. BRINDISI, M. V., Label Pasting and Paper Hanging; Book Making; Manifolding; Printed Matter, Stationery; Paper Files and Binders; Cutlery; Closures, Partitions and Panels, Flexible and Portable.	Sept. 6	Apr. 19	3,789
54. STRACHAN, O. W., Electric Lamp and Discharge Devices, Systems, Structure, Manufacture and Repair; Light Sensitive Circuits; Ray Energy Applications.	†May 16	†Jan. 16	1,856
55. BOWEN, S. T., Artificial Body Members; Dentistry; Surgery; Toilet	†Jan. 23	Apr. 5	1,870
56. COCKERILL, S., Electrical and Wave Energy Chemistry; Paper Making; Acetylene; Gas Mixing	†June 16	†May 12	1,177
57. NICOLSON, G. D., Toys; Amusement and Exercising Devices; Cutting and Punching; Bolt, Nut, Rivet, Nail, Screw, Chain, and Horseshoe Making; Driven and Screw Fastenings; Jewelry; Nut and Bolt Locks.	July 25	May 27	3,673
58. DOWELL, E. F., Abrading; Bottles and Jars; Stone Working; Making Metal Tools and Implements	†Feb. 8	Nov. 12	1,307
59. SHEPARD, P. W., Chemistry; Fertilizers; Gas, Heating and Illuminating; Heterocyclic Compounds (part)	Aug. 20	June 20	2,125
60. GLASS, R. L., Electricity—Heating; Welding; Furnaces; Battery Charging and Discharging; Consumable Electrode Lamp and Discharge Devices; Resistances and Rheostats; Prime Mover Dynamo Plants.	†July 10	Nov. 27	1,399

LIST OF TRADE-MARK APPLICANTS

PUBLISHED FOR OPPOSITION

Ace Leather Goods Repair Service, Chicago, Ill. Repairing, relining and refinishing of leather goods. Serial No. 528,241, Apr. 27. Class 55.

Ackerlind Steel Co., Inc., New York, N. Y. High-carbon, high-chromium, oil-quenching tool steel. Serial No. 529,845, Apr. 27. Class 14.

Aladdin Hearing Aid Manufacturing Co.: *See*—
Johnston, William E.

Aladdin Industries, Incorporated, Alexandria, Ind., and Chicago, Ill. Vacuum bottles and heat-insulated receptacles. Serial No. 480,126, Apr. 27. Class 2.

Albarr Products Co., Cortland, N. Y. Game board. Serial No. 513,794, Apr. 27. Class 22.

Allied Mills, Inc., Chicago, Ill. Stock feeds. Serial No. 528,169, Apr. 27. Class 46.

Allied Mills, Inc., Chicago, Ill. Dairy feed. Serial No. 528,172, Apr. 27. Class 46.

Alsan Manufacturing Company: *See*—
Frackman, Hy.

American Artists' Color Works, Inc., Brooklyn, N. Y. Artists' brushes. Serial No. 529,221, Apr. 27. Class 29.

American Battery Mfg. Company, doing business as Arrow Battery Company. Electric storage batteries. Serial No. 532,089, Apr. 27. Class 21.

American Hard Rubber Company, Hempstead and New York, N. Y. Steering wheels, for automobiles. Serial No. 518,866, Apr. 27. Class 19.

Anchor Hocking Glass Corporation, Lancaster, Ohio. Sealing machines. Serial No. 528,605, Apr. 7. Class 23.

Arcos Corporation, Philadelphia, Pa. Rod holders. Serial No. 518,646, Apr. 27. Class 21.

Arcos Corporation, Philadelphia, Pa. Consumable metal cutting rods. Serial No. 518,647, Apr. 27. Class 14.

Argus, Incorporated, Ann Arbor, Mich. Photographic lenses and lens assemblies. Serial No. 529,339, Apr. 27. Class 26.

Aristocrat Leather Products, Inc., New York, N. Y. Wallets, bill folds, pocket books, etc. Serial No. 532,791. Apr. 27. Class 3.

Armstrong Cork Company, Manheim Township, Lancaster Co., Pa. Nursing bottles. Serial No. 529,955, Apr. 27. Class 44.

Arrow Battery Company: *See*—
American Battery Mfg. Company.

Auburn Rubber Corporation, Auburn, Ind. Shoe soles, half soles, heels and etc. Serial No. 485,984, Apr. 27. Class 39.

Auerbach Shoe Company, Boston, Mass. Misses', women's and children's shoes. Serial No. 501,812, Apr. 27. Class 39.

Babson Bros. Co., Chicago, Ill. Vacuum testing apparatus for determining floor conditions in a vacuum line. Serial No. 526,550, Apr. 27. Class 26.

Bank of America National Trust and Savings Association, San Francisco, Calif. Credit financing services. Serial No. 528,982, Apr. 27. Class 55.

Barker Greeting Card Company, Cincinnati, Ohio. Greeting cards. Serial No. 501,492, Apr. 27. Class 38.

Barok, George D., Columbus, Ohio. Printed index forms. Serial No. 512,568, Apr. 27. Class 37.

Batcheller, Campbell K., doing business as Robinwood, New York, N. Y. Wood plaques and figurines. Serial No. 523,051, Apr. 27. Class 50.

Baton Rouge Rice Mills, Inc., Baton Rouge, La. Rice. Serial No. 532,997, Apr. 27. Class 46.

Berman, Gustave S., New York, N. Y. Parasols and umbrellas. Serial No. 504,317, Apr. 27. Class 41.

Black Manufacturing Co., The, Baltimore, Md. Spray gun. Serial No. 526,564, Apr. 27. Class 23.

Blumenthal-Meyer Company, Los Angeles, Calif. Men's, women's and children's nightwear. Serial No. 524,052, Apr. 27. Class 39.

Brand and Millen, Limited, Long Branch, Ontario, Canada. Radio receiving sets, electronic record players and battery operated portable fluorescent lamps. Serial No. 520,857, Apr. 27. Class 21.

Brarten Pharmaceutical Company, Chattanooga, Tenn. Medicinal preparation. Serial No. 523,654, Apr. 27. Class 6.

Brown-Electro Company: *See*—
Brown, Ual J.

Brown, Ual J., doing business as Brown-Electro Company, Oklahoma City, Okla. Electrolytic apparatus. Serial No. 521,055, Apr. 27. Class 14.

Browne, Glenn R., Hoopeston, Ill. Horses and cattle. Serial No. 525,295, Apr. 27. Class 1.

Brushmakers, Inc., Minneapolis, Minn. Brushes. Serial No. 506,579, Apr. 27. Class 29.

Buchhagen, Walter H., doing business as Bucknell Company, Nutley, N. J. Collapsible go-carts and perambulators. Serial No. 519,000, Apr. 27. Class 19.

Buchsbaum, S., & Co., Chicago, Ill. Key cases. Serial No. 504,154, Apr. 27. Class 3.

Bucknell Company: *See*—
Buchhagen, Walter H.

Cannon Shoe Company, Baltimore, Md. Shoes. Serial No. 475,356, Apr. 27. Class 39.

Carr-Consolidated Biscuit Company, Wilkes-Barre, Pa. Malted cream cookies. Serial No. 520,859, Apr. 27. Class 46.

Central Petroleum Company, Cleveland, Ohio. Oil for the protection of animals from flies, mosquitoes, gnats, etc. Serial No. 537,983, Apr. 27. Class 6.

Central Ohio Supply Co., The, Columbus, Ohio. Water soluble powdered or granular detergent compound containing water softening properties. Serial No. 517,972, Apr. 27. Class 4.

Chicago Belting Company, Chicago, Ill. Leather belting. Serial No. 532,390, Apr. 27. Class 35.

Clarin Manufacturing Company, Chicago, Ill. Folding chairs. Serial No. 530,169, Apr. 27. Class 32.

Clark, J. R., Company, The, Spring Park, Minn. Clothes drying racks. Serial No. 530,379, Apr. 27. Class 24.

Cobbs Distilling Corporation, Philadelphia, Pa. Distilled potable alcoholic beverages. Serial No. 526,599, Apr. 27. Class 49.

Cochran, Jacqueline, doing business as Jacqueline Cochran and Jacqueline Cochran Cosmetics, assignor to Jacqueline Cochran, Inc., Newark, N. J. Cosmetics and beauty preparations. Serial No. 536,585, Apr. 27. Class 6.

Cochran, Jacqueline, doing business as Jacqueline Cochran and Jacqueline Cochran Cosmetics, assignor to Jacqueline Cochran, Inc., Newark, N. J. Cosmetic and beauty preparations. Serial No. 536,585, Apr. 27. Class 6.

Cochran, Jacqueline, Cosmetics: *See*—
Cochran, Jacqueline.

Cochran, Jacqueline, Inc., assignee: *See*—
Cochran, Jacqueline.

Coleman Company, Inc., The, Wichita, Kans. Self-heating gasoline sad-irons. Serial No. 533,145, Apr. 27. Class 24.

Continental Distilling Corporation, Philadelphia, Pa. Distilled potable alcoholic beverages. Serial No. 526,595, Apr. 27. Class 49.

Continental Distilling Corporation, Philadelphia, Pa. Distilled potable alcoholic beverages. Serial No. 526,638, Apr. 27. Class 49.

Cowles Detergent Company, The, Cleveland, Ohio. Cleansing preparation. Serial No. 531,892, Apr. 27. Class 4.

Crane Co., Chicago, Ill. Shallow well pumps, deep well pumps, and jet pumps. Serial No. 521,246, Apr. 27. Class 23.

Cunningham, A., Limited, Stewarton, Scotland. Women's knitted and woven frocks and suits, etc. Serial No. 508,415, Apr. 27. Class 39.

Cutter Laboratories, Berkeley, Calif. Biological immunizing agent for immunizing against diphtheria and whooping cough by inoculation. Serial No. 509,637, Apr. 27. Class 6.

Danelectro Corporation, The, Red Bank, N. J. Audio-frequency amplifying units. Serial No. 529,440, Apr. 27. Class 21.

Darworth Incorporated, Simsbury, Conn. Toxic vapor producing material. Serial No. 525,303, Apr. 27. Class 6.

Dennett, Ellis H., Sudbury, Mass. Cleaning fluid. Serial No. 510,575, Apr. 27. Class 4.

Diebold Incorporated, Canton, Ohio. Heat responsive vault door relocking devices. Serial No. 530,387, Apr. 27. Class 25.

District of Columbia Paper Mills, Inc., Washington, D. C. Blotting paper, box cover paper, cover papers, etc. Serial No. 513,034, Apr. 27. Class 37.

Ditto, Incorporated, Chicago, Ill. Carbon paper. Serial Nos. 531,997–532,000, Apr. 27. Class 11.

Ditto, Incorporated, Chicago, Ill. Carbon paper. Serial No. 532,002–3, Apr. 27. Class 11.

Dixon, Joseph, Crucible Company, Jersey City, N. J. Lead pencils, rubber erasers, pencil point protectors, etc. Serial No. 524,692, Apr. 27. Class 37.

Dow Chemical Company, The, Midland, Mich. Aromatic chemical. Serial No. 540,053–54, Apr. 27. Class 6.

Duro-Flex Co.: *See*—
Moe, Herman.

Eagle Lock Company, The, Terryville, Conn. Trunk locks, cabinet locks, and door locks. Serial No. 529,613, Apr. 27. Class 25.

Eaton's of California: *See*—
Jacobs, Philip.

Elliott Company, Jeannette, Pa. Electric motors and electric generators. Serial No. 528,201, Apr. 27. Class 21.

Esquire, Inc., Chicago, Ill. Calendars. Serial No. 499,832, Apr. 27. Class 38.

Essential Chemicals Co., Milwaukee, Wis. Liquid cleaner for floors, walls, woodwork, and dishes. Serial No. 513,396, Apr. 27. Class 4.

Etna Machine Company, The, Toledo, Ohio. Swaging machines, cut-off machines, etc. Serial No. 528,436, Apr. 27. Class 23.

Exhibit Supply Company, Chicago, Ill. Coin-controlled amusement apparatus. Serial No. 529,245, Apr. 27. Class 22.
Exhibit Supply Company, Chicago, Ill. Coin-controlled amusement apparatus. Serial No. 529,247, Apr. 27. Class 22.
Faber-Castell, A. W., Pencil Co., Inc., Newark, N. J. Lead pencils, colored pencils, copying pencils, etc. Serial No. 529,371, Apr. 27. Class 37.
Factor, Max, & Co., Los Angeles, Calif. Cosmetics. Serial No. 532,244, Apr. 27. Class 6.
Fashion Form Mfg. Corporation, White Plains, N. Y. Garter belts and maternity suspender garters. Serial No. 515,374, Apr. 27. Class 39.
First Texas Chemical Mfg. Co., Dallas, Tex. Vaginal astringent douch powder, used for its antiseptic, astringent, and deodorant values. Serial No. 523,953, Apr. 27. Class 6.
Flax Processing and Linen Company, Greystone, R. I. Linen yarn. Serial No. 515,493, Apr. 27. Class 43.
Foglesong, Howard D., Huntington, W. Va. Glass articles. Serial No. 514,698, Apr. 27. Class 33.
Foster-Dack Company, Chicago, Ill. Mild vegetable laxative. Serial No. 534,888, Apr. 27. Class 6.
Foster-Dack Company, Chicago, Ill. Rectal ointment. Serial No. 534,889, Apr. 27. Class 6.
Foy Electro-Chemical Company: *See*—
Foy, Frank K.
Foy, Frank K., Ansonia, Conn. Salt compounds for use in electro-chemical cleaning processes for metals. Serial No. 507,631, Apr. 27. Class 4.
Foy, Frank K., doing business as Foy Electro-chemical Company, Ansonia, Conn. Detergents. Serial No. 507,633, Apr. 27. Class 4.
Frackman, Hy, doing business as Alsan Manufacturing Company, New York, N. Y. Finger rings. Serial No. 534,524, Apr. 27. Class 28.
Fuhrman & Levitt, Inc., Philadelphia, Pa. Children's dresses. Serial No. 539,693, Apr. 27. Class 39.
Fuller, William, doing business as Sportissue Company, Redlands, Calif. Toilet paper. Serial No. 519,746, Apr. 27. Class 37.
Gairay Shoe Company, Lawrence, Mass. Shoes. Serial No. 524,392, Apr. 27. Class 39.
Galter Products Co., Chicago, Ill. Cameras. Serial No. 529,259, Apr. 27. Class 26.
Garrett, George K., Company, Inc., Philadelphia, Pa. Roller skates, ice skates, convertible ice and roller skates, etc. Serial No. 527,509, Apr. 27. Class 22.
Garrett, George K., Company, Inc., Philadelphia, Pa. Roller skates, ice skates, convertible ice and roller skates, etc. Serial No. 527,845, Apr. 27. Class 22.
General Biochemicals, Inc., Chagrin Falls, Ohio. Milk, cheese, and butter cultures. Serial No. 511,808, Apr. 27. Class 46.
General Fibre Products Co., Maspeth, N. Y. Cake support. Serial No. 491,914, Apr. 27. Class 37.
General Shoe Corporation, Nashville, Tenn. Women's, misses', and children's shoes, slippers, mules, etc. Serial No. 503,160, Apr. 27. Class 39.
Gevaert Photo Producten, Antwerp, Belgium. Sensitized photographic papers, photographic plates, photographic films, etc. Serial No. 520,504, Apr. 27. Class 26.
Giannini, Peter, Santa Clara, Calif. Fresh vegetables. Serial No. 523,012, Apr. 27. Class 46.
Gifford, C. M., & Sons, San Diego, Calif. Canned olives. Serial No. 532,219, Apr. 27. Class 46.
Givren, E. J., Shoe Co., Inc., Rockland, Mass. Shoes. Serial No. 528,270, Apr. 27. Class 39.
Good Luck Glove Company, Carbondale, Ill. Fabric work gloves. Serial No. 529,009, Apr. 27. Class 39.
Good Luck Glove Company, Carbondale, Ill. Fabric work gloves. Serial No. 529,012, Apr. 27. Class 39.
Good Luck Glove Company, Carbondale, Ill. Fabric work gloves. Serial No. 529,026, Apr. 27. Class 39.
Gotham Hosiery Company, Inc., New York, N. Y. Hosiery. Serial No. 527,126, Apr. 27. Class 39.
Gould, Chester E., doing business as Chester E. Gould's Herb Laboratory, Malden, Mass. Toys for cats filled with catnip herb. Serial No. 533,732. Apr. 27. Class 3.
Gould's, Chester E., Herb Laboratory: *See*—

Composition containing chemical ingredients for strengthening, sterilizing, etc. Flower Foods, Inc. 425,514, Nov. 26, 1946. Republished Apr. 27.
Cream, Facial night. Anatole Robbins, Inc. 438,509, Apr. 27; Serial No. 505,858, published Jan. 27, 1948.
Cream, Permanent wave. W. G. Shelton Company. 397,163, Aug. 25, 1942. Republished Apr. 27.
Decolorizing carbon, Vegetable. N. V. Purit Maatschappij ter vervaardiging van plantaardige ontkleuringskool, "Purit." 438,508, Apr. 27; Serial No. 505,711, published Feb. 3, 1948.
Dental plate powder. Fasteeth, Incorporated. 373,915, Dec. 26, 1939. Republished Apr. 27.
Dental plate powder. Fasteeth, Incorporated. 373,925, Dec. 26, 1939. Republished Apr. 27.
Dentifrice. Procter & Gamble Company. 385,915, Mar. 25, 1941. Republished Apr. 27.
Disinfectant. H. Shapiro. 438,502, Apr. 27; Serial No. 497,975, published Aug. 19, 1947.
Disinfectants, germicides, and sterilizers. Diversey Manufacturing Company. 224,577, Mar. 1, 1927. Republished Apr. 27.
Drops, nasal spray and throat spray, Nasal. Broemmel's Pharmaceuticals. 408,531, Aug. 15, 1944. Republished Apr. 27.
Eau-de-cologne water, perfumery, hair tonics, etc. P. P. Mülhens. 236,768, Dec. 20, 1947. O. G. Apr. 27.
Embalming fluid. National Casket Company, Incorporated. 500,140–1, Apr. 27; Serial Nos. 528,939–40, published Feb. 3, 1948.
Fumigating compounds. Pittsberg Chemical Co. 415,298, Aug. 7, 1945. Republished Apr. 27.
Gases in cartridge containers. Nu-Whip Corp. 335,695, June 9, 1936. Republished Apr. 27.
Germicidal and fungicidal preparations. Medical Chemicals, Inc. 365,069, Feb. 21, 1939. Republished Apr. 27.
Germicidal and fungicidal preparations. Medical Chemicals, Inc. 373,904, Dec. 26, 1939. Republished Apr. 27.
Hair tonic and dandruff remedy. F. Hess. 188,445, Aug. 26, 1924. Republished Apr. 27.
Lye. B. T. Babbitt, Inc. 500,145, Apr. 27; Serial No. 529,862, published Jan. 27, 1948.
Magnesia carbonate. Keasbey & Mattison Company. 359,263, Aug. 9, 1938. Republished Apr. 27.
Magnesium carbonate and magnesium oxide. Keasbey & Mattison Company. 366,922, May 22, 1939. Republished Apr. 27.
Magnesium carbonate and magnesium oxide. Keasbey & Mattison Company. 373,963, Dec. 26, 1939. Republished Apr. 27.
Make-ups, Theatrical. M. Factor. 241,483, renewed May 1, 1948. O. G. Apr. 27.
Medicinal preparation intended to increase the flow of human milk. Nutrolactis Company. 25,312, Oct. 9, 1894. Republished Apr. 27.
Medicinal preparations. Peerless Laboratories. 438,512, Apr. 27; Serial No. 508,123, published Feb. 3, 1948.
Mixture of corrosive sublimate and hydrochloric acid. Mallinckrodt Chemical Works. 314,319, June 26, 1934. Republished Apr. 27.
Mixture, which is applied to grass for the treatment of brown patch. Mallinckrodt Chemical Works. 500,130, Apr. 27; Serial No. 526,949, published Jan. 27, 1948.
Oil for the treatment of full fashioned hosiery. Northmont Hosiery Corporation. 364,990, Feb. 21, 1939. Republished Apr. 27.
Oils, colorings, etc., Essential. Stevenson & Howell, Limited. 67,879, re-renewed Feb. 25, 1948. O. G. Apr. 27.
Ointment. Sargeant Acnoid Pharmaceutical Co., Inc. 420,012, Mar. 19, 1946. Republished Apr. 27.
Oxazolidinediones and salts thereof, Substituted. Mallinckrodt Chemical Works. 500,127, Apr. 27; Serial No. 526,868, published Jan. 27, 1948.
Pastes and powders. Daltroff, E., & Cie. 240,071, renewed Mar. 20, 1948. O. G. Apr. 27.
Penicillin product. Marlo Lab., Inc. 438,514, Apr. 27; Serial No. 508,299, published Dec. 9, 1947.
Perfumes, eaux de cologne, and toilet water. Société des Parfums Ronsard. 438,529, Apr. 27; Serial No. 514,070, published Jan. 27, 1948.
Petroleum hydrocarbon solvents, Liquid. Kendall Refining Company. 428,125, Mar. 11, 1947. Republished Apr. 27.
Photographic flash light materials, photographic developing and hardening powders, etc. Eastman Kodak Co. 67,012, re-renewed Jan. 14, 1948. O. G. Apr. 27.
Poultry mixture for the prevention of parasites. J. J. Ladner. 438,532, Apr. 27; Serial No. 514,824, published Feb. 3, 1948.
Preparation for acute, relaxed and disturbed conditions of the stomach and bowels. Fahrney, Dr. Peter, & Sons Co. 377,478, May 7, 1940. Republished Apr. 27.
Preparation for securing dental plates in place. Fasteeth Incorporated. 331,872, Jan. 21, 1936. Republished Apr. 27.
Preparation in tablet form. Lanteen Medical Laboratories, Inc. 438,522, Apr. 27; Serial No. 512,513, published July 22, 1947.
Preparation used for feminine hygienne. D. A. Gray. 365,845, Mar. 21, 1939. Republished Apr. 27.
Preparation useful in the treatment of asthmatic and such other conditions. Stearns, Frederick, & Co. 242,409, renewed May 22, 1948. O. G. Apr. 27.

Salve. D. A. Long. 408,543, Aug. 15, 1944. Republished Apr. 27.
Sedative and analgesic preparation. Abbott Laboratories. 436,707, Feb. 17, 1948. Corrected. O. G. Apr. 27.
Shampoo, hair lacquer and cream rinse. La Maur Products, Inc. 438,537, Apr. 27; Serial No. 516,422, published Dec. 23, 1947.
Skin-softening preparation. Compana Corporation. 234,573, renewed Nov. 1, 1947. O. G. Apr. 27.
Sterile solution. Harrower Laboratory, Inc., The. 500,143, Apr. 27; Serial No. 529,262, published Feb. 3, 1948.

Tetralodphenolphthalein sodium salt. Mallinckrodt Chemical Works. 500,129, Apr. 27; Serial No. 526,936, published Jan. 20, 1948.
Therapeutic compound. U. S. Vitamin Corporation. 500,142, Apr. 27; Serial No. 529,117, published Jan. 27, 1948.
Wax emulsions, Aqueous and nonaqueous. Johnson, S. C., & Son, Inc. 402,064, June 29, 1943. Republished Apr. 27.
Wax emulsions, Aqueous and nonaqueous. Johnson, S. C., & Son, Inc. 416,291, Sept. 4, 1945. Republished Apr. 27.

CLASS 7

Sash-cord, hop-twine, and mattress-twine, Braided cotton. A. F. Reid. 34,328, Mar. 20, 1900. Republished Apr. 27.
Sash-cords and flax thread or gilling-thread, Braided. A. F. Reid. 34,329, Mar. 20, 1900. Republished Apr. 27.

CLASS 8

Pipes. London House, Ltd. 369,342, July 18, 1939. Republished Apr. 27.
Pipes, Smokers'. London House, Ltd. 337,877. Aug. 25, 1936. Republished Apr. 27.

CLASS 9

Pads, gun butt extension spacers and gun butt plates, Gun recoil. Mershon Co., Inc. 438,519, Apr. 27; Serial No. 510,790, published Jan. 27, 1947.

CLASS 10

Fertilizers. Lion Oil Company. 500,123, Apr. 27; Serial No. 512,185, published Feb. 3, 1948.

CLASS 11

Carbon paper and typewriter ribbons. Write Incorporated. 500,144, Apr. 27; Serial No. 529,329, published Feb. 3, 1948.
Carbon papers and typewriter ribbons. Kee Lox Manufacturing Company. 388,211, June 17, 1941. Republished Apr. 27.
Ink, Writing. Parker Pen Company, The. 389,780, Aug. 19, 1941. Republished Apr. 27.
Mixture of low boiling liquid hydrocarbons suitable for use in rotogravure inks. American Mineral Spirits Company. 394,259, Mar. 31, 1942. Republished Apr. 27.
Typewriter ribbons. Ames Supply Company. 438,539, Apr. 27; Serial No. 519,159, published Jan. 27, 1948.

CLASS 12

Asbestos boards, asbestos sheets, asbestos lumber, etc. Keasbey & Mattison Company. 344,320, Mar. 16, 1937. Republished Apr. 27.
Asbestos-cement pipes, asbestos-cement bends, asbestos-cement elbows, etc. Keasbey & Mattison Company. 385,759, Mar. 18, 1941. Republished Apr. 27.
Asbestos cements, asbestos papers, asbestos shingles, composition shingles, etc. Keasbey & Mattison Company. 359,222, Aug. 9, 1938. Republished Apr. 27.
Blocks and tile, Refractory. M. H. Detrick Company. 402,279, July 13, 1943. Republished Apr. 27.
Blocks and tile, Refractory. M. H. Detrick Company. 403,472, Sept. 28, 1943. Republished Apr. 27.
Brick in plastic form, Fire. S. Obermayer Company. 192,777, Dec. 9, 1924. Republished Apr. 27.
Cement, Furnace. S. Obermayer Company. 179,484, Feb. 12, 1924. Republished Apr. 27.
Doors. Kinnear Manufacturing Company. 327,278, Aug. 20, 1935. Republished Apr. 27.
Partitions, metal partitions, structural parts of such partitions and fittings therefore, etc., Removable. E. F. Hauserman Company. 322,752, Mar. 19, 1935. Republished Apr. 27.
Puttying and caulking compounds. Presstite Engineering Company. 389,426, Aug. 5, 1941. Republished Apr. 27.
Waterproofing and weatherproofing compositions. Western Waterproofing Company. 346,154, May 18, 1937. Republished Apr. 27.

CLASS 13

Ball cocks, flush valves, tank fittings. Scovill Manufacturing Company. 234,663, renewed Nov. 1, 1947. O. G. Apr. 27.
Fasteners of the slider controlled type, Separable. Hookless Fastener Company. 243,746, June 26, 1928. Republished Apr. 27.
Fasteners, Slider-controlled. North & Judd Manufacturing Company. 245,274, Aug. 7, 1928. Republished Apr. 27.
Fence, Wire. Keystone Fence Company. 62,025, renewed Apr. 16, 1947. O. G. Apr. 27.
Fence, Wire. Keystone Fence Company. 62,313, renewed Apr. 30, 1947. O. G. Apr. 27.
Fencing, Wire. American Steel and Wire Company of New Jersey. 241,507, renewed May 1, 1948. O. G. Apr. 27.
Plumbing supplies. Crest Manufacturing Co., Inc. 239,062, renewed Feb. 21, 1948. O. G. Apr. 27.
Regulators and other named hardware, etc., Pressure. Julian D'Este Company. 230,461, renewed July 26, 1947. O. G. Apr. 27.
Screw connections and parts of screw connections. Aircraft Screw Products Company, Inc. 422,228, July 9, 1946. Republished Apr. 27.
Valves, strainers, and cocks. United Injector Co. 59,681, Jan. 15, 1907. Republished Apr. 27.

CLASS 14

Alloy metal, Processed cast iron. Spuck Iron & Foundry Co. 500,135, Apr. 27; Serial No. 527,221, published Jan. 20, 1948.
Alloy steel. Nitralloy Corporation. 438,553, Apr. 27; Serial No. 524,200, published Jan. 27, 1948.
Castings, Finished metal. Stainless Cavity Corp. 438,516, Apr. 27; Serial No. 509,122, published Jan. 27, 1948.
Drop-forged parts. Duff Manufacturing Company. 131,302, May 11, 1920. Republished Apr. 27.
Forgings, Steel. Heppenstall Forge & Knife Company. 233,787, renewed Oct. 11, 1947. O. G. Apr. 27.
Iron, high silicon cast iron pigs and fragments thereof, Pig. Jackson Iron & Steel Company. 500,124, Apr. 27; Serial No. 516,132, published Jan. 27, 1948.
Metal shapes and sheets, Ferrous. Dry-Zero Corporation. 365,622, Mar. 14, 1939. Republished Apr. 27.
Posts and car stops, Bumping. Buda Company. 500,139, Apr. 27; Serial No. 527,752, published Jan. 20, 1948.
Tracks. Richards-Wilcox Manufacturing Company. 500,134, Apr. 27; Serial No. 527,186, published Jan. 20, 1948.
Wire. American Steel and Wire Company of New Jersey. 241,799, renewed May 8, 1948. O. G. Apr. 27.

CLASS 15

Gasoline and motor fuel oils. Pure Oil Company. 399,615, Jan. 19, 1943. Republished Apr. 27.
Oils and petrolatum waxes, Viscous. Kendall Refining Company. 427,252, Feb. 4, 1947. Republished Apr. 27.

CLASS 16

Coloring material for paints. Bennett Glass & Paint Company. 344,220, Mar. 16, 1937. Republished Apr. 27.
Oil and spirit stains, varnish stain, varnish, etc. S. C. Johnson & Son. 230,757, Aug. 2, 1927. Republished Apr. 27.
Paint enamels. S. C. Johnson & Son. 298,967, Nov. 15, 1932. Republished Apr. 27.
Paint enamels and liquid polish. S. C. Johnson & Son, Inc. 321,364, Jan. 29, 1935. Republished Apr. 27.
Paint enamels and undercoats. S. C. Johnson & Son. 298,966, Nov. 15, 1932. Republished Apr. 27.
Paints and paint enamel. C. A. Nash & Son, Inc. 238,979, renewed Feb. 21, 1948. O. G. Apr. 27.
Paints and undercoats. S. C. Johnson & Son. 299,289, Nov. 29, 1932. Republished Apr. 27.
Polish, Auto. Super Products Co. 438,556, Apr. 27; Serial No. 498,549.
Polish, Liquid. S. C. Johnson & Son, Inc. 344,112, Mar. 16, 1937. Republished Apr. 27.
Polish, Liquid. S. C. Johnson & Son, Inc. 367,325, May 9, 1939. Republished Apr. 27.
Polish, Liquid wax. S. C. Johnson & Son, Inc. 336,511, July 7, 1936. Republished Apr. 27.
Polish, Liquid wax. S. C. Johnson & Son, Inc. 349,170, Aug. 24, 1937. Republished Apr. 27.
Polish, Liquid wax. S. C. Johnson & Son, Inc. 390,112–13, Dec. 15, 1942. Republished Apr. 27.
Stain and filler. U. S. Sanitary Specialties Corporation. 389,387, Aug. 5, 1941. Republished Apr. 27.
Undercoats and priming coats, Paint. S. C. Johnson & Son, Inc. 311,434, Mar. 20, 1934. Republished Apr. 27.
Under or priming coat. I. F. Laucks, Inc. 349,902, Sept. 14, 1937. Republished Apr. 27.
Varnish. S. C. Johnson & Son, Inc. 370,447. Aug. 29, 1939. Republished Apr. 27.
Wax. S. C. Johnson & Son. 300,874, Feb. 14, 1933. Republished Apr. 27.
Wax. S. C. Johnson & Son, Inc. 305,536, Aug. 22, 1933. Republished Apr. 27.
Wax. S. C. Johnson & Son. 310,728, Mar. 6, 1934. Republished Apr. 27.
Wax. S. C. Johnson & Son, Inc. 316,337, Aug. 21, 1934. Republished Apr. 27.
Wax. S. C. Johnson & Son, Inc. 336,189, June 30, 1936. Republished Apr. 27.
Wax for coating and polishing wood, metal, and other surfaces, and lacquer. S. C. Johnson & Son, Inc. 345,368, Apr. 27, 1937. Republished Apr. 27.
Wax, Polishing. S. C. Johnson & Son. 301,319, Feb. 28, 1933. Republished Apr. 27.
Wax, Polishing. S. C. Johnson & Son. 304,665, July 11, 1933. Republished Apr. 27.
Wax, Polishing. S. C. Johnson & Son. 320,878, Jan. 15, 1935. Republished Apr. 27.
Wax, prepared wax, wood-dye, paste wood-filler, etc., Powdered. S. C. Johnson & Son. 106,108, Oct. 12, 1915. Republished Apr. 27.
Wax products. L. M. Scofield. 349,609, Aug. 31, 1937. Republished Apr. 27.

CLASS 17

Cigarettes and smoking tobacco. Lane, Limited. 438,545, Apr. 27; Serial No. 522,541, published Feb. 3, 1948.

Cigarettes and smoking tobacco. P. Lorillard Company. 238,664, renewed Feb. 14, 1948. O. G. Apr. 27.
Cigars. E. F. Law. 23,874, Nov. 28, 1893. Republished Apr. 27.
Cigars. George Schafer-H. C. Pfaff Cigar Company. 294,541, May 31, 1932. Republished Apr. 27.
Tobacco and cigarettes, Smoking. Lane, Limited. 438,546, Apr. 27; Serial No. 522,542, published Feb. 3, 1948.
Tobacco, Smoking. John Hudson Moore, Inc. 400,081, Feb. 16, 1943. Republished Apr. 27.

CLASS 19

Cars, Motor. Lincoln Motor Company. 170,692, renewed Jan. 5, 1948. O. G. Apr. 27.
Scooters, Motor. Solar Corporation. 425,665, Nov. 26, 1946. Republished Apr. 27.
Trucks and carts, Self or manually propelled shop. Buda Company. 359,783, Aug. 30, 1938. Republished Apr. 27.

CLASS 21

Batteries, Storage. General Tire & Rubber Company. 350,059, Sept. 14, 1937. Republished Apr. 27.
Conduit and duct and asbestos cement couplings and fittings, Asbestos cement. Keasbey & Mattison Company. 389,672, Aug. 19, 1941. Republished Apr. 27.
Conduit, etc., Rigid. Triangle Conduit & Cable Co., Inc. 422,431, July 23, 1946. Republished Apr. 27.
Dielectric material in sheets and molded forms. James Millen Manufacturing Company, Inc. 375,029, Feb. 6, 1940. Republished Apr. 27.
Fans, Electrical. United Electrical Mfg. Co. 214,404, June 22, 1926. Republished Apr. 27.
Heaters, Radiant electric. Anderson-Pitt Corporation. 255,452, Apr. 23, 1929. Republished Apr. 27.
Lightning protection devices. W. N. Matthews Corporation. 376,711, Apr. 2, 1940. Republished Apr. 27.
Motors, electric record changers, etc., Electric. General Industries Company. 409,923–5, Oct. 31, 1944. Republished Apr. 27.
Phonographs of the domestic type and parts thereof, Electrically operated. General Industries Company. 429,756, May 20, 1947. Republished Apr. 27.
Polishing machines, Electric floor. S. C. Johnson & Son, Inc. 401,763, June 8, 1943. Republished Apr. 27.
Polishing machines, Electric floor. S. C. Johnson & Son, Inc. 402,849, Aug. 17, 1943. Republished Apr. 27.
Radio communication receivers, transmitters and component parts thereof. James Millen Manufacturing Company, Inc. 385,754, Mar. 18, 1941. Republished Apr. 27.
Radio receiving sets, television receiving sets, radio-television receiving sets, etc. Emerson Radio & Phonograph Corporation. 349,887, Sept. 14, 1937. Republished Apr. 27.
Radio signaling apparatus, and parts thereof. Central Radio Laboratories. 204,006, Oct. 6, 1925. Republished Apr. 27.
Ranges, Electric. Phillips & Buttorff Mfg. Co. 328,172, Sept. 17, 1935. Republished Apr. 27.
Sanding machines, Unitary and portable electric. Sterling Tool Products Company. 414,519, June 12, 1945. Republished Apr. 27.
Traffic control and flashlight, Combination. Traf-O-Lite. 394,171, Mar. 24, 1942. Republished Apr. 27.

CLASS 22

Balls, Plastic bouncing play. Tri-State Plastic Molding Company. 438,511, Apr. 27; Serial No. 507,352, published Jan. 20, 1948.
Billiard cues. Brunswick-Balke-Collender Company. 344,484, Mar. 23, 1937. Republished Apr. 27.
Billiard-table cushions. Brunswick-Balke-Collender Company. 24,237, Feb. 13, 1894. Republished Apr. 27.
Billiard table cushions. Brunswick-Balke-Collender Company. 416,217, Sept. 4, 1945. Republished Apr. 27.
Billiard tables. Brunswick-Balke-Collender Company. 398,540, Nov. 3, 1942. Republished Apr. 27.
Bottoms for bowling bags and golf bags, and the like, Molded. United States Rubber Company. 500,126, Apr. 27; Serial No. 526,641, published Jan. 27, 1948.
Bowling pins. Brunswick-Balke-Collender Company. 341,079–81, Dec. 1, 1936. Republished Apr. 27.
Bowling pins. Brunswick-Balke-Collender Company. 415,715, Aug. 14, 1945. Republished Apr. 27.
Box, Panorama viewing. L. V. Varell. 438,518, Apr. 27; Serial No. 510,553, published Jan. 20, 1948.
Creel and tackle bag, flybook or roll, and a tackle box. G. Briggs. 500,128, Apr. 27; Serial No. 526,909, published Jan. 27, 1948.
Dolls. J. C. Gray. 438,554, Apr. 27; Serial No. 488,088.
Dolls, Dressed. Nancy Ann Dressed Dolls. 438,495, Apr. 27; Serial No. 484,754, published Feb. 4, 1947.
Dolls, Dressed. Nancy Ann Dressed Dolls. 438,496, Apr. 27; Serial No. 484,755, published Feb. 11, 1947.
Fish lures. R. W. Berry. 438,500, Apr. 27; Serial No. 495,359, published Oct. 1, 1946.
Fishing lines. B. F. Gladding & Co., Inc. 500,131, Apr. 27; Serial No. 527,067, published Jan. 20, 1948.
Fishing lines. B. F. Gladding & Co. Inc. 500,132, Apr. 27; Serial No. 527,079, published Jan. 20, 1948.
Pads and elbow pads, Knee. Jung Arch Brace Co. 438,526, Apr. 27; Serial No. 513,623, published Sept. 30, 1947.
Pin spotters. Brunswick-Balke-Collender Company. 265,748, Jan. 7, 1930. Republished Apr. 27.
Shuttlecocks. Pennsylvania Rubber Company. 340,930, Nov. 24, 1936. Republished Apr. 27.
Toy dogs, Stuffed. Gramercy Toy Co. 438,501, Apr. 27; Serial No. 497,711, published Jan. 20, 1948.

CLASS 23

Agricultural and garden implements, Hand. American Fork and Hoe Company. 371,635, Oct. 3, 1939. Republished Apr. 27.
Bits, wrenches, pipe threaders and trimmers, etc., Oil well drilling. Federal Electric Company, Inc. 418,215, Dec. 11, 1945. Republished Apr. 27.
Boring and drilling machines. Moline Tool Company. 104,626, June 8, 1915. Republished Apr. 27.
Ejectors. United Injector Company. 88,644, Oct. 8, 1912. Republished Apr. 27.
Handles, Wooden. Turner, Day & Wollworth Handle Company. 376,737, Apr. 2, 1940. Republished Apr. 27.
Injectors. United Injector Co. 59,418, Jan. 8, 1907. Republished Apr. 27.
Inspirators. United Injector Co. 57,990, Dec. 4, 1906. Republished Apr. 27.
Knives, razor knives, and spoons, Pocket. Gits Molding Corporation. 436,124, Jan. 20, 1948. Corrected. O. G. Apr. 27.
Knives, Shear. Heppenstall Forge and Knife Company. 211,435, Apr. 13, 1926. Republished Apr. 27.
Liners for pumps. Macclatchie Manufacturing Company of California. 355,383, Mar. 15, 1938. Republished Apr. 27.
Motors, Outboard. Champion Outboard Motors. 325,259, June 18, 1935. Republished Apr. 27.
Pumps, Oil. Tuthill Pump Company. 326,789, Aug. 6, 1935. Republished Apr. 27.
Razors, safety razors, razor blades, etc. Thomas Ward & Sons Limited. 241,604, renewed May 1, 1948. O. G. Apr. 27.
Reaping machines, hay-making machinery, etc. Bamfords Ltd. 411,491, Jan. 16, 1945. Amended. O. G. Apr. 27.
Sewage treating plants and parts thereof, Activated sludge type. Infilco Incorporated. 414,439, June 12, 1945. Republished Apr. 27.
Sewing machines, Fur. Bonis Bros. Fur Machinery Corporation. 361,488, Oct. 18, 1938. Republished Apr. 27.
Shear-knives and die-blocks. Heppenstall Forge & Knife Company. 98,775, Aug. 4, 1914. Republished Apr. 27.
Switch-stands. Pettibone, Mulliken & Co. 59,987, renewed Jan. 22, 1947. O. G. Apr. 27.
Tool handles. Turner, Day & Woolworth Handle Company. 353,599, Jan. 11, 1938. Republished Apr. 27.
Tools, apparatus and machines. Aircraft Screw Products Company, Incorporated. 404,358, Nov. 23, 1943. Republished Apr. 27.
Trench digging machines. Cleveland Trencher Company. 200,091, June 23, 1925. Republished Apr. 27.
Type-writing machines. Oliver Typewriter Company. 51,111, re-renewed Apr. 3, 1946. O. G. Apr. 27.
Type-writing machines and parts therefor. Oliver Typewriter Company. 48,960, re-renewed Jan. 16, 1946. O. G. Apr. 27.
Valves. Macclatchie Manufacturing Company of California. 362,875, Dec. 6, 1938. Republished Apr. 27.

CLASS 24

Clothespins. Modern Plastic Co. 438,520, Apr. 27; Serial No. 511,753, published Feb. 3, 1948.

CLASS 26

Automatic apparatus. Infilco Incorporated. 416,223, Sept. 4, 1945. Republished Apr. 27.
Film, Photographic. Agfa Ansco Corporation. 376,523, Mar. 26, 1940. Republished Apr. 27.
Flowmeters, ring-balance meters, chart type recorders, Fluid. Republic Flow Meters Company. 396,098, June 30, 1942. Republished Apr. 27.
Flowmeters, ring balance meters, etc., Fluid. Republic Flow Meters Company. 397,665, Sept. 15, 1942. Republished Apr. 27.
Indicators, Direction and/or rate of liquid flow. S. F. Bowser & Company, Incorporated. 374,092, Jan. 2, 1940. Republished Apr. 27.
Light sensitive paper. Haloid Company. 359,065, Aug. 2, 1938. Republished Apr. 27.
Light sensitive paper and film. Haloid Company. 366,527, Apr. 18, 1939. Republished Apr. 27.
Meters. S. F. Bowser & Company, Incorporated. 356,240, Apr. 19, 1938. Republished Apr. 27.
Meters and measuring appliances, Electronic. J. Millen Manufacturing Company, Inc. 419,315, Feb. 12, 1946. Republished Apr. 27.

Meters, Fluid flow. Fischer & Porter Company. 386,553, Apr. 15, 1941. Republished Apr. 27.
Scales, Weighing. Hanson Brothers Scale Company. 210,069, Mar. 9, 1926. Republished Apr. 27.
Stop means for liquid dispensing apparatus, Predetermined. S. F. Bowser & Company. Incorporated. 394,541, Apr. 14, 1942. Republished Apr. 27.

CLASS 28

Bracelets. D. Ornstein & Sons Corp. 436,723, Feb. 17, 1498. Corrected. O. G. Apr. 27.
Jewelry. B. A. Ballou & Co. Incorporated. 141,283, renewed Jan. 5, 1948. O. G. Apr. 27.
Jewelry. Société Anonyme des Etablissements Rouzaud, Chocolat de Royat, "A la Marquise de Sévigné." 190,396, renewed Oct. 14, 1944. O. G. Apr. 27.
Rings, Finger. A. E. Johnson. 188,767, Sept. 2, 1924. Republished Apr. 27.
Tableware, Silver-plated flat. International Silver Co. 201,810, renewed Jan. 5, 1948, O. G. Apr. 27.

CLASS 29

Brushes. Brunswick-Balke-Collender Company. 347,410, June 22, 1937. Republished Apr. 27.
Hairbrushes, toothbrushes, nail brushes, etc. John Hudson Moore, Inc. 405,375, Jan. 25, 1944. Republished Apr. 27.
Mops and dusters. S. C. Johnson & Son, Inc. 319,479, Nov. 27, 1934. Republished Apr. 27.

CLASS 30

Cotton, Robert B.
Allard, Marc L., Valenciennes, assignor to Société Anonyme des Forges et Aciéries du Nord & de l'Est, Paris, France. Manufacture of basic steel of low phosphorus content. 2,440,564, Apr. 27.
Alley, Harold R., Northbrook, and B. F. Freeberg, Chicago, Ill. Producing mercury electrolytically from acid solutions. 2,440,238, Apr. 27.
Alley, Harold R., Northbrook, and B. F. Freeberg, Chicago, Ill. Apparatus for purifying metallic mercury. 2,440,456, Apr. 27.
Allied Chemical & Dye Corporation, assignee: *See*—
Tiddy, William.
Allis-Chalmers Manufacturing Company, assignee: *See*—
Johnson, Lauren L.
Almquist, Milton L., Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Two-way carrier wave telephone system. 2,440,239, Apr. 27.
Aluminum Company of America, assignee: *See*—
Newsome, James W., Heiser, and Wall.
American Cyanamid Company, assignee: *See*—
Baker, Bernard R.
Bernstein, Seymour, and Dorfman.
Kropa, Edward L.
Thurston, Jack T.
American-La France-Foamite Corporation, assignee: *See*—
Sheppard, Allan G.
American Pipe and Steel Corporation, assignee: *See*—
Talley, Hyrum M.
American Viscose Corporation, assignee: *See*—
Battista, Orlando A.
Ames, Robert S., R. W. McCullough, and M. P. H. Peterson, assignors to Goodyear Aircraft Corporation, Akron, Ohio. Apparatus for free-blowing thermoplastic material. 2,440,499, Apr. 27.
Anderson, John E., Los Angeles, Calif. Clamping device for cables and wires and rods. 2,440,532, Apr. 27.
Anderson, Marshall N., assignor to Sellstrom Manufacturing Company, Chicago, Ill. Welder's helmet. 2,440,596, Apr. 27.
Anderson, Walter M., Sr., Montgomery, Ala. Water saver. 2,440,389, Apr. 27.
Antalek, John J., assignor to The Rauland Corporation, Chicago, Ill. Translating device. 2,440,565, Apr. 27.
Antonson, John O., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Protective covering for preventing accumulation of ice on airfoils. 2,440,240, Apr. 27.
Antonson, John O., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Ice removing apparatus for airfoils. 2,440,533, Apr. 27.
Apex Electrical Manufacturing Company, The, assignee: *See*—
Cockerill, Gerald I.
Appleton Coated Paper Company, The, assignee: *See*—
Phillips, Marin.
Armour and Company, assignee: *See*—
Lesparre, Jean N.
Armstrong, George J., Farnborough, England. Fuel supply system for internal-combustion engines. 2,440,241, Apr. 27.
Armstrong, George J., Farnborough, England. Fuel supply system for internal-combustion engines. 2,440,566, Apr. 27.
Armstrong, George J., B. Naylor, and J. E. P. Dunning, Farnborough, England. Fuel supply system for internal-combustion engines. 2,440,567, Apr. 27.
Arrow-Hart & Hegeman Electric Company, The, assignee: *See*—
Dietrich, Walter L.
Arter, Roy C., Galion, Ohio. Cartridge loading. 2,440,568, Apr. 27.
Atchison, Leonard W., Erie, Pa., assignor to General Electric Company. Selecting valve for two-temperature refrigerating systems. 2,440,534, Apr. 27.
Atlas Supply Company, assignee: *See*—
Folk, Irvin W.
Atwood, Horace, Jr., Belleville, assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J. Television receiver antenna. 2,440,597, Apr. 27.
Auberman, Peter, Caldwell, Idaho. Receptacle filling apparatus. 2,440,354, Apr. 27.
Auer, Laszlo, South Orange, N. J. Esterified rosin modified with organic acids and making same. 2,440,242, Apr. 27.
Autogiro Company of America, assignee: *See*—
Campbell, Harris S.
Perry, Julian P.
Pitcairn, Harold F.
Pitcairn, Harold F., and Stanley.
Stanley, Paul H.
Synnestvedt, Kenneth P.
Avakian, Souren, Oreland, and G. J. Martin, assignors to The National Drug Company, Philadelphia, Pa. N-4-(quinazoline) amino benzoyl glutamic acid. 2,440,649, Apr. 27.
Bacon, Thomas P., Jr., Oakland, Calif. Vulcanizing mold. 2,440,321, Apr. 27.
Bahnson, Agnew H., Jr., Winston-Salem, N. C. Air conditioning apparatus. 2,440,627, Apr. 27.
Baker, Bernard R., Nanuet, assignor, by mesne assignments, to American Cyanamid Company, New York, N. Y. Cyanothiophanes and preparing same. 2,440,659, Apr. 27.
Baldwin, Frederick G., Woodbridge, N. J. Plant pot cover. 2,440,569, Apr. 27.
Baranowski, Frank, Jr., Boston, Mass., assignor to General Electric Company. Double concentric air gap permanent magnet instrument. 2,440,535, Apr. 27.
Barcroft, William G., and M. L. Maas, Boulder, Colo. Hand motor with manually operated brake. 2,440,322, Apr. 27.
Barlow, Everett W.: *See*—
Barlow, Miriam C. and E. W.
Barlow, Miriam C., Columbus, Ga., and E. W. Barlow, Sarasota, Fla. Brassière. 2,440,426, Apr. 27.
Barrett, Dora E., El Centro, Calif. Poultry feeder. 2,440,243, Apr. 27.
Batesole, Dwight E., Glenbrook, assignor to Norma-Hoffmann Bearings Corporation, Stamford, Conn. Skate wheel structure. 2,440,650, Apr. 27.
Battista, Orlando A., Claymont, assignor to American Viscose Corporation, Wilmington, Del. Extrusion molding of viscose products. 2,440,323, Apr. 27.
Bauman, John J., Abington, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Humidity control. 2,440,628, Apr. 27.
Beckwith, Wendell K., Whitewater, assignor to Milwaukee Electric Tool Corporation, Milwaukee, Wis. Pneumatic tool. 2,440,457, Apr. 27.
Begley, John J., Arlington, assignor to Mutual Boiler Insurance Company, Boston, Mass. Tube roller. 2,440,536, Apr. 27.
Behrens, Otto K., assignor to Eli Lilly and Company, Indianapolis, Ind. Process and culture media for producing penicillin. 2,440,355, Apr. 27.
Behrens, Otto K., assignor to Eli Lilly and Company, Indianapolis, Ind. Process and culture media for the production of penicillin. 2,440,356, Apr. 27.
Behrens, Otto K., and Q. F. Soper, assignors to Eli Lilly and Company, Indianapolis, Ind. Process and culture media for producing penicillin. 2,440,357, Apr. 27.
Behrens, Otto K., and R. G. Jones, assignors to Eli Lilly and Company, Indianapolis, Ind. Process and culture media for producing penicillin. 2,440,358, Apr. 27.
Behrens, Otto K., R. G. Jones, and J. W. Corse, assignors to Eli Lilly and Company, Indianapolis, Ind. Process and culture media for producing penicillin. 2,440,359, Apr. 27.
Behrens, Otto K., and R. G. Jones, Indianapolis, Ind., and J. W. Corse, Altadena, Calif., assignors to Eli Lilly and Company, Indianapolis, Ind. Process and culture media for the production of penicillin. 2,440,360, Apr. 27.

Behrens, Otto K., and R. G. Jones, Indianapolis, Ind., and J. W. Corse, Altadena, Calif., assignors to Eli Lilly and Company, Indianapolis, Ind. Process and culture media for the production of penicillin. 2,440,361, Apr. 27.

Belar, Herbert, Palmyra, N. J., assignor to Radio Corporation of America. Exciter lamp supply. 2,440,537, Apr. 27.

Bell, Alexander H., Los Angeles, Calif., assignor to Continental Oil Company, Ponca City, Okla. Tool joint. 2,440,651, Apr. 27.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Almquist, Milton L.
Dawson, Wilfrid L.
Dimond, Thomas L.
Hecht, Rudolph A.

Belmont Radio Corporation, assignee: *See*—
Horner, Wilfred, and Wesselman.

Benbow, Burtis W., Benbow, Calif. Molding machine. 2,440,598, Apr. 27.

Bender, Emil A., Bakersfield, Calif. Crown block assembly. 2,440,427, Apr. 27.

Bendix Aviation Corporation, assignee: *See*—
Blocher, Ora G.
Jandasek, Joseph.
Marmont, George H.
Miller, Donald L.
Price, Harold W.

Bennett, Lawrence A., Industrial City, Mo. Reversible meat block and support stand. 2,440,629, Apr. 27.

Bennett, Nicholas: *See*—
Foster, Reginald T., and Bennett.

Bennett, Owen G.: *See*—
Frazer, Joseph C. W., and Bennett.

Berger Bros. Company, assignee: *See*—
Usinger, Henry E.

Bernard, Walter J., Oakland, Calif. Label feed control. 2,440,458, Apr. 27.

Bernstein, Seymour, Pearl River, and L. Dorfman, assignors, by mesne assignments, to American Cyanamid Company, New York, N. Y. Hydrogenalysis of steroid thioacetals. 2,440,660, Apr. 27.

Best, Frank E., Indianapolis, Ind. Key bit. 2,440,428, Apr. 27.

Best, Frank E., Indianapolis, Ind. Key. 2,440,429, Apr. 27.

Best, Frank E., Indianapolis, Ind. Lock-throw mechanism. 2,440,430, Apr. 27.

Best, Frank E., Indianapolis, Ind. Lock tumbler. 2,440,431, Apr. 27.

Best, Frank E., Indianapolis, Ind. Lock core. 2,440,432, Apr. 27.

Best, Frank E., Indianapolis, Ind. Unpickable lock. 2,440,433, Apr. 27.

Best, Frank E., Indianapolis, Ind. System of locks. 2,440,434, Apr. 27.

Beverly, Nelson E., Williamstown, assignor to Sprague Electric Company, North Adams, Mass. Artificial transmission line. 2,440,652, Apr. 27.

Blakeslee, Clinton A., Middlebury, assignor to The Bristol Company, Waterbury, Conn. Mounting bracket for instrument cases. 2,440,324, Apr. 27.

Bloch, Herman S., Riverside, assignor to Universal Oil Products Company, Chicago, Ill. Synthetic drying oils. 2,440,459, Apr. 27.

Blocher, Ora G., assignor to Bendix Aviation Corporation, Detroit, Mich. Self-locking lever. 2,440,630, Apr. 27.

Block, Abraham, assignee: *See*—
Lowe, Martin.

Bocji Corporation, assignee: *See*—
Lang, Joseph C.

Bogoslowsky, Boris, Jackson Heights, N. Y. Apparatus for making convolute wound tubing from sheet material. 2,440,390, Apr. 27.

Bogoslowsky, Boris, Jackson Heights, N. Y. Apparatus for shaping tubular blanks. 2,440,391, Apr. 27.

Bonard, Claude, administrator: *See*—
Dreyfus, Henry.

Borg-Warner Corporation, assignee: *See*—
Orr, Palmer.
Wiemer, Howard C.

Bourgeois, Louis, St. Louis, Mo. Trap. 2,440,570, Apr. 27.

Bow, Horace S., assignee: *See*—
Bow, Marvin H.

Bow, Marvin H., assignor of one-half to H. S. Bow, Ardmore, Okla. Oil gauge-line wiper. 2,440,571, Apr. 27.

Braendle, Harold A.: *See*—
Wiegand, William B., and Braendle.

Brandenburg, André, and A. Jolivet; said Brandenburg assignor to M. Deloye, Paris, France. Device for the separate supply of the fuel and of the combustion air for explosion engines. 2,440,572, Apr. 27.

Brandt, Robert J., assignee: *See*—
Tomlinson, Clarence L.

Braun, Walter, Los Angeles, Calif. Slip lasted shoe with tucked in heel cover, and method. 2,440,362, Apr. 27.

Briskin, Theodore S., assignor to Excel Auto Radiator Company, Chicago, Ill. Blower. 2,440,363, Apr. 27.

Bristol Company, The, assignee: *See*—
Blakeslee, Clinton A.
Van Vessem, George E.

Brode, Charles, Scranton, Pa. Trousers. 2,440,573, Apr. 27.

Brown, Edmund K., assignor to The Torrington Company, Torrington, Conn. Double row antifriction bearing. 2,440,435, Apr. 27.

Brown, Robert O.: *See*—
Harrel, Chastain G., and Brown.

Brown, Thomas B., Arlington, Va. Electrical hook-on meter system. 2,440,244, Apr. 27.

Bruno, Samuel J., Belleville, assignor to The Thomas Wright Co., Inc., Jersey City, N. J. Safety device for dumping vehicles. 2,440,325, Apr. 27.

Budd Company, The, assignee: *See*—
Tarbox, John P.

Budway, Louis, assignee, et al.: *See*—
Edwards, Lewis E.

Burgess Battery Company, assignee: *See*—
Hirtle, Dan W.

Butler, Howard, Walsall, England. Zero meter adjuster. 2,440,392, Apr. 27.

Cadman, Norman G., London, England, assignor, by mesne assignments, to The Westinghouse Air Brake Company, Wilmerding, Pa. Air-drying apparatus. 2,440,326, Apr. 27.

California Research Corporation, assignee: *See*—
Elliott, Laverne P., and Holm.

Calvin, Harry C., assignor of one-fourth to E. C. Moody, Dothan, Ala. Switchboard plug. 2,440,661, Apr. 27.

Camner, Hilding G.: *See*—
Pyk, Herman T., and Camner.

Campbell, Harris S., Bryn Athyn, assignor to Autogiro Company of America, Philadelphia, Pa. Rotor equipped aerial device. 2,440,294, Apr. 27.

Carborundum Company, The, assignee: *See*—
Rushmer, Ralph H., and Goepfert.

Catalyst Research Corporation, assignee: *See*—
Frazer, Joseph C. W., and Bennett.

Caterpillar Tractor Co., assignee: *See*—
Rosen, Carl G. A.

Celanese Corporation of America, assignee: *See*—
Dreyfus, Henry.
White, Francis T., and Daly.

Chalberg, Harry W. A., Berne, N. Y., assignor to General Electric Company. Portable cathode-ray oscilloscope. 2,440,538, Apr. 27.

Champain, Louis, New York, N. Y. Automobile and airplane wheel. 2,440,460, Apr. 27.

Champion, William J., La Grange, assignor to Ditto, Incorporated, Chicago, Ill. Dye composition. 2,440,364, Apr. 27.

Cherry-Burrell Corporation, assignee: *See*—
Trier, Carl L., and Fogg.

Chevigny, Paul G., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Cooling of high-temperature bodies. 2,440,245, Apr. 27.

Chicago Forging and Manufacturing Company, assignee: *See*—
Deschermeier, Frank S.

Clark, Frank W., Beverly Farms, Mass. Making last-fitting fabric uppers. 2,440,393, Apr. 27.

Clarke, John E.: *See*—
Heitzer, Harry, and Clarke.

Clements, William E., Battle Creek, Mich., assignor to Eaton Manufacturing Company, Cleveland, Ohio. Sealing the stem of hollow valves. 2,440,461, Apr. 27.

Cleveland Patents, Incorporated, assignee: *See*—
Hickok, Robert D.

Cleveland Pneumatic Tool Company, The, assignee: *See*—
Lehman, Eugene W., and Whalen.
Wallace, John F.

Cockerill, Gerald I., Cleveland Heights, assignor to The Apex Electrical Manufacturing Company, Cleveland, Ohio. Liquid seal device. 2,440,394, Apr. 27.

Columbian Carbon Company, assignee: *See*—
Wiegand, William B., and Braendle.

Columbian Enameling & Stamping Co., Inc., assignee: *See*—
Weddle, Richard C.

Colwell, Harry E., assignor to The A P Parts Corporation, Toledo, Ohio. Bending machine. 2,440,599, Apr. 27.

Consolidated Water Power and Paper Company, assignee: *See*—
Dickerman, Gilbert K.

Continental Oil Company, assignee: *See*—
Bell, Alexander H.

Cook, George W., Washington, D. C. Voltage regulator. 2,440,246, Apr. 27.

Cooper, Lyle M., Rahway, N. J., assignor to Standard Oil Development Company. Pressure relief device. 2,440,462, Apr. 27.

Copping, Bruce G., Atlanta, Ga., and E. S. Wegman, East Longmeadow, Mass., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Metering motor operated pump for dispensing beverages. 2,440,365, Apr. 27.

Cornwall, Leo W., San Diego, Calif. Spot weld tip with replaceable insert. 2,440,463, Apr. 27.

Corrington, Murlan S., Camden, N. J., assignor to Radio Corporation of America. Locked-in oscillator circuits. 2,440,653, Apr. 27.

Corse, Joseph W.: *See*—
Behrens, Otto K., Jones, and Corse.

Corson, G. and W. H., Inc., assignee: *See*—
Minnick, Leonard J.

Cotton, Robert B., Lansdowne, Pa., assignor to All American Aviation, Inc., Wilmington, Del. Aircraft barrier. 2,440,574, Apr. 27.

Crawford, Bryce L., Jr., assignor to Regents of the University of Minnesota, Minneapolis, Minn. "Hot" double-base powder. 2,440,327, Apr. 27.

Creel, William H., Bartlesville, Okla., assignor to Phillips Petroleum Company. Catalyst chamber closure. 2,440,436, Apr. 27.

Crompton & Knowles Loom Works, assignee: *See*—
Peterson, George N.

Cropp, David, Rochester, N. Y., assignor to Cropp Engineering Corporation, Warren, Pa. Molding machine. 2,440,366, Apr. 27.

Cropp, David, Rochester, N. Y., assignor to Cropp Engineering Corporation, Warren, Pa. Molding machine. 2,440,367, Apr. 27.

Cropp Engineering Corporation, assignee: *See*—
Cropp, David.

Crosby, Murray G., Riverhead, N. Y., assignor to Radio Corporation of America. Electric motor control. 2,440,600, Apr. 27.

Daly, Arthur J.: *See*—
White, Francis T., and Daly.

Daniiln, Irving A., New York, N. Y. Sleeve head pad for garments. 2,440,368, Apr. 27.

Dannenberg, Hans: *See*—
Adelson, David E., and Dannenberg.

Dawson, John W., Auburndale, assignor to Raytheon Manufacturing Company, Newton, Mass. Welding system. 2,440,247, Apr. 27.

Dawson, Wilfrid L., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Object locating apparatus. 2,440,248, Apr. 27.

Deakin, Gerald, assignor to International Standard Electric Corporation, New York, N. Y. Key controlled numerical digit register equipped with discharge tube means. 2,440,249, Apr. 27.

Dedek, Frank, assignor to Magnetic Products Corporation, Detroit, Mich. Electromagnetic testing device. 2,440,575, Apr. 27.

DeHaas, Earnest E., Wichita, Kans. Mailbox bracket. 2,440,576, Apr. 27.

Deloraine, Edmond M., and E. Labin, New York, N. Y., and P. F. M. Gloess, Paris, France, assignors to International Standard Electric Corporation, New York, N. Y. Radio location system. 2,440,250, Apr. 27.

Deloye, Maurice, assignee: *See*—
Brandenburg, André, and Jolivet.

Demmer, Edward U.: *See*—
Elliott, Gordon R.

Denby, Anthony F., Hackensack, N. J. Football training machine. 2,440,577, Apr. 27.

Derthick, Everest P., Russell, Ohio. Combined perambulator and cradle or the like. 2,440,539, Apr. 27.

Deschermeier, Frank S., assignor, by mesne assignments, to Chicago Forging and Manufacturing Company, Chicago, Ill. Lever release latch. 2,440,395, Apr. 27.

Devens, Joseph M., Springfield, Mass. Vending machine. 2,440,251, Apr. 27.

Dickerman, Gilbert K., assignor to Consolidated Water Power and Paper Company, Wisconsin Rapids, Wis. Production of clay suspensions. 2,440,601, Apr. 27.

Dietrich, Walter L., assignor to The Arrow-Hart & Hegeman Electric Company, Hartford, Conn. Rotary switch contact assembly. 2,440,578, Apr. 27.

Dimond, Thomas L., Rutherford, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Multivibrator. 2,440,252, Apr. 27.

Distillation Products, Inc., assignee: *See*—
Hickman, Kenneth C. D.

Ditto, Incorporated, assignee: *See*—
Champion, William J.
Little, Alfred E., and Jagger.

Doble, Abner, assignor to Stanley Steam Motors Corporation, Chicago, Ill. Speed and cutoff control means for steam engines and the like. 2,440,328, Apr. 27.

Doble, Abner, assignor to Stanley Steam Motors Corporation, Chicago, Ill. Control means for correlating supply of aspirating to aspirated fluids. 2,440,329, Apr. 27.

Dodington, Sven H. M., Forest Hills, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Pulse radar interference producer. 2,440,253, Apr. 27.

Dodson, Howard W., Yeadon, assignor to United Steel Barrel Company, Philadelphia, Pa. Chain and method and apparatus for forming same. 2,440,254, Apr. 27.

Doppelt, Max J., Chicago, Ill. Smoking device. 2,440,396, Apr. 27.

Dorfman, Louis: *See*—
Bernstein, Seymour, and Dorfman.

Dow Chemical Company, The, assignee: *See*—
Irons, Carroll R.

Drake, George F., assignor to Woodward Governor Company, Rockford, Ill. Remote-control system. 2,440,255, Apr. 27.

Dreyfus, Henry, deceased, London, England; C. Bonard, administrator, assignor to Celanese Corporation of America. Production of thermoplastic polymeric material. 2,440,256, Apr. 27.

Dreyfus, Henry, deceased, London, England; C. Bonard, administrator, assignor to Celanese Corporation of America. Improving the fastness of dyed organic derivative of cellulose textiles by impregnation with cyanamide. 2,440,330, Apr. 27.

Du Mont, Allen B., Laboratories, Inc., assignee: *See*—
Atwood, Horace, Jr.

Dunning, John E. P.: *See*—
Armstrong, George J., Naylor, and Dunning.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
MacDougall, Keith K., and Labash.

Du Pont, Hubert I.: *See*—
Rostler, Fritz S., and du Pont.

Eakin, Edna S. and W. D., Akron, Ohio. Demountable support for garments and the like. 2,440,631, Apr. 27.

Eakin, Willard D.: *See*—
Eakin, Edna S. and W. D.

Eaton Manufacturing Company, assignee: *See*—
Clements, William E.

Edwards, Lewis E., Huntington Park, assignor of forty per cent to A. J. Keel, Downey, and twenty per cent to L. Budway, Huntington Park, Calif. Safety joint. 2,440,257, Apr. 27.

Eisensmith, William F., Penns Grove, N. J. Safety oiling means for car journals. 2,440,331, Apr. 27.

Elliott, Gordon R., Ferndale, Mich., assignor, by mesne assignments, to I. A. Puchner and E. U. Demmer, Milwaukee, Wis. Hydraulic pressure intensifier unit. 2,440,654, Apr. 27.

Elliott, Laverne P., Berkeley, and M. M. Holm, assignors to California Research Corporation, San Francisco, Calif. Refining of petroleum distillates. 2,440,258, Apr. 27.

Ellis, Robert, Belleville, N. J. Flagpole and operating means therefor. 2,440,500, Apr. 27.

Emery Industries, Inc., assignee: *See*—
Meyers, Latimer D., and Muckerheide.

Erickson, Carl A., Baltimore, Md. Excavating apparatus. 2,440,501, Apr. 27.

Erickson, James S., assignor to Sugar Creek Creamery Company, Danville, Ill. Immersion type refrigerating device. 2,440,397, Apr. 27.

Etgen, Elmer H., Los Angeles, Calif. Auxiliary vehicle truck. 2,440,502, Apr. 27.

Ewaldson, Waldemar C., Millington, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Cutting apparatus. 2,440,464, Apr. 27.

Excel Auto Radiator Company, assignee: *See*—
Briskin, Theodore S.

Fahland, Frank, Omaha, Nebr. Crossbar support for vehicles. 2,440,437, Apr. 27.

Fanto, Emil C.: *See*—
Omohundro, Allen L., and Fanto.

Farnsworth Research Corporation, assignee: *See*—
Ferguson, Joseph C.
Salinger, Hans W. G., and Mayle.

Farr, John W., Pittsfield, Mass., assignor to General Electric Company. Transformer. 2,440,540, Apr. 27.

Fay, Charles H., Houston, Tex., assignor to Shell Development Company, San Francisco, Calif. Magnetic gradiometer. 2,440,503, Apr. 27.

Federal Telephone and Radio Corporation, assignee: *See*—
Chevigny, Paul G.
Dodington, Sven H. M.
Grieg, Donald D.
Labin, Emile, and Grieg.
Pickles, Sidney B.
Riecken, William E.
Unterweiser, Paul.
Young, Norman H., Jr.

Fenwick, Ivy D., Brooklyn, N. Y. Surgical glove drying apparatus. 2,440,398, Apr. 27.

Ferguson, Joseph C., Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation. Rectifier circuit frequency multiplier. 2,440,465, Apr. 27.

Fisher, Harmon F., Palo Alto, and A. C. Peck, Los Altos, Calif., assignors, by mesne assignments, to The Permanente Metals Corporation. Apparatus for electrophoretic separation of solids from liquids. 2,440,504, Apr. 27.

Flannery Bolt Company, assignee: *See*—
Greenslade, Grover R.

Fogg, Jesse W.: *See*—
Trier, Carl L., and Fogg.

Folk, Irvin W., Belleville, assignor to Atlas Supply Company, Newark, N. J. Interlocking means for electrical testing apparatus or the like. 2,440,505, Apr. 27.

Foster, Reginald T., Birkenhead, and N. Bennet, Ditton, England, assignors to Imperial Chemical Industries Limited. Manufacture of dichloro phenols. 2,440,602, Apr. 27.

Francis, John G., Heidelberg, near Melbourne, Victoria, Australia. Automatic feeding appliance for poultry, pigeons, and other birds. 2,440,332, Apr. 27.

Frazer, Joseph C. W., Baltimore, Md., and O. G. Bennett, Forest Hills, assignors to Catalyst Research Corporation, Pittsburgh, Pa. Time fuse element. 2,440,579, Apr. 27.

Frazier, Larry C., Lakewood, Ohio, assignor to National-Standard Company, Niles, Mich. Apparatus for building tires. 2,440,662, Apr. 27.

Freeberg, Benjamin F.: *See*—
Alley, Harold R., and Freeberg.

Freedman, Ruth, New York, N. Y. Brassière. 2,440,466, Apr. 27.

Fregeolle, Oscar, assignor to Hemphill Company, Central Falls, R. I. Knitting machine and knitting. 2,440,333, Apr. 27.

Frilette, Vincent J., New York, N. Y., assignor to Ridbo Laboratories, Inc., Paterson, N. J. Sulfur containing coating compositions. 2,440,467, Apr. 27.

Frink, Frederick W., East Orange, N. J. Calculating device. 2,440,438, Apr. 27.

Furman, George R., Beacon, assignor to The Texas Company, New York, N. Y. Automotive battery heating system. 2,440,369, Apr. 27.

Furse, Oliver L., Overton, Tex., assignor to Standard Oil Development Company. Subsurface choke. 2,440,506, Apr. 27.

Gahl, William E.: *See*—
Jakoubek, Frank J., and Gahl.

Gall, James E., Washington, D. C. Cathode-ray tube mount. 2,440,260, Apr. 27.

Garey, Calavah G.: *See*—
Kaelin, Gottfried, and Garey.

Gash, Charles B., Oak Park, Ill. Box having a drawer and a cover and interconnected latching and locking means thereof. 2,440,541, Apr. 27.

Gavin, Edward M.: *See*—
Grey, Ralph E., and Gavin.

Gazda, Antoine, Providence, R. I. Cleaner and humidifier for carburetors. 2,440,580, Apr. 27.

Gemberling, Cameron H., South Bend, Ind., assignor to The Oliver Corporation. Tractor-drawn disc plow. 2,440,581, Apr. 27.

General Electric Company, assignee: *See*—
Atchison, Leonard W.
Baranowski, Frank, Jr.
Chalberg, Harry W. A.
Farr, John W.
Jensen, Richard C.
Martin, Harold M.
Paluev, Konstantin K.

General Engineering Company, The, assignee: *See*—
Riddell, William A.

General Motors Corporation, assignee: *See*—
Henney, Charles F.

Geralds, Jerry, assignor to Mid-West Wire Products Company, Inc., Detroit, Mich. Basket structure. 2,440,507, Apr. 27.

Gerken, John C., Detroit, Mich. Window ventilator. 2,440,468, Apr. 27.

Gerlach, Joseph M., Albany, Calif. Sand blasting nozzle. 2,440,334, Apr. 27.

Gilman, Webster E., Maywood, assignor to Permoflux Corporation, Chicago, Ill. Permanent magnet electrodynamic transducer. 2,440,439, Apr. 27.

Ginzton, Edward L., Garden City, N. Y., assignor to The Sperry Corporation. Radio locator test apparatus. 2,440,261, Apr. 27.

Gloess, Paul F. M.: *See*—
Deloraine, Edmond M., Labin, and Gloess.

Goddard, Ervin S., Huntington, W. Va., assignor to Adel Precision Products Corp. Multiple clip and bracket. 2,440,469, Apr. 27.

Goepfert, George J.: *See*—
Rushmer, Ralph H., and Goepfert.

Goldberg, Daisy H.: *See*—
Jackler, Rose, and Goldberg.

Goodrich, B. F., Company, The, assignee: *See*—
Antonson, John O.

Goodyear Aircraft Corporation, assignee: *See*—
Ames, Robert S., McCullough, and Peterson.
Weiser, Earl M.

Gould, William L., Albany, N. Y. Production of arch or like supports. 2,440,508, Apr. 27.

Goulds Pumps, Inc., assignee: *See*—
Mann, John.

Gray, Thomas C., U. S. Navy. Cam actuated valve mechanism for fluid pressure engines. 2,440,259, Apr. 27.

Green, Thomas L., Oklahoma City, Okla. Building block form. 2,440,582, Apr. 27.

Greenslade, Grover R., Scott Township, Allegheny County, assignor to Flannery Bolt Company, Bridgeville, Pa. Electric contact device. 2,440,335, Apr. 27.

Greitzer, Meyer, Los Angeles, Calif. Chair. 2,440,470, Apr. 27.

Grey, Ralph E., and E. M. Gavin, Osborn, Ohio. Fuel supply system for aircraft. 2,440,262, Apr. 27.

Grieg, Donald D.: *See*—
Labin, Emile, and Grieg.

Grieg, Donald D., Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation. Monitoring circuit. 2,440,263, Apr. 27.

Grieg, Donald D., Forest Hills, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Modulator system. 2,440,264, Apr. 27.

Gross, Henry R., Chicago, Ill. Flasher. 2,440,265, Apr. 27.

Guth, Edwin F., Florissant, Mo. Lighting fixture. 2,440,603, Apr. 27.

Guyer, Walter R. F., Roselle, N. J., assignor to Standard Oil Development Company. Production of diolefins. 2,440,471, Apr. 27.

Hack, George O., Hudson, Ohio. Traction device for resilient tires and wheels. 2,440,632, Apr. 27.

Hadwiger, Oscar E., Pueblo, Colo. Edge sanding machine. 2,440,440, Apr. 27.

Hagstrom, Gotthard, New Haven, assignor, by mesne assignments, to The Pioneer Hardware Corporation, Bridgeport, Conn. Latch construction mounting means. 2,440,509, Apr. 27.

Hagstrom, Gotthard, New Haven, assignor, by mesne assignments, to The Pioneer Hardware Corporation, Bridgeport, Conn. Keeper or striker for latches and the like. 2,440,510, Apr. 27.

Hahn Baking Company, assignee: *See*—
Hahn, Henry E., Jr.

Hahn, Henry E., Jr., assignor to Hahn Baking Company, Milwaukee, Wis. Dough forming machine. 2,440,655, Apr. 27.

Hainsworth, William R., Larchmont, N. Y., assignor, by mesne assignments, to Servel, Inc., Dover, Del. Absorption type refrigeration system. 2,440,583, Apr. 27.

Hale, George C., Dover, N. J., assignor to the United States of America, as represented by the Secretary of War. Propellant and manufacturing. 2,440,267, Apr. 27.

Hall, Joseph M., Chicago, Ill. Comparison type light measuring device. 2,440,266, Apr. 27.

Hall, Joseph W., Portland, Oreg. Saw filing tool. 2,440,633, Apr. 27.

Hanes, James W. E., assignor to Ventura Tool Company, Ventura, Calif. Tool joint. 2,440,441, Apr. 27.

Hanneman, Robert G., assignor to Air-Maze Corporation, Cleveland, Ohio. Multipointed electrode. 2,440,370, Apr. 27.

Hardy, René, Lyon, France, assignor to International Standard Electric Corporation. Electromagnetic wave direction indicator. 2,440,268, Apr. 27.

Hare, Donald G. C., Roslyn, assignor to Texaco Development Corporation, New York, N. Y. Radiation detector. 2,440,511, Apr. 27.

Hargrove, Berthal W., Mayfield, Ky. Tunable oscillator. 2,440,269, Apr. 27.

Harrel, Chastain G., and R. O. Brown, assignors to Pillsbury Mills, Inc., Minneapolis, Minn. High fat ingredients for soup and the like production. 2,440,604, Apr. 27.

Hastings, Sam H.: *See*—
Seyfried, Wilson D., and Hastings.

Hathaway, Claude M., Denver, Colo., assignor to Hathaway Instrument Company. Accelerometer. 2,440,605, Apr. 27.

Hathaway Instrument Company, assignee: *See*—
Hathaway, Claude M.

Hecht, Rudolph A., Teaneck, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electrical connector. 2,440,270, Apr. 27.

Heiser, Harold W.: *See*—
Newsome, James W., Heiser, and Wall.

Heltzer, Harry, and J. E. Clarke, assignors to Minnesota Mining & Manufacturing Company, St. Paul, Minn. Lenticular reflex reflector sheet and making the same. 2,440,584, Apr. 27.

Hemphill Company, assignee: *See*—
Fregeolle, Oscar.

Henney, Charles F., assignor to General Motors Corporation, Dayton, Ohio. Shell feeding mechanism for rocket guns. 2,440,634, Apr. 27.

Hickman, Clarence N., Jackson Heights, N. Y., assignor to United States of America, as represented by the Secretary of War. Rocket projectile. 2,440,271, Apr. 27.

Hickman, Kenneth C. D., assignor to Distillation Products, Inc., Rochester, N. Y. Preservation process. 2,440,606, Apr. 27.

Hickok, Robert D., Bratenahl, Ohio, assignor to Cleveland Patents, Incorporated. Electronic tube tester. 2,440,607, Apr. 27.

Hill, Arthur G., Greenville, S. C. Conditioning textile fibers. 2,440,399, Apr. 27.

Hill, Arthur G., Greenville, S. C. Conditioning textile fibers. 2,440,400, Apr. 27.

Hill, William A., Spokane, Wash. Engine braking apparatus. 2,440,336, Apr. 27.

Hillyer, John C.: *See*—
Schulze, Walter A., and Hillyer.

Hillyer, John C., Bartlesville, Okla., and D. A. Nieuwander, Borger, Tex., assignors to Phillips Petroleum Company. Inhibiting polymerization of furfural. 2,440,442, Apr. 27.

Hirtle, Dan W., assignor to Burgess Battery Company, Freeport, Ill. Dry battery for hearing aids. 2,440,401, Apr. 27.

Holden, Gary M., Beverly Hills, Calif. Dental clasp. 2,440,443, Apr. 27.

Holden, William B., U. S. Navy. Dehumidifying unit. 2,440,272, Apr. 27.

Holley, Earl, assignee, et al.: *See*—
Holley, George M., Jr.

Holley, George M., assignee, et al.: *See*—
Holley, George M., Jr.

Holley, George M., Jr., Grosse Pointe, Mich., assignor to G. M. and E. Holley. Emergency pump. 2,440,371, Apr. 27.

Holm, Melvin M.: *See*—
Elliott, Laverne P., and Holm.

Homeyer, August H.: *See*—
Wallingford, Vernon H., and Homeyer.

Hoover, Samuel R.: *See*—
Naghaki, Joseph, White, and Hoover.

Horberg, William, Bridgeport, Conn. Outboard work whipping inhibitor for centerless grinders. 2,440,402, Apr. 27.

Horner, Wilfred, and E. Wesselman, assignors, by mesne assignments, to Belmont Radio Corporation, Chicago, Ill. Stage incubator for microscopes. 2,440,472, Apr. 27.

Hosmer, Frazier O., Birmingham, Ala. Pay roll record. 2,440,337, Apr. 27.

Huber, Matthew W., Watertown, N. Y., assignor to The New York Air Brake Company. Antifriction bearing. 2,440,444, Apr. 27.

Hughes, Everett C., Cleveland Heights, assignor to The Standard Oil Company, Cleveland, Ohio. Volatile fluoride recovery. 2,440,542, Apr. 27.

Hughes, Everett C., Cleveland Heights, assignor to The Standard Oil Company, Cleveland, Ohio. Recovery of catalyst from mixtures of hydrocarbons therewith in the liquid phase. 2,440,543, Apr. 27.

Hughes, Joseph W., Southgate, London, England. Tee for golf balls. 2,440,473, Apr. 27.

Hukill, Harry E., Los Angeles, Calif., assignor to Velva-Sole Corporation, Chicago, Ill. Orthopaedic appliance. 2,440,273, Apr. 27.

Hunter, Frank B., Roscoe, assignor to C. A. Miketta, Beverly Hills, Calif. Relief valve. 2,440,608, Apr. 27.

Huntington, Fred W., Alameda, Calif. Abrasive material for polishing. 2,440,656, Apr. 27.

Hutchinson, George W., Raleigh, N. C. Roller. 2,440,585, Apr. 27.

Ibisch, Franz O., U. S. Navy, Columbus, Wis. Hood for simulated instrument flying in multicontrol aircraft. 2,440,274, Apr. 27.

Ifield, Richard J., Ealing, London, assignor to Joseph Lucas Limited, Birmingham, England. Automatically controlling the supply of liquid fuel to prime movers. 2,440,663, Apr. 27.

Imperial Chemical Industries Limited, assignee: *See*—
Foster, Reginald T., and Bennett.

Industrial Appliance & Equipment Co., Inc., assignee: *See*—
Vogel, Leo G.

Infernational Standard Electric Corporation, assignee: *See*—
Deakin, Gerald.
Deloraine, Edmond M., Labin, and Gloess.
Hardy, René.
Kruithof, Jacob, and Kozma.
Levy, Maurice M.

Irons, Carroll R., assignor to The Dow Chemical Company, Midland, Mich. Making lap-welded articles from thermoplastic films. 2,440,664, Apr. 27.

Jackler, Rose, Brooklyn, and D. H. Goldberg, New York, N. Y. Decorative fabric for handbags. 2,440,474, Apr. 27.

Jackson, Donald, assignor to Pye Limited, Cambridge, England. Focus coil suspension for cathode ray tubes. 2,440,403, Apr. 27.

Jackson, Wilbur, Chatsworth, Ga. Clamp for barrel pumps. 2,440,372, Apr. 27.

Jacomini, Virgil V., Houston, Tex. Process and apparatus for continuous catalysis. 2,440,475, Apr. 27.

Jagger, Hubert: *See*—
Little, Alfred E., and Jagger.

Jakoubek, Frank J., Elmwood Park, and W. E. Gahl, Berwyn, assignors to Templeton, Kenly & Co. Inc., Chicago, Ill. Endless track tool. 2,440,512, Apr. 27.

James, Parker H., Indianapolis, Ind. Multiple unit furniture. 2,440,544, Apr. 27.

Jandasek, Joseph, Highland Park, Mich., assignor to Bendix Aviation Corporation, South Bend, Ind. Fluid transmission. 2,440,445, Apr. 27.

Jeffrey Manufacturing Company, The, assignee: *See*—
Wright, Fred J.

Jeffrey, Max L., Shaker Heights, assignor to The National Acme Company, Cleveland, Ohio. Automatic set-back counter. 2,440,665, Apr. 27.

Jeffreys, George A., Salem, Va., assignor to N. Littell, New Canaan, Conn. Preparation of yeast and of yeast- and vitamin-rich products. 2,440,545, Apr. 27.

Jeffreys, George A., Salem, Va., assignor to N. Littell, New Canaan, Conn. Symbiotic process for preparing yeast and other products. 2,440,546, Apr. 27.

Jenkins, Paul W.: *See*—
Young, James H., and Jenkins.

Jensen, Cyril D.: *See*—
Ronay, Bela, and Jensen.

Jensen, Richard C., Scotia, N. Y., assignor to General Electric Company. Pulse generator. 2,440,547, Apr. 27.

Johansson, Gustaf E., assignor to Robur Heel Company Aktiebolag, Stockholm, Sweden. Shoe heel with exchangeable heelpiece. 2,440,404, Apr. 27.

Johnson, Lauren L., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Electric heating system for a plurality of objects, responsive to temperature and position thereof. 2,440,476, Apr. 27.

Johnson, Roy W., Milwaukee, Wis. Combustion responsive fuel control. 2,440,405, Apr. 27.

Johnstone, Warren W., Riverside, assignor to Universal Oil Products Company, Chicago, Ill. Synthetic drying oils. 2,440,477, Apr. 27.

Jolivet, Andre: *See*—
Brandenburg, André, and Jolivet.

Jones, Reuben G.: *See*—
Behrens, Otto K., and Jones.
Behrens, Otto K., Jones, and Corse.

Jost, Emil, Zurich, Switzerland. Shear head for electric dry shavers. 2,440,586, Apr. 27.

Joy Manufacturing Company, assignee: *See*—
Simmons, Leon E.

Kaelin, Gottfried, and C. G. Garey, Sacramento, Calif. Smokehouse rack. 2,440,513, Apr. 27.

Kaemmerling, Gustav H., assignor to Lord Manufacturing Company, Erie, Pa. Resilient mounting. 2,440,670, Apr. 27.

Karlstrom, Adolf M. R., Goteborg, Sweden. Purification of raw water from colloidal humic substances. 2,440,514, Apr. 27.

Keel, Anthony J., assignee, et al.: *See*—
Edwards, Lewis E.

Kégresse, Adolphe, Paris, France. Controlled freewheeling mechanism. 2,440,588, Apr. 27.

Kégresse, Adolphe, Paris, France. Feed device for hydraulically operated change-speed gears. 2,440,589, Apr. 27.

Kégresse, Adolphe, Paris, France. Pressure selector and corrector for bound-up automatic hydraulic transmissions. 2,440,590, Apr. 27.

Kehle, Ottmar A., West Los Angeles, Calif., assignor to Adel Precision Products Corp. Shuttle valve. 2,440,478, Apr. 27.

Keizer, Eugene O., Princeton, N. J., assignor to Radio Corporation of America. Bomb release radio system. 2,440,609, Apr. 27.

Kelcon Corporation, assignee: *See*—
Kelly, Stephen A., Jr., and Lindsay.

Kellog, Henry B.: *See*—
Young, David W., and Kellog.

Kelly, Richard, assignor to Standard Telephones and Cables Limited, London, England. Power supply system for carrier communication systems. 2,440,275, Apr. 27.

Kelly, Stephen A., Jr., Manhasset, and W. R. Lindsay, Floral Park, assignors to Kelcon Corporation, Flushing, N. Y. Convertible berth or bed lounge and like device. 2,440,515, Apr. 27.

Kenny, Richard J., Bhowra, British India. Apparatus for cooling or conditioning air or other fluids. 2,440,446, Apr. 27.

Kerr, Thomas M., Los Angeles, Calif. Fruit juice dispenser. 2,440,406, Apr. 27.

Kerrigan, Katherine, Waverly, N. Y. Manufacture of shoulder pads. 2,440,548, Apr. 27.

Kimberlin, Carna M., assignor to Red Ball Manufacturing Company, Spokane, Wash. Engine cooling liquid heater. 2,440,610, Apr. 27.

Kincannon, Leo T., assignor to Metal Products Corporation, Milwaukee, Wis. Outboard motor lubrication. 2,440,338, Apr. 27.

Kiser, Fred H., Los Angeles, Calif. Necktie cabinet having outwardly swingable rack. 2,440,549, Apr. 27.

Klein, Abraham A., Tel Aviv, Palestine. Brewing method using albedo in wort. 2,440,276, Apr. 27.

Knight, William W., Birmingham, Ala. Supplementary exhaust port for steam locomotives. 2,440,373, Apr. 27.

Kozma, Ladislas: *See*—
Kruithof, Jacob, and Kozma.

Krall, Michael J., Newark, N. J. Curb guiding signal. 2,440,587, Apr. 27.

Kropa, Edward L., Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y. Polyester-polyamide condensation products and producing the same. 2,440,516, Apr. 27.

Kruithof, Jacob, and L. Kozma, Antwerp, Belgium, assignors to International Standard Electric Corporation, New York, N. Y. Calling line identification system. 2,440,277, Apr. 27.

Kuenstner, Ernst K., Milwaukee, Wis. Adjustable hatband. 2,440,407, Apr. 27.

Labash, John A.: *See*—
MacDougall, Keith K., and Labash.

Labin, Emile: *See*—
Deloraine, Edmond M., Labin, and Gloess.

Labin, Emile, New York, and D. D. Grieg, Forest Hills, N. Y., assignors to Federal Telephone and Radio Corporation, Newark, N. J. Pulse selecting and eliminating system. 2,440,278, Apr. 27.

Lackie, Arthur H., Duluth, Minn. Ship hull construction. 2,440,408, Apr. 27.

Lang, Joseph C., Pittsburgh, Pa., assignor to Bocji Corporation. Stapling apparatus. 2,440,479, Apr. 27.

Langer, Walter, New York, N. Y. Tube of flexible composite sheet material and the manufacture thereof. 2,440,339, Apr. 27.

Larkins, John S., Jr., Scotia, N. Y. Cable connector. 2,440,279, Apr. 27.

Larson, Arthur G., Forest Hills, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Control apparatus for reversible locomotives. 2,440,340, Apr. 27.

Lawson, Robert H., Lakeport, assignor to Scott & Williams, Incorporated, Laconia, N. H. Knitting machine and knitting. 2,440,280, Apr. 27.

Lebedinsky, Myron, Montlucon, assignor to Societe Anonyme de Telecommunications, Paris, France. Device for the transmission of calling and clearing signals in long distance telephonic circuits. 2,440,281, Apr. 27.

Leghorn, George R., San Francisco, Calif. Aerial bomb. 2,440,282, Apr. 27.

Lehman, Eugene W., West Cleveland, and E. M. Whalen, assignors to The Pneumatic Tool Company, Cleveland, Ohio. Fastener. 2,400,341, Apr. 27.

Lehmann, Herbert G., Bridgeport, Conn. Bracket mounting. 2,440,409, Apr. 27.

Leonard, John T., Evanston, Ill. Lubricating apparatus. 2,440,410, Apr. 27.

Leonard, John T., Evanston, Ill. Double-acting pump. 2,440,411, Apr. 27.

Lesparre, Jean N., assignor to Armour and Company, Chicago, Ill. Coated meat product and process. 2,440,517, Apr. 27.

Levy, Maurice M., London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Balancing of electrical bridge circuits containing nonlinear elements. 2,440,283, Apr. 27.

Levy, Maurice M., London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Thermionic valve circuits. 2,440,284, Apr. 27.

Lewis, Clay E., Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y. Electrical insulation testing apparatus. 2,440,480, Apr. 27.

Lewis, Frederick G., and C. P. Stephen, Stockton, Calif. Endless track type row crop tractor. 2,440,518, Apr. 27.

Lewis, Warren K., Cambridge, Mass., assignor to Standard Oil Development Company. Preventing erosion in fluidized catalytic cracking of hydrocarbons. 2,440,591, Apr. 27.

Lichtenwalter, Myrl, Old Greenwich, Conn., assignor to Nicaro Nickel Company, New York, N. Y. Separation of copper. 2,440,612, Apr. 27.

Lilly, Ell, and Company, assignee: *See*—
Behrens, Otto K.
Behrens, Otto K., and Jones.
Behrens, Otto K., Jones, and Corse.
Behrens, Otto K., and Soper.

Lindsay, William R.: *See*—
Kelly, Stephen A., Jr., and Lindsay.

Littell, Nelson, assignee: *See*—
Jeffreys, George A.

Little, Alfred E., Chicago, and H. Jagger, Maywood, assignors to Ditto, Incorporated, Chicago, Ill. Feed tray for duplicating apparatus. 2,440,635, Apr. 27.

Lockheed Aircraft Corporation, assignee: *See*—
Sandorff, Paul E.

Longenecker, Levi S., Mount Lebanon, Pa. Smelting furnace. 2,440,374, Apr. 27.

Lord Manufacturing Company, assignee: *See*—
Kaemmerling, Gustav H.

Lowe, Martin, assignor of one-half to A. Block, New York, N. Y. Clothes hanger. 2,440,636, Apr. 27.

Lowe, Martin, assignor of one-half to A. Block, New York, N. Y. Clothes hanger. 2,440,637, Apr. 27.

Lowery, Frank L., Oklahoma City, Okla. Portable device for pasting wallpaper. 2,440,481, Apr. 27.

Lucas, Joseph, Limited, assignee: *See*—
Ifield, Richard J.

Lykken, Henry G. and W. H., Minneapolis, Minn. Pulverizing and classifying machine having a rotor comprising superimposed sections. 2,400,285, Apr. 27.

Lykken, William H.: *See*—
Lykken, Henry G. and W. H.

Lyon, George A., Allenhurst, N. J. Wheel cover. 2,440,638, Apr. 27.

Maas, Mabel L.: *See*—
Barcroft, William G., and Maas.

MacDougall, Keith K., Chambley Canton, Quebec, and J. A. Labash, Hamilton, Ontario, Canada, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Soldering flux. 2,440,502, Apr. 27.

Magnetic Products Corporation, assignee: *See*—
Dedek, Frank.

Mallinckrodt Chemical Works, assignee: *See*—
Wallingford, Vernon H., and Homeyer.

Mann, John, assignor to Goulds Pumps, Inc., Seneca Falls, N. Y. Pumping apparatus. 2,440,611, Apr. 27.

Marmont, George H., assignor to Bendix Aviation Corporation, Detroit, Mich. Electronic distributor. 2,440,639, Apr. 27.

Martin, Charles H., Huntington Park, assignor to H. B. and S. Rapp, co-partners doing business as Towner Manufacturing Co., Santa Ana, Calif. Tractor-conveyed implement and hitch therefor. 2,440,550, Apr. 27.

Martin, Gustav J.: *See*—
Souren, Avakian, and Martin.
Urist, Harold, and Martin.

Martin, Harold M., Schenectady, N. Y., assignor to General Electric Company. Dynamoelectric machine with cooling means. 2,440,551, Apr. 27.

Martin, Homer Z., Roselle, N. J., assignor to Standard Oil Development Company. Process and apparatus for contacting fluids with powdered solids. 2,440,482, Apr. 27.

Marton, Ladislaus, Washington, D. C., assignor to Research Corporation, New York, N. Y. Electron microanalyzer. 2,440,640, Apr. 27.

Mayle, Albert T., Jr.: *See*—
Salinger, Hans W. G., and Mayle.

Mayne, Robert, Akron, Ohio. Apparatus for manifesting acceleration. 2,440,342, Apr. 27.

McAllister, Sumner H., Lafayette, assignor to Shell Development Company, San Francisco, Calif. Interpolymerization of isoamylenes with normal butenes and isobutene. 2,440,286, Apr. 27.

McCleary, Rush F., Beacon, assignor to The Texas Company, New York, N. Y. Lubricating oil. 2,440,375, Apr. 27.

McCollum, Henry J. De N., deceased, Chicago, Ill.; T. McCollum, executrix, assignor to Stewart-Warner Corporation, Chicago, Ill. Internal-combustion heater with expansible fuel reservoir. 2,440,447, Apr. 27.

McCollum, Thelma, executrix: *See*—
McCollum, Henry J. De N.

McCullough, Robert W.: *See*—
Ames, Robert S., McCullough, and Peterson.

McCune, Joseph C., Edgewood, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Brake control system. 2,440,343, Apr. 27.

McGill, Allen: *See*—
Strickland, George M., and McGill.

McKesson & Robbins, Incorporated, assignee: *See*—
Omohundro, Allen L., and Fanto.

Melchionna, Frank A., Cincinnati, Ohio. Heel brace. 2,440,412, Apr. 27.

Mennesson, Marcel, Neuilly-sur-Seine, assignor to Societe D'Appareils de Contrôle et Equipement des Moteurs (S. A. C. E. M.), Neuilly-sur-Seine (Seine), France. Control device for internal-combustion engines. 2,440,483; Apr. 27.

Metal Products Corporation, assignee: *See*—
Kincannon, Leo T.

Mid-West Wire Products Company, Inc., assignee: *See*—
Geralds, Jerry.

Miketta, Casimir A., assignee: *See*—
Hunter, Frank B.

Miller, Donald L., Pine City, assignor to Bendix Aviation Corporation, Elmira Heights, N. Y. Engine starter drive. 2,440,657, Apr. 27.

Miller, Ellen W., assignor of one-fifth to W. E. Neely, Rochester, N. Y. Bib. 2,440,666, Apr. 27.

Miller, Harry B., Providence, R. I. Radial vane pump mechanism. 2,440,593, Apr. 27.

Milwaukee Electric Tool Corporation, assignee: *See*—
Beckwith, Wendell K.

Minnesota Mining & Manufacturing Company, assignee: *See*—
Heltzer, Harry, and Clarke.

Minnick, Leonard J., Cheltenham, assignor to G. and W. H. Corson, Inc., Plymouth Meeting, Pa. Obtaining barium carbonates. 2,440,641, Apr. 27.

Mittell, Peter, assignor to Windsor Case Company, Inc., Providence, R. I. Spectacle case. 2,440,552, Apr. 27.

Mock, Clara L., Hamilton, Kans. Braid-stitch crochet hook. 2,440,413, Apr. 27.

Montgomery, George B., Castle-Douglas, Scotland. Lens coupling mount. 2,440,344, Apr. 27.

Moody, Earle C.: *See*—
Calvin, Harry C.

Mooney, Edward, Venice, Calif. Motor fan blade control. 2,440,519, Apr. 27.

Morrison, Montford, Upper Montclair, N. J. Amplifier system. 2,440,553, Apr. 27.

Muckerheide, Victor J.: *See*—
Myers, Latimer D., and Muckerheide.

Mutual Boiler Insurance Comuany, assignee: *See*—
Begley, John J.

Myers, Latimer D., Cincinnati, and V. J. Muckerheide, Silverton, assignors to Emery Industries, Inc., Cincinnati, Ohio. Dibasic acid drying oils. 2,440,667, Apr. 27.

Myers, Richard A., assignor to Warren Plastics Corporation, Warren, Pa. Molding machine. 2,440,376, Apr. 27.

Myers, Stuart J., assignor to Warren Plastics Corporation, Warren, Pa. Molding machine. 2,440,377, Apr. 27.

Naghski, Joseph, Philadelphia, Pa., J. W. White, Jr., Washington, D. C., and S. R. Hoover, Philadelphia, Pa., assignors to United States of America as represented by the Secretary of Agriculture. Recovery of rubber in plants by fermenting with clostridium. 2,440,554, Apr. 27.

National Acme Company, The, assignee: *See*—
Jeffrey, Max L.

National Drug Company, The, assignee: *See*—
Souren, Avakian, and Martin.
Urist, Harold, and Martin.

National Fitch Corporation, assignee: *See*—
Norbom, Ragnar A.

National-Standard Company, assignee: *See*—
Frazier, Larry C.

Naylor, Beatrice: *See*—
Armstrong, George J., Naylor, and Dunning.

Neel, Carr B., Palo Alto, Calif. Aircraft carrier. 2,440,345, Apr. 27.

Neely, William E., assignee: *See*—
Miller, Ellen W.

Newsome, James W., Belleville, H. W. Heiser, East St. Louis, and J. R. Wall, Collinsville, Ill., assignors to Aluminum Company of America, Pittsburgh, Pa. Treatment of sodium aluminate solutions. 2,440,378, Apr. 27.

New York Air Brake Company, The, assignee: *See*—
Huber, Matthew W.

Nicaro Nickel Company, assignee: *See*—
Lichtenwalter, Myrl.

Nicewander, Daniel A.: *See*—
Hillyer, John C., and Nicewander.

Niederhauser, Robert J.: *See*—
Spiller, William R., and Niederhauser.

Norbom, Ragnar A., New York, N. Y., assignor to National Fitch Corporation. Transport vehicle. 2,440,379, Apr. 27.

Norma-Hoffmann Bearings Corporation, assignee: *See*—
Batesole, Dwight E.

Oblad, Alex G., Dallas, Tex., assignor, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Production of cyclohexane. 2,440,414, Apr. 27.

Ohio Crankshaft Company, The, assignee: *See*—
Strickland, Harold A., Jr.

Oilfields Service Co., assignee: *See*—
Smith, Fred D.

Oliver Corporation, The, assignee: *See*—
Gemberling, Cameron H.

Olson, Eric, Beloit, Wis. Razor blade sharpener. 2,440,520, Apr. 27.

Omohundro, Allen L., Wilton, and E. C. Fanto, Fairfield, assignors to McKesson & Robbins, Incorporated, Bridgeport, Conn. Abietate ester hair dressing. 2,440,555, Apr. 27.

Opperman, Harry E., Jr.: *See*—
Opperman, Harry E., Sr., and H. E., Jr.

Opperman, Harry E., Sr., and H. E., Jr., Los Angeles, Calif. Pessary. 2,440,521, Apr. 27.

Oravetz, Albert S., New York, N. Y. Electronic power tube tester. 2,440,287, Apr. 27.

Orr, Palmer, Muncie, Ind., assignor to Borg-Warner Corporation, Chicago, Ill. Transmission. 2,440,613, Apr. 27.

Ost, Clarence S., Atlantic City, N. J. Stop for dial indicators. 2,440,522, Apr. 27.

Oswald, Louis, Los Angeles, Calif. Land leveler. 2,440,642, Apr. 27.

Paluev, Konstantin K., Pittsfield, Mass., assignor to General Electric Company. Electrical apparatus. 2,440,556, Apr. 27.

Paulus, Charles L., and R. K. Stout, Dayton, Ohio. Electrical socket. 2,440,288, Apr. 27.

Payne, William H., Hinsdale, Ill. Automatically controlling arc furnace electrodes. 2,440,380, Apr. 27.

Peck, Albert C.: *See*—
Fisher, Harmon F., and Peck.

Pensyl, Daniel S., Garden City, N. Y., assignor to The Sperry Corporation. Automatic volume control for pulse systems. 2,440,289, Apr. 27.

Permanente Metals Corporation, The, assignee: *See*—
Fisher, Harmon F., and Peck.

Permoflux Corporation, assignee: *See*—
Gilman, Webster E.

Perry, Julian P., Holicong, assignor to Autogiro Company of America, Philadelphia, Pa. Rotor equipped aerial device. 2,440,296, Apr. 27.

Peterson, George N., Grafton, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Pneumatic thread holder for multi-stack magazines. 2,440,523, Apr. 27.

Peterson, Mauritz P. H.: *See*—
Ames, Robert S., McCullough, and Peterson.

Pettinos, George F., Merion, Pa. Sandblast nozzle. 2,440,643, Apr. 27.

Philco Corporation, assignee: *See*—
Bauman, John J.

Phillips, Harry, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Firing mechanism for guns. 2,440,381, Apr. 27.

Phillips, Marin, assignor to the Appleton Coated Paper Company, Appleton, Wis. Paper drying apparatus. 2,440,346, Apr. 27.

Phillips Petroleum Company, assignee: *See*—
Creel, William H.
Hillyer, John C., and Nicewander.
Schulze, Walter A., and Hillyer.
Vinyard, Roy E.

Pickles, Sidney B., Jackson Heights, assignor to Federal Telephone and Radio Corporation, New York, N. Y. High-frequency cable and balancing the same. 2,440,290, Apr. 27.

Pillsbury Mills, Inc., assignee: *See*—
Harrel, Chastain G., and Brown.

Pioneer Hardware Corporation, The, assignee: *See*—
Hagstrom, Gotthard.

Piper, Edward W., Woodbrook, Md. Game pointer and scorer. 2,440,415, Apr. 27.

Pitcairn, Harold F., Bryn Athyn, assignor to Autogiro Company of America, Philadelphia, Pa. Rotor equipped aerial device. 2,440,291, Apr. 27.

Pitcairn, Harold F., Bryn Athyn, and P. H. Stanley, Huntingdon Valley, assignors to Autogiro Company of America, Philadelphia, Pa. Rotor equipped aerial device. 2,440,292, Apr. 27.

Pittman, Ralph R., Little Rock, Ark. Voltage-limiting arc interrupter. 2,440,484, Apr. 27.

Poitras, Joseph A., Fort Lee, N. J., assignor to Solar Manufacturing Corporation, New York, N. Y. Stacking machine. 2,440,347, Apr. 27.

Postel, Kenneth L., assignor to Vickers Incorporated, Detroit, Mich. Power transmission. 2,440,614, Apr. 27.

Powell, David M., La Junta, Colo. Rotary seat attachment for barber chairs. 2,440,644, Apr. 27.

Power, Clifton W., Los Angeles, Calif. Fabric building. 2,440,557, Apr. 27.

Price, Harold W., assignor to Bendix Aviation Corporation, South Bend, Ind. Transmission operating mechanism. 2,440,558, Apr. 27.

Proudfoot, Alvan A., assignee: *See*—
Proudfoot, Charles B.

Proudfoot, Charles B., Oak Ridge, Tenn., assignor of one-fourth to A. A. Proudfoot, Buffalo, N. Y. Vacuum rotary drum drier having means to compress evacuated vapors. 2,440,416, Apr. 27.

Puchner, Irving A.: *See*—
Elliott, Gordon R.

Purcell, Peter E., Portland, Oreg. Loader for grease guns. 2,440,448, Apr. 27.

Pye Limited, assignee: *See*—
Jackson, Donald.

Pyk, Herman T., Saltsjo-Duvnas, and H. G. Camner, Storagen, assignors to Aktiebolaget Atlas Diesel, Sickla near Stockholm, Sweden. Scavenging for two-stroke cycle engines. 2,440,645, Apr. 27.

Radio Corporation of America, assignee: *See*—
Belar, Herbert.
Corrington, Murlan S.
Crosby, Murray G.
Keizer, Eugene O.
Solomon, Myer.
Tourshou, Simeon I.
Usselman, George L.

Radio Patents Corporation, assignee: *See*—
Rath, Karl.

Raemer, Lloyd R., Chicago, Ill. Portable building structure. 2,440,449, Apr. 27.

Rains, Bertram V., Raymondville, Tex. Combined cleaner, drier, and grainery. 2,440,524, Apr. 27.

Ranseen, Mauritz C., Minneapolis, Minn. Cap-lifting bottle opener. 2,440,485, Apr. 27.

Rapp, Howard B., assignee, et al.: *See*—
Martin, Charles H.

Rapp, Sally, assignee, et al.: *See*—
Martin, Charles H.

Rath, Karl, assignor to Radio Patents Corporation, New York, N. Y. Variable frequency continuous balance motor control system. 2,440,486, Apr. 27.

Rauland Corporation, The, assignee: *See*—
Antalek, John J.

Rayburn, Vincent A., Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y. Corrosion resistant filter. 2,440,487, Apr. 27.

Raytheon Manufacturing Company, assignee: *See*—
Dawson, John W.

Red Ball Manufacturing Company, assignee: *See*—
Kimberlin, Carna M.

Regents of the University of Minnesota, assignee: *See*—
Crawford, Bryce L., Jr.

Reichman, Alexander, South Bend, Ind., assignor to The Studebaker Corporation, South Bend, Ind. Dump body control mechanism. 2,440,559, Apr. 27.

Research Corporation, assignee: *See*—
Marton, Ladislaus.
White, Harry J.

Rice, Clifford M., Alexandria, Va. Drain. 2,440,594, Apr. 27.

Ridbo Laboratories, Inc., assignee: *See*—
Frilette, Vincent J.

Riddell, William A., assignor to The General Engineering Company, Frederick, Md. Tuyère. 2,440,382, Apr. 27.

Riecken, William E., deceased, by W. E. Riecken, Jr., administrator, Leonia, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Apparatus for and method of electroforming of rectifier elements. 2,440,297, Apr. 27.

Riecken, William E., Jr., administrator: *See*—
Riecken, William E.

Riemenschneider, Roy W., Glenside, and J. Turer, Philadelphia, Pa., assignors to the United States of America, as represented by the Secretary of Agriculture. Synergistic antioxidant composition of the acidic type. 2,440,383, Apr. 27.

Robertson, H. H., Company, The, assignee: *See*—
Young, James H., and Jenkins.

Robur Heel Company Aktiebolag, assignee: *See*—
Johansson, Gustaf E.

Roethell, Bruno E., Cranford, N. J., assignor to Standard Oil Development Company. Dehydrogenation of hydrocarbons. 2,440,525, Apr. 27.

Rogers, Dilworth T.: *See*—
Winning, Carl, and Rogers.

Ronay, Bela, and C. D. Jensen, Annapolis, Md. Brazing steel shaft and flange assemblies. 2,440,298, Apr. 27.

Root, John J., New York, N. Y. Grinding piezoelectric crystals. 2,440,348, Apr. 27.

Rose, Paul R.: *See*—
Walter, Harold J., and Rose.

Rosen, Carl G. A., Peoria, Ill., assignor to Caterpillar Tractor Co., San Leandro, Calif. Oil accumulation drain means for radial engines. 2,440,488, Apr. 27.

Rosen, Raphael, Elizabeth, and J. C. Zimmer, Union, N. J., assignors to Standard Oil Development Company. Dehydrating aqueous mixtures. 2,440,489, Apr. 27.

Rostler, Fritz S., Newark, and H. I. du Pont, Wilmington, Del., assignor to Wilmington Chemical Corporation, New York, N. Y. Compounding rubbery materials. 2,440,209, Apr. 27.

Rubel, Charles F., assignor to Union Special Machine Company, Chicago, Ill. Sewing machine. 2,440,615, Apr. 27.

Rushmer, Ralph H., and G. J. Goepfert, assignors to The Carborundum Company, Niagara Falls, N. Y. Resin bonded abrasive article. 2,440,300, Apr. 27.

Rust, John D., Memphis, Tenn. Spindle slats for cotton harvesters. 2,440,450, Apr. 27.

St. Laurence, Ernest J., Minneapolis, Minn. Automatic fire door for parts washers. 2,440,619, Apr. 27.

Salinger, Hans W. G., and A. T. Mayle, Jr., Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation. Electron beam centering system. 2,440,490, Apr. 27.

Sandorff, Paul E., Los Angeles, assignor to Lockheed Aircraft Corporation, Burbank, Calif. Apparatus for testing panels and the like. 2,440,616, Apr. 27.

Schaeffer, Benjamin B., Upper Darby, Pa., assignor to United States of America, as represented by Secretary of Agriculture. Preparing an alkylolamide of trihydroxystearic acid. 2,440,349, Apr. 27.

Schenké, Kurtiss P., New York, N. Y. Self-cleaning strainer. 2,440,384, Apr. 27.

Schulte, Charles F., Columbus, Ohio. Toothbrush holder. 2,440,385, Apr. 27.

Schulze, Walter A., and J. C. Hillyer, Bartlesville, Okla., assignors to Phillips Petroleum Company. Inhibiting polymerization of furfural. 2,440,451, Apr. 27.

Schwander, Erwin F., Reichshoffen, assignor to Societe d'Etudes des Vehicules "Sev," Reichshoffen (Bas-Rhin), France. Oil burner. 2,440,491, Apr. 27.

Scott & Williams, Incorporated, assignee: *See*—
Lawson, Robert H.

Seebold, James E., assignor to Standard Oil Company, Chicago, Ill. Oil desalting technique. 2,440,617, Apr. 27.

Sellstrom Manufacturing Company, assignee: *See*—
Anderson, Marshall N.

Servel, Inc., assignee: *See*—
Hainsworth, William R.

Seyfried, Wilson D., Wooster, and S. H. Hastings, Baytown, Tex., assignors to Standard Oil Development Company. Production of diolefins. 2,440,492, Apr. 27.

Shafer, Walter S., Roseland, N. J. Door latch. 2,440,350, Apr. 27.

Sharpe, Jack, Wembley, England. Signal reproducing system. 2,440,301, Apr. 27.

Shell Development Company, assignee: *See*—
Adelson, David E., and Dannenberg.
Fay, Charles H.
McAllister, Sumner H.
Yates, Wallace J.

Sheppard, Allan G., assignor to American-La France-Foamite Corporation, Elmira, N. Y. Two-stage pump. 2,440,560, Apr. 27.

Sherman, John Q., deceased, by K. M. Sherman, W. C. Sherman, and W. B. Turner, executors, Dayton, Ohio. Separating machine. 2,440,302, Apr. 27.

Sherman, Katherine M., executor: *See*—
Sherman, John Q.

Sherman, William C., executor: *See*—
Sherman, John Q.

Shipley, George H., Jr., Baytown, Tex., assignor to Standard Oil Development Company. Separating butadiene and acetylene from a hydrocarbon mixture. 2,440,493, Apr. 27.

Showacre, Frank A., Bethesda, Md. Differential railroad car wheel axle. 2,440,351, Apr. 27.

Silverstein, Martin S., Camden, N. J. Increasing the resistance of red phosphorous to oxidation. 2,440,303, Apr. 27.

Simmons, Leon E., Claremont, N. H., assignor to Joy Manufacturing Company. Clutch and brake control. 2,440,304, Apr. 27.

Singer, Otto, London, England. Track wheel for vehicles. 2,440,417, Apr. 27.

Skinner, Leslie A., U. S. Army, Washington, D. C., assignor to the United States of America, as represented by the Secretary of War. Rocket projectile. 2,440,305, Apr. 27.

Smith, Alva, administratrix: *See*—
Smith, Leathem D.

Smith, Fred D., assignor to Oilfields Service Co., Long Beach, Calif. Quick action coupling. 2,440,452, Apr. 27.

Smith, Fred S., Blackwell, Darlington, England. Fasteners for bags, cases, and other containers. 2,440,595, Apr. 27.

Smith, Leathem D., deceased, Sturgeon Bay, Wis.; A. Smith, administratrix. Container ship for handling package freight. 2,440,306, Apr. 27.

Smith, Leathem D., deceased, Sturgeon Bay, Wis.; A. Smith, administratrix. Ship hold. 2,440,307, Apr. 27.

Societe Anonyme de Telecommunications, assignee: *See*—
Lebedinsky, Myron.

Société Anonyme des Forges et Aciéries du Nord & de l'Est, assignee: *See*—
Allard, Marc L.

Societe D'Appareils de Contrôle et Equipment des Moteurs (S. A. C. E. M.), assignee: *See*—
Mennesson, Marcel.

Societe d'Etudes des Vehicules "Sev," assignee: *See*—
Schwander, Erwin F.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Oblad, Alex G.

Solar Manufacturing Corporation, assignee: *See*—
Poltras, Joseph A.

Solomon, Myer, deceased, Westmont, by N. W. Solomon, Princeton, N. J., administratrix, assignor to Radio Corporation of America. Fibrous sheet material for the electrolytic formation of an azo dyestuff thereon. 2,440,526, Apr. 27.

Solomon, Nellie W., administratrix: *See*—
Solomon, Myer.

Soper, Quentin F.: *See*—
Behrens, Otto K., and Soper.

Sparks, William J., Elizabeth, and R. M. Thomas, Union, N. J., assignors to Standard Oil Development Company. Low-temperature polymerization of butadiene in the presence of methallyl chloride. 2,440,494, Apr. 27.

Sperry Corporation, The, assignee: *See*—
Ginzton, Edward L.
Pensyl, Daniel S.

Spiller, William R., and R. J. Niederhauser, Dayton, Ohio, assignors, by mesne assignments, to Acme Steel Company, Chicago, Ill. Stitching machine. 2,440,618, Apr. 27.

Sprague Electric Company, assignee: *See*—
Beverly, Nelson E.

Standard Oil Company, assignee: *See*—
Hughes, Everett C.
Seebold, James E.
Voorhees, Vanderveer.

Standard Telephones and Cables Limited, assignee: *See*—
Kelly, Richard.

Stanley, Paul H.: *See*—
Pitcairn, Harold F., and Stanley.

Stanley, Paul H., Huntingdon Valley, assignor to Autogiro Company of America, Philadelphia, Pa. Rotor equipped aerial device. 2,440,293, Apr. 27.

Stanley Steam Motors Corporation, assignee: *See*—
Doble, Abner.

Stein, Frederick W., Atchison, Kans. Cell for measuring the electrical characteristics of materials. 2,440,386, Apr. 27.

Stephen, Charles P.: *See*—
Lewis, Frederick G., and Stephen.

Stewart-Warner Corporation, assignee: *See*—
McCollum, Henry J. De N.

Stirton, Robert I., Redondo Beach, assignor to Union Oil Company of California, Los Angeles, Calif. Catalyst. 2,440,236, Apr. 27.

Storck, Edward A., Manasquan, N. J., assignor to the United States of America, as represented by the Secretary of War. Oscillator structure. 2,440,308, Apr. 27.

Stout, Raymond K.: *See*—
Paulus, Charles L., and Stout.

Strickland, George M., and A. McGill, Daytona Beach, Fla. Warning signaling apparatus. 2,440,453, Apr. 27.

Strickland, Harold A., Jr., Detroit, Mich., assignor, by mesne assignments, to The Ohio Crankshaft Company, Cleveland, Ohio. Capacitor translating system. 2,440,309, Apr. 27.

Studebaker Corporation, The, assignee: *See*—
Reichman, Alexander.

Sugar Creek Creamery Company, assignee: *See*—
Erickson, James S.

Synnestvedt, Kenneth P., Bryn Athyn, assignor to Autogiro Company of America, Philadelphia, Pa. Rotor equipped aerial device. 2,440,295, Apr. 27.

Taff, Wilfred O., Roselle, N. J., assignor to Standard Oil Development Company. Contacting solids and gaseous fluids. 2,440,620, Apr. 27.

Talley, Hyrum M., Alhambra, Calif., assignor to American Pipe and Steel Corporation, Alhambra, Calif. Acetylene torch cutter support. 2,440,527, Apr. 27.

Tarbox, John P., assignor to The Budd Company, Philadelphia, Pa. Cable construction. 2,440,668, Apr. 27.

Templeton, Kenly & Co., Inc., assignee: *See*—
Jakoubek, Frank J., and Gahl.

Texaco Development Corporation, assignee: *See*—
Hare, Donald G. C.

Texas Company, The, assignee: *See*—
Furman, George R.
McCleary, Rush F.

Thege, Edvin O. P., assignor to Aktiebolaget Atlas Diesel, Sickla, near Stockholm, Sweden. Uniflow scavenging for engines. 2,440,310, Apr. 27.

Thomas, Robert M.: *See*—
Sparks, William J., and Thomas.

Thomas Wright Co., Inc., The, assignee: *See*—
Bruno, Samuel J.

Thurston, Jack T., Riverside, Conn., assignor to American Cyanamid Company, New York, N. Y. Aldehyde condensation products of sulfonated aromatic compounds as cation exchange resins. 2,440,669, Apr. 27.

Tiddy, William, Manhasset, N. Y., assignor to Allied Chemical & Dye Corporation. Treating coal tar containing a small amount of ammonium chloride. 2,440,311, Apr. 27.

Tomlinson, Clarence L., assignor of one-half to R. J. Brandt, Los Angeles, Calif. Apparatus for transmitting motion-picture light images. 2,440,312, Apr. 27.

Tomlinson, Clarence L., assignor of one-half to R. J. Brandt, Los Angeles, Calif. Shutterless motion picture lens system. 2,440,313, Apr. 27.

Törnebohm, Hilding V., assignor to Aktiebolaget Svenska Kullagerfabriken, Goteborg, Sweden. Gaging apparatus for adjusting gage blocks of the adjustable type. 2,440,646, Apr. 27.

Torrington Company, The, assignee: *See*—
Brown, Edmund K.

Tourshou, Simeon I., Philadelphia, Pa., assignor to Radio Corporation of America. Cathode-ray beam deflecting circuit. 2,440,418, Apr. 27.

Towner Manufacturing Co.: *See*—
Martin, Charles H.

Trier, Carl L., Baltimore, Md., and J. W. Fogg, Barrington, Ill., assignors to Cherry-Burrell Corporation, Wilmington, Del. Washing apparatus for bottle washers. 2,440,419, Apr. 27.

Turer, Jack: *See*—
Riemenschneider, Roy W., and Turer.

Turner, Charles R., Philadelphia, Pa. Method and means for photographic developing or the like. 2,440,314, Apr. 27.

Turner, Wellmore B., executor: *See*—
Sherman, John Q.

Tuve, Richard L., Silver Spring, Md. Sensitized pyrogallol reagent and its preparation. 2,440,315. Apr. 27.

Union Oil Company of California, assignee: *See*—
Stirton, Robert I.

Union Special Machine Company, assignee: *See*—
Rubel, Charles F.

United Shoe Machinery Corporation, assignee: *See*—
Phillips, Harry.

Western Electric Company, Incorporated, assignee: *See*—
Ewaldson, Waldemar C.
Lewis, Clay E.
Rayburn, Vincent A.

Western Precipitation Corporation, assignee: *See*—
White, Harry J.

Westinghouse Air Brake Company, The, assignee: *See*—
Cadman, Norman G.
Larson, Arthur G.
McCune, Joseph C.

Westinghouse Electric Corporation, assignee: *See*—
Copping, Bruce G., and Wegman.
Wickerham, William R.

Westmoreland, John L., Canton, N. C. Tractor-mounted buzz-saw rigging. 2,440,422, Apr. 27.

Whalen, Edward M.: *See*—
Lehman, Eugene W., and Whalen.

White, Francis T., and A. J. Daly, Spondon, near Derby, England, assignor, by mesne assignments, to Celanese Corporation of America. Catalytic polymerisation of methyl methacrylate. 2,440,318, Apr. 27.

White, Harry J., Cambridge, Mass., assignor of one-half to Research Corporation, New York, N. Y., and one-half to Western Precipitation Corporation, Los Angeles, Calif. Charging suspended particles. 2,440,455, Apr. 27.

White, Jonathan W., Jr.: *See*—
Naghski, Joseph, White, and Hoover.

Wickerham, William R., Swissvale, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Alternating current hoist control. 2,440,319, Apr. 27.

Wiegand, William B., Old Greenwich, Conn., and H. A. Braendle, Garden City, assignors to Columbian Carbon Company, New York, N. Y. Apparatus for manufacture of carbon black. 2,440,423, Apr. 27.

Wiegand, William B., Old Greenwich, Conn., and H. A. Braendle, Garden City, assignors to Columbian Carbon Company, New York, N. Y. Manufacture of carbon black. 2,440,424, Apr. 27.

Wiemer, Howard C., Muncie, Ind., assignor to Borg-Warner Corporation, Chicago, Ill. Transmission. 2,440,625, Apr. 27.

Wilder, Agnes S., executrix: *See*—
Wilder, Reuben M.

Wilder, Reuben M., deceased, Hayward, Calif.; A. S. Wilder, executrix. Operating mechanism for overhead opening doors. 2,440,561, Apr. 27.
Williams, Joseph B., San Francisco, Calif. Fruit and vegetable juice extractor. 2,440,425, Apr. 27.
Wilmington Chemical Corporation, assignee: *See*— Rostler, Fritz S., and du Pont.
Windsor Case Company, Inc., assignee: *See*— Mittell, Peter.
Winning, Carl, Westfield, and D. T. Rogers, Summit, N. J., assignors to Standard Oil Development Company. Producing unsaturated hydrocarbons containing branched carbon chains. 2,440,497, Apr. 27.
Wise, Mark M., Mosman, near Sydney, New South Wales, Australia. Obtaining of ramie. 2,440,562, Apr. 27.
Woodward Governor Company, assignee: *See*— Drake, George F.
Woyach, Agnes, Mequon, Wis. Storm boot with removable protective lining. 2,440,563, Apr. 27.
Wright, Fred J., Upper Arlington, Ohio, assignor, by mesne assignments, to The Jeffrey Manufacturing Company. Hydraulic system for reciprocating breaker plates for reversible rotary crushers. 2,440,388, Apr. 27.
Yates, Wallace J., Martinez, assignor to Shell Development Company, San Francisco, Calif. Stabilized organic compositions. 2,440,530, Apr. 27.
Young, David W., Roselle, and H. B. Kellog, Union City, N. J., assignors to Standard Oil Development Company. Polymerization catalysts. 2,440,498, Apr. 27.
Young, James H., and P. W. Jenkins, assignors to H. H. Robertson Company, Pittsburgh, Pa. Antistick bitumen surfaced building material. 2,440,626, Apr. 27.
Young, Norman H., Jr., Jackson Heights, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Modulation system. 2,440,320, Apr. 27.
Zebroski, Walter, New York, N. Y. Apparatus for making metal powder. 2,440,531, Apr. 27.
Zimmer, John C.: *See*— Rosen, Raphael, and Zimmer.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 27TH DAY OF APRIL, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Circuits, Differential detector. M. G. Crosby. 22,996, Apr. 27.
Molecular absorption of vibration, Method and apparatus for. C. W. Chamberlain. 22,995, Apr. 27.

LIST OF DESIGN INVENTIONS

Airplane, Miniature. V. W. Russell. 149,447, Apr. 27.
Automobile and airplane, Combination. T. R. Burns. 149,404, Apr. 27.
Badge or similar article, Lapel and pocket. R. J. Neller. 149,436, Apr. 27.
Band, Watch. P. E. Babin. 149,396, Apr. 27.
Bank, Mechanical. J. J. Weintraub. 149,463, Apr. 27.
Bathing device, Baby. I. Brecher. 149,403, Apr. 27.
Bicycle. R. J. Fuhs. 149,408, Apr. 27.
Billfold, coin holder, and key case, Combined. A. A. Seamon. 149,450, Apr. 27.
Body, Automobile. C. S. Lupinski. 149,430, Apr. 27.
Body for trailer vehicles. J. Stephen. 149,454, Apr. 27.
Book end or similar article. A. G. Giegold, Jr. 149,409, Apr. 27.
Bottle or article of similar nature. J. S. Allen. 149,394, Apr. 27.
Box, File. G. S. Underwood. 149,461, Apr. 27.
Box, Sewing. H. Jahn and C. S. Zaremba. 149,414, Apr. 27.
Cabinet. J. E. Moberg. 149,434, Apr. 27.
Cabinet, Combination radio and television. V. Trad. 149,459, Apr. 27.
Cabinet for a film projection unit constituting visual training and mechanical game device. J. Tjaarda. 149,458, Apr. 27.
Cabinet, Radio. U. Tecca. 149,457, Apr. 27.
Calendar, Desk. E. Kottle. 149,424, Apr. 27.
Car, Motor. J. Rose. 149,446, Apr. 27.
Chair. H. S. Beall. 149,399, Apr. 27.
Collar or similar article, Embroidered lace. W. Kohn. 149,421–3, Apr. 27.
Cradle for telephone handset, Auxiliary. H. B. Stofer. 149,455, Apr. 27.
Desk. C. E. Jones. 149,416–18, Apr. 27.
Dispenser, Condiment. C. A. Kurrash. 149,425, Apr. 27.
Dispenser, Perfume. L. J. Biro. 149,400, Apr. 27.
Doll. E. E. Brandenburg. 149,402, Apr. 27.
Dolly, Camera. H. W. Houston. 149,412, Apr. 27.
Faucet, C. W. Banberger. 149,398, Apr. 27.
Fixture, Electric lighting. M. W. Schwartz and M. J. Marks. 149,448–9, Apr. 27.
Fixture, Flourescent lighting. S. E. Lindahl. 149,427, Apr. 27.
Frame for wheeled stroller vehicle. B. G. Harley. 149,411, Apr. 27.
Guitar. L. L. Lademann. 149,426, Apr. 27.
Handle for line controlled model aircraft, Control. V. Stanzel. 149,453, Apr. 27.
Helicopter. I. I. Sikorsky and M. E. Gluhareff. 149,452, Apr. 27.
Holder or similar article, Cigarette package. H. J. Tunstall. 149,460, Apr. 27.
Jewelry finding. M. Rahthus. 149,442, Apr. 27.
Knob or similar article, Control. L. D. Johnson. 149,415, Apr. 27.
Light bowl, Electric. A. J. D. Ohm. 149,438–40, Apr. 27.
Ornament, Automobile hood. L. Ring. 149,443, Apr. 27.
Pipe, Tobacco. E. E. Gregory. 149,410, Apr. 27.
Plug, Electric attachment. J. B. Miller. 149,433, Apr. 27.
Projector, Automatic slide. E. C. Klotz, Jr. 149,420, Apr. 27.
Pushcart. F. P. Nelson. 149,437, Apr. 27.
Radio, clock, and lamp, Combined. I. Engel. 149,406, Apr. 27.
Receiver, Radio broadcast. F. E. Neill. 149,435, Apr. 27.
Ring, Finger. T. F. Strub. 149,456, Apr. 27.
Rosary. C. Vandernoot. 149,462, Apr. 27.
Roundabout. J. S. Evans. 149,407, Apr. 27.
Shirt, Sport. D. Aminoff. 149,395, Apr. 27.
Shoe. M. Kagan. 149,419, Apr. 27.
Spoon or other article of flatware. I. A. Lipman. 149,428, Apr. 27.
Spoon or other article of flatware. H. A. Malinowski. 149,431, Apr. 27.
Spoon or other article of flatware. T. D. McKiernan. 149,432, Apr. 27.
Stand and lamp, Combined reading. F. J. Luketa. 149,429, Apr. 27.
Stand, Pipe. B. Blecher. 149,401, Apr. 27.
Staple driving machine. R. E. Peterson. 149,441, Apr. 27.
Sulky, Racing. R. A. Shuttelworth. 149,451, Apr. 27.
Trainer or similar device, Flight engineer's. J. G. Dodds, A. D. MacKillop, and C. C. Sansom. 149,405, Apr. 27.
Tricycle and wagon, Combined. R. O. Jackson. 149,413, Apr. 27.
Vehicle, Motor. J. Rose. 149,445, Apr. 27.
Vehicle, Trailer. R. H. Barrett. 149,397, Apr. 27.
Wheel, Steering. J. Rose. 149,444, Apr. 27.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 27TH DAY OF APRIL, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrasive article, Resin bonded. R. H. Rushmer and G. J. Goepfert. 2,440,300, Apr. 27.
Accelerometer. C. M. Hathaway. 2,440,605, Apr. 27.
Acetylene torch cutter support. H. M. Talley. 2,440,527, Apr. 27.
Adapter and narrow die for stretching presses, Balanced. E. M. Welser. 2,440,529, Apr. 27.
Adjuster, Zero meter. H. Butler. 2,440,392, Apr. 27.
Air conditioning apparatus. A. H. Bahnson, Jr. 2,440,627, Apr. 27.
Aircraft carrier. C. B. Neel. 2,440,345, Apr. 27.
Air-drying apparatus. N. G. Cadman. 2,440,326, Apr. 27.
Alkylolamide of a trihydroxystearic acid, Preparing an. B. B. Schaeffer. 2,440,349, Apr. 27.
Alternating current hoist control. W. R. Wickerham. 2,440,319, Apr. 27.
Amplifier system. M. Morrison. 2,440,553, Apr. 27.
Antenna, Television receiver. H. Atwood, Jr. 2,440,597, Apr. 27.
Antifriction bearing. M. W. Huber. 2,440,444, Apr. 27.
Antioxidant composition of the acidic type, Synergistic. R. W. Riemenschneider and J. Turer. 2,440,383, Apr. 27.
Apparatus for airfoils, Ice removing. J. O. Antonson. 2,440,533, Apr. 27.
Apparatus for and method of electroforming of rectifier elements. W. E. Rhecken. 2,440,297, Apr. 27.
Apparatus for building tires. L. C. Frazier. 2,440,662, Apr. 27.
Apparatus for cooling or conditioning air or other fluids. R. J. Kenny. 2,440,446, Apr. 27.
Apparatus for drying cloth with air. H. J. Walter and P. R. Rose. 2,440,648, Apr. 27.
Apparatus for electrophoretic separation of solids from liquids. H. F. Fisher and A. C. Peck. 2,440,504, Apr. 27.
Apparatus for free-blowing thermoplastic material. R. S. Ames, R. W. McCullough, and M. P. H. Peterson. 2,440,499, Apr. 27.
Apparatus for induction heat-treating of work pieces. P. Unterweiser. 2,440,316, Apr. 27.
Apparatus for making a graphic record of a succession of similar operations by a machine. L. G. Vogel. 2,440,647, Apr. 27.
Apparatus for making convolute wound tubing from sheet material. B. Bogoslowsky. 2,440,390, Apr. 27.
Apparatus for making metal powder. W. Zebroski. 2,440,531, Apr. 27.
Apparatus for manifesting acceleration. R. Mayne. 2,440,342, Apr. 27.
Apparatus for manufacture of carbon black. W. B. Wiegand and H. A. Braendle. 2,440,423, Apr. 27.
Apparatus for purifying metallic mercury. H. R. Alley and B. F. Freeberg. 2,440,456, Apr. 27.
Apparatus for shaping tubular blanks. B. Bogoslowsky. 2,440,391, Apr. 27.
Apparatus for testing panels and the like. P. E. Sandorff. 2,440,616, Apr. 27.
Apparatus for transmitting motion-picture light images. C. L. Tomlinson. 2,440,312, Apr. 27.
Appliance for poultry, pigeons, and other birds, Automatic feeding. J. G. Francis. 2,440,332, Apr. 27.
Arc furnace electrodes, Automatically controlling. W. H. Payne. 2,440,380, Apr. 27.
Arch or like supports, Production of. W. L. Gould. 2,440,508, Apr. 27.
Articles from thermoplastic films, Making lap-welded. C. R. Irons. 2,440,664, Apr. 27.
Ashtray, Smokeless. R. C. Weddle. 2,440,387, Apr. 27.
Automatic volume control for pulse systems. D. S. Pensyl. 2,440,289, Apr. 27.
Automobile and airplane wheel. L. Champain. 2,440,460, Apr. 27.
Barber chairs, Rotary seat attachment for. D. M. Powell. 2,440,644, Apr. 27.
Barium carbonates, Obtaining. L. J. Minnick. 2,440,641, Apr. 27.
Barrier, Aircraft. R. B. Cotton. 2,440,574, Apr. 27.
Basket structure. J. Geralds. 2,440,507, Apr. 27.
Battery for hearing aids, Dry. D. W. Hirtle. 2,440,401, Apr. 27.
Bearing: *See*—
  Antifriction bearing
  Double row antifriction bearing.
Bending machine. H. E. Colwell. 2,440,599, Apr. 27.
Berth or bed lounge and like device, Convertible. S. A. Kelly, Jr., and W. R. Lindsay. 2,440,515, Apr. 27.
Bib. E. W. Miller. 2,440,666, Apr. 27.
Bit: *See*—
  Key bit.
Block and support stand, Reversible meat. L. A. Bennett. 2,440,629, Apr. 27.
Block form, Building. T. L. Green. 2,440,582, Apr. 27.
Blower. T. S. Briskin. 2,440,363, Apr. 27.
Bomb, Aerial. G. R. Leghorn. 2,440,282, Apr. 27.
Boot with removable protective lining, Storm. A. Woynch. 2,440,563, Apr. 27.
Box having a drawer and a cover and interconnected latching and locking means thereof. C. B. Gash. 2,440,541, Apr. 27.
Bracket: *See*—
  Mailbox bracket.
Bracket for instrument cases, Mounting. C. A. Blakeslee. 2,440,324, Apr. 27.
Bracket mounting. H. G. Lehmann. 2,440,409, Apr. 27.
Braid-stitch crochet hook. C. L. Mock. 2,440,413, Apr. 27.
Brake control system. J. C. McCune. 2,440,343, Apr. 27.
Brassière. M. C. and E. W. Barlow. 2,440,426, Apr. 27.
Brassière. R. Freedman. 2,440,466, Apr. 27.
Brazing steel shaft and flange assemblies. B. Ronay and C. D. Jensen. 2,440,298, Apr. 27.
Brewing method using albedo in wort. A. A. Klein. 2,440,276, Apr. 27.
Building material, Antistick bitumen surfaced. J. H. Young and P. W. Jenkins. 2,440,626, Apr. 27.
Building structure, Portable. L. R. Raemer. 2,440,449, Apr. 27.
Burner: *See*—
  Oil burner.
Butadiene and acetylene from a hydrocarbon mixture, Separating. G. H. Shipley, Jr. 2,440,493, Apr. 27.
Cabinet having outwardly swingable rack, Necktie. F. H. Kiser. 2,440,549, Apr. 27.
Cable connector. J. S. Larkins, Jr. 2,440,279, Apr. 27.
Cable construction. J. P. Tarbox. 2,440,668, Apr. 27.
Calculating device. F. W. Frink. 2,440,438, Apr. 27.
Cam actuated valve mechanism for fluid pressure engines. T. C. Gray. 2,440,259, Apr. 27.
Carbon black, Manufacture of. W. B. Wiegand and H. A. Braendle. 2,440,424, Apr. 27.
Carrier: *See*—
  Aircraft carrier.
Carrier wave telephone system, Two-way. M. L. Almquist. 2,440,239, Apr. 27.
Cartridge loading. R. C. Arter. 2,440,568, Apr. 27.
Case: *See*—
  Spectacle case.
Catalysis, Process and apparatus for continuous. V. V. Jacomini. 2,440,475, Apr. 27.
Catalyst. R. I. Stirton. 2,440,236, Apr. 27.
Catalyst chamber closure. W. H. Creel. 2,440,436, Apr. 27.
Catalyst from mixtures of hydrocarbons therewith in the liquid phase, Recovery of. E. C. Hughes. 2,440,543, Apr. 27.
Catalysts, Polymerization. D. W. Young and H. B. Kellog. 2,440,498, Apr. 27.
Catalytic polymerisation of methyl methacrylate. F. T. White and A. J. Daly. 2,440,318, Apr. 27.
Cathode-ray beam deflecting circuit. S. I. Tourshou. 2,440,418, Apr. 27.
Cathode-ray oscilloscope, Portable. H. W. A. Chalberg. 2,440,538, Apr. 27.
Cell for measuring the electrical characteristics of materials. F. W. Stein. 2,440,386, Apr. 27.
Chain and method and apparatus for forming same. H. W. Dodson. 2,440,254, Apr. 27.
Chair. M. Greitzer. 2,440,470, Apr. 27.
Charging suspended particles. H. J. White. 2,440,455, Apr. 27.
Choke, Subsurface. O. L. Furse. 2,440,506, Apr. 27.
Circuit: *See*—
  Cathode ray beam deflecting circuit. — Monitoring circuit.
Circuits containing nonlinear elements, Balancing of electrical bridge. M. M. Levy. 2,440,283, Apr. 27.
Circuits, Locked-in oscillator. M. S. Corrington. 2,440,653, Apr. 27.
Circuits, Thermionic valve. M. M. Levy. 2,440,284, Apr. 27.
Clamp for barrel pumps. W. Jackson. 2,440,372, Apr. 27.
Clasp, Dental. G. M. Holden. 2,440,443, Apr. 27.
Clay suspensions, Production of. G. K. Dickerman. 2,440,601, Apr. 27.

Cleaner and humidifier for carbureters. A. Gazda. 2,440,580, Apr. 27.
Cleaner, drier, and grainery, Combined. B. V. Rains. 2,440,524, Apr. 27.
Clip and bracket, Multiple. E. S. Goddard. 2,440,469, Apr. 27.
Clothes hanger. M. Lowe. 2,440,636–7, Apr. 27.
Clutch and brake control. L. E. Simmons. 2,440,304, Apr. 27.
Coal tar containing a small amount of ammonium chloride, Treating. W. Tiddy. 2,440,311, Apr. 27.
Coil suspension for cathode ray tubes, Focus. D. Jackson. 2,440,403, Apr. 27.
Conditioning textile fibers. A. G. Hill. 2,440,399–400, Apr. 27.
Connector: *See*—
  Cable connector.
Contact assembly, Rotary switch. W. L. Dietrich. 2,440,578, Apr. 27.
Contact device, Electric. G. R. Greenslade. 2,440,335, Apr. 27.
Control apparatus for reversible locomotives. A. G. Larson. 2,440,340, Apr. 27.
Control device for internal-combustion engines. M. Mennesson. 2,440,483, Apr. 27.
Control mechanism, Dump body. A. Reichman. 2,440,559, Apr. 27.
Control system, Remote. G. F. Drake. 2,440,255, Apr. 27.
Cooling of high-temperature bodies. P. G. Chevigny. 2,440,245, Apr. 27.
Copper, Separation of. M. Lichtenwalter. 2,440,612, Apr. 27.
Correlating supply of aspirating to aspirated fluids, Control means for. A. Doble. 2,440,329, Apr. 27.
Corrosion resistant filter. V. A. Rayburn. 2,440,487, Apr. 27.
Counter, Automatic set-back. M. L. Jeffrey. 2,440,665, Apr. 27.
Coupling: *See*—
  Quick action coupling.
Cover: *See*—
  Plant pot cover. Wheel cover.
Covering for preventing accumulation of ice on airfoils, Protective. J. O. Antonson. 2,440,240, Apr. 27.
Crown block assembly. E. A. Bender. 2,440,427, Apr. 27.
Curb guiding signal. M. J. Krall. 2,440,587, Apr. 27.
Cutting apparatus. W. C. Ewaldson. 2,440,464, Apr. 27.
Cyano acetic acid compounds, Metallation of. V. H. Wallingford and A. H. Homeyer. 2,440,421, Apr. 27.
Cyanothiophanes and preparing same. B. R. Baker. 2,440,659, Apr. 27.
Cycle engines, Scavenging for two-stroke. H. T. Pyk and H. G. Canner. 2,440,645, Apr. 27.
Cyclohexane, Production of. A. G. Oblad. 2,440,414, Apr. 27.
Dehumidifying unit. W. B. Holden. 2,440,272, Apr. 27.
Dehydrating aqueous mixtures. R. Rosen and J. C. Zimmer. 2,440,489, Apr. 27.
Dehydrogenation of hydrocarbons. B. E. Roetheli. 2,440,525, Apr. 27.
Detector, Radiation. D. G. C. Hare. 2,440,511, Apr. 27.
Device for cables and wires and rods, Clamping. J. E. Anderson. 2,440,532, Apr. 27.
Device for pasting wallpaper, Portable. F. L. Lowery. 2,440,481, Apr. 27.
Device for the separate supply of the fuel and of the combustion air for explosion engines. A. Brandenburg and A. Jolivet. 2,440,572, Apr. 27.
Device for the transmission of calling and clearing signals in long distance telephonic circuits. M. Lebedinsky. 2,440,281, Apr. 27.
Dichloro phenols, Manufacture of. R. T. Foster and N. Bennett. 2,440,602, Apr. 27.
Differential railroad car wheel axle. F. A. Showacre. 2,440,351, Apr. 27.
Diolefins, Production of. W. R. F. Guyer. 2,440,471, Apr. 27.
Diolefins, Production of. W. D. Seyfried and S. H. Hastings. 2,440,492, Apr. 27.
Disc plow, Tractor-drawn. C. H. Gemberling. 2,440,581, Apr. 27.
Dispenser: *See*—
  Fruit juice dispenser.
Distillates, Refining of petroleum. L. P. Elliott and M. M. Holm. 2,440,258, Apr. 27.
Distributor, Electronic. G. H. Marmont. 2,440,639, Apr. 27.
Door latch. W. S. Shafer. 2,440,350, Apr. 27.
Double-acting pump. J. T. Leonard. 2,440,411, Apr. 27.
Double row antifriction bearing. E. K. Brown. 2,440,435, Apr. 27.
Dough forming machine. H. E. Hahn, Jr. 2,440,655, Apr. 27.
Drain. C. M. Rice. 2,440,594, Apr. 27.
Drain means for radial engines, Oil accumulation. C. G. A. Rosen. 2,440,488, Apr. 27.
Drier having means to compress evacuated vapors, Vacuum rotary drum. C. B. Proudfoot. 2,440,416, Apr. 27.
Drying apparatus, Paper. M. Phillips. 2,440,346, Apr. 27.
Dye composition. W. J. Champion. 2,440,364, Apr. 27.
Dynamoelectric machine with cooling means. H. M. Martin. 2,440,551, Apr. 27.
Electrical apparatus. K. K. Paluev. 2,440,556, Apr. 27.
Electrical connector. R. A. Hecht. 2,440,270, Apr. 27.
Electrical insulation testing apparatus. C. E. Lewis. 2,440,480, Apr. 27.
Electrical socket. C. L. Paulus and R. K. Stout. 2,440,288, Apr. 27.
Electrical testing apparatus or the like, Interlocking. I. W. Folk. 2,440,505, Apr. 27.
Electromagnetic wave direction indicator. R. Hardy. 2,440,268, Apr. 27.
Electron beam centering system. H. W. G. Salinger and A. T. Mayle, Jr. 2,440,490, Apr. 27.
Emergency pump. G. M. Holley, Jr. 2,440,371, Apr. 27.
Endless track tool. F. J. Jakoubek and W. E. Gahl. 2,440,512, Apr. 27.
Engine braking apparatus. W. A. Hill. 2;440,336, Apr. 27.
Engine cooling liquid heater. C. M. Kimberlin. 2,440,610, Apr. 27.
Erosion in fluidized catalytic cracking of hydrocarbons, Preventing. W. K. Lewis. 2,440,591, Apr. 27.
Excavating apparatus. C. A. Erickson. 2,440,501, Apr. 27.
Exhaust port for steam locomotives, Supplementary. W. W. Knight. 2,440,373, Apr. 27.
Extractor: *See*—
  Fruit and vegetable juice extractor.
Fabric building. C. W. Power. 2,440,557, Apr. 27.
Fabric for handbags, Decorative. R. Jackler and D. H. Goldberg. 2,440,474, Apr. 27.
Fabric uppers, Making last-fitting. F. W. Clark. 2,440,393, Apr. 27.
Fastener. E. W. Lehman and E. M. Whalen. 2,440,341, Apr. 27.
Fasteners for bags, cases, and other containers. F. S. Smith. 2,440,595, Apr. 27.
Feed control, Label. W. J. Bernard. 2,440,458, Apr. 27.
Feed tray for duplicating apparatus. A. E. Little and H. Jagger. 2,440,635, Apr. 27.
Feeder: *See*—
  Poultry feeder.
Feeding mechanism for rocket guns, Shell. C. F. Henney. 2,440,634, Apr. 27.
Filling apparatus, Receptacle. P. Auberman. 2,440,354, Apr. 27.
Filter: *See*—
  Corrosion resistant filter.
Finely divided solids, Transferring. V. Voorhees. 2,440,623, Apr. 27.
Fire door for parts washers, Automatic. E. J. St. Laurence. 2,440,619, Apr. 27.
Firing mechanism for guns. H. Phillips. 2,440,381, Apr. 27.
Fixture, Lighting. E. F. Guth. 2,440,603, Apr. 27.
Flagpole and operating means therefor. R. Ellis. 2,440,590, Apr. 27.
Flasher. H. R. Gross. 2,440,265, Apr. 27.
Fluids with powdered solids, Process and apparatus for contacting. H. Z. Martin. 2,440,482, Apr. 27.
Flux, Soldering. K. K. MacDougall and J. A. Labash. 2,440,592, Apr. 27.
Freewheeling mechanism, Controlled. A. Kégresse. 2,440,588, Apr. 27.
Frequency modulation. G. L. Usselman. 2,440,621, Apr. 27.
Frequency multiplier, Rectifier circuit. J. C. Ferguson. 2,440,465, Apr. 27.
Fruit and vegetable juice extractor. J. B. Williams. 2,440,425, Apr. 27.
Fruit juice dispenser. T. M. Kerr. 2,440,406, Apr. 27.
Fuel control, Combustion responsive. R. W. Johnson. 2,440,405, Apr. 27.
Fuel to prime movers, Automatically controlling the supply of liquid. R. J. Ifield. 2,440,663, Apr. 27.
Furfural, Inhibiting polymerization of. J. C. Hillyer and D. A. Nicewander. 2,440,442, Apr. 27.
Furfural, Inhibiting polymerization of. W. A. Schulze and J. C. Hillyer. 2,440,451, Apr. 27.
Furnace: *See*—
  Smelting furnace.
Furniture, Multiple unit. P. H. James. 2,440,544, Apr. 27.
Gaging apparatus for adjusting gage blocks of the adjustable type. H. V. Törnebohm. 2,440,646, Apr. 27.
Gears, Feed device for hydraulically operated change-speed. A. Kégresse. 2,440,589, Apr. 27.
Generator: *See*—
  Pulse generator.
Glove drying apparatus, Surgical. I. D. Fenwick. 2,440,398, Apr. 27.
Gradiometer, Magnetic. C. H. Fay. 2,440,503, Apr. 27.
Hair dressing, Abietate ester. A. L. Omohundro and E. C. Fanto. 2,440,555, Apr. 27.
Hanger: *See*—
  Clothes hanger.
Hatband, Adjustable. E. K. Kuenstner. 2,440,407, Apr. 27.

Heater: *See*—
Engine cooling liquid heater.
Heater with expansible fuel reservoir, Internal-combustion. H. J. De N. McCollum. 2,440,447, Apr. 27.
Heating system, Automotive battery. G. R. Furman. 2,440,369, Apr. 27.
Heating system for a plurality of objects, responsive to temperature and position thereof, Electric. L. L. Johnson. 2,440,476, Apr. 27.
Heel brace. F. A. Melchionna. 2,440,412, Apr. 27.
Heel with exchangeable heelpiece, Shoe. G. E. Johansson. 2,440,404, Apr. 27.
Helmet, Welder's. M. N. Anderson. 2,440,596, Apr. 27.
High-frequency cable and balancing the same. S. B. Pickles. 2,440,290, Apr. 27.
Hoisting tower apparatus. H. A. and G. H. Wagner. 2,440,495, Apr. 27.
Holder: *See*—
Toothbrush holder.
Hook: *See*—
Braid-stitch crochet hook.
Hull construction, Ship. A. H. Lackie. 2,440,408, Apr. 27.
Humidity control. J. J. Bauman. 2,440,628. Apr. 27.
Hydraulic system for reciprocating breaker plates for reversible rotary crushers. F. J. Wright. 2,440,388, Apr. 27.
Hydraulic transmissions, Pressure selector and corrector for bound-up automatic. A. Kégresse. 2,440,590, Apr. 27.
Hydrocarbons containing branched carbon chains, Producing unsaturated. C. Winning and D. T. Rogers. 2,440,497, Apr. 27.
Hydrogen fluoride in an alkylation process, Recovery of. R. E. Vinyard. 2,440,454, Apr. 27.
Identification system, Calling line. J. Kruithof and L. Kozma. 2,440,277, Apr. 27.
Implement and hitch therefor. Tractor conveyed. C. H. Martin. 2,440,550, Apr. 27.
Incubator for microscopes, Stage. W. Horner and E. Wesselman. 2,440,472, Apr. 27.
Indicators, Stop for dial. C. S. Ost. 2,440,522, Apr. 27.
Indicator: *See*—
Electromagnetic wave direction indicator.
Inhibitor for centerless grinders. Outboard work whipping. W. Horberg. 2,440,402, Apr. 27.
Instrument flying in multicontrol aircraft, Hood for simulated. F. O. Ibisch. 2,440,274, Apr. 27.
Internal-combustion engines, Fuel supply system for. G. J. Armstrong. 2,440,241, Apr. 27.
Internal-combustion engines, Fuel supply system for. G. J. Armstrong. 2,440,566, Apr. 27.
Internal-combustion engines, Fuel supply system for. G. J. Armstrong, B. Naylor, and J. E. P. Dunning. 2,440,567, Apr. 27.
Isoamylenes with normal butenes and isobutene, Interpolymerization of. S. H. McAllister. 2,440,286, Apr. 27.
Joint: *See*—
Safety joint. Tool joint.
Key. F. E. Best. 2,440,429, Apr. 27.
Key bit. F. E. Best. 2,440,428, Apr. 27.
Knitting machine and knitting. O. Fregeolle. 2,440,333, Apr. 27.
Knitting machine and knitting. R. H. Lawson. 2,440,280, Apr. 27.
Knitting machine, Flat. H. Weinstein. 2,440,496, Apr. 27.
Lamp supply, Exciter. H. Belar. 2,440,537, Apr. 27.
Latch: *See*—
Door latch. Lever release latch.
Latch construction mounting means. G. Hagstrom. 2,440,509, Apr. 27.
Latches and the like, Keeper or striker for. G. Hagstrom. 2,440,510, Apr. 27.
Leveler, Land. L. Oswald. 2,440,642, Apr. 27.
Lever release latch. F. S. Deschermeier. 2,440,395, Apr. 27.
Lever, Self-locking. O. G. Blocher. 2,440,630, Apr. 27.
Liquid handling means. E. E. Wemp. 2,440,624, Apr. 27.
Liquid seal device. G. I. Cockerill. 2,440,394, Apr. 27.
Loader for grease guns. P. E. Purcell. 2,440,448, Apr. 27.
Locating apparatus, Object. W. L. Dawson. 2,440,248, Apr. 27.
Location system, Radio. E. M. Deloraine, E. Labin, and P. F. M. Gloess. 2,440,250, Apr. 27.
Lock: *See*—
Unpickable lock.
Lock core. F. E. Best. 2,440,432, Apr. 27.
Lock tumbler. F. E. Best. 2,440,431, Apr. 27.
Lock-throw mechanism. F. E. Best. 2,440,430, Apr. 27.
Locks, System of. F. E. Best. 2,440,434, Apr. 27.
Lubricating apparatus. J. T. Leonard. 2,440,410, Apr. 27.
Lubrication, Outboard motor. L. T. Kincannon. 2,440,338, Apr. 27.
Magnet electrodynamic transducer, Permanent. W. E. Gilman. 2,440,439, Apr. 27.
Mailbox bracket. E. E. DeHaas. 2,440,576, Apr. 27.
Measuring device, Comparison type light. J. M. Hall. 2,440,266, Apr. 27.
Meat product and process, Coated. J. N. Lesparre. 2,440,517, Apr. 27.
Media for producing penicillin, Process and culture. O. K. Behrens. 2,440,355, Apr. 27.
Media for producing penicillin, Process and culture. O. K. Behrens and R. G. Jones. 2,440,358, Apr. 27.
Media for producing penicillin, Process and culture. O. K. Behrens, R. G. Jones, and J. W. Corse. 2,440,359, Apr. 27.
Media for producing penicillin, Process and culture. O. K. Behrens and Q. F. Soper. 2,440,357, Apr. 27.
Media for the production of penicillin, Process and culture. O. K. Behrens. 2,440,356, Apr. 27.
Media for the production of penicillin, Process and culture. O. K. Behrens, R. G. Jones, and J. W. Corse. 2,440,360, Apr. 27.
Media for the production of penicillin, Process and culture. O. K. Behrens, R. G. Jones, and J. W. Corse. 2,440,361, Apr. 27.
Mercury electrolytically from acid solutions, Producing. H. R. Alley and B. F. Freeberg. 2,440,238, Apr. 27.
Meter system, Electrical hook-on. T. B. Brown. 2,440,244, Apr. 27.
Microanalyzer, Electron. L. Marton. 2,440,640, Apr. 27.
Modulation. G. L. Usselman. 2,440,622, Apr. 27.
Modulation system. N. H. Young, Jr. 2,440,320, Apr. 27.
Modulator system. D. D. Grieg. 2,440,264, Apr. 27.
Mold: *See*—
Vulcanizing mold.

Stapling apparatus. J. C. Lang. 2,440,479, Apr. 27.
Starter drive, Engine. D. L. Miller. 2,440,657, Apr. 27.
Steam engines and the like, Speed and cut-off control means for. A. Doble. 2,440,328, Apr. 27.
Steel of low phosphorus content, Manufacture of basic. M. L. Allard. 2,440,564, Apr. 27.
Steroid thioacetals, Hydrogenalysis of. S. Bernstein and L. Dorfman. 2,440,660, Apr. 27.
Stitching machine. W. R. Spiller and R. J. Niederhauser. 2,440,618, Apr. 27.
Strainer, Self-cleaning. K. P. Schenke. 2,440,384, Apr. 27.
Sulfonated aromatic compounds as cation exchange resins, Aldehyde condensation products of. J. T. Thurston. 2,440,669, Apr. 27.
Sulfur containing coating compositions. V. J. Frilette. 2,440,467, Apr. 27.
Supply system for aircraft, Fuel. R. E. Grey and E. M. Gavin. 2,440,262, Apr. 27.
Support: *See*—
Acetylene torch cutter support.
Support for garments and the like, Demountable. E. S. and W. D. Eakin. 2,440,631. Apr. 27.
Support for vehicles, Crossbar. F. Fahland. 2,440,437, Apr. 27.
Switchboard plug. H. C. Calvin. 2,440,661, Apr. 27.
Tee for golf balls. J. W. Hughes. 2,440,473, Apr. 27.
Testing device, Electromagnetic. F. Dedek. 2,440,575, Apr. 27.
Thread holder for multistack magazines, Pneumatic. G. N. Peterson. 2,440,523, Apr. 27.
Time fuse element. J. C. W. Frazer and O. G. Bennett. 2,440,579, Apr. 27.
Tool: *See*—
Endless track tool. Saw track tool.
Pneumatic tool.
Tool joint. A. H. Bell. 2,440,651, Apr. 27.
Tool joint. J. W. E. Hanes. 2,440,441, Apr. 27.
Toothbrush holder. C. F. Schulte. 2,440,385, Apr. 27.
Traction device for resilient tires and wheels. G. O. Hack. 2,440,632, Apr. 27.
Tractor, Endless track type row crop. F. G. Lewis and C. P. Stephen. 2,440,518, Apr. 27.
Training machine, Football. A. F. Denby. 2,440,577, Apr. 27.
Transformer. J. W. Farr. 2,440,540, Apr. 27.
Translating device. J. J. Antalek. 2,440,565, Apr. 27.
Translating system, Capacitor. H. A. Strickland, Jr. 2,440,309, Apr. 27.
Transmission. P. Orr. 2,440,613, Apr. 27.
Transmission. H. C. Wimer. 2,440,625, Apr. 27.

Transmission, Fluid. J. Jandasek. 2,440,445, Apr. 27.
Transmission line, Artificial. N. E. Beverly. 2,440,652, Apr. 27.
Transmission operating mechanism. H. W. Price. 2,440,558, Apr. 27.
Transmission, Power. K. I. Postel. 2,440,614, Apr. 27.
Transport vehicle. R. A. Norbom. 2,440,379, Apr. 27.
Trap. L. Bourgeois. 2,440,570, Apr. 27.
Trousers. C. Brode. 2,440,573, Apr. 27.
Truck, Auxiliary vehicle. E. H. Etgen. 2,440,502, Apr. 27.
Tube of flexible composite sheet material and the manufacture thereof. W. Langer. 2,440,339, Apr. 27.
Tube tester, Electronic. R. D. Hickok. 2,440,607, Apr. 27.
Tube tester, Electronic power. A. S. Oravetz. 2,440,287, Apr. 27.
Tuyere. W. A. Riddell. 2,440,382, Apr. 27.
Two-stage pump. A. G. Sheppard. 2,440,560, Apr. 27.
Unpickable lock. F. E. Best. 2,440,433, Apr. 27.
Valve: *See*— Shuttle valve.
Relief valve.
Valve for two-temperature refrigerating systems, Selecting. L. W. Atchison. 2,440,534, Apr. 27.
Vehicle: *See*—
Transport vehicle.
Vending machine. J. M. Devens. 2,440,251, Apr. 27.
Ventilator, Window. J. C. Gerken. 2,440,468, Apr. 27.
Volatile fluoride recovery. E. C. Hughes. 2,440,542, Apr. 27.
Voltage-limiting arc interrupter. R. R. Pittman. 2,440,484, Apr. 27.
Voltage regulator. G. W. Cook. 2,440,246, Apr. 27.
Vulcanizing mold. T. P. Bacon, Jr. 2,440,321, Apr. 27.
Washing apparatus for bottle washers. C. L. Trier and J. W. Fogg. 2,440,419, Apr. 27.
Water saver. W. M. Anderson, Sr. 2,440,389, Apr. 27.
Welding system. J. W. Dawson. 2,440,247, Apr. 27.
Wheel: *See*—
Automobile and airplane wheel.
Wheel cover. G. A. Lyon. 2,440,638, Apr. 27.
Wheel for vehicles, Track. O. Singer. 2,440,417, Apr. 27.
Wiper, Oil gauge-line. M. H. Bow. 2,440,571, Apr. 27.
Yeast and of yeast- and vitamin-rich products, Preparation of. G. A. Jeffreys. 2,440,545, Apr. 27.
Yeast and other products, Symbiotic process for preparing. G. A. Jeffreys. 2,440,546, Apr. 27.

CLASSIFICATION OF PATENTS

ISSUED APRIL 27, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

1—	13: 2,440,479	62—	141: 2,440,397	121—	136: 2,440,373	179—	27: 2,440,277	235—	144: 2,440,665	260—	2,440,525

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

ALBERT R. THOMPSON
v.
GUY A. DUNN ET AL.

No. 5354. Decided January 6, 1948

[— F.2d —; — USPQ —]

1. INTERFERENCE—BURDEN OF PROOF.
Appellee being the junior party the burden was upon him to establish priority of the invention defined by the counts in issue by a preponderance of the evidence.

2. SAME—REDUCTION TO PRACTICE.
Perfect results are not to be expected or necessary to establish that a machine conforming to the counts in issue was satisfactory.

3. SAME—SAME—DILIGENCE.
Where appellee was the first to conceive the invention, but the last to reduce to practice, it was incumbent on appellee to establish that he was diligent in reducing the invention to practice from a time just prior to appellant's entry into the field.

4. SAME—SAME—SAME.
Where the involved counts call for feeding and impaling devices, but do not call for a peeling turret, it is necessarily implied that it does not require any specific peeling means to make them operative, and therefore, the development of such a peeling means could not be a prerequisite to the reduction to practice of the invention in issue.

5. SAME—SAME—SAME.
Where it is evident from the Board's decision that it was of the opinion that work done on any part of the completed machine, although not on the elements defined by the involved counts, constituted diligence by appellee in reducing to practice the invention here involved, *Held* that appellee's work in perfecting a peeling mechanism, was not a showing of diligence in reducing to practice the feeding and impaling mechanism defined by the counts in issue.

6. SAME—SAME—SAME.
It is well settled that diligence will not wait upon commercial expediency.

7. SAME—SAME—SAME.
It has frequently been held that diligence has been exercised where work on one invention was necessary to successfully develop a second invention (1) where it was necessary to raise money for reducing the second invention to practice and (2) where the situation was such that the second invention was so related to the first invention that it was necessary to develop the first before the second could be properly tested.

8. SAME—PRIORITY—FRUIT HANDLING MACHINE.
Record reviewed and *Held* that since appellee was not diligent in reducing to practice the feeding mechanism and the impaling mechanism defined by the counts in issue, the decision of the Board of Interference Examiners is reversed.

APPEAL from the Patent Office. Interference No. 78,866.

REVERSED.

Paul D. Flehr, John F. Swain, Philip A. Minnis, and *Russel N. Low* for Thompson.

Lyon & Lyon (*Lewis E. Lyon* and *Charles M. Thomas* of counsel) for Dunn.

HATFIELD, *J.:* *

This is an appeal in an interference proceeding from the decision of the Board of Interference Examiners of the United States Patent Office awarding priority of invention of the subject matter defined by the counts in issue, Nos. 1 and 2, to appellee Guy A. Dunn.

At the time of the decision of the Board of Interference Examiners the interference involved the application of appellant, No. 267,835, filed April 14, 1939, the joint application of appellees Dunn and Borchers, No. 264,802, filed March 29, 1939, and the sole application of appellee Dunn, No. 382,650, filed March 10, 1941.

It appears from the record that the application of appellant was assigned to the Food Machinery Corporation of San Jose, California, and that the application of each of the appellees was assigned to the California Packing Corporation of San Francisco, California, so that the applications of Guy A. Dunn and Dunn and Borchers are owned by a common assignee.

Although the application of Dunn and Borchers was filed prior to the applications of both appellant Thompson and appellee Dunn, no appeal was filed in this court by the joint applicants. Accordingly, the issue as presented here is solely between appellant Thompson and appellee Dunn. See *Wheeler, Hoover, and Dirkes* v. *Kleinschmidt and Colman*, 32 CCPA (Patents) 975, 149 F.2d 161, 65 USPQ 407, 577 O. G. 875.

[1] Appellee Dunn is the junior party and the burden was upon him to establish priority of the invention defined by the counts in issue by a preponderance of the evidence.

The invention defined by the counts in issue relates to a fruit handling machine comprising two rotating turrets, one of which carries impaling members which are adapted to receive the fruit and hold it while it is processed as, for example, by peeling. The other turret carries holders, each of which is adapted to receive a fruit and carry it into a position in which it is aligned with an impal-

* This cause was originally decided by this court on January 6, 1948. Thereafter counsel for appellee filed a petition for rehearing. The rehearing was granted March 12, 1948, solely for the purpose of permitting the court to revise certain language in its original decision.

Vol. 609 • No. 4 Tuesday, April 27, 1948 Price $16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $19.50; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

ing member. The movement of the holders is controlled in such manner that each remains in alignment with an impaling member for a definite period of time, while the turrets continue to rotate, and during that time the impaling member impales the fruit, the holder releases it, and the impaling member withdraws it from the holder.

Count 2 of the interference is sufficiently illustrative of the subject matter in issue. It reads:

> A fruit handling machine comprising cooperating rotatable members, a reciprocable fruit impaling device carried by one of said members, an expansible fruit holder carried by the other of said members, means for continuously rotating said rotatable members in timed relation, means cooperating with the fruit holder for moving the same into and out of axial alignment with the impaling device and for maintaining the fruit holder in axial alignment with the impaling device for a finite distance, means for reciprocating said impaling device during such alignment to impale and remove fruit from said holder, means for holding the fruit holder closed during the impaling movement of said impaling device whereby the fruit is supported in said fruit holder until impaled, and means for opening the fruit holder to release the fruit as the impaling device is retracted.

The Board of Interference Examiners held, on the evidence presented, that Thompson conceived the invention on August 26, 1937, and that he reduced the invention to practice in August 1938. It also held that appellee Dunn had established that he conceived the invention in December 1936 and that he reduced the invention to practice in November 1938.

The real issue in the case involves the question of diligence; that is, whether appellee Dunn was diligent during the critical period from the time appellant entered the field—August 26, 1937—until he reduced the invention to practice in November 1938. If appellee was diligent during that period, he is entitled, as held by the Board of Interference Examiners, to an award of priority of invention. On the contrary, if he was not exercising reasonable diligence in reducing the invention to practice during the critical period, appellant Thompson is entitled to an award of priority of invention.

It is not contended here by counsel for appellee that appellant did not conceive the invention in issue as early as August 1937. Accordingly, it is unnecessary for reasons hereinafter stated, to determine whether appellant is entitled to an earlier date for conception of the invention.

[2] The Board's decision, holding that appellant reduced the invention in issue to practice in August 1938, is based upon a machine conforming to the counts in issue which was built under the supervision of appellant and the witness Leonard McGihon, who was employed as a designing engineer by appellant's assignee, from September 16, 1937, until April 1939. In the machine referred to, the peeling and feeding turrets rotated about a common axis; however, the Board properly held that the counts in issue do not require that the turrets be mounted on different axes.

It further appears from the record that the testimony of appellant, the witness McGihon, and the witness Richard D. Fox who was employed by appellant's assignee as an assistant chief engineer of a division of appellant's assignee company, clearly established that appellant's machine was completed and sufficiently tested as early as August 1938. Each of those witnesses stated that he observed the results of the tests and that they were better than those obtained by the use of the standard commercial machine in use at that time.

It is true that the testimony introduced by appellant indicates that about 20 per centum of the pears processed by appellant's new machine required some hand trimming before canning. However, perfect results are not to be expected in view of the irregular shapes and sizes of the fruit used. Furthermore, a test report offered by appellee Dunn—Exhibit III—shows percentages of pears satisfactorily peeled, ranging from ninety-five per centum down to sixty per centum. It appears from that exhibit that "Various types of pears had a great bearing on the percent of Pears satisfactorily peeled as is indicated in the variations shown." Accordingly, the fact that twenty per centum of the pears treated by the 1938 Thompson machine required hand trimming does not establish that the machine was not satisfactory.

Counsel for appellee Dunn argue that as the Thompson machine, hereinbefore referred to, was not produced commercially, and that as appellant's application was not based upon that machine, but rather on one in which the turrets rotated upon separate axes, the machine reduced to practice in August 1938 was not a success.

The circumstances hereinbefore related might have some weight if the issue here involved were otherwise doubtful, however, the argument presented by counsel for appellee is not sufficient to justify disregarding the uniform testimony of the witnesses that the Thompson machine was satisfactory. See *Ernest Hedenskoog* v. *John Cayton Backus*, 18 CCPA (Patents) 1065, 48 F.2d 408, 8 USPQ 436, 409 O. G. 290, and *Schmitz, Jr.* v. *Silver*, 26 CCPA (Patents) 1164, 103 F.2d 390, 41 USPQ 475, 507 O. G. 780. We are of opinion, therefore, that the Board properly held that Thompson successfully reduced the invention in issue to practice in August 1938.

[3] The Board further held that appellee Dunn first successfully reduced the invention to practice in November 1938, approximately three months subsequent to the reduction to practice of the invention by appellant. We have carefully considered the evidence of record and are of opinion that the evidence submitted by appellee is not sufficient to support a holding that he reduced the invention to practice prior to November 1938. Furthermore, it does not appear to be seriously contended by counsel for appellee that he is entitled to an earlier date for reduction to practice. Accordingly, it was properly held by the Board that although appellee was the first to conceive the invention, he was the last to reduce it to practice. As hereinbefore noted, it was incumbent on appellee to establish that he was diligent in reducing the invention to practice from a time just prior to appellant's entry into the field—August 1937—until appellee reduced the invention to practice in November 1938.

It clearly appears from the record that appellee Dunn devoted his attention and work, during the critical period, to the development of a satisfactory pear peeling means (not to be confused with the peeling turret upon which the peeling means is mounted) which is not included either in his disclosure or in the counts in issue, although it appears that when he completed and tested his peeling means in November 1938, which included the invention here involved, he had a satisfactory machine. However, it does not appear until that time that he had reduced to practice the invention here involved which comprises the two rotating turrets called for by the counts in issue. Furthermore, it is impossible to determine from the evidence submitted by appellee that his activities were diligently directed to the reduction to practice of the involved invention until subsequent to appellant's reduction to practice. It is clear from the record that appellee was attempting to develop a pear peeling mechanism which, it was thought, would operate more satisfactorily from a commercial standpoint in conjunction with his conception of the invention here involved.

[4] The witness Roy G. Lucks, manager of the Northwest division of the California Packing Corporation and who was associated with appellee, testified that "* * * prior to this time [November 8, 1937] I had repeatedly told Dunn I thought he should concentrate on the development of the *peeling turret* in order to overcome the difficulties that we were having in *peeling the pears* and that I was satisfied with the ideas that he had for the construction of the feed unit were sound and were operable. I felt, nevertheless, that he should first construct the peeling turret." [Italics ours.] That statement, together with the other evidence of record, clearly indicates an intention on the part of appellee to delay the building and testing of the involved invention until he had constructed a satisfactory peeling turret. It should be understood in the consideration of this case that although the involved counts call for feeding and impaling devices, they do not call for a peeling means. Accordingly, the assumption that appellee's application discloses a complete pear treating device necessarily implies the existence in the prior art of peeling means which could be mounted on the main turret in appellee's application and used in connection with the feeding means. In other words, the feeding and impaling means disclosed in appellee's application and set forth in the counts in issue are of such a nature that it does not require any specific peeling means to make them operative. The development of such a peeling means, therefore, could not be a prerequisite to the reduction to practice of the invention here in issue.

[5] It is evident from the Board's decision that it was of opinion that work done on any part of the completed machine, although not on the elements defined by the involved counts, constituted diligence by appellee in reducing to practice the invention here involved. We are not of that opinion. It is apparent from the record that appellee and his associates contemplated modifications in their peeling mechanism and proceeded to perfect such a mechanism before appellee attempted to reduce to practice the feeding and impaling mechanism called for by the counts in issue. In so doing, appellee, of course, is not open to criticism. [6] It is well settled, however, that diligence will not wait upon commercial expediency. See *Bastian* v. *Champ*, 34 App. D. C. 225, 1910 C. D. 321, 152 O. G. 734; *Peterson* v. *Thomas*, 56 App. D. C. 113, 10 F.2d 908, 347 O. G. 4; *George C. Beidler* v. *Arthur W. Caps and Ivan E. Leininger*, 17 CCPA (Patents) 703, 36 F.2d 122, 4 USPQ 58, 392 O. G. 241; *Hurd* v. *Smith*, 25 CCPA (Patents) 1137, 97 F.2d 147, 37 USPQ 708, 496 O. G. 571; and *Preston et al.* v. *White*, 25 CCPA (Patents) 1219, 97 F.2d 160, 37 USPQ 802, 496 O. G. 1108.

[7] It has frequently been held that diligence has been exercised where work on one invention was necessary to successfully develop a second invention (1) where it was necessary to raise money for reducing the second invention to practice and (2) where the situation was such that the second invention was so related to the first invention that it was necessary to develop the first before the second could be properly tested.

For example, where it is necessary to raise money in order to reduce the second invention to practice, see *Christensen* v. *Ellis*, 17 App. D. C. 498, 1901 C. D. 326, 94 O. G. 2561; *Wayne* v. *Tew*, 53 App. D. C. 336, 1923 C. D. 247, 313 O. G. 235; and *Joy* v. *Morgan*, 54 App. D. C. 110, 295 Fed. 931, 1924 C. D. 208, 320 O. G. 4.

Where the inventions are so related that it is necessary to develop the first invention before the second could be properly tested, see *Chapman* v. *Candee and Taylor*, 1872 C. D. 190. However, in neither of the two illustrations hereinbefore referred to is it proper in an interference case to delay the reduction to practice of the invention defined by the counts in issue and devote time and energy to the development of an auxiliary device which is not essential to the testing of the invention in issue.

In the case of *Lotterhand* v. *Hanson*, 23 App. D. C. 372, 1904 C. D. 646, 110 O. G. 861, it was held that where an inventor who had conceived an attachment for a typewriter and delayed the testing of it until he had attempted to develop a new typewriter, such development did not amount to diligence in reducing the attachment to practice. See also, *Stapleton* v. *Kinney*, 18 App. D. C. 394, 1901 C. D. 414, 96 O. G. 1432; *Hawkins* v. *Ward*, 1912 C. D. 50, 175 O. G. 845; *Clement* v. *Roberts*, 51 App. D. C. 29, 1921 C. D. 243, 288 O. G. 829; *Russell* v. *Sisson*, 55 App. D. C. 401, 1925 C. D. 274, 338 O. G. 249; *Brogden* v. *McDill et al.*, 57 App. D. C. 116, 18 F.2d 158, 364 O. G. 57; *Rollie B. Fageol* v. *Gabriel Midboe*, 19 CCPA (Patents) 1117, 56 F.2d 867, 13 USPQ 30, 421 O. G. 1179; and *Smith* v. *Nevin*, 22 CCPA (Patents) 748, 73 F.2d 940, 23 USPQ 353, 452 O. G. 469.

It is unnecessary that we here enter into a detailed discussion of all of the decisions applicable to the proposition of law hereinbefore stated.

There is nothing of record in the instant case to indicate that appellee was financially unable to properly test and reduce to practice the invention defined by the counts in issue, or on the other hand, to file an application for a patent for such invention. Certainly it did not require the testing of a peeling device in order to determine whether the elements defined by the counts in issue, that is, the feeding mechanism and the impaling mechanism and the drive means therefor, were adequate for their intended purposes. We are of opinion, therefore, that appellee was not diligent in reducing to practice the feeding mechanism and the impaling mechanism defined by the counts in issue.

It is contended here by counsel for appellee, as we understand it, that appellee is entitled to the filing date of the Dunn and Borchers joint application and that that application warrants a holding that appellee is entitled to be considered as the senior party, as the joint application was filed prior to the filing date of appellant. In support of that statement it is argued by counsel for appellee that it has been conclusively established that the invention in issue was made solely by appellee and that the filing of the joint application for the invention was a mistake. We are of opinion that it is unnecessary to rule on that question. Appellant's date of conception and reduction to practice are satisfactorily established, whether he be considered as the junior or senior party, and even if appellee were considered as the senior party, rather than the junior party, the conclusions reached as to appellee's dates of conception and reduction to practice, and his lack of diligence, would not be affected.

Counsel for appellee argue that as appellant considered the machine built by his associate McGihon to embody the best form of his invention and that, since appellant did not disclose that machine in his application, he has not complied with Sec. 4888, R. S. (U. S. C., Title 35, sec. 33) which requires that an inventor shall disclose "the best mode in which he has contemplated applying" the principle of his invention. That argument does not relate to priority of invention, but merely to appellant's right to obtain a patent. Accordingly, it cannot properly be considered by this court in an interference proceeding. See *Robert F. Gowen* v. *William F. Hendry and Robert W. King*, 17 CCPA (Patents) 789, 37 F.2d 426, 4 USPQ 161, 393 O. G. 1024, and *Albert Broadmeyer* v. *Harmon E. Lindbladh*, 18 CCPA (Patents) 1004, 47 F.2d 381, 8 USPQ 155, 408 O. G. 831.

[8] Counsel for appellant contend that for various reasons, not necessarily here involved, relating to the filing and prosecution of the Dunn and Borchers joint application, appellee Dunn is barred from receiving an award of priority. Since we are of opinion that appellant is entitled to an award of priority on the evidence of record, it is unnecessary that we consider that contention.

For the reasons stated, the decision of the Board of Interference Examiners is reversed.

REVERSED.

BLAND, *J.*, sat during the argument of this case, but resigned before the opinion was prepared.

U. S. Court of Customs and Patent Appeals

IN RE KRASNOW ET AL.

No. 5376. Decided February 10, 1948

[— F.2d —; 76 USPQ 567]

1. PRACTICE—APPEAL TO COURT—REASONS OF APPEAL—ABANDONED WHEN NOT DISCUSSED IN BRIEF.

Though in the notice of appeal the proper reasons of appeal were assigned to the Board's holding in respect to certain patents, those reasons may not be relied upon because they were not discussed in the brief and are assumed to be abandoned here.

2. PATENTABILITY—METHOD OF CONDUCTING GEOLOGICAL EXPLORATION WITHIN A BOREHOLE.

Certain claims to a method of conducting geological explorations within a borehole *Held* sufficiently disclosed in appellants' earlier application to warrant their allowance, and *Held* further that those claims are neither indefinite nor ambiguous.

APPEAL from the Patent Office. Serial No. 433,212.

MODIFIED.

Shelley Krasnow, pro se.

W. W. Cochran (*H. S. Miller* of counsel) for the Commissioner of Patents.

JACKSON, *J.*:

This is an appeal from a decision of the Board of Appeals of the United States Patent Office affirming that of the Primary Examiner, rejecting claims 4, 5, 7, 11, 12, 13, 21, and 22 of appellants' application, Serial No. 433,212, for a patent, filed March 3, 1942, for a new and useful improvement in Radiant energy activation. Three claims were allowed.

The claims were rejected by the Primary Examiner for want of patentability over the following references: Bender, 2,133,776, October 18, 1938; Hassler, 2,197,453, April 16, 1940; Buckley, 2,220,205, November 5, 1940; Brons, 2,220,509, November 5, 1940; Ennis, 2,228,623, January 14, 1941; Fearon, 2,308,361, January 12, 1943; Neufeld, 2,320,643, June 1, 1943; Albertson, 2,339,129, January 11, 1944.

In the interest of clarity we deem it proper to quote all of the rejected claims. They read as follows:

4. In a method of conducting operations within a deep borehole, the steps of fixing within the walls of the borehole a radioactive material, so that the said radioactive material is definitely associated with a given locality and emits radioactive rays at that locality, of conducting radioactive measurements at various points proximate to the desired point, and of noting the locality at which the radioactivity due to the fixed radioactive material is pronounced, thereby locating the said locality definitely.

5. In a method of indicating desired localities within a borehole, the steps of fixing radioactive material within the walls of the borehole so that the said material will send radioactive rays into the borehole at the desired localities, of receiving radioactive rays due to the said material, and noting the locality at which the effect is most pronounced, thereby locating the desired locality definitely.

7. In a method of conducting operations within a deep narrow borehole, the steps of introducing radioactive material into the borehole, of causing a change within the borehole so that rays emitted at a certain level will be different than before the introduction of the radioactive material, of making a measurement of depth to a point within the borehole at which the radioactive conditions have been altered, thereby obtaining information as to conditions at that depth.

11. In a method of investigating material existing within boreholes, the steps of introducing radioactive material into the said borehole and proximate to the point to be investigated, of allowing the radioactive material to act upon the material in the borehole, and to bestow as a consequence upon the said material, an additional radioactive property, of placing an apparatus responsive to radioactivity within the borehole proximate to the point at which the material is to be investigated, and of obtaining a response due to the additional radioactive property, thereby furnishing an indication of the nature and location of the material.

12. In a method of marking formations within a borehole for subsequent identification, the steps of introducing into the borehole one of the radioactive decomposition products of radium, of applying the said material to selected portions of the borehole whereby the said substance will be retained therein and later identifying the said formation by the radioactive rays given off by the retained radium decomposition product.

13. In a method of investigating conditions within a deep narrow borehole, the steps of introducing radioactive material within a borehole, of causing the said material to move along the length of the borehole so that it may act upon the different levels thereof, thereby causing in the materials lining the borehole an augmented radioactivity dependent upon the reaction between the radioactive material and the material lining the borehole, of making measurements of radioactivity along the length of the borehole and identifying localities where the radioactivity has acted upon the material of the borehole.

21. In a method of conducting geological explorations within a borehole in which substances with different responses to radioactive materials exist, whereby certain of said substances when exposed to radioactive material will respond in greater proportion than other of said substances and will exhibit a stronger radioactivity as a consequence thereof, the steps of introducing radioactive material within the borehole at different localities thereof and exposed to the said substances, whereby the substances with greater response to the radioactive material will respond in greater proportion and exhibit a stronger radioactivity as a consequence thereof, of lowering a radioactive detecting instrument within the said borehole and proximate to the said substances, whereby the substances exhibiting a stronger radioactivity will be identified with certainty.

22. In a method of conducting geological explorations within a borehole in which a stratum with a limited radioactivity exists whereby the presence of the said stratum is detected with difficulty by radioactive means, the steps of introducing a radioactive substance within the borehole proximate to the said stratum, of exposing the said stratum to the said radioactive substance, whereby the said stratum will exhibit a stronger radioactivity than before, and of lowering a detecting apparatus proximate to the said stratum to detect the presence thereof.

The invention relates to a method and apparatus for measuring radioactivity with particular reference to the measuring of such activity in inaccessible locations, such as in the boreholes of oil wells.

Claims 4, 5, 11, and 12 were rejected by the Primary Examiner as unpatentable over any one of the Buckley, Ennis, Neufeld, or Albertson references. Claims 7, 13, 21, and 22 were rejected under any one of the Bender, Brons, or Fearon patents. Claim 7 was further rejected as unpatentable over the Neufeld or Albertson patents. Claims 12, 13, 21, and 22 were further rejected by the Examiner as being indefinite.

The Board of Appeals in affirming the decision of the Examiner added the further rejection that the appealed claims are so broad as to be ambiguous.

Appellants contend that their prior application, Serial No. 137,380, filed April 16, 1937, which date is prior to the effective date of the cited references, disclosed, as originally filed, the subject matter of the rejected claims, and that, therefore, none of the cited art is pertinent. They further contend that the patent to Bender is inoperative, and, therefore, ineffective as a reference, and that the patent to Ennis may not be used because of a prior interference proceeding.

[1] It is not necessary to discuss the disclosure of any of the references for the reason that, if on the one hand, appellants' contention that the subject matter of the appealed claims is disclosed in the earlier application, Serial No. 137,380, it is conceded by the Solicitor that the references are ineffective, and, on the other hand, should we agree with the holding of the Board that the appealed claims are entitled only to the date of the involved application, then we must affirm the rejection on the prior art, for the reason that it has not been argued in appellants' brief that claims 7, 13, 21, and 22 are patentable over the Brons or the Fearon patents, nor is it there argued that claims 4, 5, 11, and 12 are patentable over the patents to Neufeld or Albertson. While in their notice of appeal the proper reasons of appeal were assigned to the Board's holding in respect to those patents, those reasons may not be relied upon because they were not discussed in the brief and are assumed to be abandoned here. *In re McCabe*, 24 CCPA (Patents) 1224, 90 F.2d 111, 33 USPQ 539, 485 O. G. 266. The Board in its decision stated that with the exception of the patents to Ennis and Bender, appellees did not discuss the merits of the other references.

The major issues to be decided here are whether or not appellants' application, Serial No. 137,380, as originally filed in the Patent Office, teaches the subject matter of the invention, and whether the rejected claims are definite, proper, and read upon the disclosure of that application. Both appellants and the Solicitor agree that those are the issues determinative of the appeal.

The part of that application alleged to disclose the subject matter defined in the rejected claims reads as follows:

In certain localities, petroleum in particular may be found to have a limited radioactivity; so limited that detecting its presence with the apparatus shown becomes difficult. In these cases advantage may be taken of the superior absorptive power of petroleum for radium emanation. Radium emanation may be introduced at the surface of the bore-hole, being pumped into it so as to reach the lowest level. The bore-hole may then be cleaned out with a suitable fluid, such as water, and a test made for radioactivity in the manner described previously. It will be seen that if any petroleum exists in the bore-hole, it will absorb radium emanation in greater proportion than the other strata, and will therefore exhibit a stronger radioactivity.

The Board was of opinion that the above quotation was "cryptic and too incomplete to teach the subject matter of the appealed claims." The Board properly observed that the rejected claims should be closely scrutinized for the reason that allowance of claims, based on sketchy disclosures, would open the door to attack on intervening patents having clear disclosures and claims.

In holding that the rejected claims are so broad as to be ambiguous, the Board stated that "'Fixing—a material,' in claims 4 and 5; 'introducing—material—proximate to' in claims 11 and 22; 'introducing—at different localities—' in claim 21; 'applying—to selected portions' in claim 12; 'causing a change—so that rays emitted will be different,' in claim 7, and 'the reaction between the radioactive material and the material lining the bore hole' in

claim 13, * * * do not recite steps but are directed toward results not mentioned."

We agree with the holding of the Board that the steps of fixing radioactivity material within the walls of the borehole, as set out in claims 4 and 5, are not sufficiently disclosed in said prior application. It is obvious, we think, that the quoted disclosure of that application does not in any way indicate that radioactive material is fixed within the borehole. Neither do we find any disclosure that radioactive material is applied to "selected portions of the borehole," as called for in claim 12. With respect to claim 21, it is clear that the earlier application does not disclose the introduction of radioactive material at different localities in the borehole. Therefore, we are of opinion that the decision of the Board with respect to claims 4, 5, 12, and 21 should be affirmed.

The steps defined in claims 7, 11, 13, and 22, we think, are sufficiently disclosed in the earlier application to warrant their allowance. Each of those claims calls for the introduction of radioactive material within the borehole, and, of course, such introduction of that material reasonably must be held to extend to the bottom of the hole. In claim 7, the expression, "of causing a change within the borehole so that rays emitted at a certain level will be different than before the introduction of the radioactive material," can mean nothing else, as we see it, than as is disclosed in appellants' earlier application, that the radioactive material is absorbed in the stratum containing petroleum to a greater extent than in other strata, and, therefore, the rays emitted from that stratum will be stronger and different than they were before the introduction of the radioactive material. It is the introduction of radioactive material into the borehole that causes such change, and this, we think, is clearly disclosed.

With respect to claim 11, the step of "introducing radioactive material into the said borehole and proximate to the point to be investigated, of allowing the radioactive material to act upon the material in the borehole, and to bestow as a consequence upon the said material, an additional radioactive property," we think is properly disclosed. Certainly, "the point to be investigated" is the stratum wherein petroleum is thought to exist, and in introducing the radioactive material into the borehole, it is plain, according to our understanding, that such material would fill the borehole and of necessity be proximate to the stratum or strata containing petroleum, and because, where petroleum exists, it will absorb the radioactive material in greater quantity than the other strata, it will result in additional radioactivity emanations from the petroleum bearing strata.

We do not agree with the Board that the statement in claim 13, "thereby causing in the material lining the borehole an augmented radioactivity, dependent upon the reaction between the radioactive material and the material lining the borehole," expresses results not mentioned in the appellants' earlier application. In that claim it is set out that the radioactive material fills the borehole so that it may act upon the different strata therein. It is disclosed in appellants' earlier application that petroleum seems to have a greater affinity for radium emanation (a heavy inert radioactive gas) than substances found in other strata. Because of that disclosure, it appears that there is augmented radioactivity affecting in various degrees the different strata, the difference depending upon the varying absorptive properties of the different strata. This seems to us to describe the effect of the radium emanation, so that localities within the borehole may be properly measured by reason of the different emissions of radioactivity there present. Therefore, it seems to us that the disclosure relied upon by appellants is sufficient to justify allowance of claim 13.

We are not in agreement with the Board that the expression contained in claim 22, "introducing a radioactive substance within the borehole proximate to the said stratum," is not disclosed in the earlier application. In that claim the said stratum is defined to be "a stratum with a limited radioactivity." The application relied upon by appellants sets out specifically that petroleum may have such a limited radioactivity that the detection of its presence with appellants' apparatus becomes difficult. The stratum containing petroleum is cut through by the borehole. The radium emanation, to be of any effect at all, must be introduced throughout the entire area of the borehole and of necessity must be proximate to said stratum. We are of opinion that claims 7, 11, 13 and 22 should be allowed for the reason that their limitations are sufficiently disclosed, as contended by appellants in their earlier application. We further hold that those claims are neither indefinite nor ambiguous.

For the reason herein stated, the decision of the Board is reversed with respect to claims 7, 11, 13, and 22, and affirmed with respect to claims 4, 5, 12, and 21.

MODIFIED.

BLAND, *J.*, sat during the arguments of this case, but resigned before the opinion was prepared.

COLUMBIA BROADCASTING SYSTEM INC.

v.

TECHNICOLOR MOTION PICTURE CORP. ET AL.

No. 5365. Decided January 27, 1948

TECHNICOLOR MOTION PICTURE CORP. ET AL.

v.

COLUMBIA BROADCASTING SYSTEM, INC.

No. 5366. Decided January 27, 1948

[— F.2d —; — USPQ —]

1. TRADE-MARKS—APPLICATION—"TELECOLOR" FOR TELEVISION APPARATUS—MEANING OF "TELE."

Where it appears from the record that to those connected with the television industry, "tele" is a recognized abbreviation of television, *Held* that if those in the industry give it that meaning, it must be so defined for trade-mark purposes.

2. SAME—SAME—SAME—DESCRIPTION.

Though "tele" is a dictionary term and is descriptive to only those skilled in the television art, *Held* registration of "telecolor" would be deniable as descriptive of a character of the goods under *In re Richfield Oil Co.*, 24 CCPA 996; 483 O. G. 465.

APPEAL from the Patent Office. Opposition No. 23,428.

AFFIRMED.

Pennie, Edmonds, Morton and Barrows (*Willis H. Taylor, Jr.* and *C. M. Fisher* of counsel) for Columbia.

Roberts, Cushman & Grover (*Charles S. Grover, William M. Cushman*, and *Richard F. Walker* of counsel) for Technicolor.

O'CONNELL, *J.*:

We have here appeals from decisions of the United States Commissioner of Patents, acting through the First Assistant Commissioner, in a trade-mark registration case, 69 USPQ 260. In one of the decisions an opposition involving two grounds was passed upon, and the other was a decision ex parte. Both were announced in a single opinion.

As will be observed from the caption, there are two appeals before us, but only one opinion is necessary. As is hereinafter stated, Technicolor Motion Picture Corporation was not in fact a party appellant in appeal No. 5366 and in that respect the caption is somewhat misleading.

On February 29, 1944, Columbia Broadcasting System, Inc., hereinafter usually referred to as C. B. S., filed in the Patent Office an application for registration, under the Trade-Mark Registration Act of February 20, 1905, of the word "Telecolor," shown printed in capital letters with the use of plain type, "for radio and television transmitting and receiving apparatus and component parts therefor," use of the mark being alleged "since February 11, 1944."

The application was opposed by Technicolor Motion Picture Corporation and Technicolor, Inc. It appears that the latter is a holding company which owns all the stock of the former but is not itself engaged in either the manufacture or sale of any products. The two companies joined in a single action of opposition but, it is stated, paid two filing fees in the Patent Office. A question was raised by the Examiner of Trade-Mark Interferences with respect to there being two parties in one action under the facts relating to the interest of the parties shown in this case, but in view of our conclusion that need not be discussed here.

The opposition was predicated upon two grounds, viz.:

First, it was alleged that "Telecolor" so closely simulates the full name of Technicolor, Inc., and, what was asserted to be, the "distinctive part" of the name of Technicolor Motion Picture Corporation, that it should be denied registration under that part of the second proviso of section 5 of the act, which reads:

* * * *Provided*, That no mark which consists merely in the name of * * * [a] corporation * * * shall be registered under the terms of this act.

The Examiner of Trade-Mark Interferences dismissed the opposition of Technicolor, Inc., based on the "name clause," but sustained the opposition of Technicolor Motion Picture Corporation on that ground. The First Assistant Commissioner reversed the latter holding, and, so far as the "name clause" was concerned, dismissed the opposition of both the opposing parties.

Technicolor, Inc., appealed from the First Assistant Commissioner's decision on this phase of the controversy, but Technicolor Motion Picture Corporation took no appeal. That issue is involved generally before us in appeal No. 5366, which is in fact improperly styled, since Technicolor, Inc., is the only appellant.

Second, it was alleged, particularly by Technicolor Motion Picture Corporation which plead ownership of two registrations of the term "Technicolor" used upon "motion picture films" since long prior to the date of use claimed by C. B. S. for "Telecolor" on television apparatus, that use by the latter party of the latter mark in the manner designed would be likely to cause confusion or mistake in the mind of the public or to deceive purchasers, especially as to origin. It was contended, therefore, that the registration sought by C. B. S. should be denied.

The Examiner of Trade-Mark Interferences sustained the opposition under the confusion in trade clause and the First Assistant Commissioner affirmed in that respect, whereupon C. B. S. took the appeal which became appeal No. 5365 on our calendar.

The questions raised in the opposition proceedings were interesting and they have received the attention of the court, much study having been given them, but, as we view the situation here, it is not only unnecessary to pass upon them, but any decision of them would be obiter.

The Examiner of Trade-Mark Interferences and the First Assistant Commissioner correctly held it to be their duty to consider ex parte the right of C. B. S. to the registration sought, entirely independently of the contentions of the opposers, under the statute as construed in various decisions of this court. See *Burmel Handkerchief Corp. v. Cluett, Peabody & Co., Inc.*, 29 CCPA (Patents) 1024, 127 F.2d 318, 53 USPQ 369, 542 O. G. 395, and cases therein cited.

They did this with the result that they concurred in the view that the registration should be denied because upon the record "Telecolor" was shown to be either a descriptive or a misdescriptive term with respect to television apparatus. This conclusion was based upon testimony given largely on direct examination by a witness whom C. B. S. itself called and who seemed well qualified to speak of the matters concerning which he testified.

[1] The decision of the Examiner of Trade-Mark Interferences on this phase of the matter is brief and pointed. He quotes all the testimony bearing

upon the issue involved ex parte and we here reproduce it, omitting the record page references:

Aside from the right of opposer to intervene herein on the grounds pleaded in the notice of opposition, it remains the duty of the Examiner to consider applicant's right of registration ex parte. *Burmel Handkerchief Corp.* v. *Cluett Peabody & Co., Inc.*, 542 O. G. 395; 29 CCPA 1024; 127 F.2d 318.

In the testimony of Larsen, witness for applicant, it was developed that the word "Tele" is a common term employed indicating "television." Indeed, the witness was quite insistent as to this fact as indicated by the following testimony:

Q57. Was there any short abbreviation that was used when discussing television, and if so, will you state what that is?

A. As far back as I recall, that is in the early development days, which goes back, in my particular case, to 1936, the common term we always employed in connection with television was the word "Tele."

Q58. That is, it was widely known by the public, in view of your acquaintance and work in the industry?

A. It is a very common term, used in technical discussions and used by the public as well.

* * * * * * *

Q61. And would you say that from your knowledge of the public's reaction to television announcements, that the public itself has begun to refer to affairs relating to television by the combining term "Tele"?

A. Yes, sir.

Q62. You have lectured to lay audiences, have you not, Mr. Larsen?

A. I have, sir.

Q63. And in the course of questioning and conversation amongst those lay attending, have you heard them use the word "Tele"?

A. Very often.

Q64. Among the advertisers, for example—and first I will ask you, Mr. Larsen, have you had contact with advertising firms that may have interest in television?

A. I have, sir.

Q65. And do they refer to the television art as "Tele"?

A. They do, sir.

* * * * * * *

XQ180. You say you are familiar with the personnel in the television business?

A. I am, sir.

XQ181. And with many people interested in it?

A. I am.

XQ182. Advertising concerns, I believe you mentioned some of them?

A. I am, yes, sir.

XQ183. And a portion of the lay public?

A. I am, sir.

XQ184. And to them you said "tele," just the four letters "tele" means television?

A. It is so used, yes, sir. I believe you will find that in the daily periodicals, weekly publications, monthly publications, the word "television" is very seldom used and it is always abbreviated to the word "tele" by such papers as the Herald, Variety and others.

XQ185. Of course "color" just means color to all of the general public?

A. That is correct, sir.

XQ186. And it follows, then, that combining the two "tele color" is merely descriptive of broadcasting television in color?

The last question quoted was objected to by counsel for applicant and the witness was instructed not to answer the question and no answer was given.

It would seem from this testimony that "Tele" is a mere abbreviation of "television" and is so understood by a great portion of the public. Under such circumstances applicant's notation "Telecolor" means no more than television color. In cases where color pictures are transmitted and received over apparatus bearing this designation, the mark would be merely descriptive of a characteristic of the goods and if only black and white pictures are transmitted and received it would be misdescriptive of such character. Under these circumstances the Examiner is of the opinion that the applicant is not entitled to registration under the act of 1905 of such a descriptive or misdescriptive term.

The First Assistant Commissioner said:

The denial of registration to applicant, ex parte, is based upon the proposition that "Telecolor" means nothing more than television color. The testimony conclusively shows that to those connected with the industry, "tele" is a recognized abbreviation of "television," and as such is widely used. If those in the industry give it that meaning, it must be so defined for trade-mark purposes. *In re Richfield Oil Co.*, 24 CCPA 996, 88 F.2d 499. As applied to color television apparatus, "Telecolor" is thus plainly descriptive of a quality or characteristic of the goods. If applied to black and white television apparatus, it is downright deceptive. On either score, the Examiner of Interferences properly refused registration.

The testimony is clear, unequivocal and uncontradicted as to the art of television in which apparatus for transmitting and receiving are indispensable parts. There is nothing to justify us in disregarding it.

[2] "Tele" is a dictionary term which is defined in substantially the same manner by all the lexicographers. We quote that given by Webster's New International Dictionary, Second Edition, 1932:

Tele- * * * tel-. Combining form from Greek * * * *far, far off*; as in *telegraph, telepathy, telephone*, etc.:—often used in naming or designating devices or instruments, usually electrical, which control or direct the action of distant apparatus (as in telecontrol, a device for regulating different electrical circuits at a distance by means of radiotelegraphy), or which have a distant recording apparatus (as in teleanemograph, telebarograph, telebarometer, etc.).

Even if the word be descriptive to only those skilled in the television art, registration would be deniable under the decision cited by the First Assistant Commissioner, and those decisions which it cites.

We make no holding with respect to the issues presented in the opposition proceeding, but the ex parte decision of the Commissioner is affirmed.

AFFIRMED.

BLAND, *J.*: sat during the argument of this case but resigned before the opinion was prepared.

U. S. Court of Customs and Patent Appeals

THOMAS ET AL.

v.

MICHAEL ET AL.

No. 5349. Decided January 27, 1948

[— F.2d —; — USPQ —]

1. INTERFERENCE—REDUCTION TO PRACTICE—TESTS.
   Where the utility of a new product produced by a novel process is not known or apparent, a test is required to establish reduction to practice of that process.
2. SAME—SAME—SAME.
   Where the utility of an old product produced by a novel process is known, a test is not required to establish reduction to practice of that process.
3. SAME—PRIORITY—PROCESS FOR PRODUCING CATALYST.
   Where the utility of the catalyst produced in carrying out the process of the count was known not only in the art but also was known to appellants herein, *Held* that the decision of the Board requiring a test of the catalyst to effect its reduction to practice was manifestly wrong, and that the decision of the Board of Interference Examiners is reversed and priority awarded appellants.

APPEAL from the Patent Office. Interference No. 80,929.

REVERSED:

Charles M. Thomas (*Clarence O. McKay* of counsel) for Thomas.

Samuel Z. Gordon and *Loretta I. Martone* for Michael.

O'CONNELL, *J.*:

This is an appeal in an interference proceeding from the decision of the Board of Interference Examiners of the United States Patent Office awarding priority of the invention defined by the single count in issue to the appellees herein.

The interference is between appellees' application No. 345,366, filed July 13, 1940, which is alleged to be a division of their application No. 222,144, filed July 30, 1938; and appellants' Patent No. 2,285,314, issued June 2, 1942, on their application No. 236,549, filed October 22, 1938, which is alleged to be a continuation-in-part of their application No. 171,986, filed October 30, 1937.

Title to appellants' interest in the subject matter of the count, as described in their brief, is vested in the Universal Oil Products Company. Title to appellees' application was vested in the Alien Property Custodian and is now claimed by the Attorney General of the United States as successor to the custodian.

The count, which originated in appellants' patent, reads:

A process for producing catalysts which comprises suspending silica hydrogel in an aluminum salt solution, adding a volatile basic precipitant to precipitate hydrated alumina, and drying the resultant silica-alumina composite.

The subject matter of the count, and the light in which appellants contend it should be construed, are described in the brief of counsel for appellants as follows:

The count relates to a *process* for producing a silica-alumina composite catalyst. It is not restricted to the production of a catalyst capable of promoting any specific type of reaction. It defines a *novel process* for producing *an old and well-known silica-alumina composite catalyst*, the utility of which had long been demonstrated by Thomas et al. and other prior art workers. * * * [Italics quoted]

* * * * * * *

In simple language the count defines a process for producing a catalyst, including the steps of (1) mixing with silica hydrogel an aluminum salt solution, (2) adding to the mixture a volatile basic precipitant, which may be ammonium hydroxide, which results in precipitation of hydrated alumina, and (3) drying the hydrated silica-alumina composite for the purpose of removing water and evaporating the volatile basic precipitant from the mass.

Attorneys for appellees also state in their brief that:

The catalyst produced by the process of the count is a composite of silica and alumina hydrogel, and its effectiveness as a catalyst is measured by the results obtained in the cracking processes in which it is employed. Six examples of such processes are given in appellees' application (R. 9—12) and three such examples are given in appellants' patent (R. 83—84), in all of which the utility of the catalyst used is measured by the amount of motor gasoline and light oil produced and their quality. These are the criteria for good catalysts in this art.

No testimony was offered by appellees who asserted reliance on the effective date of their German application, No. I. 58,775, filed August 9, 1937, for conception and constructive reduction to practice. Appellants offered evidence in the form of affidavits containing stipulated oral testimony together with certain documentary exhibits, including log sheets and progress reports. No objection or rebuttal was offered in the interference relative to the testimony thus submitted by appellants.

Appellees have called attention to the fact, and the Board noted, that the stipulated testimony includes the depositions of appellants Thomas and Ahlberg, co-applicants and chemists; Kinneberg, chemist, and Fitzpatrick and Cain, assistants; and that all such witnesses were employees of the Universal Oil Products Company during the period of 1937 covered by their testimony, although Kinneberg and Fitzpatrick were not employed by the company at the time the depositions were taken.

There is otherwise no disparagement of the testimony offered by appellants, and the statement in the brief of their counsel that Thomas and Ahlberg are both experienced scientists and chemists of high standing in the art of catalytic cracking is in nowise disputed.

Appellees were accorded the effective date of their German application, filed August 9, 1937. Appellants were accorded the effective date of their application, filed October 30, 1937, and were therefore the junior party to the interference.

The Board held that a preponderance of the evidence established that appellants were the first to conceive the invention of the count but failed to establish either that they were the first to reduce the invention to practice or that they were diligent during the critical period.

Appellant Ahlberg testified that on June 16, 1937, he prepared a memorandum in his notebook 410, page 108, describing the invention of the count and began the preparation of the catalyst therein described; that between June 17 and June 24, 1937, he and the witness Fitzpatrick carried out the separate and successive steps of the process described in his notebook and obtained a composite which was placed in a bottle and labeled "410—108" in accordance with the number and page of the notebook.

The Board found that the invention described in Ahlberg's notebook set forth the procedure for preparing a composition which corresponded in its essential steps to the process of the count; and that the testimony of Ahlberg, Kinneberg, and Fitzpatrick adequately established the fact that appellants carried out the process of the count and obtained a composite identified as "Catalyst 410—108."

The Board held, however that "since the count calls for a process for producing catalysts," the mere carrying out of the process was not sufficient to effect its reduction to practice for the reason that:

It is not shown, and it is not apparent, that the utility of the catalyst was known at the time it was prepared. Tests establishing the utility of the products were, accordingly, an essential element of the reduction to practice. As far as the record shows the untested silica-alumina composite was merely a subject of speculation on the part of Thomas et al., rather than a product of proven usefulness.

The foregoing decision of the Board was made on a point which was not presented to it for decision by either party to the interference.

There was no contention before the Board that the work which was done on June 17 to 24, 1937, by appellant Ahlberg and his assistant Fitzpatrick did not constitute reduction to practice. The sole contention made by appellees, as disclosed by the record, was that Ahlberg's testimony as to the work he had performed on those dates had not been sufficiently corroborated.

That contention was discussed and rejected by the Board in the following language:

The testimony of Ahlberg, Kinneberg and Fitzpatrick is believed adequate to establish the fact that Thomas et al. carried out the process of the count in issue and obtained a composite identified as "Catalyst 410—108". Michael et al. contend that there is no adequate corroboration of Ahlberg's testimony as to the preparations of the catalyst and state that Kinneberg does not make clear what he means by such expressions as "observing the work" or "performed in my presence." Michael et al. assert that there was nothing in the record to indicate that Kinneberg personally tested the reagents to determine for himself what was being done. It does not appear, however, that the chemicals used were so complex, unusual, or so foreign to those used in the laboratory's normal research on

catalysts that Kinneberg could not or did not ascertain for himself the identity of the chemicals employed. The testimony of Kinneberg does not justify the Michael et al. comment that Kinneberg was "taking Ahlberg's word for it." The statements made by Kinneberg are unequivocal in nature and there is no presumption that his testimony on the laboratory arrangement and the research group organization is a limitation on these unequivocal statements. The testimony is stipulated but this does not provide warrant for challenging Kinneberg's statements on the ground that Kinneberg meant something else than what he said.

The holding of the Board, as hereinbefore described, was based on the ground that the utility of the catalyst produced by appellants was not known at the time it was prepared. The question presented is whether the utility of that product was or was not known in the art at that time.

[1], [2] Where the utility of a new product produced by a novel process is not known or apparent, a test is required to establish reduction to practice of that process. See *Bogoslowsky* v. *Huse*, 31 CCPA (Patents) 1034, 1038, 142 F.2d 75, 78, 61 USPQ 367, 565 O. G. 717. But where the utility of an old product produced by a novel process is known, a test is not required to establish reduction to practice of that process. See *Larson* v. *Eicher*, 18 CCPA (Patents) 1497, 49 F.2d 1029, 1031, 9 USPQ 461, 413 O. G. 6; *Fenton R. Brydle* v. *Harry H. Honigbaum*, 19 CCPA (Patents) 773, 54 F.2d 147, 11 USPQ 219, 415 O. G. 755; *Kyrides* v. *Bruson*, 26 CCPA (Patents) 986, 102 F.2d 416, 41 USPQ 107, 506 O. G. 6.

Referring to the expressed view of the Board that that utility of appellants' product was not known or apparent at the time it was prepared by them, appellants assert that:

> The record refutes this view. The prior art of record, but overlooked by the Board, establishes that the utility of a silica-alumina composite catalyst for promoting cracking had been demonstrated prior to the production of the silica-alumina composite catalyst 410—108 in June 1937. This prior art was not discussed in the briefs below because the issue here decided by the Board was not in controversy between the parties. Possibly this explains why it was overlooked.

The prior art of record comprises the patent to Gayer, 2,068,016, of January 19, 1937; the patent to Houdry, 2,141,185, of December 27, 1938; the patent to Voorhees, 2,247,535, of July 1, 1941; and the patent to Thomas et al., 2,282,922, of May 12, 1942, issued on their application filed March 20, 1937.

While the respective processes defined by the prior art of record differ from the process of the count, the disclosures of that art establish beyond a doubt that prior to June, 1937, the utility of a silica-aluminn catalyst was known and had been demonstrated. Appellees contend, however, that

> There is nothing in the opinion of the Board of Interference Examiners to support the contention made in appellants' brief (p. 11) that the Board believed that the utility of other silica-alumina catalysts had not therefore been demonstrated. In saying "It was not shown, and it is not apparent, that the utility of the catalyst was known at the time it was prepared" (R. 182) the Board obviously referred only to the particular composition produced by the count in issue.

The difficulty with appellees' contention on the point in question is that the Board in its opinion made no distinction between the silica-alumina catalyst of the count and other silica-alumina catalysts. The Board specifically held, and we quote its language, including the part thereof which it italicized, that "since the count calls for a process *for producing catalysts*," a test establishing the utility of the product was an essential element of the reduction to practice.

Appellees further contend that the interference involves a highly technical chemical composition and since there is no manifest error in the decision of the Board, the decision should be affirmed.

The Board in that part of its decision which we quoted hereinbefore pointed out that it does not appear that the chemicals used by appellants in producing the product of the count were so complex, unusual, or so foreign to those used in the laboratory's normal research on catalysts that a witness could not or did not ascertain for himself the identity of the chemicals employed.

No issue was raised before the Board, and appellants have in nowise contended at any time, that the composition produced by the process of the count was new or novel. Appellants' position, as hereinbefore described, was based solely on the ground that the product of the count was an old composition the utility of which had been known and demonstrated at the time it was prepared by them in June, 1937.

[3] We are convinced, for the reasons stated, that the utility of the catalyst produced by appellants in carrying out the process of the count on June 17 to 24, 1937, was known not only in the art but also was known to appellants herein; and that the decision of the Board requiring a test of the catalyst to effect its reduction to practice was manifestly wrong.

In view of that conclusion it is unnecessary to discuss and pass upon other points raised by the respective parties herein.

The decision of the Board of Interference Examiners is accordingly reversed, and priority of the invention of the count is awarded to the appellants, Charles L. Thomas and Jacob E. Ahlberg.

REVERSED.

BLAND, *J.*, sat during the argument of this case, but resigned before the opinion was prepared.

NOTICES

Disposal of Classification Examiners' Decisions on Requirements of Division

Superseding the Notice of August 23, 1937

Where an Examiner of Classification renders a decision which approves, either in whole or in part, a requirement to divide, he will supply the Primary Examiner with both an original copy and a carbon copy of his decision. These copies will be attached to the original and carbon copies respectively, of the Office action making the requirement final so as to become parts thereof. The necessity of quoting the decision in the Office action is thereby removed. In the body of the Examiner's action should appear the statement that the requirement to divide, as approved in the attached decision, is made final. The decision and action will thus have the same paper number and will be entered together in the "Contents" section of the file wrapper.

Where the requirement to divide is entirely disapproved, the decision should not be entered in the file. The next Office action, however, should either withdraw the requirement, hold it in abeyance, or modify it, as the facts warrant.

LAWRENCE C. KINGSLAND,
Commissioner.

April 6, 1948.

Erratum

In the OFFICIAL GAZETTE of January 27, 1948, page 569, Trade-Mark Registrations Republished, Class 6, Reg. No. 95,359, lines 3 and 4, for "by The Sinclair Manufacturing Company, Toledo, Ohio, a partnership" read *by H. M. Sinclair, Jr., trustee for the partnership, The Sinclair Manufacturing Company, Toledo, Ohio*; and page viii, List of Registrants of Trade-Marks, first column, sixth item from bottom of page, for "by The Sinclair Manufacturing Company, Toledo, Ohio" read *by H. M. Sinclair, Jr., trustee for the partnership, The Sinclair Manufacturing Company, Toledo, Ohio.*

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Swift & Company, which previously registered 443 patents (published in the OFFICIAL GAZETTE for November 4, 11, 18, and 25, 1947), now places the following patents on the Register as being available for license. Inquiries concerning licenses under these patents may be directed to Swift & Company, Union Stock Yards, Chicago, Ill.

Pat. 2,406,163. SAUSAGE LINKING MACHINE. Patented Aug. 20, 1946. A string-cutting means for a machine for linking stuffed sausage casings. String delivered from a supply means is drawn tightly around the casing. The tying means includes a rotating ring to be driven around the casing while the casing is held stationary within the ring. A fixed shearing edge is placed in the path the string follows in being wrapped around the casing. A movable shearing edge is driven across the fixed edge at timed intervals in the tying cycle to sever the string. Means are associated with the fixed edge to direct the string around one end of the fixed edge during the wrapping cycle and draw the string across the fixed edge just as the knife is driven through its cutting stroke. Group 35—51. Reg. No. 9,520.

Pat. 2,412,113. PURIFYING OF ALKYLOLAMIDES. Patented Dec. 3, 1946. A method of removing basic substances and other impurities from mixtures containing alkylolamides. The preferred practice includes the addition of a strong mineral acid in a small quantity of water to the reaction products of an alkylolamine and a glycerol ester of higher fatty acids which neutralizes all the basic impurities. The precipitate formed by the refining operation is insoluble in the alkylolamides and may be removed by filtration, decantation, or centrifugal separation. Group 28—89. Reg. No. 9,521.

Pat. 2,413,631. WHITENING EGGS. Patented Dec. 31, 1946. A method for whitening buff-colored egg shells without affecting the egg material. The eggs are immersed from 5 to 10 seconds in a solution containing an acid oxidizing agent and a small amount of a wetting agent, and are then washed while being brushed lightly. The brushing may be eliminated by subjecting the eggs to an acid or alkali neutralizing solution after the treatment. Group 28—89. Reg. No. 9,522.

Pat. 2,416,146. REFINING FATS AND OILS. Patented Feb. 18, 1947. A process for refining glyceride oils and fats containing gums, free fatty acids, and coloring matter. Produces an oil free from gums and having reduced color and fatty acid content. The oils are de-gummed with an aqueous medium and then treated with a solvent which dissolves the fatty acids. A dilute solution of caustic soda is mixed with the oil to neutralize the remaining free fatty acids, further reduce the color of the oil, and separate from the oil an aqueous phase containing soap and coloring matter. Group 28—89. Reg. No. 9,523.

Pat. 2,423,930. CUT-DOWN DEVICE. Patented July 15, 1947. An automatic device for cutting down a hog carcass from a conveyor trolley moving along a supporting rail suspended from the ceiling. The carcass is hung from a gambrel engaged behind the gam cord of each of the rear legs, the gambrel being removably attached to conveyor trolley. A knife is movably mounted on a frame above a landing table so as to sever the gam cord of one of the legs as the leg is driven over the knife by movement of the carcass along the rail. The leg is thus released from the gambrel and the carcass drops toward the landing table. The gambrel becomes unbalanced and is twisted free from other leg. Groups 25—41; 35—43—62. Reg. No. 9,524.

Pat. 2,427,840. WASHING DEVICE. Patented Sept. 23, 1947. A vacuum device for cleaning and washing the fore-alimentary tract of killed poultry. A vacuum tube extends upwardly above the liquid level of a receptacle containing washing fluid. The bird to be cleaned is hung by its feet from a support and its mouth placed over the tube and pushed downwardly so tube is inserted in throat and crop. As the mouth of bird passes below fluid in receptacle, the flow of air through the tract into vacuum tube is cut off. The fluid in the receptacle is then subjected to the vacuum and caused to flow upwardly between outside of tube and inner wall of tract, washing loose particles through vacuum tube into the drain. Group 20—15. Reg. No. 9,525.

Pat. 2,430,849. TREATMENT OF CARCASSES. Patented Nov. 11, 1947. A treatment for animal carcasses, particularly skinned beef, to improve the color, texture, and moisture content. A freshly skinned carcass is cooled to a temperature of about 50° to 70° F. under controlled high humidity, until the fat assumes a plastic consistency. The partially cooled carcass is then rolled with a rubber roller to press the blood from the fat. The freshly skinned carcass may have been clothed in either a single or double cloth. If a single cloth was used, it is removed after rolling and replaced with a fresh one. When two cloths are used, the outer one is removed after rolling, the inner cloth remaining. The carcass is then transferred to another cooler. Groups 20—11—12. Reg. No. 9,526.

Pat. 2,389,899. BUILDING STRUCTURE. Patented Nov. 27, 1945. This patent shows special fittings and connectors by means of which elongated structural elements (such as pipes) may be assembled to form a rigid framework. Some of the connectors are formed with openings, while others are formed with openings and sockets for receiving the pipes. The necessity of providing the sockets and openings with threads is eliminated, while the pipes are almost entirely devoid of threads. Each connector is formed with nut-receiving and -retaining pockets on the outside at suitable points. After insertion of a pipe in a connector, a nut threaded on the end of a screw (or bolt) is slid laterally into the pocket opposite the inserted pipe. The screw is then turned so that its shank will pass through the nut and a hole in the connector and engage the side of the inserted pipe in set-screw fashion. (Owner) Leonard Deddo, 57 East Chicago Ave., Palatine, Ill. Group 33—23—81. Reg. No. 9,527.

Pat. 2,431,328. RESPIROSCOPE. Patented Nov. 25, 1947. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) This patent describes a device for observing respiratory patterns during surgery, clinical studies, and general diagnosis. The device provides a rotatable cylindrical fluorescent screen which surrounds an optical differential manometer. An airtight housing of the manometer encloses a diaphragm, the front wall of which is linked to a small mirror which is tilted back and forth as the diaphragm is caused to expand and contract. Light from an electric bulb in combination with a lens system is reflected by the mirror to the screen as an intense spot of light. The device is completed by a differential pressure device, the casing of which is divided into two chambers by a porous plate that establishes a pressure difference by resisting an inflowing gas stream. The chamber admitting the gas communicates with the diaphragm. The other chamber communicates with the interior of the manometer housing and with the gas mask worn by a person whose respiration is being studied. In use, the spot of light is seen as a streak which traces a curve across the center area of the slowly rotating screen. (Owner) Wayland E. Hull, 617 Ruby St., Durham, N. C. Group 39—15. Reg. No. 9,528.

Pat. 2,306,014. ANIMAL TOILET. Patented Dec. 22, 1942. Toilet consists of an outer pan in the form of a tray which serves as a base and an inner pan, smaller and deeper. The inner pan is covered by an inverted pan having an oval central opening, the edges of the inverted pan fitting close against the sides of the base. The parts may be easily separated and cleaned. (Owner) Beatrice Carson, P. O. Box 129, Washington, D. C. Group 33—71. Reg. No. 9,529.

Pat. 2,204,392. HOSE AND PIPE COUPLER. Patented June 11, 1940. Coupler has a pair of interlocking sections having rounded hooks, the axial movement of which is limited by an overlying cover formed with offset lugs and notches which also lock. A thickened shoulder on the cover cooperates with a ring on each of the coupling sections to retain a spring, a thinner portion of the cover being bent to engage the outer face of the rings. The structure also includes a countersunk sleeve within each of the coupling sections. In connecting the coupling, the exposed hooks are brought together and the shanks (which connect the coupling to hose or pipe) are turned in opposite directions. The offset lugs of the cover ride on each other, forcing back the locking portion. A non-turning interlock is established by the snapping of the lugs into the notches. (Co-owner) Mary Mastowski, 336 Flatbush Ave., Brooklyn 17, N. Y. Group 35—69. Reg. No. 9,530.

Pat. 2,430,297. BATHTUB CLEANING MEANS. Patented Nov. 4, 1947. Bathtub is formed with an integral water chamber around its top for connection to hot and cold water pipes. A series of special nozzles are connected to the chamber to discharge water from the chamber in a flat sheet-like spray against inner walls of tub to keep it clean. A corrugated handrail is detachably mounted over the chamber. (Owner) Leo Lombardi, 375 Columbia Ave., Los Angeles 13, Calif. Group 33—61. Reg. No. 9,531.

Pat. 2,430,011. PLUG EJECTOR. Patented Nov. 4, 1947. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Multiple-terminal plugs (such as the Jones plug which has 30 or more terminals) are difficult to remove from the socket board into which a plug is inserted without twisting or loosening the terminals. This difficulty is simplified by a springed double tong arrangement which bridges the top of the plug and is permanently pivoted to each side. The plug is easily removed by pressing the center bars of the tong together so that their free ends abut against the surface of the socket, forcing the plug outwardly. The tongs are flat and special provision is made so that the arrangement does not interfere with the cable leading into the plug. (Owner) Lunceford P. Gillentine, Hernando, Miss. Group 36—11. Reg. No. 9,532.

Pat. 2,432,144. TOOLHOLDER AND LOCK. Patented Dec. 9, 1947. A tool-retaining means manufactured as an attachment for a pneumatically actuated hammer or incorporated in the hammer part of the tool-holding and -locking means. The tool is automatically locked in position when inserted in the holders, and accidental withdrawal prevented. A housing has an opening at one end for receiving the hammer and an opening at other end for receiving rearward part of the tool. To release tool, a slight turn of a sleeve causes cam means to push against end of arms, swinging them outwardly so the tool is free for withdrawal. (Owner) Irving A. Elkins, 175 Blake Ave., Brooklyn 12, N. Y. Group 35—42—69. Reg. No. 9,533.

Pat. 2,254,340. VALVE. Patented Sept. 2, 1941. Reg. No. 9,534.

Pat. 2,254,341. LUBRICATING METHOD AND APPARATUS THEREFOR. Patented Sept. 2, 1941. Reg. No. 9,535.

The two patents listed above relate to a system for distributing lubricant in measured quantities between bearing surfaces over the entire contact area. A lubricant-compressing plug is screwed in a central cylindrical aperture in stem of plug. Lubricant in lower portion of passage is compressed in response to downward movement of the screw plug and forced to the bearing surfaces of the valve. The lower end of passage terminates in a cylindrical chamber which fits in a split sleeve. Leading therefrom, at 90° intervals, are four lubricant ducts, which extend to recesses in the bearing surface of the plug. The sleeve is automatically rotated in response to rotation of the screw plug, moving the slot in sleeve past the ducts and delivering a small quantity of the lubricant to each duct. (Owners) Nina D. Zaikowsky and Samuel S. Mackeown. Address correspondence to Reed C. Lawlor, Park Central Bldg., 412 West Sixth St., Los Angeles 14, Calif. Group 33—66.

Pat. 2,434,640. MACHINE FOR STRIPPING COVERED CABLES. Patented Jan. 20, 1948. Cable is fed between rolls made up of a series of pairs of opposed discs. Discs have a roughened groove which forms a circular passage adapted to receive the covered cable to be stripped. The rims of the discs are provided with scalloped flanges sharpened to constitute knife edges. The flanges are so arranged that, when covered cable passes between the rolls, the knife edges of opposed flanges cut into the cover from opposite directions tearing a strip from the cable so that the remaining portion of the cover may be easily removed from the cable. The rolls are rotated by motor-driven gearing housed within a hollow standard. (Owner) Howard A. Burdwood, 60 Garrison St., Portland 4, Maine. Group 35—43. Reg. No. 9,536.

Pat. 2,435,485. OVERSHOE SEAMED TO STIFFEN PLASTIC UPPER. Patented Feb. 3, 1948. Light-weight overshoe has lower rubber portion and an upper of transparent plastic material which is closed by a slide fastener extending down to top of lower portion. The smooth nature of the material enables both inside and outside of overshoe to be cleaned by wiping. The parts of the overshoe may be welded or cemented together, the upper portion requiring no additional stiffening in that the slide fastener and an overlapped seam at the rear provide sufficient stiffening in themselves. (Owner) Evalyn Wheaton, 14-C Boulevard Bldg., 7310 Woodward Ave., Detroit 2, Mich. Groups 28—83; 30—21. Reg. No. 9,537.

Pat. 2,416,492. TANDEM CARRIER. Patented Feb. 25, 1947. Group 37—41. Reg. No. 9,538.

Pat. 2,429,028. COLLAPSIBLE ONE-WHEELED CARRIER. Patented Oct. 14, 1947. Group 37—41. Reg. No. 9,539.

These two patents describe a one-wheeled carrier frame adapted for hunters, fishermen, etc., for transporting packs over rough ground. The carrier in Patent 2,416,492

consists of a tubular frame having a slidable handle in each corner and a center bar secured at the ends. A wheel is mounted in a fork braced to the underside of the center bar and to each corner of the frame. Lattice webbing covers the frame. In Patent 2,429,028, the frame is hinged to form a pair of drop leaves. This enables the carrier to be collapsed when not in use. A sizable load may be carried with little effort by two men grasping the handles at each end and balancing the load on the wheel and pushing the carrier. (Owner) James C. Neeley, Route 6, Box 861, Portland 1, Oreg.

Pat. 2,350,623. COMBINATION BASTING AND SKEWERING DEVICE. Patented June 6, 1944. Baster includes a hollow tube centered on a base which is adapted to rest on the bottom of any conventional roasting pan. The tube has several openings on the top as well as a pointed plug with which to impale the meat. The base has a central raised portion which constitutes a thermal chamber that accelerates the boiling of the meat juices so that the juices rise in the tube and squirt out the top openings to continuously baste the meat. A platform may be provided on the base to raise the meat out of contact with the bottom of the pan. Meat may be cooked at higher temperature without danger of burning or drying out. (Owner) Charles H. Kruea, 49 Indiana Ave., Fort Thomas, Ky. Groups 33—73; 34—41. Reg. No. 9,540.

Pat. 2,323,009. PHOTOGRAPHIC APPARATUS IN DETACHED PARTS. Patented June 29, 1943. This patent presents the construction of a complete camera to be sold in knock-down form which may be assembled in accordance with printed directions. Interfitting parts are connected without screws or fastenings of any kind. The purpose of selling the camera in knock-down condition is to enable the buyer to acquire an intimate knowledge of the make-up of the camera so that he may understand the purpose of the parts and the functions they perform in the operation of the camera. The patent also presents a box in which the parts are to be packed. (Owner) Rolf Bie, % Bie Trading Co., 60 Broad St., New York 4, N. Y. Group 39—12. Reg. No. 9,541.

Pat. 2,435,447. MOORING BITT. Patented Feb. 3, 1948. A combined mooring bitt and chock structure for mounting on the deck of a vessel adjacent the side rail. Comprises a base with a pair of spaced upstanding bitts with an eccentric sheave rotatably mounted between them. A hawser passes around the sheave forming a spiral coil. A removable wedge is inserted in recess in lower end of either bitt co-acting with flat surface portion of bitt and with sheave to stopper hawser. (Owner) Karl Kortum, Ely Hill, Petaluma, Calif. Group 37—31. Reg. No. 9,542.

Pat. 2,392,324. LAMP SHADE. Patented Jan. 8, 1946. Open-ended lamp shade of flexible material is devoid of the usual frame and hanger so that it may be collapsed for laundering and cleaning, or for storage in a flat condition. The shade has an inner hem at top and bottom. An expansible split hoop or band is removably inserted in each hem to extend the shade and hold it taut. A detachable hanger having hooked terminal ends is also provided for engaging top of shade on inside to hold shade suspended from a standard fixture in usual manner. (Owner) Ernest Krebeck, 1242 Wisconsin Ave., N. W., Washington, D. C. Group 39—73. Reg. No. 9,543.

Pat. 2,430,021. TIE FORM. Patented Nov. 4, 1947. A tie form for holding a tie in fixed position on wearer. Comprises a vertically extending bowed wire bar with a keeper slidably mounted thereon supporting a transversely extending bowed wire bar. Loops formed at ends of bars have pointed ends for pushing in tie to hold tie in proper position. (Owner) Thomas O. Johnson, 609 38th St., Richmond, Calif. Groups 34—52; 40. Reg. No. 9,544.

Government Owned Patent

The following patent, owned by the United States Government, as represented by the Secretary of the Interior, is available for licensing upon a non-exclusive, royalty-free basis:

Pat. 2,434,933. TRANSMISSION LINE FLASHOVER DETECTOR. Patented Jan. 27, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) This detector consists of an endless loop of wire having a multi-turn coil within which a cobalt steel link is held in an insulating case. The loop has a narrow bifurcation so that it may be bolted to the leg of a transmission tower at a readily accessible point not far from the ground. By removing the link and holding it near a compass a lineman may determine whether or not a lightning flashover has passed through tower. If the link is magnetized, a demagnetized link is substituted and inspection made of transmission line insulators for replacements or repairs if necessary. Group 36—11. Reg. No. 9,545.

BULLETIN OF DECISIONS OF PATENT OFFICE ON TRADE-MARKS

RENDERED DURING MARCH, 1948

NION CORPORATION *v.* PHYSICIANS & HOSPITALS SUPPLY CO., INC., Opposition No. 24,755.

In a decision rendered March 1, 1948 (169 Ms. Dec. 643, 76 USPQ 481), *Assistant Commissioner Daniels* reversed the action of the Examiner of Trade-Mark Interferences who had sustained the opposition of Nion Corporation, of Los Angeles, Calif., to the application of Physicians & Hospital Supply Co., Inc., of Minneapolis, Minn., for registration, under the act of 1905, of the mark "HEMATOVALS" for a medicinal preparation, namely, capsules of liver, iron, and vitamin B-complex for treatment of nutritional and secondary anemias. The opposition was based upon opposer's prior use of the trade-mark "HEMONUTRON" for an iron and B-complex combination, opposer being the owner of a registration of this mark under the Trade-Mark Act of 1905 for the products stated antedating any use claimed by applicant.

After noting that prior to the hearing on this appeal applicant filed a motion that the order and judgment of the Examiner of Interferences in this opposition be reversed and judgment be entered in favor of applicant and its trade-mark be determined to be registrable, based upon an affidavit and a withdrawal notice submitted by opposer, it was held that this motion must be denied, since the matter having been decided by the Examiner of Interferences cannot be reversed by consent, and in any event, registration would not be granted by the Patent Office over the prior registration provided the two marks are regarded as confusingly similar.

It was held that since, however, the attempted withdrawal of the opposition is considered to be in good faith and the reasons therefore seem to have a real basis it is believed proper to give this action of the opposer some weight in determining the question of confusing similarity.

It was held that, taken in their entireties, the marks are not so similar that their concurrent use on goods of the same descriptive properties will be likely to cause confusion or mistake in the mind of the public.

THE CROWN OVERALL MFG. CO. *v.* DESMOND'S, Opposition No. 24,511.

In a decision rendered March 2, 1948 (169 Ms. Dec. 645, 76 USPQ 484), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Interferences dismissing the opposition of The Crown Overall Mfg. Co., of Cincinnati, Ohio, to the application of Desmond's, of Los Angeles, Calif., for registration under the Trade-Mark Act of 1905, of the notation "FLEXI-CROWN" as a trade-mark for military caps. The notice of opposition alleged ownership and prior use of "Crown" as a trade-mark for various articles of men's clothing and sets up ownership of two trade-marks registered under the act of 1905, namely, the words "CROWN ADJUST-ALLS" for overalls, union-suit working garments for boys, young men and men, and a mark for overalls comprising a picture of a crown and the word "CROWN," both registrations having been renewed.

It was held that the goods must be held to be of the same descriptive properties.

After noting that the Examiner of Interferences has held that purchasers would regard "CROWN" as used in applicant's mark as merely descriptive and rely on the word "FLEXI" as indicating origin, it was held that the Examiner of Interferences was correct in holding, upon the record presented, that there was little, if any, likelihood of confusion from the contemporaneous use of these marks.

UNITED REXALL DRUG COMPANY *v.* REXON INC., Opposition No. 24,863.

In a decision rendered March 2, 1948 (169 Ms. Dec. 647, 76 USPQ 482), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Interferences dismissing the opposition of United Rexall Drug Company, of Boston, Mass., to the application of Rexon Inc., of New York, N. Y., to register under the Trade-Mark Act of 1905 the word "REXOR" for pyrophoric lighters for cigarettes, cigars and pipes, but reversed the decision adjudging that applicant is entitled to the registration for which it has made application and adjudged ex parte that applicant is not entitled to the registration for which it has made application, in view of the prior registration of the word "Rexall" for cigars and cigarette holders, pipes, pipe-cleaners, tobacco boxes, bags, and pouches relied upon by opposer as a basis for the opposition.

It was held that the Examiner of Interferences was right in ruling that there was no adequate proof of opposer's title to the registration in question and in dismissing the notice of opposition on that ground.

It was held that although the opposition has been dismissed, it is not only the right but the duty of the Patent Office to determine ex parte and without reference to the issues raised by the notice of opposition whether the mark submitted by applicant is entitled to registration in view of the subsisting, uncanceled registration.

It was held that "REXOR" and "Rexall" are confusingly similar within the meaning of section 5 of the Trade-Mark Act of 1905.

It was held that tobacco products and cigar and cigarette lighters are goods of the same descriptive properties both being ordinary smokers' articles, frequently sold in the same establishments to the same class of customers, so that since the mark which applicant seeks to register so nearly resembles the registered mark and is applied to merchandise of the same descriptive properties as to be likely to cause confusion or mistake in the mind of the public or to deceive purchasers in accordance with section 5 of the Trade-Mark Act of 1905, registration must be refused ex parte.

MCKESSON & ROBBINS, INCORPORATED, *v.* A. G. SPALDING & BROS. INC., Opposition No. 25,993.

In a decision rendered March 4, 1948 (169 Ms. Dec. 650, 76 USPQ 485), *Assistant Commissioner Murphy* affirmed the action of the Examiner of Trade-Mark Interferences dismissing, on motion, the opposition of McKesson & Robbins, Incorporated, of New York, N. Y., to the application of A. G. Spalding & Bros., Inc., of Chicopee, Mass., for registration of the trade-mark "DYNA-MATCHED," the word "MATCHED" being disclaimed apart from the mark, for use upon golf clubs, and further adjudging the applicant entitled to the registration sought. Opposer urged that the proposed registration is barred by reason of the prior registration to opposer of the mark "DYNA-CAPS" for capsules or liquid containing a plurality of vitamins A, B_1, B_2, C, D, B_6, G, pentothenic acid and nicotinic acid.

It was held that the Examiner was correct in construing a motion filed by applicant, entitled "Motion for Summary Judgment" as a motion to dismiss, in dismissing the opposition on the ground that the goods of the parties are patently goods of different descriptive properties, and in further stating that under such circumstances the registration sought cannot cause damage to the opposer within the meaning of the statute regardless of the similarities in the respective marks.

In response to opposer's arguments as to confusion of origin based upon the proposition that applicant, after registration, may seek to extend its mark to golf balls, since golf clubs are of necessity used with golf balls, it was held that the only goods that are involved in this proceeding and which require consideration are those described in the applicant's application and the opposer's registration.

THE KROGER GROCERY & BAKING COMPANY *v.* COUNTRY GARDENS, INC., Opposition No. 24,839.

In a decision rendered March 12, 1948 (169 Ms. Dec. 657, 76 USPQ 542), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences sustaining the opposition of The Kroger Grocery and Baking Co., of Cincinnati, Ohio, to the application of Country Gardens, Inc., of Gillet, Wis., for registration of the notation "COUNTRY GARDEN" as a trade-mark for canned vegetables under the Trade-Mark Act of February 20, 1905. Opposer alleged prior use and ownership of "COUNTRY CLUB" as a trade-mark for canned food, including canned vegetables, and relied upon three registrations of its mark under the Trade-Mark Act of 1905, which were granted in 1926 and 1928, covering a wide variety of canned fruits, canned vegetables, canned fish, jellies, cocoa, peanut butter, spices, salad dressings and other food products.

It was held that the Examiner of Interferences was right in sustaining the notice of opposition and in holding that the marks were confusingly similar within the meaning of section 5 of the Trade-Mark Act of 1905.

After noting that in the decision of the Examiner of Interferences it was held that while the defense of laches, set up in the answer to the notice of opposition, had heretofore been unavailable in an opposition proceeding it is admissible under section 19 of the act of 1946, which became effective prior to the limit of appeal from the decision, and the merits of applicant's claim of laches on the part of the opposer was accordingly passed upon, after which a motion to reopen the case for the purpose of taking further testimony on the question of laches in view of the Trade-Mark Act of 1946 having gone into effect was filed by the applicant, it was held that the Examiner of Interferences was right in denying the motion, since even if laches or acquiescence on the part of opposer were shown, this would not permit registration of applicant's mark, in view of the statutory bar to the registration of applicant's mark under the Trade-Mark Act of 1905.

ESQUIRE, INC., v. KNOMARK MANUFACTURING COMPANY, Cancellation No. 4902.

In a decision rendered March 12, 1948 (169 Ms. Dec. 654, 76 USPQ 540), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences dismissing on motion the petition of Esquire, Inc., of Chicago, Ill., to cancel a trade-mark registration of Knomark Manufacturing Co., of Brooklyn, N. Y., registered under the Trade-Mark Act of March 19, 1920, on the ground that the petition failed to state grounds upon which relief could be granted. The registration sought to be canceled discloses as its most conspicuous feature the word "ESQUIRE," which is combined with other words and features as to which no objection is interposed. The mark is applied to a dressing, cleanser and polisher for shoes, boots, leather goods and trimmings of other articles such as belts, bags, and the like.

After noting that petitioner relies primarily on its use of "ESQUIRE" as a name and trade-mark for a magazine, as negativing applicant's right to registration, it was held that as to the articles of merchandise upon which petitioner states it has used the mark, namely, its publication, playing cards, calendar, pocket secretaries, and phonograph records, these clearly are not goods of the same descriptive properties as shoe polish.

In response to petitioner's contentions to the effect that this arbitrary mark has become so well known that it must be regarded as extending to all articles relating to grooming, which are advertised and featured in opposer's publications, it was held that petitioner cannot claim general trade-mark rights applying to all of the products which may be referred to in its magazine, but its rights in this statutory proceeding must be considered only in connection with the trade with which it has been associated.

EX PARTE MISS SEVENTEEN FOUNDATIONS CO., Serial No. 485,825.

In a decision rendered March 15, 1948 (169 Ms. Dec. 663, 76 USPQ 616), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Marks refusing to register to Miss Seventeen Foundations Co., of New York, N. Y., under the Trade-Mark Act of 1905 a mark comprising the words "Miss Seventeen" as a trade-mark for women's and misses' girdles, brassières, vests and panties.

It was held that on the record presented the Examiner was right in ruling that the mark as applied to these goods is merely descriptive within the meaning of the Trade-Mark Act of 1905, since the term "Miss Seventeen" is descriptive and indicative of the character and style of the goods for the miss of seventeen, and also the term "Seventeen" is a size designation in the garment trade.

VITA-VAR CORPORATION *v.* ALUMATONE CORPORATION, Opposition No. 23,987.

In a decision rendered March 15, 1948 (169 Ms. Dec. 665, 76 USPQ 617), *Assistant Commissioner Murphy* denied a petition for rehearing and reconsideration of his decision of February 3, 1948 (608 O. G. 851, 76 USPQ 266), holding that he was still of the opinion that the syllables "tone" and "kote" are quite similar in sound as well as appearance, and accordingly adhering to his previous decision.

BOTANY WORSTED MILLS (BOTANY MILLS, INC., BY CHANGE OF NAME) *v.* JESSE LUTHER PEACOCK (LANOLIN PLUS COSMETICS, INC., ASSIGNEE, SUBSTITUTED), Opposition No. 24,963.

In a decision rendered March 16, 1948 (169 Ms. Dec. 666, 76 USPQ 618), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences sustaining the opposition of Botany Worsted Mills (Botany Mills, Inc., by change of name), of Passaic, N. J., to the registration of the mark "LANOLIN PLUS", the word "LANOLIN" being disclaimed, disclosed in the application of Jesse Luther Peacock (Lanolin Plus Cosmetics, Inc., Assignee, Substituted), of Chicago, Ill., for face cream, hand cream, cleansing cream, facial make-up and shampoo. Opposer, who manufactures and sells lanolin and also a comprehensive line of cosmetics which include lanolin as one of their ingredients, based the opposition on the ground that the mark sought to be registered is merely descriptive of the goods. The products of applicant and the cosmetics of opposer contain lanolin, as a substantial, but not the only ingredient. Opposer has continuously used the word "lanolin" both in connection with its sale of that product and of its cosmetics beginning at a date prior to any use claimed by applicant. There is no dispute that neither party has any rights to the word "lanolin" itself.

It was held that the goods of the parties being the same the only questions for decision are whether or not "LANOLIN PLUS" is merely descriptive of applicant's goods and whether or not opposer will be damaged by the registration of this mark.

It was held that the Examiner of Interferences was right in sustaining the contention of the opposer that the adjective "plus" constitutes a mere laudatory expression, so that the mark as used will be regarded as indicating that the goods contain a superior grade of lanolin or are a superior grade of lanolin cosmetics.

After noting that applicant questions the right of opposer to maintain this opposition even if the mark is descriptive, arguing that no damage to opposer can result from the registration, it was held that it would seem that registration of a descriptive term in connection with lanolin and lanolin cosmetics, both of which opposer markets, must be presumed to damage opposer.

It was further held, however, that irrespective of the rights of the parties in the opposition proceeding, the applicant would not be entitled to registration of its mark, since it would be the duty of the Patent Office, when the descriptive nature of the mark has been called to its attention, to refuse registration as an ex parte matter.

TRANS-LUX CORPORATION *v.* EASTMAN KODAK COMPANY (ASSIGNEE OF SAME NAME SUBSTITUTED), Cancellation No. 4554.

In a decision rendered March 19, 1948 (169 Ms. Dec. 671, 77 USPQ 18), *Assistant Commissioner Murphy* affirmed the action of the Examiner of Interferences sustaining the petition of Trans-Lux Corporation, of New York, N. Y., to cancel the registration of the trade-mark "TRANSLITE" of Eastman Kodak Company (assignee of same name substituted), of Rochester, N. Y., for light-sensitive photographic paper, and recommending that registration No. 279,326 be canceled, but reversed the Examiner's holding that the adoption of the mark "TRANSLITE" constituted an appropriation of the corporate name of petitioner, "Trans Lux Daylight Screen Corporation." Petitioner alleged prior adoption and use by itself and its predecessors of its trade-mark "TRANS-LUX" on a variety of merchan-

dise in the photographic and projection equipment and related supplies field. The record shows priority of use by petitioner of its mark "TRANS-LUX" on film projection screens and film projectors, stock ticker projectors for the recording of stock quotations on film and the projection thereof upon a screen.

It was held that the Examiner of Interferences was right in ruling that there can be little, if any, room for doubt that the marks "TRANS-LUX" and "TRANSLITE" are deceptively similar.

It was held that the Examiner of Interferences was right in ruling that the goods to which respondent applies its mark "TRANSLITE," namely, light-sensitive photographic paper, are goods of the same descriptive properties as petitioner's film projection screens and film projectors, stock ticker projectors for the recording of stock quotations on film and the projection thereof upon a screen.

In response to petitioner's contention that the dominant feature of its corporate name is the notation "TRANS-LUX" and therefore respondent is not entitled to the registration of its trade-mark "TRANSLITE," it was held that while the two trade-marks "TRANS-LUX" and "TRANSLITE" are so similar as to be likely to lead to confusion in trade, nevertheless the adoption of the mark "TRANSLITE" was not such an appropriation of opposer's corporate name "Trans Lux Daylight Picture Screen Corporation" as to be barred by the "name clause" of section 5 of the act of 1905.

TRANS-LUX CORPORATION *v.* EASTMAN KODAK COMPANY, Opposition No. 24,160.

In a decision rendered March 19, 1948 (169 Ms. Dec. 670, 77 USPQ 20), *Assistant Commissioner Murphy* affirmed the action of the Examiner of Interferences sustaining the opposition of Trans-Lux Corporation, of New York, N. Y., to the application of Eastman Kodak Company, of Rochester, N. Y., for registration of the mark "TRANSLITE" for photographic paper and photographic film, and adjudging that applicant is not entitled to the registration for which it has made application.

After noting that this case was heard concurrently with the appeal involved in the cancellation proceeding No. 4554, supra, in which it was agreed that the same records and testimony could be used for both proceedings, it was held that the action of the Examiner of Interferences was correct, for substantially the same reasons set forth more fully in the decision of even date in cancellation No. 4554, supra.

A. D. JUILLIARD & CO., INC., *v.* AMERICAN WOOLEN COMPANY, Opposition No. 24,436.

In a decision rendered March 24, 1948 (169 Ms. Dec. 675, 77 USPQ 21), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences sustaining the notice of opposition of A. D. Juilliard & Co., of New York, N. Y., to the registration to American Woolen Company, of Boston, Mass., of a trade-mark comprising the words "TWIL LANE" for ladies' and children's coats and suits, under the Trade-Mark Act of 1905, and dismissing applicant's counterclaim for cancellation of opposer's registered mark "TWILLEEN," for woolen, cotton and woolen, and cotton piece goods, relied upon by opposer as basis for the opposition. Opposer showed continuous use of "TWILLEEN" on these goods since a date prior to any use claimed by applicant.

It was held that the goods of the respective parties must be considered as having the same descriptive properties.

It was held that the similarity of the marks "TWIL LANE" and "TWILLEEN" requires no comment.

In response to the contention that opposer's mark is a grade mark rather than a trade-mark, because opposer has used its mark in connection with its trade-mark "JUILLIARD" and has applied the word only to a particular type of fabric, it was held that the use of the additional trade-mark does not detract from the trade-mark significance of the trade-mark "TWILLEEN"; furthermore, opposer's proof of continuous use of "TWILLEEN" on these goods since a date prior to any use claimed by applicant would be sufficient to sustain the notice of opposition even were its mark used as a grade mark rather than a trade-mark as alleged by applicant.

In response to applicant's contention that opposer's action in continuing to use the words "ATLANTIC MILLS" on labels of its goods and in organizing the new corporation and keeping it in existence constitutes "unclean hands" and requires cancellation of the registered mark, it was held that there being no showing of any impropriety or injury either to applicant or any one else from the incorporation and continued existence of this corporation or use of the name "Atlantic Mills" for a division of opposer's business, it cannot, therefore, constitute any ground for cancellation, and would not give rise to any rights to registration on the part of applicant, so that the Examiner of Interferences was clearly correct in dismissing the counterclaim.

EX PARTE DEWEY PORTLAND CEMENT COMPANY, Serial No. 474,789.

In a decision rendered March 26, 1948 (169 Ms. Dec. 678, 77 USPQ —), *Assistant Commissioner Murphy* affirmed the action of the Examiner of Trade-Marks refusing to register to Dewey Portland Cement Company, of Kansas City, Mo., a trade-mark for cement used in the manufacture of concrete blocks, pipes and the like which displays the word "DEWEY" in black block letters in the upper wing of a red Maltese cross or Formée, with the words "Concrete Products" appearing in white script in the center, and the word "Cement" appearing in black block letters in the lower wing of the cross, the words "Concrete Products" and "Cement" being disclaimed apart from the mark as shown. The refusal to register was based on the ground that the wording appearing on the mark is the dominant part thereof and that the surname "DEWEY" is not distinctively displayed.

It was held that the word "DEWEY" is the most prominent spoken symbol of the composite mark and the one which purchasers would ordinarily use in calling for applicant's goods, so that the Examiner was right in ruling that the surname "DEWEY" is the dominant part of the mark.

It was held that the surname "DEWEY" printed in plain block letters is not written, printed, or woven in some particular or distinctive manner, and that its association with the red Maltese cross or Formée does not lend the distinctiveness required by the statute, so that the Examiner was correct in denying registration of the mark applied for.

In response to applicant's arguments in its brief concerning four prior registrations of marks similar to the one applied for here, it was held that while such errors and inconsistencies as those it points out are regrettable, they add nothing to the registrability of applicant's mark.

EX PARTE THE FLEETWOOD COFFEE CO., Serial No. 473,314.

In a decision rendered March 29, 1948 (169 Ms. Dec. 681, 77 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Marks refusing to register to The Fleetwood Coffee Co., of Chattanooga, Tenn., under the act of February 20, 1905, as a trade-mark for coffee, a mark described by the Examiner as consisting of the representation of a deer-like animal, shown in side-view in the act of leaping, against the background of a circle, the animal being referred to in the application as a gazelle. Registration of this mark was refused on the ground that it is confusingly similar to registration No. 84,130 registered November 7, 1911, renewed, which shows the word "Antelope" and the representation of an antelope's head within a circle, applied to blended tea and chicory and coffee.

After noting that the only ground of appeal is the contention that the marks are not confusingly similar, it was held that both marks are similar animals and would be recognized as such by purchasers, so that they must be held to be confusingly similar within the meaning of the act.

EX PARTE POND'S EXTRACT COMPANY, Serial No. 480,379.

In a decision rendered March 30, 1948 (169 Ms. Dec. 683, 77 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Marks refusing to register to Pond's Extract Company, of New York, N. Y., under the provisions of the act of March 19, 1920, as a trade-mark for a preparation to be applied to the face to form a make-up base or foundation, the words "Make-up Pat," on the ground that the mark is devoid of trade-mark significance and can in no way indicate ownership.

It was held that while descriptiveness would be no bar to registration under the Trade-Mark Act of 1920, the Examiner of Trade-Marks was right in ruling that the mark sought to be registered is devoid of trade-mark significance.

EX PARTE SERVEL, INC., Serial No. 488,431.

In a decision rendered March 30, 1948 (169 Ms. Dec. 685, 77 USPQ —), *Assistant Commissioner Murphy* granted a request for reconsideration of his decision (605 O. G. 723, 75 USPQ 247) affirming the refusal of the Examiner of Trade-marks to register to Servel, Inc., of Evansville, Indiana, the word "SERVEL" as a trade-mark on periodicals and trade journals, on the ground that the mark which is sought to be registered is a mutilation of the one actually used, but adhered to the holding of the previous decision.

EX PARTE PARFUMERIE FRAGONARD G. FUCHS & CIE (PARFUMS FRAGONARD, INC., NEW YORK, N. Y., ASSIGNEE), Serial No. 488,117.

In a decision rendered March 31, 1948 (169 Ms. Dec. 687, 77 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Marks refusing to register to Parfumerie Fragonard G. Fuchs & Cie, (Parfums Fragonard, Inc., New York, N. Y., Assignee), of Paris, France, the words "MOMENTS VOLÉS," the English meaning of these words being "STOLEN MOMENTS," as a trade-mark for perfumes under the Trade-Mark Act of February 20, 1905. Registration was refused because of prior registrations of the words "SWEET MOMENTS" for a line of toilet preparations including perfumes and toilet waters, and "PRECIOUS MOMENTS" for perfumes, under the Trade-Mark Act of February 20, 1905.

After noting that the only issue raised on this appeal is the question of confusing similarity of the marks within the meaning of section 5 of the Trade-Mark Act of February 20, 1905, it was held that the decision of the Examiner of Trade-Marks refusing registration must be considered to be correct, since it seems that to purchasers who do not understand the meaning of the word "VOLÉS" the prominence of the word "MOMENTS" would be likely to give rise to confusion, and to those who do understand it, there is an obvious similarity in appearance and in connotation, accepting the meaning which it must be assumed the manufacturer of perfumes intends will be placed upon the words.

EX PARTE PARFUMERIE FRAGONARD G. FUCHS & CIE (PARFUMS FRAGONARD, INC., NEW YORK, N. Y., ASSIGNEE), Serial No. 488,121.

In a decision rendered March 31, 1948 (169 Ms. Dec. 689, 77 USPQ —), *Assistant Commissioner*

Daniels affirmed the action of the Examiner of Trade-Marks refusing to register to Parfumerie Fragonard G. Fuchs & Cie (Parfums Fragonard, Inc., New York, N. Y., Assignee), of Paris, France, the words "STOLEN MOMENTS" as a trade-mark for perfumes, under the Trade-Mark Act of February 20, 1905.

After noting that registration was herein refused over the same registrations as those involved in the copending application, Serial No. 488,117, decided concurrently, supra, and in addition, a prior registration of the words "STOLEN SECRET," for similar goods, has been cited as a bar to registration, and further noting that it is conceded that there is more likelihood of confusion because of similarity in this case than in the companion appeal where the words are written in French, it was held that the reasons for affirming the Examiner of Trade-Marks in the copending appeal, supra, apply in this case.

TRADE-MARKS

OFFICIAL GAZETTE, APRIL 27, 1948

[VOL. 609. NO. 4]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 525,295. GLENN R. BROWNE, Hoopeston, Ill. Filed July 1, 1947.

HALLMARK FARM

No claim is made to the word "Farm" apart from the mark.

FOR HORSES AND CATTLE.

Claims use since May 1934.

CLASS 2

RECEPTACLES

Ser. No. 523,214. ALEX TANSKI, Brooklyn, N. Y. Filed May 28, 1947.

AQUA-DOR

No claim is made to the representation of the label as shown on the drawing.

FOR PLASTIC STORAGE BAGS ADAPTED FOR THE RECEPTION AND RETENTION OF COMMODITIES.

Claims use since May 1, 1947.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 504,154. S. BUCHSBAUM & Co., Chicago, Ill. Filed June 19, 1946.

Style Princess

The word "Style" is disclaimed apart from the mark.

FOR KEY CASES.

Claims use since 1943.

Ser. No. 505,716. JESSE SHOFE, Cincinnati, Ohio. Filed July 16, 1946.

The word "Kit" is disclaimed apart from the mark shown.

FOR POCKETBOOKS.

Claims use since July 10, 1946.

Ser. No. 514,905. WILMER D. MURRAY, doing business as Kenley Dog Supplies, Needham Heights, Mass. Filed Dec. 27, 1946.

KENLEY

FOR DOG COMBS.

Claims use since October 1935.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 505,914. PATEK AND CO., San Francisco, Calif. Filed July 19, 1946.

DIGESTEX

FOR SPOT REMOVER USED BY LAUNDRIES AND DRY CLEANERS.

Claims use since Jan. 15, 1938.

Ser. No. 506,564. WESTERN PROCESSED FOOD CO., doing business as Terramar Company, Los Angeles, Calif. Filed July 30, 1946.

Du-Wets

FOR SILVER POLISH.
Claims use since July 1, 1946.

Ser. No. 507,631. FRANK K. FOY, Ansonia, Conn. Filed Aug. 19, 1946.

ANHYDRO

FOR SALT COMPOUNDS FOR USE IN ELECTRO-CHEMICAL CLEANING PROCESSES FOR METALS.
Claims use since December 1943.

Ser. No. 507,633. FRANK K. FOY, doing business as Foy Electro-Chemical Company, Ansonia, Conn. Filed Aug. 19, 1946.

HYDREX

FOR DETERGENTS—NAMELY, SOLUBLE METAL CLEANING SALTS WHICH ARE USED IN HOT, AQUEOUS SOLUTIONS AND WHICH COMPRISE VARIOUS COMBINATIONS OF SODIUM HYDROXIDE, POTASSIUM HYDROXIDE, SODIUM CARBONATE, SODIUM SILICATE, TRI SODIUM PHOSPHATE, SODIUM SESQUI SILICATE, ORTHOSILICATE, AND TETRA SODIUM PYRO PHOSPHATE AND WETTING AGENTS—NAMELY, TALLOW SOAP, SODIUM RESINATE AND SODIUM LAURYL SULPHONATE USED IN FERROUS AND NON-FERROUS METAL CLEANING AND FINISHING PROCESSES PRIOR TO PLATING, PAINTING, APPLYING PHOSPHATE COATINGS AND ANODIZING ABRASIVES—NAMELY, CALCIUM HYDRATE, SILICON DIOXIDE, TRIPOLI FLOUR, GARNET DUST AND OTHER SUCH INSOLUBLE CRYSTALLINE MATERIALS.
Claims use since July 1946.

Ser. No. 510,575. ELLIS H. DENNETT, Sudbury, Mass. Filed Oct. 10, 1946.

R2M

The mark consists of the word "Rim" and the numeral 2 as shown on the drawing.
FOR CLEANING FLUID.
Claims use since July 1, 1946.

Ser. No. 513,396. ESSENTIAL CHEMICALS CO., Milwaukee, Wis. Filed Nov. 29, 1946.

MOUNTAIN GREEN

FOR LIQUID CLEANER FOR FLOORS, WALLS, WOODWORK AND DISHES.
Claims use since Jan. 25, 1946.

Ser. No. 514,228. ROY SPIVEY, Tuscaloosa, Ala. Filed Dec. 13, 1946.

KENRO

FOR HOUSEHOLD SOAP IN POWDER FORM FOR GENERAL LAUNDRY PURPOSES.
Claims use since Nov. 5, 1946.

Ser. No. 516,150. SCHMIDT SOAP PRODUCTS, INC., doing business as Geo. A. Schmidt Co., Chicago, Ill. Filed Jan. 22, 1947.

HAPPY-HOME MAKER

IT IT

FOR SHAMPOO SOAP IN CAKE FORM.
Claims use since approximately Oct. 30, 1905.

Ser. No. 517,336. HOLLIS C. HODSON, Plainfield, Ind. Filed Jan. 10, 1947.

MIST-TEX

FOR WASHING POWDER.
Claims use since July 30, 1945.

Ser. No. 517,972. THE CENTRAL OHIO SUPPLY CO., Columbus, Ohio. Filed Feb. 24, 1947.

COLSO

DIRT CHASER

No claim is made to the word "Dirt" apart from the mark.
FOR WATER SOLUBLE POWDERED OR GRANULAR DETERGENT COMPOUND CONTAINING WATER SOFTENING PROPERTIES.
Claims use since March 1927.

Ser. No. 525,016. OREFRACTION INCORPORATED, Pittsburgh, Pa. Filed June 27, 1947.

FOR CERAMIC ABRASIVE MATERIALS, AND MINERAL MATERIALS AND COMPOSITIONS USED IN MAKING ABRASIVE WHEELS AND BODIES AND ABRASIVE MATERIALS.
Claims use since May 14, 1940.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 502,224. MCCORMICK AND CO., INCORPORATED, Baltimore, Md. Filed May 16, 1946.

ABEJA

FOR INSECTICIDES—TO WIT, INSECTICIDAL SHAMPOO, FLEA AND TICK KILLER, WALL AND SCREEN SPRAY.
Claims use since Mar. 1, 1946.

Ser. No. 508,401. JOHN R. WOODEN, Philadelphia, Pa. Filed Aug. 31, 1946.

Wooden's A-1

The applicant disclaims the term "A-1" alone and apart from the mark as shown. The name "Wooden's" is a facsimile of the signature of the applicant's surname.
FOR POMADE, ROSE OIL, BRILLIANTINE, AND PRESSING OIL, ALL OF SAID ITEMS BEING USED FOR THE HAIR.
Claims use since Sept. 15, 1945.

Ser. No. 509,637. CUTTER LABORATORIES, Berkeley, Calif. Filed Sept. 24, 1946.

Diptussis

FOR BIOLOGICAL IMMUNIZING AGENT FOR IMMUNIZING AGAINST DIPHTHERIA AND WHOOPING COUGH BY INOCULATION.
Claims use since July 1942.

Ser. No. 511,424. SMITH & COMPANY, London, England. Filed Oct. 24, 1946.

"ALTOID"

FOR PEPPERMINT LOZENGES FOR THE RELIEF OF DISCOMFORT AFTER MEALS.
Claims use since 1918.

Ser. No. 517,198. PAISLEY PRODUCTS INCORPORATED, Chicago, Ill. Filed Feb. 8, 1947.

LIGNOTITE

FOR CHEMICAL PREPARATIONS FOR USE AS A WOOD IMPREGNANT AND WOOD PRESERVATIVE.
Claims use since 1907.

Ser. No. 520,410. ABRAHAM NEWHOUSE, doing business as My-Frut Manufacturing Company, Brooklyn, N. Y. Filed Apr. 9, 1947.

MY-FRUT

The word "Frut" is disclaimed apart from the mark.
FOR CANDY LAXATIVE.
Claims use since May 26, 1925.

Ser. No. 522,751. WILLIAM ROSENKRANSE, doing business as Zo-Tite-Products Co., Ozone Park, Long Island, N. Y. Filed May 21, 1947.

ZO-TITE

BLOCK SAVER

No claim is made to the words "Block Saver" apart from the mark.
FOR PREPARATION CONSISTING OF A COMBINATION OF FINE GROUND METALS AND CHEMICAL POWDERS FOR REPAIRING CRACKS IN IRON AND METAL MOTOR PARTS OF VEHICLES.
Claims use since Apr. 17, 1947.

Ser. No. 523,105. KING RESEARCH, INC., Brooklyn, N. Y. Filed May 27, 1947.

SURE-STIX

FOR GERMICIDAL SOLUTION TO BE PLACED IN MOISTENING MACHINES OF GUMMED TAPE, ENVELOPES, POSTAGE STAMPS, LABELS, ETC., FOR DESTROYING BACTERIA, ODOR, AND SLIME.
Claims use since Mar. 17, 1947.

Ser. No. 523,953. FIRST TEXAS CHEMICAL MFG. CO., Dallas, Tex. Filed June 11, 1947.

CINCHO-SEPTINE

Applicant disclaims use of "Septine" apart from the mark.
FOR VAGINAL ASTRINGENT DOUCHE POWDER, USED FOR ITS ANTI-SEPTIC, ASTRINGENT, AND DEODORANT VALUES.
Claims use since February 1931.

Ser. No. 525,303. DARWORTH INCORPORATED, Simsbury, Conn. Filed July 1, 1947.

CORDACIDE

FOR TOXIC VAPOR PRODUCING MATERIAL TO BE USED AS AN INSECTICIDE, PACKAGED IN A CONTAINER PROVIDED WITH AN ELEMENT ADAPTED TO IGNITE THE MATERIAL TO LIBERATE THEREFROM THE TOXIC INGREDIENTS.
Claims use since June 11, 1947.

CLASS 11

INKS AND INKING MATERIALS

Ser. No. 525,862. KEUFFEL & ESSER COMPANY, Hoboken, N. J. Filed July 3, 1947.

K+E

FOR DRAWING INK.
Claims use since March 1947.

Ser. No. 525, 868. KEUFFEL & ESSER COMPANY, Hoboken, N. J. Filed July 3, 1947.

DORIC

FOR DRAWING INK.
Claims use since June 1947.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 517,639. INJECTION MOLDING COMPANY, Kansas City, Mo. Filed Feb. 17, 1947.

The mark is a rectangular figure, the height being two times the width, bisected lengthwise by a line, representing the two parts of a mold, with two lines protruding from the center of the right side of said figure at forty-five degree angles thereby forming a figure V, to represent the nozzle by which plastic material is forced into said mold.
FOR ORNAMENTAL PLASTIC TILE MANUFACTURED BY INJECTION MOLDING PROCESS.
Claims use since Jan. 23, 1945.

Ser. No. 522,264. PURITAN COMPANY, INCORPORATED, Rochester, N. Y. Filed May 12, 1947.

GASKA-SEAL

Applicant disclaims the word "Seal" apart from the mark.
FOR SEALING COMPOUND FOR SEALING JOINTS, THREADS, GASKETS, AND THE LIKE.
Claims use since July 9, 1941.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 521,055. UAL J. BROWN, doing business as Brown-Electro Company, Oklahoma City, Okla. Filed Apr. 21, 1947.

BECO CELL

The word "Cell" is disclaimed.
FOR ELECTROLYTIC APPARATUS OF DISSIMILAR METALS PROVIDING AN ELECTRIC CURRENT FOR PREVENTING PRECIPITATION OF MINERAL PARTICLES IN WATER BOILERS, WATER CIRCULATION SYSTEMS, AND WATER COOLING SYSTEMS, AND FOR DESCALING THE SAME.
Claims use since Nov. 14, 1945.

Ser. No. 522,010. HARRY R. NORTHUP, doing business as Northup Products Co., South Bend, Ind. Filed May 7, 1947.

OVEN MAID

The word "Oven" is disclaimed apart from the mark.
FOR OVEN LINERS, COMPRISING DISPOSABLE SHEETS OF METALLIC FOIL ADAPTED TO CATCH BOILED-OVER FOOD.
Claims use since Oct. 17, 1946.

CLASS 19

VEHICLES

Ser. No. 518,866. AMERICAN HARD RUBBER COMPANY, Hempstead and New York, N. Y. Filed Mar. 12, 1947.

FOR STEERING WHEELS, FOR AUTOMOBILES.
Claims use since Jan. 27, 1926.

Ser. No. 519,000. WALTER H. BUCHHAGEN, doing business as Bucknell Company, Nutley, N. J. Filed Mar. 14, 1947.

JIFFY-CART

No claim is made to the word "Cart" except in conjunction with the balance of the mark.
FOR COLLAPSIBLE GO-CARTS AND PERAMBULATORS.
Claims use since Oct. 1, 1945.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 497,631. SARGROVE ELECTRONICS LIMITED, Shepperton-on-Thames, England. Filed Mar. 4, 1946.

PHASITRON

FOR PHASE AND FREQUENCY MODULATORS AND DEMODULATORS, ELECTRICAL SWITCHING APPARATUS, ELECTRICAL DISTRIBUTION BOARDS AND OUTLET BOXES, CAPACITY AND INDUCTION MICROPHONE AMPLIFIERS AND THERMIONIC VALVES.
Claims use since Nov. 17, 1942.

Ser. No. 517,436. SUNBEAM CORPORATION, Chicago, Ill. Filed Feb. 13, 1947.

Sunbeam

The mark consists of the word "Sunbeam."
FOR ELECTRIC HEDGE TRIMMERS AND PARTS THEREOF.
Claims use since Dec. 12, 1946.

Ser. No. 520,857. BRAND AND MILLEN, LIMITED, Long Branch, Ontario, Canada. Filed Apr. 17, 1947.

Astra

FOR RADIO RECEIVING SETS, ELECTRONIC RECORD PLAYERS, AND BATTERY OPERATED PORTABLE FLUORESCENT LAMPS.
Claims use since Aug. 4, 1946.

Ser. No. 522,755. MAGNECORD, INC., Chicago, Ill. Filed May 21, 1947.

Magnecorder

The drawing is lined for the color red.
FOR MAGNETIC WIRE RECORDERS.
Claims use since Aug. 23, 1946.

Ser. No. 526,295. SANIT-ALL PRODUCTS CORPORATION, Greenwich, Ohio. Filed July 4, 1947.

FEEDMASTER

FOR COMBINATION ELECTRIC NURSING BOTTLE WARMERS AND NURSING BOTTLE STERILIZERS.
Claims use since May 1940.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 504,285. HARVEY E. OJALA, doing business as The "Ojie" Bait Co., Cleveland Heights, Ohio. Filed June 20, 1946.

OJIE

FOR FISH LURES.
Claims use since May 23, 1946.

Ser. No. 510,538. WILLIAM WILSON PETERMAN, Wilkes-Barre, Pa. Filed Oct. 9, 1946.

OH-KAY

FOR AMUSEMENT CARD AND CHART GAMES.
Claims use since May 15, 1945.

Ser. No. 510,863. ROBERT E. SODERHOLM, doing business as Soderholm, Worthington, Minn. Filed Oct. 14, 1946.

PEGA-SWING

No claim is made to the word "Swing" apart from the mark.
FOR PLAYGROUND EQUIPMENT—NAMELY, SWINGS.
Claims use since June 21, 1946.

Ser. No. 512,505. HUGGER BAIT COMPANY, Chicago, Ill. Filed Nov. 13, 1946.

HUGGER

FOR ARTIFICIAL FISH LURES AND ARTIFICIAL FISH BAITS.
Claims use since May 2, 1945.

Ser. No. 513,794. ALBARR PRODUCTS CO., Cortland, N. Y. Filed Dec. 6, 1946.

LIN-JON

FOR GAME BOARDS.
Claims use since Nov. 20, 1946.

Ser. No. 517,250. FRANCIS M. KOON, doing business as Le Roy Specialty Company, Waterloo, Ind. Filed Feb. 10, 1947.

FLY-NOT

FOR FISH SCALERS.
Claims use since Nov. 25, 1946.

Ser. No. 524,641. WRIGHT & MCGILL CO., Denver, Colo. Filed June 21, 1947.

FOR FISH HOOKS AND FISH LURES.
Claims use since Apr. 27, 1931.

Ser. No. 526,233. IMPERIAL CROWN TOY CORP., Brooklyn, N. Y. Filed July 4, 1947.

Imperial Skin

No claim is made to the word "Skin" except when associated with the word "Imperial."
FOR DOLLS.
Claims use since May 1, 1947.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 506,167. THE HEIM COMPANY, Fairfield, Conn. Filed July 24, 1946.

UNIBAL

FOR FLEXIBLE COUPLINGS, CONNECTORS (NON-ELECTRIC), ROD END COUPLINGS AND BEARINGS, DESIGNED FOR USE WITH AIRCRAFT, MACHINE TOOLS, AND THE LIKE.
Claims use since Mar. 8, 1946.

Ser. No. 521,246. CRANE CO., Chicago, Ill. Filed Apr. 24, 1947.

CRANE-LINE

The word "Line" is disclaimed apart from the remainder of the mark.
FOR SHALLOW WELL PUMPS, DEEP WELL PUMPS, AND JET PUMPS.
Claims use since Jan. 1, 1947.

Ser. No. 521,518. HELLER BROTHERS COMPANY, Newark, N. J. Filed Apr. 29, 1947.

WIZCUT

FOR FILES.
Claims use since Feb. 10, 1947.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 518,021. J. G. MAXWELL, doing business as Liquitrol Company, Terminal Island, Calif. Filed Feb. 24, 1947.

LIQUITROL

FOR AUTOMATIC LIQUID DISPENSING MACHINES FOR USE IN THE SEED INDUSTRY FOR ADDING SMALL AND EXACT QUANTITIES OF OIL TO SEEDS.
Claims use since Feb. 18, 1947.

Ser. No. 520,504. GEVAERT PHOTO PRODUCTEN, Antwerp, Belgium. Filed Apr. 11, 1947.

TRANSPAREX

FOR SENSITIZED PHOTOGRAPHIC PAPERS; PHOTOGRAPHIC PLATES; PHOTOGRAPHIC FILMS; ROLL FILMS; STUDIO FILMS; PORTRAIT FILMS; FLAT FILMS; FILMPACKS; PACK FILMS; X-RAY FILMS; GRAPHIC FILMS; CINEMATOGRAPHIC FILMS; NON-SENSITIZED PHOTOGRAPHIC ACCESSORIES—NAMELY, CAMERAS, CINECAMERAS, FILTERS, SCREENS, LENSES, AND DEVELOPING FRAMES.
Claims use since July 1, 1933.

Ser. No. 520,513. LORD-TABER COMPANY, INCORPORATED, Canandaigua, N. Y. Filed Apr. 11, 1947.

detectoMaster

FOR THERMOSTATIC CONTROL UNIT COMPRISED IN THE MAIN OF PERMANENT COIL-TYPE MAGNETS FOR DETECTING AND INDICATING ABNORMAL TEMPERATURES AT REMOTE POINTS.
Claims use since Nov. 14, 1946.

Ser. No. 521,160. TRACERLAB, INCORPORATED, Boston, Mass. Filed Apr. 22, 1947.

AUTOSCALER

FOR RADIOACTIVITY MEASURING INSTRUMENT EMPLOYING A GEIGER-MUELLER TUBE, FOR COUNTING RADIOACTIVE IMPULSES AND MEASURING THE TIME REQUIRED FOR THEIR RECEPTION.
Claims use since July 1, 1946.

CLASS 29

BROOMS, BRUSHES, AND DUSTERS

Ser. No. 506,579. BRUSHMAKERS, INC., Minneapolis, Minn. Filed July 31, 1946.

Typemaster

FOR BRUSHES FOR CLEANING TYPE.
Claims use since July 8, 1946.

CLASS 32

FURNITURE AND UPHOLSTERY

Ser. No. 514,203. JACQUES KREISLER MANUFACTURING CORPORATION, North Bergen, N. J. Filed Dec. 13, 1946.

"STYLECTOR"

FOR DISPLAY CABINETS.
Claims use since Dec. 5, 1946.

CLASS 33

GLASSWARE

Ser. No. 514,698. HOWARD D. FOGLESONG, Huntington, W. Va. Filed Dec. 23, 1946.

BlueDel

No claim is made to the word "Blue."
FOR GLASS ARTICLES—NAMELY, VASES, BOTTLES, BOTTLE STOPPERS, DISHES, DRINKING GLASSES, CUPS AND SAUCERS.
Claims use since January 1943.

CLASS 37

PAPER AND STATIONERY

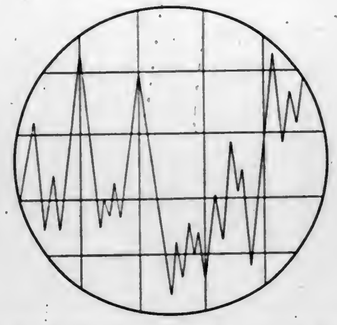
Ser. No. 491,914. GENERAL FIBRE PRODUCTS CO., Maspeth, N. Y. Filed Nov. 20, 1945.

HI-PAKS

FOR CAKE SUPPORT MADE OF CARDBOARD.
Claims use since Nov. 8, 1945.

Ser. No. 512,568. GEORGE D. BAROK, Columbus, Ohio. Filed Nov. 14, 1946.

EASEX
SHORT & LONG



No claim is made to the words "Short & Long" apart from the mark shown.
FOR PRINTED INDEX FORMS FOR MAINTAINING RECORDS OF SHORT AND LONG TERM REAL ESTATE LEASES.
Claims use since Mar. 12, 1946.

Ser. No. 513,034. DISTRICT OF COLUMBIA PAPER MILLS, INC., Washington, D. C. Filed Nov. 22, 1946.

DISCO

Applicant is the owner of Reg. No. 426,113.
FOR BLOTTING PAPER, BOX COVER PAPER, COVER PAPERS, AND PRINTING PAPERS.
Claims use since Jan. 1, 1937.

Ser. No. 514,492. POLYCHROME CORPORATION, Yonkers, N. Y. Filed Dec. 18, 1946.

FOR HEAT-SENSITIVE RECORDING PAPER.
Claims use since Nov. 1, 1946.

Ser. No. 519,746. WILLIAM FULLER, doing business as Sportissue Company, Redlands, Calif. Filed Mar. 28, 1947.

SPORTISSUE

FOR TOILET PAPER.
Claims use since Dec. 12, 1946.

Ser. No. 524,692. JOSEPH DIXON CRUCIBLE COMPANY, Jersey City, N. J. Filed June 24, 1947. Under section 5b of the act of 1905 as amended in 1920.

DIXON

FOR LEAD PENCILS, RUBBER ERASERS, PENCIL POINT PROTECTORS, CRAYON HOLDERS, PEN HOLDERS, CRAYONS, AND LEADS FOR MECHANICAL PENCILS.
Claims use on lead pencils and rubber erasers since 1880; on pencil point protectors since 1898; on crayon holders since 1914; on pen holders since 1915; and on crayons and leads for mechanical pencils since 1924.

CLASS 38

PRINTS AND PUBLICATIONS

Ser. No. 501,492. BARKER GREETING CARD COMPANY, Cincinnati Ohio. Filed May 6, 1946.

FOR GREETING CARDS.
Claims use since August 1944.

CLASS 39

CLOTHING

Ser. No. 475,356. CANNON SHOE COMPANY, Baltimore, Md. Filed Oct. 16, 1944.

RUGGED RAMBLERS

No claim is made to the word "Rugged" apart from the mark shown.
FOR SHOES, MADE OF LEATHER, FABRIC, OR RUBBER, AND/OR ANY COMBINATION THEREOF.
Claims use since Sept. 16, 1944.

Ser. No. 494,855. MARLBORO SHIRT COMPANY, INC., Baltimore, Md. Filed Jan. 16, 1946. Under 10-year proviso.

Marlboro

FOR APPAREL FOR MEN, WOMEN, AND CHILDREN—NAMELY, DRESS, NEGLIGEE, WORK AND SPORT SHIRTS; FABRIC LEATHER, DRESS, CASUAL, WORK, AND SPORTS JACKETS; RAIN, OUTER, OVER, TOP AND REVERSIBLE COATS; MACKINAWS; SWEATERS; UNDERSHIRTS; OUTER AND UNDERWEAR SHORTS; LOUNGING AND SLEEPING PAJAMAS AND PAJAMA COATS; HANDKERCHIEFS; DRESS AND SPORTS SLACKS; ENSEMBLES OF OUTER SHIRTS, OUTER SHORTS AND COATS; MEN'S AND BOYS' SUITS OF VESTS, PANTS, AND COATS; HOSIERY; HATS; CAPS, NECKTIES; HEAD AND NECK SCARFS; GARTERS; APPAREL BELTS; LEATHER AND FABRIC AND COMBINATION LEATHER AND FABRIC DRESS AND WORK GLOVES; LEATHER, FABRIC, AND COMBINATION LEATHER AND FABRIC DRESS, WORK AND BATHING SHOES; BATHING SUITS; BATHING TRUNKS; BEACH, BATH AND LOUNGING ROBES; HUNTING AND SKIING JACKETS, COATS AND PANTS; AND DRESS AND LIVERY UNIFORMS.
Claims use since 1890.

Grafshire

FOR GIRLS' AND TEENS' COATS, SUITS AND SKIRTS.
Claims use since Sept. 1, 1942.

Ser. No. 499,261. MYRTLE SPORTSWEAR, INC., New York, N. Y. Filed Mar. 29, 1946.

Applicant disclaims the right to the exclusive use of the picture of a pair of skis.
FOR SKI PANTS, SKI SUITS, AND SKI JACKETS FOR WOMEN AND CHILDREN.
Claims use since Mar. 13, 1946.

Ser. No. 501,812. AUERBACH SHOE COMPANY, Boston, Mass. Filed May 10, 1946.

The word "Juveniles" is disclaimed apart from the mark.
FOR MISSES', WOMEN'S, AND CHILDREN'S SHOES OF LEATHER, FABRIC, AND COMBINATIONS THEREOF.
Claims use since Mar. 23, 1945.

Ser. No. 508,415. A. CUNNINGHAM LIMITED, Stewarton, Scotland. Filed Sept. 3, 1946.

The picture of the woman shown on the drawing is a portrait of Mary Stuart.

FOR WOMEN'S KNITTED AND WOVEN FROCKS AND SUITS, WOMEN'S KNITTED JUMPERS AND CARDIGANS, AND WOMEN'S UNDERWEAR.

Claims use since 1911.

Ser. No. 509,061. WESTMOOR MANUFACTURING CO., Minneapolis, Minn. Filed Sept. 13, 1946.

Westmoor

FOR MEN'S PAJAMAS AND LADIES' BLOUSES.

Claims use since Aug. 6, 1946.

Ser. No. 509,865. ALAN E. MURRAY, Wilmington, Del. Filed Sept. 27, 1946.

SPACE SHOE

The word "Shoe" is disclaimed as a trade-mark apart from the mark shown.

FOR SHOES, SANDALS, AND DANCING SHOES.

Claims use since July 30, 1946.

Ser. No. 519,526. KAYLON INCORPORATED, New York, N. Y. Filed Mar. 25, 1947.

Pajam-Session

The word "Pajam" is disclaimed.

FOR PAJAMA COATS, BEACH COATS, SMOCK COATS, AND BATH ROBES.

Claims use since Mar. 10, 1947.

Ser. No. 520,217. THE H & W COMPANY, INC., Newark, N. J. Filed Apr. 5, 1947.

SHEATHFLEX

FOR CORSETTES (GARMENTS COMBINING A LOWER GIRDLE SECTION AND AN UPPER BANDEAU SECTION) AND GIRDLES.

Claims use since Sept. 19, 1934.

Ser. No. 524,052. BLUMENTHAL-MEYER COMPANY, Los Angeles, Calif. Filed June 12, 1947.

MOONBEAM

BLACK MAGIC

FOR ADHESIVE PIPE SEALING COMPOUND AND GASKET CEMENT.
Claims use since Aug. 1, 1939.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Reg. No. 25,312. Registered Oct. 9, 1894. THE NUTROLACTIS COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

NUTROLACTIS.

FOR MEDICINAL PREPARATION INTENDED TO INCREASE THE FLOW OF HUMAN MILK.
Claims use since Jan. 1, 1889.

Reg. No. 188,445. Registered Aug. 26, 1924. FRANK HESS, doing business as Hess Hair Milk Laboratories, St. Paul, Minn. Republished by registrant.

HESS

FOR HAIR TONIC AND DANDRUFF REMEDY.
Claims use since Oct. 4, 1922.

Reg. No. 224,577. Registered Mar. 1, 1927. DIVERSEY MANUFACTURING COMPANY, Chicago, Ill. Republished by The Diversey Corporation, Chicago, Ill., a corporation of Illinois.

DIVERSOL

FOR DISINFECTANTS, GERMICIDES, AND STERILIZERS GENERALLY USED IN SOLID FORM FOR DISINFECTING RECEPTACLES AND CONTAINERS.
Claims use since Oct. 12, 1926.

Reg. No. 268,659. Registered Mar. 18, 1930. PARKER RUST PROOF COMPANY, Detroit, Mich., a corporation of Michigan. Republished by registrant.

Bonderite

FOR CHEMICAL MATERIALS FOR CONDITIONING METAL SURFACES PREPARATORY TO ENAMELING.
Claims use since Mar. 5, 1929.

Reg. No. 314,319. Registered June 26, 1934. MALLINCKRODT CHEMICAL WORKS, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

FUNGINOX

FOR MIXTURE OF CORROSIVE SUBLIMATE AND HYDROCHLORIC ACID USED, FOR EXAMPLE, FOR THE TREATMENT OF POTATOES IN THE CORRECTION OF BLACKLEG, SCAB, AND RHIZOCTONIA.
Claims use since Feb. 20, 1934.

Reg. No. 331,872. Registered Jan. 21, 1936. FASTEETH INCORPORATED, Binghamton, N. Y. Republished by Clark-Cleveland, Incorporated, Binghamton, N. Y., a corporation of New York.

FIXODENT

FOR PREPARATION FOR SECURING DENTAL PLATES IN PLACE.
Claims use since July 29, 1935.

Reg. No. 335,695. Registered June 9, 1936. NU-WHIP CORP., New York, N. Y. Republished by Kidde Manufacturing Co., Inc., Bloomfield, N. J., a corporation of Delaware.

WHIPPETS

FOR GASES IN CARTRIDGE CONTAINERS ADAPTED FOR AERATED FOOD PRODUCTS UNDER PRESSURE.
Claims use since Dec. 10, 1935.

Reg. No. 359,263. Registered Aug. 9, 1938. KEASBEY & MATTISON COMPANY, Ambler, Pa., a corporation of Pennsylvania. Republished by registrant.

CLEARCARB

FOR MAGNESIA CARBONATE.
Claims use since Mar. 1, 1938.

Reg. No. 363,620. Registered Jan. 3, 1939. PARKER RUST PROOF COMPANY, Detroit, Mich., a corporation of Michigan. Republished by registrant.

STEELGRIP

FOR CHEMICALS FOR TREATING STEEL SURFACES TO OBTAIN THEREON CORROSION-RESISTANT, PAINT-HOLDING COATINGS.
Claims use since June 28, 1938.

Reg. No. 364,990. Registered Feb. 21, 1939. NORTHMONT HOSIERY CORPORATION, Reading, Pa., a corporation of Pennsylvania. Republished by registrant, present location Reading, Pa., and New York, N. Y.

Precious Cosmetics

The word "Cosmetics" is disclaimed.
FOR OIL FOR THE TREATMENT OF FULL FASHIONED HOSIERY.
Claims use since July 5, 1938.

Reg. No. 365,069. Registered Feb. 21, 1939. MEDICAL CHEMICALS, INC., Baltimore, Md., a corporation of Maryland. Republished by registrant.

ISO-PAR

FOR GERMICIDAL AND FUNGICIDAL PREPARATIONS.
Claims use since Sept. 2, 1938.

Reg. No. 365,845. Registered Mar. 21, 1939. DOROTHY A. GRAY, Amenia, N. Y. Republished by registrant.

DOTS

FOR PREPARATION USED FOR FEMININE HYGIENE HAVING ANTISEPTIC PROPERTIES.
Claims use since Aug. 28, 1938.

Reg. No. 366,922. Registered May 2, 1939. KEASBEY & MATTISON COMPANY, Ambler, Pa., a corporation of Pennsylvania. Republished by registrant.

K&M best in asbestos

The words "Best in Asbestos" are disclaimed.
FOR MAGNESIUM CARBONATE AND MAGNESIUM OXIDE.
Claims use since Mar. 1, 1938.

Reg. No. 373,904. Registered Dec. 26, 1939. MEDICAL CHEMICALS, INC., Baltimore, Md., a corporation of Maryland. Republished by registrant.

FOR GERMICIDAL AND FUNGICIDAL PREPARATIONS.
Claims use since Apr. 2, 1939.

Reg. No. 373,915. Registered Dec. 26, 1939. FASTEETH, INCORPORATED, Binghamton, N. Y. Republished by Clark-Cleveland, Incorporated, Binghamton, N. Y., a corporation of New York.

FASTEETH

FOR DENTAL PLATE POWDER.
Claims use since June 1, 1925.

Reg. No. 373,925. Registered Dec. 26, 1939. FASTEETH, INCORPORATED, Binghamton, N. Y. Republished by Clark-Cleveland, Incorporated, Binghamton, N. Y., a corporation of New York.

ALKALINE DENTURE POWDER

The words "Alkaline Denture Powder," are disclaimed.
FOR DENTAL PLATE POWDER.
Claims use since January 1932.

Reg. No. 373,963. Registered Dec. 26, 1939. KEASBEY & MATTISON COMPANY, Ambler, Pa., a corporation of Pennsylvania. Republished by registrant.

The words "Best in Asbestos" are disclaimed.
FOR MAGNESIUM CARBONATE AND MAGNESIUM OXIDE.
Claims use since about Oct. 1, 1937.

Reg. No. 377,478. Registered May 7, 1940. DR. PETER FAHRNEY & SONS CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

All of the wording on the drawing is disclaimed except "Dr. Peter's," "Del Dottor Pietro," "Du Dr. Pierre," "Magola," "1780," "P. Fahrney, M. D.," and "Dr. Peter Fahrney & Sons Co."
FOR A PREPARATION FOR ACUTE, RELAXED AND DISTURBED CONDITIONS OF THE STOMACH AND BOWELS.
Claims use since July 25, 1939.

Reg. No. 382,102. Registered Oct. 15, 1940. W. A. HAMMOND, doing business as W. A. Hammond Drierite Company, Yellow Springs, Ohio. Republished by registrant, present location Xenia, Ohio.

No claim is made to the words "Solids—Liquids—Gases" or to the chemical symbols contained within the panel border.
FOR CHEMICAL DESICCANTS.
Claims use since about June 1934.

Reg. No. 385,915. Registered Mar. 25, 1941. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

Teel

FOR DENTIFRICE.
Claims use since Sept. 22, 1938.

Reg. No. 393,207. Registered Jan. 27, 1942. BLANKE-BAER EXTRACT & PRESERVING COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

WIN-YOU

FOR FOOD COLORINGS.
Claims use since about March 1924.

Reg. No. 396,946. Registered Aug. 11, 1942. LOUIS NAPOLITAN, doing business under the name of M. Louis, New York, N. Y. Republished by registrant.

Plastique

FOR COIFFURE PRESERVING FLUID.
Claims use since February 1940.

Reg. No. 397,163. Registered Aug. 25, 1942. W. G. SHELTON COMPANY, St. Louis, Mo. Republished by Gaylord-Shelton Inc., Chicago, Ill., a corporation of Delaware.

The words "Shelton," "Kreem Wave," "Vinis" are disclaimed.
FOR PERMANENT WAVE CREAM.

Reg. No. 428,125. Registered Mar. 11, 1947. KENDALL REFINING COMPANY, Bradford, Pa., a corporation of Pennsylvania. Republished by registrant.

KENSOL

FOR LIQUID PETROLEUM HYDROCARBON SOLVENTS OF THE BOILING RANGE UP TO AND INCLUDING THAT OF THE GAS-OIL BOILING RANGE AND HAVING A GENERAL USE IN THE INDUSTRIAL ARTS.
Claims use since Dec. 31, 1945.

CLASS 7

CORDAGE

Reg. No. 34,328. Registered Mar. 20, 1900. ALEXANDER F. REID, Brooklyn, N. Y. Republished by The Grady-Travers Company, Incorporated, New York, N. Y., a corporation of New York.

AJAX

FOR BRAIDED COTTON SASH-CORD, HOP-TWINE, AND MATTRESS-TWINE.
Claims use since about the year 1870.

Reg. No. 34,329. Registered Mar. 20, 1900. ALEXANDER F. REID, Brooklyn, N. Y. Republished by The Grady-Travers Company, Incorporated, New York, N. Y., a corporation of New York.

HERCULES

FOR BRAIDED SASH-CORDS AND FLAX THREAD OR GILLING-THREAD.
Claims use since about 1870.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Reg. No. 337,877. Registered Aug. 25, 1936. LONDON HOUSE, LTD., New York, N. Y. Republished by John Hudson Moore, Inc., New York, N. Y., a corporation of New York.

MR PICKWICK

FOR SMOKERS PIPES.
Claims use since Feb. 18, 1936.

Reg. No. 369,342. Registered July 18, 1939. LONDON HOUSE, LTD., New York, N. Y. Republished by John Hudson Moore, Inc., New York, N. Y., a corporation of New York.

His Royal Highness
H. R. H.

FOR PIPES.
Claims use since about 1927.

CLASS 11

INKS AND INKING MATERIALS

Reg. No. 388,211. Registered June 17, 1941. KEE LOX MANUFACTURING COMPANY, Rochester, N. Y., a corporation of New York. Republished by registrant.

SAFE-TEE BRAND

The word "Brand" is disclaimed.
FOR CARBON PAPERS AND TYPEWRITER RIBBONS.
Claims use since Mar. 6, 1923.

Reg. No. 389,786. Registered Aug. 19, 1941. THE PARKER PEN COMPANY, Janesville, Wis., a corporation of Wisconsin. Republished by registrant.

51

FOR WRITING INK.
Claims use since Nov. 14, 1940.

Reg. No. 394,239. Registered Mar. 31, 1942. AMERICAN MINERAL SPIRITS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

ROTOSOL

FOR MIXTURE OF LOW BOILING LIQUID HYDROCARBONS SUITABLE FOR USE IN ROTOGRAVURE INKS.
Claims use since on or about Jan. 7, 1941.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 179,484. Registered Feb. 12, 1924. THE S. OBERMAYER COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

ESSO BOND

FOR FURNACE CEMENT IN LAYING UP FIRE BRICK AND KINDRED USES.
Claims use since Oct. 1, 1921.

Reg. No. 192,777. Registered Dec. 9, 1924. THE S. OBERMAYER COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

RAMTITE

FOR FIRE BRICK IN PLASTIC FORM SUITABLE FOR FURNACE LINING AND KINDRED USES.
Claims use since Apr. 1, 1923.

Reg. No. 322,752. Registered Mar. 19, 1935. THE E. F. HAUSERMAN COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

MASTERWALLS

FOR REMOVABLE PARTITIONS, METAL PARTITIONS, STRUCTURAL PARTS OF SUCH PARTITIONS AND FITTINGS THEREFOR; DOORS, FRAMES, SASH RAILINGS AND GATE DOORS, ARCHITECTURAL GRILLES, WICKETS, TRANSOMS, VENTILATOR TRANSOMS.
Claims use since December 1932.

Reg. No. 327,278. Registered Aug. 20, 1935. THE KINNEAR MANUFACTURING COMPANY, Columbus, Ohio, a corporation of Ohio. Republished by registrant.

TIP-TOP

FOR DOORS.
Claims use since Oct. 20, 1934.

Reg. No. 344,320. Registered Mar. 16, 1937. KEASBEY & MATTISON COMPANY, Ambler, Pa., a corporation of Pennsylvania. Republished by registrant.

LABSTONE

FOR ASBESTOS BOARDS, ASBESTOS SHEETS, ASBESTOS LUMBER, AND ASBESTOS BUILDING MATERIALS IN FLAT AND SHEET FORM.
Claims use since about Oct. 15, 1936.

Reg. No. 346,154. Registered May 18, 1937. WESTERN WATERPROOFING COMPANY, Detroit, Mich., a corporation of Michigan. Republished by registrant.

RESTO-CRETE

FOR WATERPROOFING AND WEATHERPROOFING COMPOSITIONS—NAMELY, CEMENTITIOUS MATERIALS ADAPTED FOR USE IN CONNECTION WITH WATERPROOFING AND WEATHERPROOFING BUILDING STRUCTURES.
Claims use since Aug. 1, 1926.

Reg. No. 359,222. Registered Aug. 9, 1938. KEASBEY & MATTISON COMPANY, Ambler, Pa., a corporation of Pennsylvania. Republished by registrant.

K&M best in asbestos

The words "Best in Asbestos" are disclaimed.
FOR ASBESTOS CEMENTS, ASBESTOS PAPERS, ASBESTOS SHINGLES, COMPOSITION SHINGLES, ASBESTOS MILL BOARD, WOOL FELT INSULATION, FURNACE COVERINGS, ASBESTOS BOARDS, SLABS, TILES, SHEETS AND SIDINGS, WALL BOARDS, PIPE COVERINGS, BLOCK INSULATION, ASBESTOS LUMBER, MINERAL WOOL, HAIR FELT, MAGNESIUM INSULATION COMPRISING MAGNESIUM AND ASBESTOS FIBRE, COMPOSITION BOARDS AND MISCELLANEOUS BUILDING PRODUCTS AND MATERIALS COMPOSED OF ASBESTOS CEMENT COMPOSITION SUCH AS DOORS, STUDDING, PARTITIONS, AND ROOFING.
Claims use since Jan. 1, 1875.

Reg. No. 385,759. Registered Mar. 18, 1941. KEASBEY & MATTISON COMPANY, Ambler, Pa., a corporation of Pennsylvania. Republished by registrant.

"Century"

FOR ASBESTOS-CEMENT PIPES, ASBESTOS-CEMENT BENDS, ASBESTOS-CEMENT ELBOWS, AND COUPLINGS AND FITTINGS USED IN CONNECTION WITH ASBESTOS CEMENT PIPES; THESE PIPES ARE PREFABRICATED, MACHINE CUT, AND/OR MANUFACTURED IN PREDETERMINED LENGTHS, AND ARE ADAPTED FOR USE IN THE CONVEYANCE OF WATER, GAS, OIL, AND LIQUIDS THAT MAY OR MAY NOT BE UNDER PRESSURE, AS WELL AS SEWER PIPES, DRAINAGE PIPES, DOWN SPOUTING, AND MISCELLANEOUS LIQUID CONVEYING USES.
Claims use since about June 6, 1938.

Reg. No. 389,426. Registered Aug. 5, 1941. THE PRESS-TITE ENGINEERING COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

ROPAX

FOR PUTTYING AND CAULKING COMPOUNDS.
Claims use since Feb. 21, 1941.

Reg. No. 402,279. Registered July 13, 1943. M. H. DETRICK COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

DETEGRAL

FOR REFRACTORY BLOCKS AND TILE EMPLOYED FOR THE CONSTRUCTION OF WALLS AND ARCHES, METAL MASONRY HOLDING AND SUPPORTING LUGS, AND FRAMES THEREFOR, AND HEAT INSULATION FOR SAID WALLS AND ARCHES.
Claims use since Nov. 24, 1942.

Reg. No. 403,472. Registered Sept. 28, 1943. M. H. DETRICK COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

THINSULITE

FOR REFRACTORY BLOCKS AND TILE EMPLOYED FOR THE CONSTRUCTION OF FURNACE WALLS AND ARCHES, METAL MASONRY HOLDING AND SUPPORTING LUGS, AND FRAMES FOR FURNACES AND ARCH CONSTRUCTION.
Claims use since Nov. 24, 1942.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 59,681. Registered Jan. 15, 1907. THE UNITED INJECTOR CO., New York, N. Y. Republished by Manning, Maxwell & Moore, Incorporated, New York, N. Y., a corporation of New Jersey.

THE HANCOCK

FOR VALVES, STRAINERS, AND COCKS.
Claims use since 1876.

Reg. No. 243,746. Registered June 26, 1928. HOOKLESS FASTENER COMPANY, Meadville, Pa. Republished by Talon, Inc., Meadville, Pa., a corporation of Pennsylvania.

TALON

FOR SEPARABLE FASTENERS OF THE SLIDER-CONTROLLED TYPE.
Claims use since Feb. 10, 1928.

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 204,006. Registered Oct. 6, 1925. CENTRAL RADIO LABORATORIES, Milwaukee, Wis. Republished by Globe-Union Inc., Milwaukee, Wis., a corporation of Delaware.

Centralab

FOR RADIO SIGNALING APPARATUS, AND PARTS THEREOF COMPRISING CONDENSERS, GRID LEAKS, POTENTIOMETERS, RHEOSTATS, SWITCH ARMS AND LEVERS, TRANSFORMERS, AND TUNERS.
Claims use since July 1, 1924.

Reg. No. 214,404. Registered June 22, 1926. UNITED ELECTRICAL MFG. CO., Adrian, Mich. Republished by Bersted Manufacturing Company, Fostoria, Ohio, a corporation of Ohio.

ESKIMO

FOR ELECTRICAL FANS.
Claims use since Apr. 1, 1925.

Reg. No. 255,452. Registered Apr. 23, 1929. THE ANDERSON-PITT CORPORATION, Kansas City, Mo. Republished by Bersted Manufacturing Company, Fostoria, Ohio, a corporation of Ohio.

Focalipse

FOR RADIANT ELECTRIC HEATERS.
Claims use since Aug. 15, 1928.

Reg. No. 328,172. Registered Sept. 17, 1935. PHILLIPS & BUTTORFF MANUFACTURING COMPANY, Nashville, Tenn., a corporation of Tennessee. Republished by registrant.

The word "Electric" is disclaimed.
FOR ELECTRIC RANGES.
Claims use since Mar. 1, 1934.

Reg. No. 349,887. Registered Sept. 14, 1937. EMERSON RADIO & PHONOGRAPH CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant.

The words "Radio and Television" are disclaimed.
FOR RADIO RECEIVING SETS, TELEVISION RECEIVING SETS, RADIO-TELEVISION RECEIVING SETS, AND PARTS THEREOF—VIZ., TUBES, ELIMINATORS, AND LOUD SPEAKERS.
Claims use since about July 1, 1927.

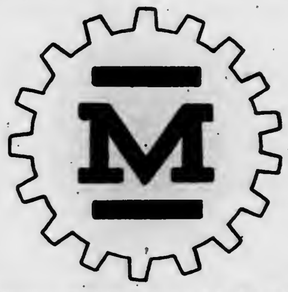
Reg. No. 350,059. Registered Sept. 14, 1937. THE GENERAL TIRE & RUBBER COMPANY, Akron, Ohio, a corporation of Ohio. Republished by registrant.

GENERAL

FOR STORAGE BATTERIES.
Claims use since Oct. 15, 1913.

Reg. No. 375,029. Registered Feb. 6, 1940. JAMES MILLEN MANUFACTURING COMPANY, INC., Malden, Mass., a corporation of Massachusetts. Republished by registrant.

QUARTZ Q



The word "Quartz" is disclaimed. In the drawing the lining of the letters "Q" indicates the color red.
FOR DIELECTRIC MATERIAL IN SHEETS AND MOLDED FORMS USED PRIMARILY AS DIELECTRICS IN ELECTRICAL CONDENSERS, COIL FORMS, AND OTHER RADIO AND ELECTRICAL APPARATUS.
Claims use since June 2, 1939.

Reg. No. 376,711. Registered Apr. 2, 1940. W. N. MATTHEWS CORPORATION, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

RINGAP

FOR LIGHTNING PROTECTION DEVICES.
Claims use since on or about July 15, 1939.

Reg. No. 385,754. Registered Mar. 18, 1941. JAMES MILLEN MANUFACTURING COMPANY, INC., Malden, Mass., a corporation of Massachusetts. Republished by registrant.

FOR RADIO COMMUNICATION RECEIVERS, TRANSMITTERS, AND COMPONENT PARTS THEREOF, EXCLUDING BATTERIES.
Claims use since June 2, 1939.

Reg. No. 389,672. Registered Aug. 19, 1941. KEASBEY & MATTISON COMPANY, Ambler, Pa., a corporation of Pennsylvania. Republished by registrant.

"Century"

FOR ASBESTOS CEMENT CONDUIT AND DUCT AND ASBESTOS CEMENT COUPLINGS AND FITTINGS USED IN CONNECTION WITH CONDUIT AND DUCT FOR USE IN ELECTRICAL WIRING AND CABLE INSTALLATIONS.
Claims use since June 6, 1938.

Reg. No. 394,171. Registered Mar. 24, 1942. TRAF-O-LITE, Oak Park, Ill. Republished by George D. Hefner, Chicago, Ill.

The word "Lite" and the representation of the goods disclosed in the trade-mark are disclaimed apart from the

mark shown in the drawing. The linings used in the drawing are the official designations for colors red, yellow, and gray.

FOR COMBINATION TRAFFIC CONTROL AND FLASH LIGHT.

Claims use since June 1, 1941.

Reg. No. 401,763. Registered June 8, 1943. S. C. JOHNSON & SON, INC., Racine, Wis., a corporation of Wisconsin. Republished by registrant.

JOHNSON'S *Streamliner* POLISHER

The word "Polisher" is disclaimed.

FOR ELECTRIC FLOOR POLISHING MACHINES.

Claims use since Sept. 15, 1941.

Reg. No. 402,849. Registered Aug. 17, 1943. S. C. JOHNSON & SON, INC., Racine, Wis., a corporation of Wisconsin. Republished by registrant.

Streamliner

FOR ELECTRIC FLOOR POLISHING MACHINES.

Claims use since Sept. 15, 1941.

Reg. No. 409,923. Registered Oct. 31, 1944. THE GENERAL INDUSTRIES COMPANY, Elyria, Ohio, a corporation of Ohio. Republished by registrant.

G.I.

FOR ELECTRIC MOTORS, ELECTRIC RECORD CHANGERS FOR PHONOGRAPHS, AND ELECTRIC PHONOGRAPH RECORDERS.

Claims use since on or about Feb. 15, 1944.

Reg. No. 409,924. Registered Oct. 31, 1944. THE GENERAL INDUSTRIES COMPANY, Elyria, Ohio, a corporation of Ohio. Republished by registrant.

FOR ELECTRIC MOTORS, ELECTRIC RECORD CHANGERS FOR PHONOGRAPHS, AND ELECTRIC PHONOGRAPH RECORDERS.

Claims use since on or about Feb. 15, 1944.

Reg. No. 409,925. Registered Oct. 31, 1944. THE GENERAL INDUSTRIES COMPANY, Elyria, Ohio, a corporation of Ohio. Republished by registrant.

GI

FOR ELECTRIC MOTORS, ELECTRIC RECORD CHANGERS FOR PHONOGRAPHS, AND ELECTRIC PHONOGRAPH RECORDERS.

Claims use since on or about Feb. 15, 1944.

Reg. No. 414,519. Registered June 12, 1945. STERLING TOOL PRODUCTS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

1000

FOR UNITARY AND PORTABLE ELECTRIC SANDING MACHINES.

Claims use since Sept. 21, 1943.

Reg. No. 422,431. Registered July 23, 1946. TRIANGLE CONDUIT & CABLE CO., INC., New Brunswick, N. J., a corporation of Delaware. Republished by registrant.

All the wording shown in the drawing of the mark is disclaimed.

FOR RIGID CONDUIT BOTH GALVANIZED AND BLACK ENAMELED, AND ALL THE OTHER ITEMS LISTED IN THE REGISTRATION.

Claims use since March 1942.

Reg. No. 429,756. Registered May 20, 1947. THE GENERAL INDUSTRIES COMPANY, Elyria, Ohio, a corporation of Ohio. Republished by registrant.

FOR ELECTRICALLY OPERATED PHONOGRAPHS OF THE DOMESTIC TYPE AND PARTS THEREOF, SUCH PARTS BEING ELECTRIC MOTORS, ELECTRIC AUTOMATIC RECORD CHANGERS, AND ELECTRIC AUTOMATIC PHONOGRAPH RECORDERS.

Claims use since on or about June 1941.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 24,237. Registered Feb. 13, 1894. THE BRUNSWICK-BALKE-COLLENDER COMPANY, Chicago, Ill. Republished by The Brunswick-Balke-Collender Company, Chicago, Ill., a corporation of Delaware.

FOR BILLIARD-TABLE CUSHIONS.

Claims use since July 1877.

Reg. No. 265,748. Registered Jan. 7, 1930. THE BRUNSWICK-BALKE-COLLENDER COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

NU-PEG

FOR PIN SPOTTERS.

Claims use since Aug. 5, 1929.

Reg. No. 340,930. Registered Nov. 24, 1936. PENNSYLVANIA RUBBER COMPANY, Jeannette, Pa., a corporation of Pennsylvania. Republished by registrant.

The drawing is lined for red.

FOR SHUTTLECOCKS.

Claims use since June 19, 1936.

Reg. No. 341,079. Registered Dec. 1, 1936. THE BRUNSWICK-BALKE-COLLENDER COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

DUKE

FOR BOWLING PINS.

Claims use since Jan. 1, 1936.

Reg. No. 341,080. Registered Dec. 1, 1936. THE BRUNSWICK-BALKE-COLLENDER COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

KING

FOR BOWLING PINS.

Claims use since Jan. 1, 1936.

Reg. No. 341,081. Registered Dec. 1, 1936. THE BRUNSWICK-BALKE-COLLENDER COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

QUEEN

FOR BOWLING PINS.

Claims use since Jan. 1, 1936.

Reg. No. 344,484. Registered Mar. 23, 1937. THE BRUNSWICK-BALKE-COLLENDER COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

"CHALLENGER"

FOR BILLIARD CUES.

Claims use since Oct. 15, 1936.

Reg. No. 398,540. Registered Nov. 3, 1942. THE BRUNSWICK-BALKE-COLLENDER COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

CENTENNIAL

FOR BILLIARD TABLES.

Claims use since Sept. 24, 1941.

Reg. No. 415,715. Registered Aug. 14, 1945. THE BRUNSWICK-BALKE-COLLENDER COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

MONARCH

FOR BOWLING PINS.

Claims use since Feb. 8, 1945.

Reg. No. 416,217. Registered Sept. 4, 1945. THE BRUNSWICK-BALKE-COLLENDER COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

MONARCH

FOR BILLIARD TABLE CUSHIONS.
Claims use since July 1877.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 57,990. Registered Dec. 4, 1906. THE UNITED INJECTOR CO., New York, N. Y. Republished by Manning, Maxwell & Moore, Incorporated, New York, N. Y., a corporation of New Jersey.

THE HANCOCK INSPIRATOR

FOR INSPIRATORS.
Claims use since 1876.

Reg. No. 59,418. Registered Jan. 8, 1907. THE UNITED INJECTOR CO., New York, N. Y. Republished by Manning, Maxwell & Moore, Incorporated, New York, N. Y., a corporation of New Jersey.

METROPOLITAN

FOR INJECTORS.
Claims use since August 1888.

Reg. No. 88,644. Registered Oct. 8, 1912. THE UNITED INJECTOR CO., New York, N. Y. Republished by Manning, Maxwell & Moore, Incorporated, New York, N. Y., a corporation of New Jersey.

HANCOCK

FOR EJECTORS.
Claims use since 1876.

Reg. No. 98,775. Registered Aug. 4, 1914. HEPPENSTALL FORGE & KNIFE COMPANY, Pittsburgh, Pa. Republished by Heppenstall Company, Pittsburgh, Pa., a corporation of Pennsylvania.

FOR SHEAR-KNIVES AND DIE-BLOCKS.
Claims use since Jan. 1, 1912.

Reg. No. 104,626. Registered June 8, 1915. MOLINE TOOL COMPANY, Moline, Ill., a corporation of Illinois. Republished by registrant.

HOLE HOG

FOR BORING AND DRILLING MACHINES.
Claims use since July 1, 1910.

Reg. No. 200,091. Registered June 23, 1925. THE CLEVELAND TRENCHER COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

BABY DIGGER

The word "Digger" is disclaimed.
FOR TRENCH DIGGING MACHINES.
Claims use since Jan. 2, 1925.

Reg. No. 211,435. Registered Apr. 13, 1926. HEPPENSTALL FORGE & KNIFE COMPANY, Pittsburgh, Pa. Republished by Heppenstall Company, Pittsburgh, Pa., a corporation of Pennsylvania.

HOTKUT

FOR SHEAR KNIVES.
Claims use since Oct. 1, 1924.

Reg. No. 325,259. Registered June 18, 1935. CHAMPION OUTBOARD MOTORS, Minneapolis, Minn. Republished by Champion Motors Company, Minneapolis, Minn., a corporation of Minnesota.

CHAMPION

FOR OUTBOARD MOTORS.
Claims use since on or about Dec. 1, 1934.

Reg. No. 326,789. Registered Aug. 6, 1935. TUTHILL PUMP COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FUELSTAT

FOR OIL PUMPS.
Claims use since Feb. 22, 1935.

Reg. No. 353,599. Registered Jan. 11, 1938. TURNER, DAY & WOOLWORTH HANDLE COMPANY, Louisville, Ky. Republished by The American Fork and Hoe Company, Cleveland, Ohio, a corporation of Ohio.

The word "Handles" and the representation of a handle are disclaimed.
FOR TOOL HANDLES—VIZ., WOODEN HANDLES FOR AXES, HATCHETS, AND SIMILAR IMPLEMENTS.
Claims use since May 26, 1937.

Reg. No. 355,383. Registered Mar. 15, 1938. MACCLATCHIE MANUFACTURING COMPANY OF CALIFORNIA, Compton, Calif., a corporation of California. Republished by registrant.

MONEY SAVER

FOR LINERS FOR PUMPS.
Claims use since Apr. 1, 1934.

Reg. No. 361,488. Registered Oct. 18, 1938. BONIS BROS. FUR MACHINERY CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant.

The words "Never Stop" are disclaimed.
FOR FUR SEWING MACHINES.
Claims use since about May 2, 1938.

Reg. No. 362,875. Registered Dec. 6, 1938. MACCLATCHIE MANUFACTURING COMPANY OF CALIFORNIA, Compton, Calif., a corporation of California. Republished by registrant.

AIR FLOTE

FOR VALVES FOR PUMPS.
Claims use since July 26, 1937.

Reg. No. 371,635. Registered Oct. 3, 1939. THE AMERICAN FORK AND HOE COMPANY, Cleveland Ohio, a corporation of Ohio. Republished by registrant.

LAWN MASTER

The word "Lawn" is disclaimed.
FOR HAND AGRICULTURAL AND GARDEN IMPLEMENTS—NAMELY, RAKES AND PARTS THEREOF.
Claims use since on or about July 1, 1930.

Reg. No. 376,737. Registered Apr. 2, 1940. TURNER, DAY & WOOLWORTH HANDLE COMPANY, Louisville, Ky. Republished by The American Fork & Hoe Company, Cleveland, Ohio, a corporation of Ohio.

WHIPCORD

FOR WOODEN HANDLES FOR AXES, HATCHETS, AND SIMILAR IMPLEMENTS.
Claims use since Oct. 10, 1939.

Reg. No. 404,358. Registered Nov. 23, 1943. AIRCRAFT SCREW PRODUCTS COMPANY, INCORPORATED, Long Island City, N. Y., a corporation of New York. Republished by registrant.

The term "Thread" is disclaimed.
FOR TOOLS, APPARATUS AND MACHINES FOR USE IN CONNECTION WITH SCREW CONNECTIONS AND THEIR PARTS—NAMELY, TAPPING TOOLS, INSERT-COILING MACHINES, INSERTING AND EXTRACTING TOOLS, SCREW DRIVERS, STUD DRIVERS, WRENCHES, STAKING TOOLS, GAUGING TOOLS.
Claims use since Mar. 30, 1942.

Reg. No. 414,439. Registered June 12, 1945. INFILCO INCORPORATED, Chicago, Ill., a corporation of Delaware. Republished by registrant.

ACCELO-BIOX

FOR ACTIVATED SLUDGE TYPE SEWAGE TREATING PLANTS AND PARTS THEREOF, SUCH PARTS INCLUDING AERATORS, CLARIFIERS, ACTIVATED SLUDGE AERATION BASINS, PIPING AND FLOW CONTROLLERS.
Claims use since Sept. 24, 1943.

Reg. No. 418,215. Registered Dec. 11, 1945. FEDERAL ELECTRIC COMPANY, INC., Chicago, Ill., a corporation of New York. Republished by registrant.

FOR OIL WELL DRILLING BITS, WRENCHES, PIPE THREADERS, AND TRIMMERS, NONELECTRIC SIRENS, EXHAUST AND AIR WHISTLES, AND APPLIANCES THEREFOR.

Claims use since July 1929 on air whistles and appliances; and since various dates on other items.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Reg. No. 210,069. Registered Mar. 9, 1926. HANSON BROTHERS SCALE COMPANY, Chicago, Ill. Republished by Hanson Scale Company, Chicago, Ill., a corporation of Illinois.

Weigh-Master

FOR WEIGHING SCALES FOR USE IN THE HOUSEHOLD AND BY PHYSICIANS.

Claims use since Jan. 7, 1925.

Reg. No. 356,240. Registered Apr. 19, 1938. S. F. BOWSER & COMPANY, INCORPORATED, Fort Wayne, Ind. Republished by Bowser, Inc., Fort Wayne, Ind., a corporation of Indiana.

XACTOMOUNT

FOR METERS FOR OILS, GASOLINES, AND OTHER LIQUIDS, PREDETERMINED STOP DEVICES FOR USE WITH LIQUID METERS TO CONTROL THE OPERATION THEREOF AND REGISTERS FOR USE WITH LIQUID METERS TO INDICATE AND/OR RECORD THE OPERATION THEREOF.

Claims use since Aug. 10, 1937.

Reg. No. 359,065. Registered Aug. 2, 1938. THE HALOID COMPANY, Rochester, N. Y., a corporation of New York. Republished by registrant.

COPYLITE

FOR LIGHT SENSITIVE PAPER.

Claims use since Dec. 14, 1937.

Reg. No. 366,527. Registered Apr. 18, 1939. THE HALOID COMPANY, Rochester, N. Y., a corporation of New York. Republished by registrant.

HALOID

FOR LIGHT SENSITIVE PAPER AND FILM.

Claims use since April 1906.

Reg. No. 374,092. Registered Jan. 2, 1940. S. F. BOWSER & COMPANY, INCORPORATED, Fort Wayne, Ind. Republished by Bowser, Inc., Fort Wayne, Ind., a corporation of Indiana.

TELEFLO

FOR DIRECTION AND/OR RATE OF LIQUID FLOW INDICATORS.

Claims use since Oct. 12, 1938.

Reg. No. 376,523. Registered Mar. 26, 1940. AGFA ANSCO CORPORATION, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware. Republished by General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware.

FLUORAPID

FOR PHOTOGRAPHIC FILM, PARTICULARLY X-RAY FILM.

Claims use since on or about Oct. 20, 1939.

Reg. No. 386,553. Registered Apr. 15, 1941. FISCHER & PORTER COMPANY, Philadelphia, Pa. Republished by Fischer & Porter Company, Hatboro, Pa., a corporation of Pennsylvania.

Stabl-Vis

FOR FLUID FLOW METERS.

Claims use since Oct. 2, 1940.

Reg. No. 394,541. Registered Apr. 14, 1942. S. F. BOWSER & COMPANY, INCORPORATED, Fort Wayne, Ind. Republished by Bowser, Inc., Fort Wayne, Ind., a corporation of Indiana.

PETINCO

FOR PREDETERMINED STOP MEANS FOR LIQUID DISPENSING APPARATUS.

Claims use since Aug. 29, 1940.

Reg. No. 396,098. Registered June 30, 1942. REPUBLIC FLOW METERS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

REPUBLIC

FOR FLUID FLOWMETERS, RING-BALANCE METERS, CHART TYPE RECORDERS FOR RECORDING FLUID FLOW, PRESSURE, TEMPERATURE, FURNACE DRAFT, LIQUID LEVELS AND PERCENTAGE OF CO_2, PANEL ASSEMBLIES OF METERS AND RECORDERS, CHARTS FOR USE ON RECORDERS, AND INTEGRATORS.

Claims use since September 1930.

Reg. No. 397,665. Registered Sept. 15, 1942. REPUBLIC FLOW METERS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

REPUBLIC

FOR FLUID FLOWMETERS, RING BALANCE METERS, AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.

Claims use since February 1914.

Reg. No. 416,223. Registered Sept. 4, 1945. INFILCO INCORPORATED, Chicago, Ill., a corporation of Delaware. Republished by registrant.

ROBOTROL

FOR AUTOMATIC APPARATUS FOR USE IN CONNECTION WITH FILTERS, ZEOLITE SOFTENERS, GRANULAR ACTIVATED CARBON PURIFIERS AND SIMILAR EQUIPMENT USED IN LIQUID PURIFICATION, FOR THE PURPOSE OF INDICATING AND CONTROLLING THE RESPECTIVE FLOWS OF LIQUID THROUGH SUCH EQUIPMENT, AND PARTS OF SUCH AUTOMATIC APPARATUS.

Claims use since May 17, 1938.

Reg. No. 419,315. Registered Feb. 12, 1946. JAMES MILLEN MANUFACTURING COMPANY, INC., Malden, Mass., a corporation of Massachusetts. Republished by registrant.

FOR ELECTRONIC METERS AND MEASURING APPLIANCES—NAMELY SYNCHROSCOPES, HIGH FREQUENCY WAVE CALIBRATORS, ABSORPTION METERS AND HIGH FREQUENCY WAVE METERS, USED FOR THE MEASUREMENT OF PULSE TRANSMISSION AND HIGH FREQUENCY DETERMINATION IN THE ELECTRONIC FIELDS, AND COMPONENT PARTS THEREOF.

Claims use since May 1940.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Reg. No. 188,767. Registered Sept. 2, 1924. AARON E. JOHNSON, Minneapolis, Minn. Republished by registrant.

Orchid

FOR FINGER RINGS.

Claims use since Mar. 25, 1924.

CLASS 29

BROOMS, BRUSHES, AND DUSTERS

Reg. No. 319,479. Registered Nov. 27, 1934. S. C. JOHNSON & SON, INC., Racine, Wis., a corporation of Wisconsin. Republished by registrant.

The representation of the mop is disclaimed. The trademark consists of a wide yellow stripe in the wiping substance of the mop.

FOR MOPS AND DUSTERS.

Claims use since Feb. 6, 1930.

Reg. No. 347,410. Registered June 22, 1937. THE BRUNSWICK-BALKE-COLLENDER COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

TABLEMASTER

FOR BRUSHES FOR BILLIARD TABLES.

Claims use since Dec. 28, 1936.

Reg. No. 405,375. Registered Jan. 25, 1944. JOHN HUDSON MOORE, INC., New York, N. Y., a corporation of New York. Republished by registrant.

SPORTSMAN

FOR HAIRBRUSHES, TOOTHBRUSHES, NAIL BRUSHES, BATH BRUSHES, COMPLEXION BRUSHES, HAND BRUSHES, AND HAT BRUSHES.

Claims use since Aug. 11, 1943.

CLASS 30

CROCKERY, EARTHENWARE, AND PORCELAIN

Reg. No. 234,917. Registered Nov. 8, 1927. EUGENE L. FONDEVILLE, doing business as A. J. Fondeville & Co., New York, N. Y. Republished by Fondeville & Co., Inc., New York, N. Y., a corporation of New York.

The terms "Ware" and "England" are disclaimed.
FOR PORCELAIN WARE.
Claims use since June 1, 1927.

Reg. No. 234,918. Registered Nov. 8, 1927. EUGENE L. FONDEVILLE, doing business as A. J. Fondeville & Co., New York, N. Y. Republished by Fondeville & Co., Inc., New York, N. Y., a corporation of New York.

CHANTICLEER
WARE
FONDEVILLE
ENGLAND

The terms "Ware," "England," and "Fondeville" are disclaimed.
FOR PORCELAIN WARE.
Claims use since June 1, 1927.

CLASS 31

FILTERS AND REFRIGERATORS

Reg. No. 374,272. Registered Jan. 2, 1940. WILLIAM MCKINLEY BAIRD, Chicago, Ill. Republished by registrant.

The words "Refrigerated Locker Systems" and "Chicago" are disclaimed.
FOR REFRIGERATED LOCKER UNITS
Claims use since Dec. 12, 1936.

Reg. No. 392,827. Registered Jan. 13, 1942. WILLIAM MCKINLEY BAIRD, Chicago, Ill. Republished by registrant.

COLD CURTAIN

FOR REFRIGERATED LOCKER UNITS.
Claims use since Dec. 12, 1936.

Reg. No. 406,976. Registered May 9, 1944. SPARKLER MANUFACTURING COMPANY, Mundelein, Ill. Republished by Sparkler Mfg. Co., Mundelein, Ill., a corporation of Illinois.

FOR INDUSTRIAL FILTERS.
Claims use since Dec. 15, 1943.

CLASS 32

FURNITURE AND UPHOLSTERY

Reg. No. 349,860. Registered Sept. 7, 1937. STAKMORE CO., INC., New York, N. Y., a corporation of New York. Republished by registrant, present location Owego, N. Y.

STAKMORE

FOR CHAIRS AND TABLES.
Claims use since Apr. 1, 1922, on chairs; and since Sept. 1, 1924, on tables.

Reg. No. 358,047. Registered June 28, 1938. STERN & CO., Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

Whitehill's

FOR FURNITURE MADE OF WOOD, METAL OR UPHOLSTERY, AS FOLLOWS: LIVING ROOM FURNITURE AND ALL OTHER ITEMS NAMED IN THE REGISTRATION.
Claims use since 1885.

Reg. No. 378,190. Registered May 28, 1940. CORDUAN MANUFACTURING COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

HI-BID

FOR CARD TABLES.
Claims use since on or about Jan. 8, 1940.

Reg. No. 386,727. Registered Apr. 22, 1941. THE BRUNSWICK-BALKE-COLLENDER COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

CENTENNIAL

FOR SETTEES; SETTEE END PANELS; GLASS RACKS; SERVICE SHELVES FOR BOWLERS; PORTABLE SCORE BOARDS AND TABLES; OPERA CHAIRS; SERVICE UNITS FOR BOWLERS CONSISTING OF STANDARDS FOR SUPPORTING BOWLERS' CHALK, TOWELS, ASH TRAYS, GLASSES, AND THE LIKE; AND BOWLING ALLEY LOCKERS.
Claims use since June 20, 1940.

CLASS 33

GLASSWARE

Reg. No. 363,207. Registered Dec. 13, 1938. PITMAN-DREITZER & CO. INC., New York, N. Y., a corporation of New York. Republished by registrant.

"GARDEN CLUB"

FOR TABLE AND COOKING GLASSWARE.
Claims use since Jan. 26, 1938.

CLASS 34

HEATING, LIGHTING, AND VENTILATING APPARATUS

Reg. No. 270,398. Registered May 6, 1930. JACKES-EVANS MANUFACTURING COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

The representation of the goods is disclaimed.
FOR STOVEPIPE, INCLUDING ELBOWS, T JOINTS, REDUCERS, AND FLUE THIMBLES; HEATERS—NAMELY, WOOD, GAS, AND COAL BURNING TYPES; OVENS, HEATING DRUMS, CAMP STOVES, AND RAIN CAPS, COMPRISING CHIMNEY AND STACK COWLS.
Claims use since Feb. 1, 1924.

Reg. No. 311,713. Registered Apr. 3, 1934. THE FOLEY GREENHOUSE MANUFACTURING CO., Forest Park, Ill., a corporation of Illinois. Republished by registrant.

RACK LOC

FOR GREENHOUSE VENTILATING APPARATUS FOR OPENING AND CLOSING THE VENTILATORS IN THE ROOFS OR SIDES OF GREENHOUSES.
Claims use since May 16, 1933.

Reg. No. 331,722. Registered Jan. 21, 1936. THE WILLIAMSON HEATER COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

TRIPL-IFE

FOR WARM AIR FURNACES AND PARTS THEREOF.
Claims use since on or about Sept. 16, 1935.

Reg. No. 396,109. Registered June 30, 1942. AUTOGAS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

REPUBLIC

FOR GAS BURNERS, GAS BURNING HUMIDIFIERS, GARBAGE INCINERATORS, AND WATER HEATERS.
Claims use since July 1930.

CLASS 35

BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES

Reg. No. 85,483. Registered Feb. 20, 1912. PENNSYLVANIA RUBBER COMPANY, Jeannette, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR RUBBER VEHICLE-TIRES.
Claims use since June 4, 1910.

Reg. No. 193,506. Registered Dec. 30, 1924. PENNSYLVANIA RUBBER COMPANY, Jeannette, Pa., a corporation of Pennsylvania. Republished by registrant.

TUXEDO

FOR RUBBER TIRES FOR VEHICLES.
Claims use since Oct. 30, 1923.

Reg. No. 295,081. Registered June 14, 1932. L. J. MILEY COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

BLACK GOLD

FOR BRAKE LINING.
Claims use since Oct. 15, 1931.

Reg. No. 306,886. Registered Oct. 3, 1933. HENRY K. BARNES COMPANY, Boston, Mass., a corporation of Massachusetts. Republished by registrant.

GAM-OIL

The word "Oil" is disclaimed.
FOR LEATHER BELTING.
Claims use since July 1903.

Reg. No. 334,092. Registered Apr. 21, 1936. WILKENING MANUFACTURING COMPANY, Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

WILCO

FOR SALAD OILS.
Claims use since May 1923.

Reg. No. 189,304. Registered Sept. 16, 1924. STROHMEYER & ARPE COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

TOMATINE

FOR TOMATO PRODUCTS — NAMELY, TOMATO PASTE AND TOMATO SAUCE.
Claims use since March 1924.

Reg. No. 206,107. Registered Nov. 24, 1925. STROHMEYER & ARPE COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

MACABEI

FOR CANNED FISH PARTICULARLY CANNED SALMON.
Claims use since about February 1924.

Reg. No. 215,089. Registered July 13, 1926. SQUIRE DINGEE COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

STAR

FOR PICKLES.
Claims use since 1909.

Reg. No. 228,444. Registered May 31, 1927. MAX I. GINSBERG, doing business as Los Angeles Saratoga Chip Co., Los Angeles, Calif. Republished by Bell Brand Foods Ltd., Los Angeles, Calif., a corporation of California.

FRENCHIES

FOR SHOE-STRING POTATOES.
Claims use since Jan. 10, 1927.

Reg. No. 260,337. Registered Aug. 20, 1929. THE MARAMOR COMPANY, Columbus, Ohio, a corporation of Ohio. Republished by registrant.

The Maramor

FOR CANDIES, CAKES, BREAD, COOKIES, ROLLS, SALAD DRESSING, FRESH, SPICED, AND CANNED FRUITS AND VEGETABLES.
Claims use since May 1, 1928.

Reg. No. 266,670. Registered Jan. 28, 1930. H. C. BRILL COMPANY, INC., Newark, N. J., a corporation of New Jersey. Republished by registrant.

BRILL'S

KREME-ALL

FOR FILLING FOR PIES, CAKES, AND PASTRIES.
Claims use since Dec. 21, 1928.

Reg. No. 283,437. Registered May 26, 1931. OCEAN SPRAY PRESERVING COMPANY, South Hanson, Mass., assignor to Cranberry Canners, Inc., a corporation of Delaware. Republished by National Cranberry Association, Hanson, Mass., a corporation of Delaware.

Pride of New England

FOR FRESH APPLES, APPLE SAUCE, AND CANNED CRANBERRIES.
Claims use since October 1924.

Reg. No. 283,708. Registered June 2, 1931. OCEAN SPRAY PRESERVING COMPANY, South Hanson, Mass., assignor to Cranberry Canners, Inc., a corporation of Delaware. Republished by National Cranberry Association, Hanson, Mass., a corporation of Delaware.

Ocean Spray

FOR FRESH CRANBERRIES, CANNED CRANBERRIES, AND CRANBERRY SYRUP.
Claims use since October 1921.

Reg. No. 303,001. Registered May 9, 1933. MAGGI CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

FOR SOUP TABLETS.
Claims use since about January 1907.

Reg. No. 304,810. Registered July 18, 1933. MAGGI CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

All wording with the exception of "Maggis" and "The Maggi Co."; and the representation of the label per se are disclaimed.
FOR SEASONINGS IN SOLID AND LIQUID FORM FOR IMPROVING SOUPS, SAUCES, GRAVIES, AND OTHER DISHES.
Claims use since Dec. 22, 1899.

Reg. No. 309,381. Registered Jan. 9, 1934. HOUSTON PACKING COMPANY, Houston, Tex., a corporation of Texas. Republished by registrant.

Jasmine

FOR HAMS, PICNICS, BOSTON BUTTS, BACON, LARD, PORK LINKS, PORK SAUSAGE, BOLOGNA, SHORTENING, COOKING OIL, SALAD OIL, CHILI CON CARNE, LUNCHEON LOAF, AND BRANDED BEEF.
Claims use since 1907 on certain items; since 1927 on certain other items; since July 1931 on other items.

Reg. No. 313,815. Registered June 12, 1934. MAGGI CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

All the wording except "Maggis" and "The Maggi Co.": plus the representation of the label per se are disclaimed.
FOR SEASONINGS IN SOLID AND LIQUID FORM FOR IMPROVING SOUPS, SAUCES, GRAVIES, AND OTHER DISHES.
Claims use since Dec. 22, 1899.

Reg. No. 332,876. Registered Mar. 3, 1936. MAGGI CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

The drawing is lined for yellow and red. The representation of the bottle and all the words except "Maggi" and "Maggis" are disclaimed.
FOR SEASONINGS IN SOLID AND LIQUID FORM FOR IMPROVING SOUPS, SAUCES, GRAVIES, AND OTHER DISHES.
Claims use since Apr. 19, 1895.

Reg. No. 337,336. Registered Aug. 4, 1936. KINGAN & CO. INCORPORATED, Indianapolis, Ind., a corporation of New Jersey. Republished by registrant.

KINGAN'S RELIABLE

FOR TRIPE, DRIED BEEF AND ALL OTHER ITEMS LISTED IN REGISTRATION EXCEPT SALAD (HAM AND PICKLE MIXTURE), AND PIG BREAKFAST BACON.
Claims use since Sept. 19, 1933, for lunch tongue; and since other dates for the other items.

Reg. No. 339,077. Registered Sept. 22, 1936. HOUSTON PACKING COMPANY, Houston, Tex., a corporation of Texas. Republished by registrant.

BISKETINE

FOR VEGETABLE SHORTENING.
Claims use since Aug. 10, 1910.

Reg. No. 340,865. Registered Nov. 24, 1936. HOUSTON PACKING COMPANY, Houston, Tex., a corporation of Texas. Republished by registrant.

Jasmine

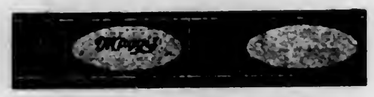
FOR BUTTER.
Claims use since Oct. 1, 1935.

Reg. No. 347,107. Registered June 15, 1937. RED STAR YEAST AND PRODUCTS CO., Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

KITCHEN-PAK

FOR COMPRESSED YEAST.
Claims use since Dec. 15, 1936.

Reg. No. 349,506. Registered Aug. 31, 1937. CHARLESTON MILLING COMPANY, Charleston, W. Va., a corporation of West Virginia. Republished by registrant.



The drawing is lined for red, blue, and orange.
FOR POULTRY FEED.
Claims use since on or about Nov. 1, 1936.

Reg. No. 353,948. Registered Jan. 25, 1938. MAGGI CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

FOR BOUILLON CUBES AND GRANULATED BOUILLON.
Claims use since Oct. 23, 1908.

Reg. No. 353,949. Registered Jan. 25, 1938. MAGGI CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

FOR BOUILLON CUBES.
Claims use since Oct. 23, 1908.

Reg. No. 353,950. Registered Jan. 25, 1938. MAGGI CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

FOR BOUILLON CUBES.
Claims use since Oct. 23, 1908.

Reg. No. 357,475. Registered June 7, 1938. MAGGI, CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

The representation of the bottle is disclaimed. The bottle labels and neck labels are printed in yellow and red, the cap sheath is printed in yellow, and the bottle is brown.

FOR FOODS AND INGREDIENTS OF FOODS—NAMELY, SEASONINGS FOR IMPROVING SOUPS, SAUCES, GRAVIES, MEAT AND VEGETABLE DISHES.
Claims use since Apr. 19, 1895.

Reg. No. 359,580. Registered Aug. 23, 1938. FRANCESCO BRAGNO, doing business as Bragno & Company, Chicago, Ill. Republished by registrant.

FOR OLIVE OIL.
Claims use since Apr. 29, 1909.

Reg. No. 361,586. Registered Oct. 25, 1938. CHARLESTON MILLING COMPANY, Charleston, W. Va., a corporation of West Virginia. Republished by registrant.

The drawing is lined for blue, red and yellow.
FOR WHEAT FLOUR.
Claims use since December 1936.

Reg. No. 365,307. Registered Mar. 7, 1939. HOUSTON PACKING COMPANY, Houston, Tex., a corporation of Texas. Republished by registrant.

AMIGO

FOR DOG FOOD.
Claims use since Oct. 19, 1937.

Reg. No. 366,165. Registered Apr. 4, 1939. MAGGI CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

Maggi

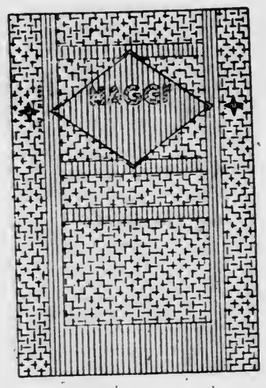
FOR FOODS AND INGREDIENTS OF FOODS—NAMELY, SEASONINGS FOR IMPROVING SOUPS, SAUCES, GRAVIES, MEAT, AND VEGETABLE DISHES; SOUPS, CONSOMMES, BOUILLONS, GRAVIES, MEAT EXTRACTS, MEAT JELLIES, SPICES, SAUCES FOR MEATS, FISH AND FOWL; VEGETABLE SAUCES, FRUIT SAUCES; WHEAT, RICE, BARLEY, OAT, RYE, MAIZE, BEAN AND POTATO FLOUR; SALT, VINEGAR, AND ALIMENTARY PASTES.
Claims use since Oct. 25, 1895.

Reg. No. 366,620. Registered Apr. 25, 1939. MAGGI CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

CROSS-STAR

FOR FOODS AND INGREDIENTS OF FOODS—NAMELY, SEASONINGS FOR IMPROVING SOUPS, SAUCES, GRAVIES, MEAT AND VEGETABLE DISHES; SOUPS, CONSOMMES, BOUILLONS, GRAVIES, MEAT EXTRACTS, MEAT JELLIES, SPICES, SAUCES FOR MEATS, FISH AND FOWL; VEGETABLE SAUCES, FRUIT SAUCES; WHEAT, RICE, BARLEY, OAT, RYE, MAIZE, BEAN AND POTATO FLOUR; SALT AND VINEGAR.
Claims use since June 8, 1898.

Reg. No. 368,818. Registered July 4, 1939. MAGGI CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.



FOR FOODS AND INGREDIENTS OF FOODS—NAMELY, SEASONINGS FOR IMPROVING SOUPS, SAUCES, GRAVIES, MEAT, AND VEGETABLE DISHES; SOUPS, CONSOMMES, BOUILLONS, GRAVIES, MEAT EXTRACTS, MEAT JELLIES, SPICES, SAUCES FOR MEAT, FISH AND FOWL; VEGETABLE SAUCES, FRUIT SAUCES; WHEAT, RICE, BARLEY, OAT, RYE, MAIZE, BEAN AND POTATO FLOUR; SALT, VINEGAR.
Claims use since June 8, 1898.

Reg. No. 368,819. Registered July 4, 1939. MAGGI CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

FOR FOODS AND INGREDIENTS OF FOODS—NAMELY, SEASONINGS FOR IMPROVING SOUPS, SAUCES, GRAVIES, MEAT AND VEGETABLE DISHES; SOUPS, CONSOMMES, BOUILLONS, GRAVIES, MEAT EXTRACTS, MEAT JELLIES, SPICES, SAUCES FOR MEATS, FISH AND FOWL; VEGETABLE SAUCES; FRUIT SAUCES; WHEAT, RICE, BARLEY, OAT, RYE, MAIZE, BEAN AND POTATO FLOUR; SALT, VINEGAR.
Claims use since July 10, 1908.

Reg. No. 368,827. Registered July 4, 1939. MAGGI CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

FOR FOODS AND INGREDIENTS OF FOODS—NAMELY, SEASONINGS FOR IMPROVING SOUPS, SAUCES, GRAVIES, MEAT AND VEGETABLE DISHES; SOUPS, CONSOMMES, BOUILLONS, GRAVIES, MEAT, EXTRACTS, MEAT JELLIES, SPICES, SAUCES FOR MEATS, FISH AND FOWL; VEGETABLE SAUCES; FRUIT SAUCES; WHEAT, RICE, BARLEY, OAT, RYE, MAIZE, BEAN AND POTATO FLOUR; SALT, VINEGAR.
Claims use since Oct. 21, 1937.

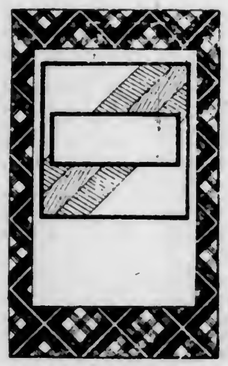
Reg. No. 371,140. Registered Sept. 19, 1939. GILLETT CANNING COMPANY, Gillett, Wis. Republished by Country Gardens, Inc., Milwaukee, Wis., a corporation of Wisconsin.

GREEN ACRE

FOR CANNED VEGETABLES.
Claims use since on or about Sept. 23, 1936.

Reg. No. 373,305. Registered Dec. 5, 1939. MINNESOTA MACARONI COMPANY, St. Paul, Minn., a corporation of Minnesota. Republished by registrant.

Quickettes



FOR ALIMENTARY PASTES.
Claims use since Mar. 1, 1939.

Reg. No. 377,221. Registered Apr. 23, 1940. THE KELLING NUT CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

Kay Kay

FOR SALTED, CANDIED, AND PLAIN NUT MEATS.
Claims use since 1907.

Reg. No. 377,744. Registered May 14, 1940. CHARLESTON MILLING COMPANY, Charleston, W. Va., a corporation of West Virginia. Republished by registrant.

FOR PANCAKE FLOUR, CAKE FLOUR, AND BISCUIT FLOUR.
Claims use since Jan. 6, 1938.

Reg. No. 382,935. Registered Nov. 19, 1940. PILLSBURY FLOUR MILLS COMPANY, Minneapolis, Minn. Republished by Pillsbury Mills, Inc., Minneapolis, Minn., a corporation of Delaware.

FOR FLOUR MADE FROM WHEAT.
Claims use since on or about Jan. 1, 1873.

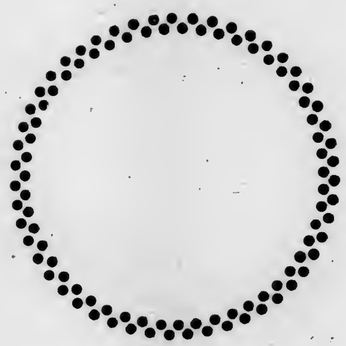
Reg. No. 385,055. Registered Feb. 11, 1941. PILLSBURY FLOUR MILLS COMPANY, Minneapolis, Minn. Republished by Pillsbury Mills Inc., Minneapolis, Minn., a corporation of Delaware.

Pillsbury's BEST XXXX Flour

The word "Flour" is disclaimed.
FOR FLOUR MADE FROM WHEAT, SELF RISING FLOUR, RYE FLOUR, AND WHEAT GERM.
Claims use since on or about April 1924.

Reg. No. 391,854. Registered Nov. 25, 1941. BLANKE-BAER EXTRACT & PRESERVING COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

WIN-YOU



FOR FRUIT BUTTERS, FRUIT PRESERVES, JELLIES, FLAVORING EXTRACTS FOR FOODS, PEANUT BUTTER, SANDWICH SPREAD, MUSTARD, PICKLES, OLIVES, SALAD DRESSING, MAYONNAISE, AND THE FOLLOWING PRODUCTS FOR USE ON OR IN ICE CREAM: FRUIT JUICES, FOUNTAIN FRUITS FOR SODA FOUNTAINS AND HOME USE, DRY NUTMEATS, NUTMEATS IN SYRUP, FROZEN FRUITS, CANDIES, CHOCOLATE SYRUP, CHOCOLATE PASTE, AND MARSHMALLOW CREME.
Claims use since Aug. 1, 1918, on fruit butters, fruit preserves, jellies, and flavoring extracts; and since various other dates on all the other products.

Reg. No. 392,893. Registered Jan. 20, 1942. PILLSBURY FLOUR MILLS COMPANY, Minneapolis, Minn. Republished by Pillsbury Mills, Inc., Minneapolis, Minn., a corporation of Delaware.

Pillsbury's BEST XXXX

FOR WHEAT FLOUR, PANCAKE FLOUR, BUCKWHEAT PANCAKE FLOUR, WHEAT BRAN, SELF-RISING FLOUR, WHEAT CEREAL, RYE FLOUR, YELLOW CORN MEAL, WHITE CORN MEAL, CORN GRITS, WHEAT GERM AND FOR THE FOLLOWING, TO-WIT: BRAN, SHORTS, MILL RUN, MIXED FEEDS, RED DOG, FLOUR MIDDLINGS, FEED MIDDLINGS USED AS FEEDS OR INGREDIENTS OF FEEDS FOR POULTRY, TURKEYS, GEESE, DUCKS, CATTLE, HORSES, MULES, SWINE, BIRDS AND VARIOUS WILD ANIMALS HELD IN CAPTIVITY.
Claims use since on or about Jan. 1, 1873, on flour made from wheat and feeds for fowls and animals; and since various other dates on other items.

Reg. No. 392,894. Registered Jan. 20, 1942. PILLSBURY FLOUR MILLS COMPANY, Minneapolis, Minn. Republished by Pillsbury Mills, Inc., Minneapolis, Minn., a corporation of Delaware.

FOR FLOUR MADE FROM WHEAT.
Claims use since Jan. 1, 1873, on flour made from wheat including bakery flour and family flour; and since various other dates on other items.

Reg. No. 402,976. Registered Aug. 24, 1943. KASCO MILLS, INC., Toledo, Ohio, a corporation of Ohio. Republished by registrant.

FOR DOG RATION.
Claims use since June 1936.

Reg. No. 403,888. Registered Oct. 19, 1943. KASCO MILLS, INC., Waverly, N. Y., a corporation of Ohio. Republished by registrant.

KASCO

FOR DOG RATION OR DOG FOOD.
Claims use since April 1936.

Reg. No. 421,472. Registered June 4, 1946. RED STAR YEAST AND PRODUCTS COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

EGGVANTAGE

FOR MIXTURE OF EGG MATERIAL, AN EMULSIFYING SYRUP AND OTHER SUBSTANCES SUITABLE FOR USE AS AN INGREDIENT IN MAKING BAKERY PRODUCTS, CUSTARDS, AND ICE CREAM.
Claims use since June 11, 1945.

Reg. No. 422,918. Registered Aug. 20, 1946. GOLDEN NUGGET SWEETS LTD., San Francisco, Calif., a limited partnership. Republished by registrant.

RUMSY

FOR CHOCOLATE COATED CANDY BARS.
Claims use since Mar. 21, 1941.

Reg. No. 424,007. Registered Sept. 17, 1946. CARL A. FUTTER, doing business as The Carlay Company, Chicago, Ill. Republished by Carl A. Futter.

Ayds

FOR CANDY.
Claims use since Sept. 3, 1937.

Reg. No. 430,806. Registered June 24, 1947. THE D. L. CLARK COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

CONFECTIONS THE D.L.C. © OF TASTE

The words "Confections of Taste" are disclaimed.
FOR CANDIES.
Claims use since Aug. 15, 1919.

CLASS 47

WINES

Reg. No. 400,322. Registered Mar. 2, 1943. SAN MARINO WINE CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant.

PIERRE PERIGNON

FOR WINE.
Claims use since November 1939.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 308,274. Registered Nov. 28, 1933. CHR. HEURICH BREWING COMPANY, Washington, D. C., a corporation of Virginia. Republished by registrant.

CHR. HEURICH BREWING CO.

FOR MALT BEVERAGES OF NOT MORE THAN LEGAL ALCOHOLIC CONTENT.
Claims use since 1891.

Reg. No. 335,012. Registered May 19, 1936. THE BUCKEYE BREWING COMPANY Toledo, Ohio, a corporation of Ohio. Republished by registrant.

BUCKEYE

FOR MALT BEVERAGE WITH NOT MORE THAN THE LEGAL ALCOHOLIC CONTENT.
Claims use since 1885.

Reg. No. 336,369. Registered July 7, 1936. THE BUCKEYE BREWING COMPANY, Toledo, Ohio, a corporation of Ohio. Republished by registrant.

FOR MALT BEVERAGE WITH NOT MORE THAN THE LEGAL ALCOHOLIC CONTENT.
Claims use since Dec. 30, 1935.

Reg. No. 345,323. Registered Apr. 20, 1937. BEVERWYCK BREWERIES, INC., Albany, N. Y., a corporation of New York. Republished by registrant.

Beverwyck

FOR ALE AND LAGER BEERS.
Claims use since about December 1877.

Reg. No. 371,924. Registered Oct. 17, 1939. THE GEO. WIEDEMANN BREWING CO., INC., Newport, Ky., a corporation of Kentucky. Republished by registrant.

Royal Amber

FOR BEER.
Claims use since on or about Jan. 1, 1894.

Reg. No. 385,098. Registered Feb. 18, 1941. KIEWEL BREWING COMPANY, Little Falls, Minn., a corporation of Minnesota. Republished by registrant.

WHITE SEAL

The drawing is lined for gold.
FOR BEER.
Claims use since on or about June 5, 1907.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 377,333. Registered Apr. 30, 1940. KEASBEY & MATTISON COMPANY, Ambler, Pa., a corporation of Pennsylvania. Republished by registrant.

K&M best in asbestos

The words "Best in Asbestos" are disclaimed.
FOR ASBESTOS CLOTH.
Claims use since about Oct. 1, 1937.

Reg. No. 411,620. Registered Jan. 23, 1945. ARMSTRONG CORK COMPANY, Lancaster, Pa., a corporation of Pennsylvania. Republished by registrant.

Armstrong's

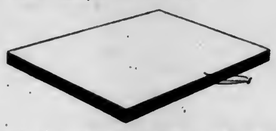
FOR BOTTLE CORKS.
Claims use since about 1864.

Reg. No. 412,143. Registered Feb. 20, 1945. ARMSTRONG CORK COMPANY, Lancaster, Pa., a corporation of Pennsylvania. Republished by registrant.

FLEXICORK

FOR RESILIENT PLASTIC COMPOSITION MATERIAL CONTAINING CORK FOR USE IN THE MANUFACTURE OF SHOES.
Claims use since on or about June 23, 1944.

REISSUES



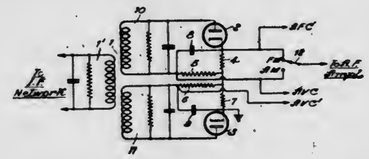
APRIL 27, 1948

22,995

METHOD AND APPARATUS FOR MOLECULAR ABSORPTION OF VIBRATION

Clark W. Chamberlain, East Lansing, Mich.

Original No. 2,407,400, dated September 10, 1946, Serial No. 531,900, April 20, 1944. Application for reissue September 5, 1947, Serial No. 772,380
32 Claims. (Cl. 188—1)



1. A device of the class described including an enclosing envelope comprising, a lower member of metal depressed within the peripheral portions thereof to form a recess and flange portions around the recess and a similar upper member reversed with respect to and positioned over the lower member, with flange portions of the envelope members in engagement with each other and permanently secured together, and a plurality of thin sheets of metal in superimposed relation located in the recessed portions of said plates, said sheets at opposing surfaces having liquid applied thereto and with all excess liquid removed to leave a liquid film of a thickness only of the molecules of such liquid as are held by molecular attraction of the metal thereon, said envelope plates bearing against the upper and lower sheets of said plurality of sheets to place them under pressure which forces free air from between the superimposed sheets and leaves a film of air attached to and held by molecular attraction of the liquid films.

22,996

DIFFERENTIAL DETECTOR CIRCUITS

Murray G. Crosby, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware

Original No. 2,296,092, dated September 15, 1942, Serial No. 402,784, July 17, 1941. Application for reissue December 28, 1943, Serial No. 515,963
13 Claims. (Cl. 250—27)

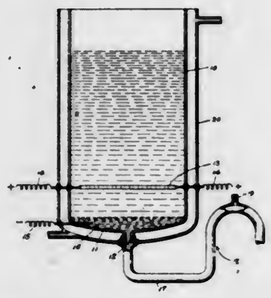
12. In combination with a source of signals, a pair of detectors each having a respective input circuit coupled to said source, a respective output resistor operatively associated with each detector, means for joining a point on one resistor to a point on the other resistor, said points being located so as to divide each output resistor into first and second sections, connections for deriving from across the first section of one output resistor and the second section of the second output resistor in series aiding relation the additive combination of the detected voltages developed thereacross, and separate connections for deriving from across each of the second sections of the two output resistors in series-opposing relation the differential combination of the detected voltages developed thereacross.

PATENTS

GRANTED APRIL 27, 1948

2,440,236
CATALYST
Robert I. Stirton, Redondo Beach, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
No Drawing. Original application May 3, 1944, Serial No. 533,949. Divided and this application February 12, 1946, Serial No. 647,215
8 Claims. (Cl. 252—210)

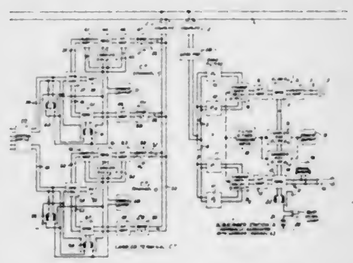
1. A catalyst consisting essentially of a major proportion of a carrier selected from the class consisting of alumina which has been activated and magnesia, and a minor proportion between about 1% and 15% of a heavy metal oxide catalytic agent distended thereon, said carrier having been stabilized by the addition thereto of between 1% and 15% of aluminum orthophosphate.



2,440,237
RESINOUS POLYMERS OF UNSATURATED ETHEREAL ESTERS
David E. Adelson, Berkeley, and Hans Dannenberg, Berkeley Highlands, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application February 1, 1944, Serial No. 520,688
17 Claims. (Cl. 260—78.3)

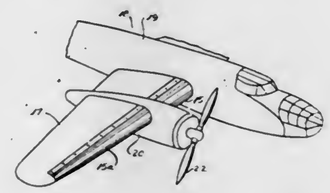
17. A polymer of a compound represented by the general formula

$$R_1\text{—O—D—}\overset{\overset{O}{\|}}{C}\text{—O—}R_2$$



wherein R_1 and R_2 are allyl groups and D is a divalent saturated unsubstituted hydrocarbon radical of 1 to 17 carbon atoms.

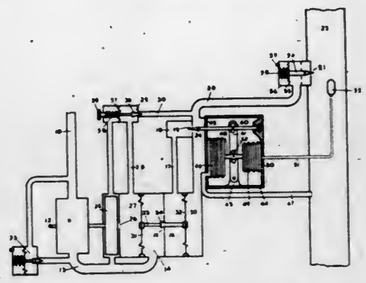
2,440,238
MEANS FOR PRODUCING MERCURY ELECTROLYTICALLY FROM ACID SOLUTIONS
Harold R. Alley, Northbrook, and Benjamin F. Freeberg, Chicago, Ill.
Application December 9, 1942, Serial No. 468,396
2 Claims. (Cl. 204—250)



1. An electrolytic cell for producing metallic mercury from an acid electrolyte containing a mercury salt having, in combination, a cylindrical container for acid electrolyte, the bottom wall of said container sloping inwardly and downwardly and having a central outlet, a liquid cooling jacket about said container, a stationary anode consisting of a flat perforate member suspended transversely in said container and having leads extending through and sealed in the side wall of said container in the lower portion thereof, a cathode in the lower portion of said container below said anode and comprised of a static pool of metallic mercury, a conduit connected at one end to said outlet and having a reverse bend located above said outlet for maintaining constant the level of said cathode pool within the container, and an air vent opening upwardly from the top of said reverse bend in said conduit, said conduit affording a passage for the continuous removal of mercury from said pool as mercury is electrolytically deposited thereon.

2,440,239
TWO-WAY CARRIER WAVE TELEPHONE SYSTEM
Milton L. Almquist, Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 6, 1945, Serial No. 633,205
9 Claims. (Cl. 179—15)

3. In a carrier wave communication system, a transmission medium, a plurality of groups of subscriber carrier communication stations and a corresponding number of two-way carrier terminals connected to said medium, one group of said subscriber stations and one of said carrier terminals associated with one carrier channel on said medium normally utilizing one carrier frequency for transmission in one direction between each subscriber station in that group and said one carrier terminal and a second carrier frequency for transmission in the opposite direction therebetween, a second group of said subscriber stations and a second of said carrier terminals associated with a second carrier channel on said medium normally utilizing a third carrier frequency for transmission in one direction between each subscriber station in the group and said second carrier terminal and a fourth carrier frequency for transmission in the opposite direction therebetween, a common central switching office associated with said medium separately through the carrier terminal station for each carrier channel and means to enable two-way communication without appreciable signal distortion between any two subscriber stations normally associated with the same carrier channel comprising means under control of the subscriber at the one of said two stations calling the other for changing the carrier transmitting and receiving frequencies of said one station only to those normally utilized by the subscriber stations of another channel, and means under control of said central switching office for setting up a connection between the carrier terminal stations for said same and said other channel such that the communication signals received by each from said medium are retransmitted by the other on its normal carrier transmitting frequency over said medium.

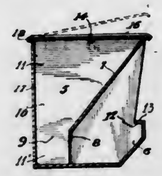


2,440,240
PROTECTIVE COVERING FOR PREVENTING ACCUMULATION OF ICE ON AIRFOILS
John O. Antonson, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application December 29, 1944, Serial No. 570,308
10 Claims. (Cl. 244—134)

1. Apparatus for preventing the accumulation of ice on a surface exposed to ice-forming conditions in airflow, said apparatus comprising a covering of elastic material for said surface including a front portion and a rearward portion and including a plurality of inflatable passages in each of said portions for distending said covering into a series of ridges, said plurality of passages in said front portion being wholly disposed within the latter said portion and of widths gradually narrower throughout their lengths toward said rearward portion, and said plurality of passages in said rearward portion being wholly disposed therein closely adjacent one another and being of less width throughout their lengths than the width of each of said passages in said front portion, whereby said covering is distensible into ridges relatively small and closely adjacent one another in said rearward portion as compared to the ridges in said front portion.

2,440,241
FUEL SUPPLY SYSTEM FOR INTERNAL-COMBUSTION ENGINES
George Jeffrey Armstrong, Farnborough, England
Application February 27, 1945, Serial No. 580,028
In Great Britain June 9, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires June 9, 1963
6 Claims. (Cl. 123—119)

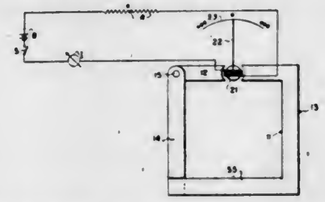
1. In a fuel supply system for injecting fuel into an internal combustion engine intake the provision of means for adjusting a metering valve to represent a function of the absolute pressure in the intake and of a pressure equivalent to the exhaust back pressure, said means comprising two connected resilient bellows of different size connected to said valve, one of said bellows being evacuated internally, and the other subjected internally to the pressure in the intake and both being immersed in a liquid whose pressure is



maintained at a value exceeding said other pressure by a predetermined quantity.

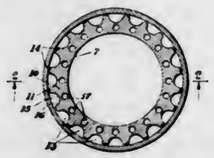
2,440,242
ESTERIFIED ROSIN MODIFIED WITH ORGANIC ACIDS AND PROCESS FOR MAKING SAME
Laszlo Auer, South Orange, N. J.
No Drawing. Application October 12, 1942, Serial No. 461,800
11 Claims. (Cl. 260—104)

1. A process for preparing a condensation product of rosin which process comprises incorporation in the rosin from 2% to 30% of an organic acid selected from the class consisting of oxalic acid, citric acid, salicylic acid, tartaric acid and benzoic acid, and heating the mixture between about 160° C. and 350° C., but not above the temperature at which extensive decarboxylation occurs under the conditions of the process, said heating being carried out for at least one half hour and until condensation takes place between the rosin and the acid used and further comprising esterification of the modified rosin.



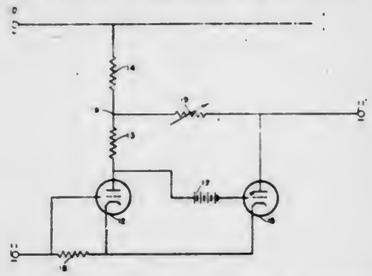
2,440,243
POULTRY FEEDER
Dora E. Barrett, El Centro, Calif.
Application December 11, 1943, Serial No. 513,947
1 Claim. (Cl. 119—52)

A poultry feeder comprising a feeding trough having side walls, at least one of said side walls being provided on its upper edge with an inturned flange, a feed hopper for the trough having spaced side walls, at least one of said side hopper walls sloping downwardly toward the other and from the flanged wall of the trough and terminating in a vertical lower edge portion, said feeder having end walls common to the hopper and the trough, said end walls extending beyond the sloping side wall of the hopper and being provided with shoulders, the ends of said inturned flange extending inwardly upon and being secured to said shoulders, a transverse partition dividing the hopper into compartments and having a sloping



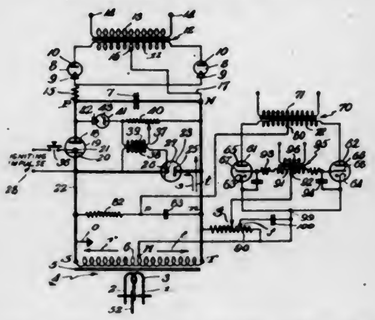
edge and provided with a depending lower portion that extends to the bottom of the trough, the upper portion of the sloping wall of the hopper and its vertical lower edge portion being respectively secured to the sloping edge and to the edge of the depending lower portion of the partition.

2,440,244
ELECTRICAL HOOK-ON METER SYSTEM
Thomas B. Brown, Arlington, Va.
Application June 4, 1943, Serial No. 489,670
9 Claims. (Cl. 171—95)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In a device of the character disclosed for measuring direct current flowing within a conductor without establishing a physical connection thereto, a core of magnetic material having a movable portion and adapted to be arranged about the conductor, a movable coil rotatably arranged within the magnetic circuit of said core, an indicating element controlled by said coil and rotatable therewith, means for yieldably urging the indicating element toward an initial setting, means for causing a predetermined flow of current within said coil whereby the electrodynamic reaction between the flux set up by the coil and the flux induced within the core by said conductor causes the indicating element to be rotatively moved from said initial setting to a setting corresponding to the current flowing within said conductor, and means for measuring said predetermined flow of current by the full scale deflection of said indicating element.

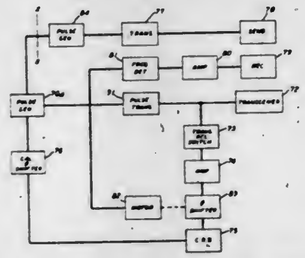
2,440,245
COOLING OF HIGH-TEMPERATURE BODIES
Paul Georges Chevigny, New York, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application March 13, 1944, Serial No. 526,168
19 Claims. (Cl. 250—27.5)



1. In combination, an anode structure having a heated surface and a longitudinally corrugated cooled surface, means for passing a liquid cooling medium over said cooled surface, and heat flow deviation means arranged between said heated surface and the bottom portion of the grooves of said cooled surface in such a way as to provide longer heat conducting paths from the heated surface to the bottom of said grooves than without said heat flow deviation means.

2,440,246
VOLTAGE REGULATOR
George W. Cook, Washington, D. C.
Application February 15, 1943, Serial No. 475,921
7 Claims. (Cl. 323—22)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

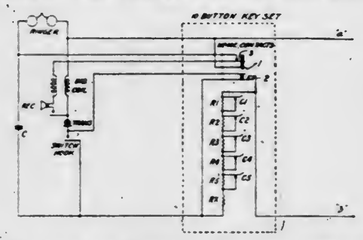
1. A voltage regulator adapted to operate between a source of constant potential and a load, including a positive input line, a negative input line, a shunt across said lines including an electron tube, resistance means in the negative input line for producing a voltage drop depending on the flow of current through said load and through said shunt, means dependent upon the voltage drop across said resistance means for biasing the electron tube to vary the conductivity thereof, another electron tube in the negative input line between the resistance means and the load, means for varying the plate resistance of the said other tube and thus the output of the regulator by means of the variation in the conductivity of the first mentioned tube, and means for fixing the incremental resistance of the regulator within its operating range at zero.



2,440,247
WELDING SYSTEM
John W. Dawson, Auburndale, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application January 23, 1942, Serial No. 427,897
11 Claims. (Cl. 323—58)

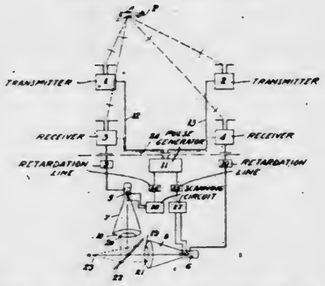
1. An electric control system comprising a transformer having an input winding with two supply terminals, an intermediate terminal, an output winding and a magnetic circuit coupling said windings, means for supplying to said windings a current impulse with an ascending and a decaying period and having a unidirectionally operative component, a resistance and a capacitance

connected in series between said input terminals, voltage apportioning means connected between said intermediate terminal and one of said supply terminals, a current source having terminals supplying a voltage difference, electronic valve means having cathode means connected to said intermediate terminal, anode means connected in series with said source terminals to a point between said resistance and said condenser, control electrode means connected to a point of said apportioning means.



2,440,248
OBJECT LOCATING APPARATUS
Wilfrid L. Dawson, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Original application August 19, 1944, Serial No. 550,155. Divided and this application December 20, 1946, Serial No. 717,372
6 Claims. (Cl. 177—352)

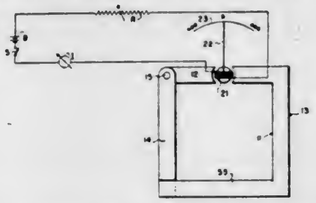
2. In combination with distance determining apparatus comprising means at an observing point for transmitting one portion of a signal pulse and receiving its echo, and means responsive to the echo and a further portion of the signal pulse for indicating the distance to an object causing the echo, means to compensate the distance indication for relative motion between said observing point and object, said last means comprising means at said point for transmitting a compensating pulse of preselected frequency and receiving its echo, and means responsive to frequency variations in the compensating echo, with reference to the preselected frequency, for varying the delay of echo of the signal pulse in a sense depending on the direction of the relative motion between said observing point and object, and to an extent depending on the amount of such relative motion whereby the distance indication is compensated for such relative motion for each distance-determining echo.



2,440,249
KEY CONTROLLED NUMERICAL DIGIT REGISTER EQUIPPED WITH DISCHARGE TUBE MEANS
Gerald Deakin, New York, N. Y., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application April 21, 1944, Serial No. 532,142
25 Claims. (Cl. 179—18)

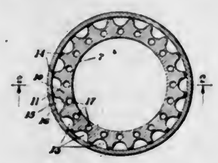
1. In a telecommunication system, a plurality of lines, each having a multi-digit number, means including a plurality of stages of numerical selector switches for establishing a connection between a calling and a called line, a plurality of keys for each line, a normally inactive register comprising digit switching means for variably operating the selectors in accordance with the different digits of the called number, said register comprising a plurality of electric discharge tube means less in number than the keys associated with a line, means for establishing a conductive connection from the keys to the tube means, a

source of direct current potential, means controlled by the keys over the connection for selectively operating the tube means from said source, and means controlled by the tubes for variably controlling the digit switching means.



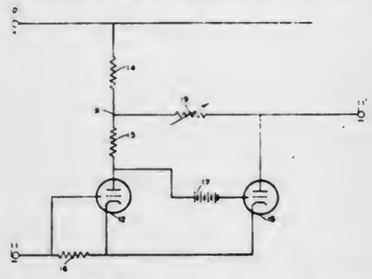
2,440,250
RADIO LOCATION SYSTEM
Edmond M. Deloraine and Emile Labin, New York, N. Y., and Paul François Marie Gloess, Paris, France, assignors to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application June 3, 1943, Serial No. 489,476
In France April 4, 1940
1 Claim. (Cl. 250—1.70)

A system for indicating the position of a distant body capable of returning received radio frequency impulses, comprising means for radiating energy impulses to said body, a first receiving means for receiving impulses returned from said body, a second receiving means for receiving impulses returned from said body, said second receiving means being spaced a predetermined significant distance from said first receiving means, said body having different characteristics of position with respect to said first and said second receiving means respectively, a first reproducing means responsive to the impulse received by said first receiving means for producing the first indication corresponding to a characteristic of the position of said object with respect to said first receiving means, a second reproducing means responsive to the impulse received by said second receiving means for producing the second indication corresponding to a characteristic of position of said body with respect to said second receiving means, and means for combining said indications including means to superpose the separate indications thereby producing a resultant indication of the position of said body



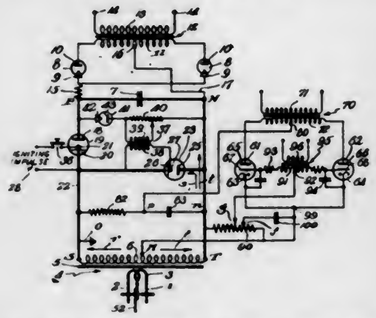
edge and provided with a depending lower portion that extends to the bottom of the trough, the upper portion of the sloping wall of the hopper and its vertical lower edge portion being respectively secured to the sloping edge and to the edge of the depending lower portion of the partition.

2,440,244
ELECTRICAL HOOK-ON METER SYSTEM
Thomas B. Brown, Arlington, Va.
Application June 4, 1943, Serial No. 489,670
9 Claims. (Cl. 171—95)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In a device of the character disclosed for measuring direct current flowing within a conductor without establishing a physical connection thereto, a core of magnetic material having a movable portion and adapted to be arranged about the conductor, a movable coil rotatably arranged within the magnetic circuit of said core, an indicating element controlled by said coil and rotatable therewith, means for yieldably urging the indicating element toward an initial setting, means for causing a predetermined flow of current within said coil whereby the electrodynamic reaction between the flux set up by the coil and the flux induced within the core by said conductor causes the indicating element to be rotatively moved from said initial setting to a setting corresponding to the current flowing within said conductor; and means for measuring said predetermined flow of current by the full scale deflection of said indicating element.

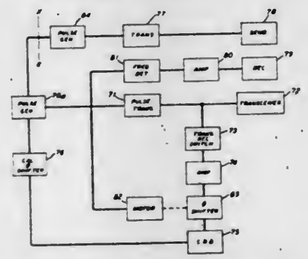
2,440,245
COOLING OF HIGH-TEMPERATURE BODIES
Paul Georges Chevigny, New York, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application March 13, 1944, Serial No. 526,168
19 Claims. (Cl. 250—27.5)



1. In combination, an anode structure having a heated surface and a longitudinally corrugated cooled surface, means for passing a liquid cooling medium over said cooled surface, and heat flow deviation means arranged between said heated surface and the bottom portion of the grooves of said cooled surface in such a way as to provide longer heat conducting paths from the heated surface to the bottom of said grooves than without said heat flow deviation means.

2,440,246
VOLTAGE REGULATOR
George W. Cook, Washington, D. C.
Application February 15, 1943, Serial No. 475,921
7 Claims. (Cl. 323—22)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

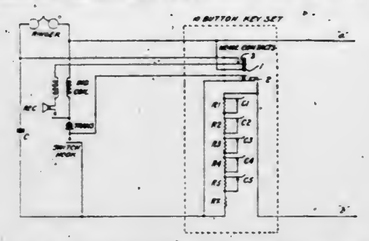
1. A voltage regulator adapted to operate between a source of constant potential and a load, including a positive input line, a negative input line, a shunt across said lines including an electron tube, resistance means in the negative input line for producing a voltage drop depending on the flow of current through said load and through said shunt, means dependent upon the voltage drop across said resistance means for biasing the electron tube to vary the conductivity thereof, another electron tube in the negative input line between the resistance means and the load, means for varying the plate resistance of the said other tube and thus the output of the regulator by means of the variation in the conductivity of the first mentioned tube, and means for fixing the incremental resistance of the regulator within its operating range at zero.



2,440,247
WELDING SYSTEM
John W. Dawson, Auburndale, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application January 23, 1942, Serial No. 427,897
11 Claims. (Cl. 323—58)

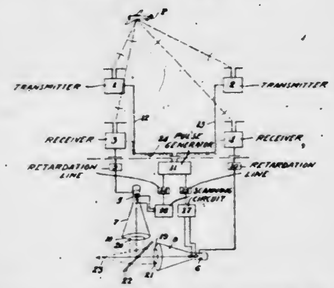
1. An electric control system comprising a transformer having an input winding with two supply terminals, an intermediate terminal, an output winding and a magnetic circuit coupling said windings, means for supplying to said windings a current impulse with an ascending and a decaying period and having a unidirectionally operative component, a resistance and a capacitance

connected in series between said input terminals, voltage apportioning means connected between said intermediate terminal and one of said supply terminals, a current source having terminals supplying a voltage difference, electronic valve means having cathode means connected to said intermediate terminal, anode means connected in series with said source terminals to a point between said resistance and said condenser, control electrode means connected to a point of said apportioning means.



2,440,248
OBJECT LOCATING APPARATUS
Wilfrid L. Dawson, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Original application August 19, 1944, Serial No. 550,155. Divided and this application December 20, 1946, Serial No. 717,372
6 Claims. (Cl. 177—352)

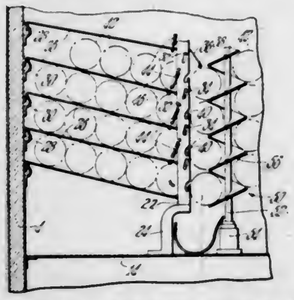
2. In combination with distance determining apparatus comprising means at an observing point for transmitting one portion of a signal pulse and receiving its echo, and means responsive to the echo and a further portion of the signal pulse for indicating the distance to an object causing the echo, means to compensate the distance indication for relative motion between said observing point and object, said last means comprising means at said point for transmitting a compensating pulse of preselected frequency and receiving its echo, and means responsive to frequency variations in the compensating echo, with reference to the preselected frequency, for varying the delay of echo of the signal pulse in a sense depending on the direction of the relative motion between said observing point and object, and to an extent depending on the amount of such relative motion whereby the distance indication is compensated for such relative motion for each distance-determining echo.



2,440,249
KEY CONTROLLED NUMERICAL DIGIT REGISTER EQUIPPED WITH DISCHARGE TUBE MEANS
Gerald Deakin, New York, N. Y., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application April 21, 1944, Serial No. 532,142
25 Claims. (Cl. 179—18)

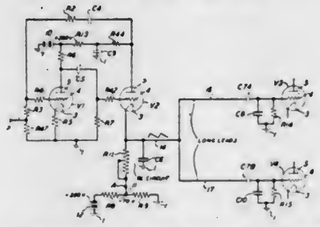
1. In a telecommunication system, a plurality of lines, each having a multi-digit number, means including a plurality of stages of numerical selector switches for establishing a connection between a calling and a called line, a plurality of keys for each line, a normally inactive register comprising digit switching means for variably operating the selectors in accordance with the different digits of the called number, said register comprising a plurality of electric discharge tube means less in number than the keys associated with a line, means for establishing a conductive connection from the keys to the tube means, a

source of direct current potential, means controlled by the keys over the connection for selectively operating the tube means from said source, and means controlled by the tubes for variably controlling the digit switching means.



2,440,250
RADIO LOCATION SYSTEM
Edmond M. Deloraine and Emile Labin, New York, N. Y., and Paul François Marie Gloess, Paris, France, assignors to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application June 3, 1943, Serial No. 489,476
In France April 4, 1940
1 Claim. (Cl. 250—1.70)

A system for indicating the position of a distant body capable of returning received radio frequency impulses, comprising means for radiating energy impulses to said body, a first receiving means for receiving impulses returned from said body, a second receiving means for receiving impulses returned from said body, said second receiving means being spaced a predetermined significant distance from said first receiving means, said body having different characteristics of position with respect to said first and said second receiving means respectively, a first reproducing means responsive to the impulse received by said first receiving means for producing the first indication corresponding to a characteristic of the position of said object with respect to said first receiving means, a second reproducing means responsive to the impulse received by said second receiving means for producing the second indication corresponding to a characteristic of position of said body with respect to said second receiving means, and means for combining said indications including means to superpose the separate indications thereby producing a resultant indication of the position of said body

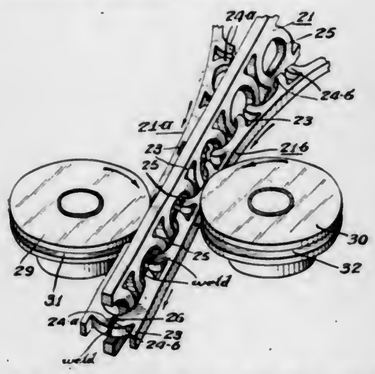


not given by the said first and second indications when uncombined, said combined indications being positioned with respect to each other in proportion to the spacing of said first and second receiving means.

2,440,251
VENDING MACHINE
Joseph M. Devens, Springfield, Mass.
Application June 21, 1944, Serial No. 541,311
3 Claims. (Cl. 312—48)

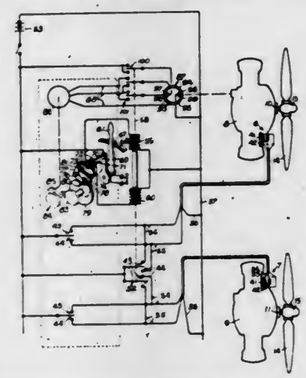
1. Apparatus for dispensing bottles and the like comprising in combination, a casing having side walls, transporters between the said side walls rotatable on vertical axes and having spirally arranged members for receiving and lowering bottles, vertically spaced shelves on opposite sides of and inclined downwardly toward said transporters hingedly connected at outer ends to said side walls whereby their inner ends may swing from lower to upper positions, and means on the inner ends of said shelves adapted to hold bottles on a shelf below against movement therefrom by the weight of bottles on the upper shelf.

2,440,252
MULTIVIBRATOR
Thomas L. Dimond, Rutherford, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 13, 1945, Serial No. 582,457
6 Claims. (Cl. 250—36)



1. An oscillator for producing a saw-tooth wave form comprising a pair of electron discharge tubes each including a cathode, a control electrode and an anode, means including anode resistances for maintaining said anodes positive with respect to said cathodes, means including capacitances for connecting the anode of each of said tubes with the control electrode of the other of said tubes, means including resistances for connecting said control electrodes with one of said cathodes, means including another resistance for connecting the other of said cathodes with a source of direct current bias potential which is negative with respect to said one of said cathodes, and means including a condenser connected across said another cathode resistance, the value of said negative bias potential being related to a partial capacitance discharge value of said condenser and comprising means for obtaining a nearly linear discharge characteristic for the form of said saw-tooth wave when said condenser discharges through said another resistance.

2,440,253
PULSE RADAR INTERFERENCE PRODUCER
Sven H. M. Dodington, Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application July 4, 1944, Serial No. 543,454
18 Claims. (Cl. 250—1.76)

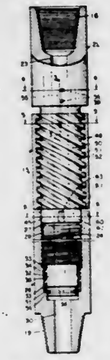


5. A repeater system for falsely simulating the reflection of a group of obstacles in response to a radio impulse comprising means for detecting radio impulses, pulse generating means responsive to energy of a detected impulse to produce a composite pulse signal simulating the reflection characteristics of said group of obstacles, and means to transmit said composite pulse signal at substantially the same carrier frequency at which said impulse was detected.

2,440,254
CHAIN AND METHOD AND APPARATUS FOR FORMING SAME
Howard W. Dodson, Yeadon, Pa., assignor to United Steel Barrel Company, Philadelphia, Pa., a corporation of Pennsylvania
Application July 14, 1944, Serial No. 544,907
9 Claims. (Cl. 59—35)

7. For forming a chain or the like, means for punching elongated strips from blanks of sheet-metal or the like, each of said strips including a plurality of longitudinally-spaced links integrally connected by pairs of lateral webs; means for longitudinally cutting a strip thereby to provide a pair of half-strips each including a plurality of half-links integrally connected by a lateral web; means for electrically flash-welding the cut ends of the pair of half-links in intermeshing engagement with the links of an uncut strip; and means for trimming the connecting webs from said strips, thereby to free the links.

2,440,255
REMOTE-CONTROL SYSTEM
George Forrest Drake, Rockford, Ill., assignor to Woodward Governor Company, Rockford, Ill., a corporation of Illinois
Application July 14, 1944, Serial No. 544,963
12 Claims. (Cl. 74—388)

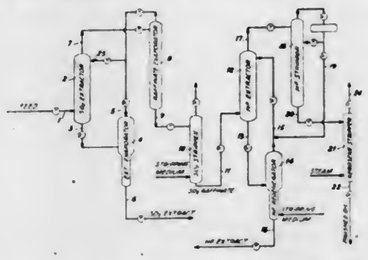


1. A remote control system having, in combination, a rotary member adapted to be power driven, an associated part to be moved in opposite directions to different positions selectable at a remote point of control, couplings adapted to be rendered operative selectively to couple said rotary member to said part to drive the latter in opposite directions, magnetic windings energizable to render the respective couplings operative in driving said part in a selected direction, a commutating switch driven in unison with said member, an electric motor located at said remote control point and adapted when electrically connected to said switch to rotate in unison therewith, means including control switches at said remote point controlling the energization of said coupling windings selectively, an element at said remote point manually movable to various positions and operable during such movement to close one or the other of said control switches, means driven by said motor and actuating said control switches to follow-up the movement of said element and open the closed switch when the selected position of said part has been reached, and means for electrically connecting said commutating switch and said motor while either one of said control switches is closed and disconnecting the same when both of said control switches are open.

2,440,256
PRODUCTION OF THERMOPLASTIC POLYMERIC MATERIAL
Henry Dreyfus, London, England; Claude Bonard, administrator of said Henry Dreyfus, deceased, assignor to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application August 2, 1944, Serial No. 547,805. In Great Britain July 26, 1943
1 Claim. (Cl. 260—83)

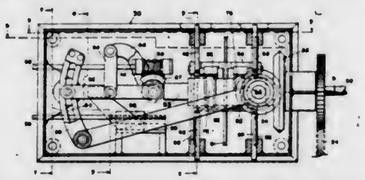
Process for the solution polymerization of methyl methacrylate, which comprises effecting said polymerization in a reaction medium comprising aqueous acetone, containing a plasticizer for the polymer, in an amount equal to 50 to 100% of the weight of the monomer, the ratio of acetone to water being about 8:3 the polymerization being carried out in a closed vessel at about 100° C. in the presence of a peroxide polymerization catalyst in solution, until substantially all the monomer is converted to polymer, all the polymer formed remaining in solution at the polymerization temperature although the reaction medium is not capable of holding the polymer in solution at atmospheric temperature, and then recovering the polymer in friable form by the evaporation of the acetone.

2,440,257
SAFETY JOINT
Lewis E. Edwards, Huntington Park, Calif., assignor of forty per cent to Anthony J. Keel, Downey, and twenty per cent to Louis Budway, Huntington Park, Calif.
Application September 7, 1946, Serial No. 695,379
12 Claims. (Cl. 285—146)



1. A safety joint including, a tubular mandrel member adapted to be carried at the lower end of a string of pipe, a tubular member adapted to be carried at the upper end of a complementary string of pipe, means providing a threaded connection between said members, flexible abutment means carried by one of said members for limiting the extent of said threaded connection between said members, and means tending to urge said abutment means into firm engagement with the other of said members when said abutment means is engaged by said other member and tends to rotate therewith as said members are rotated relatively in a direction to screw one onto the other and tending to urge said abutment means out of engagement with said other member when said members are rotated relatively in an opposite direction.

2,440,258
REFINING OF PETROLEUM DISTILLATES
Laverne P. Elliott, Berkeley, and Melvin M. Holm, San Francisco, Calif., assignors to California Research Corporation, San Francisco, Calif., a corporation of Delaware
Application August 8, 1945, Serial No. 609,676
8 Claims. (Cl. 196—14.19)

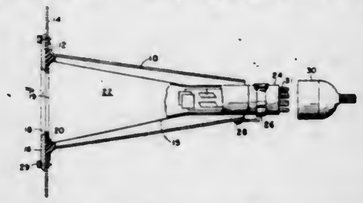


1. A process of refining a hydrocarbon oil containing aromatic and non-aromatic hydrocarbons and sulfur compounds to obtain therefrom a high yield of a product of extremely low sulfur content

and of controlled hydrocarbon type composition, comprising first extracting said hydrocarbon oil with liquid sulfur dioxide to remove the desired major amount of aromatic hydrocarbons therefrom, and subsequently extracting the raffinate

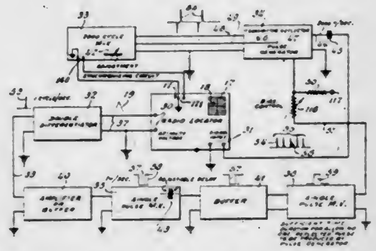
obtained from the sulfur dioxide extraction with liquid hydrogen fluoride in the absence of added agents other than up to 20% water to remove sulfur compounds substantially completely therefrom without appreciably changing the minor aromatic content of said raffinate.

2,440,259
CAM ACTUATED VALVE MECHANISM FOR FLUID PRESSURE ENGINES
Thomas C. Gray, United States Navy
Application March 9, 1945, Serial No. 581,818
14 Claims. (Cl. 121—167)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A fluid distribution control unit for actuating the valves of an elastic fluid engine comprising inlet and exhaust valve operating cams, engine driven means for imparting a timed rotary motion to said cams, and adjustable means including an axially movable sleeve for advancing and retarding the rotary motion of the cams during successive portions of their rotation.

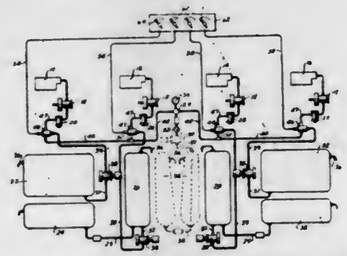
14. A fluid distribution control unit for actuating the valves of a fluid engine comprising a cam supporting member, valve operating cams slidably mounted upon said cam-supporting member, means for rotating the cam-supporting member and the cams mounted thereon, means for imparting reciprocating movement to the cam supporting member, and a common drive for said rotating and reciprocating means.



2,440,260
CATHODE-RAY TUBE MOUNT
James E. Gall, Washington, D. C.
Application July 14, 1945, Serial No. 605,160
5 Claims. (Cl. 250—141)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

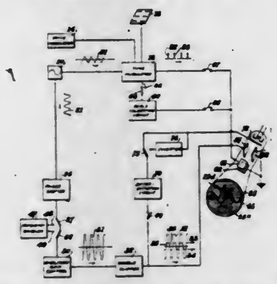
1. A cathode-ray tube mount comprising a hollow metallic shield having open ends and adapted to accommodate and encompass the sides of a cathode-ray tube, support means supporting said shield independently of the tube, means including a resilient abutting member arranged to engage and support the screen end of said cathode-ray tube in a desired operating position, contractile

clamp means for engaging and firmly gripping the base member of said cathode-ray tube in the closed position of said clamp means, and support means for said contractile clamp means fixed in relation to said shield.



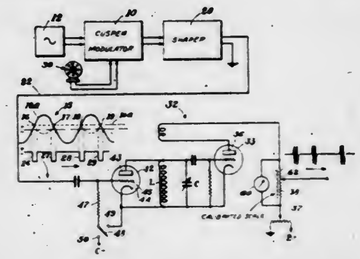
2,440,261
RADIO LOCATOR TEST APPARATUS
Edward L. Ginzton, Garden City, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application May 30, 1945, Serial No. 596,707
10 Claims. (Cl. 250—1.62)

7. Recurrent pulse radio locator testing apparatus comprising a pulse generator for periodically producing pairs of pulses at a rate corresponding to the recurrent pulse repetition rate of the radio locator, means connected to said generator for normally suppressing the second of each pair of pulses, and a unit for periodically overcoming the suppressing of said second pulses whereby transmitted pulses of said radio locator are simulated by the first of each pair of pulses and reflections of some transmitted pulses are simulated by said unsuppressed pulses.



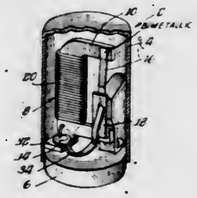
2,440,262
FUEL SUPPLY SYSTEM FOR AIRCRAFT
Ralph E. Grey and Edward M. Gavin, Osborn, Ohio
Application February 16, 1942, Serial No. 431,114
15 Claims. (Cl. 158—36)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

11. A fuel supply system for multiengined aircraft comprising a plurality of fuel outlet means, a fuel reservoir means associated with each of said outlet means, an individual conduit communicatively connecting each of said reservoir means with its associated outlet means, a multiway valve and a centrifugal pump interposed in each of said conduits, said valve being located between said pump and said outlet means and being provided with a control member settable to any one of a plurality of positions, a cross-feed conduit communicatively connected with each of said valves, a reserve fuel reservoir means, a separate conduit communicatively connecting said last-named means with said cross-feed conduit, and a shut-off valve and a centrifugal pump interposed in said separate conduit, each of said aforementioned pumps being characterized by its ability to pass fuel in either direction when rendered inoperative whereby, upon proper setting of said control members, fuel may be transferred from any selected reservoir means whose associated pump has been rendered operative to any of the remaining reservoir means whose associated pump has been rendered inoperative and simultaneously delivered to any one or more of said outlet means.



15. A fuel supply system for multiengined aircraft comprising a plurality of fuel outlet means; a fuel reservoir means associated with each of said outlet means; and a valve interposed between each outlet means and its associated reservoir means, each of said valves comprising a multiport valve body having one port communicatively connected with the outlet means, a second port communicatively connected with the reservoir means, and a third port communicatively connected with a corresponding port of each of the other of said valves, and the valves having a positionable selector means for each valve for controlling the flow of fuel through said valve body and between said ports whereby fuel may be delivered from any selected reservoir means to any selected outlet means.

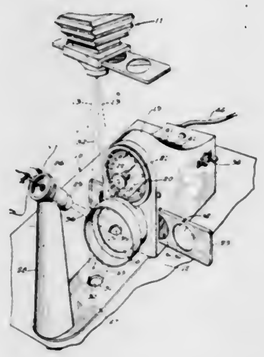
2,440,263
MONITORING CIRCUIT
Donald D. Grieg, Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, a corporation of Delaware
Application September 18, 1942, Serial No. 458,853
12 Claims. (Cl. 315—24)



1. A method of monitoring the pairs of pulses of a pulse modulating system having a source of sinusoidal current, a generator forming recurring pairs of pulses in response to the sinusoidal current, means to time modulate said pairs of pulses and a cathode ray oscillograph; which method comprises clipping the sinusoidal wave a short distance above and below the center line thereof, using the inclined portions thus clipped from the sinusoidal wave to provide electrical sweep control for the oscillograph, the alternate inclined portions of the clipped wave constituting sweeps in opposed directions, and applying to the oscillograph at right angles to the electrical sweep control the energy of said pairs of pulses.

2,440,264
MODULATOR SYSTEM
Donald D. Grieg, Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application October 15, 1943, Serial No. 506,412
6 Claims. (Cl. 179—171.5)

1. A modulating system comprising an oscillator having an oscillatory tank circuit for producing an oscillatory wave, a vacuum tube having plate, cathode and grid electrodes, means connecting said plate and cathode electrodes across a part of said oscillator tank circuit, means for connecting the grid electrode to a source of pulses of negative polarity, a grid leak, and means connecting said grid leak to the cathode electrode to normally give the grid electrode zero bias, such zero bias condition functioning to permit said tube to conduct upon occurrence of positive halves of oscillations thereby preventing occurrence of oscillations during such zero bias condition, and said pulses of negative polarity operating to bias the tube to cut-off thereby rendering said tube non-conductive so as to permit said oscillator to produce oscillations during the occurrence of said pulses.

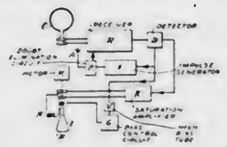


2,440,265
FLASHER
Henry R. Gross, Chicago, Ill.
Application April 5, 1943, Serial No. 481,852
3 Claims. (Cl. 200—113)

1. A flasher comprising a housing having one wall formed by a member of insulating material,

a relay in said housing and comprising a core mounted on said member, a coil upon said core, a switch blade comprising a thermo-responsive strip secured and electrically connected at one end to said core, an armature carried by said strip and attracted to said core when said coil is energized, a contact carried by said armature, a metal bracket mounted on said member, a switch contact carried by said bracket and positioned for engagement by the contact carried by the armature when the thermo-responsive strip is cold and for disengagement when the thermo-responsive strip is hot, terminal means connected to one end of the relay coil and extending out of the housing through said member, the other end of said coil being connected to said core, and additional terminal means connected to said bracket and extending out of the housing through said member.

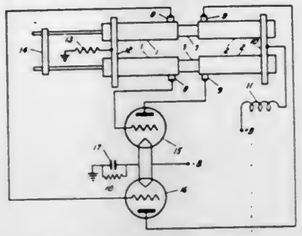
2,440,266
COMPARISON TYPE LIGHT MEASURING DEVICE
Joseph M. Hall, Chicago, Ill.
Application December 4, 1944, Serial No. 566,431
12 Claims. (Cl. 88—23)



1. In a densitometer for measuring a light beam projected onto a substantially horizontal surface, a casing adapted to rest upon said surface on the side of said beam opposite from the observer without masking the projection of the beam on said surface, a mirror serving as a wall of said casing in a direction transversely of the axis of the beam, said mirror facing outwardly of the casing and being positioned to direct to the observer's eye by reflection an image of the beam projection on said surface, said mirror having a light-transmitting spot within its reflecting area, a light source within said casing to illuminate said spot, a plurality of relatively movable members in a plane intersecting the path of light from said source to said spot, said plurality of members cooperating to define an aperture for controlling the illumination of said spot whereby the illumination of the spot may be matched with the light reflected from the mirror surface around the spot, said aperture having at least one edge conforming to a logarithmic curve so that relative movement of said members in arithmetical progression will vary the area of said aperture in geometrical progression, and means to indicate the relative positions of said members in terms of light value.

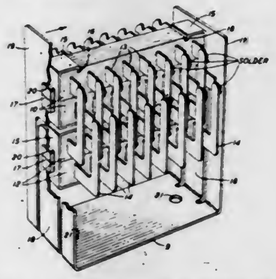
2,440,267
PROPELLANT AND PROCESS FOR MANUFACTURING
George C. Hale, Dover, N. J., assignor to the United States of America as represented by the Secretary of War
No Drawing. Application March 20, 1939, Serial No. 263,047
16 Claims. (Cl. 52—13)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A propellent powder comprising nitrocellulose 77.8%, nitroglycerin 20%, dinitrotoluene 1.2%, a stabilizer 1%, and having a coating of dinitrotoluene 2 to 10%.



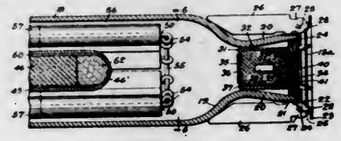
2,440,268
ELECTROMAGNETIC WAVE DIRECTION INDICATOR
René Hardy, Lyon, France, assignor to International Standard Electric Corporation, New York, N. Y.
Application May 28, 1943, Serial No. 488,875
In France January 17, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires January 17, 1961
9 Claims. (Cl. 343—118)

1. A radio direction finder comprising a directional antenna, means to rotate the directivity of said antenna, means to receive a signal from said antenna, means to detect said signal, means to produce pulses from portions of said detected signal having a value above a predetermined value, a second antenna adapted to intercept signals from any direction, means controlled by said pulses to feed said last mentioned signals into said receiving means during the periods of said pulses only, a cathode ray tube, means to control the spot of said tube in one coordinate of a two coordinate system with the rotation of said antenna directivity, means to control said spot in the other coordinate by the output of said detecting means, and means to extinguish the spot of said cathode ray tube for a predetermined period of time when the output of said detecting means rises above a predetermined value.



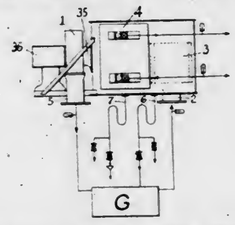
2,440,269
TUNABLE OSCILLATOR
Berthal W. Hargrove, Mayfield, Ky.
Application September 20, 1944, Serial No. 554,927
2 Claims. (Cl. 250—36)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A tunable, push-pull oscillator circuit comprising a pair of electron tubes each having at least an anode, a cathode and a grid, a first lecher line having a pair of spaced, parallel conductors respectively connected to the grids of said tubes, a second lecher line having a pair of spaced, parallel conductors respectively connected to the anodes of said tubes, a shorting bar on said first lecher line connected to said cathodes, a shorting bar on said second transmission line connected to said cathode in series with a source of plate current, said lecher lines being aligned in end-to-end relation, and a movable metallic element capacitatively coupling each conductor of said first lecher line with an



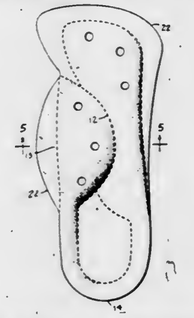
aligned conductor of said second lecher line, said metallic element overlapping only a portion of each line.

2,440,270
ELECTRICAL CONNECTOR
Rudolph A. Hecht, Teaneck, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 3, 1946, Serial No. 681,202
13 Claims. (Cl. 173—328)



1. An electrical connector comprising a pair of terminal units each having a plurality of contact springs, corresponding springs of said units having terminal ends mechanically connected together by fusible solder, and independently flexible supports for each of said units whereby said units may be relatively displaced to relatively tension the contact springs thereof at their soldered terminal ends.

2,440,271
ROCKET PROJECTILE
Clarence N. Hickman, Jackson Heights, N. Y., assignor to United States of America as represented by the Secretary of War
Application June 26, 1944, Serial No. 542,214
19 Claims. (Cl. 102—49)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



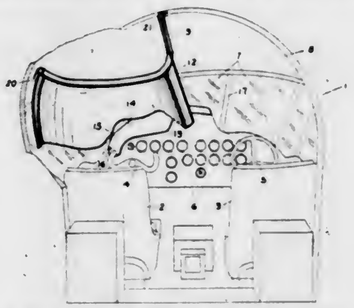
6. In a rocket projectile, a shell head, a motor tube of material frangible under predetermined explosive pressure and having a terminal Venturi nozzle, a tube extended from said head within the motor tube and having a hemispherical closed end, a bursting charge in the head and second tube, a propellant in the first tube around the second one, said hemispherical end being spaced in a relation to the venturi coordinated with the stream line flow of gases from the propellant beside the second tube to said nozzle.

2,440,272
DEHUMIDIFYING UNIT
William B. Holden, United States Navy
Application May 24, 1944, Serial No. 537,027
1 Claim. (Cl. 183—32)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

In combination with a closed gear casing, an apparatus for removing vapor and entrained oil droplets from the atmosphere of said casing that exists above the lubricant contained therein, said apparatus comprising three compartments connected in series, the first compartment containing a filter element and a drain for returning separated oil to the casing, the second compartment containing a vapor condensing means and a drain for removing condensed liquid, and the third compartment containing a blower, said first and third compartments further having inlet and outlet respectively connected to the gear casing at widely separated points.

2,440,273
ORTHOPAEDIC APPLIANCE
Harry Edward Hukill, Los Angeles, Calif., assignor to Velva-Sole Corporation, Chicago, Ill., a corporation of California
Application September 14, 1943, Serial No. 502,358
4 Claims. (Cl. 36—71)

1. A foot support and exerciser comprising an elongated body formed of resilient material and having a flat lower surface, said body being formed to provide a metatarsal pad portion at its forward end having a convexly curved upper surface and tapering in width to a relatively narrow strip in the medial portion of the body



along the outer side thereof, said strip portion having a laterally convexly curved upper surface and having an inwardly extending projection to provide a cuboid pad portion, said body having a substantially semi-circular half-dome-like pad portion located medially of the body along the inner side thereof, having a heel portion comprising a relatively thin substantially U-shaped loop extending from said last mentioned pad portion to said cuboid pad portion; and relatively thin flexible covers for the upper and lower surfaces of said body, said covers extending for a substantial distance beyond the lateral margins of said body in the region of the metatarsal pad portion thereof.

2,440,274

HOOD FOR SIMULATED INSTRUMENT FLYING IN MULTICONTROL AIRCRAFT

Franz O. Ibisch, United States Navy, Columbus, Wis.

Application May 5, 1945, Serial No. 592,153
4 Claims. (Cl. 244—121)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

4. In an airplane having an instrument panel and dual controls, a seat for an operator behind each control, transparent windows in front and to the sides of the seats, an opaque overhead, and an opaque hood depending from the overhead and extending forwardly from adjacent the rear margin of one side window, then laterally from adjacent the forward margin of said side window to a point adjacent the inner margin of the adjacent seat, then rearwardly, the hood surrounding both sides and the front of said seat and being of such dimensions that the windows are obscured to an occupant of said seat while the instrument panel remains visible to such occupant.

2,440,275

POWER SUPPLY SYSTEM FOR CARRIER COMMUNICATION SYSTEMS

Richard Kelly, London, England, assignor to Standard Telephones and Cables Limited, London, England, a British company

Application July 12, 1943, Serial No. 494,343
In Great Britain August 7, 1942
2 Claims. (Cl. 175—363)

1. In a power supply system for a multichannel carrier system in which each high tension direct current voltage controlling a load circuit is derived from an alternating current supply through a transformer and rectifier, regulation being obtained by controlling the potentials of a thermionic valve having a plurality of grids, the anode voltage of which controls the impedance of a space discharge regulator device connected in series with the load circuit, the combination therewith comprising means for deriving a bias reference potential, said means further comprising a separate transformer having a primary connected to said alternating current supply and a secondary, a static regulator of the

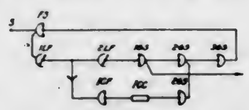
saturable choke type connected in said primary, a rectifier connected in said secondary, means for deriving a potential in opposition to said reference potential, said opposition potential varying according to the potential across the load circuit, and means for applying said reference potential and said opposition potential to the input of said thermionic valve.

2,440,276

BREWING METHOD USING ALBEDO IN WORT

Abraham Arnold Klein, Tel Aviv, Palestine

No Drawing. Application December 7, 1944, Serial No. 567,125. In Palestine September 25, 1943
7 Claims. (Cl. 99—52)



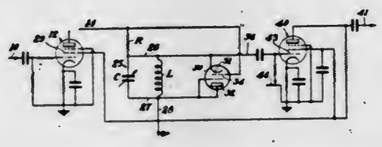
1. In the process of brewing beer the step of boiling the wort with the addition of albedo from citrus fruit as flavouring agent.

2,440,277

CALLING LINE IDENTIFICATION SYSTEM

Jacob Kruithof and Ladislas Kozma, Antwerp, Belgium, assignors to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware

Application May 8, 1943, Serial No. 486,273
In the Netherlands August 21, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires August 21, 1961
11 Claims. (Cl. 179—27)



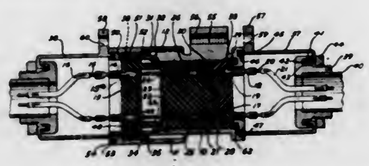
1. In an automatic telephone exchange system, a plurality of groups of lines each designated by a different number, means including non-numerical switches and numerical group and final selectors for establishing a connection between a calling and a called line, equipment for identifying the number of the calling line, different sources of characteristic A. C. potentials, means for operating at least one of said group selectors and a final selector to connect said equipment with the calling line, means to connect the equipment with the calling line over the non-numerical switch employed in the establishment of said connection, connections from said sources to the last mentioned means, and means in said equipment responsive to said A. C. potentials.

2,440,278

PULSE SELECTING AND ELIMINATING SYSTEM

Emile Labin, New York, and Donald D. Grieg, Forest Hills, N. Y., assignors to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware

Application May 15, 1943, Serial No. 487,072
9 Claims. (Cl. 250—27)



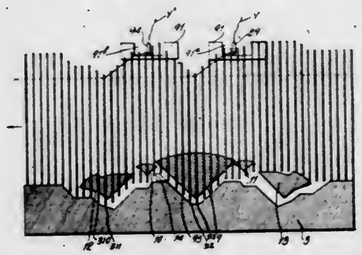
6. A system for distinguishing by greater amplitude a wanted pulse of a given duration from pulses of greater duration but of substantially the same amplitude, comprising a resonant circuit, means to apply the pulses for shock excitation of said circuit by the leading and trailing edges of the pulses, control means to maintain the circuit in oscillatory condition for the duration of each pulse so that the oscillations initiated by the edges of each pulse combine to form an undulation following the trailing edge of the pulse, means to damp out the oscillations normally following said undulation, means to render the means for damping out oscillations inoperative for the duration of each applied pulse, said circuit being tuned to a wavelength the period of which is twice the duration of said wanted pulse so that the oscillations set up by the edges of the wanted pulse are timed one half wavelength apart to provide an undulation of maximum amplitude and the oscillations produced by the edges of pulses of greater duration are timed greater distances apart than said one half wavelength to form undulations of amplitude less than said maximum undulation, and means for threshold clipping the peak portions of the maximum undulations.

2,440,279

CABLE CONNECTOR

John S. Larkins, Jr., Scotia, N. Y.

Application November 6, 1944, Serial No. 562,151
6 Claims. (Cl. 173—328)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



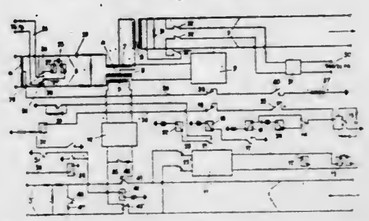
1. A cable connector comprising insulating means having a passage therein, a conducting element loosely received in said passage, said element having a contact member at one end thereof, a conductor anchored in said insulating means in line with said conducting element and flexibly connected at one end to the other end of said conducting element to permit transverse play of the element in its passage, the other end of said anchored member protruding through said insulating means to provide a terminal for attachment of a wire thereto.

2,440,280

KNITTING MACHINE AND METHOD OF KNITTING

Robert H. Lawson, Lakeport, N. H., assignor to Scott & Williams, Incorporated, Laconia, N. H., a corporation of Massachusetts

Application November 13, 1943, Serial No. 510,166
9 Claims. (Cl. 66—48)

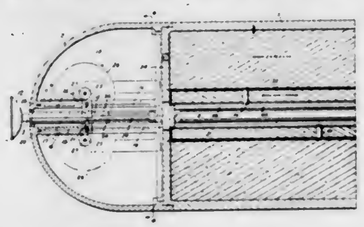


1. In a method of knitting heels and toes of stockings, the steps of feeding a plurality of yarns separately to the needles of a knitting machine during reciprocatory knitting so that any one yarn only appears in a recurring group of courses, progressively narrowing and widening the fabric knit by varying, by a group of needles, the needles operated to knit the yarns with each change in the direction of the knitting movement and joining the narrowed and widened sections along suture lines, the varying of the needles operated so relating the narrowing and widening that, in widening, the group of needles added in the knitting of one or more courses divides a group of needles which were narrowed together.

2,440,281

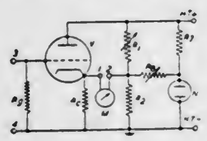
DEVICE FOR THE TRANSMISSION OF CALLING AND CLEARING SIGNALS IN LONG DISTANCE TELEPHONIC CIRCUITS

Myron Lebedinsky, Montlucon, France, assignor to Societe Anonyme de Telecommunications, Paris, France, a corporation of France



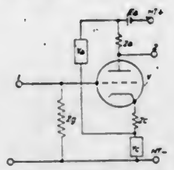
Application December 29, 1945, Serial No. 638,108
In France April 22, 1943
9 Claims. (Cl. 179—84)

1. A device for the transmission of voice frequency calling and clearing signals in long distance four-wire telephonic circuits comprising an auxiliary two-wire circuit connected to the trunk exchange, means for connecting said two-wire circuit to the four-wire circuit, a low frequency current generator, a generator of voice-frequency signals modulated at low frequency, a relay circuit, means actuated by said relay circuit for connecting said low frequency current generator in parallel with said auxiliary two-wire circuit, means connected to the incoming pair of the four-wire circuit for energizing said relay circuit when receiving a voice frequency



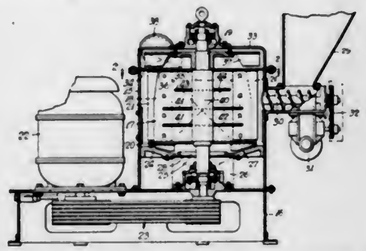
signal through said incoming pair, and means actuated by said relay circuit for connecting said generator of voice frequency signals in parallel with the outgoing pair of the four-wire circuit.

2,440,282
AERIAL BOMB
George R. Leghorn, San Francisco, Calif.
Application January 20, 1945, Serial No. 573,796
1 Claim. (Cl. 102—7.4)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



An aerial bomb having means comprising an axial passage, said bomb comprising a rod member slidable in the passage, spring means biasing said rod member forwardly of the bomb, a detent for said rod member and wind vane means associated with said detent means to release the rod on downward flight of the bomb, electric generating means for detonating the bomb, and means on the rod constructed and arranged to engage with said generating means at a predetermined degree of distension of the rod whereby said generating means is motivated on regression of the rod at impact of the bomb.

2,440,283
BALANCING OF ELECTRICAL BRIDGE CIRCUITS CONTAINING NONLINEAR ELEMENTS
Maurice Moise Levy, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application November 20, 1943, Serial No. 511,105
In Great Britain April 5, 1943
9 Claims. (Cl. 323—75)

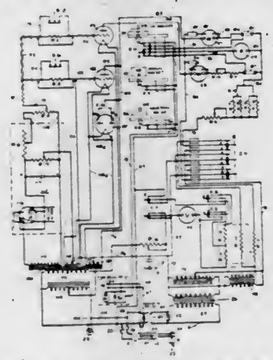


1. A bridge circuit which remains balanced when the operating voltage varies comprising means including a non-linear impedance constituting one bridge arm and a linear impedance in series therewith constituting another arm, a second linear impedance constituting the balancing arm therefor in the bridge, and means for imparting to the second linear impedance a substantially constant current voltage characteristic irrespective of substantial variations in the operating voltage from its normal voltage and substantially equivalent to the characteristics of said non-linear impedance and in accordance with the bridge ratio.

2,440,284
THERMIONIC VALVE CIRCUITS
Maurice Moise Levy, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application March 2, 1944, Serial No. 524,761
In Great Britain March 19, 1943
13 Claims. (Cl. 250—27)

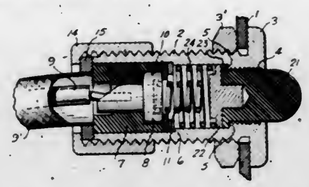
1. An electrical circuit including a thermionic valve, said valve including an anode, a cathode, and a grid, a source of variable voltage, two impedances connected in series with one another to the terminals of said source, and means connecting the cathode of said valve to the common junction point of said impedances, and connections from said anode and said grid, respectively, to opposite ends of said impedances, the ratio of the electrical values of said impedances being so chosen that the performance of the valve circuit is independent of the variation of said voltage, a gas discharge tube connected across said source, and a potentiometer shunted across said tube with a tap connected to said grid to supply a steady bias to the grid from said source of variable voltage.

2,440,285
PULVERIZING AND CLASSIFYING MACHINE HAVING A ROTOR COMPRISING SUPERIMPOSED SECTIONS
Henry G. Lykken and William H. Lykken, Minneapolis, Minn.
Application April 28, 1943, Serial No. 484,898
9 Claims. (Cl. 241—56)



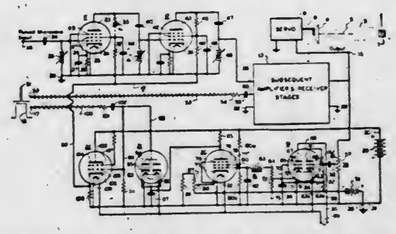
1. A pulverizing and classifying machine comprising a cylindrical casing, means for supplying air and material to be pulverized to said casing at regulated rates, a bottom in said casing having an opening therein for the admission of air, a cooperating ring and disc at the upper end of the casing spaced from each other to define an annular outlet, a closed end rotor of less diameter than the casing and having a plurality of radial blades extending substantially between said bottom and said outlet and arranged to set up a vortex of air suspended material in the space around said rotor, a plurality of transverse discs dividing said rotor into a plurality of closed end rotor sections, the rotor operating to pulverize material in the vortex around the lower portions thereof and to classify the material in the portion adjacent said outlet, and fan means for withdrawing sufficiently pulverized material through said outlet.

2,440,286
INTERPOLYMERIZATION OF ISOAMYLENES WITH NORMAL BUTENES AND ISOBUTENE
Sumner H. McAllister, Lafayette, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application October 16, 1944, Serial No. 558,965
6 Claims. (Cl. 260—683.15)



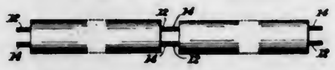
1. A process for producing paraffins of high anti-knock quality from hydrocarbon fractions containing iso- and normal olefins having four and five carbon atoms per molecule which comprises contacting the hydrocarbon fraction of five carbon atoms per molecule with sulfuric acid of 60% to 80% concentration under conditions at which iso-amylenes present therein are selectively absorbed by the acid without substantial polymerization to form an absorption product containing 0.2 to 0.8 mol of said iso-amylenes per mol of sulfuric acid, separating the absorption product from the unabsorbed hydrocarbons, contacting the former with the hydrocarbon fraction containing four carbon atoms per molecule in such proportions as to form a mixture containing 0.8 to 1.4 mols of iso-olefin per mol of normal olefin and between about 0.2:1 and 1:1 mols of iso-amylenes to isobutylene, maintaining the mixture in intimate contact at about 60° C. to 110° C. until substantial interpolymerization of absorbed iso-amylene with said isobutylene and of isobutylene with normal butylenes takes place, separating and hydrogenating polymerization products and returning at least a part of the acid to the iso-amylene absorption step.

2,440,287
ELECTRONIC POWER TUBE TESTER
Albert S. Oravetz, New York, N. Y.
Application July 25, 1945, Serial No. 607,074
6 Claims. (Cl. 315—369)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



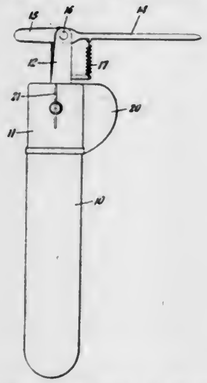
1. A voltmeter for measuring the voltage drop across an electron-discharge tube during periods of conduction, said voltmeter comprising a wattmeter connected across the plate and cathode circuit of said tube, and an ammeter serially connected in the plate circuit of said tube, said ammeter connection being such as to make said wattmeter responsive to and indicative of average arc-drop voltage in the tube tested.

2,440,288
ELECTRICAL SOCKET
Charles L. Paulus and Raymond K. Stout, Dayton, Ohio
Application June 14, 1944, Serial No. 540,364
12 Claims. (Cl. 200—159)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. As an article of manufacture, an electrical socket with which are interchangeably engageable, a lamp unit or a push button element, including a one piece metallic mounting sleeve, an internal shoulder within the sleeve forming a stop for a spring actuated reciprocatory push button having a peripheral shoulder thereon overlapping and engaging the internal stop shoulder, an internally screw threaded bore therein adjacent to the internal shoulder within which a lamp element is detachably engageable alternately with the push button, a helical axially disposed contact spring engageable with the lamp element or push button enclosed within the sleeve and insulated therefrom with which electrical contact surfaces upon the lamp element or the push button are respectively engageable, the lamp element or contact surface of the push button being otherwise grounded upon the mounting sleeve.

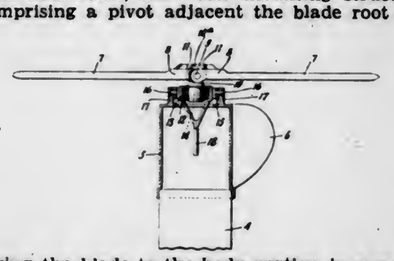
2,440,289
AUTOMATIC VOLUME CONTROL FOR PULSE SYSTEMS
Daniel S. Pensyl, Garden City, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application February 18, 1943, Serial No. 476,357
11 Claims. (Cl. 250—1.72)



10. In an automatic follow system for tracking a target tending to change in attitude and moving in a medium subject to changing propagation effects whereby undesired low frequency variations in reflection from the target may occur, the combination of a receiver and a follow element coupled to the receiver and movable in response to variations in the strength of higher frequency modulations recovered by the receiver as variations take place in the relative positions of the target and the follow element, said receiver comprising an automatic volume control having means for eliminating volume control response to variations in volume at a frequency higher than a predetermined frequency below the frequency of the desired modulations.

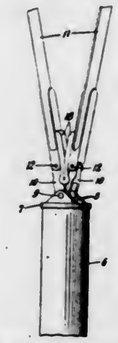
2,440,290
HIGH-FREQUENCY CABLE AND METHOD OF BALANCING THE SAME
Sidney B. Pickles, Jackson Heights, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application January 8, 1944, Serial No. 517,490
5 Claims. (Cl. 174—34)

1. The method of balancing a high frequency, solid dielectric, dual, concentric cable, of predetermined length, in which each individual concentric line has a different velocity propagation constant, which includes the steps of cutting the cable into a plurality of parts and reconnecting these cable parts with adjacent parts reversed, so that the one concentric line of one part is connected to the other concentric line of its adjacent part and vice versa, the total length of reversed cable parts being equal to the total length of the cable parts not reversed.



2,440,291
ROTOR EQUIPPED AERIAL DEVICE
Harold F. Pitcairn, Bryn Athyn, Pa., assignor to Autogiro Company of America, Philadelphia, Pa., a corporation of Delaware
Application May 5, 1944, Serial No. 534,245
11 Claims. (Cl. 244—138)

1. An aerial device, adapted to be released from an aircraft in flight, comprising a body portion and a bladed rotor adapted to provide for retarded descent of the device, the rotor being mounted on the body portion with its axis offset from the center of gravity of the body portion in such manner as to ensure descent of the device in an inclined path.

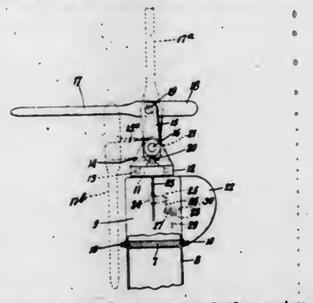


2,440,292
ROTOR EQUIPPED AERIAL DEVICE
Harold F. Pitcairn, Bryn Athyn, and Paul H. Stanley, Huntingdon Valley, Pa., assignors to Autogiro Company of America, Philadelphia, Pa., a corporation of Delaware
Application May 5, 1944, Serial No. 534,246
2 Claims. (Cl. 244—138)

1. A motorless rotary wing device adapted to be dropped from a height with its rotor initially inoperative, said device comprising a relatively light rotor having at least one airfoil rotor blade, a body portion adapted to cooperate with a load so that the combined mass of said body portion and the load is relatively heavy compared with said rotor, and rotor mounting structure comprising a pivot adjacent the blade root se-

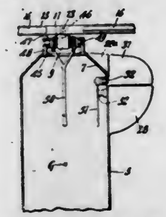
curing the blade to the body portion in a manner to provide for blade swinging movement to a high coning position responsive to the downward motion of the device through the air, said structure being arranged to provide for decrease of blade pitch to a negative value when the blade is in said high coning position.

2,440,293
ROTOR EQUIPPED AERIAL DEVICE
Paul H. Stanley, Huntingdon Valley, Pa., assignor to Autogiro Company of America, Philadelphia, Pa., a corporation of Delaware
Application May 5, 1944, Serial No. 534,247
11 Claims. (Cl. 244—138)



1. An aerial device comprising a body portion, a bladed rotor connected with the body portion providing for retarded descent of the device, said rotor incorporating a plurality of blades pivotally mounted for upward and downward swinging movement through a range extending above and below a plane perpendicular to their autorotational axis, and mechanism for controlling upward swinging movements of the blades including resilient means interconnecting the blades and normally urging them toward positions approximately perpendicular to the axis of rotation of the rotor.

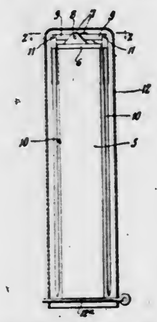
2,440,294
ROTOR EQUIPPED AERIAL DEVICE
Harris S. Campbell, Bryn Athyn, Pa., assignor to Autogiro Company of America, Philadelphia, Pa., a corporation of Delaware
Application May 5, 1944, Serial No. 534,244
8 Claims. (Cl. 244—138)



1. An aerial device comprising an elongated body portion, a bladed sustaining rotor disposed

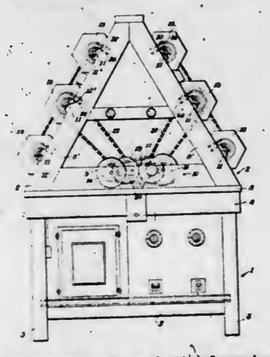
at the upper end thereof and providing for retarded descent of the device, and mounting means for the rotor adjustably connected to said body portion so that the adjustment of said mounting

means provides for movement of the rotor as a whole between its operating position and a folded position closely paralleling a side wall of the body portion, whereby to facilitate compact stowage of the device.



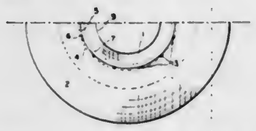
2,440,295
ROTOR EQUIPPED AERIAL DEVICE
Kenneth P. Synnestvedt, Bryn Athyn, Pa., assignor to Autogiro Company of America, Philadelphia, Pa., a corporation of Delaware
Application May 5, 1944, Serial No. 534,248
1 Claim. (Cl. 244—138)

An aerial device adapted to be launched from an aircraft in flight comprising a body, a sustaining rotor having free-flapping airfoil blades to provide for retarded descent of the device, and rotor mounting means, the rotor being rotatively journaled on the mounting means, and the mounting means being attached to the upper end of the body in a manner to provide for universal angular displacement of the rotor axis with respect to the vertical axis of the body portion; and control means comprising a control member extending downward into the body portion, the upper end of the control member being rigidly associated with the rotor mounting means; and further control means comprising an external fin mounted in a plane passing through the rotational axis of the rotor and movable about an axis substantially perpendicular to the vertical axis of the body, and a second control member inside the body portion to control the rotation of the fin on its axis.



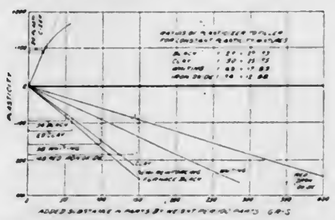
2,440,296
ROTOR EQUIPPED AERIAL DEVICE
Julian P. Perry, Holicong, Pa., assignor to Autogiro Company of America, Philadelphia, Pa., a corporation of Delaware
Application May 5, 1944, Serial No. 534,249
2 Claims. (Cl. 244—138)

1. An aerial device adapted to be launched from an aircraft comprising an elongated body portion and a bladed sustaining rotor adapted to rotate therewith, and pivot means connecting the rotor with the body portion, providing for upward blade swinging movement to a position approaching parallelism with the rotational axis on a pivot axis obliquely inclined to the longitudinal blade axis in a sense to reduce the blade pitch in the upper range of swinging movement, and said



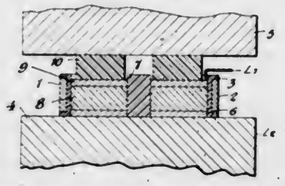
pivot means further providing for downward blade folding movement to a position of substantial parallelism with the rotational axis, on a second pivot axis perpendicular to the longitudinal blade axis displaced from the rotational axis so as to fall beyond the edge of the body portion when the blades are perpendicular to the rotational axis.

2,440,297
APPARATUS FOR AND METHOD OF ELECTROFORMING OF RECTIFIER ELEMENTS
William E. Riecken, deceased, late of Leonia, N. J., by William E. Riecken, Jr., administrator, Leonia, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application May 4, 1945, Serial No. 591,893
6 Claims. (Cl. 175—366)



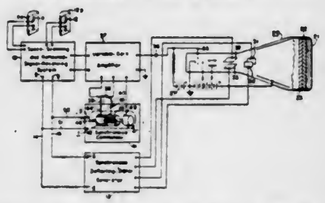
1. In an apparatus for electroforming of rectifier elements, a rotating drum, means for supporting and for electrically connecting a plurality of metal strips containing rectifier elements on said drum, means including high and low potential conductors having physical contact with said drum for supplying electric current to said rotating drum and in parallel arrangement to each of said rectifier elements contained in said strip, said supporting and connecting means comprising resilient contact means.

2,440,298
METHOD OF BRAZING STEEL SHAFT AND FLANGE ASSEMBLIES
Bela Ronay and Cyril D. Jensen, Annapolis, Md.
Application July 18, 1944, Serial No. 545,526
8 Claims. (Cl. 113—112)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



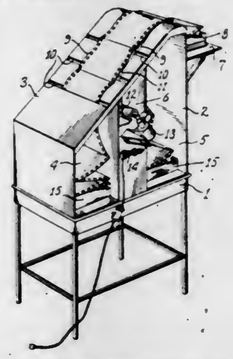
1. In a method for joining male and female shaft elements, forming a tapered guide on the male element at the inner end of the joint for contact with one end of the female element; providing a closely interfitting zone for said elements at the other end of the female element in the form of complemental surfaces parallel to the axis of the joint; providing a capillary clearance space all the way from said guide to said zone, interrupted by at least one cavity for reception of a brazing material; introducing the brazing material to said cavity; supplying a flux to at least one of the surfaces that form said clearance space; and causing the female element to exert radially compressive forces on the male element at said surfaces of said zone and heating the brazing material to cause it to flow into said capillary clearance space.

2,440,299
METHOD OF COMPOUNDING RUBBERY MATERIALS
Fritz S. Rostler, Newark, and Hubert I. du Pont, Wilmington, Del., assignors to Wilmington Chemical Corporation, New York, N. Y., a corporation of Delaware
Application January 26, 1945, Serial No. 574,745
7 Claims. (Cl. 260—36)



1. The method which comprises masticating premixed compounding composition consisting of powdered pigment filler and unsaturated hydrocarbon extender-plasticizer into a rubbery material selected from the group consisting of natural rubber, butadiene-styrene co-polymers and butadiene-acrylonitrile co-polymers having a Scott plasticity in the range of 100 to 450, which produces an extensible and elastic material when vulcanized with sulfur, the amount of extender-plasticizer in said compounding composition being in the range of 5 to 27 parts of extended-plasticizer per 95 to 73 parts of total filler, the ratio of filler to plasticizer in said compounding composition being such that the total plasticity decreasing effect of the filler on a butadiene-styrene co-polymer having a Scott plasticity in the range of 100 to 450 at least balances the total plasticity increasing effect of the extender-plasticizer on said co-polymer, all the filler being powdered and one whose reinforcing properties are not degraded when so premixed with the extender-plasticizer in the said proportions, the extender-plasticizer being an unsaturated hydrocarbon mass having approximately 90% of carbon and 10% of hydrogen and substantially free of fractions having a boiling point of less than about 160° C. at 12 mm. Hg, of the class consisting of components derived from the extract separated in the solvent refining of mineral oils and components separated by the distillation of neutralized acid sludge of petroleum oil refining.

2,440,300
RESIN BONDED ABRASIVE ARTICLE
Ralph H. Rushmer and George J. Goepfert, Niagara Falls, N. Y., assignors to The Carborundum Company, Niagara Falls, N. Y., a corporation of Delaware
Application June 11, 1945, Serial No. 598,838
4 Claims. (Cl. 51—298)

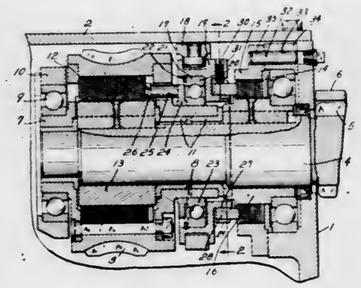


1. A dense resin bonded abrasive article comprising abrasive grains and a resin bond comprising finely divided electrically conductive carbon, the proportion of carbon in the article being such that the electrical resistance of the mixture from which the article is formed increases as the temperature of the article is raised.

2,440,301
SIGNAL REPRODUCING SYSTEM
Jack Sharpe, Wembley, England
Application November 1, 1945, Serial No. 626,117
In Great Britain November 1, 1944
13 Claims. (Cl. 315—22)

1. A system for reproducing and distinguishing between a first periodic signal which recurs at a substantially constant repetition frequency in a given time interval and a second signal which does not recur at said repetition frequency throughout said time interval comprising, fluorescent signal-reproducing means adapted to emit visible light of one predominant color when excited for a given excitation period with incident energy within a first amplitude range or when repeatedly excited at said repetition frequency for a certain number of said given excitation periods with incident energy within a second lower amplitude range but adapted to emit visible light of a contrasting color when excited for a lesser number of said excitations periods with incident energy within said second amplitude range, means for effectively scanning said signal-reproducing means at said repetition frequency during said time interval with excitation energy representing said first and second signals so as to excite elemental areas thereof in any one scanning cycle for an interval at least equal to said given excitation period, and means for adjusting the amplitude levels of said excitation energy during one scanning cycle within said given time interval to values within said first amplitude range and during another scanning cycle within said given time interval to values within said second amplitude range.

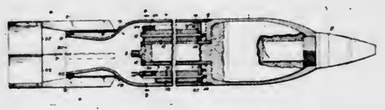
2,440,302
SEPARATING MACHINE
John Quirk Sherman, deceased, late of Dayton, Ohio, by Katherine M. Sherman, William C. Sherman, and Wellmore B. Turner, executors, all of Dayton, Ohio
Original application April 5, 1935, Serial No. 14,854. Divided and this application August 1, 1941, Serial No. 405,093
36 Claims. (Cl. 271—2.1)



1. In a manifolding assembly separating apparatus, wherein an interleaved strip of transfer material is removed from between superposed record strips of an initially zigzag folded packet thereof, strip feeding means for collectively advancing both the record and transfer strips in unison past a separating position, a collecting roller for the transfer strip actuated in unison with the advancement of the strips upon which the transfer strip is wound, and a receiver for the record strips in which the strips are refolded into zigzag form.

2. The herein described method of removing interleaved transfer material from a manifolding assembly of alternating superposed strips of record and transfer material, including collectively advancing the superposed strips in unison past a separation point, winding the transfer material into roll form and refolding the record strips into zigzag formation in unison with their advancement.

2,440,303
INCREASING THE RESISTANCE OF RED PHOSPHORUS TO OXIDATION
Martin S. Silverstein, Camden, N. J.
No Drawing. Application September 8, 1941, Serial No. 410,055
4 Claims. (Cl. 23—223)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

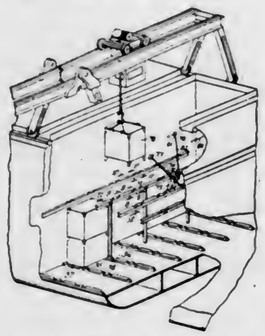


1. A method for rendering red phosphorus resistant to oxidation which comprises adding a small amount of mannitol to the phosphorus.

2,440,304
CLUTCH AND BRAKE CONTROL
Leon E. Simmons, Claremont, N. H., assignor to Joy Manufacturing Company, a corporation of Pennsylvania
Application April 9, 1943, Serial No. 482,401
8 Claims. (Cl. 192—18)

1. In a control mechanism, a clutch and brake mechanism embodying a rotatable clutch and a non-rotatable brake, said clutch and brake being arranged in coaxial spaced apart relation, and shipper means for said clutch and brake arranged intermediate the same and including reciprocable shipper elements, one a clutch operating element and the other a brake operating element, said elements being freely relatively rotatable and mounted to move axially in relatively opposite directions alternately to apply said clutch and brake, a thrust bearing coaxial with and interposed between said shipper elements to permit free relative rotation therebetween, and a shipper member movable between said clutch and brake in opposite directions and associated with said brake operating element for selectively moving said elements into their operating positions, said shipper member effecting movement of said clutch operating element through said thrust bearing and the clutch loading pressures being transmitted directly by said clutch operating element to said clutch.

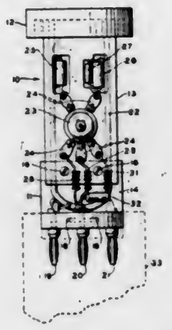
2,440,305
ROCKET PROJECTILE
Leslie A. Skinner, United States Army, Washington, D. C., assignor to the United States of America as represented by the Secretary of War
Application January 20, 1942, Serial No. 427,430
4 Claims. (Cl. 102—49)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



3. A projectile comprising a body with a plurality of units of charge composition, U bolts supporting said units from the body, and an elongated bag of priming composition interlaced between said units and said U bolts for igniting said charge units.

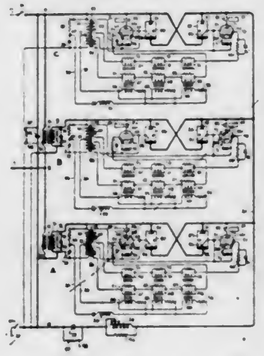
2,440,306
CONTAINER SHIP FOR HANDLING PACKAGE FREIGHT
Leathem D. Smith, Sturgeon Bay, Wis.; Alva Smith administratrix of said Leathem D. Smith, deceased
Application April 22, 1944, Serial No. 532,240
9 Claims. (Cl. 114—72)

1. In a ship of the character described, in combination, an open cargo hold having a plurality of spaced beams disposed horizontally within the hold, certain of said beams lying in one horizontal plane and other beams lying in a different horizontal plane, means connecting said beams at their respective ends to the ship structure whereby the beams comprise an integral part thereof, said beams presenting a flat supporting surface for substantially their entire length, and said flat supporting surfaces having pairs of notches to receive fixed elements on uniformly sized containers to hold them against lateral movement.



2,440,307
SHIP HOLD
Leathem D. Smith, Sturgeon Bay, Wis.; Alva Smith administratrix of said Leathem D. Smith, deceased
Application April 4, 1945, Serial No. 586,521
14 Claims. (Cl. 114—72)

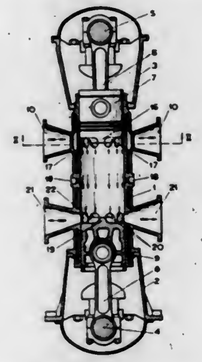
1. A ship hold comprising a bottom, side walls, bulkheads, a substantially horizontal row of equally spaced holding means for supporting one side of alignable containers having uniform width and length, a second substantially horizontal row of similarly spaced holding means facing the first row and substantially parallel thereto, said rows of holding means being in a common horizontal plane, and a pair of similarly spaced holding means in a different horizontal plane in said hold and at substantially right angles to the first two rows.



2,440,308
OSCILLATOR STRUCTURE
Edward A. Storck, Manasquan, N. J., assignor to the United States of America as represented by the Secretary of War
Application June 16, 1945, Serial No. 599,945
6 Claims. (Cl. 250—36)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

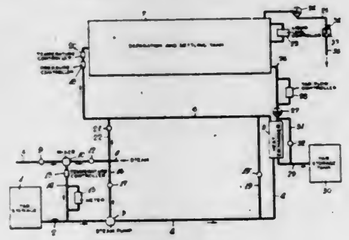
6. A unitary oscillator structure comprising a dielectric cylindrical casing, a radio frequency oscillator circuit mounted within said casing, and a metal collar slidably received about said casing, said collar being electrically coupled to

said oscillator circuit whereby the longitudinal position of said collar on said casing controls the operating frequency of said oscillator.



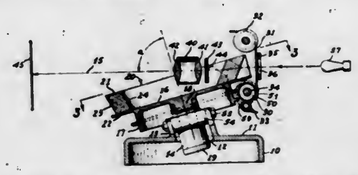
2,440,309
CAPACITOR TRANSLATING SYSTEM
Harold A. Strickland, Jr., Detroit, Mich., assignor, by mesne assignments, to The Ohio Crankshaft Company, Cleveland, Ohio, a corporation of Ohio
Application January 25, 1944, Serial No. 519,637
13 Claims. (Cl. 320—1)

1. A power supply circuit comprising a polyphase source of alternating current, a load circuit connected thereto, and means for transmitting current in discontinuous complete pulses to said load circuit from at least two different phases of said source current within the time period of a half-cycle of source current.



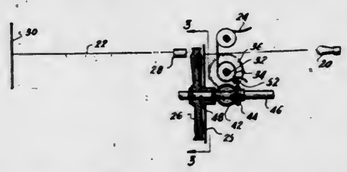
2,440,310
UNIFLOW SCAVENGING FOR ENGINES
Edvin Ossian Parcival Thege, Stockholm, Sweden, assignor to Aktiebolaget Atlas Diesel, Sickla, near Stockholm, Sweden, a corporation of Sweden
Application April 6, 1945, Serial No. 586,920
In Sweden April 6, 1944
18 Claims. (Cl. 123—51)

7. In a two stroke cycle internal combustion engine with uniflow scavenging, a combustion cylinder, a plurality of substantially parallel passages leading into said cylinder at one end of the cylinder and directed substantially perpendicularly towards an axial centre plane of the cylinder and disposed on each side of said axial centre plane and distributed over the whole length of the cylinder diameter included in the axial centre plane, walls confining the outside of said side-



most passages making a sharp almost 90° turn towards the cylinder centre just before the inlet into the cylinder and forming guide surfaces for counteracting the formation for tangential fluid streams in the cylinder during the scavenging period, means for supplying scavenging fluid to the passages, and an outlet at the opposite end of the cylinder.

2,440,311
PROCESS OF TREATING COAL TAR CONTAINING A SMALL AMOUNT OF AMMONIUM CHLORIDE
William Tiddy, Manhasset, N. Y., assignor to Allied Chemical & Dye Corporation, a corporation of New York
Application July 24, 1946, Serial No. 685,957
3 Claims. (Cl. 196—146)

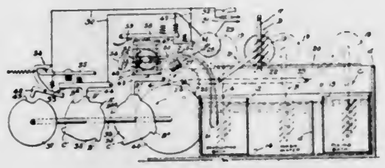


1. A process of treating coal tar containing a small amount of ammonium chloride which comprises continuously flowing the tar, continuously adding water to the tar, introducing the resultant mixture under a superatmospheric pressure of at least about 50 pounds per square inch gauge and at a temperature within the range of about 200° to about 350° F. into a settling and separation zone and flowing the mixture through this zone while permitting the resulting ammonium chloride solution and tar to separate and removing tar substantially free of ammonium chloride from this zone.

2,440,312
APPARATUS FOR TRANSMITTING MOTION-PICTURE LIGHT IMAGES
Clarence L. Tomlinson, Los Angeles, Calif., assignor of one-half to Robert Jay Brandt, Los Angeles, Calif.
Application January 5, 1946, Serial No. 639,307
23 Claims. (Cl. 88—16.8)

1. A lens system for motion picture film adapted to be interposed in a path of light comprising a framing aperture member having an opening in the path of light greater in area than a frame of said film, a refractor element of predetermined length and uniform thickness having opposite parallel walls wherein the angle of the walls relative to the axis of the path of light varies from end to end of said length an amount adapted to accommodate a shift in location of a ray of light on one wall equal to the height of said frame and a zero shift in said ray on the opposite wall during movement of said refractor element a distance equal to said predetermined length.

2,440,313
SHUTTERLESS MOTION-PICTURE LENS SYSTEM
Clarence L. Tomlinson, Los Angeles, Calif., assignor of one-half to Robert J. Brandt, Los Angeles, Calif.
Application March 20, 1946, Serial No. 655,782
19 Claims. (Cl. 88—16.8)

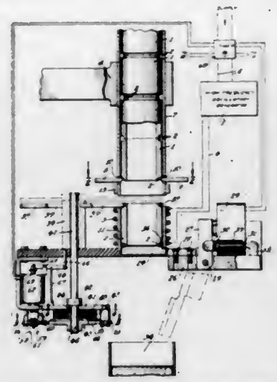


1. A lens comprising a refractive body of transparent material of uniform thickness having two parallel faces adapted to be interposed in a beam of light, on each of which may be traced a path of predetermined height and length, one of said paths having a displacement along its length equal to its height, said displacement being transverse to said beam of light, said parallel paths having a progressive inclination with respect to the axis of said beam of light so that movement of the beam lengthwise along the displaced path of said one face will effect a projection of said beam without such displacement from the path of said opposite face.

2,440,314
METHOD AND MEANS FOR PHOTOGRAPHIC DEVELOPING OR THE LIKE
Charles Roger Turner, Philadelphia, Pa.
Application March 6, 1944, Serial No. 525,166
19 Claims. (Cl. 95—89)

11. In combination in timing apparatus of the character described, a metallic bellows unit hav-

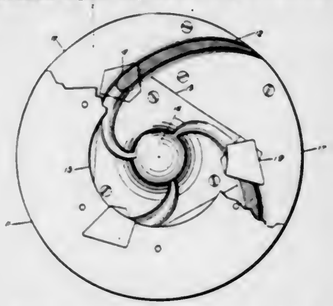
ing therein a liquid of predetermined viscosity characteristics, a passage of severely restricted cross-sectional flow area for flow of the liquid from one part of the bellows unit to another under given hydraulic pressure to determine an interval by the length of time required for such flow by a given volume of the liquid, and a member adapted to move from one position to a second position and return having an operative re-



lation with said bellows unit whereby it is retained for said interval in the second position after movement thereto from the one position and then released for return, said bellows unit having another passage of greater but also restricted flow area adapted for return of the liquid to said one part coincident with return movement of said member and serving as a brake to restrain said member for relatively slow movement in said return.

2,440,315
SENSITIZED PYROGALLOL REAGENT AND METHOD FOR ITS PREPARATION
Richard L. Tuve, Silver Spring, Md.
No Drawing. Application April 16, 1945, Serial No. 588,518
4 Claims. (Cl. 252—408)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. The method of rendering pyrogallol solution proportionally sensitive to minute traces of dissolved oxygen, comprising, dissolving pyrogallol in water, reacting said solution of pyrogallol with a water soluble oxidizing agent, and stopping the oxidation at the point of maximum sensitivity of pyrogallol to oxygen by adding to the solution a sufficient amount of a reducing agent to eliminate excess oxygen which reducing agent produces no discoloration of the said solution upon reaction therewith.

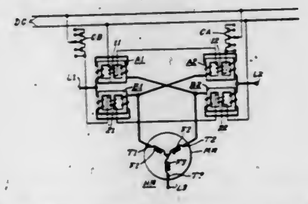


2,440,316
APPARATUS FOR INDUCTION HEAT-TREATING OF WORK PIECES
Paul Unterweiser, New York, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application February 9, 1945, Serial No. 576,921
14 Claims. (Cl. 219—13)

1. An apparatus for heat treating work pieces, comprising an inductor, means for intermittently energizing said inductor, means for holding a plurality of work pieces in inoperative position, means for releasing said holding means and for depositing successively said work pieces into operative position in said inductor, a support for the work piece in the operative position, means for intermittently removing said support, and timing means connected to control the related operations of the holding means, the inductor energizing means and the movement of said support, whereby work pieces will move successively into said inductor, will be heated therein, and

will fall therefrom when the heat treatment is completed.

2,440,317
PUMP IMPELLER
William H. Welsh, New York, N. Y.
Application April 20, 1945, Serial No. 589,445
4 Claims. (Cl. 103—115)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

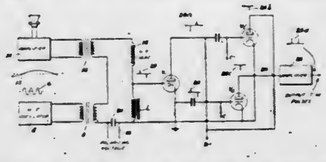


3. A pump impeller comprising an impeller body provided with an inlet opening and multiple vanes, and replaceable inserts constituting the leading edges of said vanes, said inserts being positioned at their ends in recesses in said impeller body and being held from radial motion during rotation of said impeller by the walls of said recesses.

2,440,318
CATALYTIC POLYMERISATION OF METHYL METHACRYLATE
Francis Thomas White and Arthur John Daly, Spondon, near Derby, England, assignors, by mesne assignments, to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application January 23, 1945, Serial No. 574,220. In Great Britain January 24, 1944
3 Claims. (Cl. 260—83)

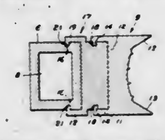
1. Process for the production of polymerised polymethyl methacrylate which comprises heating a solution of 100 parts by weight of methyl methacrylate in less than its own weight of a mixture consisting of 35 to 50 parts by weight of 95% of acetone and 18 parts by weight of water, said mixture containing hydrogen peroxide in

the proportion of 0.125 to 0.25% of the weight of the methyl methacrylate, and the temperature being maintained just high enough to avoid the formation of any substantial quantity of a second liquid phase, until substantially the whole of the methyl methacrylate has been consumed, removing solvent from the reaction mixture by evaporation at a temperature below 60° C. and recovering the polymer in friable form.



2,440,319
ALTERNATING CURRENT HOIST CONTROL
William R. Wickerham, Swissvale, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 29, 1944, Serial No. 524,387
17 Claims. (Cl. 172—152)

16. A motor control system, comprising a three-phase alternating-current motor having three terminals, three line terminals connected to said respective motor terminals to provide three-phase energy, control means disposed between two of said line terminals and two of said motor terminals for varying the energy distribution relative to said motor terminals and comprising two controllable impedance devices arranged so that the energy flow to one of said two motor terminals increases with decreasing impedance of one of said devices and the energy flow to the other one of said two motor terminals increases with decreasing impedance of said other device, said two devices having control means for controlling said impedance of said respective devices, circuit means connected to said control means for applying variable control voltage thereto so as to selectively increase the impedance of either device depending upon the polarity of said control voltage, first voltage supply means associated with said motor and connected to said circuit means for providing a component voltage variable in accordance with the motor speed, second voltage supply means connected to said circuit means for providing a constant component voltage in opposition to said variable component voltage so that said control voltage corresponds to the differential value of said component voltages, and selectively adjustable means for varying one of said component voltages relative to the other to permit selecting the motor speed at which said control voltage reverses its polarity.

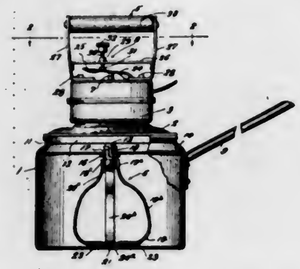


2,440,320
MODULATION SYSTEM
Norman H. Young, Jr., Jackson Heights, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application March 13, 1944, Serial No. 526,264
6 Claims. (Cl. 179—171.5)

6. In a pulse generating system, a source of alternating current, an electron discharge device having an anode, a cathode and a grid, a saturable reactor element, a circuit connecting said source across the cathode and grid of said electron discharge device, said element being a part of said circuit and receiving current from said source to produce clipped voltage alternations, said grid and said cathode acting to conduct alternations of opposite polarity respectively to result in pulses of opposite polarity in the respective anode and cathode circuits of said device, means for segregating the pulses of a given polarity appearing on the anode and cathode of said elec-

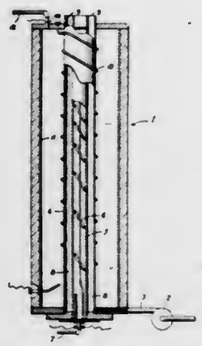
tron discharge device, the means for segregating including two additional electron discharge devices respectively connected to be controlled by energy from the anode and cathode circuits of the first-mentioned electron discharge device, and bias means for controlling the conductivity of each of said two additional electron discharge devices so as to pass only those received pulses which are of a given polarity.

2,440,321
VULCANIZING MOLD
Thomas P. Bacon, Jr., Oakland, Calif.
Application April 27, 1945, Serial No. 590,599
2 Claims. (Cl. 18—18)



2. In combination with a sectional circular tire mold adapted to be opened, each mold section being arcuate and having arcuate retaining grooves thereon concentric with the mold, a plurality of spacer elements on each section of the mold, retaining elements extended from said spacer elements over the top and bottom of each of said mold sections and longitudinally slidable in said grooves to hold said spacer elements in place, arcuate grooves in said spacer sections being concentric with said first grooves on said mold sections, a plurality of matrix sections larger in number than said mold sections, each of said matrix sections being circumferentially smaller than any one of said mold sections, retaining elements extended from each of said matrix sections over the respective spacer sections and being longitudinally slidable in the grooves of said spacer sections, said matrix sections complementing each other to form the curing cavity on said mold sections, said spacer elements being in heat conducting contact with said mold sections and with said matrix sections.

2,440,322
HAND MOTOR WITH MANUALLY OPERATED BRAKE
William G. Barcroft and Mabel L. Maas, Boulder, Colo.
Application May 29, 1945, Serial No. 596,552
3 Claims. (Cl. 172—36)

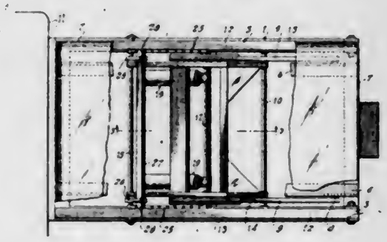


1. In a device of the character described, a support, a motor on said support including a vertical shaft having protruding upper and lower

portions, a handle extending upwardly from said motor and having side arms mounted upon the motor and a hand grip between upper portions of the side arms, a cross bar extending horizontally between the side arms and spaced from the motor and the hand grip, a yieldable lever carried by said motor and extending transversely of the motor under the cross bar and across the upper end of the motor shaft with a free end

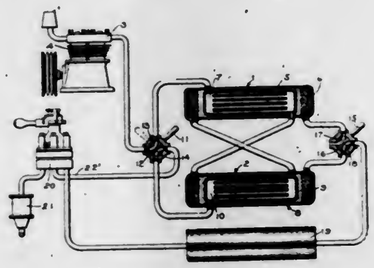
protruding from one side of the cross bar in position for engagement by the thumb of a hand grasping the hand grip whereby the lever may be depressed and pressure applied to the motor shaft to frictionally check the speed at which the shaft rotates, and means carried by the cross bar for forcing the lever downwardly and holding the lever in position for frictionally engaging the shaft.

2,440,323
EXTRUSION MOLDING OF VISCOSE PRODUCTS
Orlando A. Battista, Claymont, Del., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application December 18, 1943, Serial No. 514,740
2 Claims. (Cl. 18—55)



1. In a process of producing shaped articles from viscose, the steps of adding a gelation accelerator to the viscose in an amount sufficient to effect coagulation thereof in a period of time of the order of one hour or less at a temperature of about 80° C. to 100° C. and then molding and coagulating the viscose by continuously forcing the mixture through an extrusion molding device externally heated to a temperature of about 80° C. to 100° C., such heat being the sole coagulating medium.

2,440,324
MOUNTING BRACKET FOR INSTRUMENT CASES
Clinton A. Blakeslee, Middlebury, Conn., assignor to The Bristol Company, Waterbury, Conn., a corporation of Connecticut
Application December 8, 1943, Serial No. 513,413
1 Claim. (Cl. 248—27)

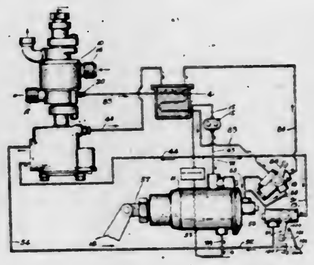


The combination with a panel provided with an opening, and an instrument case adapted for mounting within said opening, said case having a front upturned flange; of a mounting bracket for securing the case to the panel in the opening thereof substantially flush with its outer face, said bracket comprising a T-element with oppositely directed perforated flanges and an intermediate portion at right angles thereto and provided with a threaded perforation, the outer surfaces of said last-named flanges lying in a common plane and the inner surface of one of the flanges in a plane parallel to said common plane, the inner and outer surface of the one flange being adapted to fit in the panel opening between the panel and the case and extend forwardly of the face of said panel to the flange of said case, the other flange of the bracket being adapted to be secured to the case, and a screw adjustable in the perforation of the intermediate portion of the T-element to engage the inner face of the panel and draw the case flange into contact with the said outer face of the panel when the T-element has been secured to said case.

2,440,325
SAFETY DEVICE FOR DUMPING VEHICLES
Samuel J. Bruno, Belleville, N. J., assignor to The Thomas Wright Co., Inc., Jersey City, N. J., a corporation of New Jersey
Application August 8, 1945, Serial No. 609,577
3 Claims. (Cl. 298—38)

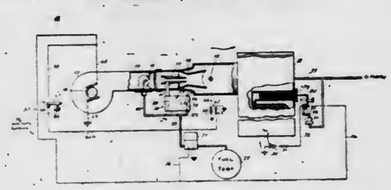
1. In mechanism of the character described the combination with a main frame, a lift frame comprising two parallel side pieces rigidly connected together and pivotally mounted on said main frame, means for pivotally swinging said lift frame upwardly including a lift header pivotally connected adjacent one end to said main frame with the other end underlying and movable longitudinally of said lift frame during swinging of the latter, a toothed rack rigidly connected to each said piece, and a pawl for said toothed racks including a pair of links each pivotally connected at one end to said lift header adjacent one of said toothed racks, and a bar rigidly connecting the other ends of said links and having a tooth at each end thereof to engage one of said toothed racks to hold said lift frame in elevated position.

2,440,326
AIR-DRYING APPARATUS
Norman Geoffrey Cadman, London, England, assignor, by mesne assignments, to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application January 24, 1945, Serial No. 574,356
In Great Britain March 9, 1944
4 Claims. (Cl. 303—1)



1. An air pressure system to which air under pressure is supplied and from which air under pressure may be discharged and comprising the combination of an air receiver, an air compressor for supplying air under pressure to said receiver, means interposed between said compressor and said receiver for dehydrating the air under pressure supplied by said compressor, said means comprising a moisture absorbing material which can be regenerated, means for regenerating said material, and means for directing the air discharged from said system over said material when said material is being regenerated whereby the moisture expelled by the regeneration is carried away.

2,440,327
"HOT" DOUBLE-BASE POWDER
Bryce L. Crawford, Jr., Minneapolis, Minn., assignor to Regents of the University of Minnesota, Minneapolis, Minn., a corporation of Minnesota
No Drawing. Application December 29, 1943, Serial No. 516,081
4 Claims. (Cl. 52—13)



1. A thick section of double-base powder of the "hot" type that is normally susceptible to "worming" in the presence of intense radiations developed during burning, said powder being colored with a coloring matter capable of absorbing radiant energy in the wave length range of .8 to 5.0 μ, said coloring matter being of a type and present in an amount such that visible light is capable of being transmitted through the powder, thus permitting visual inspection thereof, and present in an amount such that radiations between the wave lengths of .8 to 5.0 μ are largely absorbed.

2,440,328
SPEED AND CUTOFF CONTROL MEANS FOR STEAM ENGINES AND THE LIKE
Abner Doble, Chicago, Ill., assignor to Stanley Steam Motors Corporation, Chicago, Ill., a corporation of Delaware
Application January 17, 1944, Serial No. 518,517
12 Claims. (Cl. 121—143)

1. In combination with a steam engine, a throttle, governing means intermediate said engine and throttle including a member movable to control the flow of steam from said throttle and thereby limit the maximum speed of said engine, means for producing a flow of fluid varying in proportion to said engine speed, a pressure chamber having a movable wall connected to said governing member, means for conducting at least a portion of the fluid through a closed circuit extending from the outlet to the inlet of said flow-producing means and including said chamber to produce a pressure in said chamber tending to move said wall and governing member toward a speed-limiting governing position, means forming a second closed circuit for said fluid in parallel relation to said chamber, and means in said second circuit for varying the portion of the fluid flow from said flow-producing means supplied to said chamber to vary the maximum engine speed established by said governing means.

2,440,329
CONTROL MEANS FOR CORRELATING SUPPLY OF ASPIRATING TO ASPIRATED FLUIDS
Abner Doble, Chicago, Ill., assignor to Stanley Steam Motors Corporation, Chicago, Ill., a corporation of Delaware
Application October 21, 1944, Serial No. 559,749
7 Claims. (Cl. 158—42.1)

1. In a burner for a steam boiler, a duct for supplying combustion air to said burner, damper means in said duct having open and closed positions for controlling the flow of said combustion air therethrough, fluid-pressure-responsive means for operating said damper means between said positions, aspirating means associated with

said duct for supplying fuel thereto including a fuel reservoir, pump means for producing a flow of fuel to said reservoir, said aspirating means being constructed to supply fuel when the fuel level in said reservoir has a normal value greater than that at which aspiration fails, means connecting said pump means to said fluid-pressure-responsive means whereby said fuel exerts pressure on said pressure-responsive means to operate said damper means to said open position, said fluid pressure means being effective to operate said damper means to said closed position upon a predetermined decrease in the pressure exerted by said fuel, valve means responsive to a predetermined decrease in the fuel level in said reservoir from said normal value for decreasing the resistance to flow of said fuel from said pump to said reservoir thereby to effect said predetermined decrease in the pressure on said pressure-responsive means, and means responsive to boiler heat conditions for stopping and starting the flow of fuel from said pump.

2,440,330

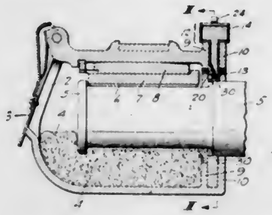
IMPROVING THE FASTNESS OF DYED ORGANIC DERIVATIVE OF CELLULOSE TEXTILES BY IMPREGNATION WITH CYANAMIDE

Henry Dreyfus, London, England; Claude Bonard, administrator of said Henry Dreyfus, deceased, assignor to Celanese Corporation of America, a corporation of Delaware

No Drawing. Application August 15, 1944, Serial No. 549,625. In Great Britain August 26, 1943

5 Claims. (Cl. 8—61)

1. Process for improving the color fastness of dyed textile material which comprises impregnating a dyed textile material having a basis of an organic derivative of cellulose with an aqueous solution of cyanamide and then drying and heating the impregnated material until a difficultly soluble nitrogenous compound is formed.



2,440,331

SAFETY OILING MEANS FOR CAR JOURNALS

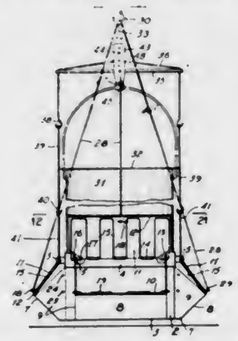
William F. Eisensmith, Penns Grove, N. J.

Application October 4, 1944, Serial No. 557,176

2 Claims. (Cl. 308—79)

1. The combination with a car axle journal box having an opening in an end wall through which the journal extends, and a transversely arranged open top slot adjacent said end wall for reception of a dust guard; of an emergency oil supply means comprising a reservoir with a relatively wide upper portion adapted to be supported externally of the top of the box, and a narrower pendent portion conformative with and snugly fitting into the upper part of the slot above the dust guard, and a fusible plug normally closing a lateral drain orifice in the pendent portion of the reservoir near the bottom and adapted upon melting, when the box becomes over-heated, to permit discharge of the reserve oil inwardly of the box over the journal.

2,440,332



AUTOMATIC FEEDING APPLIANCE FOR POULTRY, PIGEONS, AND OTHER BIRDS

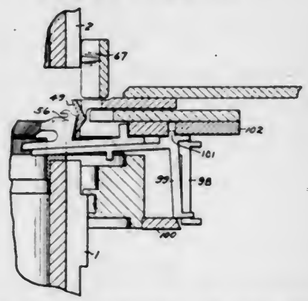
John Gilbert Francis, Heidelberg, near Melbourne, Victoria, Australia

Application October 3, 1942, Serial No. 460,646

In Australia October 15, 1941

7 Claims. (Cl. 119—53)

1. In an automatic feeder of the character described, a hopper casing, feed troughs on said casing, a bottomless food container therein, hinged grids apportioning each of said troughs into a series of feeding compartments, shutters pivotally connected to said grids, clips on said shutters for releasably holding the free ends of said grids, means for elevating and lowering said shutters to open and close said troughs additional grids independently hinged to said troughs, and baffles associated with the latter grids to prevent small animals which are feeding from throwing feed out of the trough.



2,440,333

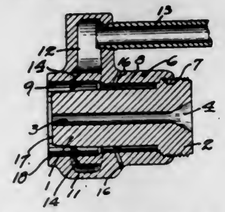
KNITTING MACHINE AND METHOD OF KNITTING

Oscar Fregeolle, Central Falls, R. I., assignor to Hemphill Company, Central Falls, R. I., a corporation of Massachusetts

Original application October 18, 1944, Serial No. 559,136. Divided and this application September 12, 1945, Serial No. 615,810

5 Claims. (Cl. 66—14)

1. In a knitting machine, the combination of superposed, axially aligned, rotatable needle cylinders, sinkers movable radially and substantially horizontally, needles capable of knitting in either cylinder, means in each cylinder which cooperate to cause needles to knit true rib fabric in the leg of a stocking, sinkers operably associated with needles knitting in the lower cylinder, means for moving said sinkers inwardly soon enough and far enough to cause yarn to be drawn over their backs behind their nibs and through the corresponding needle loops of the previous course, means for casting off the lower cylinder needle loops of the previous course by sinkers acting upon the intervening sinker loops only and causing the newly drawn sinker loops to pass from the backs to the throats of the sinkers upwardly over the tops of the nibs.



2,440,334

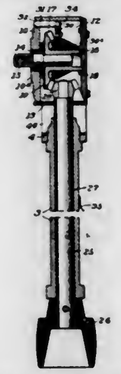
SANDBLASTING NOZZLE

Joseph M. Gerlach, Albany, Calif.

Application April 29, 1946, Serial No. 665,793

14 Claims. (Cl. 51—11)

1. In a sand blasting nozzle of the character described, a nozzle tip, a chamber formed around said tip, a plurality of air vents leading into said chamber so as to draw air into the chamber by the suction created by the sand discharged from the tip of said nozzle, and a moisture issuing device leading into said chamber in the path of said air flow to introduce moisture into said airflow and into said sand particles issuing from said nozzle.



2,440,335

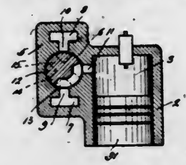
ELECTRIC CONTACT DEVICE

Grover R. Greenslade, Scott Township, Allegheny County, Pa., assignor to Flannery Bolt Company, Bridgeville, Pa., a corporation of Delaware

Application September 29, 1944, Serial No. 556,371

12 Claims. (Cl. 173—324)

1. A connector of the class described comprising a head element, an elongated handle element pivotally suspended from the head element, a rotatable threaded stud on the head element electrically insulated therefrom, insulated means on the handle element for rotating the stud, and means for making electrical connections with the stud.



2,440,336

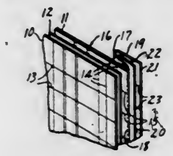
ENGINE BRAKING APPARATUS

William A. Hill, Spokane, Wash.

Application October 3, 1945, Serial No. 620,097

7 Claims. (Cl. 123—97)

1. In an internal combustion engine, a cylinder, a piston operating in said cylinder, a crank shaft, a valve chamber at a side of said cylinder having inlet and exhaust ports and a port communicating with the cylinder, the inlet port being of less length longitudinally of the valve chamber then the exhaust port and the cylinder port, a valve member rotatably mounted in said valve chamber and slidable longitudinally therein to adjusted positions, said valve member being formed with a fuel passage extending circumferentially thereof for alternately establishing communication between the cylinder port and the inlet port and the exhaust port during rotation of the valve member in one position of longitudinal adjustment, the valve member being also formed with passages spaced from the fuel passage longitudinally of the valve member a distance greater than the length of the exhaust port and the cylinder port and extending diametrically through the valve member when the valve member is slid longitudinally to crossed relation to each other and intermittently establishing communication between the cylinder port and the exhaust port during rotation of the valve member in another position of longitudinal adjustment, means for intermittently transmitting rotary motion from the crank shaft to the valve member, and means for shifting the valve member longitudinally to adjusted positions.

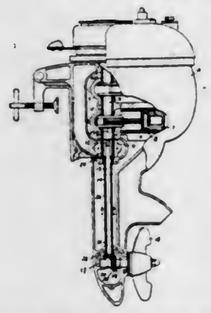


2,440,337

PAY ROLL RECORD

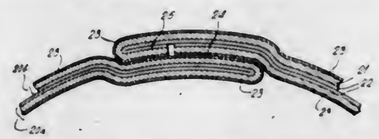
Frazier O. Hosmer, Birmingham, Ala.

Application February 15, 1946, Serial No. 647,977



5 Claims. (Cl. 282—3)

3. A pay roll record comprising original and duplicate sheets each having horizontal and vertical parallel lines which divide them into corresponding columns for the entry of pay roll data for a plurality of employes, a carbon sheet between the original and the duplicate, identifying headings at the tops of the columns on the original sheet, a detachable flap along one marginal edge of the duplicate folded over the duplicate

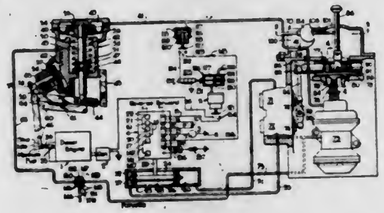


and then over against itself and having vertical lines thereon forming columns which lie directly under the marginal lines on the duplicate, a carbon strip within the folds of the flap, the flap being joined to the marginal edge of the duplicate along a perforated line, individual pay records each having ruled lines extending thereacross corresponding to the vertical lines on the sheet and having identifying data associated with the lines corresponding to those on the original, horizontal perforated parting lines on the duplicate and extending across the flap for separating the duplicate into a plurality of separate records for attachment to the individual pay records with a tab formed by separating the flap overhanging one end of the individual pay record.

2,440,338
OUTBOARD MOTOR LUBRICATION
Leo T. Kincannon, Milwaukee, Wis., assignor to Metal Products Corporation, Milwaukee, Wis., a corporation of Wisconsin
Application November 15, 1946, Serial No. 710,208
1 Claim. (Cl. 184—6)

In an outboard motor having an engine crankcase, a crankshaft journalled in said crankcase, a propeller shaft housing, a propeller shaft mounted in said propeller shaft housing, a drive shaft housing between said crankcase and said propeller shaft housing, the combination of a hollow drive shaft operatively connected to said crankshaft and said propeller drive shaft and extending into said propeller shaft housing, and conduit means between said crankcase and the interior of said drive shaft for supplying crankcase lubricant thereto and thence to said propeller shaft housing.

2,440,339
TUBE OF FLEXIBLE COMPOSITE SHEET MATERIAL AND THE MANUFACTURE THEREOF
Walter Langer, New York, N. Y.
Application November 24, 1942, Serial No. 466,724
8 Claims. (Cl. 138—53)

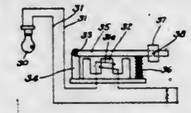


1. A tube of flexible composite sheet material, said sheet material comprising a strain-resisting sheet of non-metallic sheet material the outer surface of which carries integral therewith a layer of metal foil, said tube being characterized by a longitudinally extending seam and by the fact that in the region of said seam longitudinally extending portions of the inner non-metallic surface of said flexible composite sheet material are brought into juxtaposition and bonded face-to-face by an adhesive to provide a primary seal which is the initial juncture of said flexible composite sheet material that provides the inner surface of said tube, the layers of said primary seal being integrally arranged in the superposed order metal foil, non-metallic sheet, bonding adhesive, non-metallic sheet, and metal foil, and by the further fact that one thickness of said composite sheet material is carried beyond said primary seal a substantial distance along the outer surface of said tube and is adherently bonded adjacent the end thereof to said tube to provide side wall of said tube extending substantially completely thereabout so that the tube comprises a plurality of thicknesses of said composite sheet material substantially all around, said extension of said composite sheet material being adherently bonded to said tube as aforesaid by adhesive applied to the non-metallic surface thereof.

5. A method of making a tube utilizing flexible composite sheet material that comprises a strain-resisting sheet of non-metallic sheet material one surface of which carries integrally therewith a layer of metal foil, the opposite surface of said flexible composite sheet material being non-metallic, said method comprising wrapping said flexible composite sheet material about a mandrel with the non-metallic surface thereof on the inside, bringing longitudinally extending portions of said non-metallic inner surface of said flexible composite sheet material into juxtaposition in the region of initial juncture of said flexible composite sheet material and with heat sealing adhesive material between said juxtaposed portions, applying heat to seal together said juxtaposed portions of non-metallic surface of said flexible composite sheet material face-to-face, carrying an extension consisting of one thickness of the flexible composite sheet material beyond said region of initial juncture and wrapping same substantially completely about the previously formed tube with the folding back on itself of one thickness of said composite sheet material at said region of initial juncture, bringing the non-metallic surface of said extension adjacent the end of said extension into juxtaposition with underlying peripheral surface of the tube with heat sealing adhesive between the last mentioned juxtaposed surfaces, and applying heat to seal together said last mentioned juxtaposed surfaces by means of said heat sealing adhesive therebetween.

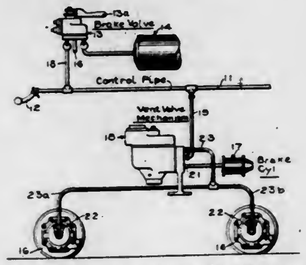
2,440,340
CONTROL APPARATUS FOR REVERSIBLE LOCOMOTIVES
Arthur G. Larson, Forest Hills, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application June 21, 1946, Serial No. 678,265
22 Claims. (Cl. 290—17)

22. A control apparatus for controlling the speed of an engine and the supply of electric current from a generator driven by said engine to an electric motor comprising in combination, a speed control pipe, speed regulating means for said engine operable to vary the speed of said engine in proportion to the pressure of fluid in said pipe, reversing means for said motor having forward and reverse current supply positions, circuit control means cooperative with said reversing means in its forward and reverse positions to close an electric current supply circuit from said generator to said motor, an operator's control device having forward and reverse positions for supplying fluid under pressure to said pipe and having



a neutral position for releasing fluid under pressure from said pipe, means operable in said forward and reverse positions of said operator's control device to effect movement of said reversing means to the corresponding position, and manually operative means for also effecting operation of said circuit control means to open said supply circuit.

2,440,341
FASTENER
Eugene W. Lehman, East Cleveland, and Edward M. Whalen, Cleveland, Ohio, assignors to The Cleveland Pneumatic Tool Company, Cleveland, Ohio, a corporation of Ohio
Application January 22, 1945, Serial No. 573,833
2 Claims. (Cl. 85—5)

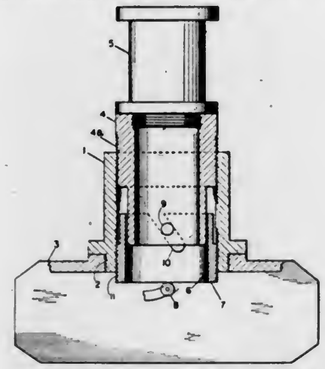


1. A fastener for temporarily holding together at least two perforated sheets in superposed relation, including a cup-shaped housing having a base adapted to rest on the upper sheet, a bore extending centrally through said base of a diameter substantially equal to that of the perforations of the sheets, a retainer slidable in said housing including two laterally resilient legs extending through said bore, an outwardly inclined projection on each of said legs below said base, said projections being laterally movable toward each other for insertion through aligned perforations of said sheets and laterally movable away from each other for engagement with the under side of the lower sheet, a rigid spreader member between said legs for normally urging said projections laterally away from each other, and an upwardly tapered spring urging said retainer upwardly relative to said housing for effecting the spreading of said projections by said spreader and the consequent engagement of said projections with the under side of the lower sheet, and means for locking the lower part of said spring in said housing, the upper end of said spring engaging and gripping said retainer to prevent accidental release thereof from the housing.

2,440,342
APPARATUS FOR MANIFESTING ACCELERATION
Robert Mayne, Akron, Ohio
Original application September 23, 1939, Serial No. 296,281. Divided and this application October 4, 1943, Serial No. 504,812
3 Claims. (Cl. 315—79)

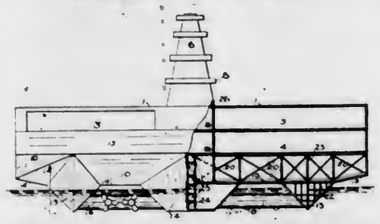
3. In apparatus for visually combating nausea in a human being subjected to accelerations the combination of a light, means for supplying electric current to the light, an accelerometer, and means operated by the accelerometer and positioned in the means for supplying electric current to the light for variably controlling the amount of current supplied to the light in direct ratio to the accelerations applied to the accelerometer.

2,440,343
BRAKE CONTROL SYSTEM
Joseph C. McCune, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Original application April 30, 1943, Serial No. 485,130. Divided and this application February 24, 1944, Serial No. 523,648
11 Claims. (Cl. 303—21)



1. In a deceleration control apparatus for a railway vehicle having a wheel unit on which the brakes may be applied and released, the combination of means carried by the wheel unit and operatively responsive to the rate of change of rotational speed thereof, valve means carried by a non-rotated casing associated with said wheel unit, means for effecting operation of said valve means in response to a predetermined operation of the first said means, fluid pressure operated brake control means for controlling the brakes associated with the wheel unit, and means providing a fluid pressure communication between the brake control means and the said valve means whereby to cause operation of the brake control means in response to operation of the valve means.

2,440,344
LENS COUPLING MOUNT
George Bertram Montgomery, Castle-Douglas, Scotland
Application March 17, 1947, Serial No. 735,216
In Great Britain March 15, 1946
1 Claim. (Cl. 88—57)

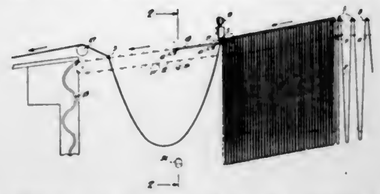


A lens coupling mount comprising a main annular body to engage a socket on a camera body,

two coaxial tubes carried by said annular body, said tubes being adapted for relative axial movement, one of said tubes being a lens tube including an objective fitting, and the other tube being a range-finder tube, range-finder gear on the camera body, the end of said range-finder tube adapted to engage said range-finder gear, the wall of one of said tubes being formed with a helical slot, and a pin projecting from the wall

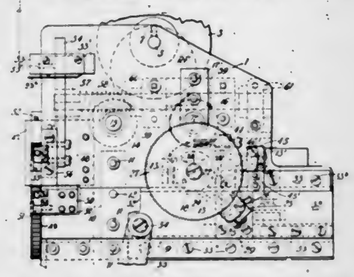
of the other tube and engaging said helical slot, the pitch of the helix being such as to provide, on movement of the lens tube, in addition to the altered axial relationship of the tube required for focusing, a supplementary relative axial movement of the tubes of an amount to compensate for the amount by which the actual focal length of the objective differs from the theoretical focal length of the objective.

2,440,345
AIRCRAFT CARRIER
Carr Baker Neel, Palo Alto, Calif.
Application May 2, 1944, Serial No. 533,681
11 Claims. (Cl. 114—43.5)



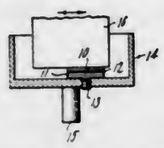
1. An airplane carrier having a main body portion provided with a watertight bottom skin, a row of horizontally elongated hulls in side by side spaced parallel relationship connected directly with and projecting downwardly from said skin for supporting said body above the water, said skin and body projecting equal and substantial distances laterally outwardly and upwardly from the outside hulls of said row,

---



2,440,346
PAPER DRYING APPARATUS
Marin Phillips, Appleton, Wis., assignor to The Appleton Coated Paper Company, Appleton, Wis., a corporation of Wisconsin
Application October 13, 1943, Serial No. 506,026
6 Claims. (Cl. 271—2.2)

2. In a drying apparatus wherein the material is carried in loops on sticks conveyed through the drier, the combination of a stop for arresting the movement of the foremost stick, means for positively releasing said stop when the preceding loop has moved to a predetermined looping position,

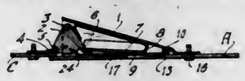


and means directly actuated by the released stick for delaying subsequent actuation of said release means to release said stop until said preceding loop is taken up to a predetermined position.

2,440,347
STACKING MACHINE
Joseph A. Poitras, Fort Lee, N. J., assignor to Solar Manufacturing Corporation, New York, N. Y., a corporation of New York
Application Nov. 6, 1944, Serial No. 562,247
2 Claims. (Cl. 270—58)

1. In a condenser stacking machine, the combination comprising means for feeding a tape foil along a defined path, means for shearing the tape into pieces of predetermined length, a stacking fixture positioned to receive the sheared lengths, means actuated with said shearing means for transversely shifting said fixture alternately to the right and left of said path for each operation of the feeding means so that successive sheared pieces are stacked on said fixture alternatively displaced with respect to the center of the stack and means forming part of said stacking fixture for guiding an insulating sheet centrally of said stacked pieces.

2,440,348
METHOD OF GRINDING PIEZOELECTRIC CRYSTALS
John J. Root, New York, N. Y.
Application May 8, 1945, Serial No. 592,644
5 Claims. (Cl. 171—327)

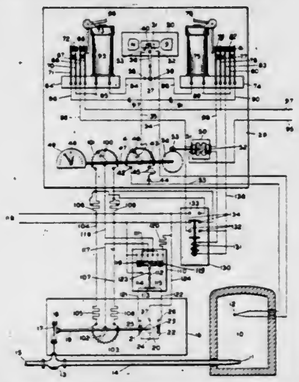


1. A method of processing piezoelectric elements which comprises permanently securing one side of said element to a support and thereafter reducing the thickness of said element by removing material from the free side thereof so as to increase its natural frequency.

2,440,349
PROCESS FOR PREPARING AN ALKYLOLAMIDE OF A TRIHYDROXYSTEARIC ACID
Benjamin B. Schaeffer, Upper Darby, Pa., assignor to United States of America as represented by the Secretary of Agriculture
No Drawing. Application November 14, 1944, Serial No. 563,420
4 Claims. (Cl. 260—404)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A process of preparing an alkylolamide of a trihydroxystearic acid, comprising reacting the trihydroxystearic acid with an alkylol amine in the presence of an aromatic hydrocarbon having a boiling point of about from 80° C. to 176° C., at the temperature of reflux, with continuous removal of water formed and until a sufficient quantity of water has separated to indicate essential completion of the reaction.

2,440,350
DOOR LATCH
Walter S. Shafer, Roseland, N. J.
Application November 14, 1944, Serial No. 563,360
3 Claims. (Cl. 292—226)

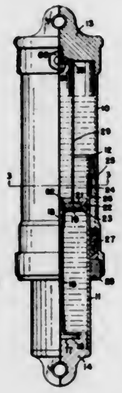


1. A latch including a casing that is open at one side, a latch bolt pivoted therein on a fixed pivot at one end of said open side, an operating member pivotally connected at one end to said casing at the other end of said open side and extending across and substantially closing said open side so as to be exposed for application of pressure, there being an operative connection between the swinging end of said operating member and said latch bolt for swinging the latter in one direction upon application of pressure in one direction to said operating member, and a spring for normally influencing said bolt and said operating member in the opposite direction, said latch bolt having a lug normally disposed adjacent said open side of said casing and said operating member including a substantially straight lever disposed in substantially the plane of said open side of the casing and pivoted at one end to the casing with its swinging end underlying said lug on said bolt.

2,440,351
DIFFERENTIAL RAILROAD CAR WHEEL AXLE
Frank A. Showacre, Bethesda, Md.
Application October 25, 1944, Serial No. 560,272
1 Claim. (Cl. 295—37)

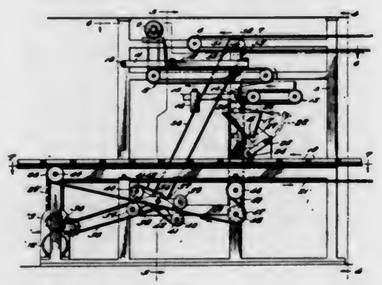
A differential railroad car axle comprising a freely rotatable sleeve, axle sections rotatable in said sleeve independent of each other and being inserted and removable through ends of the sleeve, said axle sections having outer end portions projecting from ends of the sleeve and terminating in journals for rotatable reception in journal boxes of a railroad car truck, wheels fixed about protruding portions of said axle sections between the journals and ends of said sleeve, said axle sections having longitudinal bores and annular seats at their outer ends surrounding the bores, a locking shaft extending through the bores and having its ends protruding from outer ends of the axle sections and threaded, and nuts upon the threaded ends of said shaft having flanged inner ends engaged in said seats to hold the axle sections against outward shifting.

2,440,352
AUTOMATIC ELECTRIC MOTOR CONTROL SYSTEM
George E. Van Vessem, Naugatuck, Conn., assignor to The Bristol Company, Waterbury, Conn., a corporation of Connecticut
Application June 2, 1943, Serial No. 489,346
12 Claims. (Cl. 318—28)



1. In a system for automatically regulating a condition, a motor adapted to actuate a valve for controlling a condition-affecting agent, means sensitive to changes in said condition, a measuring instrument comprising electrical means adapted to be unbalanced by changes in said condition and a member adapted under the influence of said sensitive means to assume different positions to restore a balanced condition in said electrical means, said positions being representative of the magnitudes of said condition, means operatively coupling said measuring instrument and said motor and adapted to cause said motor to move said valve toward positions corresponding to those assumed by said member of said instrument, and further means directly and substantially instantaneously responsive to said sensitive means independently of the position of said member for modifying the coupling between said instrument and motor and in a sense to anticipate the influence normally transmitted through said coupling means.

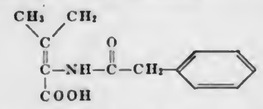
2,440,353
SHOCK ABSORBER
John F. Wallace, University Heights, Ohio, assignor to The Cleveland Pneumatic Tool Company, Cleveland, Ohio, a corporation of Ohio
Application February 2, 1945, Serial No. 575,858
2 Claims. (Cl. 267—64)



1. In a hydropneumatic shock absorber comprising first and second telescoping elements, an

orifice plate carried by said first element and a cooperating metering pin carried by said second element, a tube upon one end of which said orifice plate is supported, a ball and socket joint between

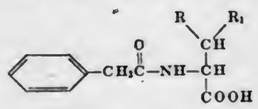
the opposite end of said tube and the said first element, and a fastening extending through said ball and socket joint into said first element for locking the joint in adjusted position.



2,440,354
RECEPTACLE FILLING APPARATUS
Peter Auberman, Caldwell, Idaho
Application July 1, 1946, Serial No. 680,666
6 Claims. (Cl. 226—2)

1. In an apparatus of the character described, the combination of an endless belt-conveying means for continuously carrying receptacles past a feed hopper, means for continuously delivering articles or the like to said feed hopper including a feed conveyor tiltable about a horizontal axis, yieldable means acting to normally swing said feed conveyor upwardly, driving means for said conveying means including a motor-driven variable speed transmission device having a speed control mechanism including a lead screw rotatable in opposite directions to vary the speed of said conveying means, and reversible driving means for said lead screw connected and responsive to the tilting movements of said feed conveyor for rotating the lead screw in a direction to slacken the speed of the conveying means when the feed conveyor is swung upwardly by said yieldable means and for rotating the lead screw in the opposite direction to increase the speed of said conveying means when the feed conveyor is swung downwardly against the action of said yieldable means by the articles or the like supplied to the feed conveyor.

2,440,355
PROCESS AND CULTURE MEDIA FOR PRODUCING PENICILLIN
Otto K. Behrens, Indianapolis, Ind., assignor to Eli Lilly and Company, Indianapolis, Ind., a corporation of Indiana
No Drawing. Application August 24, 1945, Serial No. 612,525
7 Claims. (Cl. 195—36)

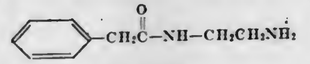


3. In the method of producing penicillin in submerged culture by growing a Penicillium mold of the notatum-chrysogenum group in association with a nutrient material, the improvement which comprises incorporating in the nutrient material, in effective amount less than about 1 percent, a member of the group consisting of N-phenylacetyl - α - amino - β,β - dimethylacrylic acid represented by the formula

and salts and lower alkyl esters thereof.

2,440,356
PROCESS AND CULTURE MEDIA FOR THE PRODUCTION OF PENICILLIN
Otto K. Behrens, Indianapolis, Ind., assignor to Eli Lilly and Company, Indianapolis, Ind., a corporation of Indiana
No Drawing. Application August 24, 1945, Serial No. 612,526
8 Claims. (Cl. 195—36)

1. The method of producing penicillin in submerged culture which comprises growing a Penicillium mold of the notatum-chrysogenum group in a culture medium in the presence of an effective amount less than about one percent of a compound characterized by the presence of its 1-configuration isomer and selected from the class consisting of acids represented by the formula



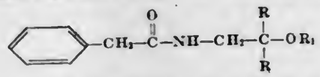
wherein R represents a member of the group consisting of hydrogen, methyl and ethyl and R_1 represents an alkyl radical having not more than two carbon atoms, and salts and lower alkyl esters of said acids.

2,440,357
PROCESS AND CULTURE MEDIA FOR PRODUCING PENICILLIN
Otto K. Behrens and Quentin F. Soper, Indianapolis, Ind., assignors to Eli Lilly and Company, Indianapolis, Ind., a corporation of Indiana
No Drawing. Application August 24, 1945, Serial No. 612,528
8 Claims. (Cl. 195—36)

3. The method of producing penicillin in submerged culture, which comprises growing a Penicillium mold of the notatum-chrysogenum group in the presence of an effective amount less than about one percent of an N-alkenylphenyl acetamide of the group consisting of N-allyl-phenylacetamide, N-crotyl-phenylacetamide, N-(2-methylallyl)-phenylacetamide, N-(3-ethylallyl)-phenylacetamide and N-(3,3-dimethylallyl)-phenylacetamide.

2,440,358
PROCESS AND CULTURE MEDIA FOR PRODUCING PENICILLIN
Otto K. Behrens and Reuben G. Jones, Indianapolis, Ind., assignors to Eli Lilly and Company, Indianapolis, Ind., a corporation of Indiana
No Drawing. Application August 24, 1945, Serial No. 612,529
7 Claims. (Cl. 195—36)

1. The method of producing penicillin in submerged culture which comprises growing a Penicillium mold of the notatum-chrysogenum group in a culture medium in the presence of an effective amount less than about one percent of a member of the group consisting of N-(2-aminoethyl)-phenylacetamide represented by the formula

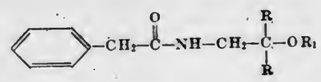


and acid addition salts thereof.

2,440,359
PROCESS AND CULTURE MEDIA FOR PRODUCING PENICILLIN
Otto K. Behrens, Reuben G. Jones, and Joseph W. Corse, Indianapolis, Ind., assignors to Eli Lilly and Company, Indianapolis, Ind., a corporation of Indiana
No Drawing. Application August 24, 1945, Serial No. 612,538
8 Claims. (Cl. 195—36)

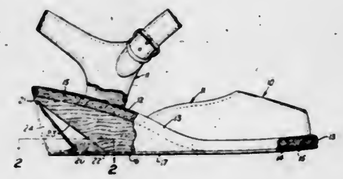
3. The method of producing penicillin in submerged culture which comprises growing a Penicillium mold of the notatum-chrysogenum group in a culture medium in the presence of an effective amount less than about one percent of a compound of the group consisting of N-(2-hydroxyethyl)-phenylacetamide, N-(2-hydroxypropyl)-phenylacetamide, and N-(2-hydroxybutyl)-phenylacetamide.

2,440,360
PROCESS AND CULTURE MEDIA FOR THE PRODUCTION OF PENICILLIN
Otto K. Behrens and Reuben G. Jones, Indianapolis, Ind., and Joseph W. Corse, Altadena, Calif., assignors to Eli Lilly and Company, Indianapolis, Ind., a corporation of Indiana
No Drawing. Application August 12, 1947, Serial No. 768,274
9 Claims. (Cl. 195—36)



1. The method of producing penicillin in submerged culture which comprises growing a Penicillium mold of the notatum-chrysogenum group in a culture medium in the presence of an effective amount less than about one percent of a compound represented by the following formula:

wherein each R represents a member of the group consisting of hydrogen, methyl and ethyl, and R_1 represents a member of the group consisting of methyl, ethyl, propyl and isopropyl.

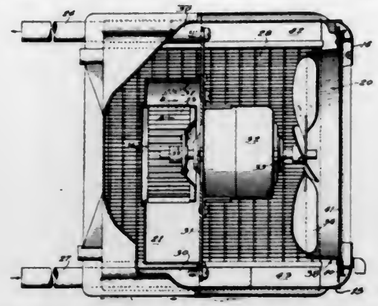


2,440,361
PROCESS AND CULTURE MEDIA FOR THE PRODUCTION OF PENICILLIN
Otto K. Behrens and Reuben G. Jones, Indianapolis, Ind., and Joseph W. Corse, Altadena, Calif., assignors to Eli Lilly and Company, Indianapolis, Ind., a corporation of Indiana
No Drawing. Application August 12, 1947, Serial No. 768,275
9 Claims. (Cl. 195—36)

1. The method of producing penicillin in submerged culture which comprises growing a Penicillium mold of the notatum-chrysogenum group in a culture medium in the presence of an effective amount less than about one percent of a compound represented by the following formula

wherein each R represents a member of the group consisting of hydrogen, methyl and ethyl, and R_1 represents a member of the group consisting of acetyl, propionyl, butyryl and phenylacetyl.

2,440,362
SLIP LASTED SHOE WITH TUCKED IN HEEL COVER, AND METHOD
Walter Braun, Los Angeles, Calif.
Application July 25, 1944, Serial No. 546,455
8 Claims. (Cl. 36—34)

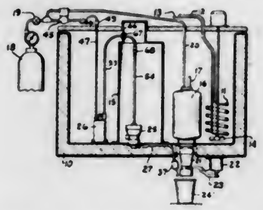


6. A heel for a shoe comprising a generally wedge type heel raise, said heel raise being formed with a substantially vertical slit commencing at a point spaced from the top of said heel raise cut in from the surface thereof which is on the outside of the shoe said slit being of increasing depth towards the bottom of said heel raise, and a single, continuous cover of sheet material over the outside surface of said heel raise fitted snugly thereto, said cover having an original fullness around its lower portion greater than the surface to be covered, and a tuck of the unbroken area of said cover forced into said slit to remove surplus and improve the fit of said cover on said heel raise.

2,440,363
BLOWER
Theodore S. Briskin, Chicago, Ill., assignor to Excel Auto Radiator Company, Chicago, Ill., a corporation of Delaware
Application February 5, 1945, Serial No. 576,234
2 Claims. (Cl. 230—119)

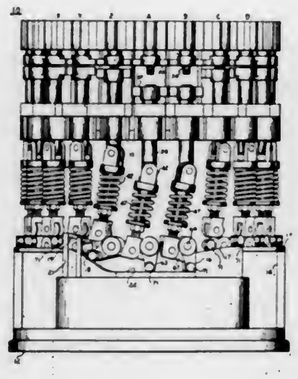
1. In a heater in which the parts are arranged so that the inlet air stream moves in a transverse direction with respect to the outlet air stream, and having a fan disposed in the path of said outlet air stream, an interiorly extending

duct disposed around said fan, said duct being built up at the windward side so as to form a



partial barrier for said transversely flowing air stream.

2,440,364
DYE COMPOSITION
William J. Champion, La Grange, Ill., assignor to Ditto, Incorporated, Chicago, Ill., a corporation of West Virginia
No Drawing. Application December 24, 1943, Serial No. 515,620
1 Claim. (Cl. 106—272)

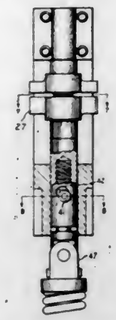


A coating composition consisting of a suspension of a dye selected from the group consisting of water and alcohol soluble dyes in a wax and mineral oil solution, said composition containing less than one-half percent of water and from 55 to 67 percent by weight of said dye, the wax being present in substantial amount and the oil being present in greater amount than the wax and sufficient to give a free-flowing composition under coating conditions.

2,440,365
METERING MOTOR OPERATED PUMP FOR DISPENSING BEVERAGES
Bruce G. Copping, Atlanta, Ga., and Evert S. Wegman, East Longmeadow, Mass., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 10, 1945, Serial No. 577,204
4 Claims. (Cl. 225—26)

1. Beverage dispensing apparatus comprising, a tank for containing water to be dispensed, a syrup tank, a syrup pump associated with and operatively connected to the syrup tank, an adjustable metering device for operating the syrup pump detachably connected in and near the bottom of the water tank, and a connection adapted to contain liquid joining the metering device and the syrup pump, said connection being so constructed and arranged that the metering device may be removed from the water tank for adjustment without breaking said connection.

2,440,366
MOLDING MACHINE
David Cropp, Rochester, N. Y., assignor to Cropp Engineering Corporation, Warren, Pa., a corporation of Delaware
Application July 13, 1945, Serial No. 604,762
8 Claims. (Cl. 18—20)

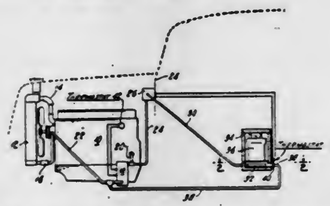


2. In a molding machine having a rotatable turret, a plurality of molds carried by said turret, each of said molds including a pair of complemental elements, one of said elements being fixed, the other of said elements being movable with respect to the fixed element and said turret, mechanism for operating the movable element of each of said molds comprising a spring pressure unit joined to each movable element, a cam-like track on a stationary part of said machine, a toggle pivotally mounted on said turret and joined to said spring pressure unit, said toggle being engageable with a portion of said track in a manner to impart movement in one direction thereof to said movable element through said spring pressure unit to bring said movable element into cooperative relationship with said fixed element, said toggle and said spring pressure unit being so constructed and arranged as to secure said movable element against withdrawal from said fixed element independently of said track during at least part of a molding cycle, and means associated with said track for rotating said toggle in another direction to permit withdrawal of said movable element from said fixed element under impulse of said spring pressure unit.

2,440,367
MOLDING MACHINE
David Cropp, Rochester, N. Y., assignor to Cropp Engineering Corporation, Warren, Pa., a corporation of Delaware
Application July 24, 1945, Serial No. 606,826
5 Claims. (Cl. 18—20)

1. In a molding machine having a rotatable turret, a plurality of molds carried by said turret, each of said molds comprising a fixed element and a cooperative movable element, a track on a stationary part of said machine, means for moving said movable element, said means being carried by said turret and rendered movable by engagement with at least a portion of said track, lost motion means connecting the movable element with said moving means, said lost motion

means including two relatively movable parts constructed to turn said movable element about

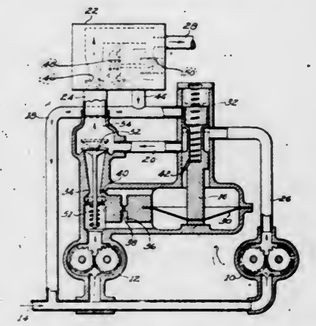


an axis common to both elements during relative movement of said last named parts.

2,440,368
SLEEVE HEAD PAD FOR GARMENTS
Irving A. Danilin, New York, N. Y.
Application March 2, 1946, Serial No. 651,510
4 Claims. (Cl. 2—268)

1. A shoulder or sleeve head pad comprising: a plurality of separate elongated strips of felt, each of said strips being folded about a predetermined line thereon, said last mentioned lines being aligned and juxtaposed; and stitch means extending through and securing together the several laminations formed by said strips in the folded condition thereof.

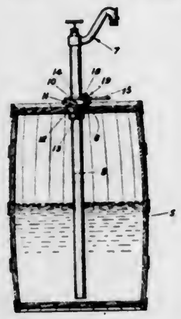
2,440,369
AUTOMOTIVE BATTERY HEATING SYSTEM
George R. Furman, Beacon, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application July 29, 1944, Serial No. 547,233
5 Claims. (Cl. 123—142.5)



5. The combination with a motor vehicle having an engine with a water jacketed cylinder block, a heater for heating the water in said water jacket during standby periods and a battery for starting said engine, of means for heating said battery during said standby periods to insure maximum power output when starting the engine, comprising a heat exchanger coil disposed in contact with said battery, means connecting said heater and said coil to provide for circulation of heated water through said coil, means for pumping heated liquid through said water circulating means, and temperature responsive means operatively connecting said coil and said pumping means for controlling the actuation of the latter in response to changes in the temperature of the water in said coil.

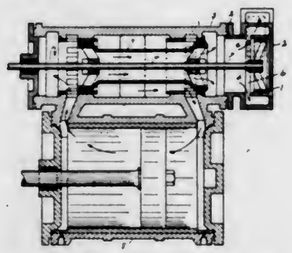
2,440,370
MULTIPOINTED ELECTRODE
Robert Gorden Hanneman, Cleveland, Ohio, assignor to Air-Maze Corporation, Cleveland, Ohio, a corporation of Delaware
Application January 23, 1947, Serial No. 723,704
3 Claims. (Cl. 250—27.5)

1. An electrode comprising a strip of woven screen having filaments crossing at right angles, there being long filaments running lengthwise of said strip and a series of short filaments running crosswise thereof, said short filaments extending laterally beyond said long filaments providing a series of sharp points along the side of said strip, and said strip being twisted about a central axis generally parallel to said long filaments.



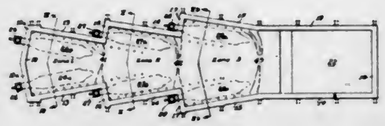
2,440,371
EMERGENCY PUMP
George M. Holley, Jr., Grosse Pointe, Mich., assignor to George M. Holley and Earl Holley
Application February 1, 1946, Serial No. 644,835
2 Claims. (Cl. 103—11)

1. An emergency fuel pump having a normally open escape valve in combination with a normally-functioning fuel supply pump having a Venturi outlet, yieldable means for closing said escape valve, means responsive to the drop in pressure in the throat of said Venturi outlet



for opening said escape valve against said yielding means when said normally-functioning fuel pump is operating normally, said escape valve being adapted when closed by said yieldable means to also admit fuel from said emergency fuel pump downstream from said Venturi outlet when the flow through said venturi fails, a non-return valve in the outlet from said venturi.

2,440,372
CLAMP FOR BARREL PUMPS
Wilbur Jackson, Chatsworth, Ga.
Application January 16, 1947, Serial No. 722,399
1 Claim. (Cl. 285—30)



A fitting adapted to be mounted upon a barrel and provided with a main opening, a clamp plate arranged upon the fitting and provided with a main opening and an eccentric slot, the main openings being adapted to receive the cylinder of a pump or the like, and a pin secured to the fitting and projecting into the eccentric slot and co-acting with the slot when the clamp plate is turned for shifting the clamp plate bodily laterally to clamp the cylinder against the side wall of the main opening in the fitting.

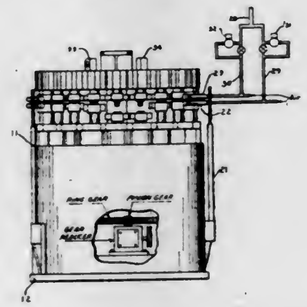
2,440,373
SUPPLEMENTARY EXHAUST PORT FOR STEAM LOCOMOTIVES
William W. Knight, Birmingham, Ala.
Application November 20, 1946, Serial No. 711,153
3 Claims. (Cl. 121—136)

2. A supplementary exhaust for use on steam locomotives of the class described comprising: a slide valve, a case for the slide valve to operate therein, a piston rod attached to the valve, an exhaust port adapted to register with the slide valve, an exhaust pipe leading from the exhaust port of the valve, said assembly attached to the main steam valve of the locomotive cylinder and adapted to operate in unison therewith.

2,440,374
SMELTING FURNACE
Levi S. Longenecker, Mount Lebanon, Pa.
Application September 16, 1943, Serial No. 502,581
20 Claims. (Cl. 266—10)

11. In a smelting furnace having an exhaust duct adjacent its front wall and a settling zone below such duct, a shadow wall overlying such zone and arranged to serve as a shield between such duct and such zone, means dividing the furnace space between such duct and the furnace back wall into a number of longitudinally extending melting zones of different widths; each succeeding zone having a greater width than the zone that precedes it, and a pair of burners for each such zone with each pair so constructed and arranged as to project a pair of heating flames adjacent the zone side walls and throughout substantially its full length whereby a substantially constant high flame temperature is maintained throughout the furnace from the back wall to such duct and a relatively low temperature is maintained within the exhaust duct.

2,440,375
LUBRICATING OIL
Rush F. McCleary, Beacon, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Original application April 26, 1941, Serial No. 390,541, now Patent No. 2,363,134, dated November 21, 1944. Divided and this application February 23, 1942, Serial No. 432,039
11 Claims. (Cl. 252—42.7)

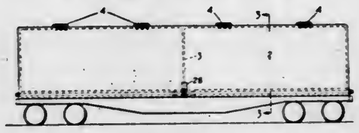


1. An improved lubricating oil comprising a mineral lubricating oil having incorporated therein a small proportion of an oil-soluble metal salt of a compound which is the reaction product of a methylol-forming aromatic compound with equimolecular quantities of formaldehyde and a secondary amine.

2,440,376
MOLDING MACHINE
Richard A. Myers, Warren, Pa., assignor to Warren Plastics Corporation, Warren, Pa., a corporation of Delaware
Application August 23, 1946, Serial No. 692,639
4 Claims. (Cl. 18—20)

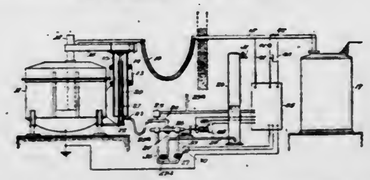
4. In a molding machine having a rotatable turret, a plurality of pairs of complemental mold elements carried by said turret, and means operable to separate each pair of elements on the completion of a molding cycle to expose a molded article on its carrying element; a mechanism for the successive removal of molded articles from their carrying elements comprising a swingable member mounted on a stationary part of said machine, means yieldingly urging said member into the path of travel of an exposed molded article, a block on said member having a plane surface adapted to have contact with an exposed article, said block being proportioned to have sufficiently protracted contact with said article as to break the seal of adherence of the article with its carrying element, a spring actuated trigger on said member, said trigger being positioned to contact and effect removal of a loosened article from its carrying element.

2,440,377
MOLDING MACHINE
Stuart J. Myers, Warren, Pa., assignor to Warren Plastics Corporation, Warren, Pa., a corporation of Delaware
Application August 21, 1946, Serial No. 692,037
4 Claims. (Cl. 18—20)



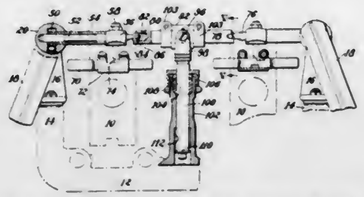
1. In a molding machine having a rotatable turret of generally circular cross section, means for rotating said turret, a plurality of molds carried by and radially disposed in a common plane about said turret, said molds including upper and lower separable elements, said elements each having a frontal portion that includes lateral extensions, structure for heating said molds comprising two stationary gas heating units arranged in an arc around the molds on said turret and including burners so positioned as to direct a flame successively onto the full frontal surface of each element and its lateral extensions as said turret revolves.

2,440,378
TREATMENT OF SODIUM ALUMINATE SOLUTIONS
James W. Newsome, Belleville, Harold W. Heiser, East St. Louis, and James R. Wall, Collinsville, Ill., assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application September 13, 1946, Serial No. 696,936
2 Claims. (Cl. 23—52)



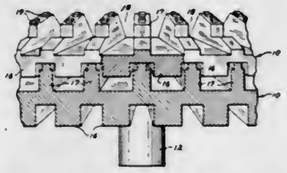
2. In the process comprising removing dissolved sodium sulfate present in an aqueous sodium aluminate solution containing dissolved sodium organic salts, and produced by digesting alumina-bearing ore containing organic material with caustic soda solution, by evaporating water from the solution sufficiently to precipitate sodium sulfate values therefrom, the step comprising introducing into the solution to be concentrated a material selected from the class consisting of rosin, rosin oil, and tall oil.

2,440,379
TRANSPORT VEHICLE
Ragnar A. Norbom, New York, N. Y., assignor to National Fitch Corporation, a corporation of Delaware
Application January 12, 1945, Serial No. 572,531
13 Claims. (Cl. 214—83.28)



1. In a vehicle for transporting flour or similar finely-crushed or granular material in bulk, the combination comprising: two enclosed lading compartments in end-to-end relation, each extending approximately one-half of the length of the vehicle with their adjacent transverse end walls at approximately the longitudinal center of the vehicle, the compartment at one end having its bottom wall out-of-line, longitudinally of the vehicle, with the bottom wall of the other compartment; two suction conducting means mounted within the vehicle and exteriorly of the compartments for discharging the lading of the said compartments, one said means being positioned to operate along the bottom wall of each of the compartments and each comprising an extensible suction nozzle with operating mechanism therefor, mounted on the vehicle, for moving the said nozzles into and along the bottom walls of the respective compartments lengthwise thereof; and connection fittings on the vehicle for connecting each of the nozzles with a terminal source of suction.

2,440,380
MEANS FOR AUTOMATICALLY CONTROLLING ARC FURNACE ELECTRODES
William Harvey Payne, Hinsdale, Ill.
Application December 23, 1944, Serial No. 569,443
21 Claims. (Cl. 314—61)

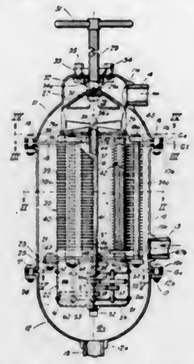


1. Mechanism adapted to position an electric arc furnace electrode and comprising a cooperating cylinder and piston connected to move the electrode in opposite directions in response to delivery or withdrawal of a hydraulic medium to and from the cylinder, a storage tank for the hydraulic medium, a pump, means for driving the pump in one direction only, and cooperating valve means operable, in one position, to connect the intake and delivery side of the pump respectively with the storage tank and said cylinder, to deliver the medium to the cylinder and cause the electrode to move in one direction, said valve means being operable, in another operating position, to connect the intake and delivery sides of the pump respectively with the said cylinder and tank, to withdraw the medium from the cylinder and effect movement of the electrode in the opposite direction, the speed of electrode movement being controlled by the pump delivery rate.

2,440,381
FIRING MECHANISM FOR GUNS
Harry Phillips, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application March 10, 1944, Serial No. 525,925
11 Claims. (Cl. 89—136)

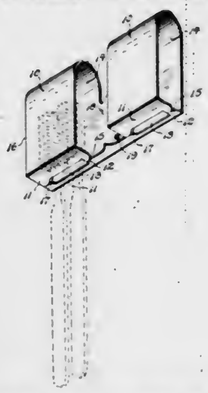
1. In a dual gun assembly the combination with two guns, a common cradle for said guns, a firing mechanism including in each gun a firing pin, a sear for operating the firing pin, and a sear lever for operating the sear, of two triggers mounted on said cradle for swiveling movement on axes parallel to the bores of the guns, mechanism whereby said triggers operate said sear levers respectively, and means interconnecting the triggers comprising two rocker members constructed and arranged to be operated by the triggers respectively, and a central rocker member disengageably connecting said trigger-operated rocker members.

2,440,382
TUYÈRE
William A. Riddell, Frederick, Md., assignor to The General Engineering Company, Frederick, Md., a corporation of Maryland
Application February 27, 1946, Serial No. 650,595
6 Claims. (Cl. 110—44)



6. In combination at least two superimposed tuyère plates, the upper plate having a series of spaced depending lower ribs and the lower plate having upwardly projecting ribs on its upper surface adapted to loosely mesh with the lower ribs on said upper plate, and means supporting the plates with the respective upper and lower edges of the upper and lower ribs spaced from the adjacent plate surfaces.

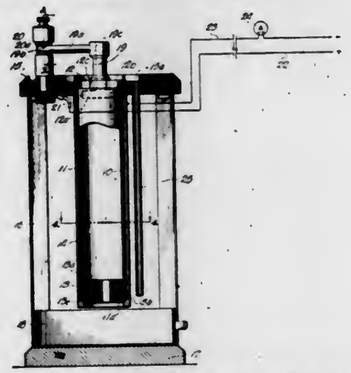
2,440,383
SYNERGISTIC ANTIOXIDANT COMPOSITION OF THE ACIDIC TYPE
Roy W. Riemenschneider, Glenside, and Jack Turer, Philadelphia, Pa., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application April 24, 1943, Serial No. 484,347
7 Claims. (Cl. 260—398.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. An antioxidant composition comprising phospholipids and an ascorbyl monoester of a saturated aliphatic monocarboxylic acid containing 12 to 18 carbon atoms per molecule.

2,440,384
SELF-CLEANING STRAINER
Kurtiss P. Schenke, New York, N. Y.
Application July 20, 1944, Serial No. 545,795
13 Claims. (Cl. 210—167)

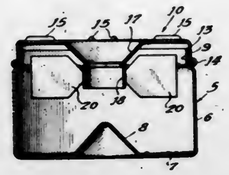
1. A fluid strainer comprising a main casing portion having a fluid inlet through the wall thereof, a casing portion having a fluid outlet, a supporting element having an opening disposed between said main and said outlet casing portions to form a partition to seal off said main portion from said outlet portion, a strainer unit having vertically spaced laminations supported by said supporting element in an inwardly spaced relationship from the wall of said main casing to the opening in said supporting element, rotatportion, said strainer unit having an outlet open able means disposed within said strainer unit adapted to extend between and clean the spaces between said laminations, an axial flow impeller disposed at said opening in said supporting element operatively connected to said rotatable cleaning means adapted to be driven by the fluid flowing from the outlet side of said strainer unit for the automatic cleaning of said spaces.



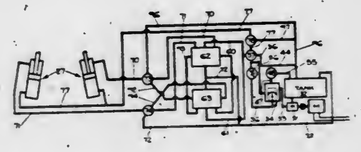
2,440,385
TOOTHBRUSH HOLDER
Charles F. Schulte, Columbus, Ohio
Application March 2, 1946, Serial No. 651,541
3 Claims. (Cl. 211—65)

1. An article holder comprising a body formed to include a pair of horizontally aligned resiliently separable jaws, the latter having adjoining

edges, at least one of said edges being recessed to provide an opening for the reception of handles of articles to be supported by said jaws, said edges at the article entrance end of the jaws being relieved to permit of relative separation between said jaws when a handle of an article is forced therebetween and toward said opening, the opposite or article-removal end of the jaws being unrelieved to prevent the insertion of an article handle therebetween, and one end only of said opening at the article-removal side thereof being relieved to permit of the passage of an article during removal thereof from the holder through the separation of the jaws.



2,440,386
CELL FOR MEASURING THE ELECTRICAL CHARACTERISTICS OF MATERIALS
Frederick W. Stein, Atchison, Kans.
Application September 30, 1943, Serial No. 504,404
8 Claims. (Cl. 175—183)

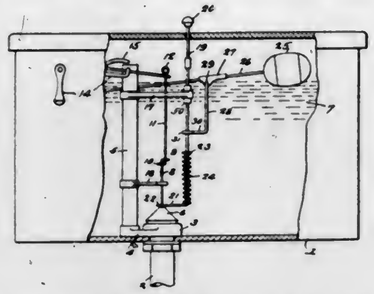


1. In a cell for determining the electrical characteristics of materials, a frame with an upper insulating support member, inner and outer concentric spaced apart tubes the outer tube suspended from the support member upper and lower insulating spacers mounted on the ends of the inner tube and engaging the inner surface of the outer tube to hold the tubes in insulated spaced relationship, the assembly of the upper extremity of the outer tube and upper spacer member forming a well, passageways through said upper spacer connecting said well with the annular space between said tubes for draining fluid from the well into said annular space.

2,440,387
SMOKELESS ASHTRAY
Richard C. Weddle, Terre Haute, Ind., assignor to Columbian Enameling & Stamping Co., Inc., Terre Haute, Ind., a corporation of Indiana
Application November 1, 1946, Serial No. 707,274
4 Claims. (Cl. 131—231)

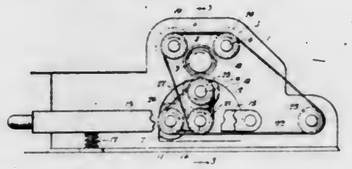
3. A smokeless ash tray comprising a receptacle having side walls and a bottom, means in the lower center of said receptacle for directing burning objects toward said walls, a detachable cover for said receptacle, said cover having a central opening therein, a tube depending from said cover in alignment with said opening and terminating short of said directing means, and cooling members spaced about and carried by said tube, the junction between a cooling member and said tube extending substantially the length of said tube, said cooling members lying in vertical planes and extending radially from said tube to points short of the receptacle walls whereby to present substantial cooling surfaces to the products of combustion emitted by burning objects deposited within the receptacle.

2,440,388
HYDRAULIC SYSTEM FOR RECIPROCATING BREAKER PLATES FOR REVERSIBLE ROTARY CRUSHERS
Fred J. Wright, Upper Arlington, Ohio, assignor, by mesne assignments, to The Jeffrey Manufacturing Company, a corporation of Ohio
Application July 10, 1945, Serial No. 604,219
5 Claims. (Cl. 241—187)



1. A crusher including a rotor, a pair of reciprocably mounted breaker plates adjacent said rotor, hydraulic motor means for reciprocating said breaker plates in reverse directions simultaneously upwardly and downwardly, a hydraulic circuit for controlling reciprocation of said breaker plates including a reversible hydraulic motor for each plate, a hydraulic circuit for controlling said motors including means providing a hydraulic coupling between them whereby the weight of each breaker plate counterbalances the other and said breaker plates are moved in reverse directions as aforesaid, and valve means operable to reverse the direction of travel of said motors periodically and insure that each breaker plate moves through a full stroke.

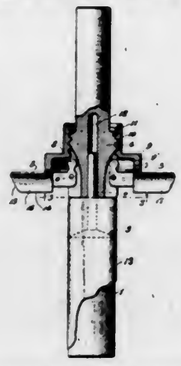
2,440,389
WATER SAVER
Walter Mark Anderson, Sr., Montgomery, Ala.
Application August 14, 1944, Serial No. 549,359
4 Claims. (Cl. 4—57)



1. In a water saving device, a flush tank having an outlet, a buoyant valve controlling the outlet, a valve operating member disposed above the valve and supported thereby, said member being movable relatively to the valve, a portion of said member being exposed for depression by an operator, to secure a premature closing of the valve, an abutment on said member, a float and mechanism for mounting the float in the tank for movement responsive to the rise and fall of the liquid therein, weight means comprising a part slidably mounted on said member and en-

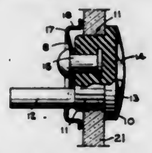
gageable with the abutment, when the level of the water in the tank falls, thereby to superpose

an added weight on the valve and to secure a premature closing of the valve.



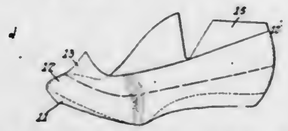
2,440,390
APPARATUS FOR MAKING CONVOLUTE WOUND TUBING FROM SHEET MATERIAL
Boris Bogoslowsky, Jackson Heights, N. Y.
Application October 27, 1944, Serial No. 560,706
5 Claims. (Cl. 93—81)

4. Apparatus for making convolute wound tubing from sheet material, comprising, a mandrel, a frame, a plurality of rollers mounted on said frame to rotate on parallel axes arranged around said mandrel, the peripheral surfaces of said rollers being spaced to engage the peripheral surface of said mandrel, means for driving at least one of said rollers to rotate said mandrel to feed the leading end of a sheet of material between one of said rollers and said mandrel, and means for guiding the leading end of said sheet circumferentially of said mandrel as said mandrel rotates to cause the leading end to feed into the bight between each of said rollers and said mandrel and tuck under the next succeeding convolution.



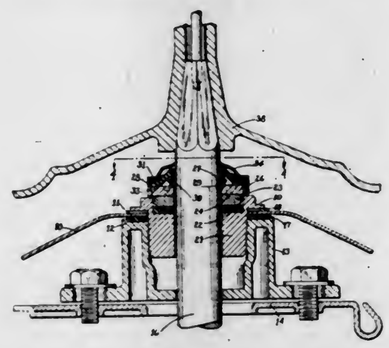
2,440,391
APPARATUS FOR SHAPING TUBULAR BLANKS
Boris Bogoslowsky, Jackson Heights, N. Y.
Application December 8, 1944, Serial No. 567,267
2 Claims. (Cl. 93—36.8)

1. Apparatus for making an embryo tubular article having a tubular body portion and a shoulder and tubular neck integral with said tubular body, comprising, a head, a plurality of fingers mounted on said head and spaced at intervals around a center, and means for moving said fingers radially inwardly toward said center, each of said fingers having surfaces which engage spaced portions of one end of a tubular blank to fold the same inwardly, and each of said fingers having radially disposed surfaces opposed to but spaced from similar radially disposed surfaces of the next adjacent finger on each side, which said radially disposed surfaces serve



to fold the portions of said tubular blank lying between said inwardly folded portions to form outwardly projecting pleats.

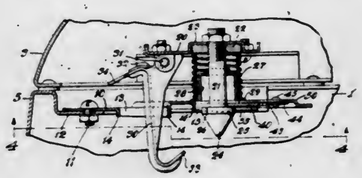
2,440,392
ZERO METER ADJUSTER
Howard Butler, Walsall, England
Application August 8, 1944, Serial No. 548,585
In Great Britain October 29, 1943
8 Claims. (Cl. 171—95)



8. A zero adjuster for a measuring instrument comprising a casing member, a stud mounted for rotation about its axis in an opening in the casing member, said stud having a flanged head engaging the outer side of the casing member, an eccentric projection on the opposite end of the stud, and a resilient plate washer secured to the inner end of the stud, said washer being bent by means securing it to the stud and engaging the casing member at points within the inner side of the casing member around the opening therein and forming a cover therefor.

2,440,393
PROCESS OF MAKING LAST-FITTING FABRIC UPPERS
Frank W. Clark, Beverly Farms, Mass.
Application August 18, 1944, Serial No. 550,026
2 Claims. (Cl. 12—142)

1. The process of making fabric shoe uppers, which consists in providing a band of chenille yarn having coarse strands of vinyon disposed longitudinally in closely spaced courses in one portion of the band and in more widely spaced courses in an adjacent portion of the band, stretching the band longitudinally about a last with the vinyon strands concentrated adjacent the lower portion of the last and passing about the toe and heel ends thereof, connecting one margin of the band across the bottom of the last, and then steaming the band thereby causing the vinyon strands to shrink and stiffen the band into a resilient, self-sustained last-fitting upper.



2,440,394
LIQUID SEAL DEVICE
Gerald I. Cockerill, Cleveland Heights, Ohio, assignor to The Apex Electrical Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application October 11, 1944, Serial No. 558,146
2 Claims. (Cl. 286—11)

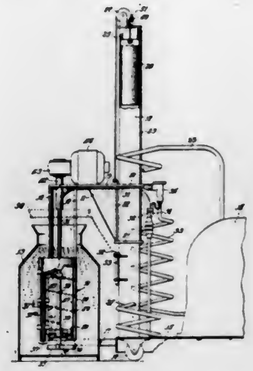
1. In a liquid seal adapted to effect a seal between the base of a chamber for sediment containing liquid and a rotatable shaft projected into the chamber through said base, said seal comprising a sealing surface encircling the shaft and elevated above the normal level of sediment tending to settle in the chamber, a sealing ring of self-lubricating material encircling the shaft and engaging the sealing surface, a sealing element of flexible material effecting a seal between the shaft and the sealing ring, means for exerting resilient pressure on the sealing element comprising a sheet metal plate of generally frusto-conical form having resilient fingers exerting pressure on the sealing element and generally V-shaped prongs directed at an angle to the shaft and in a direction away from the sealing ring, and said prongs defining an opening for receiving the shaft having an inner effective diameter slightly less than the shaft diameter adapted to permit the plate to slide along the shaft relatively rapidly in a direction toward the sealing ring and the prongs to be wedged into locking engagement with the shaft upon slight movement in a reverse direction.

2,440,395
LEVER RELEASE LATCH
Frank S. Deschermeier, Chicago, Ill., assignor, by mesne assignments, to Chicago Forging and Manufacturing Company, Chicago, Ill., a corporation of Delaware
Application February 7, 1946, Serial No. 646,101
1 Claim. (Cl. 292—221)

In a latch assembly, a supporting plate having a keeper receiving aperture, a keeper adapted to penetrate the aperture and move toward and from the plate in a plane generally perpendicular to the supporting plate, a latch element on the side of the plate farthest removed from the direction from which the keeper approaches, said latch element being pivoted to the late and having a portion adapted to engage the keeper, an actuating lever pivoted to said latch element, and

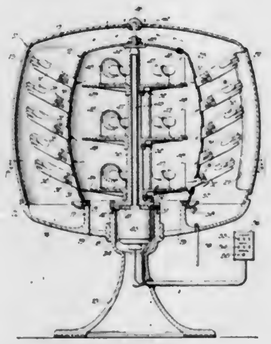
having an abutting portion adapted to engage a side of said keeper, yielding means adapted normally to urge said latch element and said actuating lever toward latching position, and means, engaging an outer portion of said actuating lever, for rotating it and the latch element, toward unlatching position, while maintaining a leverage contact between said actuating lever and the keeper.

2,440,396
SMOKING DEVICE
Max J. Doppelt, Chicago, Ill.
Application June 1, 1946, Serial No. 673,858
1 Claim. (Cl. 131—198)



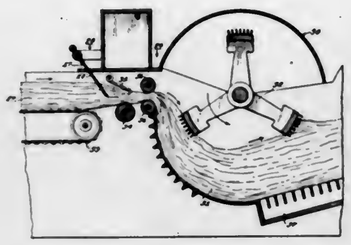
In a smoking device having a tobacco holder and a mouthpiece, a foraminous tube having a continuous smooth exterior surface throughout the length of the tube interposed between said holder and said mouthpiece for admitting air to co-mingle with the smoke passing through said tube, and a sleeve of porous paper surrounding said tube, said sleeve of porous paper being in continuous intimate contact at all points with the smooth surface of said tube and removed from the zone of combustion to permit repeated use of said porous paper and whereby admission of air into the tube for co-mingling occurs solely through the pores of said paper.

2,440,397
IMMERSION TYPE REFRIGERATING DEVICE
James S. Erickson, Danville, Ill., assignor to Sugar Creek Creamery Company, Danville, Ill., a corporation of Delaware
Application May 6, 1944, Serial No. 534,486
8 Claims. (Cl. 62—141)



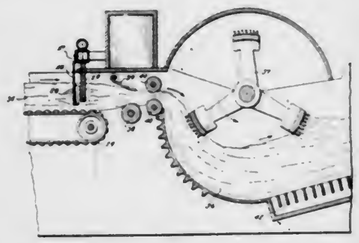
1. A cream cooler of the class described, comprising a cooling unit adapted to be immersed in cream contained in a conventional cream can, means for vertically adjustably supporting said cooling unit to thereby facilitate lowering of the unit into a can of cream positioned thereunder, means for supplying refrigerant to said cooling unit, a scraper adapted to be moved over the

cooling surface of said cooling unit to prevent accumulation of chilled and more or less con-



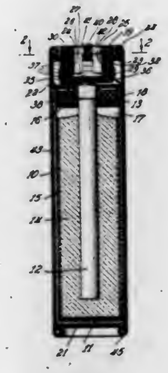
gealed cream on said surface, and means for actuating said scraper.

2,440,398
SURGICAL GLOVE DRYING APPARATUS
Ivy D. Fenwick, Brooklyn, N. Y.
Application August 16, 1944, Serial No. 549,667
11 Claims. (Cl. 34—105)



1. In an apparatus of the character described, an outer stationary casing, an inner rotary casing within the outer casing and defining therewith an air chamber extending entirely around the side and top of the inner casing, means for rotatably supporting and driving said inner casing, said outer casing having atmospheric air inlets communicating with the interior of the inner casing at the bottom thereof, said outer casing having air vents in the top thereof, means arranged within said inner casing to draw atmospheric air into the inner casing through said inlets and promote circulation of the air, and means on the inner casing communicating with the interior thereof and projecting into said chamber to receive air from the inner casing and let it flow into said chamber for the purpose of drying articles arranged on said last means, said outer casing having means of access to the interior thereof.

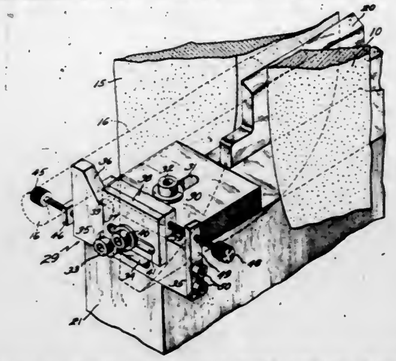
2,440,399
MEANS FOR CONDITIONING TEXTILE FIBERS
Arthur G. Hill, Greenville, S. C.
Application August 18, 1944, Serial No. 550,082
2 Claims. (Cl. 19—66)



1. In appparatus for treating textile fibers, a beater, means for conveying a relatively thick lap of the textile fibers to said beater, at least one applicator for applying liquid to the moving lap of fibers, said applicator being located above said conveyor means and at a position ahead of said beater, said applicator extending at an angle well down into the relatively thick lap of fibers so that it effects wiping contact with the inner fibers of the lap for applying treating liquid thereto and before the lap enters said beater.

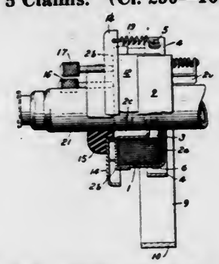
2,440,400
MEANS FOR CONDITIONING TEXTILE FIBERS
Arthur G. Hill, Greenville, S. C.
Application October 1, 1945, Serial No. 619,617
4 Claims. (Cl. 19—66)

1. A system for applying a conditioning liquid to textile fibers comprising, in combination with textile processing equipment, such as pickers or beaters, in which the textile fibers are disposed in a moving lap of substantial thickness, a plurality of applicator members arranged in said textile equipment for applying the conditioning liquid to the moving lap, said applicator members comprising a parting element positioned to extend well into the inner portion of a moving lap disposed in said textile equipment and adapted to part said moving lap transversely with respect to its thickness, and a depositing element positioned beyond said parting element with respect to the path of travel of said moving lap and adapted to extend into the part formed in said moving lap by said parting element and direct a deposit of conditioning liquid interiorly of said moving lap at the point of parting.



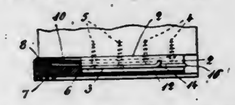
2,440,401
DRY BATTERY FOR HEARING AIDS
Dan W. Hirtle, Freeport, Ill., assignor to Burgess Battery Company, Freeport, Ill., a corporation of Delaware
Application June 15, 1945, Serial No. 599,726
6 Claims. (Cl. 136—107)

6. A battery comprising a cylindrical dry cell having a pair of electrodes exposed at the top thereof, a pair of socket terminals at the top of said cell and respectively connected to said electrodes, a terminal-supporting element of non-conductive material having a periphery substantially coincident with the cylindrical surface of said cell extended, said supporting element having a flat margin at the periphery thereof, means for supporting said terminal supporting element at the top of said cell in spaced relation thereto, a bottom member at the bottom of said cell and having a flat margin at the periphery thereof, a tubular member of non-conductive material laterally enclosing said cell and extending beyond said supporting element at the top of said cell and beyond said bottom member at the bottom of said cell, the end portions of said tubular member being turned inwardly and backwardly to form flanges, said flanges resting in pressure engagement with the peripheral margins of said supporting member and said bottom member respectively, and a disc of non-conductive material mounted upon the top of said supporting member above said terminals within the space encircled by the flange of said tubular element, the top surface of said disc being substantially coplanar with the top of the surrounding flange, said disc having apertures therein for access to said terminals.



2,440,402
OUTBOARD WORK WHIPPING INHIBITOR FOR CENTERLESS GRINDERS
William Horberg, Bridgeport, Conn.
Application April 17, 1946, Serial No. 662,851
11 Claims. (Cl. 51—103)

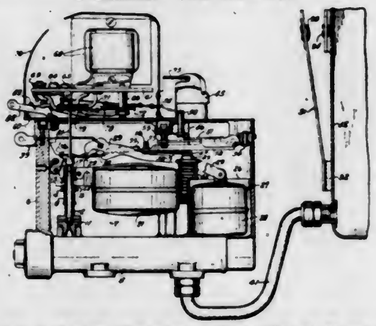
1. In a centerless grinding machine, the combination of, a power driven work regulating wheel flanking said grinding throat, a work rest underlying said grinding throat sloping downward toward said wheel, and a work whipping inhibitor comprising a motionless work guiding surface in outboard relation to said grinding throat having



a steeper slope than said work rest in a corresponding direction.

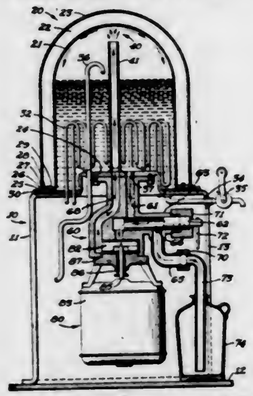
2,440,403
FOCUS COIL SUSPENSION FOR CATHODE-RAY TUBES
Donald Jackson, Cambridge, England, assignor to Pye Limited, Cambridge, England, a British company
Application October 24, 1946, Serial No. 705,286
In Great Britain October 31, 1945
5 Claims. (Cl. 250—161)

1. Device for suspending the focus coil of a cathode ray tube comprising pivot means for swinging the coil about an axis inclined at an acute angle to the horizontal, and pivot means for swinging the coil about an axis at right angles to said first axis.



2,440,404
SHOE HEEL WITH EXCHANGEABLE HEELPIECE
Gustaf Einar Johansson, Stockholm, Sweden, assignor to Robur Heel Company Aktiebolag, Stockholm, Sweden, a company of Sweden
Application January 29, 1945, Serial No. 575,012
In Sweden August 11, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires November 16, 1959
4 Claims. (Cl. 36—36)

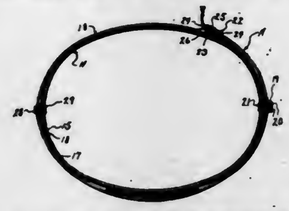
1. In a heel construction, in combination a rigid heel part having a flat bottom surface; a guide bar fixed longitudinally to said rigid heel



part extending from a point spaced from the rear edge of said rigid heel part to a point near the inner edge thereof; a locking plate having its inner end fixed to said guide bar and being wider and longer than the same so as to have two lateral edge portions and an outer end portion projecting over the corresponding edges of said guide bar; inwardly extending locking projections arranged in said lateral edge portions of said locking plate spaced from said outer end portion of the same; a flat detachable heel part having an outline corresponding substantially to the outline of said rigid heel part and provided with an elevated abutment along its outer edges for contacting the flat lower surface of said rigid heel part; a concave inner surface on said rubber heel part arranged so that it is normally spaced from said rigid heel part providing free play between said rubber heel part and said rigid heel part when subjected to treading pressure; a concave cavity in said rubber heel part arranged parallel to said concave inner surface of said rubber heel part and shaped so that the distance of its bottom from said concave inner surface of said rubber heel part is smaller than the height of said guide bar; a resilient metallic concave reinforcing plate entirely enclosed in said concave cavity substantially parallel to said concave inner surface of said rubber heel part; a longitudinal recess in said resilient metallic concave reinforcing plate corresponding in width and length substantially to said guide bar; opposed notches along the longitudinal edges of said recess near the outer end thereof corresponding to said inwardly extending locking projections of said locking plate so that the same are adapted to enter said notches and hold said flat detachable rubber heel part in proper position; a longitudinal slot in said flat detachable rubber heel part between said inner surface and said concave cavity in the same corresponding in width substantially to said guide bar; and an additional longitudinal cavity in said rubber heel part extending under said concave cavity from a point spaced from the rear edge of said flat detachable rubber heel part to the inner edge thereof and corresponding in width substantially to said locking plate but being deeper than the thickness of the same so as to leave under said locking plate a free space providing for play between said locking plate and the bottom of said additional longitudinal cavity.

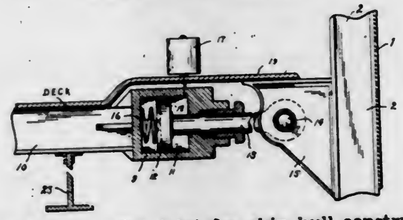
2,440,405
COMBUSTION RESPONSIVE FUEL CONTROL
Roy W. Johnson, Milwaukee, Wis.
Application August 31, 1944, Serial No. 552,168
5 Claims. (Cl. 158—28)

1. In a device for controlling the flow of fuel to a burner, an inlet valve controlling the supply of fuel and biased toward open position, a bimetallic element movable into position to close the valve, an electric heating element for supplying heat to warp the bimetallic element away from valve-closing position, a plurality of circuits for supplying electric current to the heating element, a manually operable switch closing one of the circuits to the heating element, the bimetallic element engaging and retaining the manually operable switch in closed position for a predetermined time after energization of the heating element, and a thermally responsive switch for closing another of said circuits to the heating element to hold the bimetallic element out of valve-closing position after opening of the manually operable switch, the thermally responsive switch closing on combustion and opening upon non-combustion of fuel in the burner.



2,440,406
FRUIT JUICE DISPENSER
Thomas M. Kerr, Los Angeles, Calif.
Application November 6, 1944, Serial No. 562,084
8 Claims. (Cl. 225—21)

1. A fruit juice dispenser comprising: a transparent container for the juice; a faucet for dispensing juice from the bottom of said container, a fountain conduit having its outlet in the upper portion of said container; a circulating outlet in the bottom portion of said container; a housing secured to the bottom of said container having a passage communicating with said conduit and a passage communicating with said outlet, said housing having a valve chamber and a filling inlet communicating therewith a concealed pump for continuously withdawing part of the fruit juice through said circulating bottom outlet and for forcing it through said conduit into the top portion of said container to form a display fountain; and a tubular valve in said chamber for controlling the flow of juice from said circulating bottom outlet to said pump at one time and from said filling inlet to said pump at another time, said pump being removable from said housing without interfering with the dispensing function of said container, when said valve is in neutral position.

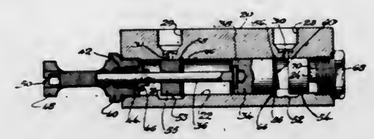


2,440,407
ADJUSTABLE HATBAND
Ernst K. Kuenstner, Milwaukee, Wis.
Application September 25, 1946, Serial No. 699,116
2 Claims. (Cl. 2—179)

2. The combination with the crown and brim of a hat, of a means adjusting the crown to the size of the head of a wearer including a band on said crown in close proximity to the brim, means securing one end of the band to the crown against movement, said band being brought around the

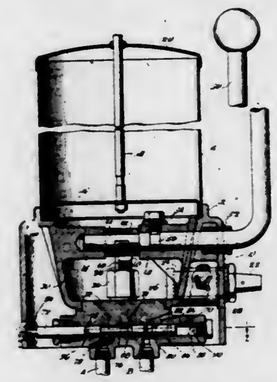
crown and over the point of fastening of said end, a slide buckle mounted on an intermediate portion of the band for movement around the band, and means securing the opposite end of the band to the slide buckle for movement therewith.

2,440,408
SHIP HULL CONSTRUCTION
Arthur H. Lackie, Duluth, Minn.
Application August 4, 1944, Serial No. 548,051
1 Claim. (Cl. 114—79)



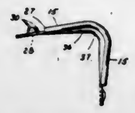
In an expansive joint for ship hull construction having side frames and thwartship internal girders; an inwardly projecting flat topped bracket fixed to one of said side frames carrying a piston rod pivotally mounted on said bracket, an elongated flat extension member fixed adjacent the end of one of said girders with its free end resting upon the flat surface of said bracket, a cylinder fixed to the end of said girder carrying a piston therewithin cooperatively engaged with said piston rod, and a fluid supply for said cylinder.

2,440,409
BRACKET MOUNTING
Herbert G. Lehmann, Bridgeport, Conn.
Application December 2, 1941, Serial No. 421,293
5 Claims. (Cl. 248—226)



1. A bracket to be clamped to a supporting surface by a screw or bolt having a head of predetermined radius comprising a face plate having an aperture therein provided with a countersink and having a depending skirt of uneven width for engaging, and positioning said bracket on, the supporting surface with the face plate in angular relation thereto, the surface of the countersink being spherical and having a radius of curvature greater than the radius of the head of the said screw or bolt to provide a bearing surface for the head when the screw or bolt is normal to the supporting surface.

2,440,410
LUBRICATING APPARATUS
John T. Leonard, Evanston, Ill.
Application August 12, 1944, Serial No. 549,223
9 Claims. (Cl. 184—7)



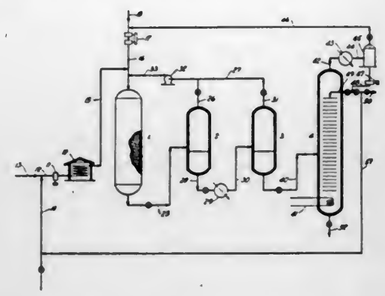
1. A lubricant measuring valve comprising, a valve body having a bore extending therethrough, said bore having a bypass at each end thereof, a cylindrical valve at each end of said bore and operable to cut off its adjacent bypass when in one position and to uncover said bypass when in another position, resilient means associated with each of said valves for moving it to bypass cut-off position, a piston reciprocable in said bore between said valves, means for supplying lubricant under pressure alternately to the opposite ends of said bore, and discharge ports near the ends of said bore positioned to be covered respectively by said valves when the latter are in positions in which they are not in bypass cut-off position.

2,440,411
DOUBLE-ACTING PUMP
John T. Leonard, Evanston, Ill.
Application February 15, 1946, Serial No. 647,769
8 Claims. (Cl. 184—28)

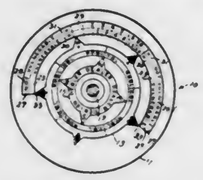
1. In a pump of the class described, a hollow base casting which includes an upwardly open sump, a block fitted into and forming a portion of the bottom wall of said sump, said block having a vertical bore threaded at its upper end, a pump cylinder having its lower end portion fitted into said bore and having a threaded portion engaging said upper end portion of the bore, said block having a horizontal bore and a transverse bore connecting said vertical and horizontal bores, said block having also a pair of outlet ports which intersect said horizontal bore, a slide valve member movable in said horizontal bore to connect the outlet bores alternatively with said transverse bore, and a piston reciprocable in said cylinder.

2,440,412
HEEL BRACE
Frank A. Melchionna, Cincinnati, Ohio
Application April 20, 1946, Serial No. 663,675
2 Claims. (Cl. 36—76)

2. A mild steel heel repair bracket comprising a pair of integral, angularly related leaves, and an integral raised reenforcing rib disposed longitudinally of said leaves and terminating at its opposite ends a distance from the free ends of said leaves, one of said leaves constituting a depending leaf having countersunk fastener receiving holes at its end and on opposite sides of said rib, the other of said leaves constituting an upper leaf having near its opposite edges and at a distance from the end of the leaf a pair of countersunk fastener receiving perforations surrounded, on the face opposite the countersinks, by pointed prongs integral with the leaf, the side edges of the bracket being folded over to provide straight edges along said leaves and providing marginal folded reenforcing margins, which are substantially coextensive in length with said rib and on the body face opposite the rib, said margins being notched along the edges, said leaves having bosses struck from said body into the notches and perforated for the reception of fastening members.



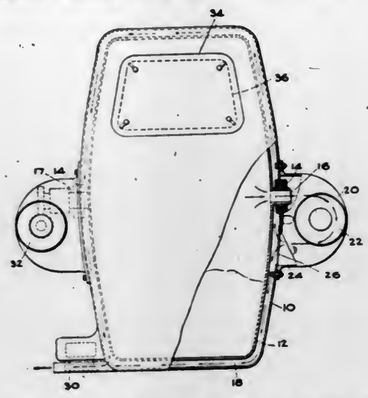
2,440,413
BRAID-STITCH CROCHET HOOK
Clara Leota Mock, Hamilton, Kans.
Application March 18, 1947, Serial No. 735,473
1 Claim. (Cl. 66—118)



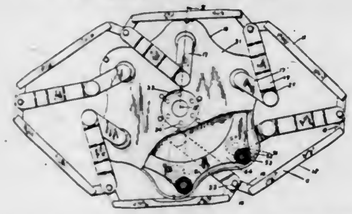
As a new article of manufacture, a braid-stitch crochet hook comprising a handle having an under face, a comparatively flat portion extending from one end of said handle, an elongated outwardly bulged portion extending from the outer end of said flat portion, said outwardly bulged portion provided with a flat bottom throughout its entire length, said flat bottom being formed in the same plane with the under face of said handle, and said outwardly bulged portion being provided with a comparatively long or enlarged hook on its outer end with a deep throat formed in said hook, substantially as shown and described.

2,440,414
PRODUCTION OF CYCLOHEXANE
Alex G. Oblad, Dallas, Tex., assignor, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application December 3, 1945, Serial No. 632,546
4 Claims. (Cl. 260—667)

1. The process for the manufacture of cyclohexane which comprises the steps of (1) reacting a hydrocarbon stream containing benzene and methylcyclopentane with hydrogen to convert a major portion of said benzene to cyclohexane, (2) fractionating the product stream of step 1 to obtain a stream consisting of an azeotrope of methylcyclopentane with benzene and a substantially benzene-free stream containing cyclohexane, (3) recycling the stream of methylcyclopentane-benzene azeotrope of step 2 to step 1, and (4) recovering the cyclohexane substantially free from benzene.



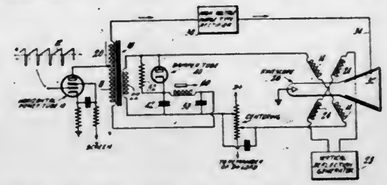
2,440,415
GAME POINTER AND SCORER
Edward W. Piper, Woodbrook, Md.
Application April 10, 1947, Serial No. 740,594
7 Claims. (Cl. 235—88)



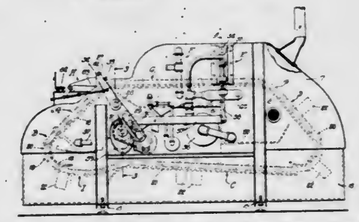
1. In a bridge-playing accessory, a base disc, a five-pointed disc rotatably mounted on said base disc, and a four-pointed disc rotatably mounted over said five-pointed disc, each of said discs having sectional markings, whereby the points on the five-pointed disc, representing the five suits, cooperate with the sectorial markings on said base disc to indicate the bid whether the bidder is vulnerable or not, and the points on the four-pointed disc, representing the four players, cooperate with the sectorial markings on said five-pointed disc to indicate the dealer whether the bidder was doubled, redoubled or not-doubled.

2,440,416
VACUUM ROTARY DRUM DRIER HAVING MEANS TO COMPRESS EVACUATED VAPORS
Charles B. Proudfoot, Oak Ridge, Tenn., assignor of one-fourth to Alvan A. Proudfoot, Buffalo, N. Y.
Application March 3, 1945, Serial No. 580,851
2 Claims. (Cl. 34—86)

1. A laundry drier comprising an airtight outer casing and an airtight inner casing disposed within the outer casing, means mounting said inner casing for movement to cause agitation of a load of laundry therein, said casings having laundry loading ports at registering positions and airtight closures for said ports, the space within said outer casing exteriorly of said inner casing defining a vapor space, a pump having its intake port in open communication with said vapor space and arranged to discharge into the atmosphere exteriorly of said outer casing, and a second pump having its intake port in open communication with the interior of said inner casing and arranged to discharge into said vapor space.



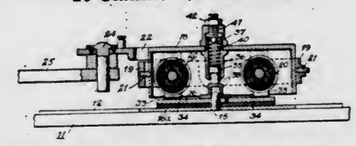
2,440,417
TRACK WHEEL FOR VEHICLES
Otto Singer, London, England
Application February 25, 1947, Serial No. 730,698
In Great Britain March 16, 1946
5 Claims. (Cl. 305—6)



1. A track wheel comprising a hub member, a plurality of track sections jointed together and constituting an endless track, a plurality of crank shafts disposed in spaced relation around the axis of said hub member, outer cranks on said crank shafts displaced in their relative angular positions successively around said hub member, links extending from points adjacent the joints between said track sections to said outer cranks, and means for causing said crank shafts to rotate synchronously in one direction of rotation as said hub member rotates in the opposite direction, comprising inner cranks on said crank shafts so disposed as normally to extend parallel to one another, and means inter-connecting said inner cranks adapted to cause them to maintain said parallel relation.

2,440,418
CATHODE-RAY BEAM DEFLECTING CIRCUIT
Simeon I. Tourshou, Philadelphia, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application March 9, 1946, Serial No. 653,261
13 Claims. (Cl. 315—27)

1. In a television system in which a power output tube is adapted to deliver cyclically varying current through a coupling transformer to the electromagnetic beam deflection means associated with a cathode ray tube wherein an electron beam is developed and then deflected by the passage of said current through said deflection means so as to scan a target area, and in which means, including a diode, are provided in shunt with said coupling transformer for damping out oscillations which would normally be produced during a portion of each current cycle in part by the inductance of said coupling transformer and said deflection means, the combination of means for deriving a cyclically varying voltage from the cyclically varying current delivered by said power output tube, means for delaying the phase of the said cyclically varying voltage, and means for applying said phase-delayed voltage to the cathode of said diode.



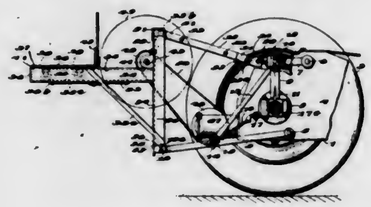
2,440,419
WASHING APPARATUS FOR BOTTLE WASHERS
Carl L. Trier, Baltimore, Md., and Jesse W. Fogg, Barrington, Ill., assignors to Cherry-Burrell Corporation, Wilmington, Del., a corporation
Original application May 6, 1937, Serial No. 141,084, now Patent No. 2,367,652, dated January 16, 1945. Divided and this application April 25, 1940, Serial No. 331,588
5 Claims. (Cl. 134—48)

1. In a device of the character described, the combination with a bottle propelling conveyor having a bottle support adapted to grip a bottle and maintain it in securely fixed position relative to said support and a spray discharge means provided with a valve, a means in the path of a bottle propelled by said conveyor and connected with said valve and adapted to be actuated by the bottle in a valve opening direction.

2,440,420
CONTROL MECHANISM FOR SOUND REPRODUCING
Fred Van Eps, Plainfield, N. J.
Application February 22, 1944, Serial No. 523,384
10 Claims. (Cl. 274—1)

1. Control mechanism for the operation of apparatus for reproducing sound from sound rec-

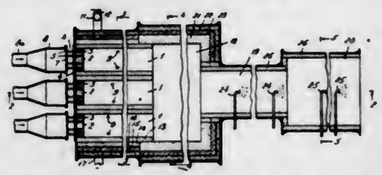
ords, comprising a rotatable turntable, a record supported and rotated thereby, electro-magnetically controlled means for arresting the rotation of said record without stopping the rotation of said turntable, said means comprising a disc of magnetic material concentric with said record and having a driving connection with the top surface thereof and normally rotating therewith and stationary electro-magnetic means supported on said disc for arresting the rotation of said disc and said record upon the energization of said electro-magnetic means.



2,440,421
METALLATION OF CYANO ACETIC ACID COMPOUNDS
Vernon H. Wallingford, Ferguson, and August H. Homeyer, Webster Groves, Mo., assignors to Mallinckrodt Chemical Works, St. Louis, Mo., a corporation of Missouri
No Drawing. Application October 29, 1945, Serial No. 625,450
9 Claims. (Cl. 260—464)

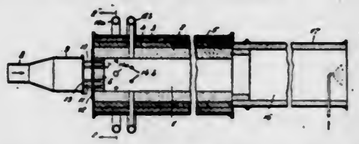
1. The method of metallating an α-cyano ester of the following structure:

$$R\cdot CH(CN)\cdot CO_2X$$



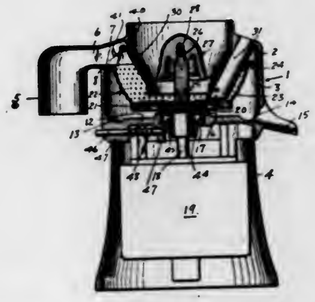
where R is selected from the group consisting of hydrogen, aromatic hydrocarbon radicals, and saturated aliphatic hydrocarbon radicals, and X is an alkyl radical, which comprises reacting the ester with an anhydrous alcoholate of a metal selected from the group consisting of sodium, potassium and magnesium in a reaction medium consisting essentially of a dialkyl carbonate.

2,440,422
TRACTOR-MOUNTED BUZZ-SAW RIGGING
John Leonard Westmoreland, Canton, N. C.
Application June 27, 1944, Serial No. 542,331
2 Claims. (Cl. 143—43)



1. In combination with a tractor of the type having a rear housing and hydraulic responsive rotative arms above said housing, a pair of links having one end thereof connected to said housing, connecting means extending between said arms and intermediate the ends of said links, means extending between said arms and housing to prevent rotation of said arms in one direction, a draw bar joining the free extremities of said links, means having one end secured to said tractor above said link-housing connection, a vertically disposed frame removably supported by said draw bar, pivot means connecting said first named means and frame, a driven shaft secured to said frame and having a saw associated with one extremity thereof, spaced horizontal guides outstanding from said frame, and carriage means associated with said guides and arranged for movement toward and away from said shaft.

2,440,423
APPARATUS FOR MANUFACTURE OF CARBON BLACK
William B. Wiegand, Old Greenwich, Conn., and Harold A. Braendle, Garden City, N. Y., assignors to Columbian Carbon Company, New York, N. Y., a corporation of Delaware
Application May 4, 1944, Serial No. 534,089
4 Claims. (Cl. 23—259.5)

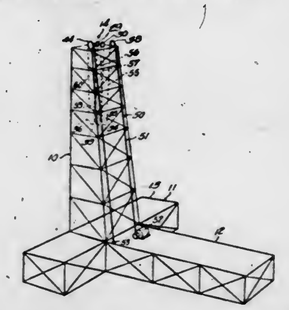


1. Apparatus for the production of carbon black comprising a plurality of elongated, unobstructed heat-insulated reaction chambers of substantially uniform transverse area, each provided with a blast burner positioned in one end thereof and comprising a burner block substantially coextensive with the transverse area of the chamber, said burner block comprising a plurality of burner ports arranged in a uniform pattern over the entire face of the burner block, the blast burner being so constructed and arranged as to project into said chamber a plurality of blast flames in a direction generally parallel to the longitudinal axis of said chamber, connections adapted to convey air and fuel gas under pressure to the burner, a plurality of tubes leading into each chamber and terminating in a zone thereof toward its burner end, the inner ends of the respective tubes being spaced a substantial distance from the burner block and being directed across the chamber substantially transversely of the longitudinal axis thereof and toward an opposite wall thereof, connections adapted to supply a gaseous medium under pressure to said tubes, a heat-insulated blending chamber of enlarged cross-sectional area communicating with the end of each reaction chamber opposite the burner, an elongated substantially uninsulated chamber of reduced cross-sectional area leading from said blending chamber and liquid spray nozzles longitudinally spaced along the last mentioned chamber.

2,440,424
MANUFACTURE OF CARBON BLACK
William B. Wiegand, Old Greenwich, Conn., and Harold A. Braendle, Garden City, N. Y., assignors to Columbian Carbon Company, New York, N. Y., a corporation of Delaware
Application May 4, 1944, Serial No. 534,090
5 Claims. (Cl. 23—209.8)

1. In the process for producing carbon black which comprises the injecting into and burning within an elongated, uncooled and unobstructed reaction chamber of substantially uniform and relatively small cross-sectional area, a mixture of a combustible fuel gas and an oxygen-containing gas at such a rate as to produce a violently turbulent flow of gas and blast flame having a temperature sufficiently high to thermally decompose hydrocarbons, forcefully injecting into said blast flame gases while passing through said reaction chamber, and at a point removed from the point of introduction of said gas mixture, hydrocarbon make gas to be decomposed in such quantity that a hot mixture of the flame gases and the make gas is produced at a temperature at which the make gas is largely decomposed to form finely divided carbon, effecting thereby substantially instantaneous and complete mixing of the make gas with the flame gases, continuing the flow of the gas mixture through the elongated reaction chamber at high temperature and high turbulence whereby the make gas is decomposed by the heat of the flame gases within the reaction chamber and during the period of maintained turbulence, passing the mixture of gases and carbon from the reaction chamber and collecting the carbon, the steps of so proportioning the fuel gas, the oxygen-containing gas and the said hydrocarbon make gas that the oxygen present in the combustible mixture is substantially in excess of that required for complete combustion of the fuel gas and that said hydrocarbon make gas is injected in an amount substantially in excess of that required to consume the excess oxygen present in the blast flame gases, and injecting the said hydrocarbon make gas into a zone of active combustion of the blast flame.

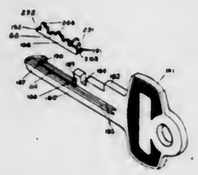
2,440,425
FRUIT AND VEGETABLE JUICE EXTRACTOR
Joseph B. Williams, San Francisco, Calif.
Application September 23, 1944, Serial No. 555,515
2 Claims. (Cl. 146—3)



1. In a juicer having a vertical, cylindrical sided housing and a rotary shaft coaxial therewith, a fruit reamer secured to the upper end of said shaft and a basket concentric with said reamer secured to said shaft below the reamer for receiving fruit pulp and juice reamed by said reamer, a top on said housing having a central opening for access to said reamer for reaming said pulp and juice therefrom, a depending cylindrical flange on said top extending from the edges of said opening into said basket and terminating at a point above the bottom of said basket, an open ended conduit for vegetables extending downwardly through the wall of said housing and into said basket to a point slightly spaced above said bottom eccentric to the central axis of the basket, projections on said bottom for grating vegetables fed through said conduit, and means for rotating said shaft whereby said reamer and said bottom will be rotated for simultaneously reaming fruit and grating vegetables if so desired.

2,440,426
BRASSIÈRE
Miriam Cooper Barlow, Columbus, Ga., and Everett Wayne Barlow, Sarasota, Fla.
Application November 29, 1946, Serial No. 712,900
4 Claims. (Cl. 2—42)

3. In a strapless brassière, bust-covering means including an integral framework of resilient material, the frontal part of said framework being composed of an upper portion shaped in breast conforming loops resting against the body above the breasts and a lower portion disposed on the body substantially directly below the breasts and extending laterally toward opposite sides of the body; said framework having means to apply supporting pressure against the back of the wearer consisting of integrally formed extensions of said upper and lower frontal portions, said extensions passing substantially laterally around the sides of the body beneath the armpits and in an upward direction to terminate at separated points inside and between the shoulder blades of the wearer, said extensions providing the sole supporting means for the framework; and a fabric cover for the breasts supported between said upper and lower frontal framework portions.



2,440,427
CROWN BLOCK ASSEMBLY
Emil A. Bender, Bakersfield, Calif.
Application January 12, 1945, Serial No. 572,510
8 Claims. (Cl. 254—145)

8. In combination with a derrick having a front side and a back side, a base extending horizontally therefrom, a traveling block arranged within the derrick and having a plurality of sheaves, and an operating line for said traveling block, a crown block assembly comprising a plurality of parallel sheaves supported on the top of the derrick in planes parallel to the front side and back side of the derrick and from which said line is adapted to pass directly to certain sheaves of the traveling block, a "dead line" sheave and a "live line" sheave supported on the top of said derrick parallel to each other and perpendicular to said plurality of sheaves, said "dead line" and "live line" sheaves having their back side extremities extending beyond the back side of the derrick and their front side extremities arranged for the passage of said line thereover and downwardly to certain of said traveling block sheaves to be reeved therearound, the "dead line" end of said operating line being fixed to the derrick base.

and a drum for winding and unwinding the "live line" end of said line, the "live line" and "dead line" ends of said operating line being arranged at approximately equal angles to a vertical plane passing through the axis of the derrick from the front side to the back side thereof.

2,440,428
KEY BIT
Frank Ellison Best, Indianapolis, Ind.
Original application January 8, 1942, Serial No. 425,952. Divided and this application January 15, 1945, Serial No. 572,901
12 Claims. (Cl. 70—409)

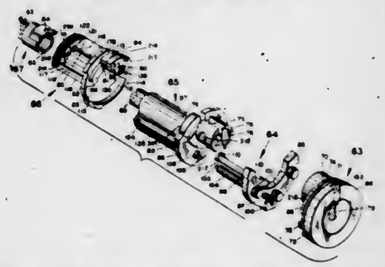
1. In a separable key bit consisting of a substantially rectangular block adapted to be releasably attached to a key blade in the formation of a multiple-element key, the combination of elements comprising an anvil side adapted to fit a flat surface, a bottom edge, adjacent said anvil side, that is substantially straight throughout the length of said block, and a groove in said bottom edge adapted to cooperate with key means adapted to fit thereinto to detachably retain said key bit in said key.

2,440,429
KEY
Frank Ellison Best, Indianapolis, Ind.
Original application January 8, 1942, Serial No. 425,952. Divided and this application January 15, 1945, Serial No. 572,902
29 Claims. (Cl. 70—395)

1. In a key blade, the combination of elements comprising a recess adapted to receive a latch bolt and a latch spring, a latch bolt and a latch spring in said recess and lugs in said key blade adapted to cooperate with said latch bolt and said latch spring to releasably lock a detachable key bit to said blade.

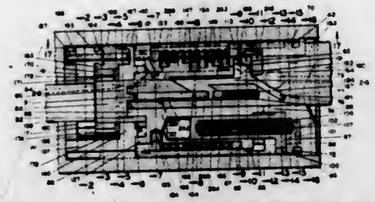
2,440,430
LOCK-THROW MECHANISM
Frank Ellison Best, Indianapolis, Ind.
Original application January 8, 1942, Serial No. 425,952. Divided and this application January 15, 1945, Serial No. 572,903
12 Claims. (Cl. 70—379)

1. In a lock, two lock throw members, and lost motion means interconnecting said two lock throw members providing lost motion therebe-



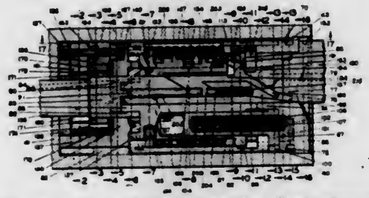
tween at the beginning and end of a period of lock operation.

2,440,431
LOCK TUMBLER
Frank Ellison Best, Indianapolis, Ind.
Original application January 8, 1942, Serial No. 425,952. Divided and this application January 15, 1945, Serial No. 572,904
10 Claims. (Cl. 70—376)



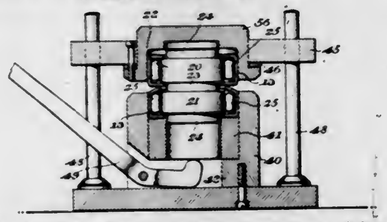
1. A lock tumbler comprising a flat ring having inwardly extending, key-bit-engaging steps and an inwardly extending portion adapted to have combination notches cut therein.

2,440,432
LOCK CORE
Frank Ellison Best, Indianapolis, Ind.
Original application January 8, 1942, Serial No. 425,952. Divided and this application January 15, 1945, Serial No. 572,905
25 Claims. (Cl. 70—375)



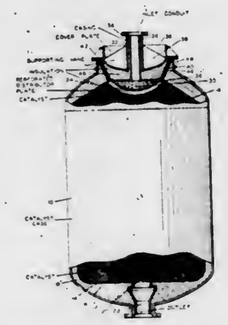
1. In a lock core, consisting of a key-operable primary lock mechanism adapted to complement a secondary lock mechanism, the combination of elements comprising a face member, an inner body member and a throw member, integrally joined to form a core frame, a keyway in said core frame, said core frame having a portion adapted to receive a number of ring tumblers and means adapted to releasably retain said ring tumblers thereon, said ring tumblers being adapted to cooperate with key means in said keyway to control operation of said primary lock mechanism.

2,440,433
UNPICKABLE LOCK
Frank Ellison Best, Indianapolis, Ind.
Original application January 8, 1942, Serial No. 425,952. Divided and this application January 15, 1945, Serial No. 572,906
51 Claims. (Cl. 70—366)



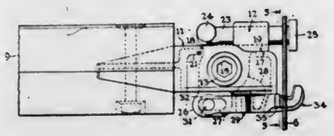
1. An unpickable lock comprising a lock and a key, said lock having tumbler means, and combination means carried by said tumblers, said lock having combination-shielding means adapted to render said combination means unreachable by a picking instrument while the lock is locked, and said lock having tumber-shielding means adapted to render said tumbler means unreachable by a picking instrument during any unlocking trial thereof.

2,440,434
SYSTEM OF LOCKS
Frank Ellison Best, Indianapolis, Ind.
Original application January 8, 1942, Serial No. 425,952. Divided and this application January 15, 1945, Serial No. 572,907
19 Claims. (Cl. 70—369)



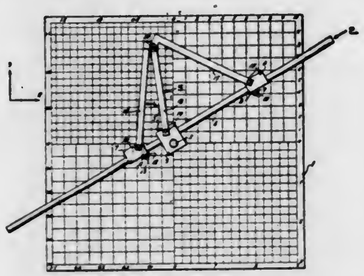
1. In a lock, a housing and a key-removable core in said housing, means in said lock limiting the rotary movement of said core, for lock unlocking purposes, to a prescribed angle and permitting and requiring a greater angular movement in the same direction for removing the core from the housing.

2,440,435
DOUBLE ROW ANTIFRICTION BEARING
Edmund K. Brown, Torrington, Conn., assignor to The Torrington Company, Torrington, Conn., a corporation of Connecticut
Application September 6, 1945, Serial No. 614,669
3 Claims. (Cl. 308—213)



1. A roller bearing structure comprising an inner race member having race surfaces each terminated at its ends by an inward shoulder, the proximate shoulders being spaced, a set of rolls on each said surface; and two outer race members each surrounding one of said sets of rolls, each outer race member having an integral flange extending inwardly for engaging the corresponding proximate shoulder and thereby preventing separation of the race members.

2,440,436
CATALYST CHAMBER CLOSURE
William Hunt Creel, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application January 24, 1946, Serial No. 643,120
3 Claims. (Cl. 23—288)

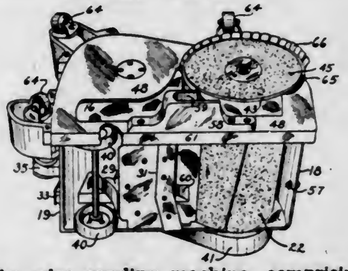


3. In combination, a catalyst chamber comprising an inner shell and an outer shell, heat-insulating material in the space between said shells, a frustro-conical shaped ring connecting said inner and outer shells and forming a circular opening in said chamber; a plug-inlet structure adapted to seat in said opening comprising a frustro-conical annular shell corresponding to said opening, a convex perforated inlet plate closing the inner end of said shell, a convex outer casing with a substantially cylindrical skirt of diameter intermediate the minimum and maximum diameters of said shell and attached to the outer edge of said shell, an outer tube fitting into a central opening in said casing, an inner tube within said outer tube fastened thereto along the free edge thereof, a circular plate connecting the edge of the inner end of said inner tube with the outer edge of said convex perforated inlet plate forming a space between the two said plates continuous with the interior of said inner tube, heat-insulating material filling the void between said shell, casing, outer tube, inner tube and circular plate, radial supporting vanes attached to said outer tube and said outer casing, a flange attached to and around said outer casing and said frustro-conical shell; means on the outer shell of said catalyst chamber around the opening therein adapted to cooperate with said flange to hold said plug-inlet structure in place; a body of catalyst within said catalyst chamber extending substantially into contact with said convex perforated inlet plate; the whole being arranged so that fluid introduced through said inner tube passes therefrom through said space between said plates and through said perforated plate immediately into contact with said catalyst.

2,440,437
CROSSBAR SUPPORT FOR VEHICLES
Frank Fahland, Omaha, Nebr.
Application January 7, 1947, Serial No. 720,551
6 Claims. (Cl. 105—369)

1. A locking unit for connecting a beam releasably with an apertured support, comprising, in combination with the beam, a hook member having a curved end adapted to enter an aperture in said support as the hook member is swung about an axis transverse to the beam; a pin-and-slot connection between the hook and a lateral portion of the beam, arranged to guide said hook in such swinging motion and into contact with said lateral portion at the limit of such swinging motion, the pin-and-slot connection being so arranged that, at least when the hook is in contact with the beam, the hook may move in the direction of the length of the beam through a range defined by said connection; means having thrust surfaces substantially parallel with the imaginary plane described by the longitudinal axis of the hook as the hook swings, and arranged to interengage when the hook is in contact with the beam and inhibit lateral motion of the hook relatively to the beam in directions transverse to said imaginary plane without resisting longitudinal movement of the hook; and a bolt projectible endwise from the end of the beam into another aperture in said support.

2,440,438
CALCULATING DEVICE
Frederick W. Frink, East Orange, N. J.
Application February 5, 1947, Serial No. 726,526
19 Claims. (Cl. 235—61)

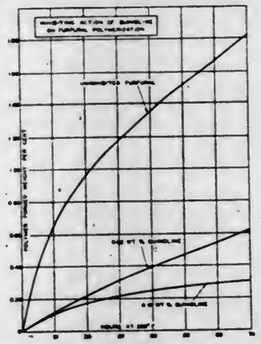


1. In combination, a flat base, means for pointing out the location of a selected point on said base, means for pointing out the location of another point on said base, means connected to the first mentioned means for limiting the location of the second mentioned means to a straight line that passes through the first mentioned means and a fixed point on said base, and means connected to the first mentioned means for further limiting the location of the second mentioned means to a distance from said fixed point which is inversely proportional to the distance of the first mentioned means from said fixed point.

2,440,439
PERMANENT MAGNET ELECTRODYNAMIC TRANSDUCER
Webster E. Gilman, Maywood, Ill., assignor to Permoflux Corporation, Chicago, Ill., a corporation of Illinois
Application July 4, 1942, Serial No. 449,767
2 Claims. (Cl. 179—115.5)

1. In a speaker adapted for use in a headset, means forming a magnetic circuit including inner and outer annular pole pieces concentrically located and spaced to provide an annular magnetic gap therebetween, a diaphragm mounted on said outer pole piece and having a voice coil structure carried thereon and extending into said annular magnetic gap, said diaphragm being spaced from one face of said inner pole piece to define a sound chamber, means defining a back chamber on the side of said diaphragm opposite from said sound chamber, a permanent magnet forming part of said magnetic circuit and comprising a centrally bored hub having one end engaging said inner pole piece and having an annular skirt extending outwardly from the other end of the hub and then in an endwise direction in spaced relation to said hub and into contact with said outer pole piece, and a tubular fastening member extending through the bore of said hub and operatively engaged with said magnet and said inner pole piece to hold the same together, said tubular fastening member opening into said sound chamber to afford a passage through which sound may travel from said sound chamber.

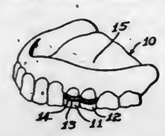
2,440,440
EDGE SANDING MACHINE
Oscar E. Hadwiger, Pueblo, Colo.
Application April 29, 1946, Serial No. 665,805
2 Claims. (Cl. 51—177)



1. An edge sanding machine, comprising, in combination, a housing having spaced bottom and top walls and end walls, one side being open, a removable cover for the open side, means for attaching the cover to the housing to form a closed chamber, a shaft extending through the housing, mounted for rotation in the top and bottom walls, a cylindrical drum balance wheel carried by the shaft, within the housing, an electric motor positioned in the housing, a centrifugal fan positioned in the housing, the fan having inlet and outlet ports, means for rotating the shaft and the fan from the motor, a sanding disk secured to the lower end of the shaft, outside of the bottom wall, a flange encircling the disk, and a conduit communicating the intake port of the fan with the space between the sanding disk and the flange.

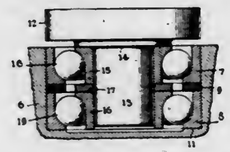
2,440,441
TOOL JOINT
James W. E. Hanes, Ventura, Calif., assignor to Ventura Tool Company, Ventura, Calif., a corporation of California
Application August 7, 1943, Serial No. 497,783
7 Claims. (Cl. 308—4)

1. In a composite tool joint, the combination of a cylindrical body, the outer surface of which is of reduced diameter, a wear sleeve mounted over the surface to bring the tool joint to full diameter, means for releasably securing the sleeve to the body, said latter means including threads formed on one of said members, and a fiber-like material carried by the other said member in which threads are adapted to be formed on threading the members together.



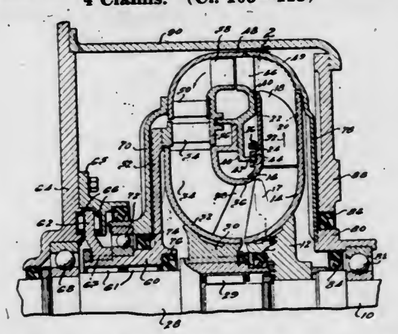
2,440,442
INHIBITING POLYMERIZATION OF FURFURAL
John C. Hillyer, Bartlesville, Okla., and Daniel A. Nicewander, Borger, Tex., assignors to Phillips Petroleum Company, a corporation of Delaware
Application March 26, 1945, Serial No. 584,984
14 Claims. (Cl. 260—347)

1. A method of inhibiting the polymerization of furfural which comprises incorporating therein a minor proportion of a compound selected from the group consisting of quinoline and its alkyl homologs.



2,440,443
DENTAL CLASP
Gary M. Holden, Beverly Hills, Calif.
Application November 29, 1946, Serial No. 712,809
3 Claims. (Cl. 32—5)

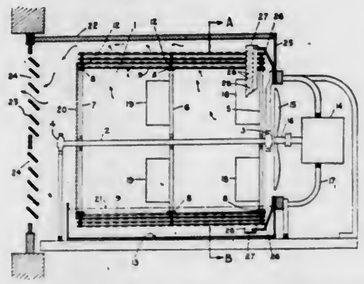
3. A dental clasp of metal having a reentrant outer surface, and material having substantially the color of natural human teeth maintained in



position on said metal by said reentrant surface.

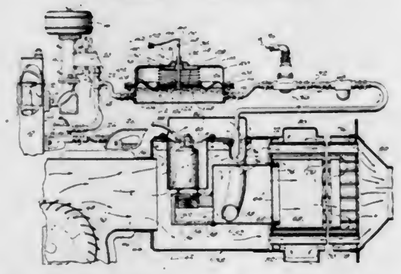
2,440,444
ANTIFRICTION BEARING
Matthew W. Huber, Watertown, N. Y., assignor to The New York Air Brake Company, a corporation of New Jersey
Application May 6, 1946, Serial No. 667,664
5 Claims. (Cl. 308—230)

1. A bearing assembly comprising in combination a plurality of anti-friction radial-and-thrust bearing units, each unit comprising an inner race, an outer race and an interposed series of rolling load transmitting members; thrust imposing means in which the outer races of said bearings are laterally confined in stacked relation, and by which only an end race of the stack is sustained against axial thrust; thrust imposing means upon which the inner races of said bearings are assembled in stacked relation and by which only an end race of the stack is sustained against axial thrust; and elastic means interposed between proximate ends of the inner races and between the proximate ends of the outer races, the form and elastic modulus of said means being so chosen that under the maximum thrust loading for which the assembly is designed the thrust load is approximately equally divided between said bearing units.



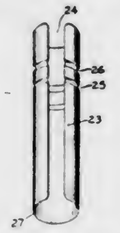
2,440,445
FLUID TRANSMISSION
Joseph Jandasek, Highland Park, Mich., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application January 31, 1944, Serial No. 520,423
4 Claims. (Cl. 103—115)

1. An impeller for a fluid transmission having spaced fluid energizing blades wherein alternately



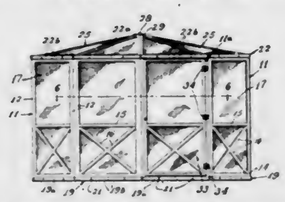
spaced blades are movable tangentially to the axis of rotation under the influence of centrifugal force, the remainder of the vanes being fixed.

2,440,446
APPARATUS FOR COOLING OR CONDITIONING AIR OR OTHER FLUIDS
Richard Joseph Kenny, Bhowra, British India
Application July 12, 1945, Serial No. 604,708
In British India July 31, 1944
3 Claims. (Cl. 261—92)



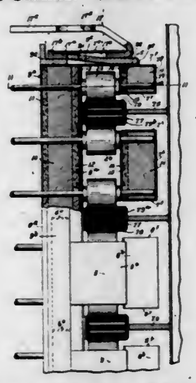
1. An apparatus for cooling or conditioning air or other fluid, comprising in combination a casing, a rotary drum within the casing, consisting of at least one perforated circumferential layer, forming an evaporating surface, a water tank below the drum for wetting the lower part of the said layer as the drum rotates, a fan facing one end of the drum for supplying a draught of air through the drum, vanes secured to the inside of the drum to rotate it when the draught of air from the fan passes therethrough, an air leakage check ring secured to the end of the drum facing the fan and blades provided on the said check ring which are so inclined to the axis of the drum that the air passing into the check ring will cause these blades to rotate the drum in the same direction as it is turned by the vanes secured to the inside of the drum.

2,440,447
INTERNAL-COMBUSTION HEATER WITH EXPANSIBLE FUEL RESERVOIR
Henry J. De N. McCollum, Chicago, Ill.; Thelma McCollum, executrix of said Henry J. De N. McCollum, deceased, assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application May 7, 1943, Serial No. 486,019
6 Claims. (Cl. 126—116)



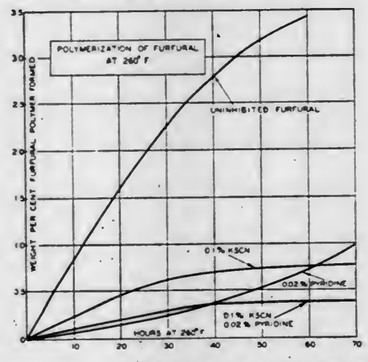
5. Heating apparatus of the class described comprising an internal combustion heater, an electrical igniter therefor, a pump for supplying fuel to said heater, a pipe line connecting said pump to the heater, a fuel reservoir interposed in said pipe line between the pump and the heater, a spring closed valve in the pipe line between the reservoir and the heater and electrically operable means for opening said valve, an electrically driven blower for supplying combustion and ventilating air to said heater, said reservoir comprising a fuel chamber having a flexible diaphragm which forms one wall of said chamber, spring means constantly urging said diaphragm against the fuel in said chamber to provide pressure for feeding fuel from the reservoir to the heater when the pump is not operating, a source of electrical energy and a circuit which includes said energy source, said electrical igniter, said valve operating means, and said blower, and switch means operatively connected to said diaphragm for actuation thereby to open the said circuit when the quantity of fuel in said chamber falls below a predetermined minimum.

2,440,448
LOADER FOR GREASE GUNS
Peter E. Purcell, Portland, Oreg.
Application April 24, 1946, Serial No. 664,672
2 Claims. (Cl. 222—388)



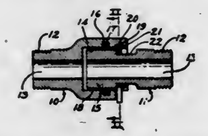
1. A loader for grease guns consisting of a cylindrical shell having a slot formed therethrough along the length thereof, through which the loading is performed, and having a pair of beads formed around said shell near one end thereof and spaced from each other sufficiently far to accommodate the cup leather of a grease gun.

2,440,449
PORTABLE BUILDING STRUCTURE
Lloyd R. Racmer, Chicago, Ill.
Application January 6, 1944, Serial No. 517,189
5 Claims. (Cl. 20—2)



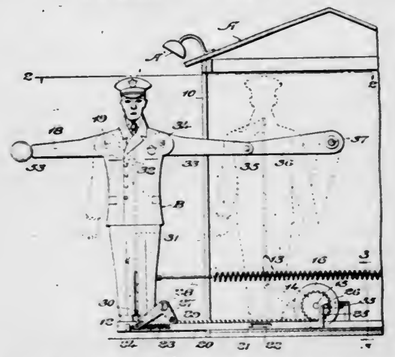
1. In a demountable building structure, a plurality of upright wall panels of predetermined width arranged in angular relation and edge abutment one to the other to provide an enclosure, a header on the upper edges of said panels connecting said panels together, a base on the lower edges of said panels connecting the panels together, said header and base each consisting of a plurality of interengaged rigid sections each of said sections including an intermediate portion of a length equal to the width of a panel and extending coextensively along and secured to an end edge thereof, and rigid extensions at each end of said intermediate portion in an angular relation to such portion corresponding to the horizontal angle between the panels joined thereby and each of a length less than the width of a panel and extending along and being secured to end edges of the last mentioned panels so that alternate of said panels have two such end extensions connected thereto.

2,440,450
SPINDLE SLATS FOR COTTON HARVESTERS
John D. Rust, Memphis, Tenn.
Application March 29, 1944, Serial No. 528,586
12 Claims. (Cl. 56—42)



1. In a cotton picking machine wherein spindle-carrying slats are mounted by means of hinge elements on conveyor chains: a slat unit comprising a sheet metal backbone; top and bottom ribs clipped to the backbone; intermediate ribs clipped to the backbone; spindle mounting bearing elements carried by said backbone and said ribs; and spindles rotatably mounted in said bearing elements.

2,440,451
INHIBITING POLYMERIZATION OF FURFURAL
Walter A. Schulze and John C. Hillyer, Bartlesville, Okla., assignors to Phillips Petroleum Company, a corporation of Delaware
Application March 26, 1945, Serial No. 584,983
12 Claims. (Cl. 260—347)



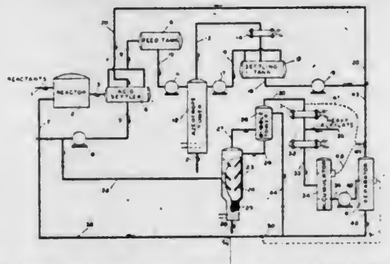
1. A method of inhibiting the polymerization of furfural which comprises incorporating therein minor proportions of an inorganic thiocyanate and a compound selected from the group consisting of pyridine and its alkyl homologs.

2,440,452
QUICK ACTION COUPLING
Fred D. Smith, Long Beach, Calif., assignor to Oilfields Service Co., Long Beach, Calif., a corporation of California
Application March 2, 1944, Serial No. 524,702
2 Claims. (Cl. 285—174)

1. A coupling comprising in combination: a female tubular member having an internal surface extending inward from one end thereof; a male tubular member having a head with an external surface adapted to telescope freely within the internal surface, one of said surfaces having an annular groove therein, said male and female members having cooperating shoulders thereon; a resilient sealing ring in said annular groove and dimensioned to project beyond said groove and yieldably engage and seal with the member having the other of said surfaces; and a split retaining ring engageable between said shoulders for securing said two members in telescopic engagement with each other, the relative radial widths of said split ring and one of said shoulders being such as to permit radial distortion of the split ring sufficient to disengage the other of said shoulders, the ends of said split ring being bent substantially at right angles to the body of the split ring and extending substantially axially beyond the open end of said female member and within the limits of the greatest diameter of said female member.

2,440,453
WARNING SIGNALING APPARATUS
George Marion Strickland and Allen McGill, Daytona Beach, Fla.
Application February 26, 1947, Serial No. 730,966
4 Claims. (Cl. 246—128)

1. Grade crossing signaling apparatus comprising a robot in the form of a human figure having a swingable arm, means mounting said robot for projection and retraction between operative and inoperative positions, an electric motor and means



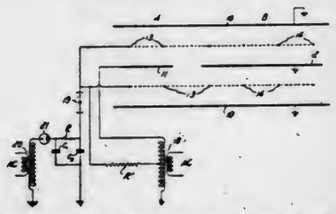
cooperating therewith for projecting said robot and for maintaining the same projected as long as the motor continues to operate, means operable upon the approach of a train to close the circuit of said motor and to maintain the same closed until the train has passed, solely mechanical means operable by said motor following projection of said robot to swing said arm as long as the motor continues to operate, and means to return said robot to its retracted position upon passing of the train and opening of said motor circuit.

2,440,454

RECOVERY OF HYDROGEN FLUORIDE IN AN ALKYLATION PROCESS

Roy E. Vinyard, Borger, Tex., assignor to Phillips Petroleum Company, a corporation of Delaware

Application July 18, 1944, Serial No. 545,415
2 Claims. (Cl. 260—683.4)



1. An improved continuous process for the alkylation of an alkylatable hydrocarbon with an olefin in the presence of concentrated hydrofluoric acid as an alkylation catalyst and for an improved recovery of said concentrated acid catalyst, which comprises continuously passing an alkylatable hydrocarbon and an olefin hydrocarbon together with said hydrofluoric acid to a reaction zone under alkylation conditions and subjecting them to reaction therein, passing the reaction mixture to an acid-settling zone and therein separating a liquid hydrocarbon phase from a liquid hydrofluoric acid phase which contains light hydrocarbons and acid-soluble oils dissolved therein, separately fractionating said hydrocarbon phase to recover light alkylate and heavy alkylate and recirculating a portion of said acid phase together with fresh hydrocarbon reactants to said reaction zone, passing another portion of said acid phase to a first distillation zone, flash distilling from said first distillation zone at about 260° F. a vaporous overhead product comprising hydrofluoric acid and light hydrocarbons and a liquid bottom product comprising acid-soluble oils, passing said overhead product to a second distillation zone operating at about 175° F., removing from said second distillation zone a liquid bottom product and passing same back to said first distilaltion zone as a reflux therefor, removing also from said second distillation zone a vaporous overhead product comprising hydrofluoric acid and light hydrocarbons, separately contacting said latter vaporous overhead product from said second distillation zone with a heavy alkylate obtained from the alkylation reaction to substantially absorb said light hydrocarbons, said heavy alkylate being introduced into said latter vaporous overhead product in an amount such that the pressure of said overhead product is about 40 pounds per square inch gage, thereafter cooling said latter vaporous overhead product and added heavy alkylate to condense remaining unabsorbed vapors and separating a resulting liquid acid phase comprising purified hydrofluoric acid from a resulting liquid alkylate phase comprising said heavy alkylate and absorbed light hydrocarbons, passing a portion of said purified hydrofluoric acid to said second distillation zone as a reflux therefor and passing another portion of said purified hydrofluoric acid to said reaction zone, controlling the flow of said purified acid to said reaction zone responsive to the liquid level of said acid phase, passing said liquid alkylate phase to said acid-settling zone for subsequent recovery of said heavy alkylate in the fractionation of the hydrocarbon phase therefrom, and controlling the flow of said alkylate phase to the settling zone responsive to the pressure of said overhead product.

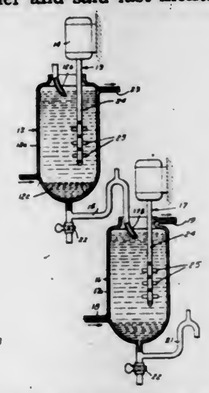
2,440,455

CHARGING SUSPENDED PARTICLES

Harry J. White, Cambridge, Mass., assignor, by direct and mesne assignments, of one-half to Research Corporation, New York, N. Y., a corporation of New York, and one-half to Western Precipitation Corporation, Los Angeles, Calif., a corporation of California

Application June 11, 1945, Serial No. 598,732
12 Claims. (Cl. 183—7)

1. A method of charging particles which comprises passing a gas containing suspended particles through an electric field alternating between spaced non-discharge electrodes at a period less than half the transport time of gaseous ions between said electrodes and subjecting the gas while passing through the alternating field to ionizing discharge impulses having an impulse duration substantially less than half the period of the alternating field.



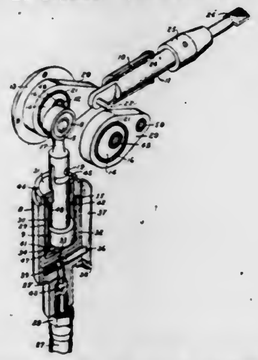
2,440,456

APPARATUS FOR PURIFYING METALLIC MERCURY

Harold R. Alley, Northbrook, and Benjamin F. Freeberg, Chicago, Ill.

Application December 9, 1942, Serial No. 468,395
1 Claim. (Cl. 266—34)

A washing device for use in the purifying of mercury comprising, in combination, an acid wash container adapted to contain a body of acid wash and having a mercury collection space at the bottom and a mercury outlet opening from said space, a vertical rotary stirrer projecting into the top of said container and being located above said collection space, a mercury supply conduit projecting into the upper end of said container and having the discharge orifice positioned to direct a stream of mercury into the top of said container and toward said stirrer located therein, a water wash container adapted to contain water wash and having a mercury collection space at the bottom and a mercury outlet opening from said last mentioned space, a vertical rotary stirrer projecting into the top of said water wash container and located above said last mentioned collection space, a conduit connected to said first mercury outlet and projecting into the top of said water wash container and having a discharge orifice for delivering a stream of mercury into the top of said water wash container and toward the stirrer therein, said water wash container being located below said acid wash container and said last mentioned conduit having a return bend providing a trap for maintaining a small quantity of mercury in said first collection space, each stirrer in cooperation with the associated orifice being adapted to finely comminute the stream of mercury directed thereto and to cause the dispersed particles of mercury to move downwardly through a spiral path to the associated collection space.

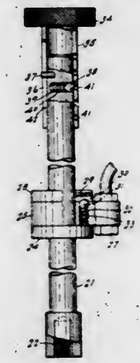


2,440,457

PNEUMATIC TOOL

Wendell K. Beckwith, Whitewater, Wis., assignor to Milwaukee Electric Tool Corporation, Milwaukee, Wis., a corporation of Wisconsin

Application May 22, 1944, Serial No. 536,716
10 Claims. (Cl. 121—32)



5. In combination, a casing having a tubular barrel and a tubular handle disposed at an oblique angle relative to the barrel, an anti-friction guide bearing confined within said barrel, a tool carrying spindle reciprocable within said bearing, a pneumatic motor secured to said handle and having a piston reciprocable therein, and a double throw eccentric rotatable within said casing and cooperating with said piston and spindle to convert the relatively long stroke reciprocating motion of the piston into shorter stroke reciprocation of the spindle.

2,440,458

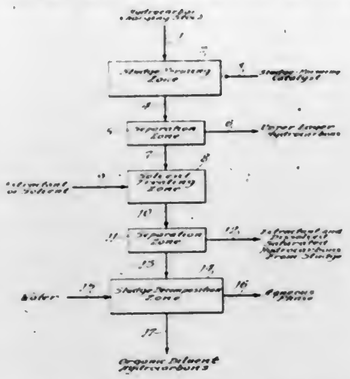
LABEL FEED CONTROL

Walter J. Bernard, Oakland, Calif.

Application July 23, 1946, Serial No. 685,750
4 Claims. (Cl. 271—62)

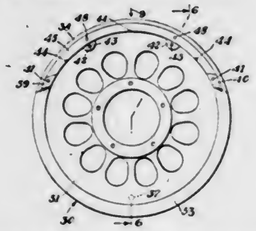
1. In a labeling machine having a label feed control located at the rear of the machine and including a cam-actuable pawl lever having a pivot, and a trip lever actuable by containers being labeled, and a connecting rod having a combined pivotal and sliding connection at one end with said pivot on said pawl lever and threaded at the other end, and a spring for urging said connecting rod to its uppermost position on said pivot; adjusting means for said label feed control comprising a shaft having an axial threaded socket at its lower end threaded onto the threaded end of said connecting rod, with the upper end of said shaft extending above the level of the top of the machine for immediate access for tripping or rotative adjustment at will from the front of the machine; a trip lever arm having a bore with said shaft rotatable therein and having direct pivotal connection with said trip lever, and means for maintaining said trip lever arm against axial movement on said shaft, whereby manual depression of said shaft will cause immediate actuation of said label feed, and rotative adjustment of said shaft will vary the length of the connection between the trip lever and the pawl lever to change the rate of feed, thus providing instant and continuous control of the label feed from the front of the machine.

2,440,459



SYNTHETIC DRYING OILS

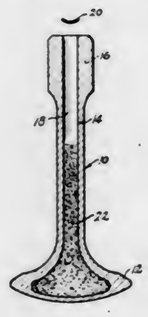
Herman S. Bloch, Riverside, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware



Application April 28, 1944, Serial No. 533,258
9 Claims. (Cl. 196—78)

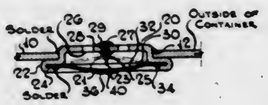
1. A process for the production of synthetic drying oils which comprises reacting an olefinic hydrocarbon charging stock in the presence of a conjunct polymerization catalyst comprising hydrogen fluoride to form a catalyst-hydrocarbon complex, separating the resultant reaction products into a hydrocarbon phase and a catalyst phase comprising said complex and relatively saturated higher boiling compounds, extracting said catalyst phase with a substantially non-reactive solvent boiling below about 250° C. under conditions to remove said relatively saturated higher boiling compounds without effecting conversion of said solvent, said solvent being substantially

inert toward and substantially immiscible with said complex, and separating from the thus extracted catalyst phase a hydrocarbon drying oil substantially free of said compounds.



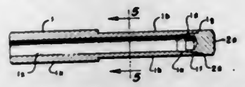
2,440,460
AUTOMOBILE AND AIRPLANE WHEEL
Louis Champain, New York, N. Y.
Application June 23, 1944, Serial No. 541,816
3 Claims. (Cl. 152—411)

1. A rim of the channel type having side flanges and being capable of receiving a tire, comprising a main rim body, a portion of a side flange of said main rim body being cut away, an arcuate rim flange section detachably mounted on said main body at the place where said portion of the side flange is cut away, said arcuate rim flange section being arranged for engagement with the tire at its inner surface, the radius of the circumference of said arcuate rim flange section being smaller than the radius of the circumference of the side flanges of said main rim body, holding means arranged on said main rim body for engagement with said arcuate rim flange section at the outer surface thereof, fastening means arranged for connecting said arcuate rim flange section with said holding means, and safety means arranged for locking said fastening means.



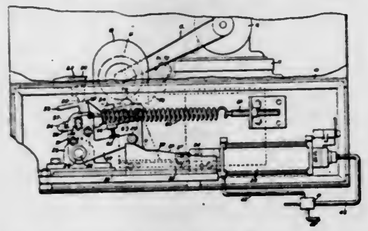
2,440,461
METHOD OF SEALING THE STEM OF HOLLOW VALVES
William E. Clements, Battle Creek, Mich., assignor to Eaton Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application April 22, 1944, Serial No. 532,277
3 Claims. (Cl. 29—156.7)

1. The method of making a hollow poppet valve comprising making a valve part including a mushroom-shaped head and an integral axially extended stem, said head and stem having a central cavity extending therethrough closed at the head end and opened at the stem end being substantially uniform in diameter throughout the length of the stem and said stem having an enlarged annular portion at the extremity thereof adjacent the open end of the cavity, partly filling the cavity with a cooling medium, placing a plug having a convex surface with its convex surface in line contact relation upon the stem end of the valve part at the junction of the opening into the cavity and the end extremity of the



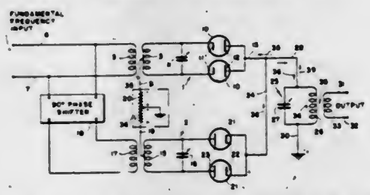
stem, applying an electrical resistance welding current and axial pressure to weld the plug to the stem effective to inhibit foreign matter from the cavity of the valve in the further working of the valve, compressing the enlarged portion of the valve in heated state with the plug as a part thereof to close the cavity in the stem over a portion thereof adjacent the plug and effect a welding of the compressed annular portion of the stem substantially along the axis of the stem so as to seal the cooling medium in the valve part and then removing the end of the compressed portion of the valve stem incorporating the plug.

2,440,462
PRESSURE RELIEF DEVICE
Lyle M. Cooper, Rahway, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application June 28, 1945, Serial No. 602,127
5 Claims. (Cl. 220—85)



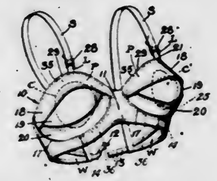
2. A pressure relief device for application to a vent opening of an enclosure, comprising a flexible diaphragm securely attached to and sealing said vent opening, said diaphragm comprising a material having springy action characteristics and having a preformed buckle sufficient to form an inwardly directed convex surface and to impart a snap action reversal when pressure is applied to the convex surface; a central perforation in said diaphragm, a thin, easily penetrable material sealing the perforation in said diaphragm; and a cutting element against which said easily penetrable material may impinge and be ruptured upon development of a predetermined pressure within said enclosure.

2,440,463
SPOT WELD TIP WITH REPLACEABLE INSERT
Leo W. Cornwall, San Diego, Calif.
Application October 10, 1945, Serial No. 621,508
5 Claims. (Cl. 219—4)



3. In a spotweld tip with replaceable insert the combination of a hollow tubular spotweld tip having a central bore therein and an internally tapered bore portion near one end thereof terminating in an enlarged diameter straight bore portion near the end of said spotweld tip, and a replaceable insert having a welding contact portion at one end and a hollow straight cylindrical skirt portion at its other end adapted to be wedged into the internally tapered bore portion of said spotweld tip.

2,440,464
CUTTING APPARATUS
Waldemar C. Ewaldson, Millington, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application May 8, 1946, Serial No. 668,056
6 Claims. (Cl. 125—13)

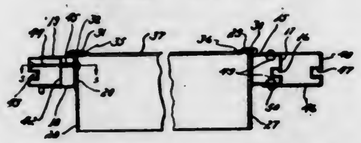


3. In a cutting apparatus, a cutter rotatable about a fixed axis, a movable support for work to be cut thereby, means active to force the support with the work at selected variable speeds toward the cutter, a cam movable at a constant speed to effect movement of the support with the work at a variable speed relative to the cutter, and fluid operated means to move the cam.

2,440,465
RECTIFIER CIRCUIT FREQUENCY MULTIPLIER
Joseph C. Ferguson, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application September 4, 1944, Serial No. 552,650
12 Claims. (Cl. 250—36)

1. An electric circuit for multiplying a fundamental frequency comprising a source for supplying a fundamental alternating current frequency, a first full wave rectifier circuit including two rectifier units each having a pair of terminals between which there is a current flow, one terminal of each unit being coupled to said source, means for shifting the phase of said fundamental frequency current substantially through 90 degrees, a second full wave rectifier circuit including two rectifier units each having a pair of terminals between which there is a current flow, one terminal of each unit being coupled to said phase shifting means, the remaining terminals of said rectifier units constituting the output of said rectifier circuits, a resonant circuit tuned to a harmonic of said fundamental frequency and connected to said output terminals, said rectifier circuits being arranged in such a manner that a direct current component will flow through said rectifier units in opposite directions with respect to said output terminals, and means for deriving an output signal from said resonant circuit.

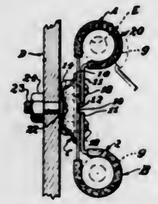
2,440,466
BRASSIÈRE
Ruth Freedman, New York, N. Y.
Application June 24, 1946, Serial No. 678,855
2 Claims. (Cl. 2—42)



1. A brassière comprising a body portion and wing portions defining spaced and arcuate borders constituting arcuate and spaced openings, normally distended and spaced breast sustaining means arranged within and covering said openings and embodying substantially cone shaped preformed resilient and perforated cups each comprising an anterior convex face and a posterior concaved face, front flexible linings each comprising upper and lower panels distended by said cups for closely and snugly covering and disposed adjacent to said convex faces, rear linings for covering and disposed contiguous to said concaved faces, stitch means permanently securing marginal portions of said cups, of said upper and lower panels, and of rear linings to said arcuate borders, and strap means secured to upper portions of said breast sustaining means and wing portions.

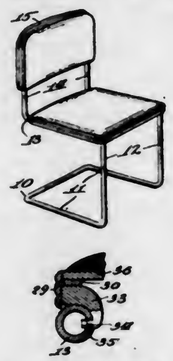
2,440,467
SULFUR CONTAINING COATING COMPOSITIONS
Vincent J. Frilette, New York, N. Y., assignor to Ridbo Laboratories, Inc., Paterson, N. J., a corporation of New Jersey
No Drawing. Application May 20, 1944, Serial No. 536,639
7 Claims. (Cl. 106—228)

4. A liquid coating composition adapted to form a dried film comprising a constituent capable of forming a dried film upon oxidation, said constituent being a member of the class consisting of: (*a*) drying fatty oils; (*b*) semi-drying fatty oils; (*c*) mixtures of drying and semi-drying fatty oils, and elemental sulfur in the form of finely divided particles well dispersed in the said constituent in an amount not exceeding 3% calcu-



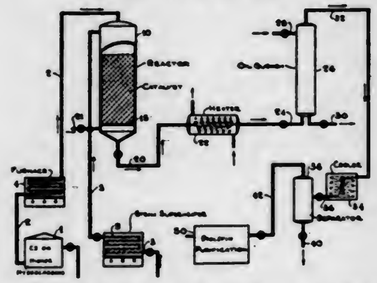
lated on the weight of the said constituent, said amount of sulfur in no case being less than .05% or more than 2% of the total non-volatile ingredients of the coating composition.

2,440,468
WINDOW VENTILATOR
John C. Gerken, Detroit, Mich.
Application February 8, 1945, Serial No. 576,810
2 Claims. (Cl. 98—99.8)



1. A ventilator of the class described comprising a frame embodying a pair of oppositely disposed side rails and a top rail and bottom rail all rigidly connected together; an angularly turned portion on one of the corresponding edges of the said side rails to provide an outwardly projecting shoulder and an inwardly faced channel on said edge of each of said side rails; a U-shaped member mounted on and engaging at its bight with the outer face of one of said side rails, and engaging at the outer face of one of its legs with the inner face of the shoulder on said side rails; a tubular member slidably mounted between the legs of said U-shaped member and movable inwardly and outwardly thereof; a spring for normally resisting inward movement of said tubular member relatively to said U-shaped member; a tubular member rectangular in cross-section and engaging at one of its sides with the outer face of the other of said side rails and secured thereto, the outer face of one of the sides of said tubular member engaging the inner face of the shoulder of said side rail; and a U-shaped extension mounted on and projecting outwardly from said tubular member.

2,440,469
MULTIPLE CLIP AND BRACKET
Ervin S. Goddard, Huntington, W. Va., assignor to Adel Precision Products Corp., a corporation of California
Application October 23, 1944, Serial No. 559,984
6 Claims. (Cl. 248—68)

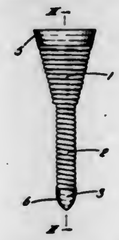


1. In a multiple clip for supporting conduits or the like, a bracket having means to accommodate a fastening for securing the bracket to a support, a pair of conduit-embracing loops of resilient metal having end portions independently movable to open and close the mouths of the loops for reception and removal of conduits, means securing end portions of said loops to said bracket so that the other end portions of the loops are independently movable for opening and closing said loops, and means embodied in said bracket and end portions of said loops for accommodating fastenings for independently clamping said loops around the conduits or the like, the loops of said pair occupying opposite side portions of said bracket with their mouths directed toward each other.

2,440,470
CHAIR
Meyer Greitzer, Los Angeles, Calif.
Application March 21, 1945, Serial No. 583,906
7 Claims. (Cl. 155—194)

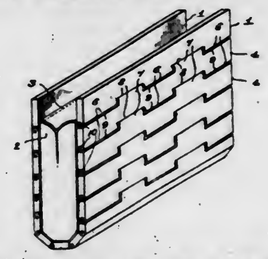
3. In a chair, the combination with a frame including a base, front legs, seat supporting rails provided on their inner side portions with apertures and tubular members projecting upwardly from the rear ends of said rails and a chair back carried by said upwardly projecting members, of a seat frame having side rails, brackets secured to the side rails of said seat frame, lugs projecting from said brackets, which lugs are engaged in the apertures in the seat supporting rails of said frame and the undersurfaces of which brackets and upper inner faces of said seat supporting rails are correspondingly contoured so as to provide a snug fit and bearing between said brackets and rails.

2,440,471
PRODUCTION OF DIOLEFINS
Walter R. F. Guyer, Roselle, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application April 22, 1944, Serial No. 532,227
2 Claims. (Cl. 260—680)



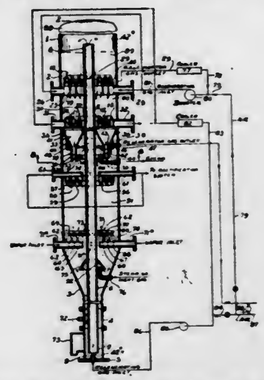
1. The method of selectively producing butadiene and pentadiene in controlled proportions from pentenes, which comprises charging a mixture of steam with a pentene feed having a controlled proportion of trimethylethylene and of a straight-chain pentene to a reaction zone in which the mixture is contacted with an active dehydrogenation catalyst selected from the class consisting of manganese oxide, chromium oxide, iron oxide, cobalt oxide and nickel oxide associated with a base from the class consisting of magnesium oxide, zinc oxide, and barium oxide, together with an alkaline metal compound having basic properties and a stabilizing oxide, maintaining the temperature in the reaction zone at essentially between 1100 and 1400° F., obtaining principally pentadiene from the trimethylethylene in the feed and butadiene from the straight-chain pentene in the feed, the diolefin product in preponderance being determined by the controlled proportion of the trimethylethylene and of straight-chain pentene in the feed, said pentenes being reacted at the same temperature in the reaction zone.

2,440,472
STAGE INCUBATOR FOR MICROSCOPES
Wilfred Horner and Eugene Wesselman, Chicago, Ill., assignors, by mesne assignments, to Belmont Radio Corporation, Chicago, Ill., a corporation of Illinois
Application September 11, 1944, Serial No. 553,661
5 Claims. (Cl. 88—40)



5. A culture medium stage incubator for microscopes comprising, a base member including a central cylindrical body portion of substantial thickness and an extended flange having a configuration for mounting in a microscope, said body portion having a central web portion of reduced thickness and substantially parallel faces, and a small precisely dimensioned aperture in said web adapted to be closed by transparent covers engaging the faces of said web to form a container of accurately predetermined volume for a culture medium to be examined, said body portion being formed with an annular groove surrounding said web, and an electrical winding disposed in said groove for developing in the region of said aperture a culture-affecting condition.

2,440,473
TEE FOR GOLF BALLS
Joseph William Hughes, Southgate, London, England
Application March 21, 1945, Serial No. 583,951
In Great Britain October 11, 1944
3 Claims. (Cl. 273—33)



1. A golf tee comprising a helical coil consisting of a single length of wire, adjacent turns of said coil being disposed in contact with one another and a few turns at each end of the coil being joined together, said coil including a number of turns the diameters of which decrease gradually from one end of the coil to form a frusto-conical cup, and, emerging from the smallest turn of said cup, a number of turns of a uniform diameter not exceeding that of said smallest turn of said cup to form a cylindrical stem, and a pointed tip at the free end of said stem.

2,440,474
DECORATIVE FABRIC FOR HANDBAGS
Rose Jackler, Brooklyn, and Daisy H. Goldberg, New York, N. Y.
Application September 27, 1944, Serial No. 555,964
4 Claims. (Cl. 41—10)

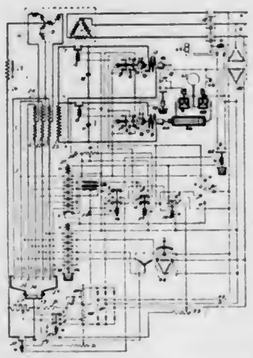
1. A decorative covering for a bag, the covering comprising decorative elements arranged in superimposed horizontal rows extending from end to end of the bag, with the lateral edges of the elements of each row castellated to consecutively interfit with one another, and the upper and the lower edges of the elements of adjacent rows also castellated to interfit with one another, and flexible hinge pin wires extending horizontally and vertically through perforations in said interfitting castellations to secure said elements to one another for relative pivotal movement.

2,440,475
PROCESS AND APPARATUS FOR CONTINUOUS CATALYSIS
Virgil V. Jacomini, Houston, Tex.
Application January 8, 1944, Serial No. 517,595
19 Claims. (Cl. 196—52)

1. A vapor and solid contact apparatus of the class described, comprising a reaction chamber for contact of vapors and gases at high temperature, an inlet for hot solids into the chamber, an outlet for solids from said chamber, a vapor inlet into said reaction chamber, a vapor outlet from

said chamber, a regeneration chamber, a solids inlet to said regeneration chamber and a solids outlet in said regeneration chamber, means connected to the outlet from said reaction chamber for pneumatically conveying solids directly to said regeneration chamber, means for gravitationally conveying hot solids from said solids outlet of said regeneration chamber to said reaction chamber, means for introducing regenerating gas into one end of said regeneration chamber, means for passing regenerating gases through the regeneration chamber together with said solids means for removing regenerating gas from an intermediate zone of said regeneration chamber, means for introducing fresh regenerating gas into an intermediate zone of said regeneration chamber, and means for withdrawing regenerator gas from another end of said regeneration chamber, said means for introducing regenerating gases and withdrawing gases from said regeneration chamber being adapted for the passage of solids from the solids inlet of said regeneration chamber to the solids outlet of said regeneration chamber.

4. A process for hydrocarbon conversion, which comprises introducing hydrocarbons at an elevated temperature into one end of a gravitationally descending body of hot catalyst in a catalytic reaction zone, withdrawing converted vapors from another end of said reaction zone, discharging spent catalyst carrying carbonaceous material from said reaction zone and pneumatically conveying said catalyst into a regenerating zone wherein said catalyst gravitationally descends as a body to be regenerated by oxygen containing gas introduced into said regenerating zone and which oxygen containing gas passes together with the gravitationally descending body of catalyst through the regenerating zone, withdrawing combustion gases from said regenerating zone, and passing regenerated catalyst gravitationally from said regenerating zone into said reaction zone.



2,440,476

ELECTRIC HEATING SYSTEM FOR A PLURALITY OF OBJECTS, RESPONSIVE TO TEMPERATURE AND POSITION THEREOF

Lauren L. Johnson, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware

Application November 4, 1944, Serial No. 561,951

10 Claims. (Cl. 219—20)

6. In a system for simultaneously heating a plurality of objects electrically, the combination of a plurality of heating stations, each said station comprising a heating device, a movable temperature responsive device, movable means actuable by one of said objects through the associated said temperature responsive device into a first position in response to relative movement of the associated said heating device and of one of said objects into heating relation and into a second position in response to relative movement of the associated said heating device and of one of said objects out of heating relation, and means responsive to heating of the associated said temperature responsive device to a predetermined temperature for causing relative movement of the associated said heating device and of one of said objects out of heating relation, a source of current, a converter connected with said source for converting current from said source into heating current for said devices, means for severally connecting the different said devices with said converter, and means responsive to movement of any of said movable means into said first position for rendering said converter operative to supply current to said devices and responsive to movement of all said movable means into said second position for rendering said converter inoperative.

2,440,477

SYNTHETIC DRYING OILS

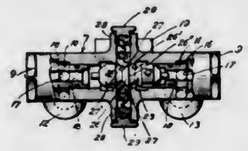
Warren W. Johnstone, Riverside, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware

No Drawing. Application November 29, 1943

Serial No. 512,271

13 Claims. (Cl. 196—78)

1. A process for the preparation of a drying oil which comprises reacting a hydrocarbon fraction containing olefins in the presence of a hydrogen fluoride catalyst, separating the reaction mixture into a catalyst phase and a hydrocarbon phase, removing hydrogen fluoride from said catalyst phase thereby leaving a residual organic material, treating said residual organic material with an alkaline reagent to neutralize free acid therein, and recovering the acid-free organic material as said drying oil.



2,440,478

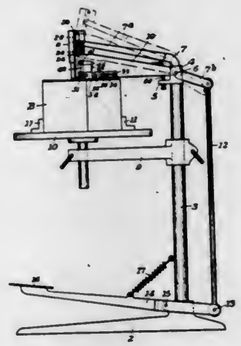
SHUTTLE VALVE

Ottmar A. Kehle, West Los Angeles, Calif., assignor to Adel Precision Products Corp., a corporation of California

Application November 24, 1942, Serial No. 466,784

2 Claims. (Cl. 251—118)

2. In a valve, a body member having a cylindrical bore therein, spaced inlet seats in said bore and outlet means communicating with said bore intermediately of said seats, a shuttle valve slidable in said bore and having provision for alternately engaging said seats to open communication between a selected inlet seat and the outlet means and close the other inlet means, said shuttle valve having cylindrical portions engaging the wall of said bore inwardly of the respective inlet seats, said cylindrical portions being so spaced apart as to be simultaneously engageable with bore wall portions at opposite sides of said outlet means and disengageable with said bore wall portions one at a time to open said inlet seats, said shuttle valve having two cam surfaces, and a spring loaded detent disposed intermediately of said inlet seats for engaging one or the other of said cam surfaces for urging the shuttle valve toward and yieldably holding said valve against one or the other of said inlet seats, said cylindrical portions being positioned to remain in closing engagement with said bore wall portions on opposite sides of said outlet means until said detent contacts one or the other of said cam surfaces in each direction of movement of said shuttle valve.



2,440,479

STAPLING APPARATUS

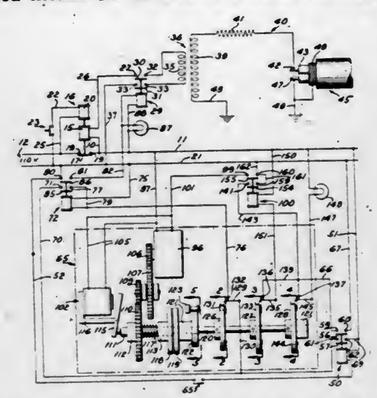
Joseph C. Lang, Pittsburgh, Pa., assignor to Bocji Corporation, a corporation of Delaware

Application November 30, 1942, Serial No. 467,365

17 Claims. (Cl. 1—13)

1. A stapling machine of the class described having a reciprocable driver, means forming a delivery chute along which the driver is movable, guide means normally projecting into the delivery chute extending across the path of the driver and having slots therein positioned to engage and support the legs of the staple moving along the chute, said guide means being movable out of staple-engaging position.

2,440,480



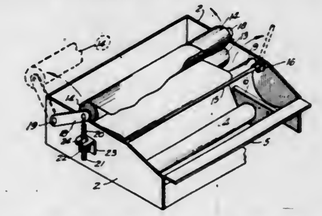
ELECTRICAL INSULATION TESTING APPARATUS

Clay E. Lewis, Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York

Application March 31, 1944, Serial No. 528,823

8 Claims. (Cl. 175—183)

1. An apparatus for testing an insulating jacket surrounding a conductor forming part of an electric cable, which comprises a testing circuit energizable to impress a high potential across such a conductor connected therein, a low potential control circuit including means for energizing the high potential testing circuit, means for controlling the continuity of the energizing means, manually controlled means for energizing the continuity controlling means to energize the testing circuit and start an insulation testing operation on the conductor connected therein, means operable with the continuity controlling means for indicating when the testing circuit is energized, and timing means started by the manually controlled means for indicating when a testing operation has been conducted on the conductor for a predetermined period of time.



2,440,481

PORTABLE DEVICE FOR PASTING WALLPAPER

Frank L. Lowery, Oklahoma City, Okla.

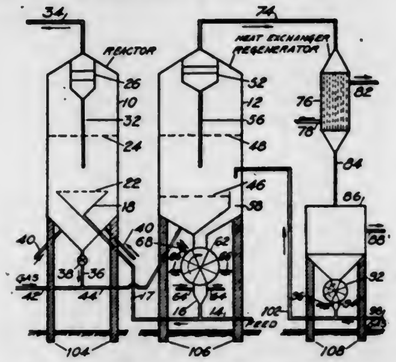
Application March 1, 1946, Serial No. 651,142

3 Claims. (Cl. 91—51)

1. In a portable device for pasting wall paper, a unitary sheet metal supporting frame, supporting flange, paper trough, bead roll and paste tank, and enclosing members for the aforesaid parts and a movable baffle plate for the said paper trough to adjust its length for different widths of paper.

2,440,482

PROCESS AND APPARATUS FOR CONTACTING FLUIDS WITH POWDERED SOLIDS

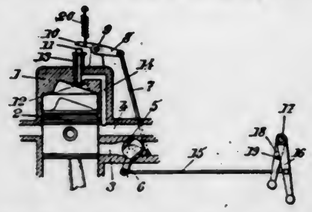


Homer Z. Martin, Roselle, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

Application December 15, 1943, Serial No. 514,324

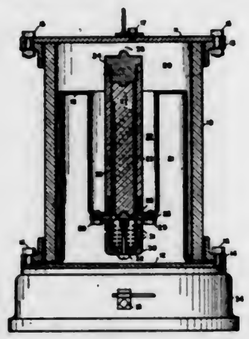
6 Claims. (Cl. 196—52)

1. A process for contacting powdered solids with gaseous fluids which comprises maintaining a reaction zone and a regeneration zone substantially at ground level, maintaining a body of dry fluidized solid particles in each of said zones, maintaining one zone under higher superatmospheric pressure than the other zone, removing fluidized solid particles from the bottom of said higher pressure zone and passing them through a constriction whereby a drop in pressure occurs, then mixing the withdrawn particles with a gaseous fluid and passing the mixture to said lower pressure zone, removing dry fluidized solid par-



ticles from the bottom of said lower pressure zone and passing them into a chamber, introducing a fluid under pressure into said chamber to raise the pressure on the solid particles, maintaining a pressure seal between said lower pressure zone and said chamber, removing the solid particles from said chamber and mixing a gaseous fluid therewith, the pressure in said chamber being sufficient to prevent seepage of the last mentioned gaseous fluid into the said lower pressure zone and to pass the last mentioned mixture to said higher pressure zone, and removing gaseous fluid from each of said zones.

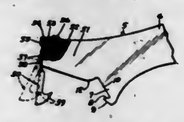
5. An apparatus of the character described including a higher pressure vessel and a lower pressure vessel located substantially at ground level, each vessel being adapted to hold dry fluidized solid particles and having a top outlet for gaseous fluids and a bottom outlet for fluidized solid particles, said higher pressure vessel having a slide valve in its bottom outlet, said lower pressure vessel having a star feeder in its bottom outlet, a fluid pressure chamber below said star feeder, means for supplying fluid under pressure to said pressure chamber, means for mixing a gaseous fluid with solid particles from said pressure chamber and passing the mixture to said higher pressure vessel and means for mixing a gaseous fluid with solid particles from below said slide valve and passing the mixture to said lower pressure vessel.



2,440,483
CONTROL DEVICE FOR INTERNAL-COMBUSTION ENGINES
Marcel Mennesson, Neuilly-sur-Seine, France, assignor to Societe D'Appareils de Contrôle et Equipement des Moteurs (S. A. C. E. M.), Neuilly-sur-Seine (Seine), France, a society of the French Republic
Application March 2, 1945, Serial No. 580,587
In France August 1, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires August 1, 1962
13 Claims. (Cl. 123—97)

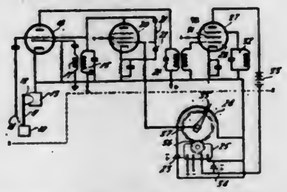
1. A control device for an internal combustion engine comprising at least a cylinder with at least a combustion chamber formed therein, a gas intake for said cylinder, pressure relief means for placing said combustion chamber in communication with the atmosphere, said control device comprising, in combination, throttle means for controlling said gas intake, and interconnecting means between said pressure relief means and said throttle means, adapted to permit the opening of said pressure relief means to the atmosphere only after the closing of said throttle means, and inversely the opening of said throttle

means only after said pressure relief means have been closed.



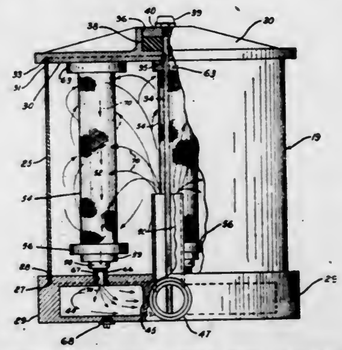
2,440,484
VOLTAGE-LIMITING ARC INTERRUPTER
Ralph R. Pittman, Little Rock, Ark.
Application March 7, 1944, Serial No. 525,465
2 Claims. (Cl. 175—30)

1. A voltage-limiting arc interrupter comprising a hollow cylindrical housing of insulating material having upper and lower closures of conducting material at its respective ends; a reentrant partition of condycting material extending within said housing, said partition engaging the lower closure and extending first inwardly and upwardly from the lower end of said housing to an elevation below that of the upper closure, thence inwardly and downwardly to a centrally positioned opening at an elevation above that of said lower closure; a discharge device including an upstanding tubular insulator closed at the upper end and vented at the lower end, normally insulated spaced upper and lower conducting electrodes associated therewith and so related that the weakest electrical path therebetween is within said insulator rather than externally thereof; means supporting said discharge device on said partition at said last-named elevation, said discharge device extending upwardly in lateral spaced relationship with said partition and in vertical spaced relationship to the upper closure to provide a spark gap between the latter and the upper electrode of said discharge device, the lower end of said discharge device closing said centrally positioned opening and being arranged to vent gaseous products attending the operation of said discharge device only into the space between said lower closure and said reentrant partition; and a discharge disperser mounted at the vented end of said discharge device for cooling said gaseous products prior to entry into said space; the conducting members being so related to



the insulating housing that the weakest electrical path from said upper closure to said lower closure is via the series circuit arrangement of said spark gap and said discharge device.

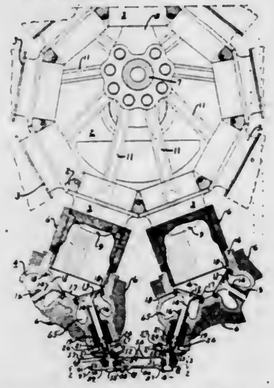
2,440,485
CAP-LIFTING BOTTLE OPENER
Maurits C. Ranseen, Minneapolis, Minn.
Application March 11, 1944, Serial No. 525,996
1 Claim. (Cl. 81—3.46)



A bottle opener comprising a body having one edge provided with a projection constituting a fulcrum and adapted to seat upon a bottle cap adjacent to one side thereof, a hook pivoted to the end of said body remote from the fulcrum and depending from said end of the body and having an upturned nib adapted to engage under the edge of the bottle cap, the opposite end of said body being formed with an abutment adapted to engage the side of the cap adjacent to said fulcrum, when the opener is applied to the cap, an operating handle extending downwardly from said abutment and body and positioned adjacent to the neck of the bottle whereby the operator may conveniently grasp the neck of the bottle and said handle with one hand and operate the opener to release the cap by a squeezing action, and means constantly urging the hook into cap engaging position whereby the opener may be quickly applied to the bottle cap by simply moving it straight downwardly into engagement with the top of the cap, such manipulation of the opener causing the nib of the hook and said abutment to automatically assume their operative positions with respect to the cap.

2,440,486
VARIABLE FREQUENCY CONTINUOUS BALANCE MOTOR CONTROL SYSTEM
Karl Rath, New York, N. Y., assignor to Radio Patents Corporation, New York, N. Y., a corporation of New York
Original application February 19, 1944, Serial No. 523,027. Divided and this application June 26, 1947, Serial 757,198
8 Claims. (Cl. 318—28)

1. In a system of the character described, a primary element having a movable member; a secondary element having a movable member; an electric motor driving said secondary element; a frequency converter comprising a first resonant impedance means, a generator of high frequency voltage including a second resonant impedance means having a resonant frequency determinative of the generated frequency and being normally equal to the resonant frequency of said first impedance means, reactive coupling means between said first resonant impedance means and said generator to develop a secondary high frequency voltage by said first resonant impedance means having a phase normally at 90° with respect to the phase of the generated voltage and varying in sense and magnitude in accordance with the relative frequency departure between the generated voltage and the resonant frequency of said first impedance means, and further means for combining said secondary voltage with the generated voltage to produce a direct output current having an amplitude varying in sense and magnitude in accordance with said frequency departure; means for controlling said motor in response to said output current to cause rotation thereof in either direction in dependance upon the sense of variation of said output current; an electronic reactance control tube operatively connected to said generator; means associated with said primary element for varying the resonant frequency of one of said impedance means; a source of constant direct current potential; an adjustable resistance controlled by said motor and connected to said source for producing a variable control potential; and means for applying said control potential to said reactance tube to vary the internal impedance of said tube, whereby to counteract an initial relative frequency departure between said first and second impedance means to maintain said primary and secondary elements in a continuously balanced follow-up movement.

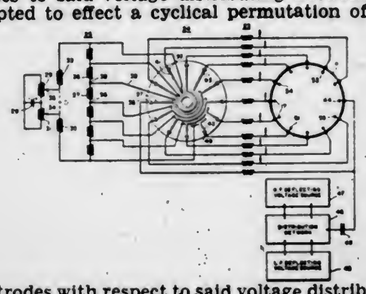


2,440,487
CORROSION RESISTANT FILTER
Vincent A. Rayburn, Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application September 4, 1943, Serial No. 501,235
2 Claims. (Cl. 210—184)

1. A filter, which comprises a base member having separate inlet and outlet chambers formed therein, an annular casing positioned on the base member, a cover for the casing means for conveying a liquid to be filtered from the inlet chamber in the base member to substantially the middle portion of the casing, a plurality of threaded couplings, a plurality of threaded pipes secured to the base member in positions equidistant from the center of the casing for adjustably connecting the couplings with the outlet chamber, resilient rubber gaskets carried by the coupling members, a plurality of perforated hard rubber tubes each having one end thereof positioned upon one of the gaskets, a plurality of resilient rubber gaskets carried by the cover so as to engage the ends of the tubes, a plurality of tubular,

wool fabric strainers each surrounding the exterior surface and the ends of one of the tubes, and means for exerting pressure on the cover, whereby the gaskets are forced into close engagement with the strainers and the tubes and liquid tight seals are effected between the tubes and the couplings and the cover, respectively.

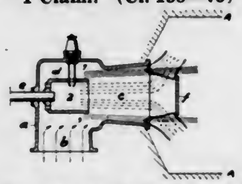
2,440,488
OIL ACCUMULATION DRAIN MEANS FOR RADIAL ENGINES
Carl G. A. Rosen, Peoria, Ill., assignor to Caterpillar Tractor Co., San Leandro, Calif., a corporation of California
Application February 7, 1944, Serial No. 521,327
4 Claims. (Cl. 123—55)



4. An internal combustion engine comprising a cylinder in which liquid is apt to accumulate, a valve for allowing drainage of such liquid, a control member for the engine, and mechanism connected to the control member for opening the valve, said mechanism including yieldable means for delaying opening of the valve until compression in the cylinder is relieved should the control member be moved to open the valve when the cylinder is under compression.

2,440,489
PROCESS FOR DEHYDRATING AQUEOUS MIXTURES
Raphael Rosen, Elizabeth, and John C. Zimmer, Union, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application November 3, 1945, Serial No. 626,580
9 Claims. (Cl. 252—321)

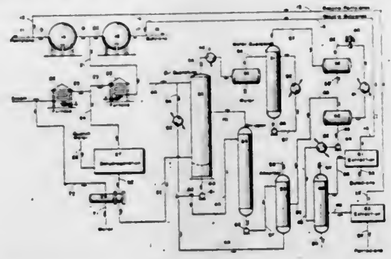
1. An improved process for dehydrating water-containing liquids which normally foam excessively on ebullition, which comprises evaporating water from the liquid by heat in the presence of a small quantity, sufficient to substantially prevent foaming, of a liquid, low-volatility polymer of a chloro-fluoro olefin monomer said polymer having 10 to 50 carbon atoms per molecule.



2,440,490
ELECTRON BEAM CENTERING SYSTEM
Hans W. G. Salinger and Albert T. Mayle, Jr., Fort Wayne, Ind., assignors, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application November 6, 1946, Serial No. 708,004
7 Claims. (Cl. 315—18)

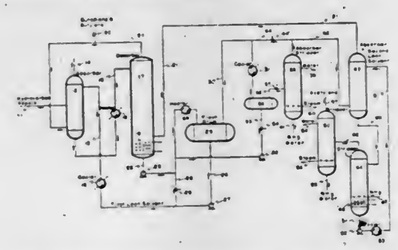
1. A system for orienting an electron beam relative to a target electrode comprising, a plurality of field-producing electrodes located in spaced positions around the path of said beam, a source of unidirectional voltage, a voltage distributing network for deriving from said source a predetermined voltage distribution pattern for said electrodes, a switch for connecting said electrodes to said voltage distributing network and adapted to effect a cyclical permutation of said

electrodes with respect to said voltage distribution pattern, whereby to secure any one of a plurality of angular directions of the field produced by said electrodes in the path of said beam, and means to vary the magnitude of the voltage impressed upon said voltage distributing network from said source, whereby to correspondingly vary the strength of said field.



2,440,491
OIL BURNER
Erwin Frédéric Schwander, Reichshoffen, France, assignor to Societe d'Etudes des Vehicules "Sev," Reichshoffen (Bas-Rhin), France, a society of France
Application February 20, 1936, Serial No. 64,928
In France March 21, 1935
Section 3, Public Law 690, August 8, 1946
Patent expires March 21, 1955
1 Claim. (Cl. 158—73)

In an oil burner particularly for steam generators for vehicles comprising in combination a tubular burner body receiving combustion air, a sleeve-like member in the body for dividing the combustion air into a primary and a secondary air current, an oil nozzle and an electric ignition device in said member and a baffle plate disposed in front of the tubular body, the sleeve-like member being a cylindrical cup having a perforated bottom turned against the air current, said tubular body extending beyond the cup mouth and the inner walls thereof being throughout their whole length essentially parallel to those of the cup.

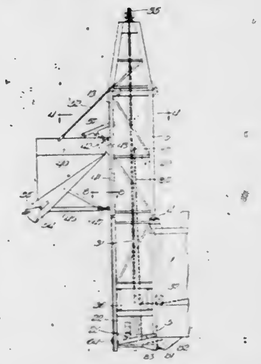


2,440,492
PROCESS FOR THE PRODUCTION OF DIOLEFINS
Wilson D. Seyfried, Wooster, and Sam H. Hastings, Baytown, Tex., assignors to Standard Oil Development Company, a corporation of Delaware
Application June 13, 1944, Serial No. 540,078
2 Claims. (Cl. 260—680)

1. In the production of butadiene, the steps comprising forming a hydrocarbon mixture including butylene and pentylene in the ratio of about 3 parts of pentylene per part of butylene to about 3 parts of butylene per part of pentylene, feeding said mixture and superheated steam into a dehydrogenation zone containing a catalyst comprising about 80 per cent MgO, 14 percent

Fe_2O_3, 3 per cent K_2O, and 3 per cent CuO and maintaining said mixture and steam in said zone at a temperature in the range of about 1150° F. to about 1300° F. for a time sufficient to convert substantial amounts of said mixture to butadiene whereby a substantially greater yield of butadiene is produced than is producible under comparable conditions from said butylene alone.

2,440,493
PROCESS FOR SEPARATING BUTADIENE AND ACETYLENE FROM A HYDROCARBON MIXTURE
George H. Shipley, Jr., Baytown, Tex., assignor to Standard Oil Development Company, a corporation of Delaware
Application March 27, 1944, Serial No. 528,190
6 Claims. (Cl. 260—679)

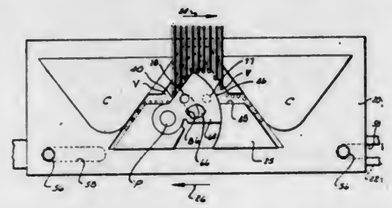


1. A process for separating butadiene and acetylene from a hydrocarbon admixture including butadiene and acetylene comprising the steps of contacting the hydrocarbon mixture in a first absorption zone with a first aqueous solution of ammonia cuprous acetate to absorb butadiene and acetylene from the hydrocarbon mixture and obtain a first rich solvent, subjecting the first rich solvent to preliminary desorption to remove a major portion of butadiene therefrom, subsequently stripping the resulting solvent to remove substantially all of the hydrocarbons therefrom in vaporous condition, contacting the vaporous hydrocarbons with a second solution of ammonia cuprous acetate in a second absorption zone to absorb a major portion of acetylene and a minor portion of butadiene from the vapors, removing unabsorbed vapors from the second absorption zone and removing rich absorbent from the second absorption zone and recovering hydrocarbons therefrom.

2,440,494
LOW-TEMPERATURE POLYMERIZATION OF BUTADIENE IN THE PRESENCE OF METHALLYL CHLORIDE
William J. Sparks, Elizabeth, and Robert M. Thomas, Union, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application October 11, 1941, Serial No. 414,596
4 Claims. (Cl. 260—93)

1. A low temperature polymerization process for butadiene comprising the steps in combination of mixing butadiene with methallyl chloride, cooling the mixture to a temperature below 0° C., and applying to the cooled mixture a polymerization catalyst comprising aluminum chloride dissolved in a non-complex-forming solvent having a freezing point below 0° C.

2,440,495
HOISTING TOWER APPARATUS
Harold A. Wagner and Gustave H. Wagner, Portland, Oreg.
Application June 24, 1946, Serial No. 678,842
10 Claims. (Cl. 214—120)



1. An elevator arrangement comprising a tower adapted to be pivotally secured adjacent one end thereof to a vehicle and being further adapted to be transported horizontally upon said vehicle and shifted to a vertical operative position, said tower comprising a rectangular arrangement of parallel uprights, said tower being open along the front side thereof, a pair of slides mounted upon the uprights on the opposite sides of said front side of said tower, a hopper pivotally mounted adjacent its upper end on said slides, means detachably fastening said hopper adjacent its lower end on said slides, said hopper having a width slightly less than the distance between the uprights defining the front side of said tower whereby upon disconnection of the lower end of said hopper from said slides said hopper may be pivotally swung between said front uprights.

2,440,496
FLAT KNITTING MACHINE
Harry Weinstein, Brooklyn, N. Y.
Application June 12, 1947, Serial No. 754,117
3 Claims. (Cl. 66—68)

1. A flat knitting machine including a reciprocating bed plate, wall structure disposed on one

side of said plate and defining a recess, a bank of needles, means supporting said needles adjacent said bed plate with the butts of said needles engaging said channel, said needles being movable, by the reciprocal movement of said bed plate, in a direction normal to the direction of the movement of said bed plate, certain of said needles having relatively high butts and relatively long latches, and certain of said needles having relatively low butts and relatively short latches, a stitch regulating device disposed in said recess and coacting with said wall structure

to define a V-shaped channel, said regulating device being movable to a first position in which the butts of all of said needles are moved toward the apex of said channel, and to a second position in which the butts of the high butt needles are moved toward the apex of said channel and the butts of the low butt needles are moved away from the apex of said channel to vary the type of stitch formed by said low and high butt needles, and means operable by the reciprocal movement of said bed plate to move said stitch regulating device into either of said positions.

2,440,497

PROCESS FOR PRODUCING UNSATURATED HYDROCARBONS CONTAINING BRANCHED CARBON CHAINS

Carl Winning, Westfield, and Dilworth T. Rogers, Summit, N. J., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application October 5, 1945, Serial No. 620,628

4 Claims. (Cl. 260—677)

1. In a process for producing unsaturated hydrocarbons containing branched carbon chains, the step comprising heating chlorinated tetraisobutylene with a smaller quantity of phenol for an extended period at a temperature from 100–200° C., continuously removing hydrogen chloride vapor and separating the phenol from the unsaturated residue.

2,440,498

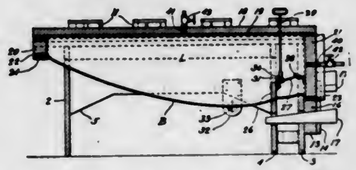
POLYMERIZATION CATALYSTS

David W. Young, Roselle, and Henry B. Kellog, Union City, N. J., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application May 15, 1943, Serial No. 487,155

8 Claims. (Cl. 252—199)

1. A low temperature polymerization catalyst active between 0° C. and —100° C. in the form of a solution in an aliphatic solvent having from 1 to 5 carbon atoms per molecule which is liquid below 0° C.; of a double salt composed of a Friedel-Crafts active metal halide catalyst and a titanium alkoxy compound in which the alkoxy radical has a carbon atom number within the range between 1 and 8 inclusive.



2,440,499

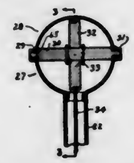
APPARATUS FOR FREE-BLOWING THERMOPLASTIC MATERIAL

Robert S. Ames, Robert W. McCullough, and Maurits P. H. Peterson, Akron, Ohio, assignors to Goodyear Aircraft Corporation, Akron, Ohio, a corporation of Delaware

Application April 26, 1945, Serial No. 590,478

4 Claims. (Cl. 18—19)

3. A jig for forming stream-lined canopies for airplanes and the like including frame means having an opening therein, the opening being shaped to the longitudinal contour of the base of the article to be formed, the opening extending at both ends appreciably beyond the trim length of the article to be formed, means supporting a sheet of plastic over the opening in the frame means, differential pressure means for moving the sheet through the opening in the frame means, external gauge means extending transversely of the frame means and positioned at the trim lines for article length against which the sheet is moved just to touch, and means movably mounted in association with the jig for engaging the inside of the article after the main forming of the article is completed to press the article into narrow area contact with the external gauge means.



2,440,500

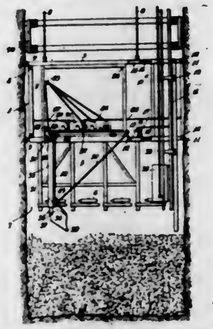
FLAGPOLE AND OPERATING MEANS THEREFOR

Robert Ellis, Belleville, N. J.

Application April 14, 1944, Serial No. 530,954

8 Claims. (Cl. 116—173)

1. A flag-pole and operating means therefor comprising a hollow fixed pole, a hollow extension pole mounted to the upper end of said fixed pole, a side hole in said extension pole near the lower end thereof, a side opening in and near the lower end of said fixed pole, a rope extending from said lower side opening in the fixed pole up through the hollow interior thereof and on through the hollow extension pole through an upper opening therein and then extending downwards on the outside thereof through the said side hole in the lower part of said hollow extension pole into the interior thereof and down through said hollow fixed pole to the said lower side opening therein, a flag attached to said rope on the outside of said hollow extension pole between the upper and the said lower side openings therein, and means for causing said rope to haul said flag into said side opening in the lower part of said hollow extension pole.



2,440,501

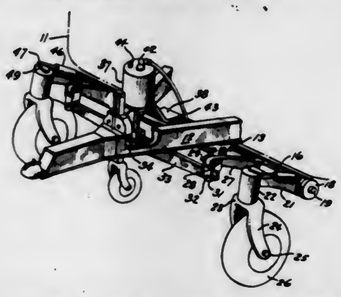
EXCAVATING APPARATUS

Carl A. Erickson, Baltimore, Md.

Application July 27, 1945, Serial No. 607,475

12 Claims. (Cl. 214—141)

1. An excavating machine including a main frame provided at opposite sides with longitudinal ways and having means for engaging walls of an excavated hole for securing the main frame in different positions in said hole, hoisting means connected with the main frame for lowering it into said hole as the excavation of the same progresses and for removing it from the hole when the excavation thereof is completed, a carriage slidable in the ways of the main frame and provided with a transverse guide, a pivoted boom mounted for sliding movement back and forth along said transverse guide and provided with an extensible section, a dipper pivotally mounted on the extensible section of the boom at the outer end thereof, means for actuating and controlling the boom to swing the same and to slide the boom along said transverse guide, means for effecting adjustment of said extensible section to vary the effective length of the boom, and a dipper line connected with the dipper and guided on and carried by the boom in the sliding movement thereof.



2,440,502

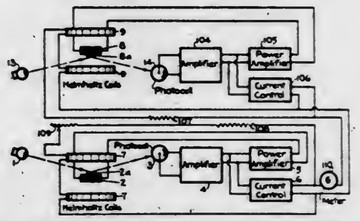
AUXILIARY VEHICLE TRUCK

Elmer H. Etgen, Los Angeles, Calif.

Application April 17, 1947, Serial No. 742,022

19 Claims. (Cl. 280—124)

1. A vehicle truck, including: a hollow, frame member constituting a pneumatic reservoir and adapted to be attached transversely to the forward end of the vehicle; a ground-wheel support rotatably mounted on each end of said member for arcuately-vertical rotation; a ground-engaging wheel carried by each support; and pneumatic cylinder-and-piston means disposed intermediate the ends of said member, and having a volume less than that of said reservoir and motion-connected by its piston means to each of said wheel supports and flow-connected by its cylinder means to said reservoir, whereby to maintain substantially equal the load pressure on each wheel, thereby minimizing lateral and vertical oscillations of the vehicle.



2,440,503

MAGNETIC GRADIOMETER

Charles H. Fay, Houston, Tex., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware

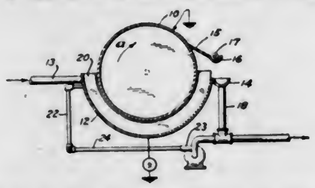
Application January 11, 1945, Serial No. 572,278

4 Claims. (Cl. 175—183)

1. A system for measuring the gradient of a magnetic field, comprising first and second coils spaced from each other, means pivoting said coils for independent oscillation in said field, light source means, first and second photo-electric elements, optical means carried by said pivoted coils for varying the illumination of said photo-electric elements whereby the output current of said elements is varied proportionally to the oscillation of said pivotal coils, amplifier means energized by the outputs of said photo-electric elements, controlled rectifier means in circuit with said amplifier means for rectifying a portion of the output current of said amplifier means, Helmholtz coil means mounted coaxially with the pivoted coils in planes parallel and adjacent thereto, said Helmholtz coil means being energized by the direct current output of said rectifier means for neutralizing the magnetic field in which the pivoted coils oscillate, means in circuit with the amplifier means and said pivoted coils for passing through said pivoted coils the non-rectified portion of the output current of the amplifier means, and indicating means in circuit with said amplifier means for comparing the strength of the magnetic fields produced at the location of each of said pivoted coils as a resultant of said magnetic field and the neutralizing field of the Helmholtz coil means.

2,440,504

APPARATUS FOR ELECTROPHORETIC SEPARATION OF SOLIDS FROM LIQUIDS



Harmon F. Fisher, Palo Alto, and Albert C. Peck, Los Altos, Calif., assignors, by mesne assignments, to The Permanente Metals Corporation, a corporation of Delaware

Application August 16, 1944, Serial No. 549,776

1 Claim. (Cl. 204—300)

In an apparatus for separating solids from their suspension in a liquid slurry which comprises a horizontal drum of electrical conducting material partially submerged in said slurry, a semi-cylindrical pan electrode for containing the slurry in which said drum is submerged, means for connecting a source of potential across said pan electrode and said drum to effect the elec-

trophoretic deposition of solids onto said drum from said slurry, dielectric baffle means secured to said pan electrode and projecting radially inwardly close to the surface of the drum, said drum extending axially beyond the baffles, said baffles thereby defining outer zones adjacent to the end portions of said drum and an inner annular zone therebetween, said baffle means being adapted to substantially separate said outer zones from said inner zone without frictional engagement with the surface of the drum, delivery means for supplying slurry to one side of the drum to effect the flow of slurry through said inner zone and in a circumferential direction around the

under side of the medial portion of said drum, overflow means on the opposite side of the drum to collect the clear liquid formed by passing slurry through said inner zone in such a manner as to electrophoretically deposit said solids onto the medial portion of said drum, and a conduit leading from said overflow means to said outer zones on the same side of the drum and at substantially the same height as the delivery means for recirculating a portion of said clear liquid through each of said outer zones in the same direction as said slurry and for projecting an annular stream of clear liquid inwardly therefrom and into said inner zone.

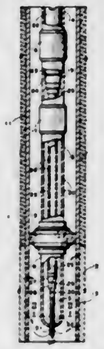
2,440,505

INTERLOCKING MEANS FOR ELECTRICAL TESTING APPARATUS OR THE LIKE

Irvin W. Folk, Belleville, N. J., assignor to Atlas Supply Company, Newark, N. J., a corporation of Delaware

Application April 18, 1946, Serial No. 662,949
5 Claims. (Cl. 74—483)

1. In a structure of the character described, a panel provided with spaced plug-receiving sockets and a rotatable member that is spaced from the sockets, a first bolt slidably mounted on the panel between said member and one of the sockets and adapted to be moved in one direction to obstruct one of the sockets when the rotatable member is turned and to lock the rotatable member against turning when a plug occupies that socket, and a second bolt slidably mounted on the panel in alignment with the first bolt and adapted to be moved in one direction by a plug introduced into the last-mentioned socket and to be moved in the opposite direction by a plug introduced into the other socket.



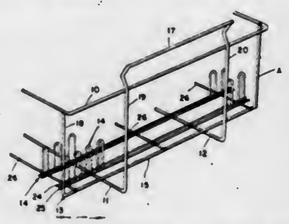
2,440,506

SUBSURFACE CHOKE

Oliver L. Furse, Overton, Tex., assignor to Standard Oil Development Company, a corporation of Delaware

Application December 27, 1943, Serial No. 515,748
5 Claims. (Cl. 166—2)

1. An assembly adapted to be secured to the lower end of a string of tubing and arranged in a well, said assembly comprising, in combination, a tubular first member with the inner wall of its upper end defining a seat, its lower end closed except for an axial circular port of smaller diameter than said seat, said first member being adapted to have its upper end secured to the lower end of the string of tubing, a second member adapted to be slidably inserted into and withdrawn from the first member and including a medial perforated tubular body portion of smaller diameter than the minimum diameter of the seat, an upper portion of said second member defining



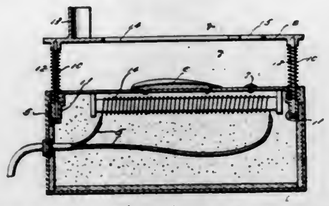
a central passage and having an exterior surface shaped to cooperate with said seat to make a fluid tight seal, and a lower solid rod portion of slightly less diameter than said axial port in the first member and making a close fit therewith, said rod portion being provided with a longitudinal groove, the second member having such a length that when inserted in the first member with its upper portion in contact with said seat the rod portion projects through the axial port with said longitudinal groove extending above and below the wall defining said port.

2,440,507

BASKET STRUCTURE

Jerry Geralds, Detroit, Mich., assignor to Mid-West Wire Products Company, Inc., Detroit, Mich., a corporation of Michigan

Original application June 22, 1942, Serial No. 448,017. Divided and this application April 19, 1943, Serial No. 483,622
2 Claims. (Cl. 220—19)



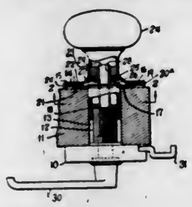
1. In a basket structure, a rack forming an open mesh bottom comprising a frame, a series of spaced pairs of spaced metal bars extending across said frame and secured thereto, and a series of spaced upwardly extending metal rods each having one end arranged between the spaced bars of each pair and rigidly connected at said end to each of said bars on opposite sides of each member.

2,440,508

PRODUCTION OF ARCH OR LIKE SUPPORTS

William L. Gould, Albany, N. Y.

Application January 21, 1944, Serial No. 519,220
3 Claims. (Cl. 18—35)



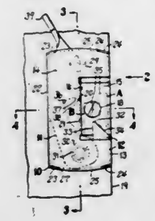
1. The herein described method of producing a support for an arch of the foot, which method consists in providing a pattern sheet of plastic material, yieldingly supporting the pattern above and spaced from a fixed shaping mold, and using the foot to move the pattern downwardly into engagement with the shaping mold so that the pattern will be shaped directly to the arch of the foot.

2,440,509

LATCH CONSTRUCTION MOUNTING MEANS

Gotthard Hagstrom, New Haven, Conn., assignor, by mesne assignments, to The Pioneer Hardware Corporation, Bridgeport, Conn., a corporation of Connecticut

Application June 14, 1946, Serial No. 676,791
6 Claims. (Cl. 292—348)



1. A latch construction, including in combination: a first latch-unit designed and adapted for engagement with one face of a door and provided with a threaded portion having its axis extending in a direction transverse of such door; and a second latch-unit designed and adapted for engagement with the opposite face of the door from the said first latch-unit and provided with a threaded portion threadedly engageable with the threaded portion of the said first latch-unit and jointly therewith providing coupling-means to couple the two latch-units together; one of the said latch-units including a clamping-member rigid with its said threaded portion and formed with a wrench-receiving recess constructed and arranged to receive a tool whereby the clamping-member and its rigid threaded portion may be turned with respect to the threaded portion of the other latch-unit to clamp a door between the two said latch-units, and a cover-member covering the outer face of the said clamping-member and formed with a clearance-opening located so as to be movable into and out of registry with the wrench-receiving recess of the clamping-member, the said cover-member being rotatable with respect to the said clamping-member to move its clearance-opening into and out of registry with the wrench-receiving recess in the clamping-member.

2,440,510

KEEPER OR STRIKER FOR LATCHES AND THE LIKE

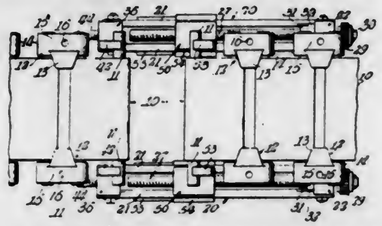
Gotthard Hagstrom, New Haven, Conn., assignor, by mesne assignments, to The Pioneer Hardware Corporation, Bridgeport, Conn., a corporation of Connecticut

Application June 14, 1946, Serial No. 676,792
5 Claims. (Cl. 292—340)

1. A keeper for latches and the like, including in combination: a cover-member having a front face-portion and a side face-portion projecting from the said front face-portion at substantially a right angle, a part of the said front face-portion and a part of the said side face-portion intermediate the respective opposite ends of the cover-member being respectively deflected to provide the said front face-portion with a side panel extending in substantial parallelism with the said side face-portion, and to provide the said side face-portion with a front panel extending in substantial parallelism with the said front face-portion; a latch-retaining member extending to the rear of the said front panel and having a portion extending forwardly thereof toward the said front face-portion and there provided with a latch-retaining abutment and an inclined striker-surface; and a locking-member movably mounted intermediate the side-face portion of the said cover-member and the said latch-retaining member and having a locking-abutment located adjacent the said latch-retaining abutment.

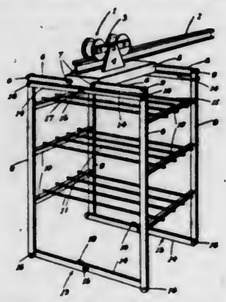
2,440,511

RADIATION DETECTOR



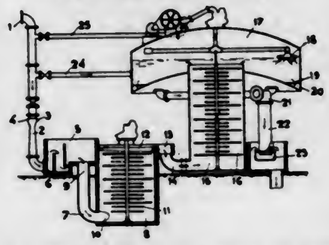
Donald G. C. Hare, Roslyn, N. Y., assignor to Texaco Development Corporation, New York, N. Y., a corporation of Delaware

Application December 29, 1944, Serial No. 570,264
7 Claims. (Cl. 250—83.6)



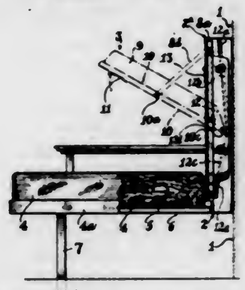
7. A device for detecting gamma rays comprising a housing, a plurality of metallic, frusto-conical plate members in said housing, said members being disposed in an intermeshed, separated relation about a center axis and connected together to form a cathode, an anchor member disposed so as to coincide with said center axis, a plurality of anode wires attached to said anchor member and extending outwardly through the spaces between and parallel to said plate members, and an ionizable medium in said housing.

2,440,512
ENDLESS TRACK TOOL
Frank J. Jakoubek, Elmwood Park, and William E. Gahl, Berwyn, Ill., assignors to Templeton, Kenly & Co. Inc., Chicago, Ill., a corporation of Illinois
Application January 9, 1943, Serial No. 471,912
14 Claims. (Cl. 59—7)



1. A tool of the kind described and embodying therein means providing a rigid beam, block-like members mounted on said beam for a relative longitudinal movement thereon, one of said members carrying a part for detachable engagement with a part of the connector plate mounted on adjacent trunnions of an endless track structure, a pair of laterally spaced projecting members carried by the other member and positioned in alignment with and adapted to engage said trunnions, when said other member moves toward the first mentioned one, means for producing said relative movement between said block-like members, and means carried by said one of said block-like members for engaging another part of said connector plate to prevent tipping thereof when said laterally spaced projecting members engage said trunnions.

2,440,513
SMOKEHOUSE RACK
Gottfried Kaelin and Calavah G. Garey, Sacramento, Calif.
Application September 3, 1946, Serial No. 694,578
8 Claims. (Cl. 211—178)



2. A collapsible rack comprising a rectangular head, a pair of swing links pivotally connected at one end to each end of the head and projecting laterally in opposite directions therefrom when the rack is unfolded, a substantially vertical corner post pivoted at its upper end on and depending from the other end of each swing link, vertically spaced cross bars connected between corresponding corner posts on each side of the rack, corresponding cross bars on opposite sides of the rack being horizontally alined, rods extending between and removably engaging said alined, corresponding cross bars, and releasable means operative to prevent downward swinging of said links from their laterally projecting position; said releasable means including a foldable brace link unit pivotally connected between the corner posts at each end of the rack.

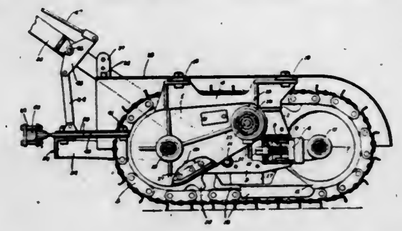
2,440,514
PROCESS FOR THE PURIFICATION OF RAW WATER FROM COLLOIDAL HUMIC SUBSTANCES
Adolf Magnus Rupert Karlstrom, Goteborg, Sweden
Application November 16, 1944, Serial No. 563,711
In Sweden November 23, 1943
2 Claims. (Cl. 210—16)

1. A process for the purification of raw water from colloidal humic substances, comprising, in combination, introduction of air into the water, addition of water soluble salt with trivalent positive ion of one of the metals aluminium, iron and chromium, subsequent slow agitation of the water for the coagulation of the humic substances, and separation by flotation of the coagulated humic substances from the water.

2,440,515
CONVERTIBLE BERTH OR BED LOUNGE AND LIKE DEVICES
Stephen A. Kelly, Jr., Manhasset, and William R. Lindsay, Floral Park, N. Y., assignors to Kelcon Corporation, Flushing, N. Y., a corporation of New York
Application January 29, 1946, Serial No. 643,986
6 Claims. (Cl. 5—59)

5. A convertible bed-lounge embodying, in combination, a bed-mattress, a mattress-supporting structure for holding the mattress in horizontal position, a lounge-back housing having a top rail positioned at conventional lounge-back height and extending along one side edge of the said mattress-supporting structure in a vertical plane, a pair of arcuately-swinging arms pivotally mounted at their upper ends to said housing and having their lower ends movable in the arc of a circle from a position parallel with said housing to a position over said mattress and mattress supporting structure, and a dual-surfaced lounge-seat-back having a pivotal connection between its upper and lower edges with the outer ends of said arcuately-swinging pivoted arms, said seat-back being pivotally-movable and invertible in said arcuately-swinging arms and extensible therewith over a portion of the said mattress and mattress-supporting structure to present one of said dual surfaces outwardly and with said mattress to produce a lounge and also being reversely invertible into retracted position to present the other of said dual surfaces outwardly in substantial alignment with said housing out of contact with said mattress to clear the surface thereof for use as a bed, said housing being provided internally with a track and one transverse edge of said seat-back being provided with a guiding roller adapted to roll on said track and to guide the extending and retracting movements of the seatback during inversion thereof, said track being composed of two straight portions inclined rearwardly within the casing and meeting intermediate the ends of said track to facilitate the movement of the roller in opposite directions thereon, and to provide a stop point in the reversible movement to enable facile making-up of the bed.

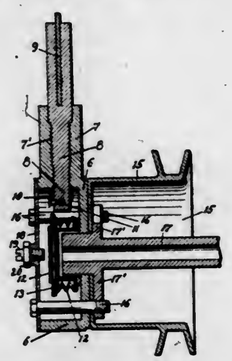
2,440,516
POLYESTER-POLYAMIDE CONDENSATION PRODUCTS AND PROCESS OF PRODUCING THE SAME
Edward L. Kropa, Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application May 26, 1939, Serial No. 275,819
6 Claims. (Cl. 260—6)



1. A process which includes reacting a monoalkylol amine, an amino acid which does not lose ammonia upon heating and a dicarboxylic acid which does not form an anhydride upon heating and which does not contain an alpha, beta-unsaturation, the molal ratio of monoalkylol amine to dicarboxylic acid being 1:1 and the reaction being carried far enough to produce a resin having an acid number and an amine number each less than about 5.

2,440,517
COATED MEAT PRODUCT AND PROCESS
Jean N. Lesparre, Chicago, Ill., assignor to Armour and Company, Chicago, Ill., a corporation of Illinois
No Drawing. Application June 7, 1943, Serial No. 489,987
8 Claims. (Cl. 99—157)

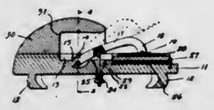
1. A coated meat product comprising an interior body portion of cooked comminuted meat and an exterior covering adhering tightly to the surface of said body portion, said covering including a mixture containing approximately 100 parts of milk, between 10 and 25 parts of fat, and between 3 and 8 parts of gelatinized starch, all of the proportions being by weight, the covering being substantially solid at normal atmospheric temperatures.



2,440,518
ENDLESS TRACK TYPE ROW CROP TRACTOR
Frederick G. Lewis and Charles P. Stephen, Stockton, Calif.
Application May 20, 1946, Serial No. 670,936
13 Claims. (Cl. 180—9.1)

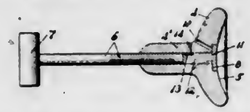
1. A garden type, handle controlled tractor comprising a chassis having a longitudinally extending case, an engine above and supported by the case, a driven rear shaft extending transversely in journaled relation through the case toward its rear end, and projecting on opposite sides thereof, a transverse front spindle unit, means mounting the front spindle unit in connection with the forward portion of the case, a transversely spaced pair of crawler track assemblies connected between corresponding ends of

the rear shaft and front spindle unit on opposite sides of the case, and drive means included in part in the case, between the engine and said shaft; said drive means including an intermediate shaft extending from exteriorly thereof into the case some distance ahead of the rear shaft, driving connections between the engine and intermediate shaft exteriorly of the case, and other driving connections between the intermediate shaft and rear shaft interiorly of the case.



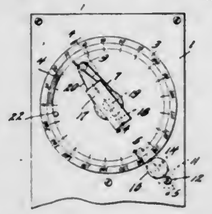
2,440,519
MOTOR FAN BLADE CONTROL
Edward Mooney, Venice, Calif.
Application June 6, 1945, Serial No. 597,860
2 Claims. (Cl. 230—270)

1. An air circulating fan structure including a cup-like body having radially extending bearing arms bored and threaded with low pitch threads, a fan blade with shaft correspondingly threaded for each of said arms, the ends of said shafts extending into said cup-like body and provided with coiled springs and laterally extending fingers, a thermostat mounted axially in said cup-like body, said thermostat having thereon laterally extending fingers positioned to engage crosswise the fingers on said shafts, whereby each finger projecting from said thermostat engages a finger on one of said fan shafts for imparting a turning movement to said shaft and fan blade, the threads between said shafts and said bearing arms being such that centrifugal force cannot cause any



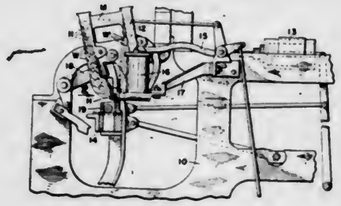
turning of said shaft and fan blade, said thermostat operating to automatically turn said shaft and fan blade to change the pitch of the fan blade.

2,440,520
RAZOR BLADE SHARPENER
Eric Olson, Beloit, Wis.
Application December 6, 1946, Serial No. 714,524
5 Claims. (Cl. 51—158)



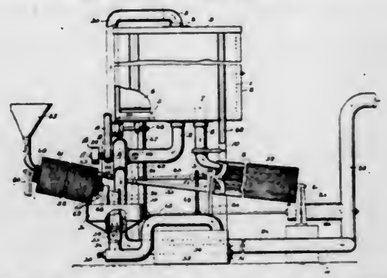
2. A razor blade sharpening device comprising a base member, a crankshaft journaled in said base member, an arm connected to said crankshaft for reciprocating movement responsive to rotation of said crankshaft, means carried by said arm adapted to interlock with a razor blade, a hone element on said base member subadjacent to said means, and spring means biasing said arm downwardly.

2,440,521
PESSARY
Harry E. Opperman, Sr., and Harry E. Opperman, Jr., Los Angeles, Calif.
Application October 1, 1945, Serial No. 619,504
4 Claims. (Cl. 128—127)



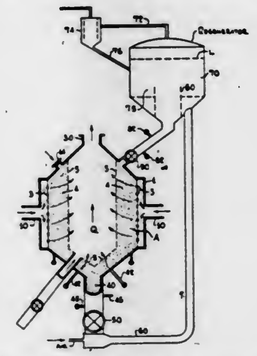
1. A pessary provided with a releasable valve and means forming a part thereof and manually operable for releasing said valve to relieve vacuum tendency when it is desired to remove said pessary from the uterus.

2,440,522
STOP FOR DIAL INDICATORS
Clarence S. Ost, Atlantic City, N. J.
Application August 14, 1946, Serial No. 690,452
1 Claim. (Cl. 74—526)



In a stop for dial indicators in combination with a face plate having a dial thereon, a rotatable arm on the front of the face plate, an upstanding post at the outer end of said arm, a relatively large rotatable disk on the back of the face plate secured to said arm, operable means extending through the face place for clamping the disk to the rear of the face plate in any selected rotated position to thereby also lock the arm on the front of the face plate in a desired selected position, a pointer arm adapted to be limited in its reset position by the said post on said arm, and means on the said disk for limiting the movement of said first mentioned arm.

2,440,523
PNEUMATIC THREAD HOLDER FOR MULTI-STACK MAGAZINES
George N. Peterson, Grafton, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application April 2, 1947, Serial No. 738,861
11 Claims. (Cl. 139—247)

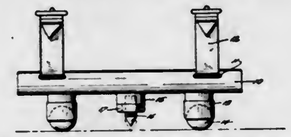


1. In a pneumatic thread holder for a weft replenishing loom having two groups of weft ends leading from a reserve bobbin magazine, thread holder means containing a thread passage transverse of said weft ends and within which subatmospheric pressures exist, said passage having a thread intake mouth formed with a curved surface convex toward the magazine and along which the weft ends of one of said groups are distributed, and guide means fixed with respect to said holder means spaced from said passage and having a curved edge convex toward the magazine and farther from the latter than is said curved surface and along which the weft ends of the other groups are distributed and from which the second group enters said passage spaced from the first group.

2,440,524
COMBINED CLEANER, DRIER, AND GRAINERY
Bertram V. Rains, Raymondville, Tex.
Application December 23, 1943, Serial No. 515,461
12 Claims. (Cl. 209—10)

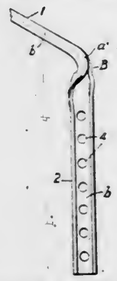
10. In a combined grainery and drier including a housing for grain to be stored, a blower having an inlet and outlet, a duct connecting the inlet of said blower and said housing, an air heating apparatus, a duct connecting said heating apparatus and said housing and subjected to suction from said pump inlet through said housing, means for feeding grain to said duct connecting said heating apparatus and housing for movement to said housing by suction, a grain cooling screen, means for discharging grain from said housing to said screen, means for feeding air from said blower to said screen, means for feeding unheated air into the duct connecting said blower and housing, and means for moving the grain discharging from said screen by the exhaust from said blower.

2,440,525
DEHYDROGENATION OF HYDROCARBONS
Bruno E. Roetheli, Cranford, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application June 24, 1944, Serial No. 541,918
10 Claims. (Cl. 260—683.3)



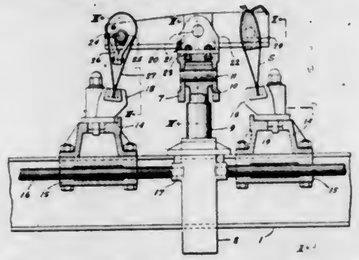
5. A continuous method for dehydrogenating a paraffin in vapor phase, which comprises continuously discharging vapor of the paraffin to be dehydrogenated into a fluidized mass of a dehydrogenation catalyst within a reaction zone, said fluidized mass of catalyst having an annular form, adjusting the velocity of the vapor with horizontal and vertically upward flow direction components through the fluidized mass of catalyst within the reaction zone so as to limit contact between the vapor and catalyst within the range of from ¼ to 4 seconds' residence time, withdrawing a dehydrogenated paraffin vapor product upwardly from said fluidized mass of catalyst, immediately quenching said withdrawn product in an upwardly flowing admixed stream of gaseous cooling medium, withdrawing catalyst continuously from the reaction zone, regenerating the catalyst withdrawn from the reaction zone by contact with an oxygen-containing gas in the regeneration zone, and returning regenerated catalyst while still hot from the regeneration zone to the reaction zone.

2,440,526
FIBROUS SHEET MATERIAL FOR THE ELECTROLYTIC FORMATION OF AN AZO DYESTUFF THEREON
Myer Solomon, deceased, late of Westmont, N. J., by Nellie W. Solomon, administratrix, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
No Drawing. Application December 23, 1942, Serial No. 469,958
8 Claims. (Cl. 204—2)



1. A fibrous sheet material for the electrolytic formation of an azo dyestuff thereon having the surface thereof uniformly treated with an aqueous solution of a dyestuff forming composition consisting substantially of a diazotizable primary amine, a sufficient quantity of an alkali metal nitrite to produce the nitrite ions necessary for diazotization of said amine under the influence of the electrolyzing current, a water soluble neutral inorganic salt in addition to said nitrite as the electrolyte in an amount to insure passage of the electrolyzing current, a sufficient quantity of an azo dye coupling component to couple with the diazonium compound when formed to produce an azo dye, and a quantity of alkali sufficient to impart to said composition a pH on the alkaline side to thereby preclude diazonium salt formation until the fibrous sheet material is subjected to the action of the electrolyzing current said fibrous sheet material being free from any azo dyestuff.

2,440,527
ACETYLENE TORCH CUTTER SUPPORT
Hyrum M. Talley, Alhambra, Calif., assignor to American Pipe and Steel Corporation, Alhambra, Calif., a corporation of California
Application September 4, 1944, Serial No. 552,648
4 Claims. (Cl. 280—29)

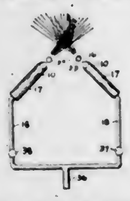


1. An acetylene torch cutter's support comprising a table adapted to support the forearm of the operator, means for fastening the table to the forearm of the operator and a plurality of balls mounted for rotation on the underside of the table and serving to rollably support the same for movement in any direction, said balls being arranged close together in a direction transverse of the table and sufficiently spaced from the underside of the table so that they may ride a right angled edge of a plate to be bevelled without the edge contacting the underside of the table.

2,440,528
EAVES TROUGH SHANK
Henry E. Usinger, Pitman, N. J., assignor to Berger Bros. Company, Philadelphia, Pa., a corporation of Pennsylvania
Application September 12, 1944, Serial No. 553,725
1 Claim. (Cl. 248—48.1)

A gutter supporting shank formed from channel stock into a plate and stem, the channel stock intermediate its ends being bent into tubular form with the edges of the flanges in substantial contact, said tubular portion bent so that the plate and stem will be at an angle to each other and twisted so that the webs of the channel section portions in the plate and stem will extend at right angles to each other.

2,440,529
BALANCED ADAPTER AND NARROW DIE FOR STRETCHING PRESSES
Earl M. Welser, Akron, Ohio, assignor to Goodyear Aircraft Corporation, Akron, Ohio, a corporation of Delaware
Application May 8, 1945, Serial No. 592,704
10 Claims. (Cl. 153—48)



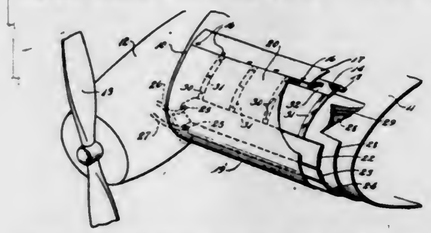
10. In combination, a die, beam means mounting the die adjacent one end of the beam means, a hold-down secured adjacent the other end of the beam means, clamping means in substantial alignment with the die, means pivotally supporting the beam means between its ends, and means for effecting relative movement of the beam supporting means with respect to the clamping means and hold-down so as to stretch material over the die when held by the clamping means.

2,440,530
STABILIZED ORGANIC COMPOSITIONS
Wallace J. Yates, Martinez, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application November 4, 1944, Serial No. 562,039
7 Claims. (Cl. 252—51.5)

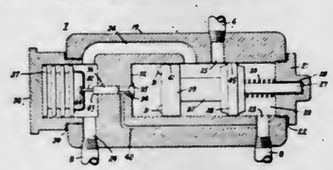
1. A refined mineral oil which is normally subject to oxidative decomposition in the presence of a metal surface and containing a total of about 0.01% to 0.5% by weight of tetramethyldiamino diphenylmethane and a saturated alkyl succinic acid of at least 16 carbon atoms, the tetramethyldiamino diphenylmethane being present in a minimum amount of about 0.01% and the balance, not less than 0.0025% being a saturated alkyl succinic acid, the total amount not exceeding 0.5% by weight.

2,440,531
APPARATUS FOR MAKING METAL POWDER
Walter Zebroski, New York, N. Y.
Application May 1, 1946, Serial No. 666,462
1 Claim. (Cl. 18—2.5)

In an apparatus for atomizing metals, a melting pot having two or more discharge openings for delivering thin streams of molten metal, and a gas nozzle associated with each of said openings for discharging gas streams across the path of said metal streams, said gas nozzles being positioned at an angle to each other whereby the paths of the streams therefrom commingle beyond the points at which they encounter the metal streams.



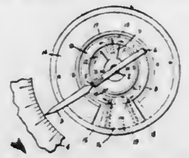
2,440,532
CLAMPING DEVICE FOR CABLES AND WIRES AND RODS
John Edwin Anderson, Los Angeles, Calif.
Application February 1, 1944, Serial No. 520,699
2 Claims. (Cl. 24—135)



1. A clamp of the character described comprising a pair of body portions arranged in face-to-face relation, a perforated lug on one end of each of said body portions, means on each of said body portions extending angularly therefrom and slidable through the perforation in said lug on the other of said body portions for forcing said body portions toward each other, each of said body portions having a plurality of grooves extending transversely thereof in its inner face, said grooves of each of said body portions registering, respectively, with those of the other of said body portions whereby said grooves are arranged in pairs with each of said pairs of grooves defining a socket for the reception of a member to be clamped and whereby each of a plurality of said members is individually and separately clamped by both of said body portions when said forcing means is actuated, the angularity of each of said forcing means with respect to the plane containing the axes of said members being oblique, and a projection on each of said body portions having a flat face disposed at an oblique angle with respect to the associated body portion and parallel to said forcing means of the other of said body portions, each of said flat, oblique faces slidably engaging a complementarily oblique flat surface on the other body portion parallel to and adjacent the base of said forcing means on said other body portion, whereby actuation of said forcing means results in engagement of said body portions with each of said members in an oblique, rotating action about the axis of said member.

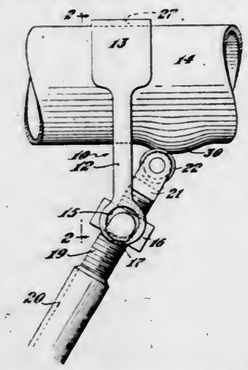
2,440,533
ICE REMOVING APPARATUS FOR AIRFOILS
John O. Antonson, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application March 21, 1944, Serial No. 527,388
5 Claims. (Cl. 244—134)

1. Apparatus for preventing the accumulation of ice on the leading edge of an airfoil, said apparatus comprising a covering of resilient rubber-like material for said leading edge having an expansible zone and a stretchable portion between said zone and a margin of the covering, and means for attaching said covering at said margin, the covering in said expansible zone including a plurality of adjacent inflatable portions extending spanwise in side-by-side relation along the covering and serially arranged in the chordwise direction, at least one of said inflatable portions including stretch-resisting material and being constructed and arranged for imparting upon inflation a stretching force to said stretchable portion, and another of said inflatable portions to one side of the first inflatable portion having a margin thereof extending along in close proximity to an adjacent margin of the first said inflatable portion and including material of relatively high stretchability as compared to said stretch-resisting material of the first said inflatable portion and being constructed and arranged for local inflation by virtue of its high stretchability without exerting substantial stretching force on said stretchable portion.



2,440,534
SELECTING VALVE FOR TWO-TEMPERATURE REFRIGERATING SYSTEMS
Leonard W. Atchison, Erie, Pa., assignor to General Electric Company, a corporation of New York
Application January 4, 1947, Serial No. 720,255
10 Claims. (Cl. 62—3)

1. In a refrigerating system, a low temperature evaporator, a higher temperature evaporator, means for withdrawing vaporized refrigerant from said evaporators, means for maintaining said evaporators at different pressures, said last-mentioned means including means responsive to the difference of pressure between said evaporators for selectively connecting one or another of said evaporators to said withdrawing means, and means responsive to a condition of one of said evaporators for modifying the operation of said pressure-responsive means.

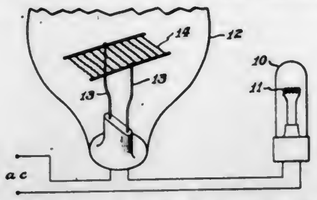


2,440,535
DOUBLE CONCENTRIC AIR GAP PERMANENT MAGNET INSTRUMENT
Frank Baranowski, Jr., Boston, Mass., assignor to General Electric Company, a corporation of New York
Application June 10, 1947, Serial No. 753,611
3 Claims. (Cl. 171—95)

1. An electrical measuring instrument comprising an inner magnetic circuit containing a circular air gap and a permanent magnet for producing a flux across such gap, an outer magnetic circuit containing a second circular air gap and a second permanent magnet for producing a flux across such second air gap, said two circular air gaps being concentric with respect to the same axis and an armature coil pivoted for rotation about said axis, said armature having one coil side in the first-mentioned air gap and the other coil side in the second air gap, said permanent

magnets producing fluxes across said gaps in such relative directions as to cause both coil sides to produce torques in the same direction of rotation about such axis when the coil is energized by direct current.

2,440,536
TUBE ROLLER
John J. Begley, Arlington, Mass., assignor to Mutual Boiler Insurance Company, Boston, Mass., a corporation of Massachusetts
Application December 27, 1946, Serial No. 718,763
7 Claims. (Cl. 153—39)

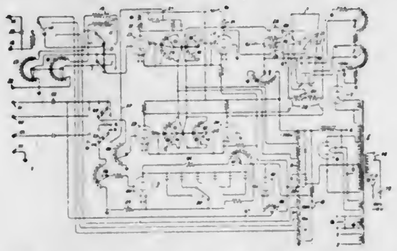


1. A tube roller comprising a U-shaped strap member adapted to straddle a tube, said strap member including a pair of legs and an end portion extending between the legs and a roller mechanism having one end pivotally supported by one of said legs and the other end pivotally supported by the other leg thereby to form an axis of pivotal movement for the roller mechanism, said roller mechanism comprising a roller adapted to bear on the tube and mounted for pivotal movement about an axis located in offset relationship to said axis of pivotal movement for the roller mechanism, and means by which in use the roller mechanism is moved about its said axis for pivotal movement.

2,440,537
EXCITER LAMP SUPPLY
Herbert Belar, Palmyra, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application October 31, 1942, Serial No. 464,131
3 Claims. (Cl. 315—179)

1. A photoelectric sound reproducing system, including the combination of an exciter lamp, terminal connections to a source of alternating voltage for said lamp, and a resistor of low ther-

mal inertia connected in series between said lamp and said terminal connections and having a resistance which varies with the amplitude of said voltage during a period which is small in relation to a half cycle of said voltage.

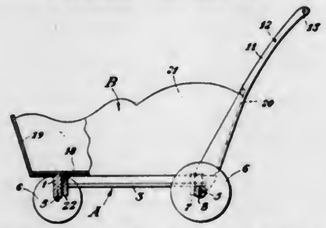


2,440,538

PORTABLE CATHODE-RAY OSCILLOSCOPE

Harry W. A. Chalberg, Berne, N. Y., assignor to General Electric Company, a corporation of New York

Application April 26, 1946, Serial No. 665,304
2 Claims. (Cl. 315—26)



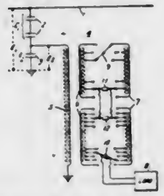
1. A combined amplifier and positioner for cathode-ray oscilloscopes for amplifying deflection plate voltages and positioning the cathode-ray beam, comprising a pair of vacuum tubes having plate, cathode, control grid, and screen grid electrodes, means for impressing the signal to be amplified on the control grid of one of said tubes, means connecting said tubes as a cathode coupled phase inverter, and means for simultaneously and inversely varying the voltage between the screen grids of said tubes and their corresponding cathodes for cathode-ray tube beam positioning purposes.

2,440,539

COMBINED PERAMBULATOR AND CRADLE OR THE LIKE

Everest P. Derthick, Russell, Ohio

Application April 12, 1945, Serial No. 587,912
5 Claims. (Cl. 280—31)



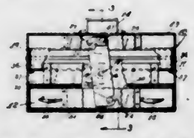
2. An article of the character described comprising a chassis including bolsters having kerfs in their upper sides adjacent the ends thereof, and a body consisting of a cradle adapted to rest on the chassis and being otherwise detached therefrom, said cradle including a bottom wall, and side walls that extend below said bottom wall and the lower edges of which are arranged to occupy the aforesaid kerfs, and rockers rigidly fastened to said bottom wall for cooperation with the bolsters to hold the body against appreciable movement longitudinally of the chassis, the side walls and rockers of the cradle cooperating with both bolsters in identical fashion whereby the cradle may be reversed with respect to the chassis.

2,440,540

TRANSFORMER

John W. Farr, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York

Application October 22, 1945, Serial No. 623,816
18 Claims. (Cl. 171—119)



4. An adjustable transformer for potential device circuits which is particularly adapted for connection between a capacitance potentiometer and a load comprising, in combination, a magnetic core, a magnetic shunt for said core, primary and secondary electric circuits each linking said core with a plurality of turns, said turns being grouped into a total of three windings none of which is on said magnetic shunt, and adjustable means which is exclusive of any separate impedance device for varying the effective number of turns of certain of said windings for adjusting the reactance of said transformer.

2,440,541

BOX HAVING A DRAWER AND A COVER AND INTERCONNECTED LATCHING AND LOCKING MEANS THEREFOR

Charles B. Gash, Oak Park, Ill.

Application August 26, 1944, Serial No. 551,371
5 Claims. (Cl. 312—193)

1. A box open at the upper end and having an opening in a front wall thereof, a cover providing a closure for the upper end of the box, means hinging the cover to the box, a drawer positioned in the box and slidable through the opening in the front wall thereof, a latch element pivotally mounted on the front wall of the box with the upper end extending for engagement with the cover and the lower end for engagement with the drawer, said latch element locking the cover and drawer in their closed positions respectively, and positioned on the inside of the box and cover, and a handle on the outside of the box attached to the latch for operation thereof.

2,440,542

VOLATILE FLUORIDE RECOVERY

Everett C. Hughes, Cleveland Heights, Ohio, assignor to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio

No Drawing. Application July 17, 1942, Serial No. 451,289
18 Claims. (Cl. 23—205)

14. In a continuous process of recovering hydrogen fluoride and boron fluoride contained in off-gas from a catalytic hydrocarbon operation, the steps which comprise contacting said gases in an absorbing zone with an absorbent, the primary absorbing component of which is a dihydroxyfluoboric acid maintained at a temperature to absorb at least part of both the hydrogen fluoride and the boron fluoride from said gas in the dihydroxyfluoboric acid, passing the dihydroxyfluoboric acid containing the absorbed fluorides to a fluoride liberating zone maintained at a temperature higher than the temperature of the absorbing zone whereby at least part of both the hydrogen fluoride and the boron fluoride is liberated and can be recovered and reused, and repeatedly returning the denuded dihydroxyfluoboric acid to the absorbing zone for further absorbing of the fluorides and then to the liberating zone.

2,440,543

RECOVERY OF CATALYST FROM MIXTURES OF HYDROCARBONS THEREWITH IN THE LIQUID PHASE

Everett C. Hughes, Cleveland Heights, Ohio, assignor to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio

No Drawing. Application April 27, 1944, Serial No. 533,050
20 Claims. (Cl. 23—205)

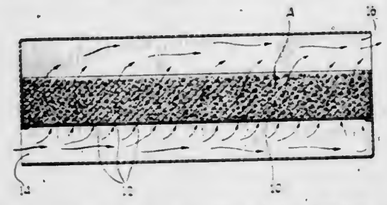
18. A method of recovering hydrogen fluoride and boron trifluoride from a liquid catalyst phase containing said fluorides in the form of a fluoride-hydrocarbon complex as a result of treating said hydrocarbon with liquid hydrogen fluoride containing boron trifluoride; which method comprises contacting said liquid catalyst phase with an oxyfluoboric acid in an absorbing zone at a temperature at which said fluorides are absorbed in said oxyfluoboric acid, transferring said oxyfluoboric acid in which the fluorides are absorbed to a fluoride liberating zone, liberating the fluorides by heating to a temperature higher than in the absorbing zone, and returning the denuded oxyfluoboric acid to the absorbing zone to absorb the fluorides from an additional quantity of the liquid catalyst phase.

2,440,544

MULTIPLE UNIT FURNITURE

Parker H. James, Indianapolis, Ind.

Application July 31, 1945, Serial No. 607,931
5 Claims. (Cl. 312—107)



1. In an article of furniture, a pair of shell sections, each having a front and an end wall, and a curved portion interconnecting those walls; the end of one of said front walls opposite said end wall having a rearwardly curved portion, the edge of which abuts said curved portion of the other shell; and means interconnecting said shells at said abutment; the radius of curvature of both of said curved portions being substantially the same; and said abutting curved portion having substantially half the circumferential length as that of the abutted curved portion and abusing that curved portion at substantially midway of its length.

2,440,545

PREPARATION OF YEAST AND OF YEAST- AND VITAMIN-RICH PRODUCTS

George A. Jeffreys, Salem, Va., assignor, by direct and mesne assignments, to Nelson Littell, New Canaan, Conn.

Application November 3, 1941, Serial No. 417,708
11 Claims. (Cl. 195—82)

1. A process for producing yeast which comprises forming a coating of an active yeast wort on vegetable granules which contain nutrients assimilable by yeast and aerating and incubating an air-pervious mass of the coated particles while maintaining the mass at temperatures conducive to active yeast propagation.

2,440,546

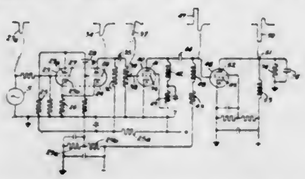
SYMBIOTIC PROCESS FOR PREPARING YEAST AND OTHER PRODUCTS

George A. Jeffreys, Salem, Va., assignor, by direct and mesne assignments, to Nelson Littell, New Canaan, Conn.

No Drawing. Application November 3, 1941, Serial No. 417,709
11 Claims. (Cl. 195—90)

1. A process for producing yeast- and vitamin-rich products which comprises forming air-pervious masses of vegetable particles coated with thin films of active yeast wort containing live spores of molds that in growing produce enzymes acting to convert constituents of said particles into substances readily assimilable by growing yeast and symbiotically cultivating yeast in said films in conjunction with a growth of said molds by aerating said masses while maintaining the same at temperatures conducive to active yeast propagation.

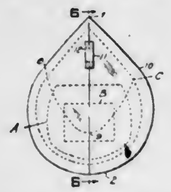
2,440,547



PULSE GENERATOR

Richard C. Jensen, Scotia, N. Y., assignor to General Electric Company, a corporation of New York

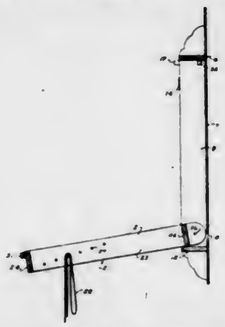
Original application January 23, 1943, Serial No. 473,279. Divided and this application April 12, 1944, Serial No. 530,624
2 Claims. (Cl. 250—27)



2. A pulse generating circuit comprising a first, normally conductive, discharge device having an input circuit and having a substantially aperiodic ouput circuit including an inductive reactance, a source of triggering voltage pulses of peaked waveform, means for impressing a negative triggering pulse from said source on said input circuit, said pulse having sufficient amplitude to drive said device beyond cutoff,

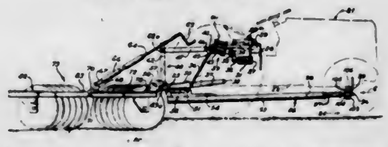
thereby to induce a positive voltage pulse of steep wave front and predetermined duration across said reactance, a second, normally non-conductive, discharge device having a substantially aperiodic grid circuit and a load circuit, and means to impress said induced pulse on

said grid circuit, said induced pulse having sufficient amplitude to drive said second device abruptly beyond saturation, said aperiodic circuits being damped for undesired negative transients by return of said first device to conductive condition at the termination of said induced pulse.



2,440,548
MANUFACTURE OF SHOULDER PADS
Katherine Kerrigan, Waverly, N. Y.
Application April 11, 1946, Serial No. 661,222
3 Claims. (Cl. 2—268)

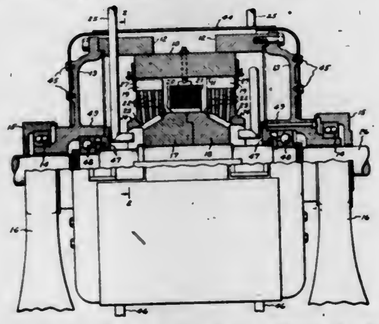
1. A shoulder pad of concavo-convex form having a rounded base at one end and a point at the other with sides which merge into the base, adapted to fit with the tip of the shoulder in the concavity of the pad and the point of the pad directed towards the base of the neck, said pad having a top-surface of non-skid material and comprising a plurality of laminations at least one of which is of stiffening material and another of filling material, and means secured to the top-surface of the pad for removably attaching the same to a shoulder strap, said pad being adapted to be held on the shoulder solely by its non-skid top-surface, by its concavity and its attachment to said shoulder strap.



2,440,549
NECKTIE CABINET HAVING OUTWARDLY SWINGABLE RACK
Fred H. Kiser, Los Angeles, Calif.
Application August 22, 1944, Serial No. 550,516
1 Claim. (Cl. 312—185)

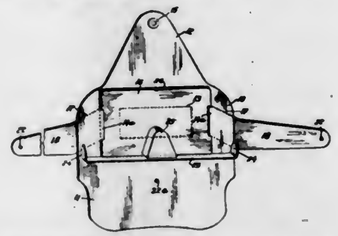
In a necktie storage device of the character described, a cabinet comprising a back wall, top, bottom and side walls, and a front wall movable optionally to open or closed position with relation to said walls, a pair of axially aligned pivot pins rigid with said side walls and extending inwardly therefrom adjacent said bottom wall, and a movable tie rack comprising side rails slightly shorter than the distance between said top and bottom walls of said cabinet and pivotally mounted adjacent their lower ends on said pivot pins, the lower ends of said side rails being rounded and the distance between said pivot pins and the upper face of said bottom wall of said cabinet being only slightly greater than the distance between said pivot pins and the front edges of said side rails whereby said rails are supported in position extending forward from said cabinet by resting on the upper front corner of said bottom wall, top and bottom rails rigidly interconnecting said side rails and retaining them in spaced, parallel relation with the distance between their outer faces slightly less than the distance between said side walls of said cabinet, and a plurality of horizontal bars rigid with both of said side rails and extending horizontally across said rack, said bars being disposed in a common

plane extending obliquely with respect to said rack so that when said rack is swung to said forwardly extending position each of said bars is at a lower elevation than the next adjacent bar between it and the pivoted, inner end of said rack whereby a greater amount of ties carried on bars nearer said inner end of said rack are visible over the bars near the outer end of said rack, and the after edge of each of said bars except the lowermost being in back of the vertical plane which includes the forward edge of the next adjacent bar therebelow when said rack is in erect position whereby ties hanging on an upper one of said bars are deflected by a lower bar to restrain said ties against displacement.



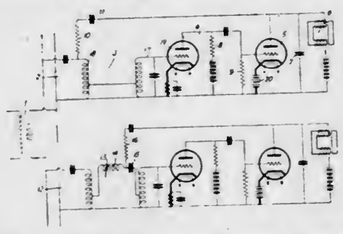
2,440,550
TRACTOR-CONVEYED IMPLEMENT AND HITCH THEREFOR
Charles H. Martin, Huntington Park, Calif., assignor to Howard B. Rapp and Sally Rapp, copartners doing business as Towner Manufacturing Co., Santa Ana, Calif.
Application September 5, 1944, Serial No. 552,727
20 Claims. (Cl. 97—50)

18. An automatic depth control apparatus for ground-working implements of the type in which bodily shift of a movable control member by force derived from ground reaction on the implement is utilized to control a power actuated lift device and in which downward force on said implement tends to cause movement of said control member, characterized by the fact that there is combined with the control member means including a



spring having means thereon for operatively associating the same with said control member for yieldingly resisting movement of the control member under the urging of the downward force exerted on the implement.

2,440,551
DYNAMOELECTRIC MACHINE WITH COOLING MEANS
Harold M. Martin, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application September 29, 1943, Serial No. 504,273
10 Claims. (Cl. 188—104)



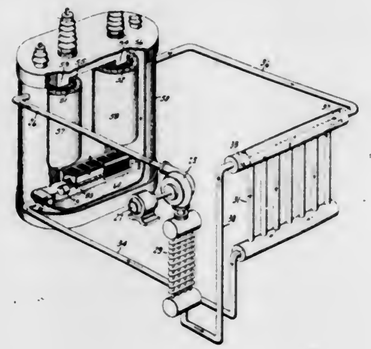
1. A dynamoelectric machine having a pair of relatively rotatable members, one of said members having a section with a relatively smooth surface and the other of said members having a toothed section with the teeth of said toothed section arranged adjacent said smooth surface and providing an air gap therebetween, means including an exciting winding for magnetically exciting said pair of relatively rotatable members, means for supplying cooling liquid into the air gap between said pair of relatively rotatable members, and means arranged in the exhaust flow path of the cooling liquid from said machine for variably controlling the exhaust flow of cooling liquid through the air gap between said relatively rotatable members.

2,440,552
SPECTACLE CASE
Peter Mittell, Providence, R. I., assignor to Windsor Case Company, Inc., Providence, R. I., a corporation of Rhode Island
Application April 15, 1947, Serial No. 741,486
8 Claims. (Cl. 206—5)

1. A receptacle of the class described comprising a pouch element formed from a one-piece blank of flexible sheet material and including a back wall panel formed with a window and with slits adjacent to the opposite ends of said window, a front wall panel disposed opposite and spaced away from said back wall panel, said front wall panel being integrally connected with the bottom of said back wall panel, and a closure flap integrally and hingedly connected with the top of said back wall panel and adapted to occupy a position alongside the exterior of said front wall panel, said closure flap being provided adjacent to its free end with the socket member of a snap fastener; a partition element disposed within the pouch element adjacent to said back wall panel and made at its opposite ends with longitudinal tang extensions that are threaded through said slits and extend around the opposite ends of the pouch element into overlapping relationship outside of said front wall panel; means fastening together the overlapping ends of said tangs, and a snap fastener stud carried by said front wall panel for co-operation with said snap fastener socket member.

2,440,553
AMPLIFIER SYSTEM
Montford Morrison, Upper Montclair, N. J.
Application August 5, 1943, Serial No. 497,497
3 Claims. (Cl. 179—171)

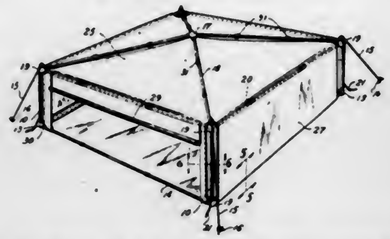
3. The method of signal-current amplification by regeneration which comprises receiving signal current, amplifying said current and converting the form thereof into a wave having a direct current component, discharging said wave into means having a direct-current storage characteristic, conducting feed-back current from said means into first said current for regeneration and employing said direct-current storage characteristic to limit said feed-back current to a stable amount.



2,440,554
PROCESS FOR THE RECOVERY OF RUBBER IN PLANTS BY FERMENTING WITH CLOSTRIDIUM
Joseph Naghski, Philadelphia, Pa., Jonathan W. White, Jr., Washington, D. C., and Samuel R. Hoover, Philadelphia, Pa., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application March 27, 1945, Serial No. 585,178
13 Claims. (Cl. 195—2)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

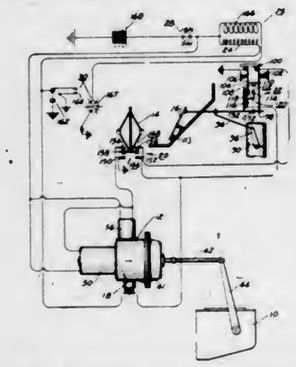
1. The process of recovering rubber from Cryptostegia leaves comprising the combination of steps wherein the leaves are first subjected to fermentation by *Clostridium roseum*, permitting fermentation to proceed until the protoplasts containing the rubber globules are released from the cellulose part of the plant, then isolating the released protoplasts and boiling them in an aqueous alkali in the presence of a rubber antioxidant to release the rubber globules and then recovering the rubber.

2,440,555
ABIETATE ESTER HAIR DRESSING
Allen L. Omohundro, Wilton, and Emil C. Fanto, Fairfield, Conn., assignors to McKesson & Robbins, Incorporated, Bridgeport, Conn., a corporation of Maryland
No Drawing. Application January 12, 1943, Serial No. 472,160
4 Claims. (Cl. 167—87)



1. A non-drying hair preparation free from dyes, and containing essentially an alcoholic solution of a hair fixative ingredient of the class consisting of the esters of abietic acid and the hydrogenated esters of abietic acid in proportions of 3 to 50%.

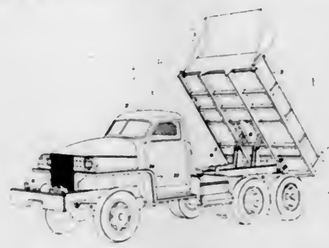
2,440,556
ELECTRICAL APPARATUS
Konstantin K. Paluev, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application March 8, 1944, Serial No. 525,570
12 Claims. (Cl. 175—361)



1. In an electrical apparatus, an enclosing casing, a winding having a duct, said winding being spaced from the side walls of said casing, an insulating fluid in said casing, heat exchanger means having first and second parts connected to said casing to provide a recirculating system, pump means for forcing the insulating fluid through said casing and both parts of said heat exchanger means, means including barrier means between said winding and said casing for directing the flow of the fluid through said duct, pipe means for connecting said second part of said heat exchanger means with said casing, said barrier having port means for permitting the flow of the fluid by free convection through said duct then between said winding and said casing and through said port means so as to use the fluid between said winding and casing to cool said winding, means responsive to the forcing of the fluid flow through said duct for closing said port and to the cessation of the forcing of the fluid flow through said duct for opening said port, and valve means for substantially preventing the circulation of fluid flow between said casing and said second part of said heat exchanger means through said pipe means during operation of said pump, said valve means being openable upon cessation of fluid flow by said pump so as to allow fluid flow by free convection through said duct and said second heat exchanger means.

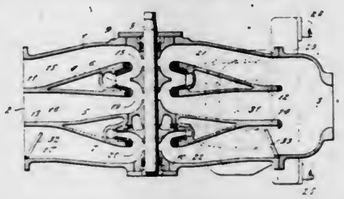
2,440,557
FABRIC BUILDING
Clifton W. Power, Los Angeles, Calif.
Application March 5, 1945, Serial No. 581,021
15 Claims. (Cl. 135—1)

1. A device of the class described comprising means providing corner posts, an assemblable roof frame slidable upon said corner posts, means for hoisting the roof frame upwardly on the corner posts and holding it in elevated position thereon, and a tent having a roof and side walls, the tent having means by which its roof may be suspended from said roof frame.



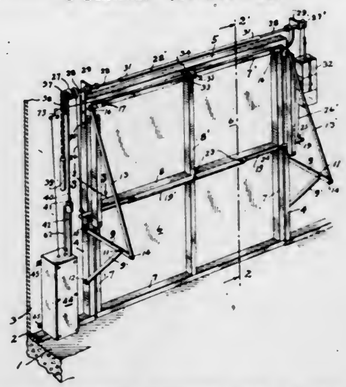
2,440,558
TRANSMISSION OPERATING MECHANISM
Harold W. Price, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application November 13, 1940, Serial No. 365,413
5 Claims. (Cl. 74—472)

1. A power actuator for an automotive vehicle change speed transmission comprising a motor including a casing and a power element, valve means for controlling the operation of said motor, and power means including a solenoid for operating said valve means and further including a holding coil operative, when energized, to supplement an operation of the motor to maintain said power element in a certain position.



2,440,559
DUMP BODY CONTROL MECHANISM
Alexander Reichman, South Bend, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a corporation of Delaware
Application December 11, 1943, Serial No. 513,933
7 Claims. (Cl. 298—22)

1. For use in a dump vehicle having a chassis, a dump body provided with hydraulically operable means for moving said dump body relative to said chassis, a pump for controlling flow of fluid to and from said hydraulically operable means, and a power takeoff mechanism, control means comprising a pair of shift rods, means for mounting said shift rods for movement substantially vertically relative to said chassis, means including a bell crank associated with one of said



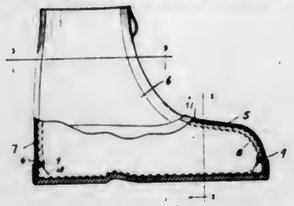
shift rods for connecting the same with said power takeoff mechanism for controlling operation of the latter by vertical movement of said shift rod, and means including a bell crank associated with the other of said shift rods for connecting the same with said pump to control operation of the latter by vertical movement of said other shift rod.

2,440,560
TWO-STAGE PUMP
Allan G. Sheppard, Elmira, N. Y., assignor to American-La France-Foamite Corporation, Elmira, N. Y., a corporation of New York
Application November 27, 1946, Serial No. 712,632
6 Claims. (Cl. 103—106)

4. A two-stage, series-parallel pump comprising: a housing; first and second stage impeller casings mounted within the housing and laterally spaced from each other and from the housing side walls to provide first stage inlet spaces between the first stage casing and its proximate housing side wall and between the casings, and a second stage inlet space between the second stage casing and its proximate housing side wall; a water inlet to the housing adapted to supply all three of said inlet spaces; a large capacity first stage impeller and a smaller capacity second stage impeller mounted in the respective casings; dual casing inlets to the opposite sides of the first stage impeller communicating with said first stage inlet spaces, and a single casing inlet to the second stage impeller communicating with said second stage inlet space; a discharge header; a first discharge passage from the first stage casing communicating with the header and with the second stage inlet space, and a second discharge passage from the second stage casing to the header; and valve means adapted for coupling the said casings and discharge passages to the header in series or in parallel.

2,440,561
OPERATING MECHANISM FOR OVERHEAD OPENING DOORS
Reuben M. Wilder, Hayward, Calif.; Agnes S. Wilder executrix of said Reuben M. Wilder, deceased
Application June 4, 1945, Serial No. 597,558
6 Claims. (Cl. 268—30)

1. In an overhead opening door of the character described, means for raising said door comprising flexible strands secured to opposite edges of the door, an overhead shaft about which said flexible strands are arranged for winding, a wheel secured to said shaft with a flexible device arranged therearound for turning the shaft when one end is pulled, a hydraulic power cylinder with power piston and means connecting the piston to said flexible device for pulling the same upon admission of liquid under pressure to said power cylinder, an electric motor driven pump with oil sump and pipe to supply oil under pressure to said power cylinder, an electric control circuit for starting said motor, and means operated by the power piston at the end of its door opening stroke breaking the motor circuit to stop said motor, a valve locking the liquid in said power cylinder with the door open, and electric controlled means arranged for bleeding said hydraulic power cylinder to said sump for permitting the gravity closing of said door.

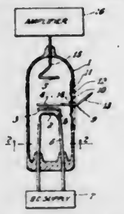


2,440,562
OBTAINING OF RAMIE
Mark Michael Wise, Mosman, near Sydney, New South Wales, Australia
No Drawing. Application June 12, 1944, Serial No. 540,005. In Australia July 29, 1943
2 Claims. (Cl. 19—7)

2. A method of obtaining ramie fibre from green ramie stems which consists in subjecting the said green stems to the action of steam at a pressure of between 15 and 40 lbs. per square inch gauge pressure for between one and six hours, drying the steam treated stems, and crushing the dried stems to separate the fibres from the other substances of the dried stems.

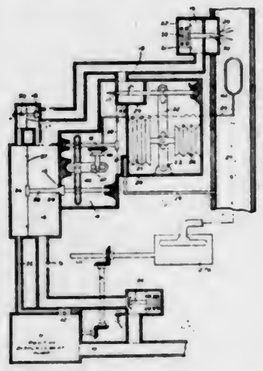
2,440,563
STORM BOOT WITH REMOVABLE PROTECTIVE LINING
Agnes Woyach, Mequon, Wis.
Application December 21, 1945, Serial No. 636,382
2 Claims. (Cl. 36—7.3)

1. The combination with a storm overshoe having a sole portion and an overportion adapted



to cover the foot and the lower portion of the leg and having in its interior at the toe and heel portions thereof respectively one member of a readily disengageable fastening means, of a lining of flexible washable material extending only from the top portion of said overshoe to the sole portion and provided at its heel and toe portions with the other cooperative member of said fastening means.

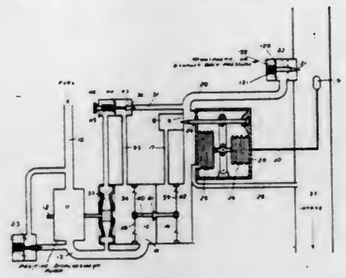
2,440,564
PROCESS FOR THE MANUFACTURE OF BASIC STEEL OF LOW PHOSPHORUS CONTENT
Marc Louis Allard, Valenciennes, France, assignor to Société Anonyme des Forges et Aciéries du Nord & de l'Est, Paris, France
No Drawing. Application May 6, 1939, Serial No. 272,267. In France May 10, 1938
Section 3, Public Law 690, August 8, 1946
Patent expires May 10, 1958
7 Claims. (Cl. 75—52)



1. A process for obtaining in the Thomas converter steel of low phosphorus and oxygen contents and possessing a high temperature, comprising blowing molten cast iron in the converter to reduce the phosphorus content, skimming off the slag formed, adding to the skimmed metal a fused basic oxidizing slag, slightly raising the converter and strictly maintaining the blast necessary for preventing the stopping up of the blow holes of the converter whereby superficial contact of short duration is insured between the second slag and the molten iron, and avoiding any appreciable stirring in order to prevent the attainment of equilibrium between the molten iron and slag.

2,440,565
TRANSLATING DEVICE
John J. Antalek, Chicago, Ill., assignor to The Rauland Corporation, Chicago, Ill., a corporation of Illinois
Application September 19, 1944, Serial No. 554,761
4 Claims. (Cl. 250—27.5)

1. An electron discharge device for translating mechanical energy into electrical energy comprising means for responding to mechanical energy in a predetermined form to produce mechanical movements, an envelope enclosing means for producing a stream of electrons, means therebetween for receiving the stream, and movable electrode means responsive to movements to control the stream, said means for responding comprising a diaphragm mounted over an opening in said envelope, the diaphragm comprising a relatively heavy outer portion of annular shape sealed to the envelope, a relatively light inner portion of circular shape and a resilient circular corrugation between said two portions loosely coupling them together to permit the inner portion to vibrate freely with respect to the outer portion, and a movement-transmitting element connected between the inner portion and said electrode means.



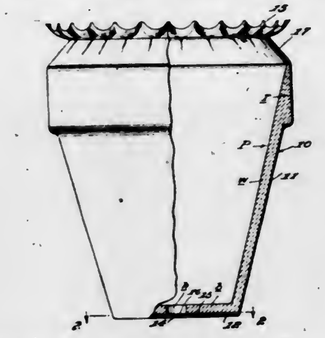
2,440,566
FUEL SUPPLY SYSTEM FOR INTERNAL-COMBUSTION ENGINES
George Jeffrey Armstrong, Farnborough, England
Application February 27, 1945, Serial No. 580,029
In Great Britain June 26, 1943
6 Claims. (Cl. 123—119)

1. A fuel supply system for an internal combustion engine comprising an adjustable metering value, an adjustable pressure regulating valve in series with said metering valve, an engine-driven positive displacement pump having an outlet duct with a constriction therein located to pass the whole output of said pump, a pressure-responsive element located to respond to changes in pressure difference across said constriction, and a connection between said pressure-responsive element and said pressure regulating valve to control the same in response to changes in the output of said positive displacement pump.

2,440,567
FUEL SUPPLY SYSTEM FOR INTERNAL-COMBUSTION ENGINES
George Jeffrey Armstrong, Beatrice Naylor, and John Ernest Patrick Dunning, Farnborough, England
Application February 27, 1945, Serial No. 580,030
In Great Britain June 9, 1943
6 Claims. (Cl. 123—119)

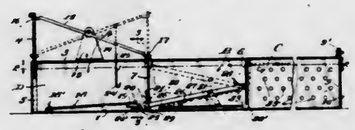
1. A fuel supply system for injecting fuel into an intake of an internal combustion engine, comprising a duct entering the intake, an adjustable metering valve located in said duct, an adjustable pressure regulating valve also located in said duct for regulating the pressure difference across said metering valve, a positive displacement pump for supplying fuel to said duct, a centrifugal pump through which fuel is passed by said positive displacement pump from an inlet remote from the eye thereof to an outlet nearer the eye and thence to said intake, a pressure-responsive member ar-

ranged to be acted upon by the pressure difference across said centrifugal pump and a connection between said pressure-responsive member and said pressure regulating valve.



2,440,568
CARTRIDGE LOADING
Roy C. Arter, Galion, Ohio
Application January 2, 1946, Serial No. 638,614
1 Claim. (Cl. 102—42)

In a cartridge for firearms, the combination, which comprises, a shell having a base with a detonator cap therein, a tubular casing with the outer edges thereof crimped inward carried by the shell, an explosive charge in the inner end of the casing, projectiles in the outer portion of the casing, wadding between the explosive charge and projectiles, a washer positioned at the outer end of the projectiles held by the crimped edges of the casing, a collapsible conical shaped element, the base of which is of the same diameter as that of the inside of the casing, positioned in the explosive charge with the base thereof against the wadding, and a centrally disposed collapsible tubular element extending through the projectiles in the outer portion of the casing.

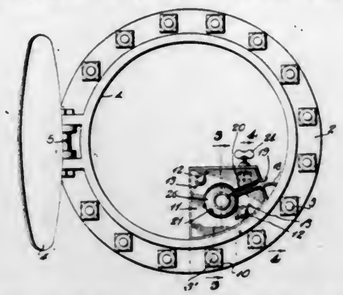


2,440,569
PLANT POT COVER
Frederick G. Baldwin, Woodbridge, N. J.
Application May 4, 1945, Serial No. 591,886
2 Claims. (Cl. 41—10)

1. A cover for a plant pot including a centrally apertured bottom wall and an upwardly and outwardly flared side wall including an upper rim and the side wall being of predetermined diameters and of a predetermined height; said cover comprising a thin walled, flexible water-proof sack-like member having a bottom wall and a side engageable with the pot externally thereof with its bottom wall in engagement with the bottom wall of the pot, and said member being of greater length than the height of the pot side wall and the walls thereof being stretchable, the diameters of the side wall of the member being normally less than corresponding diameters of the pot side wall and the rim portion of the member projecting above the rim of the pot, whereby the major portion of the member side wall is stretched and conforms with the pot side wall while the rim portion is disposed above the pot

rim in unstretched condition and within the circumference of the pot rim in overhanging relations to the interior of the pot in frusto-conical formation.

2,440,570
TRAP
Louis Bourgeois, St. Louis, Mo.
Application January 4, 1945, Serial No. 571,331
5 Claims. (Cl. 43—76)

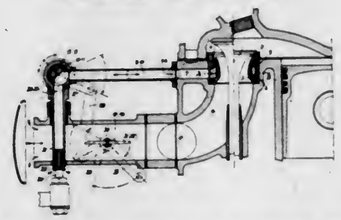


1. An animal trap, comprising a hollow rectangular box having a slidingly movable door and transverse partition positioned respectively at the front end and at an inner or intermediate position in said box and adapted to be disposed alternately in open and closed positions, operative connections between said door and said partition, the door having a greater weight than the partition and having a tendency to close and simultaneously to open the partition through said operative connections, a catch for said door to hold the door open against said closing tendency, means actuated by the weight of an animal thereon to trip said catch and allow the door to close and cause the partition to open, a lever positioned rearward of and operatively connected to said partition so as to rise and descend therewith, and means connected to said lever and actuated by the weight of an animal to cause its descent and pull down the partition and thus simultaneously lift the door and thereby re-set the trap, substantially as described.

2,440,571
OIL GAUGE-LINE WIPER
Marvin H. Bow, Ardmore, Okla., assignor of one-half to Horace S. Bow, Ardmore, Okla.
Application May 16, 1946, Serial No. 670,128
4 Claims. (Cl. 15—210)

1. In a wiping device for a gauge line, the combination with a body of resilient material having an open-edge wiping-slot, a stiff presser wall carried by the body and spaced from said wiping-slot, and a casing enclosing the body and

wall and having enlarged slots registering with the body-slot, of a presser screw operatively



mounted in a wall of the casing and engaging said presser-wall.

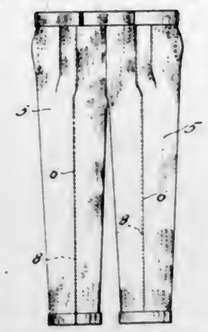
2,440,572

DEVICE FOR THE SEPARATE SUPPLY OF THE FUEL AND OF THE COMBUSTION AIR FOR EXPLOSION ENGINES

André Brandenburg and André Jolivet, Paris, France; said Brandenburg assignor to Maurice Deloye, Paris, France

Application January 3, 1938, Serial No. 183,222
In France January 18, 1937
Section 3, Public Law 690, August 8, 1946
Patent expires January 18, 1957
8 Claims. (Cl. 123—119)

1. A device for separately supplying fuel and combustion air to the cylinders of explosion engines, comprising, an admission valve opening into the combustion chamber, a removable member formed with two concentric parts forming a ring like unit, the outer part of said unit having a seat for said admission valve, and the said unit being provided between the concentric parts with a circular chamber communicating with the source of fuel supply, and also provided with a continuous annular slit having its inlet end communicating with said chamber and having its outlet end located beneath the seat on which the valve bears, means producing a rich mixture for ensuring its vaporization by contact with a hot wall of the outer part of the said unit, and means for maintaining the inner part cool by the surrounding fuel and combustion air flowing through the center.



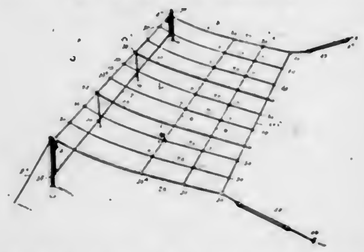
2,440,573

TROUSERS

Charles Brode, Scranton, Pa.

Application February 28, 1945, Serial No. 580,094
3 Claims. (Cl. 2—231)

2. A garment including leg portions having creases extending vertically at the front and rear thereof, means for maintaining said creases including only blind stitching secured to the inner surface of the leg immediately behind said creases, said stitching extending partly through



a single thickness of the material of the garment and exteriorly invisible.

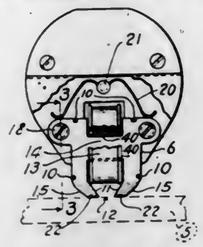
2,440,574

AIRCRAFT BARRIER

Robert B. Cotton, Lansdowne, Pa., assignor to All American Aviation, Inc., Wilmington, Del., a corporation of Delaware

Application May 29, 1947, Serial No. 751,485
6 Claims. (Cl. 244—110)

1. Means for landing airplanes on a restricted landing surface comprising a net-like formation of horizontally positioned cables arranged along an inclined path from a first upper cable above the landing surface to a last lower cable above the surface, support means for holding the said first upper cable taut, frangible connections for coupling the said upper cable to the support means, cross strands connecting said first upper cable, said last lower cable and the intermediate horizontal cables together, each of said horizontal cables being positioned to cooperatively engage with a particular type and size of airplane landing gear, and energy absorbing means operatively connected to each end of the lower portion of the net-like formation and anchored to the landing surface in advance of the airplane approach side of the said formation.



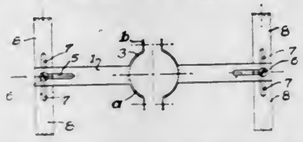
2,440,575

ELECTROMAGNETIC TESTING DEVICE

Frank Dedek, Detroit, Mich., assignor to Magnetic Products Corporation, Detroit, Mich., a corporation of Michigan

Application April 15, 1944, Serial No. 531,186
8 Claims. (Cl. 175—183)

1. In an electromagnetic testing device for testing the physical, chemical or heat treatment properties of magnetic materials, a head arranged to be lowered into and raised from contact with the work to be tested, said head comprising a support, a core of high permeability comprising at least two sections, each section of said core comprising a plurality of laminations, each core section comprising a pair of legs adapted to contact the work to be tested and an interconnecting bridge portion, means for joining the laminations



of each section together, an exciting coil circumscribing the interconnecting bridge portion of said sections, and means constructed and arranged for independently and yieldably supporting the said sections in juxtaposition on said support whereby as the support is lowered the pole tips of each section make individual contact with the surface of the work.

2,440,576

MAILBOX BRACKET

Earnest E. De Haas, Wichita, Kans.

Application October 21, 1946, Serial No. 704,741
3 Claims. (Cl. 248—221)

1. A bracket means for supporting a mail box or the like upon a post or kindred support comprising two substantially duplicate sections, said sections embodying an elongated member, support engaging means carried by one end portion of the member, oppositely directed and laterally disposed arms at the outer extremity of the member and means for selectively securing said arms at different points lengthwise of the member at the outer end portion thereof.

2,440,577

FOOTBALL TRAINING MACHINE

Anthony Frank Denby, Hackensack, N. J.

Application March 5, 1946, Serial No. 651,995
5 Claims. (Cl. 273—55)

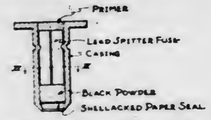
1. In a football training machine, a track adapted to be embedded in the ground with its top flush with the surface of the ground, a carriage movable along the track, a spring yieldingly holding the carriage near one end of the track, a column rising from the carriage and a yielding pad carried on the column against which a player in training places a portion of his anatomy to move the carriage against the spring.

2,440,578

ROTARY SWITCH CONTACT ASSEMBLY

Walter L. Dietrich, Hartford, Conn., assignor to The Arrow-Hart & Hegeman Electric Company, Hartford, Conn., a corporation of Connecticut

Application May 27, 1946, Serial No. 672,394
14 Claims. (Cl. 200—155)



2. In a rotary switch, fixed contact members each having contact surfaces on two levels and facing in the same direction, a rotary bridging contact assembly comprising a bridging member having arms to slidingly engage with the contact surface on one level, a second bridging member having arms, an insulating disc between said bridging members, means to secure said disc and bridging members together, said disc having recesses in its periphery, the ends of the arms of said second bridging member being offset into said recesses and engageable with the fixed contact surfaces on a second level, and an insulating disc which is coaxial with said first disc and is fixedly secured in relation to said fixed contact members and has recesses receiving the portions of said fixed contacts on which are located said first-level contact surfaces.

2,440,579

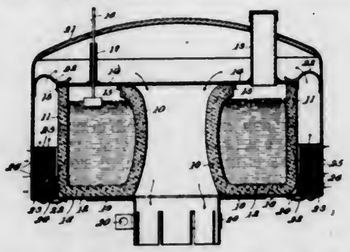
TIME FUSE ELEMENT

Joseph C. W. Frazer, Baltimore, Md., and Owen G. Bennett, Forest Hills, Pa., assignors to Catalyst Research Corporation, Pittsburgh, Pa., a corporation of Maryland

Application December 24, 1942, Serial No. 469,978
7 Claims. (Cl. 52—2)

1. A fuse element composition comprising an intimate mixture of finely divided nickel produced by distillation of mercury from a mercury-nickel amalgam, and an oxidizing agent which reacts exothermically with said nickel, a unit quantity of said mixture burning in a confined unit of space during a predetermined period of time and with production of substantially no gaseous products of combustion.

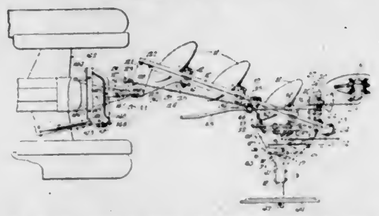
2,440,580



CLEANER AND HUMIDIFIER FOR CARBURETERS

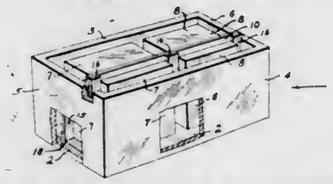
Antoine Gazda, Providence, R. I.

Application July 5, 1944, Serial No. 543,576
1 Claim. (Cl. 261—99)



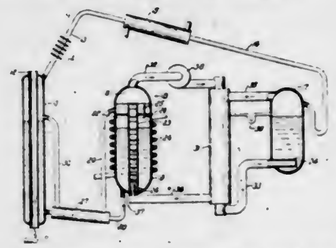
A humidifier for the carburetor of an internal combustion engine comprising a support, an annular water reservoir on said support having an inner wall and an outer wall of porous material so that water in said reservoir may seep therethrough, said inner wall defining a substantially central unobstructed passageway through said reservoir and being of Venturi configuration whereby an enhanced suction action may be exerted on the air passing therethrough to secure improved admixture with the moisture coming through said inner wall, a jacket encompassing said reservoir and support, a fixed clamp struc-

ture on said jacket to support the jacket on the upper end of said reservoir and a movable clamp structure to contact the under side of said support at the lower end of said reservoir, said jacket being spaced from said outer wall to define a peripheral passageway having communication



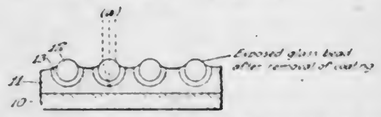
with said central passageway and said jacket being provided with air inlet means leading into the bottom of said peripheral passageway whereby air drawn into the latter is subjected to the humidifying action of moisture seeping through said outer wall before being drawn into said central passageway.

2,440,581
TRACTOR-DRAWN DISC PLOW
Cameron H. Gemberling, South Bend, Ind., assignor to The Oliver Corporation, a corporation of Delaware
Application April 8, 1944, Serial No. 530,191
3 Claims. (Cl. 97—72)



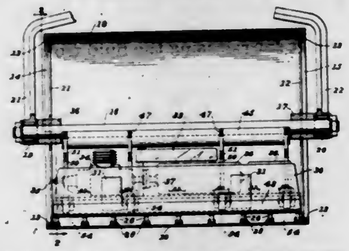
1. A plow comprising a main frame, an adjustable rear furrow wheel supporting the rear end of said frame, a draft hook pivoted to the front end of said main frame and on the draft bar of a tractor, a land wheel for said main frame, and a power lift mechanism driven by said land wheel and operatively connected to said draft hook and said rear furrow wheel for raising and lowering said plow frame.

2,440,582
BUILDING BLOCK FORM
Thomas L. Green, Oklahoma City, Okla.
Application May 31, 1946, Serial No. 673,328
1 Claim. (Cl. 25—119)



In apparatus for forming building blocks, the combination with a hollow open topped box having vertical walls and a closed bottom, a central upstanding core in said box supported on said bottom, said core spaced inwardly from said walls to form interconnected vertical channels for receiving block forming material, of a removable septum in at least two of said channels, each septum including: two vertically disposed straight portions laterally spaced and vertically staggered with relation to each other; and a laterally extending portion connecting the adjacent ends of said straight portions, said connecting portion being slanted to form an acute angle with relation to the straight portions.

2,440,583
ABSORPTION TYPE REFRIGERATION SYSTEM
William R. Hainsworth, Larchmont, N. Y., assignor, by mesne assignments, to Servel, Inc., Dover, Del., a corporation of Delaware
Application April 5, 1933, Serial No. 664,475
14 Claims. (Cl. 62—119.5)



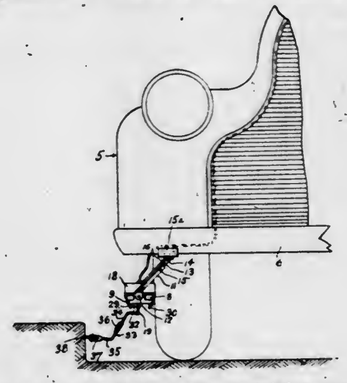
1. In a refrigeration system of the absorption type including a generator and an absorber interconnected for the circulation of absorption solution therebetween, and an evaporator containing a body of liquid refrigerant, flowing an inert gas by bubbling into and through said body of liquid refrigerant, and flowing the resulting gas mixture by bubbling through solution in said absorber to cause circulation of the solution between said absorber and generator and absorption of refrigerant vapor.

2,440,584
LENTICULAR REFLEX REFLECTOR SHEET AND METHOD OF MAKING THE SAME
Harry Heltzer and John Edmund Clarke, St. Paul, Minn., assignors to Minnesota Mining & Manufacturing Company, St. Paul, Minn., a corporation of Delaware
Application June 19, 1944, Serial No. 540,944
5 Claims. (Cl. 88—82)

1. A reflex light reflector including a multiplicity of small transparent glass spheres forming a surface layer of convex lens elements of which there are many thousands per square foot of surface, a reflective binder layer underlying said spheres and formed to provide concave reflecting surfaces substantially concentric to the rear surfaces of the spheres and spaced therefrom, and interposed transparent coating material serving to hold the spheres in spaced relation to the reflective binder, such that the distance from the center of each sphere to the underlying concave reflective surface is greater than the distance to the outer surface which receives incident light.

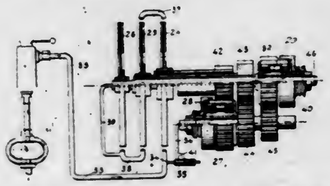
2,440,585
ROLLER
George W. Hutchinson, Raleigh, N. C.
Application June 5, 1944, Serial No. 538,781
6 Claims. (Cl. 94—50)

1. A roller comprising a cylindrical shell, a carriage resting on the lower inner surface of the shell, said carriage having side wall portions, vibrating units fixed to said wall portions, means including a prime mover spring-mounted on said carriage and arranged to drive said units, means limiting movement of the carriage axially of the shell, and means restraining the climbing of said carriage on the inner surface of the shell during rotation of the latter so that vibrations will be transmitted through the carriage predominantly to the bottom portion of said shell.



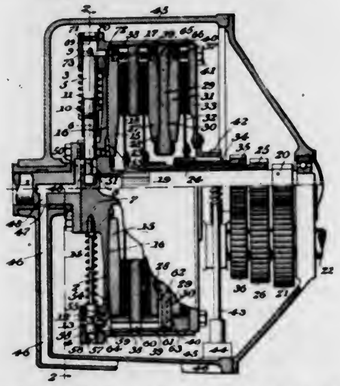
2,440,586
SHEAR HEAD FOR ELECTRIC DRY SHAVERS
Emil Jost, Zurich, Switzerland
Application February 24, 1945, Serial No. 579,527
In Switzerland May 18, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires May 18, 1962
2 Claims. (Cl. 30—43)

2. A shear head for electric dry shavers in which a stationary perforated shearing cutter-part cooperates with a perforated movable shearing cutter-part located underneath the first shearing cutter-part, the outer surface of the stationary shearing cutter-part being provided with an arrangement of low projections which extend in oblique directions relative to the shear head axis in which the low projections are formed by ribs, crossing each other.



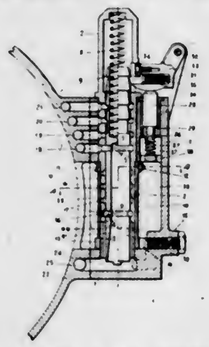
2,440,587
CURB GUIDING SIGNAL
Michael J. Krall, Newark, N. J.
Application June 28, 1943, Serial No. 492,597
2 Claims. (Cl. 200—52)

1. A signal switch mechanism for curb location indicators of vehicles, carried by a part projecting from said vehicle and including a curb feeler adapted to come into contact with the curb which comprises a panel attached to said part projecting from the vehicle, a contactor member pivotally attached to said panel, contacts on said panel cooperating with said contactor, a driving member for said contactor consisting of a two armed lever pivotally mounted on said panel, a pivot pin carrying said driving member, means on said contactor and



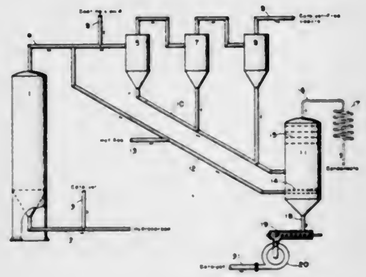
on one arm of said two armed driving member, for rotating the contactor, around its pivotal connection, when the driving member is rocked around its pivot, and further means for fixedly attaching the said curb feeler to the second arm depending from said driving member, for transmitting the movement of the curb feeler to the said driving member.

2,440,588
CONTROLLED FREEWHEELING MECHANISM
Adolphe Kégresse, Paris, France
Application March 22, 1938, Serial No. 197,521
In France April 20, 1937
Section 3, Public Law 690, August 8, 1946
Patent expires April 20, 1957
14 Claims. (Cl. 74—336.5)



1. In a fluid actuated change speed transmission, a driven shaft, a fluid actuated clutch associated with said shaft for driving the same, an intermediate speed sleeve surrounding said shaft, a fluid actuated clutch for driving said sleeve, a low speed sleeve surrounding the intermediate speed sleeve, a fluid actuated clutch for driving said low speed sleeve, a counter-shaft, gears on each of said sleeves meshing with cooperating gears on said counter-shaft, cooperating meshing gears on said counter-shaft and driven shaft, free wheeling devices interposed in the drives between said sleeves and the driven shaft, fluid actuated means for effecting the operativeness of said free wheeling devices, means controlling the supply of fluid to said clutches, and means operable upon supplying fluid to said first- and second-mentioned clutches for supplying fluid to the means for effecting the operativeness of the free wheeling devices.

2,440,589
FEED DEVICE FOR HYDRAULICALLY OPERATED CHANGE-SPEED GEARS
Adolphe Kégresse, Paris, France
Application April 17, 1939, Serial No. 268,419
In France April 16, 1938
Section 3, Public Law 690, August 8, 1946
Patent expires April 16, 1958
8 Claims. (Cl. 192—87)
(Granted under the provisions of sec. 14, act of March 2, 1927; 357 O. G. 5)

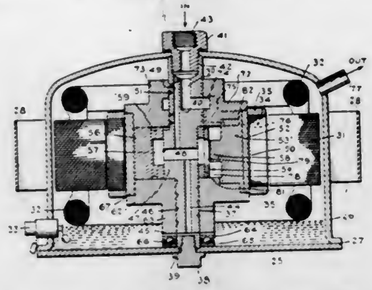


1. In a feed device for clutches with hydraulically compressed discs wherein the clutches are arranged in a rotating housing, a double-acting radial valve mounted on the rotating clutch housing, the part thereof adjacent the axis of the housing controlling the admission of fluid to the device from the feed system, the part of said valve adjacent the periphery of the housing controlling the discharge of said fluid, a pivoted lever engaging said valve for actuating the latter, and a centrifugal weight fixed to the end of the lever acting on said valve.

2,440,590
PRESSURE SELECTOR AND CORRECTOR FOR BOUND-UP AUTOMATIC HYDRAULIC TRANSMISSIONS
Adolphe Kégresse, Paris, France
Application January 18, 1939, Serial No. 251,640
In France January 21, 1938
Section 3, Public Law 690, August 8, 1946
Patent expires January 21, 1958
9 Claims. (Cl. 137—139)

1. A control valve of the character described, comprising a casing having a cylinder provided with two sets of ports, means for controlling the flow through the ports of one set, a hollow piston reciprocably mounted in said cylinder, said piston having one port adapted to register with one of the set of flow controlled ports of the cylinder and a second port adapted to register with one of the other set of ports of the cylinder, a chamber for fluid under pressure, said piston having a closed end and an open end, the latter and the corresponding end of the cylinder opening into said pressure chamber so that fluid will flow through the piston ports and through the registering cylinder ports, means for resiliently opposing movement of the piston under the action of fluid pressure, a valve for releasing the fluid from the pressure chamber, and means operable upon movement of the piston by the spring for opening the release valve.

2,440,591
METHOD FOR PREVENTING EROSION IN FLUIDIZED CATALYTIC CRACKING OF HYDROCARBONS
Warren K. Lewis, Cambridge, Mass., assignor to Standard Oil Development Company, a corporation of Delaware
Application July 1, 1944, Serial No. 543,123
3 Claims. (Cl. 196—52)

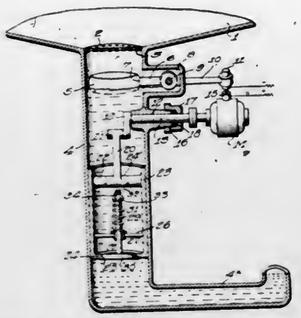


1. In fluid catalyst cracking in which cracked effluent carrying suspended catalyst is introduced into a device for separating the catalyst from the cracked effluent the steps of coating the catalyst particles in said cracked effluent with a liquid prior to the entry thereof into the separating device, recovering coated catalyst particles from said separating device and subjecting them to a drying action to remove the coating liquid therefrom.

2,440,592
SOLDERING FLUX
Keith Kennedy MacDougall, Chambly Canton, Quebec, and John Arthur Labash, Hamilton, Ontario, Canada, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 21, 1944, Serial No. 532,202. In Canada April 29, 1943
2 Claims. (Cl. 148—23)

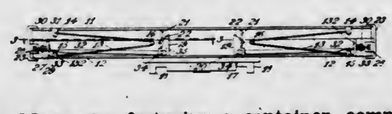
1. A soldering flux having an acidity equivalent to 0.15 part by weight of HCl and having substantially the following composition:

	Parts by weight
Zinc chloride	47
Ammonium chloride	3.5
Cupric chloride	1.0
Wetting agent	0.25
Water	48.25



2,440,593
RADIAL VANE PUMP MECHANISM
Harry B. Miller, Providence, R. I.
Application October 23, 1946, Serial No. 705,180
2 Claims. (Cl. 230—140)

2. A pump of the radial vane positive displacement type comprising a symmetrically rotatable hollow cylinder having a radial vane extending inwardly therefrom, said vane having a wide body and a central projection, a symmetrically rotatable dynamically balanced hollow rotor having a cylindrical bearing receiving portion exposed at the periphery of the rotor and communicating with the hollow interior of the rotor, said rotor being mounted within said cylinder in eccentric relation to said cylinder, a stationary shaft for supporting said rotor and cylinder, said shaft having a bore therein communicating with the hollow interior of the rotor, a cylindrical vane bearing mounted in said bearing receiving portion of the rotor, said bearing having an exposed longitudinal groove to receive the wide body of the vane and a central elongated slot in the bottom of the groove to receive the projection on said vane, the sides of said slot closely engaging the sides of said vane but the ends of the slot being spaced from the edges of said vane, the projection on said vane being adapted to move in and out of said hollow rotor through said central slot as the cylinder and rotor rotate, a housing enclosing said cylinder, rotor and parts before mentioned, and connections for causing the pressure differential between the interior of said rotor and the interior of the housing to supply oil from the bottom of said housing through the bore in said shaft to said hollow rotor, said projection in its movementi into and out of said hollow rotor serving to displace oil therefrom.

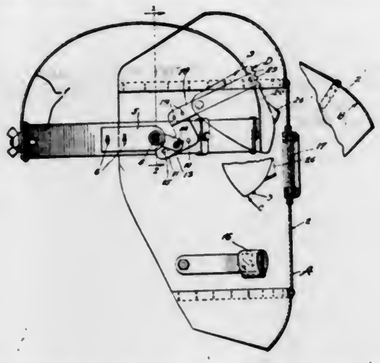


2,440,594
DRAIN
Clifford M. Rice, Alexandria, Va.
Application January 22, 1945, Serial No. 573,902
1 Claim. (Cl. 103—26)

A vertically disposed drain comprising a hollow drain pipe, a substantially horizontally extending arm pivotally secured substantially centrally thereof to said pipe adjacent the upper end of the latter, one end portion of said arm projecting through and into the pipe and the other end portion projecting externally thereof, a float secured to the end of the inwardly projecting portion of the arm and an electrical contact secured to the end of the outwardly projecting portion of the arm, a motor supported by said pipe externally thereof and having an electrical contact member below and spaced from said float contact member, said motor having a shaft substantially parallel with said arm extending through and into the pipe, and a pump member within said pipe

connected to and operated by said motor shaft upon closing of said electrical contacts.

2,440,595
FASTENER FOR BAGS, CASES, AND OTHER CONTAINERS
Fred Spencer Smith, Blackwell, Darlington, England
Application December 15, 1944, Serial No. 568,381
In Great Britain December 3, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires December 3, 1963
5 Claims. (Cl. 292—25)



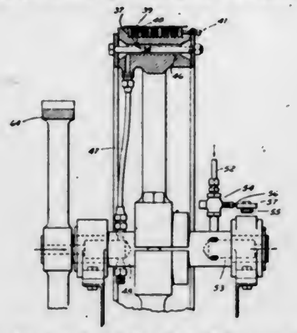
1. Means for fastening a container, comprising two spaced catches each movable between a fastened position in which it prevents the container being opened and an unfastened position in which it allows of the container being opened, a separate spring biasing each catch to move to its unfastened position, a separate latch arranged to engage and hold each catch in its fastened position, spring means biasing each latch to engage its catch and common operating means for actuating both latches together to release their catches.

2,440,596
WELDER'S HELMET
Marshall N. Anderson, Chicago, Ill., assignor to Sellstrom Manufacturing Company, Chicago, Ill., a corporation of Illinois
Original application July 26, 1943, Serial No. 496,106, now Patent No. 2,410,256, dated October 29, 1946. Divided and this application March 27, 1944, Serial No. 528,226
7 Claims. (Cl. 2—8)

3. A head protector comprising a headband, a face mask pivotally carried thereby and movable from face shielding position to a position above the face, an eye shield pivotally carried by said headband and movable from eye shielding position to a position above the eyes, and transmission means between said mask and eye shield whereby motion of the mask to nonshielding position moves the eye shield to shielding position and whereby motion of the mask to shielding position moves the eye shield to nonshielding position, said transmission comprising a first crank arm movable with the face mask and a

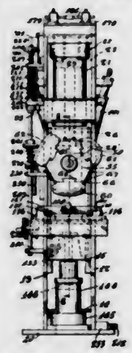
second crank arm actuated by said first crank arm and movable with the eye shield, said crank

arms having a pin and slot connection with each other.



2,440,597
TELEVISION RECEIVER ANTENNA
Horace Atwood, Jr., Belleville, N. J., assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J., a corporation of Delaware
Application February 10, 1945, Serial No. 577,291
3 Claims. (Cl. 250—33)

1. A television antenna comprising a single integral central supporting rod of rigid material, cones of rigid insulating material each less than half the length of said rod supported on an intermediate portion of said rod at their small ends with a short space between said small ends, thin layers of conducting material coating said cones, and cylindrical metal rings on said rod at the small ends of said cones on the outside of said rod bonded to said conducting material for making connection to a receiver.

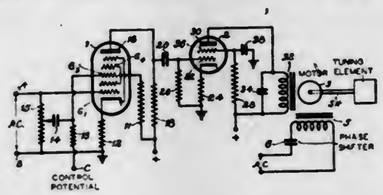


2,440,598
MOLDING MACHINE
Burtis W. Benbow, Benbow, Calif.
Application December 20, 1944, Serial No. 568,999
11 Claims. (Cl. 18—6)

9. In a machine for continuously molding a material like rubber to form a sheath for a wire or cable, a molding wheel adapted to be rotated at a predetermined rate, the wheel being provided with a groove extending about its peripheral portion to form a molding cavity, an endless wire having one portion of the same disposed within said cavity and adapted to enter and leave the cavity as the wheel rotates, means for placing the remaining portion of said endless wire under tension, means within the groove for spacing the wire from the bottom, sides and outer edges of the groove, means for supplying a length of moldable material to the groove in conjunction with the wire, means for applying a groove enclosing member to the periphery of the molding wheel to apply pressure to the moldable material during the molding operation, and means for slitting the sheath longitudinally to enable its removal from

the wire, as the finished sheath is removed from the wheel.

2,440,599
BENDING MACHINE
Harry E. Colwell, Toledo, Ohio, assignor to The A P Parts Corporation, Toledo, Ohio, a corporation of Ohio
Application June 16, 1944, Serial No. 540,660
12 Claims. (Cl. 153—48)



1. Apparatus of the character disclosed comprising in combination a frame; a member arranged for reciprocatory movement associated with said frame; hydraulic means for reciprocating said member; an arbor supported upon said member and adapted for movement relative thereto; a plurality of work performing tools carried by said arbor; electrically actuated means for indexing said arbor to selectively move said tools into work performing position; a work supporting means associated with said frame; and hydraulic cushioning means for said work supporting means whereby the latter is adapted to be moved under the influence of one of said tools engaging the work.

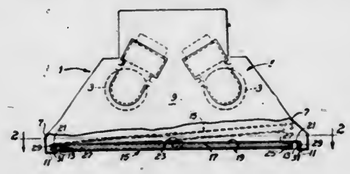
2,440,600
ELECTRIC MOTOR CONTROL
Murray G. Crosby, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Original application May 14, 1941, Serial No. 393,339. Divided and this application November 18, 1942, Serial No. 465,957
12 Claims. (Cl. 318—257)

1. In apparatus for controlling the direction of rotation of a motor having two field producing

windings and a rotor, connections to one of said windings for applying alternating current of a first phase to one of said windings, an amplifier tube alternating current phase reverser having output electrodes connected to the other of said windings, said tube having two control grids excited by said alternating current, means in-

cluding a screening electrode in said tube for reversing the phase of one of the currents amplified in said tube so that the amplified currents on said output electrodes oppose, and a variable bias circuit for one of said control grids for controlling the relative bias of said control grid to cause one of said amplified currents in said output to predominate and be supplied to said other winding.

2,440,601
PRODUCTION OF CLAY SUSPENSIONS
Gilbert K. Dickerman, Wisconsin Rapids, Wis., assignor to Consolidated Water Power and Paper Company, Wisconsin Rapids, Wis., a corporation of Wisconsin
No Drawing. Application November 14, 1946, Serial No. 709,791
3 Claims. (Cl. 106—308)



1. The method of converting refined clay filter cake of less than about 67% solids content to a pumpable aqueous suspension and for enhancing the resistance of the suspended clay particles to settling on standing which comprises dispersing and fluidizing the clay filter cake with the aid of a deflocculating agent together with the addition of relatively dry clay of less than 15% moisture content in an amount sufficient to increase the solids content of the resulting suspension to approximately 70%.

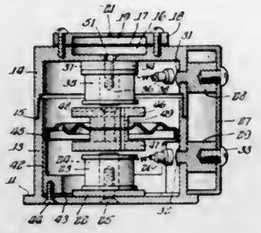
2,440,602
MANUFACTURE OF DICHLOROPHENOLS
Reginald Thomas Foster, Birkenhead, and Nicholas Bennett, Ditton, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application July 25, 1945, Serial No. 607,082. In Great Britain April 21, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires April 21, 1963
5 Claims. (Cl. 260—623)

1. A process for the production of a dichlorophenol which comprises chlorinating molten phenol with chlorine up to the stage where a reaction product containing dichlorophenol is formed having a maximum setting point.

2,440,603
LIGHTING FIXTURE
Edwin F. Guth, Florissant, Mo.
Application March 12, 1947, Serial No. 734,118
1 Claim. (Cl. 240—51.11)

A lighting fixture comprising a housing enclosing elements of the fixture and having parts which are readily separable for obtaining access to the interior of the housing, one of said parts comprising a trough-like member adapted to be mounted upon a support in inverted position with the trough opening downward, said one part having side walls each of which has an upwardly opening channel interiorly of its lower edge, each channel having an upstanding flange spaced inward from the lower end of the respective side wall, the other part being a light diffusing member having parallel downwardly opening hinge hooks on opposite sides thereof engaged in said channels and forming quick detachable hinge connections

therewith, each hook including an outer flange spaced from the respective edge portion of said diffusing member and having at its lower margin a web extending toward the edge portion of said member and at right angles to the flange, the distance from the edge of the web to the edge portion of said diffusing member being less than the height of said upstanding flange, said hooks and channels being sufficiently wide to permit either side of said diffusing member to be lifted upward out of the channel of its hinge connection and shifted laterally toward the opposite side to clear the channel.



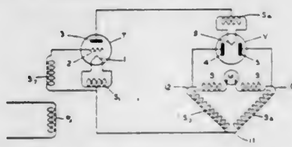
2,440,604
HIGH FAT INGREDIENTS FOR SOUP AND THE LIKE AND METHOD OF PRODUCTION
Chastain G. Harrel and Robert O. Brown, Minneapolis, Minn., assignors to Pillsbury Mills, Inc., Minneapolis, Minn., a corporation of Delaware
No Drawing. Application August 20, 1945, Serial No. 611,687
6 Claims. (Cl. 99—83)

1. The method of producing fat-loaded farinaceous particles which consists in first exploding a multiplicity of farinaceous particles to convert the same into integral, cellular bodies, then mixing with a multiplicity of said cellular bodies, a fat ingredient in liquid state, subjecting said mixture to partial vacuum, then subjecting said mixture to a materially increased pressure to cause the liquid fat ingredients to be forced by pressure into the cells of said bodies and thereafter, cooling the particles to congeal the fat within said cells.

2,440,605
ACCELEROMETER
Claude M. Hathaway, Denver, Colo., assignor to Hathaway Instrument Company, a corporation of Colorado
Application May 10, 1945, Serial No. 592,945
10 Claims. (Cl. 177—351)

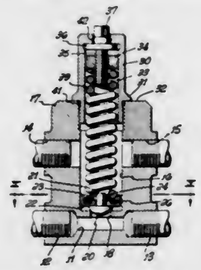
1. An accelerometer comprising a housing containing a pair of electromagnetic impedances, a mass subject to the effects of acceleration and deceleration, said mass being mounted on a flexible diaphragm between said impedances and so related to said electromagnetic impedances as to cause opposite changes in impedances thereof in accordance with the displacement of said mass from its normal position, said diaphragm being

mounted to divide said housing into two chambers, and fluid means for damping the movement



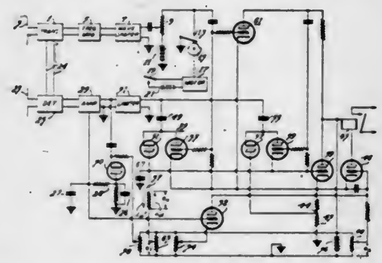
of said mass including a fluid passage extending through said diaphragm.

2,440,606
PRESERVATION PROCESS
Kenneth C. D. Hickman, Rochester, N. Y., assignor to Distillation Products, Inc., Rochester, N. Y., a corporation of Delaware
No Drawing. Original application October 30, 1942, Serial No. 463,896. Divided and this application November 30, 1943, Serial No. 512,367
2 Claims. (Cl. 99—163)



1. The process of stabilizing an oxidizable substance which comprises incorporating in the oxidizable substance an antioxidant comprising hydrogenated deodorizer scum, which scum is lighter-than-water, contains tocopherol and is obtained from the steam after it has been passed through a fat which contains tocopherol, during vacuum-steam deodorization of said fat.

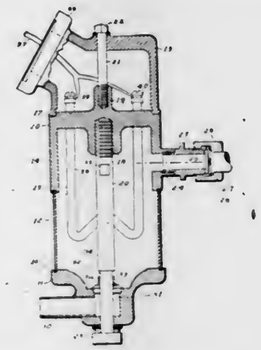
2,440,607
ELECTRONIC TUBE TESTER
Robert D. Hickok, Bratenahl, Ohio, assignor to Cleveland Patents, Incorporated, a corporation of Ohio
Application February 5, 1946, Serial No. 645,658
6 Claims. (Cl. 315—370)



1. Apparatus for the measurement of mutual conductance comprising a full wave rectifying tube having two plate electrodes, an alternating current input circuit for said rectifying tube including a first coil connected at one end to one said electrode, a second coil connected at one end to the other said electrode, the two other ends of the coils being connected to each other at a common point, a third coil in a bridge circuit cross-connecting symmetrically corresponding points on said first and second coils whereby to produce a bridging shunt, meter means in said bridge circuit for measuring current flow therethrough, means for inducing an alternating current potential in each of said first, second, and third coils, a tube to be tested having a plate, a grid, and an electron emission element, the said electron emission element being connected to the aforesaid common point, the D. C. output from said rectifying tube being applied to said plate, and means for applying a variable control potential to said grid, whereby to produce a proportional variation in the plate current of the tube to be tested and a consequent indication upon said meter of the mutual conductance of the tube to be tested.

2,440,608
RELIEF VALVE
Frank B. Hunter, Roscoe, Calif., assignor to Casimir A. Miketta, Beverly Hills, Calif.
Application May 5, 1945, Serial No. 592,114
7 Claims. (Cl. 137—53)

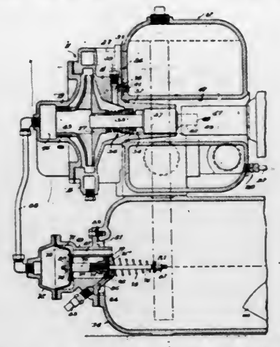
7. In a relief valve, including a body having a through inlet passageway for pressure fluid and a spaced exhaust passage way, the combination of: a valve chamber extending from one side of the body transversely with regards to the inlet and exhaust passageways and into communication with said passageways, said valve chamber being of greater diameter than the inlet passageway and terminating in an annular valve seat including a valve port between said valve chamber and inlet passageway; a valve member having a central stem and a virtually hemispherical head adapted normally to sit on the annular seat; a centrally ported valve keeper loosely receiving the stem of the valve member, a non-metallic member carried by the valve keeper and having fingers extending therebeyond into contact with the walls of the valve chamber; a cap for the end of the valve chamber and spring means positioned between the cap and valve keeper for releasably holding the valve member in seated position.



2,440,609
BOMB RELEASE RADIO SYSTEM
Eugene O. Keizer, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application November 16, 1945, Serial No. 629,171
1 Claim. (Cl. 343—7)

In a radio bomb release system of the frequency modulation type including a transmitter,

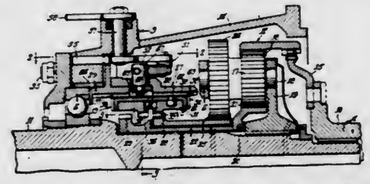
a receiver, beat frequency responsive means for producing a voltage of magnitude depending on the relationship between speed and range of a target and relay means normally responsive to the attainment of a predetermined magnitude by said voltage to effect release, apparatus for preventing false operation of said system comprising an automatic gain control circuit for said receiver, normally inoperative means for biasing said relay means to prevent release, and means responsive to the output of said automatic gain control circuit to operate said last-mentioned means and thus bias said relay circuit during signal fading periods.



2,440,610
ENGINE COOLING LIQUID HEATER
Carna M. Kimberlin, Spokane, Wash., assignor to Red Ball Manufacturing Company, Spokane, Wash., a corporation of Washington
Application March 7, 1946, Serial No. 652,760
6 Claims. (Cl. 219—38)

1. A portable device for use in connection with internal combustion engine cooling systems to maintain the engine cooling liquid warm during the periods of idleness of the engine, said device comprising a liquid chamber, inlet and outlet conduits for said chamber, heating means extending into the chamber for heating liquid therein and valve means in said inlet operable to close the inlet against reverse flow of liquid, said valve means comprising a valve body to which the inlet conduit is secured, an internal seat in said body, a mounting member coaxial with the seat and extending through the body into the chamber and securing the body to the chamber, and a valve slidable axially on said mounting member for engaging said seat.

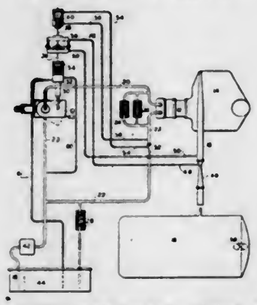
2,440,611
PUMPING APPARATUS
John Mann, Seneca Falls, N. Y., assignor to Goulds Pumps, Inc., Seneca Falls, N. Y., a corporation of New York
Application February 14, 1945, Serial No. 577,879
8 Claims. (Cl. 103—5)



1. A pumping system comprising, in combination, a chamber having a walled opening extending therethrough, a pump casing mounted at one side of said chamber and having an impeller therein, a prime mover mounted at the other side of said chamber, means extending through said walled opening for driving the pump impeller from said prime mover, and means for conveying liquid from said casing to said chamber.

2,440,612
SEPARATION OF COPPER
Myrl Lichtenwalter, Old Greenwich, Conn., assignor to Nicaro Nickel Company, New York, N. Y., a corporation of Delaware
No Drawing. Application September 12, 1942, Serial No. 458,137
10 Claims. (Cl. 75—117)

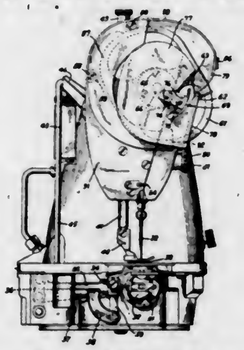
1. A process for separately recovering the copper content and the nickel content from ammoniacal ammonium carbonate leaching solutions which comprises subjecting such solution to reducing conditions until the copper is reduced to the cuprous state, converting the cuprous ammonium carbonate formed into a copper acetylide precipitate, and separating said precipitate from the solution containing the nickel and from which solution the nickel may be precipitated in a condition free of copper.



2,440,613
TRANSMISSION
Palmer Orr, Muncie, Ind., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application October 27, 1945, Serial No. 624,983
16 Claims. (Cl. 74—275)

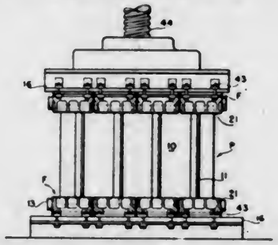
12. In transmission mechanism, in combination with a drive shaft, a driven shaft, means including gearing for providing power trains of two different speed ratios between said shafts, said means also including a first member, and second and third relatively rotatable members which are so arranged that one of said power trains is completed when said second member is coupled to said first member and the other power train is completed when said third member is coupled to said first member, the improvement comprising means for so coupling said members and including teeth provided on said second and

third members, a pair of shiftable coupling elements each having a set of teeth thereon and adapted to interengage with the teeth on one of said second or third members, coupling means coupling said coupling elements with said first member arranged to allow movement of the coupling elements relative to each other and shifting thereof relative to said second and third members, said coupling means being responsive to the force produced by a reversal of the torque in said gearing between said first member and either said second or third members and transmitted through said teeth for shifting the coupling elements to engage or disengage the teeth thereof with the teeth of said second or third members through the reaction of said gearing during torque reversal on the one of said second and third members which is then coupled with one of said coupling elements, at least one set of each pair of sets of teeth adapted to interengage being beveled on their engaging ends, whereby one of the said sets of teeth may ratchet on the other, and spring means yieldably opposing movement of said coupling elements relative to each other, said coupling elements being arranged so that one or the other of the sets of teeth on said coupling elements must always be in engaged or in ratcheting position with respect to the teeth adapted to be engaged thereby on said second or third members.



2,440,614
POWER TRANSMISSION
Kenneth I. Postel, Detroit, Mich., assignor to Vickers Incorporated, Detroit, Mich., a corporation of Michigan
Application February 9, 1946, Serial No. 646,576
10 Claims. (Cl. 230—11)

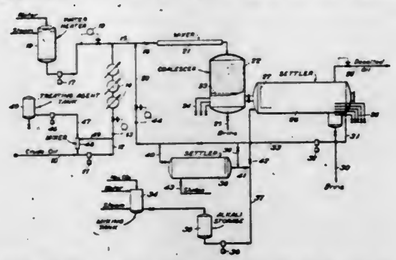
1. A hydraulic transmission drive and control system comprising a variable delivery pump driven by a prime mover, a hydraulic motor, a blower driven by said hydraulic motor, pneumatic means actuated by the blower for controlling the pump delivery and hydraulic power transmitted to said blower, in combination with hydraulic means actuated by the rate of flow of hydraulic fluid in the hydraulic transmission for controlling the pump delivery and hydraulic power transmitted to said blower.



2,440,615
SEWING MACHINE
Charles F. Rubel, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a corporation of Illinois
Application August 21, 1943, Serial No. 499,483
17 Claims. (Cl. 112—248)

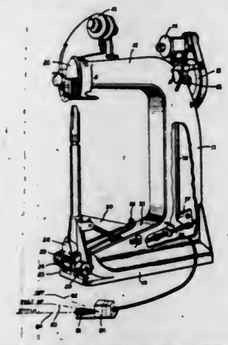
1. In a sewing machine a reciprocatory needle bar having a thread carrying needle, a rotary take-up for the needle thread which comprises a slotted thread engaging element having a free end and mounted for orbital movement, and a member adapted to engage and position a portion of the needle thread during each complete revolution of said rotary take-up and arranged

to pass through the slot in said element in the course of its orbital movement, said member being constructed and arranged to force outwardly beyond the free end of said element any thread which may become improperly engaged with the same due to breakage.



2,440,616
APPARATUS FOR TESTING PANELS AND THE LIKE
Paul E. Sandorff, Los Angeles, Calif., assignor to Lockheed Aircraft Corporation, Burbank, Calif.
Application December 2, 1944, Serial No. 566,339
14 Claims. (Cl. 73—94)

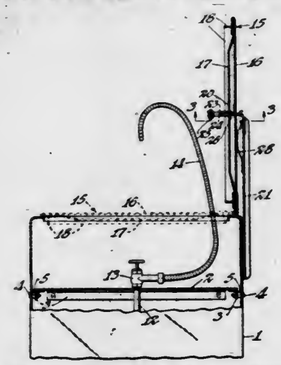
1. Apparatus useful in compression testing a specimen having an appreciable dimension transverse of the direction of the compression to be applied comprising tubes to be arranged with their long axes transverse of said direction of compression and having axial slots receiving the opposite end portions of the specimen, matrix material in the tubes embedding said end portions, and fixtures for clamping radially inward on the tubes and operable to transmit the compression test loading to the tubes.



2,440,617
OIL DESALTING TECHNIQUE
James E. Seebold, Chicago, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application July 23, 1946, Serial No. 685,651
8 Claims. (Cl. 252—330)

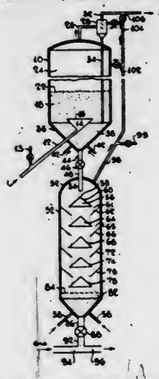
1. In the process of desalting petroleum oil wherein the oil is vigorously contacted with a brine solution, thereafter separated from said solution and the separated brine solution is recycled to the contacting step of the process, the improvement comprising controlling the hydrogen ion concentration of said brine solution

by adding an alkali thereto after separation from said oil, thereby producing a precipitate and settling said precipitate from said brine solution before recycling said solution to said mixing step.



2,440,618
STITCHING MACHINE
William R. Spiller and Robert J. Niederhauser, Dayton, Ohio, assignors, by mesne assignments, to Acme Steel Company, Chicago, Ill., a corporation of Illinois
Application July 20, 1944, Serial No. 545,863
9 Claims. (Cl. 1—15)

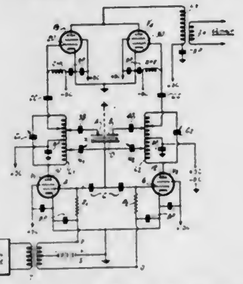
1. In a stitching machine having a stitcher head, a base, a post adjustably mounted on said base, pivotal means for mounting said post providing for movement thereof from an inoperative position to an operative position beneath said head, a toggle mechanism connecting with said post and operative to cause pivotal movement thereof from its inoperative to its said operative position and to lock said post firmly in its said operative position, and an electric solenoid connected to one arm of said toggle mechanism for effecting said operation thereof.



2,440,619
AUTOMATIC FIRE DOOR FOR PARTS WASHERS
Ernest J. St. Laurence, Minneapolis, Minn.
Application June 9, 1944, Serial No. 539,475
5 Claims. (Cl. 220—89)

5. In a parts washer, an open top reservoir having a rear wall and adapted to contain a volatile cleaning liquid, a normally upstanding apertured cover hinged to the reservoir adjacent the upper rear edge thereof, an upstanding supporting post secured to the rear wall of the reservoir and projecting above the top of said reservoir, a supporting plate secured to the cover adjacent said aperture and projecting inwardly therefrom, and a fusible link extending through the cover aperture and having one end anchored to said supporting post and its other end portion anchored to the inwardly projecting end portion

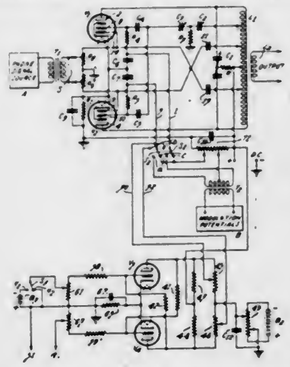
of said supporting plate, said supporting plate being located above and extending in close substantially parallel relation to the fusible link and being of materially greater width than said fusible link, whereby in case of fire in said reservoir said relatively wide supporting plate will serve to deflect rising heat waves downwardly against said fusible link to increase the heating rate of the fusible link.



2,440,620
CONTACTING SOLIDS AND GASEOUS FLUIDS
Wilfred O. Taff, Roselle, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application August 24, 1944, Serial No. 551,027
1 Claim. (Cl. 23—288)

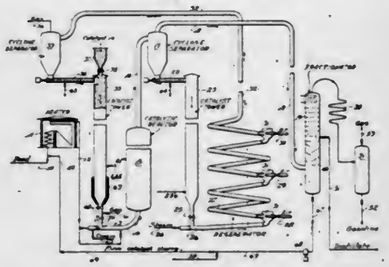
An apparatus of the character described including a vertically arranged elongated vessel, means for introducing a gaseous fluid and subdivided solids into the lower portion of said vessel, said means including a horizontally extending perforated distribution plate arranged in the lower portion of said vessel, means for withdrawing gaseous fluid and entrained solids from the upper portion of said vessel, means for withdrawing solids and gaseous fluid from the bottom portion of said vessel below said distribution plate,

means associated with said gaseous fluid and entrained solids withdrawal means for separating entrained solids from the gaseous fluid and returning the solids to said vessel below said distribution plate, and means for segregating gaseous fluid from the solids withdrawn from said bottom portion and for preventing further contact of the fluid thus segregated with the solids in the bottom portion in said vessel, said segregating means comprising a separate stripping vessel communicating at its top with the means for withdrawing solids from said first mentioned vessel and provided with an inlet for a stripping gas, said stripping vessel being further provided with baffles, a bottom outlet on said stripping vessel to remove stripped solids and a top outlet on said stripping vessel for removing stripping gas and volatile material.



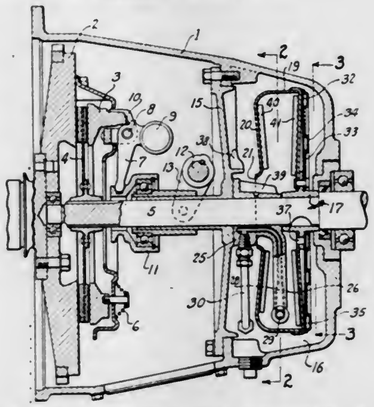
2,440,621
FREQUENCY MODULATION
George L. Usselman, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application April 25, 1944, Serial No. 532,592
7 Claims. (Cl. 179—171.5)

1. In a timing modulation system of the type comprising two tubes, each having a plurality of electrodes, a tank circuit tuned to a first frequency regeneratively coupling the electrodes of one tube in an oscillation generating circuit, said connections including a feedback excitation circuit between the anode and control grid of the tube, a second tank circuit tuned to a second frequency coupling the electrodes of the other tube in a regenerative oscillation generating circuit, said last named oscillation generating circuit including a feedback excitation circuit between the anode and control grid of the second tube, a band pass filter which passes a frequency spectrum including said first frequency and half of the band between said first and second frequency in said first feedback circuit, a band pass filter which passes a band of frequencies including said second frequency and half of the band between said first and said second frequency in said second feedback connection, and means for differentially controlling the gains of said tubes in accordance with signals.



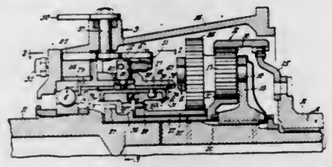
2,440,622
MODULATION
George L. Usselman, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application August 2, 1945, Serial No. 608,575
3 Claims. (Cl. 179—171.5)

1. In apparatus for generating and modulating oscillatory energy, two electron tubes each having an anode, a cathode, a control grid and an auxiliary grid, a tank circuit parallel tuned substantially to the desired operating frequency, means coupling each of said tubes and tank circuit in a regenerative oscillation generator including said tank circuit coupling the anodes and cathodes of said tubes in pushpull relation and coupling the control grids and cathodes of said tubes in pushpull relation, the arrangement being such that the phases of the voltages of the regenerated frequency on the anode of each tube are displaced in phase about 180 degrees with



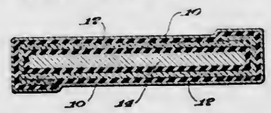
respect to the phase of the generated voltages on the grid of the same tube, additional couplings between said tank circuit and said auxiliary electrodes such that when oscillatory energy of the desired operating frequency is developed in said tubes and tank circuit the phases of the voltages of the generated frequency on the control grid and auxiliary grid of each tube are displaced by substantially 90°, and means for differentially modulating the gains of said tubes in accordance with signals.

2,440,623
TRANSFERRING FINELY DIVIDED SOLIDS
Vanderveer Voorhees, Hammond, Ind., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application June 28, 1940, Serial No. 342,847
2 Claims. (Cl. 214—17)



1. A method of transferring finely divided particles of solid material in a system between confined zones maintained under different gaseous pressures which comprises maintaining a vertically extending manometric column of the particles in communication with the zone of higher pressure at its lower end and in communication with the zone of lower pressure at its upper end, introducing an aerating gas into said column of solid particles in amount adapted to maintain the particles in a pseudo-liquid phase, the height of said column being such that it will exert a pseudo-hydrostatic pressure approximating the difference between the pressures of the two zones, and introducing the particles of solid material from one of said zones into said column at the end in communication therewith to displace solid material from the other end of said column into the other of said zones.

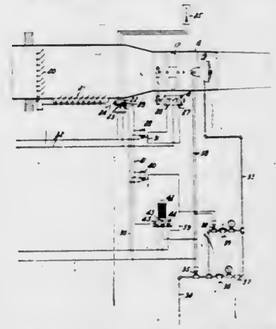
2,440,624
LIQUID HANDLING MEANS
Ernest E. Wemp, Detroit, Mich.
Application March 16, 1944, Serial No. 526,710
7 Claims. (Cl. 103—11)



1. Liquid handling means comprising, a gear pump having an outlet, a rotatable shell adapted to contain liquid and to cause rotation of the liquid therein so that the liquid has a centrifugal head and a velocity head and a tube in the shell having an open end submerged in the liquid and facing in a direction opposite the direction of the rotation of the shell and connected to the outlet of said pump whereby to serve as a supplemental pump and as a pressure regulator for the outlet side of said pump.

2,440,625
TRANSMISSION
Howard C. Wiemer, Muncie, Ind., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application October 21, 1944, Serial No. 559,804
13 Claims. (Cl. 74—275)

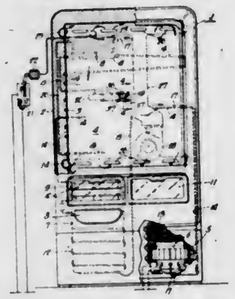
9. In power transmission mechanism, the combination of a driving element, a driven element, and means for completing two power trains of different speed ratios between said elements and including two different reaction members and gearing for driving said driven element at two different speeds in the same direction, a torque responsive brake for said two reaction members, said brake comprising a stationary member, a shiftable coupling element effective between said reaction members and said stationary member and adapted to couple either of the reaction members with said stationary member depending upon the position of said coupling element, said coupling element being adapted to be shifted in response to changes in the relative direction of torque between the reaction members and said stationary member, an oscillatable blocker having blocking portions effective to prevent shifting movement of said coupling element in one direction or the other depending upon the position of said blocker, and means for effecting a change in the position of said blocker to permit shifting of said coupling element by the reaction of said gearing on the reaction member then coupled with the coupling element upon a reversal of torque.



2,440,626
ANTISTICK BITUMEN SURFACED BUILDING MATERIAL
James Howard Young and Paul W. Jenkins, Pittsburgh, Pa., assignors to H. H. Robertson Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application April 22, 1942, Serial No. 439,994
3 Claims. (Cl. 117—85)

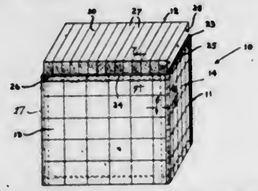
1. A building material having a normally tacky bituminous surface and an anti-stick coating film covering the normally tacky surface, said coating film comprising

	Parts
Methyl cellulose	2
Glycerine	1
Sodium salt of sulphated heptadecanol	¼



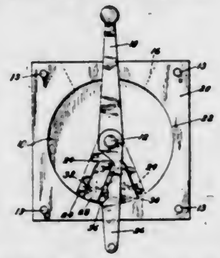
2,440,627
AIR CONDITIONING APPARATUS
Agnew H. Bahnson, Jr., Winston-Salem, N. C.
Application August 23, 1945, Serial No. 612,179
6 Claims. (Cl. 236—44)

2. Air conditioning apparatus which comprises: a duct having an inlet for air to be humidified and an outlet for discharging humidified air to a space to be humidified; air circulating means including a fan mounted in the duct and a motor for driving said fan; air humidifying



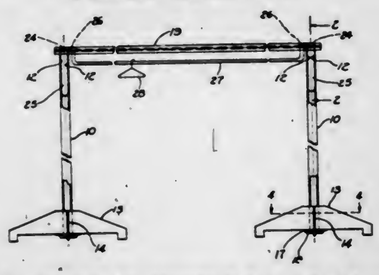
means mounted in said duct; temperature-controlled means for lowering and raising the speed of said fan in response to lower and higher temperatures respectively in the space to be humidified; and means responsive to a decrease in space humidity for increasing the speed of said fan above that established by said temperature-controlled means for a relatively low temperature within the space to be humidified.

2,440,628
HUMIDITY CONTROL
John J. Bauman, Abington, Pa., assignor by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application February 2, 1945, Serial No. 575,876
4 Claims. (Cl. 236—44)



1. In a device for controlling humidity in high humidity storage chambers of refrigerators of the type having a refrigerant circulating cooling system, a movable control element, a pressure means responsive to the temperature within said chamber, a second temperature responsive pressure means having an actuating element exposed within said chamber, said first-named and second means being arranged to exert forces tending respectively to displace said control element in opposite directions, and an element in thermal exchange association with said cooling system and extending into said chamber to form within the latter an area of low temperature for condensation of part of the moisture in the atmosphere of said chamber, said condensing element being positioned above the said actuating element of the second pressure means for gravity transfer of the condensate from the condensing element to the actuating element.

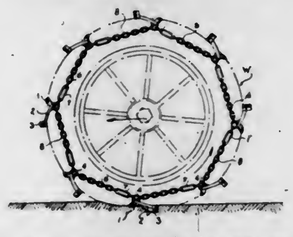
2,440,629
REVERSIBLE MEAT BLOCK AND SUPPORT STAND
Lawrence A. Bennett, Industrial City, Mo.
Application September 19, 1945, Serial No. 617,310
2 Claims. (Cl. 146—215)



1. A meat block comprising a stand formed by vertically extending spaced inner and outer corner angle irons, vertical side walls for said stand having bevelled ends disposed between said spaced corner angle irons with their inner and outer surfaces respectively contacting said inner and outer angle irons, clamping bolts projected through the bevelled edges and adjustably connecting adjacent corner angle irons, a block supporting seat formed by interconnected side angle irons supported on the upper ends of said side walls and secured within the upper ends of said outer corner angle irons, and a reversible chopping block supported in said block supporting seat.

2,440,630
SELF-LOCKING LEVER
Ora G. Blocher, Detroit, Mich., assignor to Bendix Aviation Corporation, Detroit, Mich., a corporation of Delaware
Application June 21, 1946, Serial No. 678,197
4 Claims. (Cl. 192—8)

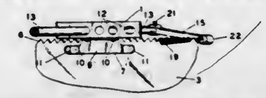
1. A self-locking lever comprising a fixed support, a member associated therewith having an opening providing an annular surface concentric with the fixed support, a primary lever and a secondary lever each pivoted on the support, a yoke carried by the secondary lever, locking members on the secondary lever for cooperation with the annular surface and the yoke to lock the movement of the secondary lever, and a knock-out block on the force transmitting end of the primary lever for unlocking the locking members and actuating the secondary lever.



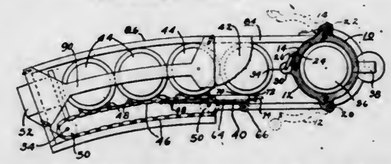
2,440,631
DEMOUNTABLE SUPPORT FOR GARMENTS AND THE LIKE
Edna Smith Eakin and Willard D. Eakin, Akron, Ohio
Application June 17, 1944, Serial No. 540,762
2 Claims. (Cl. 211—177)

1. A support for garments and the like comprising a pair of standards each having a foot structure of which floor-engaging areas are widely distant in at least three directions from the vertical line of the standard's center of gravity, so that the standard has stability in standing alone, and a bridge structure having

thereon means telescoping with and seating upon the upper ends of the standards by simple, vertical movement, for removably holding the bridge structure thereon, the bridge structure comprising, as a single handling unit, hat-supporting means and garment-suspending means, and the bridge structure, having simple, telescopic relation to the standards, constituting the only essential connection between them, the connection of the standards by the bridge structure being sufficiently non-rigid to permit each of the standards to maintain its position of independent stability when the assembly is mounted upon an appreciably uneven floor.



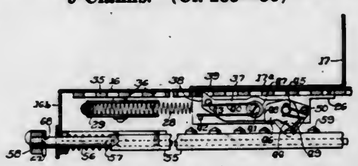
2,440,632
TRACTION DEVICE FOR RESILIENT TIRES AND WHEELS
George O. Hack, Hudson, Ohio
Application March 3, 1947, Serial No. 731,901
11 Claims. (Cl. 152—225)



11. A traction assembly for a resilient vehicle wheel tire comprising a series of anti-skid members, each member having a relatively rigid cross member adapted for mounting on a tire, traction means associated with a rearward element of each member, a forward portion of each cross member adapted to engage the wheel tire and act as a pivot for said anti-skid device about an axis generally parallel to that of the wheel, attaching means rigid with each of said cross members, and a series of tension means directly connecting each of said attaching means to the attaching means on adjacent anti-skid members for urging each cross member to rotate about said pivot and force the traction means on each cross member toward the wheel tire, the lever arm between the traction means and the pivot of each anti-skid member being substantially greater than that between the attaching means and the pivot, the tension of said tension means with the traction assembly mounted on a tire being such that reaction of the earth against one of the traction means can initially cause adjacent traction members to deform the tire through force transmitted by said tension means and cause said one traction means to remain stationary as the wheel turns through a given arc, whereafter the ground-engaging means is snapped against the wheel tire to clear it of earth.

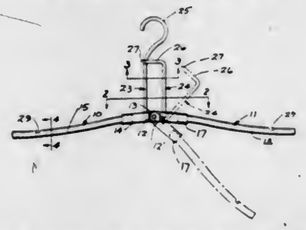
2,440,633
SAW FILING TOOL
Joseph W. Hall, Portland, Oreg.
Application June 18, 1946, Serial No. 677,565
2 Claims. (Cl. 76—36)

1. Supporting means for a saw tooth file holder having a file and a guide bar parallel to said file, comprising a guide block, means resiliently supporting said block on the cutting edge of a saw, said block formed with a plurality of horizontally disposed angularly related bores therethrough through a selected one of which said guide bar is slidably engageable for slidably supporting said file in engagement with the teeth of said saw in selected angular relation thereto.



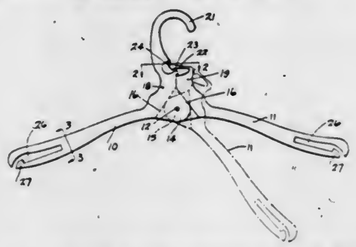
2,440,634
SHELL FEEDING MECHANISM FOR ROCKET GUNS
Charles F. Henney, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application October 14, 1943, Serial No. 506,147
4 Claims. (Cl. 89—1.7)

1. In a rocket type of gun, a barrel having a projectile receiving breech opening in a side wall thereof, closure means for said opening comprising a pair of movable jaws, projectile conveyor means for feeding projectiles into said breech opening, said conveyor means comprising a pair of aligned portions including a curved portion and a straight portion, said curved portion comprising an endless chain for conveying projectiles arranged in side by side relationship on said chain onto said straight portion, said straight portion comprising a reciprocating projectile supporting carriage means having one end movable into and out of a position between said jaws when said jaws are in the open position so as to deliver projectiles through said open jaws.



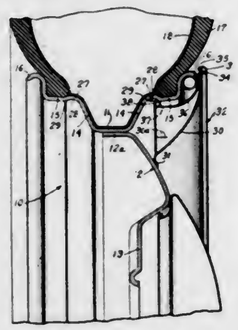
2,440,635
FEED TRAY FOR DUPLICATING APPARATUS
Alfred E. Little, Chicago, and Hubert Jagger, Maywood, Ill., assignors to Ditto, Incorporated, Chicago, Ill., a corporation of West Virginia
Application February 24, 1944, Serial No. 523,632
9 Claims. (Cl. 185—38)

1. Mechanism for causing step by step movement between two relatively movable elements which comprises, said elements, the first element having a transverse slot therein, means guided by said slot and affixed to the second element for adjusting said second element across said first element, and mechanism for operating said adjusting means, said mechanism comprising a plurality of spaced stops beneath the first element and fixed with respect thereto, a spring pressed pawl attached to said adjusting means having a latching face to engage the stops to prevent movement of said means in one direction along the slot and having a non-latching face to



ride over the stops when said adjusting means is moved in the opposite direction along the slot, means urging said adjusting means in the first named direction, a trip member operable to release the pawl from one stop and allow said urging means to advance the adjusting means until the next stop engages the pawl, said trip member being inoperative in another position to disengage the pawl from a stop, and means to lock the trip member in inoperative position.

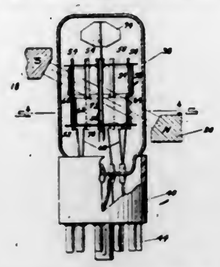
2,440,636
CLOTHES HANGER
Martin Lowe, New York, N. Y., assignor of one-half to Abraham Block, New York, N. Y.
Application November 10, 1945, Serial No. 627,909
2 Claims. (Cl. 223—94)



1. In a clothes hanger, a pair of substantially horizontal shoulder pieces hingedly connected together and adapted to pivot from downwardly extended positions upwards to said substantially horizontal position, said shoulder pieces having abutting elements for limiting pivoting from said substantially horizontal position upwards, a handle projecting upwards from each of said shoulder pieces at points close to their hinge, a hook on one of said handles extending towards and partially around the other handle, said handles being disposed in a plane substantially at right angles to the axis of the hinge connection of said shoulder pieces whereby with the thumb and one finger of one's hand engaging the outer sides of said handles the shoulder pieces may be held in said substantially horizontal position with said abutting elements abutting each other and said handles may be slightly flexed together and slightly laterally for disengaging said hook and then said shoulder pieces may be lowered by allowing said handles to move apart.

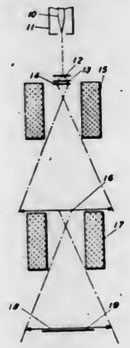
2,440,637
CLOTHES HANGER
Martin Lowe, New York, N. Y., assignor of one-half to Abraham Block, New York, N. Y.
Application January 3, 1946, Serial No. 638,834
3 Claims. (Cl. 223—94)

1. In a clothes hanger having a pair of shoulder pieces of substantially flat material hingedly connected together at their adjacent bottom portions, flat handle portions having inwardly curved sides and projecting upwards from said shoulder pieces and normally abutting each other for limiting pivoting of said shoulder pieces from a substantially horizontal position upwards and by which the shoulder pieces may be pivoted downwards and then upwards with two fingers of one hand engaging against said inwardly curved sides, a projection on one of said handle portions, a leaf spring on the other handle portion and engaging said projection for holding said handle portions latched together, and said leaf spring having side portions projecting from the faces of said handle portions by which the leaf spring may be manually engaged and flexed by another finger of said hand for unlatching said handle portions.



2,440,638
WHEEL COVER
George Albert Lyon, Allenhurst, N. J.
Application December 9, 1943, Serial No. 513,546
2 Claims. (Cl. 301—37)

1. In a cover structure for a wheel including multi-flanged tire rim and body parts, one of the axial flanges of said rim part being provided with a radially outwardly extending depression to provide an annular cover retaining shoulder, a cover for the exposed outer flanges of the rim part including an annular outer portion of relatively flexible material extending radially and axially inwardly from an outer edge of the rim part over flanges thereof to the body part, and an annular retaining portion connected to an outer edge of said outer portion and substantially concealed thereby, said concealed portion extending axially and radially inwardly and terminating in a continuous rear edge formed with a radially outwardly projecting bead for snap-on detachable engagement with said shoulder, both of said portions being convex and curved axially rearwardly inside of the outer flanges of the rim part, said rear edge bead having a circumferential series of generally radially extending splits to enhance the resilient springing action thereof.

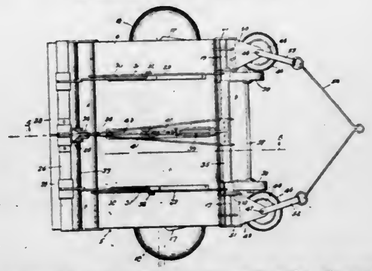


2,440,639
ELECTRONIC DISTRIBUTOR
George H. Marmont, Detroit, Mich., assignor to Bendix Aviation Corporation, Detroit, Mich., a corporation of Delaware
Application December 5, 1945, Serial No. 632,948
6 Claims. (Cl. 250—27.5)

5. In an electronic distributor tube having a cathode and a plurality of plate sections, means for directing the electron emission from the cathode in two oppositely disposed beams, means for rotating the beams, and means for preventing

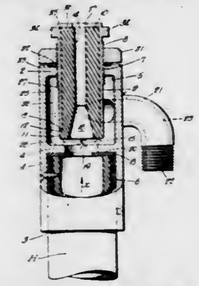
one of the beams from impinging on the plate sections.

2,440,640
ELECTRON MICROANALYZER
Ladislaus Marton, Washington, D. C., assignor to Research Corporation, New York, N. Y., a corporation of New York
Application November 27, 1946, Serial No. 712,585
10 Claims. (Cl. 250—49.5)



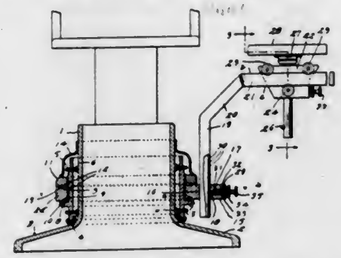
1. An electron microanalyzer comprising means for directing a beam of substantially monochromatic X-rays upon a specimen to be analyzed, means for accelerating photoelectrons emitted from the specimen, and means for focussing the accelerated photoelectrons to form an electron image.

2,440,641
PROCESS OF OBTAINING BARIUM CARBONATES
Leonard John Minnick, Cheltenham, Pa., assignor to G. and W. H. Corson, Inc., Plymouth Meeting, Pa., a corporation of Delaware
No Drawing. Application April 30, 1946, Serial No. 666,186
6 Claims. (Cl. 23—66)



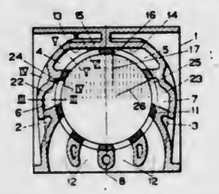
3. The process of producing barium carbonate from barium sulphate which comprises reacting said sulphate and a soluble carbonate in an aqueous medium at a temperature corresponding to a steam pressure of between about 250 and about 500 pounds per square inch until the reaction is substantially completed, the soluble carbonate being present in an amount between about 2 to about 3 mols per mol of sulphate, and separating the solids from the solution before appreciable reconversion of the barium carbonate into barium sulphate has taken place.

2,440,642
LAND LEVELER
Louis Oswald, Los Angeles, Calif.
Application July 10, 1944, Serial No. 544,312
In Canada September 10, 1943
8 Claims. (Cl. 55—12)



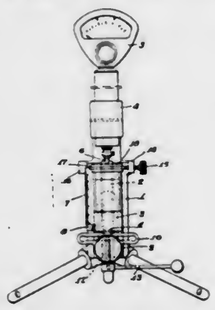
2. A land leveler for use in orchards, vineyards, and the like, comprising a sled-type drag body, said body being a hollow housing, rectangular in top plan and including flat top and bottom sections, said body being open at opposite transverse end portions, earth smoothing disks horizontally mounted in said end portions and having limited peripheral portions projecting normally outward and beyond said open ends, means operatively mounting said disks within the interior of said drag body including buffer springs and bell-crank members, disk mountings fastened to the leading edge of said drag body at points adjacent the open ends of the body, horizontal disks mounted for rotation in said mountings, said disks having treads in the form of rubber tires, said rubber tired disks serving as guides and as steering members and also as buffers.

2,440,643
SANDBLAST NOZZLE
George F. Pettinos, Merion, Pa.
Application March 14, 1945, Serial No. 582,669
7 Claims. (Cl. 51—11)



7. A nozzle structure comprising a body member, a chamber having an internal cylindrical wall within said body member, a nose element extending inwardly of said chamber axially thereof, a liner of resilient material within and extending substantially the length of said nose element and provided with an axial bore for passage and discharge of an abrasive substance suspended in a gaseous conveying medium, and means for supplying an aqueous lubricant into said chamber tangentially of the internal cylindrical wall thereof to effect a swirling entrance of said lubricant into said axial bore and cover the wall of the bore to minimize erosion thereof by said abrasive substance.

2,440,644
ROTARY SEAT ATTACHMENT FOR BARBER CHAIRS
David M. Powell, La Junta, Colo.
Application December 18, 1944, Serial No. 568,678
5 Claims. (Cl. 155—81)

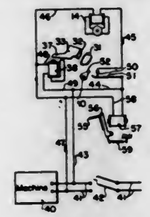


1. In combination with the base for a barber chair or the like including an upstanding column, a member supported for turning movement around the column, a seat post carried by and extending upwardly from said turning member, outstanding spaced tracks carried by the upper portion of the post and arranged side by side, a carriage block freely positioned between the tracks and extending above and below the tracks, parts carried by the block at opposite sides thereof and fore and aft of the block riding on the tracks from above, parts carried by the block at opposite sides thereof for engaging the tracks from below, and a seat carried by the block.

2,440,645
SCAVENGING FOR TWO-STROKE CYCLE ENGINES
Herman Theodor Pyk, Saltsjo-Duvnas, and Hilding Gunnar Camner, Storangen, Sweden, assignors to Aktiebolaget Atlas Diesel, Sickla, near Stockholm, Sweden, a corporation of Sweden
Application April 6, 1945, Serial No. 586,918
In Sweden April 18, 1944
7 Claims. (Cl. 123—65)

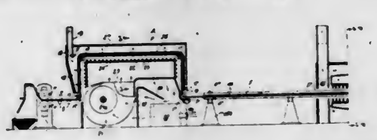
7. In a two stroke cycle internal combustion engine, a combustion cylinder, scavenging openings in one half of said cylinder, a reciprocating piston in the cylinder controlling said openings, two scavenging fluid passages each ending in a scavenging opening and disposed symmetrically one on each side of an axial centre plane through said cylinder half nearest the intersection between said centre plane and the periphery of the cylinder half and directed away from said piston in a plane substantially perpendicular to the centre plane, two further scavenging fluid passages each ending in a scavenging opening in the cylinder half and disposed symmetrically one on each side of the axial centre plane second nearest said intersection and directed away from the piston and the other cylinder half towards the centre plane, a wall in each one of first-mentioned two passages radially confining the passage on its outside and extending substantially tangentially to the cylinder and making a sharp turn towards the central portion of the cylinder close to an axial confining edge of the pertaining scavenging opening nearest the intersection, and a portion of said wall disposed adjacent the leading peripheral edge of the opening inclined at an angle towards the cylinder axis decreasing towards said sharp turn, so that the scavenging fluid entering the opening is directed most axially in the cylinder in the vicinity of the sharp turn.

2,440,646
GAGING APPARATUS FOR ADJUSTING GAGE BLOCKS OF THE ADJUSTABLE TYPE
Hilding Valdemar Törnebohm, Goteborg, Sweden, assignor to Aktiebolaget Svenska Kullagerfabriken, Goteborg, Sweden, a corporation of the Kingdom of Sweden
Application January 23, 1946, Serial No. 642,799
In Sweden January 24, 1945
3 Claims. (Cl. 33—147)



3. A gaging apparatus comprising a frame, a work supporting table and an indicating instrument mounted on the frame one above the other, means for adjusting the distance between the table and the instrument and means for adjusting an adjustable gage block having a plurality of relatively adjustable members, said gage block adjusting means comprising a pair of arms fixed one at each end of a spindle, said spindle being turnable in the said frame about an axis substantially parallel with the plane of the said table and located between the table and the instrument, means on one of the said arms forming an abutment for one of the members of the gage block and means on the other arm adjustable in a direction towards and from the said abutment for acting on another member of the gage block.

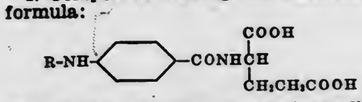
2,440,647
APPARATUS FOR MAKING A GRAPHIC RECORD OF A SUCCESSION OF SIMILAR OPERATIONS BY A MACHINE
Leo G. Vogel, Arlington, Mass., assignor to Industrial Appliance & Equipment Co., Inc., West Newton, Mass., a corporation of Massachusetts
Application February 21, 1946, Serial No. 649,303
4 Claims. (Cl. 234—5.8)



3. A recording apparatus for making a graphic record of a series of successive similar operations performed by a machine, said recording apparatus comprising means for supporting and time

mechanism for moving a chart, a recording pen, a shaft on which said pen is mounted, turning movement of the shaft moving the pen over the chart, a Telechron motor and a circuit therefor, means other than the time mechanism to close said circuit when the machine is started and to maintain said circuit closed during the opera-

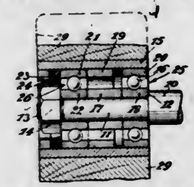
tion of the machine thereby rendering the Telechron motor continuously operative while the machine is in operation, and to open the circuit and thus render the Telechron motor inoperative when the machine is stopped, and driving connections between said Telechron motor and said shaft to give the shaft a turning movement during the time the Telechron motor is operating.



2,440,648
APPARATUS FOR DRYING CLOTH WITH AIR
Harold J. Walter, Uxbridge, Mass., and Paul R. Rose, East Orange, N. J., assignors to Uxbridge Worsted Co., Inc., Uxbridge, Mass., a corporation of Massachusetts
Application January 19, 1944, Serial No. 518,804
8 Claims. (Cl. 34—159)

1. Apparatus for conditioning and drying a strip of textile material which comprises a closed chamber having exit and entrance openings for the strip of material, a perforated backing plate extending from adjacent the inlet end to adjacent the exit end of said chamber, and support means for said strip of material adapted to guide the material adjacent one face of said perforated backing plate, a port for admitting air into said chamber, an air exhaust port, means for controlling the volume of air admitted into and exhausted from said chamber, air heating means positioned in said chamber adjacent the air inlet, and means for directing the heated air into contact with the material on the side of the material remote from said perforated backing plate, the said backing plate having angularly related lateral portions forming, together with said chamber side walls and the side walls of said means for directing the heated air, air passages, leading from the space beyond said perforated backing plate, and from below the lateral edges of a strip of material passing through the said chamber, respectively, back to said heating means, whereby air which has passed through the dryer portion of the material and air which has been deflected from the lower surface of the material is returned, mixed with incoming air, reheated, and recirculated, and individual means for controlling the flow through said passages.

2,440,649
N-4-(QUINAZOLINE)AMINO BENZOYL GLUTAMIC ACID
Souren Avakian, Oreland, and Gustav J. Martin, Philadelphia, Pa., assignors to The National Drug Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application January 18, 1947, Serial No. 722,972
4 Claims. (Cl. 260—251)

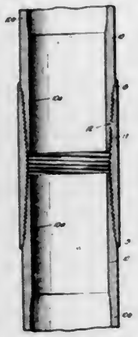


1. Compounds having the following general formula:

wherein R represents a quinazoline radical.

3. A process which comprises reacting an ethyl alcohol solution of a halogenated quinazoline and N-p-aminobenzoyl glutamic acid at elevated temperatures, and removing the resulting precipitate therefrom.

2,440,650
SKATE WHEEL STRUCTURE
Dwight E. Batesole, Glenbrook, Conn., assignor to Norma-Hoffmann Bearings Corporation, Stamford, Conn., a corporation of New York
Application May 29, 1946, Serial No. 673,067
3 Claims. (Cl. 301—5.7)

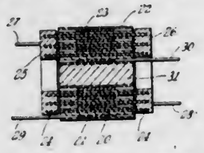


1. In a skate wheel structure having a tire with a bore, the combination of a shaft, a cylindrical member surrounding the same having cylindrical inner bore portions, concentric with the shaft, a pair of spaced antifriction bearings having their inner race rings on the shaft, means for clamping the inner rings of both bearings to the shaft, means for locking the outer race ring of one of said antifriction bearings against axial movement in the cylindrical portions, the outer race ring of the other antifriction bearing being slidably disposed and free to move as a floating ring in the cylindrical portion and spaced from said outer race ring locking means, whereby the locked bearing takes up radial and axial loads, and the other bearing takes up radial loads only, and means securing the cylindrical member to the bore of the tire.

2,440,651
TOOL JOINT
Alexander H. Bell, Los Angeles, Calif., assignor to Continental Oil Company, Ponca City, Okla., a corporation of Delaware
Application September 18, 1943, Serial No. 502,899
2 Claims. (Cl. 285—146)

1. A tool joint for oil well drill pipes comprising aligning pipe sections, the end portions of the pipe sections being internally upset; a tubular collar or coupling surrounding and threadedly connected to the adjacent end portions of the pipe sections, the threaded joints between the respective pipes and couplings being tapered toward the ends of the pipe and positioned entirely between the inner and outer walls of the pipe sections, the pitch diameter of the narrow outer

ends of the joints being sufficiently greater than the inside diameter of the pipe so that the internal upsets can be bored out without cutting into the threads, the pitch diameter of the joints at their crests or inner ends being substantially less than the outside diameter of the pipe, said



pipe tapering gradually from its outer surface to the crests of the threads, and the internal terminal portions of said coupling being axially tapered complementary to the tapered outer surfaces on the ends of the pipe and of such diameter as to engage the tapered outer surfaces on the ends of the pipes.

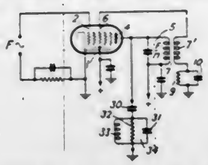
2,440,652

ARTIFICIAL TRANSMISSION LINE

Nelson E. Beverly, Williamstown, Mass., assignor to Sprague Electric Company, North Adams, Mass., a corporation of Massachusetts

Application July 21, 1943, Serial No. 495,621
10 Claims. (Cl. 178—44)

1. An artificial transmission line comprising a wide layer of electrically conducting material and a narrow layer of electrically conducting material separated by layers of dielectric material of intermediate width and convolutely wound, the wide layer of electrically conducting material being connected on both sides throughout substantially its entire length to terminals and the narrow layer of electrically conducting material being connected only at its extreme ends to terminals.



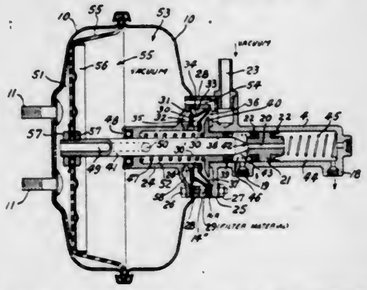
2,440,653

LOCKED-IN OSCILLATOR CIRCUITS

Murlan S. Corrington, Camden, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application November 14, 1944, Serial No. 563,379
7 Claims. (Cl. 250—20)

1. In combination with a tube provided with at least an electron emitter, a control element, an oscillator grid and oscillator output electrode, means for applying to the control element high frequency current which is angle modulated and has a desired mean frequency, a resonant tank circuit reactively coupled to said oscillator grid and output electrode and tuned substantially to a desired subharmonic frequency of said mean frequency, means including a selective network tuned substantially to said subharmonic frequency, means coupling said selective network to said tank circuit, and said selective network



having its constants so chosen that it has an effective capacity vs. frequency characteristic which falls off at a rate to just keep the subharmonic oscillator in tune over most of its operating range.

2,440,654

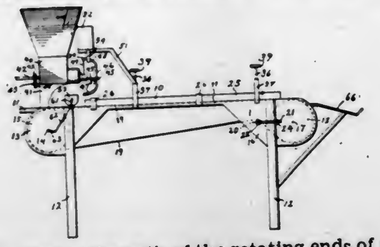
HYDRAULIC PRESSURE INTENSIFIER UNIT

Gordon R. Elliott, Ferndale, Mich., assignor, by mesne assignments, to Irving A. Puchner and Edward U. Demmer, Milwaukee, Wis.

Application October 28, 1943, Serial No. 508,033
13 Claims. (Cl. 60—54.5)

10. The combination, a hydraulic cylinder, a valve housing co-axial with said cylinder and communicating with the interior thereof, movable air and vacuum control valve means within said housing, a valve control piston in said cylinder movable into operative contact with said movable valve means, a fluid control piston in said cylinder, a manually controlled pressure fluid source connected to the cylinder intermediate said pistons adapted for communication through said fluid control piston and for operative pressure engagement with said valve control piston, a plunger rod adapted for forceful translation extending through said valve control piston, a power chamber remote from said cylinder, a movable member therein adapted for a translation upon a pressure differential on opposite sides thereof, and pivotal motion transmitting means interconnecting said movable member and said plunger rod.

2,440,655



DOUGH FORMING MACHINE

Henry E. Hahn, Jr., Milwaukee, Wis., assignor to Hahn Baking Company, Milwaukee, Wis.

Application February 28, 1945, Serial No. 580,091
1 Claim. (Cl. 107—7)

In a device of the character described, means for extruding dough in continuous cylindrical form, a rotatable shaft adjacent said extrusion means, an arcuate member centrally fixed on said shaft, a wire cutter element extended from one end of said arcuate member to said shaft for intermittently cutting through said extruded

dough, a flour sifter mounted above said extrusion means, and a yieldable member on said

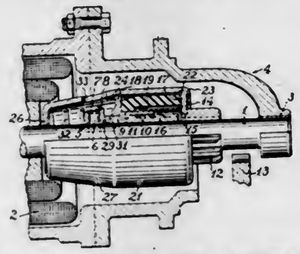
flour sifter in the path of the rotating ends of said arcuate member operable to sift some of the flour with each contact of said parts.

2,440,656

ABRASIVE MATERIAL FOR POLISHING

Fred W. Huntington, Alameda, Calif.

Application March 18, 1946, Serial No. 655,041
1 Claim. (Cl. 51—164.5)



A polishing compound consisting of an admixture comprising two (2) cubic feet of rice hulls, one-fourth (¼) cubic foot of crushed walnut shells, one-fourth cubic foot of crushed apricot pits, to which is added two (2) quarts of powdered pumice and one (1) quart of light oil, all mixed to form a homogeneous mass.

2,440,657

ENGINE STARTER DRIVE

Donald L. Miller, Pine City, N. Y., assignor to Bendix Aviation Corporation, Elmira Heights, N. Y., a corporation of Delaware

Application February 25, 1946, Serial No. 649,999
5 Claims. (Cl. 74—7)

1. In an engine starter drive, a power shaft, a drive head fixed thereon, a screw shaft slidably journalled on said power shaft in tandem relation with said head, said head and screw shaft having interengaging means forming an overrunning clutch connection therebetween, a control nut threaded on said screw shaft, said screw shaft having an abutment for positioning said nut thereon when in idle position, a pinion slidably journalled on said power shaft to engage and rotate a gear on an engine to be started, and means for driving said pinion from said nut and for closing said clutch including a casing member fixed to the pinion and a resilient member yieldingly transmitting torque from the nut to the casing.

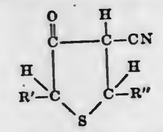
2,440,658

SALICYLOYL-BETA ALANIDE

Harold Urist and Gustav J. Martin, Philadelphia, Pa., assignors to The National Drug Company, Philadelphia, Pa., a corporation of Pennsylvania

No Drawing. Application April 29, 1946, Serial No. 665,892
1 Claim. (Cl. 260—519)

Salicyloyl beta alanide.



2,440,659

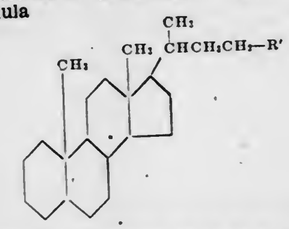
CYANOTHIOPHANES AND METHODS OF PREPARING SAME

Bernard R. Baker, Nanuet, N. Y., assignor, by mesne assignments, to American Cyanamid Company, New York, N. Y., a corporation of Maine

No Drawing. Application June 21, 1945, Serial No. 600,831
9 Claims. (Cl. 260—329)

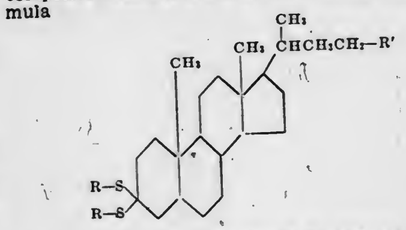
1. A compound of the formula

in which R′ and R″ stand for a member of the group consisting of hydrogen, alkyl, carbalkoxy and carbalkoxyalkyl radicals, one of which is hydrogen.



2,440,660

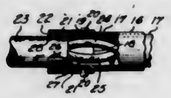
HYDROGENOLYSIS OF STEROID THIOACETALS



Seymour Bernstein, Pearl River, and Louis Dorfman, New York, N. Y., assignors, by mesne assignments, to American Cyanamid Company, New York, N. Y., a corporation of Maine

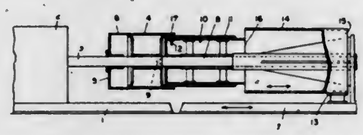
No Drawing. Application March 26, 1945, Serial No. 585,012
7 Claims. (Cl. 260—397.1)

4. A method of preparing compounds having the formula



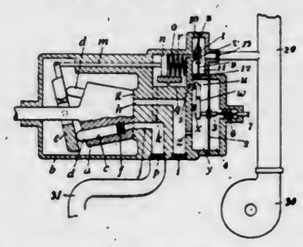
wherein R′ is a member of the group consisting of alkyl, carboxy and carbalkoxy radicals which comprises heating a compound having the formula

wherein R is alkyl and R′ is as defined above,



with Raney nickel catalyst in the presence of a solvent selected from group consisting of dioxane, a lower aliphatic alcohol and ethyleneglycol ethylether.

2,440,661
SWITCHBOARD PLUG
Harry C. Calvin, Dothan, Ala., assignor of one-fourth to Earle C. Moody, Dothan, Ala.
Application September 3, 1943, Serial No. 501,171
3 Claims. (Cl. 173—361)

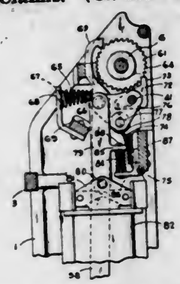


3. A telephone switchboard plug comprising a plug body having a plurality of contacts at one end portion thereof and an open ended cylindrical ferrule at the other end thereof, said ferrule having diametrically opposite portions projecting longitudinally therefrom as continuations thereof, an open ended cylindrical thimble substantially equal in diameter to said ferrule and normally arranged in axial alignment therewith, a pair of parallel arms fixed to said thimble diametrically opposite each other, said arms extending longitudinally of said thimble and overlying the projections of said ferrule radially outwardly thereof and in contact therewith, the adjacent open ends of said ferrule and said thimble being unobstructed for the passage of wires therethrough, and a pivot pin projecting through each arm and the corresponding projection of said thimble, said pins being in axial alignment to pivotally connect said thimble and said ferrule to each other and the contacting surfaces of said arms and the projections of said thimble constituting the sole frictional engagement between said ferrule and said thimble during relative turning movement thereof about said axis, said thimble and said ferrule being adapted for the passage therethrough of wires engageable with the inner surface of said ferrule to be bent thereby when said thimble is turned about said axis relative to said ferrule, the ends of said thimble between the projections thereof being engageable with the adjacent ends of said ferrule to predetermine and limit relative swinging movement of said ferrule and said thimble about said pivot axis.

2,440,662
APPARATUS FOR BUILDING TIRES
Larry C. Frazier, Lakewood, Ohio, assignor to National-Standard Company, Niles, Mich., a corporation of Michigan
Application October 31, 1945, Serial No. 625,789
11 Claims. (Cl. 154—10)

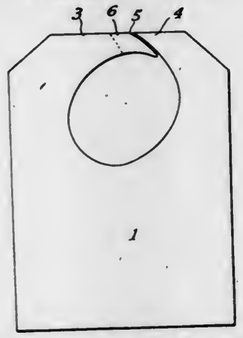
1. In apparatus of the character described, the combination of a drum assembly, means for changing the effective relative diameters of different axially extending sections of said drum, and means adapted to closely surround said drum and move axially relative thereto.

2,440,663
MEANS FOR AUTOMATICALLY CONTROLLING THE SUPPLY OF LIQUID FUEL TO PRIME MOVERS
Richard Joseph Ifield, Ealing, London, England, assignor to Joseph Lucas Limited, Birmingham, England
Application July 17, 1944, Serial No. 545,362
In Great Britain May 12, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires May 12, 1963
2 Claims. (Cl. 103—162)



1. A system for supplying liquid fuel and air to a prime mover, comprising in combination a variable-delivery liquid fuel supply pump having a movable member for varying its output, an air blower, a cylindrical chamber which at one end communicates with the delivery side of the pump, a liquid vent at the other end of the chamber, a spring loaded piston slidable in the chamber under fluid pressure and connected to the said movable member, a restricted passage interconnecting the ends of the chamber, and closure means responsive to fluid pressure for controlling the vent, the closure means being exposed to the delivery pressures of the pump and blower at positions where the said delivery pressures have opposed effects on the closure means.

2,440,664
MAKING LAP-WELDED ARTICLES FROM THERMOPLASTIC FILMS
Carroll R. Irons, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
Application July 28, 1945, Serial No. 607,533
2 Claims. (Cl. 154—42)

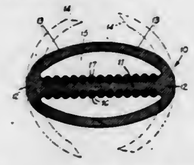


1. The method which comprises providing two films of uniform width of organic thermoplastic material, bending the two films to semicylindrical form about and at opposite sides of a common longitudinal axis, lapping the right edge of each with the left edge of the other, aligning one such lapped pair parallel with and opposite to the other such pair, interposing between the parallel pairs of lapped edges a thin, flexible barrier to prevent adherence between the two internally disposed members of the pairs of lapped edges, applying pressure to the assembly while heating each lapped joint externally to effect fusion and welding of the members of each pair between a single set of opposed heating elements, and cooling the so-formed welds, to produce a tube of organic thermoplastic film material with two longitudinal lap welds.

2,440,665
AUTOMATIC SET-BACK COUNTER
Max L. Jeffrey, Shaker Heights, Ohio, assignor to The National Acme Company, Cleveland, Ohio, a corporation of Ohio
Application June 17, 1942, Serial No. 447,460
8 Claims. (Cl. 235—144)

1. In combination with a counter having a shaft for resetting the same, an apparatus for rotating said shaft comprising a ratchet wheel secured to the shaft, means cooperating with said wheel to turn the same including a reciprocable member having a tooth engaging portion for engaging teeth on said wheel, means for moving said member into and out of operative engagement with said wheel including spring means connected to the member and moving it toward the wheel and means to move said member against the pressure of said spring means away from said wheel and including a lever pivoted on a support spaced from said member, an abutment carried by said lever and engageable with said member and means to move said lever to cause the abutment to push said member against the pressure of said spring away from said ratchet wheel comprising a link connected to said lever and a spring connected to a fixed support and urging said link to move said lever with said abutment against said member, and means to overcome the effect of said last mentioned spring and cause said first spring to move said member against said ratchet wheel.

2,440,666
BIB
Ellen Witmer Miller, Rochester, N. Y., assignor of one-fifth to William Edward Neely, Rochester, N. Y.
Application February 18, 1946, Serial No. 648,259
3 Claims. (Cl. 2—49)

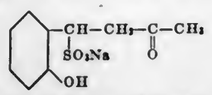


1. A paper bib comprising a sheet of paper having a neck opening generally elliptical in shape extending diagonally and upwardly across the upper part of the sheet and wholly within the sheet, a slit extending directly from a point in the upper part of the neck opening which is near the major axis of the neck opening to the top edge of the sheet and wherein the direction of said slit is toward the center of the top edge of the sheet, adjustable strap members formed by said slit whereby said neck opening can be adjusted to fit the neck of the wearer and an adhesive material affixed to at least one of said strap members whereby said strap members can be fastened to each other.

2,440,667
DIBASIC ACID DRYING OILS
Latimer D. Myers, Cincinnati, and Victor J. Muckerheide, Silverton, Ohio, assignors to Emery Industries, Inc., Cincinnati, Ohio, a corporation of Ohio
No Drawing. Application November 6, 1942, Serial No. 464,792
23 Claims. (Cl. 260—404.8)

20. As a new product, a drying oil which comprises an oil selected from the class consisting of drying and semi-drying oils in which non-drying constituents are replaced by an aliphatic di-carboxylic acid having a vapor pressure lower than the vapor pressure of the replaced non-drying constituents.

2,440,668
CABLE CONSTRUCTION
John P. Tarbox, Philadelphia, Pa., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application August 18, 1943, Serial No. 499,058
3 Claims. (Cl. 174—138)



1. A process of making electrical conductors which comprises forming a strip of insulation material with flexible, divided, strip extensions on each edge, thereof, positioning electrical conducting units on each side of said strip, folding over adjacent opposite edge extensions to form conducting unit enclosing tubes of greater cross sectional area than the enclosed conducting unit and sealing together the folded edges of said edge extensions.

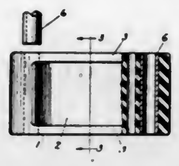
2. A cable blank for electric conductors comprising a strip of insulation material having flexible reversely extended strip extensions at each edge on each side thereof, the width of each extension being greater than one-half of the strip width whereby the extensions on one side of the strip may be edge joined to form a tube adapted to receive a conductor.

2,440,669
ALDEHYDE CONDENSATION PRODUCTS OF SULFONATED AROMATIC COMPOUNDS AS CATION EXCHANGE RESINS
Jack T. Thurston, Riverside, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application June 21, 1944, Serial No. 541,480
7 Claims. (Cl. 260—49)

1. A granular water-insoluble composition of matter comprising the granulated gelled and

water-insolubilized products of reaction of a mixture including formaldehyde and sodium 1-(o-hydroxyphenyl)-3-ketobutane sulfonate having the formula

in a molar ratio of from 1:1 to 3:1.



2,440,670

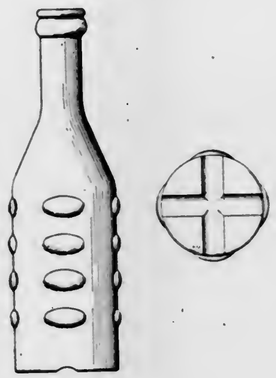
RESILIENT MOUNTING

Gustav H. Kaemmerling, Erie, Pa., assignor to Lord Manufacturing Company, Erie, Pa., a corporation of Pennsylvania

Application September 1, 1944, Serial No. 552,297
8 Claims. (Cl. 248—358)

1. A mounting comprising a laterally extending rubber arm free to deflect in shear, I-shaped in cross section, having a vertically extending web having an enlarged end provided with a vertically extending opening, and a load supporting pin extending into and fixed in the opening and transferring load to the arm through surface contact of the pin with the arm.

DESIGNS



APRIL 27, 1948

149,394

DESIGN FOR A BOTTLE OR ARTICLE OF SIMILAR NATURE

John S. Allen, Montgomery, Ala.

Application March 27, 1946, Serial No. 128,003
Term of patent 7 years
(Cl. D58—8)

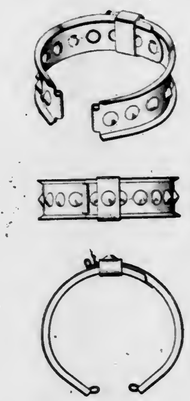
The ornamental design for a bottle or article of similar nature, as shown.

149,395

DESIGN FOR A SPORT SHIRT

Daniel Aminoff, Los Angeles, Calif.

Application September 24, 1947, Serial No. 141,565
Term of patent 3½ years
(Cl. D3—25)



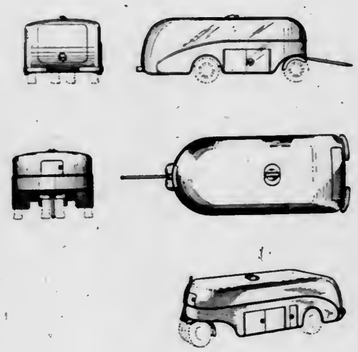
The ornamental design for a sport shirt, substantially as shown and described.

149,396

DESIGN FOR A WATCH BAND

Paul E. Babin, New Orleans, La.

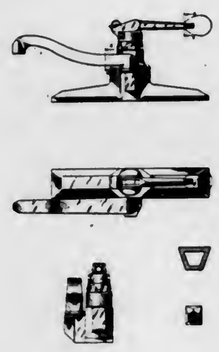
Application June 17, 1946, Serial No. 130,806
Term of patent 3½ years
(Cl. D45—4)



The ornamental design for a watch band, as shown.

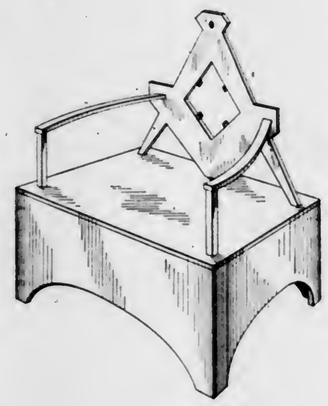
149,397

DESIGN FOR A TRAILER VEHICLE



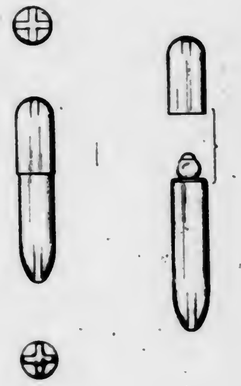
Rufus H. Barrett, San Francisco, Calif.

Application July 22, 1946, Serial No. 131,786
Term of patent 3½ years
(Cl. D14—3)



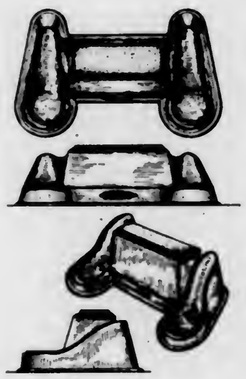
The ornamental design for a trailer vehicle, as shown and described.

149,398
DESIGN FOR A FAUCET
Charles W. Bauberger, Malverne, N. Y.
Application December 2, 1946, Serial No. 135,207
Term of patent 14 years
(Cl. D91—3)



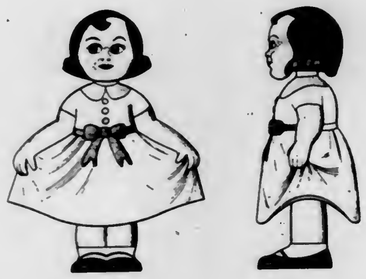
The ornamental design for a faucet, substantially as shown and described.

149,399
DESIGN FOR A CHAIR
Herbert S. Beall, Norfolk, Va.
Application November 8, 1946, Serial No. 134,627
Term of patent 14 years
(Cl. D15—8)



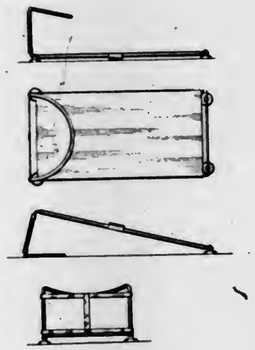
The ornamental design for a chair, substantially as shown.

149,400
DESIGN FOR A PERFUME DISPENSER
Ladislao J. Biro, Buenos Aires, Argentina
Application October 30, 1946, Serial No. 134,396
Term of patent 14 years
(Cl. D86—10)



The ornamental design for a perfume dispenser, as shown.

149,401
DESIGN FOR A PIPE STAND
Boris Blecher, Philadelphia, Pa.
Application November 1, 1946, Serial No. 134,443
Term of patent 14 years
(Cl. D85—8)

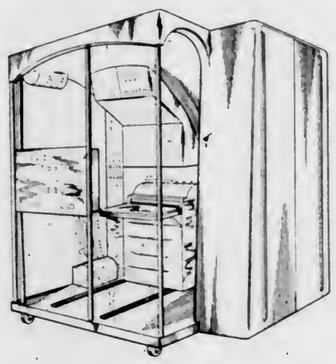


The ornamental design for a pipe stand, as shown.

149,402
DESIGN FOR A DOLL
Edna E. Brandenburg, New York, N. Y.
Application October 11, 1947, Serial No. 141,870
Term of patent 7 years
(Cl. D34—4)

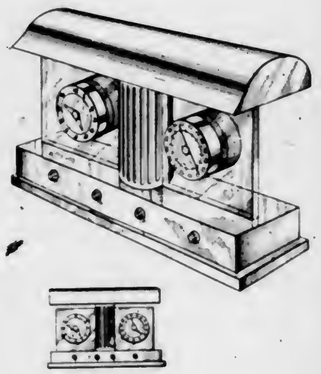
The ornamental design for a doll, as shown.

149,403
DESIGN FOR A BABY BATHING DEVICE
Irving Brecher, Flushing, N. Y., assignor to Baby World Company, Inc., New York, N. Y., a corporation of New York
Application October 29, 1946, Serial No. 134,366
Term of patent 3½ years
(Cl. D4—4)



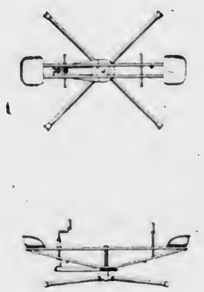
The ornamental design for a baby bathing device, substantially as shown.

149,404
DESIGN FOR A COMBINATION AUTOMOBILE AND AIRPLANE
Thomas R. Burns, Washington, D. C.
Application May 8, 1946, Serial No. 129,441
Term of patent 14 years
(Cl. D71—1)



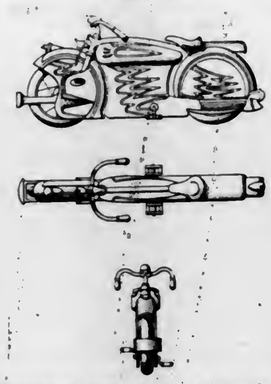
The ornamental design for a combination automobile and airplane as shown.

149,405
DESIGN FOR A FLIGHT ENGINEER'S TRAINER OR SIMILAR DEVICE
John G. Dodds, North Hollywood, Angus D. MacKillop, Glendale, and Clarence C. Sansom, Studio City, Calif., assignors to Lockheed Aircraft Corporation, Burbank, Calif.
Application June 10, 1946, Serial No. 130,580
Term of patent 7 years
(Cl. D71—1)



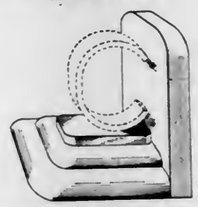
The ornamental design for a flight engineer's trainer or similar device, substantially as shown and described.

149,406
DESIGN FOR A COMBINED RADIO, CLOCK, AND LAMP
Irving Engel, East Orange, N. J., assignor to Crystalite Company, East Orange, N. J., a corporation of New Jersey
Application November 7, 1946, Serial No. 134,570
Term of patent 3½ years
(Cl. D56—4)



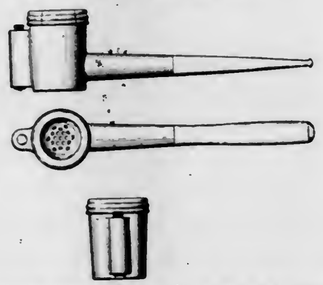
The ornamental design for a combined radio, clock and lamp, as shown and described.

149,407
DESIGN FOR A ROUNDABOUT
James S. Evans, San Marino, Calif.
Application April 18, 1946, Serial No. 128,723
Term of patent 14 years
(Cl. D34—5)



The ornamental design for a roundabout, as shown.

149,408
DESIGN FOR A BICYCLE
Royal J. Fuhs, Louisville, Ky.
Application May 17, 1946, Serial No. 129,813
Term of patent 14 years
(Cl. D90—8)

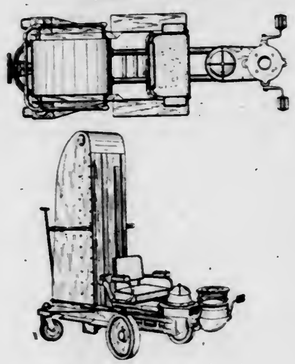


The ornamental design for a bicycle, as shown and described.

149,409
DESIGN FOR A BOOK END OR SIMILAR ARTICLE
Andrew G. Giegold, Jr., Mount Vernon, N. Y.
Application March 2, 1946, Serial No. 127,050
Term of patent 3½ years
(Cl. D33—1)

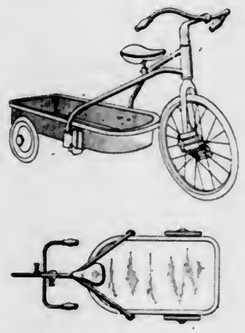
The ornamental design for a book end or similar article, as shown and described.

149,410
DESIGN FOR A TOBACCO PIPE
Everett E. Gregory, Kansas City, Mo.
Application September 30, 1946, Serial No. 133,656
Term of patent 14 years
(Cl. D85—8)



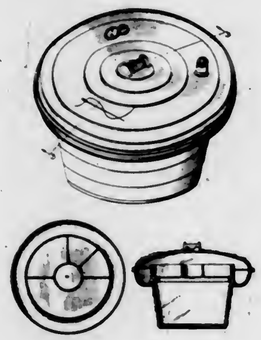
The ornamental design for a tobacco pipe, as shown.

149,411
DESIGN FOR A FRAME FOR WHEELED STROLLER VEHICLE
Bertron G. Harley, Penn Yan, N. Y., assignor to Mercury Aircraft, Inc., Hammondsport, N. Y.
Application March 13, 1946, Serial No. 127,409
Term of patent 3½ years
(Cl. D14—3)



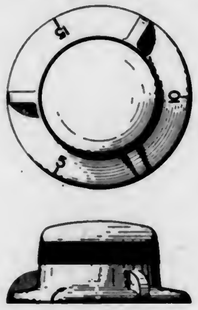
The ornamental design for a frame for wheeled stroller vehicle, substantially as shown and described.

149,412
DESIGN FOR A CAMERA DOLLY
Herbert W. Houston, Sherman Oaks, Calif., assignor to The Houston Corporation, Los Angeles, Calif., a corporation of California
Application November 18, 1946, Serial No. 134,860
Term of patent 3½ years
(Cl. D14—3)



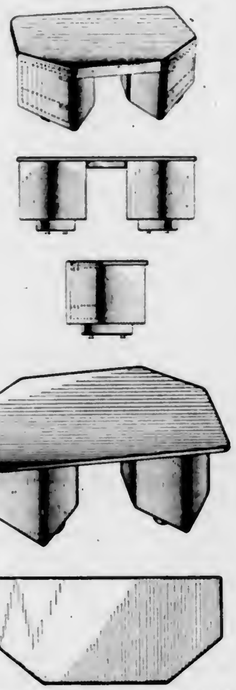
The ornamental design for a camera dolly, substantially as shown.

149,413
DESIGN FOR A COMBINED TRICYCLE AND WAGON
Robert O. Jackson, Highland Park, Mich.
Application September 27, 1946, Serial No. 133,613
Term of patent 7 years
(Cl. D34—15)



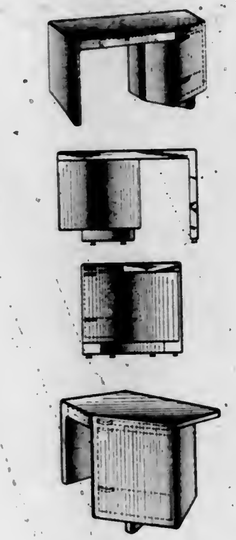
The ornamental design for a combined tricycle and wagon, substantially as shown.

149,414
DESIGN FOR A SEWING BOX
Herbert Jahn, Garfield, and Chester S. Zaremba, Paterson, N. J., assignors to Cascade Plastics, Inc., a corporation of New Jersey
Application February 4, 1947, Serial No. 136,670
Term of patent 14 years
(Cl. D3—19)



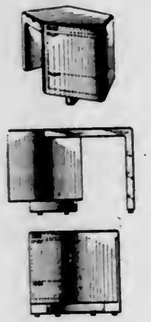
The ornamental design for a sewing box, as shown.

149,415
DESIGN FOR A CONTROL KNOB OR SIMILAR ARTICLE
Leon D. Johnson, Sellersville, Pa., assignor to American Machine and Metals, Inc., New York, N. Y., a corporation of Delaware
Application April 12, 1946, Serial No. 128,558
Term of patent 7 years
(Cl. D26—1)



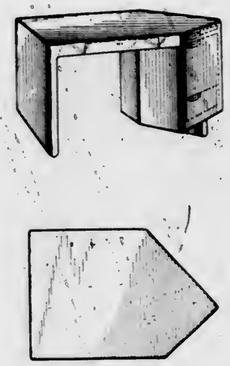
The ornamental design for a control knob or similar article, as shown.

149,416
DESIGN FOR A DESK
Charles E. Jones, Chicago, Ill.
Application December 6, 1946, Serial No. 135,319
Term of patent 14 years
(Cl. D33—7)



The ornamental design for a desk, substantially as shown.

149,417
DESIGN FOR A DESK
Charles E. Jones, Chicago, Ill.
Application December 6, 1946, Serial No. 135,320
Term of patent 14 years
(Cl. D33—7)

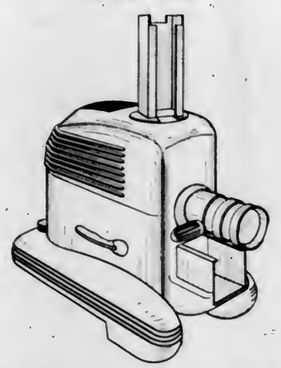


The ornamental design for a desk, substantially as shown.

149,418
DESIGN FOR A DESK
Charles E. Jones, Chicago, Ill.
Application December 6, 1946, Serial No. 135,321
Term of patent 14 years
(Cl. D33—7)

The ornamental design for a desk, substantially as shown.

149,418—Continued



The ornamental design for a desk, substantially as shown.

149,419
DESIGN FOR A SHOE
Max Kagan, Old Town, Maine, assignor to Penobscot Shoe Company, Old Town, Maine, a corporation of Maine
Application April 4, 1947, Serial No. 138,161
Term of patent 3½ years
(Cl. D7—7)

The ornamental design for a shoe, substantially as shown.

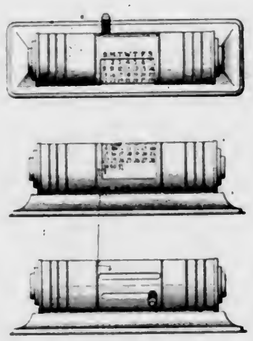
149,420
DESIGN FOR AN AUTOMATIC SLIDE PROJECTOR
Edward C. Klotz, Jr., Brookfield Township, Waukesha County, Wis., assignor to Picture Recording Company, Chicago, Ill.
Application October 30, 1946, Serial No. 134,383
Term of patent 7 years
(Cl. D61—1)

The ornamental design for an automatic slide projector, as shown and described.

149,421
DESIGN FOR AN EMBROIDERED LACE COLLAR OR SIMILAR ARTICLE
Walter Kohn, New York, N. Y.
Application October 23, 1947, Serial No. 142,117
Term of patent 7 years
(Cl. D3—8)

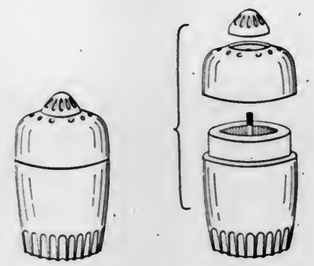
The ornamental design for an embroidered lace collar or similar article, substantially as shown.

149,422
DESIGN FOR AN EMBROIDERED LACE COLLAR OR SIMILAR ARTICLE
Walter Kohn, New York, N. Y.
Application October 23, 1947, Serial No. 142,118
Term of patent 7 years
(Cl. D3—8)



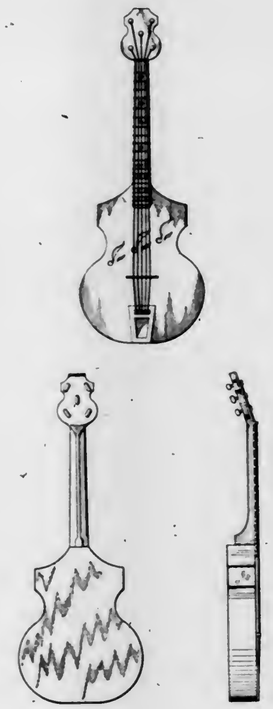
The ornamental design for an embroidered lace collar or similar article, substantially as shown.

149,423
DESIGN FOR AN EMBROIDERED LACE COLLAR OR SIMILAR ARTICLE
Walter Kohn, New York, N. Y.
Application October 23, 1947, Serial No. 142,119
Term of patent 7 years
(Cl. D3—8)



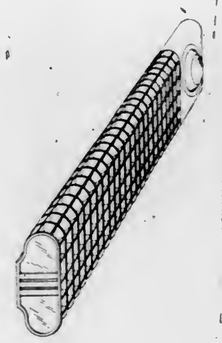
The ornamental design for an embroidered lace collar or similar article, substantially as shown.

149,424
DESIGN FOR A DESK CALENDAR
Edward Kottle, Lynbrook, N. Y.
Application November 29, 1947, Serial No. 142,883
Term of patent 7 years
(Cl. D74—5)



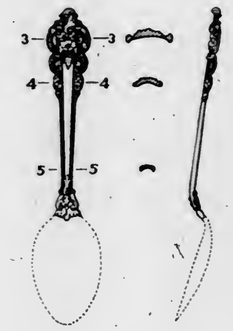
The ornamental design for a desk calendar substantially as shown and described.

149,425
DESIGN FOR A CONDIMENT DISPENSER
Chester A. Kurrash, Detroit, Mich.
Application November 8, 1946, Serial No. 134,637
Term of patent 14 years
(Cl. D44—22)



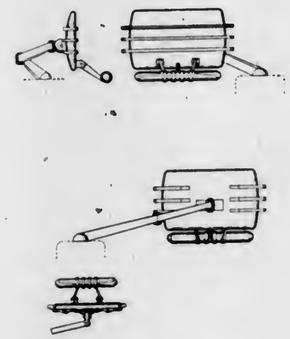
The ornamental design for a condiment dispenser, as shown.

149,426
DESIGN FOR A GUITAR
Leonard L. Lademann, Detroit, Mich.
Application October 25, 1946, Serial No. 134,239
Term of patent 14 years
(Cl. D56—1)



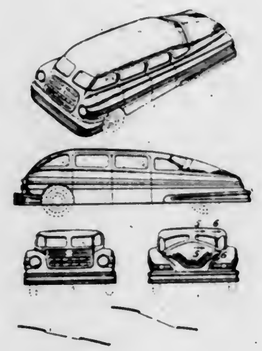
The ornamental design for a guitar, as shown.

149,427
DESIGN FOR A FLUORESCENT LIGHTING FIXTURE
Stanley E. Lindahl, Los Angeles, Calif.
Application March 4, 1947, Serial No. 137,338
Term of patent 7 years
(Cl. D48—23)



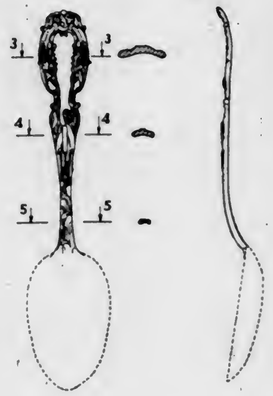
The ornamental design for a fluorescent lighting fixture, as shown and described.

149,428
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
Isadore A. Lipman, Meriden, Conn., assignor to The Ellmore Silver Co., Inc., Meriden, Conn., a corporation of Connecticut
Application December 30, 1947, Serial No. 143,431
Term of patent 14 years
(Cl. D54—12)



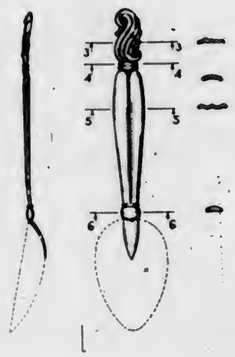
The ornamental design for a spoon or other article of flatware, as shown and described.

149,429
DESIGN FOR A COMBINED READING STAND AND LAMP
Frank J. Luketa, Seattle, Wash.
Application March 26, 1946, Serial No. 127,960
Term of patent 14 years
(Cl. D33—10)



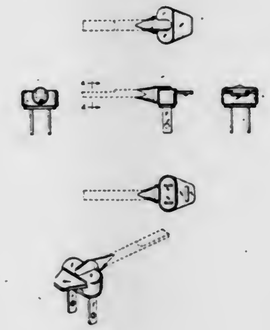
The ornamental design for a combined reading stand and lamp, substantially as shown.

149,430
DESIGN FOR AN AUTOMOBILE BODY
Casimir S. Lupinski, Hamtramck, Mich.
Application February 15, 1947, Serial No. 136,931
Term of patent 14 years
(Cl. D14—3)



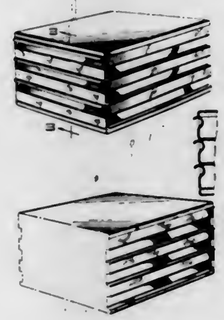
The ornamental design for an automobile body, as shown, and described.

149,431
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
Harry A. Malinowski, Meriden, Conn., assignor to The Ellmore Silver Co., Inc., Meriden, Conn., a corporation of Connecticut
Application December 5, 1947, Serial No. 142,976
Term of patent 14 years
(Cl. D54—12)



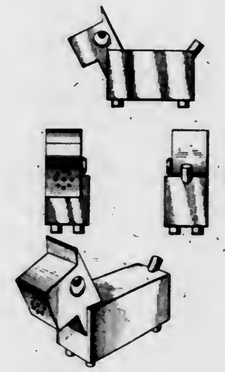
The ornamental design for a spoon or other article of flatware, as shown and described.

149,432
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
Thomas B. McKiernan, Meriden, Conn., assignor to The Ellmore Silver Co., Inc., Meriden, Conn., a corporation of Connecticut
Application January 29, 1947, Serial No. 136,488
Term of patent 14 years
(Cl. D54—12)



The ornamental design for a spoon or other article of flatware, as shown and described.

149,433
DESIGN FOR AN ELECTRIC ATTACHMENT PLUG
James B. Miller, Webster Groves, Mo., assignor to Mines Equipment Company, St. Louis, Mo., a corporation of Missouri
Application January 27, 1947, Serial No. 136,449
Term of patent 14 years
(Cl. D26—1)

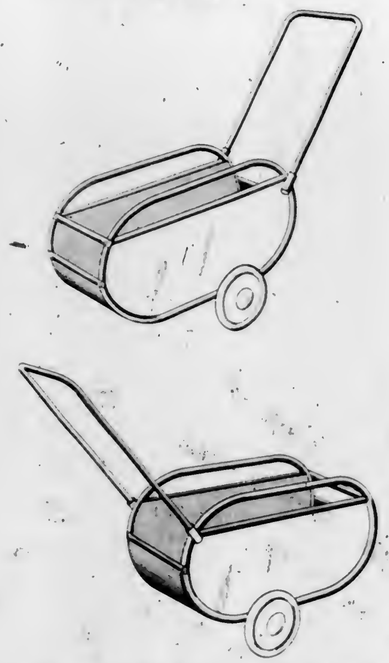


The ornamental design for an electric attachment plug, substantially as shown and described.

149,434
DESIGN FOR A CABINET
Jerome E. Moberg, Ellicottville, N. Y., assignor to Alfred E. Taylor, Detroit, Mich.
Application July 13, 1946, Serial No. 131,552
Term of patent 14 years
(Cl. D33—19)

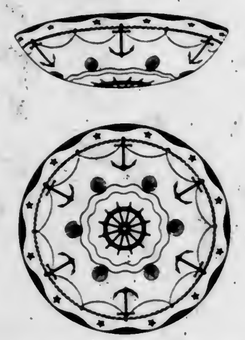
The ornamental design for a cabinet, substantially as shown and described.

149,435
DESIGN FOR A RADIO BROADCAST RECEIVER
Frank E. Neill, Detroit, Mich., assignor of one-half to Richard H. Meigs, Dearborn, Mich.
Application January 24, 1947, Serial No. 136,362
Term of patent 14 years
(Cl. D56—4)



The ornamental design for a radio broadcast receiver, as shown and described.

149,436
DESIGN FOR A LAPEL AND POCKET BADGE OR SIMILAR ARTICLE
Robert J. Neller, Appleton, Wis., assignor to Neller Mfg. Co., Appleton, Wis., a corporation of Wisconsin
Application November 7, 1946, Serial No. 134,577
Term of patent 3½ years
(Cl. D45—19)

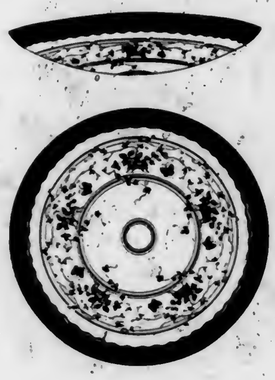


The ornamental design for a lapel and pocket badge or similar article, as shown.

149,437
DESIGN FOR A PUSHCART
Fred P. Nelson, Minneapolis, Minn.
Application March 7, 1947, Serial No. 137,431
Term of patent 7 years
(Cl. D14—3)

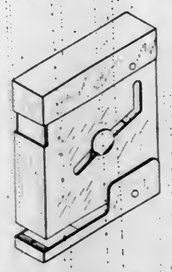
The ornamental design for a push cart, as shown.

149,438
DESIGN FOR AN ELECTRIC LIGHT BOWL
Albert J. D. Ohm, Buffalo, N. Y., assignor to Markel Electric Products, Inc., Buffalo, N. Y., a corporation of New York
Application February 25, 1947, Serial No. 137,164
Term of patent 3½ years
(Cl. D48—16)



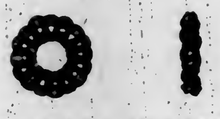
The ornamental design for an electric light bowl, as shown and described.

149,439
DESIGN FOR AN ELECTRIC LIGHT BOWL
Albert J. D. Ohm, Buffalo, N. Y., assignor to Markel Electric Products, Inc., Buffalo, N. Y., a corporation of New York
Application February 25, 1947, Serial No. 137,165
Term of patent 3½ years
(Cl. D48—16)



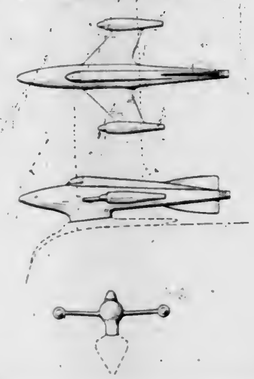
The ornamental design for an electric light bowl, as shown and described.

149,440
DESIGN FOR AN ELECTRIC LIGHT BOWL
Albert J. D. Ohm, Buffalo, N. Y., assignor to Markel Electric Products, Inc., Buffalo, N. Y., a corporation of New York
Application March 1, 1947, Serial No. 137,263
Term of patent 3½ years
(Cl. D48—16)



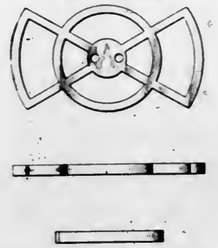
The ornamental design for an electric light bowl, as shown and described.

149,441
DESIGN FOR A STAPLE DRIVING MACHINE
Roy E. Peterson, Norwalk, Conn., assignor to The E. H. Hotchkiss Company, Norwalk, Conn., a corporation of Delaware
Application March 31, 1947, Serial No. 138,075
Term of patent 14 years
(Cl. D74—1)



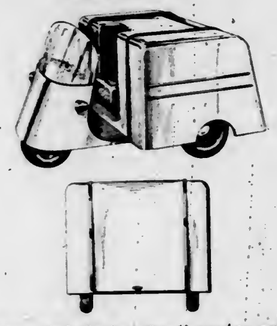
The ornamental design for a staple driving machine, substantially as shown and described.

149,442
DESIGN FOR A JEWELRY FINDING
Max Rahthus, New York, N. Y.
Application January 13, 1947, Serial No. 136,109
Term of patent 14 years
(Cl. D45—1)



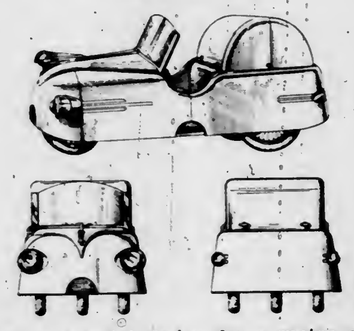
The ornamental design for a jewelry finding, substantially as shown.

149,443
DESIGN FOR AN AUTOMOBILE HOOD ORNAMENT
Lucian Ring, Detroit, Mich.
Application February 24, 1947, Serial No. 137,119
Term of patent 14 years
(Cl. D14—18)



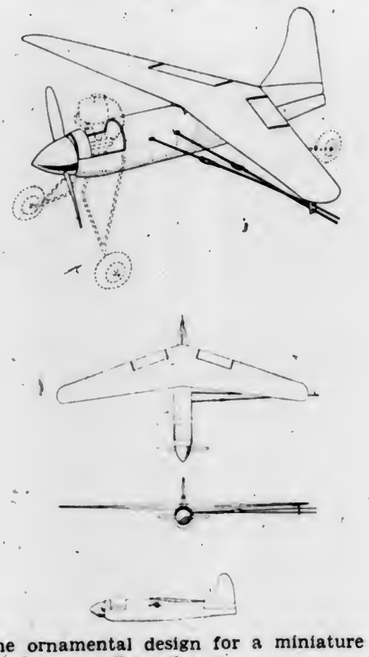
The ornamental design for an automobile hood ornament, substantially as shown and described.

149,444
DESIGN FOR A STEERING WHEEL
Julius Rose, Ridgewood, Long Island, N. Y.
Application September 12, 1946, Serial No. 133,270
Term of patent 14 years
(Cl. D14—30)



The ornamental design for a steering wheel, as shown.

149,445
DESIGN FOR A MOTOR VEHICLE
Julius Rose, Ridgewood, Long Island, N. Y.
Application September 12, 1946, Serial No. 133,271
Term of patent 14 years
(Cl. D14—3)



The ornamental design for a motor vehicle, as shown.

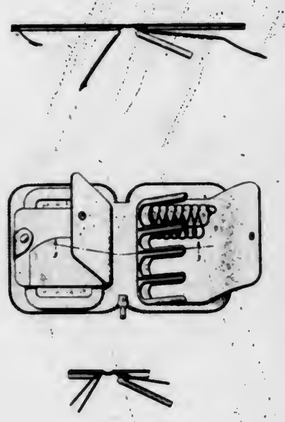
149,446
DESIGN FOR A MOTOR CAR
Julius Rose, Ridgewood, Long Island, N. Y.
Application October 16, 1946, Serial No. 133,988
Term of patent 14 years
(Cl. D14—3)

The ornamental design for a motor car, as shown and described.

149,447
DESIGN FOR A MINIATURE AIRPLANE
Virgil W. Russell, Fort Worth, Tex.
Application June 28, 1946, Serial No. 131,151
Term of patent 7 years
(Cl. D34—15)

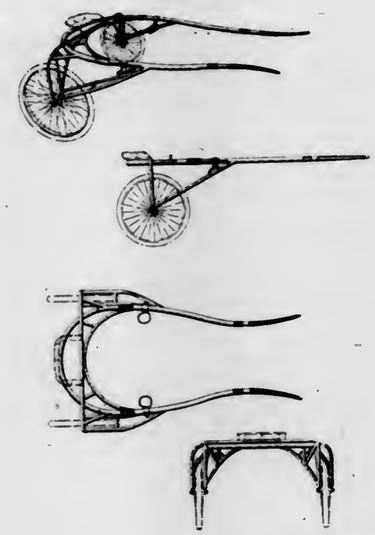
The ornamental design for a miniature airplane, substantially as shown.

149,448
DESIGN FOR AN ELECTRIC LIGHTING FIXTURE
Martin W. Schwartz and Max J. Marks, Chicago, Ill.
Application July 1, 1946, Serial No. 131,246
Term of patent 14 years
(Cl. D48—4)



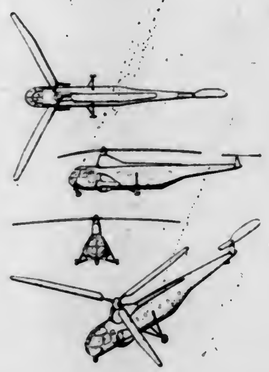
The ornamental design for an electric lighting fixture, as shown.

149,449
DESIGN FOR AN ELECTRIC LIGHTING FIXTURE
Martin W. Schwartz and Max J. Marks, Chicago, Ill.
Application July 1, 1946, Serial No. 131,248
Term of patent 14 years
(Cl. D48—4)



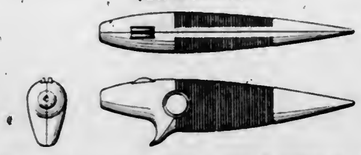
The ornamental design for an electric lighting fixture, as shown.

149,450
DESIGN FOR A COMBINED BILLFOLD, COIN HOLDER, AND KEY CASE
Abraham A. Seamon, Brooklyn, N. Y.
Application May 12, 1947, Serial No. 138,989
Term of patent 7 years
(Cl. D87—3)



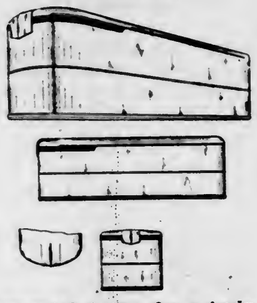
The ornamental design for a combined billfold, coin holder and key case, as shown and described.

149,451
DESIGN FOR A RACING SULKY
Robert A. Shuttleworth, Buffalo, N. Y.
Application December 2, 1946, Serial No. 135,215
Term of patent 3½ years
(Cl. D14—3)



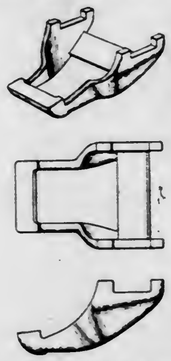
The ornamental design for a racing sulky, substantially as shown and described.

149,452
DESIGN FOR A HELICOPTER
Igor I. Sikorsky, Long Hill, and Michael E. Gluhareff, Bridgeport, Conn., assignors to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application September 24, 1946, Serial No. 133,533
Term of patent 7 years
(Cl. D71—1)



The ornamental design for a helicopter, substantially as shown.

149,453
DESIGN FOR A CONTROL HANDLE FOR LINE CONTROLLED MODEL AIRCRAFT
Victor Stanzel, Schulenburg, Tex.
Application January 24, 1947, Serial No. 136,359
Term of patent 14 years
(Cl. D34—5)

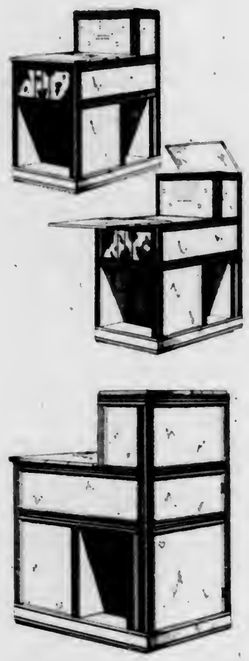


The ornamental design for a control handle for line controlled model aircraft, as shown.

149,454
DESIGN FOR A BODY FOR TRAILER VEHICLES
James Stephen, Edgerton, Wis., assignor to Highway Trailer Company, Edgerton, Wis.
Application September 27, 1946, Serial No. 133,611
Term of patent 14 years
(Cl. D14—3)

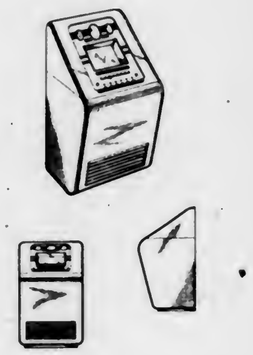
The ornamental design for a body for trailer vehicles, substantially as shown.

149,455
DESIGN FOR AN AUXILIARY CRADLE FOR TELEPHONE HANDSET
Harwood B. Stofer, Lakewood, Ohio
Application January 9, 1947, Serial No. 136,022
Term of patent 3½ years
(Cl. D48—14)



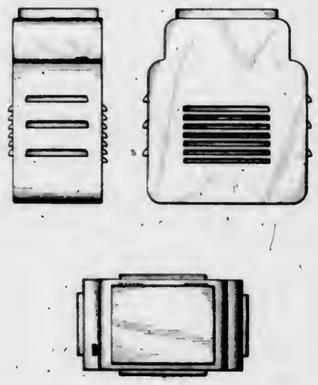
The ornamental design for an auxiliary cradle for telephone handset, substantially as shown.

149,456
DESIGN FOR A FINGER RING
Theodore F. Strub, Chicago, Ill.
Application March 27, 1947, Serial No. 137,951
Term of patent 14 years
(Cl. D45—10)



The ornamental design for a finger ring, as shown.

149,457
DESIGN FOR A RADIO CABINET
Umberto Tecca, Bridgeport, Conn., assignor of one-half to Eli Don Bullian, Greenbelt, Md.
Application February 12, 1947, Serial No. 136,876
Term of patent 7 years
(Cl. D56—4)

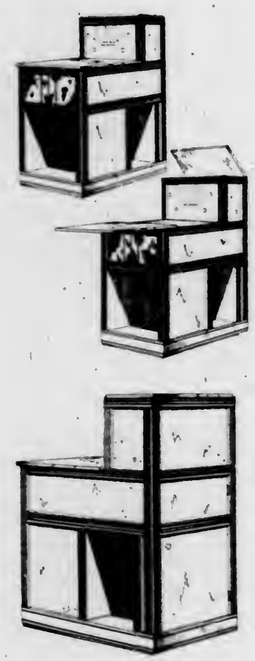


The ornamental design for a radio cabinet, as shown and described.

149,458
DESIGN FOR A CABINET FOR A FILM PROJECTION UNIT CONSTITUTING VISUAL TRAINING AND MECHANICAL GAME DEVICE
John Tjaarda, Grosse Pointe Shores, Mich., assignor, by mesne assignments, to Training Devices, Inc., Detroit, Mich., a corporation of Michigan
Application March 9, 1946, Serial No. 127,317
Term of patent 14 years
(Cl. D61—1)

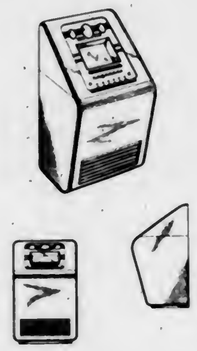
The ornamental design for a cabinet for a film projection unit constituting visual training and mechanical game device, as shown.

149,459
DESIGN FOR A COMBINATION RADIO AND TELEVISION CABINET
Victor Trad, Deal, N. J.
Application January 24, 1947, Serial No. 136,352
Term of patent 3½ years
(Cl. D56—4)



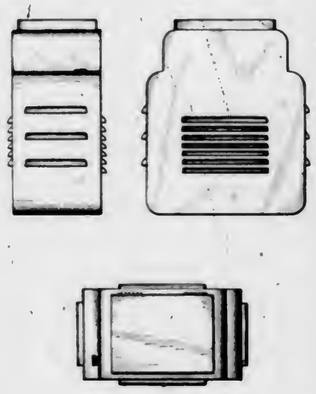
The ornamental design for a combination radio and television cabinet, as shown.

149,456
DESIGN FOR A FINGER RING
Theodore F. Strub, Chicago, Ill.
Application March 27, 1947, Serial No. 137,951
Term of patent 14 years
(Cl. D45—10)



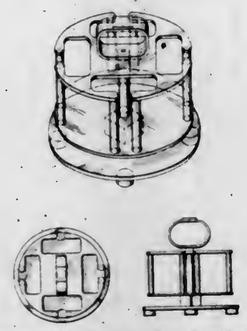
The ornamental design for a finger ring, as shown.

149,457
DESIGN FOR A RADIO CABINET
Umberto Tecca, Bridgeport, Conn., assignor of one-half to Eli Don Bullian, Greenbelt, Md.
Application February 12, 1947, Serial No. 136,876
Term of patent 7 years
(Cl. D56—4)



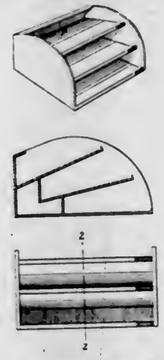
The ornamental design for a radio cabinet, as shown and described.

149,458
DESIGN FOR A CABINET FOR A FILM PROJECTION UNIT CONSTITUTING VISUAL TRAINING AND MECHANICAL GAME DEVICE
John Tjaarda, Grosse Pointe Shores, Mich., assignor, by mesne assignments, to Training Devices, Inc., Detroit, Mich., a corporation of Michigan
Application March 9, 1946, Serial No. 127,317
Term of patent 14 years
(Cl. D61—1)



The ornamental design for a cabinet for a film projection unit constituting visual training and mechanical game device, as shown.

149,459
DESIGN FOR A COMBINATION RADIO AND TELEVISION CABINET
Victor Trad, Deal, N. J.
Application January 24, 1947, Serial No. 136,352
Term of patent 3½ years
(Cl. D56—4)

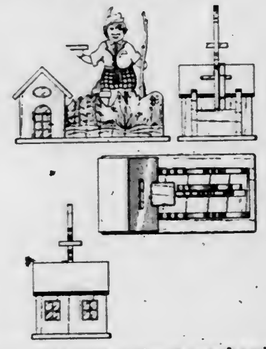


The ornamental design for a combination radio and television cabinet, as shown.

149,460
DESIGN FOR A CIGARETTE PACKAGE HOLDER OR SIMILAR ARTICLE
Henry J. Tunstall, Rockledge, Pa.
Application February 15, 1947, Serial No. 136,926
Term of patent 14 years
(Cl. D85—2)

The ornamental design for a cigarette package holder or similar article, as shown.

149,461
DESIGN FOR A FILE BOX
Gilbert Stanley Underwood, Washington, D. C.
Application December 9, 1946, Serial No. 135,362
Term of patent 3½ years
(Cl. D74—1)



The ornamental design for a file box, as shown and described.

149,462
DESIGN FOR A ROSARY
Catherine Vandernoot, New York, N. Y.
Application April 6, 1946, Serial No. 128,344
Term of patent 14 years
(Cl. D45—16)

The ornamental design for a rosary, substantially as shown and described.

149,463
DESIGN FOR A MECHANICAL BANK
Jack J. Weintraub, Chicago, Ill.
Application June 28, 1946, Serial No. 131,131
Term of patent 14 years
(Cl. D34—11)

The ornamental design for a mechanical bank, as shown.
